THE editor who lately induced Mr. GLADSTONE to promote the sale of a new periodical by answering a string of questions about his career and his feelings was impertinent only in the sense in which Lord BEACONSFIELD has been accused of unconstitutional conduct. The House of Commons ratified the acts of the Minister, and Mr. GLADSTONE has fully condoned an extraordinary intrusion by acknowledging the right of a stranger to extort from him an autobiographical communication. It is said, indeed, by an Irish journal which professes to be well informed, that Mr. GLADSTONE'S answers were not intended for publication, and have been used without authority. The assertion, if true, only varies the form of the indiscretion which has been committed; and it is not stated that Mr. GLADSTONE had taken any steps to prevent his very frank communication from being put to a use which was announced some weeks beforehand in the most public and circumstantial manner. When the Duke of WELLINGTON, thirty years ago, was the principal recipient of promiscuous applications, his correspondents had to content themselves with the shortest and most direct rebuffs. It seems never to occur to Mr. GLADSTONE that there is any limit to the right of interference with his privacy. It cannot be said that the last instalment of his personal confessions adds much to popular knowledge except as an illustration of one peculiarity of character. The most significant part of Mr. GLADSTONE'S answer is the fact that he thought it necessary to answer at all. The inquisitor is referred to a speech delivered some months ago at Oxford in which Mr. GLADSTONE offered to explain his transition from Conservative to subversive doctrines. The intelligent editor may probably have read the Oxford speech; but his magazine would not have sold better because it contained a quotation from the newspapers. The same statement furnished by Mr. GLADSTONE himself was a valuable commodity. On the subject of the Irish University Bill Mr. GLADSTONE is more indulgent to curiosity. It seems that, perhaps alone among politicians of either party, he seriously believed that his Bill would be carried. Whether he would, in the event of success, have offered further boons to Ireland must remain a mystery. The land, the Established Church, and University education had been during the election of 1868 the three branches of the Irish Upas-tree. If the third stroke had been as effective as the measures of 1869 and 1870, Mr. GLADSTONE would probably have turned his attention for the time to the destruction of some English or Scotch institution. On the delicate subject of his feelings towards his old antagonist, Mr. GLADSTONE confines himself to a repudiation of the charge of antipathy. He would perhaps admit that he cherishes little sympathy towards Lord BEACONSFIELD; but it is not necessary to convert a negative into an opposite. Many years ago a humorous writer, after propounding the question whether Mr. X. hates Mr. Z., himself supplied the answer, that "Mr. X. does not hate Mr. Z., but he dislikes "him as much as so good a man can." There are indeed certain kinds of goodness which often coincide with strong feelings of dislike. There are fewer precedents for Mr. GLADSTONE'S amiable readiness to explain to an intrusive stranger his most delicate private feelings. Perhaps Mr. GLADSTONE means to say that the adverse feeling which is not to be called antipathy is unimpassioned moral disapprobation. An apology for himself which should inflict a stigma on his adversary would be happy and ingenious.

Mr. GLADSTONE's explanation of the total revolution which has taken place in his political opinions is without doubt sincere; but he is perhaps not the best judge of his own feelings and motives. It seems that, when he was at Oxford fifty years ago, he, in common with the University in general, was not absorbed by unqualified enthusiasm for human freedom. He has since that time repaired the defects of his education, and he now looks with cheerful confidence to the establishment of universal suffrage. It seems that Conservatives fear the people, and that Liberals trust the people. If the multitude is formidable and liable to error, the Conservatives are in the right. There are those who think that the absolute supremacy of numbers will not conduce to the enjoyment of freedom by the helpless minority; but Mr. GLADSTONE is apparently unconscious that there is any distinction between liberty and popular despotism. Mr. GLADSTONE left Oxford about 1832, and he entered Parliament in 1834. His first avowal of his desire for a wide extension of the suffrage was made thirty years later. In 1858 he was a supporter of Lord DERBY, for whom he voted in the decisive division of 1859. If Mr. DISRAELI had at that time gone to India, there is little doubt that Mr. GLADSTONE would have taken office under Lord DERBY as leader of the House of Commons. It is impossible to know whether he would in that case have finally identified himself with the Conservative party. For the present purpose it is enough to say that Mr. GLADSTONE retained his early political sympathies long after the time when they could be explained by the circumstances of his education. In another form Oxford still exercised an influence over the eminent member for the University. Perhaps still longer endurance of Mr. GLADSTONE's deviations from his youthful creed might have enabled his constituents to restrain his zeal. An unconscious motive for his conversion to the cause of extreme democracy has probably been the discovery that his genius is better adapted to elicit popular enthusiasm than to control deliberative assemblies. For many years Mr. GLADSTONE has been the most powerful debater in the House of Commons, and, with perhaps the exception of Mr. BRIGHT, he has been the most eloquent orator; but he has never been an effective or favourite party leader. His vehemence of temper, his impetuous devotion to objects which are constantly changing, his singular want of humour and deficiency in knowledge of human nature, have often irritated and alienated his followers and colleagues, while they have in no degree impaired his popularity out of doors. The multitude likes the blind enthusiasm which it shares far better than the reticent caution of a statesman. Foibles by which equals are offended and repelled are invisible at a distance. The Liberal party in the House of Commons is perfectly satisfied with its present titular leader; but public meetings seem scarcely to be aware of the existence of Lord HARTINGTON, while they invariably applaud the mention of Mr. GLADSTONE's name. In all human societies ambitious men incline to those by whom they find themselves appreciated. Male adults who are swayed at will by the eloquent champion of flesh and blood seem to him on their part to represent the general opinion of the community. Freedom has no necessary connexion with flesh and blood, or with the whole body of male adults.

Mr. GLADSTONE has the good fortune to be able to persuade himself that the change of the English Constitution into a pure democracy is consistent with the preservation of his youthful pride in the great achievements of the English nation; but on other occasions his patriotism has assumed strange and unintelligible forms. In an article published in an American periodical he lately expressed perfect contentment with the prospect of a transfer of commercial supremacy from England to the United States. It is not surprising that he should be still more indifferent to the effect of organic changes which will, if they are accomplished, wholly alter the character and reverse the tendency of the ancient institutions of England. The ease with which Mr. GLADSTONE can reconcile his own successive phases of opinion will not remove the distrust which his many recent eccentricities are calculated to provoke; but the mass of his admirers will not even discover the oddity of his submission to the importunity of his latest catechist. One of his answers appears to have caused a certain feeling of surprise. Mr. GLADSTONE says that for political guidance and administrative information he was chiefly indebted to Sir ROBERT PEEL and Sir JAMES GRAHAM. Sir ROBERT PEEL had always been regarded as Mr. GLADSTONE's political teacher; and the disciple has carried out with fidelity and vigour the financial changes which were begun by his master; but no two statesmen of the first rank were ever more unlike one another in character. Sir ROBERT PEEL was wholly incapable of a passionate devotion to the cause of democratic government, though it was his destiny to abandon in turn many of the doctrines of his party. No statesman of the last generation was so fully recognized as the undisputed leader of the House of Commons; but Sir ROBERT PEEL was never thoroughly popular with the multitude. Mr. GLADSTONE's mention of Sir JAMES GRAHAM was probably suggested by recollection of his great administrative powers. As a politician Sir JAMES GRAHAM was almost as versatile as his younger colleague; but his frequent changes were the result of a real indifference to all political opinions. Having first risen to eminence as a Radical, Sir JAMES GRAHAM seceded from the Whigs in company with the late Lord DERBY, and he was afterwards the most confidential colleague of Sir ROBERT PEEL. In his later years he returned to the professions of his youth, and in his last addresses to the electors of Carlisle he affected to pass over all the changes which he had undergone since he first represented the borough in Parliament. In the power of commanding popular sympathy Sir JAMES GRAHAM was remarkably deficient. Either Sir JAMES GRAHAM or Sir ROBERT PEEL would have been surprised to learn that it had become the fashion for statesmen to publish fragments of autobiography in answer to uninvited inquiry.

RUSSIAN FINANCE.

THE Russian Government has now furnished materials with sufficient detail and definiteness to permit something like an estimate to be made of the financial position of the country. These materials only consist of the statements and estimates of the Government, and in a country governed as Russia is governed there can never be a perfect assurance that the statements made by the Government are not only accurate but complete, and that the estimates made by the Government are not framed with the desire of giving hopes to outsiders of better times coming than the officials themselves expect. But it must be owned that the Government materials now furnished are not of a vague kind. They tell us with seeming accuracy what has happened, and they show from what special sources the Government expects an increase of revenue. We have given to us for our inspection the actual receipts and expenditure of 1876 and 1877, exclusive of the extraordinary outlay for the war, the estimated receipts and expenditure for 1878, and the estimated, or perhaps it should be said, conjectural Budget for 1879. In 1876 Russia received fifty-six millions, and paid a little over fifty-seven. In 1877 Russia received nearly fifty-five millions, and paid fifty-eight and a half. Thus there was in 1876 an admitted deficit of more than a million, and in 1877 an admitted deficit of three millions and a half. This increase of deficit was produced by a falling off in the revenue of one million, principally under the head of customs, and by the interest on the war expenditure having begun to tell, half a million being needed for the service of the public debt, and another half-million for the growing exigencies of the Ministry of Finance. We now come from facts to estimates. For 1878 the estimated revenue is fifty-seven millions and a quarter, and the estimated expenditure is sixty millions; so that there is an anticipated deficit of three millions. The revenue, however, is taken as showing an increase of a little more than two millions over that of 1877, so that the expenditure of 1878 is five millions greater than that of 1877. But from this must be deducted apparently a sum of about two millions, which is merely a bookkeeping entry, made in 1878, but not in 1877. We are thus half in doubt whether the actual deficits in 1877 and in 1878 were not greater than appears in the statement But it is more important to ascertain what is stated to be the present position of Russian finance than to go into its past history, and the main fact to be borne in mind is that there is an acknowledged deficit for 1878 of three millions. This year is, however, to be a year of marvels. The Budget is to be

balanced, Russia is to receive close on sixty-three millions, and to pay away within a few thousand pounds exactly what it receives. This is most cheering, and we may add unexpected; and the English investor, and the English politician, who perceives the important bearing of Russian finance on the peace of the world, will anxiously scrutinize the figures by which this wonderful result is supposed to be obtained.

When we examine the figures of 1878 we find that there is an increase of two millions for the service of the public debt, as compared with 1877, and for the first time there is an allowance of 200,000*l.* made for irrecoverable taxes. But then on the other items of the Budget there is an equal reduction. Less is to be spent on the War Department; the Ministry of Finance requires less, the debt having been consolidated; the allowance for the expenses of the Court is considerably reduced, and so is the outlay on the State domains and on roads; while the only item that exhibits an increase—and that a slight one—is education. From the figures on the revenue side, we find that there is an anticipated total increase of about two millions. Alcoholic liquors are to yield 300,000*l.* more, and salt and tobacco as much. The main increase is, however, in the receipts from railways, which appear in the Budget of 1878 as giving almost exactly double what they gave in 1877, and spring from 1,700,000*l.* to about 3,400,000*l.* This cannot be supposed to come from increased traffic, but may be conjectured to be the result of an arrangement said to have been made some months ago between the Government and the shareholders of some of the Russian lines. It did not affect the railway bonds and guaranteed shares held abroad, and therefore little was heard of it outside; but until it is explained how there comes to be this enormous anticipated increase in the yield of railways, it is impossible to treat the financial position of Russia with any pretension to accuracy. It must be understood that in the whole of the figures we are now dealing with the rouble is converted at two shillings, whereas in English calculations of former years it used to be converted at 2*s.* 8*d.*, and therefore the figures both of receipts and expenditure seem less than they used to be. But there is no substantial difference in the general result, and if it is once understood that for complete accuracy all the computations ought to be made in roubles and not in pounds, we may take as the general result that Russia was spending two millions more in 1878 than in 1877, and reducing expenditure by the same amount, that it was receiving two millions more, and that nevertheless there was a deficit of three millions. In 1879 there is a further increase of two millions in the charge for the public debt, so that to balance the Budget five millions more are required. They are supposed to be obtained in the following way—two millions more from alcoholic liquors, two millions more from customs, and a million principally from a new tax on railway and steamboat traffic. There are minor alterations, such as a slight increase in the expenses of the Court, a further increase in the outlay on education, and in the cost of the administration of the Transcaucasian provinces; but these alterations do not affect the general total in any serious degree. What we have principally got to keep in view is that the Russian Government, having had acknowledged deficits in previous years, and having to provide five millions more, or about thirty per cent. additional, for the service of the public debt, calculates that everything will be put right by the end of the present year, if only the people will drink enough to supply two millions more, if merchants can afford to import so as to pay two millions more for duties, and if the new tax on traffic gives the anticipated yield.

Whether these agreeable anticipations will be fulfilled depends on a variety of causes on which it is very difficult to offer any opinion. If the Russian peasant drinks the same quantity of liquor, but pays more for it, he must either be making more money than he used to make, or he must spend on liquor money which he used to spend on something else. It is extremely hard to believe that he is likely to be making more money. As a rule, agricultural distress is a sequence of war, and there seems to be no reason why there should be an exception in the case of Russia. That under the greatest severity of distress the Russian peasant will still somehow get his alcohol may be probable; but obviously he must give up something to get his alcohol, and his first resource will be to starve his wife and family, and then himself. This must tell on the well-being of the agricultural population and make it a readier prey to disease. It may still be hoped that Russia generally will escape the fearful calamity of the plague; but there are ordinary diseases which are apt to seize on a population underfed and given to drink, and anything like wide-spread sickness must affect the revenue adversely. Thus the Customs are supposed to yield two millions more, and this is an enormous increase. It means an increase from five and a half millions to seven and a half millions, or thirty per cent. The only proposed increase in the duties of which particulars are given is one on raw cotton, which it is calculated will yield 200,000*l.* Where the other nine-tenths of the extra two millions are to come from, it is not easy to imagine. Still it must not be hastily pronounced impossible that the anticipated increase should be secured. The consumption of imported articles will necessarily be checked, but there are imported articles which the rich will have and others which the poor must have; and, if it can but prevent smuggling, a Government can get a revenue from customs duties which seems out of proportion to the wealth of the country. In the same way there is not any good ground for supposing that the next tax on traffic will do more than check travelling and the transport of goods. There may be enough travellers and a sufficiency of goods sent from one part of the Empire to another to furnish the Government with the amount it expects from the tax. That the Budget should be even approximately balanced it is absolutely necessary that Russia should accept sincerely and without reservation a policy of peace; but if this is done, the immediate financial prospects of Russia cannot be said to be altogether gloomy. The Budget of 1879, when it is finally settled, will show in all probability a deficit, but it may also show that, disturbing causes apart, Russia is on the way to a balanced Budget. If this is shown, and the figures given are accepted as true, the credit of Russia will not have been very seriously impaired.

MR. SULLIVAN ON THE IRISH VOTE.

MR. SULLIVAN lately made a speech at a London Home Rule Club which was apparently intended as an apology for the most anomalous of past or present forms of agitation. The statistics which he quoted may be admitted for the purpose of argument, though the estimate of two million Irish living in Great Britain is probably excessive, even if it includes all persons of recent Irish descent. Mr. SULLIVAN, though he is a man of ability and cultivation, apparently sees no absurdity in the maintenance for generations of a separate and partially hostile nation in the midst of the general English community. For an indefinite time the great-grandchildren of Irish immigrants are to enjoy all the advantages of English birth, and not only to disclaim the corresponding responsibilities, but to cultivate an exclusively Irish patriotism. In the United States the Irish, though they may be regarded with mixed feelings by their fellow-citizens, profess extreme devotion to the country of their choice, and illustrate their enthusiasm by a cordial support of one of the indigenous factions. In England they have rights but no duties, except to the country which they have left, probably without any purpose of return. Mr. SULLIVAN is kind enough to suggest to Irishmen settled in England that they have three courses among which they may choose. The first, and it might be thought the simplest, is that they should fuse with the English about them, as they do with the Americans in the United States. If agitators would let them alone they might perhaps follow the dictates of nature and common sense; but Mr. SULLIVAN says that the change is as impossible as that of a beech into an elm. The second plan, habitually recommended by blatant demagogues, is to be Irish in the sense of being anti-English and hostile to the people among whom they are living. Mr. SULLIVAN has too much self-respect to approve publicly of the criminal folly which is usually inculcated at Home Rule meetings; but chronic spite and sedition are more intelligible than his doctrine that, "placed as they were in the heart of the Empire, "they were just in the spot where they could best work "for and serve Ireland, and at the same time prove them-"selves the best friends of England."

The benefit to be conferred on England is of course the establishment of a separate State in Ireland, at first con-

nected with the rest of the disunited kingdom by some tie of nominal allegiance to the Crown, with the ulterior and speedy certainty of total separation. It is to this end that the Irish in England are to devote their energies in a spirit which would be strangely disinterested if they anticipated success. When Home Rule or Repeal was once attained, the Irish in England would no longer have any political object to pursue, unless indeed the beech, separated from its stem, became an elm. An independent Ireland could scarcely allow non-residents to share in its Government, and in Great Britain there would be no longer any Irish politics to occupy disengaged patriots. It is difficult to attach any meaning to Mr. SULLIVAN's declaration that the Irish in England should exercise a mediatory influence on the international quarrel which he, like other Irish orators, supposes to exist between Great Britain and Ireland. If Home Rulers in Ireland are parties to the dispute and not arbitrators or mediators, Home Rulers in England are in exactly the same position. Mr. SULLIVAN well knows that the whole project or pretence of Home Rule has virtually collapsed from the time when Mr. PARNELL discovered that separation was more popular than Mr. BUTT's illusory pretences of compromise. From their vantage ground in the heart of Great Britain the Irish immigrants and their descendants to the remotest generation are to employ themselves in promoting the disruption of the Empire. At the same time they will complacently regard themselves both as impartial mediators and as the best friends of England. Perhaps an orator must share the prejudices and affect the ignorance of the mob which he addresses; but some intellectual consciences would shrink from Mr. SULLIVAN's avowal of preposterous designs. The Irish residents in England are allowed to vote on the tacit assumption that they will use the franchise for the promotion of the welfare of the State. Mr. SULLIVAN advises them to disregard the implied terms of the bargain by attending exclusively to Irish interests. If English and Scotch elections were to be decided on Irish grounds, Parliament would be justified in withholding the franchise from unfriendly aliens; but in politics, as in commerce, the enemies of England rely with confidence on her tenacious adherence to liberality and justice.

Having defined the object of the war, Mr. SULLIVAN proceeds to draw the plan of the campaign and to muster his forces. It is not known whether he is well informed when he asserts that within a week or a fortnight "stock "had been taken of the Irish political power in England, "by some of the highest men in the land for their own "purposes," in connexion with the approaching general election. It may be hoped that Mr. SULLIVAN has attributed in mistake to the Liberal leaders an investigation which is very likely to have been undertaken by election managers of humbler rank. Statesmen cannot but know that an open alliance with the promoters of Home Rule would be fatal to the prospects of any party. Several unscrupulous candidates, after buying the Home Rule vote by unworthy concessions, have found it necessary to inform the rest of their constituents that they have only promised to vote for a barren and fictitious inquiry. In future the Home Rule electors will drive a harder bargain; and complaisant politicians will only pause in their progress of subserviency when they find that more is to be lost by alienating the English than they can gain by trusting to the Irish. As an encouragement to purchasers, Mr. SULLIVAN makes the most of the bulk and value of the commodity which Irish voters in English boroughs have to sell. The next election will show whether Mr. SULLIVAN is too sanguine. He professes to have ascertained that in four English constituencies the Irish voters can return a member. It is odd that not one English constituency returns a Roman Catholic, though the Irish electors almost always belong to the unpopular Church. There is no use in guessing at the towns in which Mr. SULLIVAN finds an Irish majority. He proceeds to state that in thirty constituencies the Irish electors have the absolute decision of contested elections in their hands, and that in sixteen other boroughs they have a considerable, though not a decisive, influence. The estimate of the number of cases in the second class cannot be tested until the comparative strength of the two English parties is known.

One of the many advantages of dealing with a cultivated and thoughtful opponent is that, in his advocacy of the most questionable doctrines, he cannot afford to be heartily cynical. Mr. SULLIVAN is evidently embarrassed by an indistinct consciousness that the Irish voters can only hold the balance between English factions by giving their support to the highest bidder. Though he would certainly not apologize for pecuniary corruption, the whole gist of his speech consists in the recommendation to barter borough votes for political concessions. The customers who are to be tempted have the less hesitation in giving the requisite promises because, like the unjust steward, they are paying their benefactors out of the property of their employer. At Manchester, at Newcastle-under-Lyme, and at Bristol, the buyer and seller have struck a bargain which perhaps appears to Mr. SULLIVAN, as to more disinterested observers, to be not a little immoral. He therefore salves the consciences of himself and his audience by asserting that at the general election "there will be no political huckstering. "Their vote would never be given unless there was "a principle behind the act of giving it. That vote "would not be the chattel or the property of any "British party, Whig or Tory. No person in the country "would again be able to calculate on the Irish vote as "a thing in his pocket." Inconsistency amounting to self-contradiction is sometimes creditable to the character, if not to the understanding. The earlier part of Mr. SULLIVAN's speech is devoted to an exposition of the duty and possibility of deciding the balance of parties by disposing of the Irish vote without reference to the merits of any political question. If there is to be a principle behind the act of voting, the vote is no longer a negotiable security, and the four boroughs, the thirty boroughs, and the sixteen supplementary boroughs will return their own members without reference to Home Rule pledges. It is not surprising that Mr. SULLIVAN should shrink from the theory and practice which he recommends. In the majority of recent transactions the Irish electors may complain that they have been deceived by obsequious candidates who hasten to explain away discreditable pledges.

COMPETITIVE EXAMINATION AT SOUTHWARK.

MR. WATKIN WILLIAMS has learnt by this time the folly of the inquiry which Scripture puts into the mouth of HAZAEL. His correspondence with Mr. BRODRICK was little more than an amplification of the exclamation, "Is thy servant a dog that he should do this?" He was shocked and pained at being suspected of approving of competitive examination for Parliamentary candidates. It was "degrading to the individuals," "injurious to the "State," and would "reduce the whole proceedings to an "absolute absurdity." The accounts which have been given of the meetings of the Southwark "Two Hundred" on Tuesday and Wednesday evenings completely bear out Mr. WATKIN WILLIAMS's observations. That they were "degrading to the individuals" is, one would think, self-evident. There cannot be much pride about a man who binds himself not to solicit election at the hands of a large constituency if he fails to make himself acceptable to two hundred men about whom he knows nothing, except that they call themselves a Liberal Committee and claim to have been chosen by some unascertained fraction of the Liberal electors in the borough. It is not wonderful that these Associations should lay so much stress upon the acceptance of this rule by the candidates who present themselves for selection. It is probably their only chance of concealing the fact that they do not represent anything like a majority of the party in whose name they professedly speak. If they can keep all rival Liberals out of the field, the choice lies between their candidate and a Conservative; and upon an issue thus stated the Liberal elector knows how to vote. If it were open to the rejected candidates to present themselves before the Southwark constituency at the general election, it might easily happen that the decision of last Wednesday would be reversed. Considering that the absurd farce which was acted at the Bridge House Hotel on Tuesday and Wednesday may have some influence on the election of a member for Southwark, Mr. WATKIN WILLIAMS's second charge against competitive examinations for candidates may be taken as proved. Anything which "degrades individuals" who may hereafter help to compose the House of Commons must so far be "injurious to the State." That the proceedings

on these two nights were reduced to absurdity from some cause or other is indisputable, and Mr. WATKIN WILLIAMS may fairly boast that each several part of his prophecy has now been justified by the event.

The most remarkable feature, however, in the whole affair was that the author of this lifelike description was himself one of the candidates who presented themselves for examination. So far from objecting to a competition among candidates, he declines to enter Parliament on any easier terms. He will not consent to be the Liberal candidate as a matter of favour, or even as an expression of confidence in his past achievements. He insists upon being put through his paces afresh. No matter how eager the Two Hundred had been to have him, he would still "have "required as a condition that he should state his opinions "and answer questions." This passion for being examined is at all times rare, and its occurrence in a gentleman who only a week or two before "disclaimed in the strongest "way" any application of the process to Parliamentary elections is peculiarly remarkable. It is plain that Mr. WATKIN WILLIAMS knew perfectly well what the process was to which he submitted himself. It would be difficult to describe the process of examination more accurately than by making it consist of stating opinions and answering questions. This is precisely what every man who goes in for an examination prepares himself to do if he can. Nor can Mr. WATKIN WILLIAMS plead that he supposed the design of the examination to be simply to test his competence for the post of candidate. His own words make it quite clear that he realized with entire accuracy the competitive character of the trial. The business of the evening he said was the "selection" of a candidate, and if after the Two Hundred had compared his speech with the other speeches they had heard, "they thought "another better able to fight the Liberal battle than "himself, he should cheerfully acquiesce in their "decision." We do not see what more Mr. WATKIN WILLIAMS could have said if he had been standing for a fellowship. To make the resemblance perfect, he was not content with doing his *vivâ voce* to the best of ability, he also left his paper work on the table for the benefit of the examiners in the shape of a volume of *Hansard*. Mr. WATKIN WILLIAMS has certainly displayed one faculty which often leads its possessors to political success. He can change his convictions with remarkable rapidity. He has found the interval between the talk of his standing for Guildford and the talk of his standing for Southwark long enough for an entire revolution of opinion upon a question which he must constantly have argued out with himself.

The details of this interesting experiment will not repay any long inspection. It is plain that as between Mr. WATKIN WILLIAMS and the successful candidate, Mr. THOROLD ROGERS, the choice of the Two Hundred was determined by the degree of amusement that could be got out of each. One of the Two Hundred asked Mr. ROGERS whether, if elected, he would pledge himself to "show his sweet face to the electors every six months at "least;" and there can be no doubt that any one condemned to listen twice a year to Mr. ROGERS or to Mr. WATKIN WILLIAMS would do well to choose the former. Mr. ROGERS has more fun in him and more repartee. He can tell a good story, and sprinkle his speech pretty liberally with epigrams which are decidedly above the electioneering average. By the side of these qualifications Mr. WATKIN WILLIAMS's rather laboured explanations must have seemed decidedly dull. This cannot be said either of Sir JOHN BENNETT or of Mr. LEICESTER. But the Southwark Two Hundred do dimly understand that they want in a member something beyond the power of amusing them for half-an-hour together. They could not swallow Mr. LEICESTER's offer to make himself Prime Minister in five years if the preliminary difficulty of getting into Parliament were surmounted by their aid; and Sir JOHN BENNETT's political career hardly admits of being taken seriously. If the proceedings of the Southwark Two Hundred are an example of the inner working of caucuses, it is plain that Sir WILFRID LAWSON will be the type on which intending candidates will do well to model themselves. The popular combination will be a certain amount of Radical shrewdness combined with some homely humour of expression. That it is possible to conceive a lower variety of statesmanship than this we do not deny; but a House of Commons mainly composed of Sir WILFRID LAWSONS and their humble imitators would not tend to raise the standard of legislation or government. Yet the system of competitive examination will make this a necessity. When some hundreds of men, mostly unfamiliar with politics except in their most local and concrete form, are brought together to choose a candidate by a process of unassisted inspection, they can only be guided by the qualities which admit of being displayed in the course of half-an-hour's speech and half-an-hour's baiting with questions. Readiness and a certain rough fun are indispensable qualities in a man who means to come through this ordeal successfully; and, as qualities for which there is a popular demand can usually be multiplied in a short time, it is these that will chiefly characterize the legislators of the future. This is not so charming a prospect as to make it incumbent upon every consistent Liberal to put no obstacle in the way of its realization. So long as the candidate of the Southwark Two Hundred is understood to represent the Southwark Two Hundred only, and to have no claim on Liberal support beyond such as is involved in having the promise of two hundred votes out of twenty thousand, no great harm will come of this particular essay at "organization." With a system of really secret voting, it may be doubted whether any one who is at all disposed to come forward for Southwark will be deterred from doing so by the grand electoral pantomime exhibited at the Bridge House Hotel.

RECRUITING.

THE convenient practice of presenting papers to Parliament is now supplemented by a practice of presenting papers to the *Times*. The column headed "Recruiting in "1878" which appeared in that journal a week ago was avowedly founded, not on an early copy of the Inspector-General's Report, but on the returns which are the basis of that Report. So long as the Government and the *Times* are satisfied with this arrangement, we do not know that the public need find fault with it. They at all events get the information sooner, and in a form in which they are more likely to read it, than in the traditional shape of either a Blue-book or a white paper.

The figures which show the total number of recruits enlisted in 1878 appear to be satisfactory. In 1876 there were 29,370 enlistments, and in 1877, 28,728. The figures for 1878 will probably come between these two numbers, but they will represent a more active flow of recruits, inasmuch as in the later months of 1878 the standard of height was raised, and other steps taken to ensure an improvement in the physical qualifications of the troops. It is a good sign that the flow was most rapid when the need for increasing the army was greatest. During the three months which the Reserve spent with the colours the recruits were nearly half as many again as during the other months of the year. In April they amounted to 1,998; in May, when there was most talk of war, they rose to 2,900; and in the following month they were not fifty short of the latter number. It is easy, however, to overrate the importance of this fact. It shows, no doubt, that the spirit of the nation has not grown so poor that there will not be men enough to come forward whenever there is any serious prospect of war. But the best intentions and the most gallant temper will not make a recruit an effective soldier until he has gone through the necessary training; and, though it is pleasant to know that we can always count upon getting hold of young soldiers whenever we want them, it would be pleasanter still to know that we can lay our hands upon trained soldiers whenever we want them. Happily for us, our Reserve system has never been tested in one most important point —the rapidity with which it can be brought to reasonable completeness. Short service and a small army make up an excellent method of forming a large Reserve, provided that there need be no hurry about getting it together. But, supposing that the Reserve had been wanted in any of the years between 1870 and 1875, it would have been an almost infinitesimal element in any calculation of our strength. The true way of creating a Reserve would have been to raise in the first instance an army considerably in excess of our ordinary requirements, and thus to pass a large number through the military mill in the same space of time which has now been spent in passing a small number through it. As things have turned out, it may no doubt be contended that this would

have been an unnecessary outlay; but where should we have been if events had moved a little quicker and the Reserves had been called out in 1874 instead of in 1878? In this instance Russia and Turkey were good enough to postpone the acute stage of their quarrel until we had made some appreciable progress towards being prepared; but risks of this kind have been run too often in the last half-century to make it excusable that they should have been run again. When Lord CARDWELL framed the scheme which has turned out so well the Government had no business to feel confident that England would remain eight years at peace. They had seen how quickly the sky had become overclouded in 1870, and they must have known what elements of disturbance the Franco-German war had left behind it. Under these circumstances the estimate of the cost of carrying out Lord CARDWELL's scheme should have included a provision for the maintenance of the army on an increased footing until such time as the Reserve was ready.

There would be no object in going over these forgotten errors, or in showing how dangers which, as it is, have been escaped ought by rights to have been guarded against, were it not for the occasional rumours that the Government contemplate repeating the blunder during the present year. The strength of the army in 1878 was greater by some ten thousand men than its ordinary strength. In 1877 it was about 182,000 men; in 1878 it was not less than 192,000, not reckoning the mobilized Reserve. If the hints that are let fall from time to time in well-informed quarters mean anything, they point to a desire on the part of the Government to reduce their military expenditure. After preaching that the recent increase in the Estimates is due to the parsimony of the late Government, which allowed the army to fall below the proper standard of efficiency, and throw upon the present Government the ungrateful burden of strengthening the unnoticed weak places which their predecessors had allowed to go uncared for, they are now, it is said, contemplating a retaliation in kind. The army is once again to be neglected, in order to convince the country that a Conservative Government can be as short-sighted and as reckless in the matter of retrenchment as any Liberal Government. It will of course be said that the preparations of 1878 were made to meet a specific danger, and that, now that this specific danger is over, there is no need to continue the preparations. We will concede for the sake of argument that the danger is really over, and simply ask whether it was not commonly said last year that the six millions voted by Parliament for the needs of the two services were spent, so far as the army was concerned, in making good defects which ought never to have existed. If this is true as regards defects in stores and equipment it is also true as regards men. The proportion of Reserve to men with the colours cannot be called satisfactory so long as it is necessary, whenever a war breaks out in Europe, to increase the regular army openly or secretly by ten or twenty thousand men. We ought always to be so far forearmed that we can watch the progress of a Continental conflict in well-grounded reliance on our ability to dispense with precautions the hasty adoption of which is, in fact, an admission that they ought never to have been neglected. The maintenance of the army at its present strength—unless indeed it has already been reduced in preparation for the Estimates—is one of these precautions. The addition of ten thousand men to the force with the colours means in time a proportionate addition to the Reserve. That addition ought to have been made long ago; but, as it was not made then, it had better be made now. There ought to be no reduction in the numbers of the army until the Secretary of State is able to assure Parliament that the Reserve has reached the strength at which it is desired permanently to maintain it. In our judgment the army ought to be increased so as to bring the Reserve to this point at the earliest period possible. But if this is a counsel of perfection too hard for these commonplace times, it is not too much to ask that the army should not be reduced until this modest conception has been realized.

Desertion seems coming to be accepted as an inseparable accident of military life. At least it is stated, almost as legitimate ground for congratulation, that the net loss from this cause during 1878 has been "about what it was "in 1876, and but a trifle over the figures of 1877." It is a little difficult fully to share the complacency which is called out by the fact that things are no worse than they were. When desertion first came to be talked about, it was usually assumed that the permanent loss from this cause alone of some 2,700 men a year was a state of things that required the prompt application of an effectual remedy. Either the remedy has not yet been discovered, or there has been an unaccountable remissness in applying it. It was supposed that the institution of deferred pay would have the desired effect; but the deserter does not seem to be in the least restrained by the knowledge that he will forfeit any claims he may have of this kind. Perhaps desertion is a temptation to which young soldiers are especially subject, and they are naturally little impressed by the forfeiture of an advantage the enjoyment of which is so distant, and which has to be purchased by continuance in an employment which they find more irksome than they expected. If desertion is to be effectually checked, it must be done in one or both of two ways. The service must be provided with additional attractions, or the process of identifying those who leave it without permission must be made easier. As regards the latter point, it may be doubted whether anything quite effectual will be done until the military authorities insist that every man in the army shall bear a distinguishing and ineffaceable mark. If there are prejudices which make the adoption of this system impossible, there is nothing to be said but that we must submit to the comparative failure of any alternative method that may be devised.

TERCENTENARY OF THE UNION OF UTRECHT.

EVERY ONE—having been so recently reminded of the facts —doubtless is aware that the Union of Utrecht laid the foundation of the famous Commonwealth of the United Provinces of the Netherlands, which we commonly call by the name of one province out of the seven, Holland; and that the three-hundredth anniversary, or "tercentenary," as the fashionable term is, of that event came round on the 23rd of the present month. On that day, which is regarded as the birthday of Dutch independence, in the year 1579, the deputies of five Netherland provinces, with Count John of Nassau, Stadholder of Gelderland and Zutphen, at their head, signed the Treaty of Union, which six days later was published from the Town House of Utrecht. In dramatic fitness, the first hand to be set to the treaty should have been that of the principal director of the movement, the great hero, soon to be the martyr, of the Netherland revolt against Spain—William the Silent. But the Silent One, ever cautious, ever anxious to avoid the charge of personal ambition, chose to keep in the background, and to put his less famous brother Count John forward as the ostensible leader. Not until the following May did William of Orange append his signature to the document. Philip of Spain, however, did not need to be told who had been the moving spirit. When in the course of the next year the King issued the famous ban which forbade food, water, fire, and shelter to William of Nassau, which gave the Prince's property to whosoever could seize it, and set a price upon his head, the creation of the Union of Utrecht was set forth as one of the crimes which justified these merciless penalties. Yet the Union of Utrecht, though afterwards regarded as the origin of Dutch independence, was not intended to be a renunciation of allegiance to Philip of Spain, or to establish an independent Republic. On the contrary, the framers of the document expressed their intention to strengthen the Ghent Pacification of 1576, which acknowledged the sovereignty of Philip. It is true that the confederates of Utrecht, like those of Ghent before them, recognized Philip's authority much in the fashion of our own Presbyterians who levied troops in the King's name to fight against the King. The United Provinces bound themselves to defend each other "with life, goods, and blood" against all forces brought against them in Philip's name. Two years after the Union the lingering hope of compromise and reconciliation with their lawful sovereign, which in 1579 still seemed within the bounds of possibility, was finally abandoned, and the revolted provinces by a solemn Act of abjuration cast off their Spanish tyrant.

Few nations have passed through a more terrible birth-struggle, and undergone a more complete baptism of blood, than the Dutch. In many of its incidents the struggle, especially in its earlier stages, reminds us of our own constitutional battles. The patriotic Netherlander, like the patriotic Englishman, put his trust, not in new-fangled rights of man, but in his ancient charters, his undoubted privileges and liberties. Every fresh stretch of tyranny was met with an appeal to some national or provincial chartered rights. Respect for precedent, belief in ancestral and immemorial freedom, the sentiment of conservatism and loyalty existing side by side with that of liberty, characterize the Netherlander as strongly as they do the Englishman. But our sufferings and our triumphs in the cause of liberty must yield in tragic and high-wrought interest to those of the Netherlands. History has no

more stirring pages than those which record how Holland and her sister provinces burst the bonds of Spain; none which can display deeds of more heroic valour, of more stubborn tenacity, and, it must be owned, of blacker cruelty on both sides—for if the Spaniard was a fiend incarnate, the Dutchman was often no angel. Special Correspondents were not as yet, and International Commissions never sat to inquire into atrocities; but, without their aid, the revolt of the Netherlands shows us quite enough of the uglier side of human nature. Like the Turk of old, the Spanish soldier of the sixteenth century might boast that where he set his foot the grass ceased to grow. Nay, in the eyes of the wild "Sea-beggars" of Zeeland who followed Admiral Boisot to the relief of Leyden, the Turk, with whom, it is true, they had not such familiar acquaintance as they had with the Spaniard, would have been better. The crescent, with the motto "Liever Turk than Pope," was the badge of these fierce patriots, one of whom, attempting to put in action that which was only the thought of Achilles—

αἲ γάρ πως αὐτόν με μένος καὶ θυμὸς ἀνήῃ
ὤμ' ἀποταμνόμενον κρέα ἔδμεναι—

was once seen to fasten his teeth in a Spaniard's heart, and, exclaiming "It is too bitter," throw it to a dog. Historians of civil wars are fond of using the grand phrase of "fratricidal strife." It was literally applicable to warfare as conducted in the island of Walcheren, where on more than one occasion men were seen helping to hang their own brothers who had been taken prisoners in the enemy's ranks. Yet, when we turn over page after page of horrors inflicted by the Spanish soldiery often upon unresisting victims, we cease to marvel at any retaliation, however atrocious. Diabolical cruelty to women seems to have been peculiarly characteristic of the most chivalrous nation of Europe. One wonders whether Cervantes, had his fate led him to serve under Alva in the Netherlands instead of under Don John of Austria against the Turks, would have engaged joyfully in the good work of butchering heretics, and have said Amen to Alva's pious comments upon the sack of Naarden. Can we fancy our beloved Don Quixote smiling approval as the soldiers' shouts of "Santiago! á sangre, á carne, á fuego, á sacco!" fell on his ear, or our equally beloved Sancho Panza enlivening with wise saws and quaint moralizings the monotonous labours of plundering and torturing the conquered?

Leaving these flights of imagination, we may note that in *Don Quixote* we do get one distant glimpse of the Netherland troubles. The captain who relates his adventures to the guests at the inn where Don Quixote made the famous onslaught on the wine-skins, tells his hearers that he began his military career by following "the great Duke of Alva" into Flanders, and was present at the death of the Counts "de Eguemon y de Hornos." In these we recognize the executed patriots Egmont and Horn, whom M. Gallait's pictures have made familiar to many of the British public who otherwise would never have troubled their heads about Netherland history. The names of Counts Egmont and Horn take us back to the preliminaries of the contest, when the Union of Utrecht and the Dutch Republic yet lay hidden in the future. Their names are inseparably connected with the resistance to Philip's first efforts to reduce the free-spirited Netherlands to that state of prostration under royal and spiritual absolutism which was his political ideal. Nevertheless we may fairly say that the cause of the Netherlands gained more by the deaths of Egmont and Horn than it would ever have gained by their continued lives. Neither of the two was a statesman, and the gloomy and unsociable Count of Horn had so little power of winning personal sympathy that even martyrdom in his country's cause could not gain him the honours of popularity. While weeping crowds flocked to the convent of St. Clara to kiss the coffin of the gallant and brilliant Egmont, as if it had been the shrine of a saint, the body of Horn lay almost deserted in St. Gudule's. Yet Egmont had already withdrawn from his position as a champion of freedom when Philip chose to re-elevate him to it by putting him to death. Disgusted by the excesses of the iconoclastic Protestants, the Count had given himself up to his feelings of Catholicism and loyalty; and any other king than Philip, any other governor than Alva, would have perceived that in the long run the worst use they could put him to was to behead him. As far as his historic fame went, Egmont was fortunate in his death. The loss to freedom and the world would have been far greater could the Blood-Council have laid its grasp on William of Orange. "Astutus Gulielmus," as Peter Titelmann the inquisitor styled him, had been wise enough to place himself beyond its reach. The common version of the farewell dialogue between Egmont and Orange—"Adieu, landless Prince," "Adieu, headless Count"—is probably apocryphal. The words really uttered by Orange to his friend were more tender and more solemn. After vainly trying to shake Egmont's infatuated trust in the Royal clemency, he wound up with the prediction, "I foresee too clearly that you are to be the bridge which the Spaniards will destroy as soon as they have passed over it to invade our country." Egmont stayed, to meet the doom foretold by his wiser friend; Orange escaped, to be the virtual founder of the Dutch Republic. Whether, if his life had not been cut short by the assassin's hand, he could have averted the permanent separation of Holland from Belgium—to use our modern nomenclature—and have established a Republic of Seventeen instead of Seven Provinces, remains a question; but at any rate his fall removed the only man who might have brought about such a union. It was in the period of doubt and despondency which followed upon his death that the medal was struck which represented a dismasted hulk driving before the storm, with the dreary legend, "Incertum quo fata ferant." But the author of this device hardly did his countrymen justice. The Hollanders did not abandon the vessel of the State to the chances of wind and wave; they stuck to her like good seamen, and worked her triumphantly into port at last.

For Englishmen the tale of the struggle of the Dutch for independence should have a special interest. Their enemy was our enemy; their cause was, in the eyes of all good Protestant Englishmen of the days of Elizabeth, our cause. In later times, indeed, this sympathy gave place to something very like antipathy. The Dutch, free, rich, and enterprising, were our rivals in trade, and bitter are the hatreds of two rival shopkeepers. The typical Dutchman of English imagination took the form of a rough skipper, eating red herrings, drinking deep of the best Hollands, swearing after the fashion of Dirk Hatteraick, massacring Englishmen in Amboyna, and trampling on the crucifix in Japan. We may remember how Gulliver, when passing as a Dutch merchant, petitioned to be excused from performing this ceremony, and how the Emperor of Japan, in Swift's malicious words, "seemed a little surprised, and said he believed I was the first of my countrymen who ever made any scruple on this point, and that he began to doubt whether I was a real Hollander or not; but rather suspected I must be a Christian." The nearest approach to a hero of romance that Holland was known to have produced was the Flying Dutchman, who can hardly be called a virtuous character. And has not poetry recorded in imperishable strains that

> In matters of commerce, the fault of the Dutch
> Is giving too little and asking too much.

But let us forget the ill blood, the bitter gibes of our days of commercial rivalry, and cast our eyes backward to the time when the interests of England and the United Provinces were felt to be one, and the Dutch were recognized as our brethren in the great fight for religion and national existence. To subjugate England, to reconquer the Netherlands, were parts of one vast scheme in Philip's plotting brain; and the conquest of either country would have paved his way to the reduction of the one still unsubdued. "The freehold of England will be worth but little if this action quail," were the words used by an English captain in reference to the defence of the Netherlands. In this "action" Philip Sidney sacrificed his life, and "the brave Lord Willoughby" displayed that "courage fierce and fell" which has caused him to be immortalized in song as a hero

> Who would not give one inch of way
> For all the devils in hell.

The three-hundredth anniversary of the defeat of the Spanish Armada, we may remind our readers, will come round in nine years' time, and as our antiquarian and historical tastes are nowadays assiduously cultivated, it is not improbable that we may rouse ourselves to celebrate the "tercentenary" of that great national deliverance with due patriotic fervour. If so, let us then give a thought to the debt of gratitude we owe to those stout sailors of Holland and Zeeland who kept Alexander of Parma blockaded in the Flemish ports and barred his junction with Medina-Sidonia. In serving their country they served England.

WINTERING ABROAD.

WINTERING abroad has become almost as essential a part of the order of the fashionable world as summering in town. Not so very long ago it was deemed that banishment from England at Christmas time was a penance only to be encountered where life and death were at stake; but now crowds of voluntary exiles are fast taking possession of the shores of the Mediterranean and, like all Saxon colonists, displacing the natives of those shores as surely as the sun does the snow. Truth to tell, the cause of their flight is not seldom the desire to escape the hospitable rites of an English Christmas. The bachelor flies from the necessity of eating Christmas dinners, or of feigning a mirth he cannot feel at Christmas parties. The householder turns his back on the awful duty entailed upon him as head of the family, that of crowding his house with relations whom he does not want to see, and who all quarrel among themselves. But it is by no means so easy for the householder to effect his escape as it is for the bachelor. If no plea of health can be established, it is difficult to find a sufficiently plausible pretext for the apparently incomprehensible whim of shirking a six months' residence in an out-of-the-way part of the country in the dullest, darkest, dreariest time of the whole year. His flight has to be furtive if he would escape the upbraidings of the whole clan of kindred who look on this dereliction of duty in refusing to keep open house at Christmas as an infringement of their just rights pretty nearly as dangerous, and quite as unjustifiable, as a readjusting of the land laws or the tampering with an entail. Perhaps, if the stayers at home knew a little better the sort of thing that the winterer abroad has to go through, the asperity with which they think of his good fortune might be a little softened. Their excited fancy sees him free from all cares, domestic and social, wandering at will by the shore of a bright blue sea, beneath an equally bright blue sky; through olive

yards and orange gardens where the ripe golden fruit hangs temptingly within his grasp. But this fancy picture is quite as far from the truth as fancy pictures generally are. The rash man who has decided on wintering abroad finds to his cost that his life is only transplanted, not transmuted, and that, by escaping from one set of difficulties, he has only tumbled headlong into another.

First of all, the momentous question of where to go to has to be settled; and this is no easy matter. One place is too relaxing, another too exposed, this too large and noisy, that too dull and quiet. At last, after weighing all the pros and cons, a favourite English colony is chosen. It is credited with all the advantages of scenery, climate, accommodation, and variety that the much-vaunted Riviera has to offer. On first arrival the weather is fine, and everything seems delightful. In a few days, however, it begins to rain with true Provençal determination. The natives, who are always praying for rain, themselves seem to stand aghast at the violence of the blessing when it comes. The newly arrived visitors gaze piteously from the windows of the hotel, wondering whether anything will ever be dry again. Within doors there is little to console them. The hotel is like an ark separated from the rest of the world by a waste of water, and the other inmates of the ark are not lively company. They are all either ill or devoted to the nurture of their health in order to avoid becoming so. Nearly all the *habitués* of the *table-d'hôte* and *salon* have a cough of some sort, except one or two patients suffering from St. Vitus's dance, and they are as unpleasant to look at as the others are to listen to. Then, too, all the meal hours are adjusted to suit the invalids. Dinner must be eaten at six, and after nine o'clock not a mouse may be heard stirring. The gifted youth who fancies himself a second Chopin and dares to break through established precedent by improvising till midnight on the piano in the *salon*, expecting thereby to earn the gratitude of the poor sufferers for whom he has been creating a lullaby, is astonished to find himself next morning treated as a malefactor, and can scarcely believe his ears when he is told that he must either give up such dissipation or go elsewhere. But more disquieting than the pianist or the invalids is the intelligent stranger who is so determined not to fall ill that he makes his health a matter of scientific study. He confides to each newcomer that there was fever last year in every hotel in the town, this one included; that the drainage is in a shocking state; and the water not above suspicion. Nor is it possible to forget his warnings. A strong smell of disinfectants gushes out upon you every time you pass his door. At every meal he ostentatiously brings in his private supply of distilled water, and assures his friends that it may be death to them to drink any other. He makes inroads into the kitchen to see that the cook scours his coppers carefully, and is not content with paying a visit of inspection to see how, when, and where the cows are fed, but sets off to the chemist with a bottle of the milk to have it analysed before he can drink it in comfort. In spite of his better judgment the winterer abroad is affected by this nervous neighbour, and is haunted by the dread of fever or diphtheria wherever he turns. But even worse things than these are in store for him. He finds out that the hostel in which he is will shortly be invaded by a personally conducted band of Cook's Tourists; and worse even than the distant prospect of the tourists is the immediate presence of the greatest bore in his county, who also has taken into his head to winter abroad, and has put up at the selfsame hostel. Life in an hotel having thus become a burden, our wanderer decides on taking a villa.

No sooner does his intention get wind than he is overwhelmed with offers of eligible houses by those persons who are interested in letting them, and awful warnings against the said houses by others who have no such interest. "Whatever you do, keep out of the mistral," say all these friendly advisers; but then no two of them are agreed as to which quarter the mistral blows from, some averring that it sweeps down from the snow mountains, another sect averring that the said mountains are the best screen from it, and that the wind to be dreaded is the one which blows in the contrary direction. Then come cautions against "getting on the clay," as that is sure to give you rheumatism; against one side of the town, as bad for the nerves and sure to give neuralgia; against another, as equally dangerous to the chest and liver; against them all, in the matter of drains and water; until the unhappy stranger feels as if it is all a dream that he has come to a favourite health resort, and thinks he must really be in one of the most unhealthy spots of Africa or South America, or some other of the places where the greatest care is required to preserve life, to say nothing of health. He is quite thankful at last to fall in with a cheerfully-minded agent, who alone of all the inhabitants takes a hopeful view of the sanitary conditions of the land in which he has come to sojourn. This man is a genius in his way, and has moreover the fairy gift of turning straw into gold by the power of persuasion. The houses that you have heard slightingly spoken of he soon convinces you are the most eligible to let in the place and quite faultless. He can tell you where to get everything of the best quality. All the tradesmen he recommends are immaculate, all the servants treasures. Under his auspices you are soon happily installed in a villa that seems all that heart can wish for. Having been at some pains to take your villa at a great distance from church and market on purpose to be out of the town, you find that your next care must be to provide a carriage to take your cook daily into the town unless you are content to trust to the chance of a very precarious supply of victuals. Now residents in villas take rank at once as members of the colony and are expected to do their duty in that state of life. Mere dwellers in hotels, being birds of passage only, are left more at liberty to follow the bent of their own inclinations. But the tenant of the villa no sooner enters on possession than he becomes the butt of endless volleys of circulars from the followers of every imaginable calling. He might almost fancy himself to be as destitute of clothing and as sorely afflicted as Job himself, so many are the offers which assail him for renewing his wardrobe in every different item at an easy rate, so constant are the entreaties that he will allow one doctor to examine his chest, another to draw his teeth, or try the remedies of a third for every several disorder to which humanity is a prey. He is supposed to be anxious to learn how to play on every known instrument, and how to speak every Aryan language, and professors of them all are at his gate ready to teach him. The rival incumbents of the High Church, of the Low Church, and of the Slow Church—for the colony is blessed with representatives of all three parties of the Church of England—each in turn tries to allure him to his respective fold. The worst of it is that he cannot favour one without offending the other two. Other enemies, too, he is doomed to make. The tradespeople whom he does not employ write indignant letters demanding the reason why they are to be deprived of his custom, just as if his forefathers had dealt with them for generations; and servants out of place feel aggrieved that he will not at once add wet nurses and grooms to his establishment, simply because they are ready to serve in that capacity and can produce unimpeachable characters. For some days after entering on possession the newcomer is left to the uninterrupted contemplation of as much of the interior of his villa as he can see through the atmosphere of wood-smoke which has resulted from his endeavours at keeping up cheerful fires. For the rainy days, which he was assured were to usher in fine weather, are wondrous slow at going out of office. The much-vaunted view from his windows is one unbroken stretch of leaden grey, in which sea and sky are scarcely distinguishable. The palm-trees, the boast of the garden, flap the ragged tatters of their dripping branches drearily to and fro; the olives shiver eerily in the hollows; while the gum-trees look like poles draped with seaweed by some abnormally high tide. Sallying out in a pause in the deluge, the new tenant finds that the greater part of the garden has suddenly been seized with a desire to come down the stair of which it forms the uppermost step. The rain has divorced the earth from the rock. The garden has come slithering down, bearing the wall before it, and in the earthy avalanche lies buried the winter stock of vegetables, save only a few cabbages which have escaped the general wreck, and hang like acrobats over the edge of the precipice, holding on only by the slenderest fibres of their upturned roots. The natives, all unconscious of Swift's axiom that a "lie is quite too good a thing to be lavished about," are ready to tell any number of them with regard to the present, past, and probable future of the weather. But the visitor, drawing his own conclusions from personal observation, decides that it always rains unless when there blows a violent and piercing mistral, and that this happens three days out of seven.

When a fine afternoon at length comes, it brings with it the painful revelation that the neighbours intend to call, and that the new comer is expected to devote many more afternoons to returning these calls. From a visitor he has passed into a member of a colony, half the units of which claim kindred with his kinsfolk at home. They are eager to welcome him to their midst, but then in return he must be altogether such as they are, or he will be reported as a very black sheep at home in England. And unless he minds his Ps and Qs he will very soon find that he has left undone those things which he ought to have done and done those things which he ought not to have done. Mrs. Grundy, too, is wintering abroad, and her eye is upon him. She nods to him in church, or notes his absence from it, spies him out in his solitary walks, and pulls him up as a recusant if he prefers these excursions to at-homes in over-heated and over-crowded drawing-rooms. She bids him disport himself on lawn-tennis grounds instead of roaming in the pine woods. She goads him into attendance at all the social gaieties by which the little knot of exiles try to cheat themselves into forgetfulness of their banishment from merry England. The better to carry out the delusion, by one consent every interest beyond the boundaries of the octroi is ignored. Conversation is rigidly restricted to the discussion of the doings of all the members of the colony, each according to his or her rank. If Providence should send a prince that way, he of course takes first rank as a subject for study and a text for conversation. But, in default of some one greater, even a duke will be accepted with thankfulness. His house becomes the "cynosure of neighbouring eyes." His family affairs are canvassed; his comings and goings, and those of his household, reported and commented on as if so delightful a topic could never be worn threadbare. Should our wanderer be a Gallio who cares for none of these things, should he be one of those eccentric mortals who like foreign ways in foreign parts, then he would do wisely to seek safety in flight before the season requires him to send Christmas cards and to lend a helping hand at Christmas decorations. Not improbably, as he turns his back upon the smart villas that hold this miniature society, and passes by the quaint old town crowding up round the sentry-like *campanile* that crowns the crest of the hill, the thought may cross his mind that the great man who first brought the place into fashion conferred on it a very questionable benefit. He comes home a wiser, if a sadder, man, more than ever convinced that nothing can be

taken on hearsay, least of all the delights of winter on the Riviera. In all likelihood he has made up his mind that wintering abroad is a mistake, and that, unless you can go far enough to escape wild weather and gossiping society, you may just as well stay at home.

THE *SPECTATOR* ON THE AFGHAN CAMPAIGN.

THE article in last week's *Spectator* on the campaign in Afghanistan is an amusing illustration of the sort of writing for which our respectable contemporary has gained a special reputation. The first point insisted on is the remarkable fact that the Indian Government has not publicly announced the nature and extent of the further operations to be undertaken by the advancing columns, as if this reticence were unprecedented and discreditable. We have occupied Jellalabad and the Koorum Valley in the North and Candahar in the South; but "no one appears to know, or even to guess, how far" the present Government "is going in Afghanistan, what sort of treaty, if any, it proposes to make, or what it intends to do with the positions it has acquired." The public has ceased to take any interest in the campaign, because the slaughter has been so small, "and the Government is therefore left free; but it takes no advantage of its freedom to clear up the haze in which it has enveloped its designs," and so on; from which artless statement the simple readers who receive their weekly dose of inspiration from the *Spectator* are apparently to infer that it is the proper and customary procedure in war for each combatant to formulate beforehand exactly what his plan of operations will be under every possible contingency, taking both the public and the enemy into his confidence. This was no doubt the course we followed in the wars with Napoleon. After Waterloo, for example, we halted on the field while the Government at home called a meeting of the Opposition and objectors generally to invite suggestions upon the situation and discuss the next move. In like manner the Prussians, after Sadowa, stopped the movement of their victorious columns, to give the Austrians time to say what they thought about the matter. Of all the unwarrantable complaints which have been brought against the Government, this of reticence about the plans of its army in the field is surely the most absurd; there now only remains one more charge to bring against them, and that is to hold them responsible for the present frost.

But it is not only the Government which is acting so unaccountably in the present war. The proceedings of the generals are equally opposed to precedent. For example, Jellalabad "is treated by the military authorities rather as a 'station' of the British army than as a mere outpost temporarily occupied." Considering that Jellalabad now holds the headquarters of a division, and a couple of brigades, the general might fairly plead, in excuse for this treatment, that it is in effect at this moment actually a "station" of the British army. But, except that one does not usually go to the *Spectator* for information on such matters, it might be asked in what respect the treatment of a place as a "station" differs from that accorded to an outpost. Possibly the *Spectator*, which favoured us not long ago with a circumstantial diagnosis of Shere Ali's mental condition and his private opinions on a variety of matters, may possess sources of intelligence not available to the rest of the world; but, so far as the reports from the scene of operations may be relied on, the only special treatment Jellalabad has received as yet appears to consist in an attempt to purge the town of some of its accumulated filth and to prepare lodgings for the garrison. Perhaps we are to infer that, if the campaign had been directed by a Liberal Government, the temporary nature of our occupation would have been formulated by keeping the troops under canvas through the winter. If the *Spectator* means anything at all by its remarks, it must mean this.

But if the troops in the north are going all wrong, by treating their posts as if they were stations, equally unsatisfactory is the line of action pursued in the south. "Not a word is revealed of the Government designs, or of the objects with which British armies are marching through territories in the depth of winter, of which a staff officer writes, that all maps are useless. There is not so much as a show of resistance to the invaders, far less a serious effort to contest any point or defend any fortress. There never was a war so strange"; and, moreover, it presents the further irregular feature of being carried on when Parliament is not sitting. As to the exceptional character of the advance, it does not appear to have occurred to the *Spectator* that the war which is "so strange" offers a singular resemblance in many points to the first Afghan war. Then, too, our armies met with scarcely any resistance; then too, as now, the ruler of the country made no sign while one place after another fell into our hands. As for the difficulty of finding our way, it has to be observed that if, as the *Spectator's* staff officer informs it, the maps of the country are useless, our army is moving along precisely the same line as was taken in the first invasion, and the places which the *Spectator* speaks of with a mysterious awe, much as a Roman in the Augustan age might write of Parthia, were in our occupation for four years, there being officers still in the army who are as familiar with Candahar and Ghuzni as the *Spectator* is with the Strand. The object of the advance "in the depth of winter," which appears so mysterious to that authority, to simple folk appears obvious enough. We hear little now of Russian action in Afghanistan, but if, under the dictate of a "safe" policy, our advance had been deferred till the spring, things might have taken a very different complexion. Any hesitation on our part would have put the Ameer in heart, and might have encouraged the Russian authorities on the frontier to play a bold game, and to give him an active support in preparing the means of resistance. If so, the positions which now have offered merely the resistance of nature and the elements might have been found almost impregnable, or would at best have been carried only at a great loss of life. The Indian Government has therefore shown a foresight as prudent as it was bold in pushing on at once, regardless of difficulties, and although incompletely prepared, and its wise policy has been most ably carried out by its officers. We are glad to be in accord with the *Spectator* on one point, in admiration of the courage and determination shown by General Stewart and his army. The advance on Candahar this winter has in fact been one of the most creditable performances ever recorded of British troops. It would have been easy to find excellent reasons for delay, while it must have required the exercise of an unusual amount of determination on the part of the General, and of endurance on the part of his troops, to carry out the campaign under a stress of cold and hard work which it is difficult to realize. After all, it does not require so much courage to stand up to be shot at in battle, when you are one among a great number, and moreover cannot run away, as to assume the responsibility for such an operation as that which Stewart has just accomplished, of the passage of the mountains which dominate the plain of Candahar, while the continued forward movement, after that objective point has been reached, is a stroke of true generalship. The loss of life among the unfortunate camp-followers, hastily and imperfectly supplied with clothing, must have been very great, and piteous to witness; but it has saved a much greater loss which would probably have taken place among the fighting men if the advance had been deferred till the spring. In war a general has to make a choice of evils, and Stewart has rightly chosen the lesser of the two presented. The loss of camels seems also to have been enormous, and one which will be more difficult to replace than the other, while unfortunately we do not hear that any adequate steps are being taken to make good the deficiency by pressing on the construction of roads for wheel carriage. Had General Stewart consulted his own fame, he would have no doubt preferred to distinguish himself by a bloody victory, for it is unfortunately true that our countrymen are prone to estimate the merits of their generals by the extent of the butcher's bill, which too often represents the result of blundering quite as much as skill. And the great merits of General Stewart's advance do not seem as yet to be properly understood; but we may hope that in the end they will come to be adequately appreciated. Certainly nothing will more tend to bring the war to a successful conclusion than this rapid over-running of the enemy's country, taking away all hope of successful resistance. Had the Germans been satisfied after Gravelotte with holding Metz, the war of 1870 might be going on still.

Equally wise as its criticisms on the conduct of the war are the *Spectator's* croakings about the supposed dangerous position of our troops. "The thirty-five thousand soldiers engaged . . . in the war are scattered over six points, separated from each other by wide stretches of mountainous country." Two of the points mentioned as being thus separated are Dakka and Jellalabad; two others, Candahar and Khelat-i-Ghilzi. Evidently the *Spectator* must have been using a very large-scale map indeed. Dakka is, in fact, a strong support to Jellalabad, just as Aldershot would be to Portsmouth, the places in question being respectively at about the same distance apart; and there are no mountains between them; while, so long as Khelat-i-Ghilzi is held in force, Candahar is as safe from attack as Calcutta. The three armies under Browne, Roberts, and Stewart are no doubt operating independently, and from separate bases; but each comprises a strong force of Europeans, and should be more than able to take care of itself. But indeed to suppose that a rabble which has not been able to make a respectable defence at a single strong point should be able to assume offensive war, is surely to carry croaking to the last extremity. Of course you cannot prove that there may not be danger. You cannot prove that the palanquin bearers of Calcutta will not rise tomorrow on the British. But if an army that overruns a country almost without opposition, and holds all the strong places with a complete chain of posts to the base, is in danger, what army is safe? Individual officers may no doubt be liable to assassination, but this is not a liability peculiar to the occupation of Afghanistan. The First Commissioner of Peshawur was murdered by a fanatic while sitting in his own house; another was cut down while riding through the street; since the occupation of the Punjab many other officers have shared the same fate within our own territory. The real danger of our position will not arise at the present time, but will come, if it comes at all, after permanent occupation, when the excitement has worn off, and our native troops begin to realize the discomfort of a tour of service in that country, and when perhaps, under a policy of retrenchment and reaction, the garrison may be reduced to an unreasonably low strength. But as for present danger, the army now in Afghanistan is very much stronger, especially in Europeans, and better found in every way, than that of 1839, which also overran and held the country with ease; it has strong reserves in support, which did not exist on the former occasion; and it is much nearer its base.

During the Abyssinian war, a foolish person, who signed himself "Nobody," kept on writing to the *Times*, predicting every

possible calamity to the expeditionary force; and the *Times*, with its usual sagacity, published the letters, which most editors would have thrown into the fire, in a conspicuous form. However, when the expedition was brought to a successful termination, everybody forgot all about "Nobody" and his false prophecies; and the best thing for the *Spectator* is that its ravings about the present war should also be forgotten as soon as possible.

THE RAILWAY COMMISSIONERS' REPORT.

FROM this recently published Report it appears that during the twelve months which ended in August last only fourteen cases came before the Commissioners for decision, and seven of these were such as before 1873 and 1874 were settled without any difficulty by arbitration. As we pointed out when speaking of the Report for the previous twelve months, during which nineteen cases were heard, this tribunal costs taxpayers about 10,000*l.* a year; and, unless clear proof can be given that the complaints of the very few suitors who resort to it could not be properly dealt with in any other court, it certainly seems strange, to say the least, that at a time when the expense of increasing the judicial staff is supposed to be one of the reasons why additional judges, who are greatly needed, are not appointed, so large a sum should be spent annually in maintaining a tribunal which has less work to do in two years than one of the Chancery Judges gets through in three months. An examination of the few judgments which the Commissioners have had to pronounce will certainly not leave the impression that their jurisdiction ought to continue because without them one class of litigants could not obtain justice. Putting aside questions of through rates, which, if any trust is to be placed in a Parliamentary guarantee, the Commissioners should never have been allowed to fix, there has been nothing in the cases on which they have had to adjudicate to take them out of the category of those which can be decided by ordinary courts or by arbitrators. It is true that a court might find it difficult to exercise one of the powers which, owing to the careless wording of a statute, the Commissioners are able to claim; but it has not yet been determined whether they legally possess this power; and it is perfectly clear that, according to the simplest rules of justice, they ought not to possess it. In considering, therefore, whether a tribunal to which plaintiffs so rarely come should be continued, this doubtful claim must be dismissed.

It may perhaps be thought that one reason why the Commissioners are so seldom appealed to is that they are not able to do much, and that if their jurisdiction were extended there would be plenty of work for them; but this can hardly be the opinion of those who have given attention to this matter and who are not carried away by prejudice. The Commissioners have—leaving out of consideration all disputed questions—very great powers, of which they have made the most unsparing use in favour of plaintiffs against Railway Companies; but nevertheless plaintiffs have only come forward in ridiculously small numbers. That there is not the slightest occasion to tempt people to litigation by increasing these powers can be shown from a recommendation made by the Commissioners themselves. They are painfully conscious of the solitude of their court, and have clamoured for further jurisdiction in a manner not a little remarkable for a quasi-judicial body. The principal suggestion made by them of late was that contained in their Report of last year, on which we commented at the time of its appearance. Being empowered in defiance of Parliamentary good faith to fix through rates on the application of Railway Companies, they demanded that this power should be enlarged, and that they should be enabled to fix those rates on the application of any private complainant; or, in other words, that any trader might apply to them to order a Railway Company to carry his goods at rates lower than those which by Act of Parliament the Company was entitled to charge. Railways have been constructed at enormous cost; a vast amount of capital has been advanced to Companies on the faith of the Parliamentary guarantees which have thus been given; and what the Commissioners proposed was that these guarantees should be deliberately broken, that the country, in fact, should not keep its word, and that they, three irresponsible persons, should be allowed to diminish the earnings which belonged to shareholders and creditors. A proposal that a Commission should be empowered to diminish the sums receivable by those who have purchased annuities would not be more opposed to all principles of justice, and it may clearly be inferred that there must be but little chance of legitimate work for a tribunal when its members are driven to suggest confiscation on a large scale as a means of attracting suitors.

In their last Report the Commissioners do not repeat this monstrous proposition, nor, strange to say, do they ask for any substantial increase of jurisdiction. They content themselves with giving an account of the fourteen cases which came before them, and with passing, so far as is possible in an official document, a handsome eulogium on themselves. Indeed parts of the Report read not unlike a statement by a clever attorney to a considerable client whose work he is afraid of losing. With respect to one matter they are able to claim some credit for themselves, and they do so with much emphasis. They have usually refused to allow appeals from their decisions, but in a few cases they have granted them, and in others it has been found possible to obtain the judgment of the Superior Courts on the Commissioners' decisions without the permission of the latter. In some of the cases which have thus come before the courts the decisions of the Commissioners have been confirmed, and they dwell on this fact with as much unction as though it was surprising that they should be right in their law. Indeed, so carried away are they by their delight at not having been wrong on some points that they utterly fail to perceive that, in the principal case mentioned by them, the decision, although given against a Railway Company, must have the practical result of aiding monopoly and discouraging competition, and must thus augment the evil against which the Commissioners are supposed specially to guard. The case referred to is that of Thompson, Evershed, and Others *v.* The London and North-Western Railway Company, in which, to use the words of the Commissioners, "the complaint was that the applicants, brewers at Burton-on-Trent, were not charged the same rates as some other brewers at Burton, although the services the Company performed were the same, and, with one exception, all the circumstances also were the same, the point of difference being that the brewers whose traffic was favoured were in a good situation locally to use the railway of another Company, in consequence of which the respondents, the North-Western Railway Company, could not attract a traffic which was competitive except by lowering their charges *quoad* such traffic to the level of the charges of the other Company." This the Commissioners held to be an undue preference; and subsequently, when a similar question arose out of an action to recover overcharges, the same view was taken by the House of Lords, the judges holding that the wording of sec. 90 of the 8 & 9 Vict. cap. 20 was too clear to admit of doubt. There can be no dispute, therefore, as to the law on this subject; but it is obvious that the effect of the ruling must be to diminish competition. Henceforth traders who are "in a good situation locally"—as the Commissioners, with slight tautology, say—for using one railway will find themselves practically confined to that railway, as another Company, with a more distant station, will not be able to compete except by lowering charges all round, which in most cases would not be found advisable. Some traders will therefore lose the many advantages of competition without any corresponding benefit being conferred on others. It can hardly be denied that grave doubt must be felt as to whether an enactment which produces this result is not too absolute, and the judges in the House of Lords carefully guarded themselves against expressing any opinion as to the expediency of such a rule. Singularly enough, however, no perception of the very obvious fact which has been mentioned seems to have dawned on the Commissioners. Of course they had to decide according to law; but it is certainly curious to find that, in their exultation at having been able to pronounce against a Railway Company and having had their law confirmed, they should fail to see what the effect of their decision must be.

In the other cases in which the rulings of the Commissioners have been held to be right there is little to call for remark; but two of those on which judgment has not yet been given by the Superior Courts merit attention—the first on account of the singular manner in which it seems to have aggrieved the Commissioners, and the second on account of the great importance of the question involved. In the case of the Warwick canals the Commissioners made an order granting a through rate along certain canals, and a motion was afterwards made for a prohibition against them on the ground that they had not statutory power to give the rate. The court granted a rule *nisi*, and stayed proceedings under the order until the question should be decided. That a court should be able to take this course—which had been followed in other cases—the Commissioners apparently consider very unreasonable. Their opinion appears to be that the operation of an order made by them should never be stayed except by themselves, pending the decision of a superior court on it, although it may prove to be altogether beyond their statutory powers. According to their view seemingly, if they were to order the North-Western Railway Company to pull down Euston Square Station, the Company would have to begin at once, and it would be very improper for a court to interfere, and to say that the station was to remain standing until the legality of the order was determined. It is to be regretted that such pretensions should be put forward in an official document, and indeed the Commissioners seem to have had some trouble in asserting them, for, in speaking of the Warwick canals case, they become almost incoherent, one of their sentences being so worded as to express—so far as it has any meaning—the opposite of what the Commissioners intend to say. Of the other case referred to we can only speak briefly now, owing to want of space, though we hope to treat it more fully at a future time, when we shall draw attention to some of the decisions of the Commissioners. In this instance they hold that, under sec. 2 of the Railway Traffic Act of 1854, which enacts that proper "facilities" shall be afforded for traffic, it was competent to them to order, on application being made, such alterations in and enlargement of any railway stations as might seem good to them. We have spoken before of the extraordinary nature of the power thus claimed. If it is rightly claimed, three irresponsible persons, from whose decision there will be in these matters no appeal, will be able to spend the money of shareholders almost as they please. It is scarcely possible to believe that the Legislature can have intended to give such an absolute power of arbitrary taxation to any official or judicial body; but at present no positive statement can be made respecting the law on this sub-

ject as the case has not yet come before any of the Superior Courts for decision. Perhaps indeed it will never be decided by them. The powers of the Railway Commissioners, which expire this year, are, it seems, from an answer given during the late sittings of Parliament, to be continued, and probably if this is done some attempt will be made in the Act which will have to be passed to define clearly the jurisdiction of the Commissioners.

It may well be thought, however, that the better course would be not to continue this anomalous court, of which the proceedings have been so singular. It is true, no doubt, that if the present Commissioners, who, though actuated by a sincere desire for the public good, have certainly shown no judicial capacity, and have taken a very one-sided view of their duties, were replaced by able and unprejudiced men, the work would be differently done, and that there would not be the painful spectacle of a tribunal begging for increased jurisdiction, and asking that Parliamentary guarantees should be broken. But still it seems clear that, however constituted, the Commission would generally be without work; and there can be little doubt that the grievances of the few suitors likely to come before it can be redressed without maintaining a court on purpose for them. There is nothing whatever in the questions which at long intervals are submitted to the Commissioners to make them unfit for being decided by the judges or settled by arbitration. It is difficult to see why a costly experiment which has failed should be repeated.

GRANDMOTHERLY ADVICE.

THE folly of teaching one's grandmother an easily acquired art is insisted on by the proverb. Perhaps the grandmother is no better advised when she, in her turn, gives the world lessons in the very simplest matters. Thus the lectures on "Health and Recreation" which Dr. Richardson has been reading at the London Institution may extort the smile of the worldling, but can only win the sympathy of those who are caution itself. It is never quite fair to judge a lecture by printed reports, which merely preserve the remarks that most impressed the mind of the shorthand writer. Very probably Dr. Richardson's advice was not so anxiously maternal as it reads in the newspapers. Without losing sight of this, we must confess that no one but Memnon, the hero of Voltaire's romance *La Sagesse Humaine*, ever equalled Dr. Richardson in extreme discretion. "To be truly happy," said Voltaire's Oriental sage, "is the simplest thing in the world. I must never love a woman, never eat and drink too much, never go to Court." When he had constructed his little theory of prudence in his own room, Memnon looked out of the window—he saw two ladies——. We all know the conclusion. "They brought the sagacious Memnon back from Court drunk, penniless, deceived, and with one eye knocked out." Voltaire probably meant to ridicule the famous maxim of Pascal:—"J'ai dit souvent que tout le malheur des hommes vient d'une seule chose, qui est de ne savoir pas demeurer en repos dans une chambre. . . . . On ne recherche les divertissements des jeux que parce qu'on ne peut demeurer chez soi avec plaisir."

Dr. Richardson protests that he is no ascetic, not one of the people who would be for ever moping at home; and it is a pity that he tries to convert his audience into a sort of self-conscious hypochondriacs. Hypochondria, in the long run, must be the result of constant thought about the golden mean in amusement. Dr. Richardson divides all civilized mankind into six classes, the composition of which we do not quite understand. First, there is "the learned, governing, and defending," next "the domestic," then "the commercial," fourth, the "agricultural," fifth, the "industrial," last, the "indefinite, non-productive, scholars and children." Which of these classes gets the most fun out of life at the least cost? that is the question. Which enjoys the greatest amount of diversion that does not end like the diversions of Memnon? To answer this, we must first glance with admiration at the divisions of humanity which Dr. Richardson borrows, he says, from the Registrar-General. Is it by way of fine irony that "the learned" and "scholars" are put so far apart? We know that there are some who think no man a "scholar" that cannot turn *Fifine at the Fair* into one of the metres of Pindar. In that sense, many learned men are not scholars, and it is perhaps fair to class scholars, as the Scotch class "fules" with "bairns," in the unproductive category. But why is the "domestic" division made? are commercial men not domestic? have the governing and industrial classes no wives and children? It seems likely that by the domestic class servants are hinted at. Still the division is rather a cross division.

Dr. Richardson says that five out of these six sets of people are all in the wrong about amusement. "They suffer from the course which they pursue." It is a most depressing thought. Infinitely more than five-sixths of the people on the globe are blindly running terrible risks in the hunt after pleasure. The one just class among the six is a very tiny one, composed of—whom does the reader suppose? Who does he think deserve the proud title, conferred by Dr. Richardson, of "the Greeks of modern life"? They are the "brain-workers." Now, if there is one set of persons more unlike the Hellenes of antiquity than another it is the conventional "brain-worker." Did Dr. Richardson ever cast a glance on him in the Reading-Room of the British Museum? Did the Greeks make those extraordinary noises which are uttered by the brain-worker? Did they live in an atmosphere of dust and in the smell of mouldy leather, with shoulders bowed from the constant stooping over desks, with eyes dimmed with weary poring over manuscripts? Plato has left us a cruel picture of a Greek brain-worker, a man who had prolonged the life which he spent in philosophizing by rigid attention to health and exercise. "A noble sort of life, forsooth," says the Athenian with a sneer, and he more than hints that a nurse like Mr. Matthew Arnold's "Wragge" would have been found very convenient "on the banks of the Ilissus" when the careful philosopher was a baby. Lord Beaconsfield has detected a much closer resemblance to the Greeks in the excellent young men of good family who spend their lives in the open air, know no language but their own, and never read a book. Even Dr. Richardson, we think, will admit that four undergraduates starting, with scarcely any clothes on their backs and never a thought in their heads, for a quarter-of-a-mile race are rather more like Greeks in personal appearance than is the most distinguished brain-worker. "The rising men of genius," says the young dandy of Mr. Du Maurier's drawing, "seem rather a grubby lot." Delphis and Eudamnippus, when they "left the bright toil of the palæstra," were certainly not grubby. It may be true, however, that "the brain-worker, divested of worry, is the happiest and healthiest of mankind, a man constantly re-created, and therefore of longest life." One thinks of Goethe, and admits that there have been brain-workers who were also "the Greeks of modern life." The compliment, however, is too sweeping; and even brain-workers themselves will grant, unlike the American in *Martin Chuzzlewit*, that they do not come up to the ancient Spartan ticket.

Dr. Richardson goes on to criticize the classes who are not brain-workers. The first group—that is, apparently, "the learned, governing, and defending"—"is able to command true recreation, but there is little attempt to use the privilege wisely." Dr. Richardson cannot really have meant that the learned and the governing classes (even when the "stupid party" is in) are not "brain-workers." If by the defending class he distantly alludes to the Volunteers, and their motto, "Defence not Defiance," it may be allowed that they are not always reading men. Perhaps, however, he means the army, navy, marines, and police; and indeed it is often said that the military are not clever. This is supposed to be one cause of their popularity with a sex which does not, as a rule, take very strongly to brain-workers. The first group, then, whoever may be included in the first group, "are subject to automatism of recreation." This is a very excellent description of the pleasures of the world. The giddy creatures of fashion (the remark is not original) spin round in ceaseless vortex, like the painted flies that dance through their summer day. The flies are not bored by the monotonous and mechanical nature of the fun, and we doubt if young men and women, while they are really young, are more bored than the ephemeral insects. Let it be granted, however, that their circle of pastimes does seem monotonous to the mature, the indolent, the brain-working, and generally to those persons who are not invited to join the dance. A philosopher, we think, should remember that it takes all sorts to make a world, and should leave girls and boys their possibly automatic delights. When they get tired of the usual round, they can go into sisterhoods, or marry, or take to brain-working. The fate, of course, of the gay whose heart never wearies of pleasure is melancholy enough. It is true, also, that "thousands of persons in London are wearing themselves out twice as much in the pursuit of recreative pleasures as in the labour of earning their daily bread." In fact, the majority of persons who pursue pleasure do not earn their daily bread at all. They are beyond the voice of wisdom, be it the wisdom of Memnon, or Pascal, or Dr. Richardson.

The physician's rather narrow view of life is particularly conspicuous in his criticism of the Volunteer movement. "When it was begun he was an enthusiast in its favour, but he now looked upon his enthusiasm as evidence of inexperience. It was not good for a man who had lost the elasticity of youth, and who felt himself becoming prematurely fat, to compete in the same exercises and fatigues as young men underwent in their training and drill . . . . it was drawing an over-draft on the bank of life." How shocking! the Volunteer movement was not invented as part of the regimen of persons who feel themselves becoming prematurely fat! It is the fault of Dr. Richardson to look at the universe—life, recreations, everything—from the point of view of this kind of sufferer. The Volunteers do not want the sort of recruit whom, according to Mr. Arnold, the old Celtic military code punished severely—the man "who stood out too much in front." The unbought defence of nations, the cheap protection of our hearths and homes, is not, and never was meant to be, a portion of the system of Mr. Banting. Let the prematurely fat take, like Lord Byron, to hard biscuits, salad, and soda-water. No one wants these corpulent targets in the Volunteers. If any one is still enthusiastic about the Volunteers, he is not likely to be chilled, as Dr. Richardson was chilled, by the thought that drill is not good for men who are adipose before their day. Dr. Richardson denies that he is a "man of one idea," as a critic has unkindly described him. The remarks about corpulence and enthusiasm might certainly mislead one into holding with the petulant critic.

In regard to the sports of youth Dr. Richardson spoke "like a printed book." "There must be discrimination in this matter (Volunteer drill), and also in football and rowing." So far, every one will agree with the lecturer, especially the captains of boats and the Presidents of the O. U. B. C. and

O. U. B. C. They are at present giving their whole minds to the discriminating search for men who can stay the long course. In his second lecture Dr. Richardson seems to have changed his opinions about football. We ourselves, like the authors of the Rugby Rules, are all for discrimination. "Scratching and biting are entirely out of harmony with the true spirit of the game," or words to that effect, have always commanded the assent of football players. We will grant, too, that the practice called "hinding" is tedious, and the player cannot be too severely reproved who hacks a man when he is not on the ball. It may be admitted also that the usage of Eton is more graceful, more truly of the nature of football, and better suited to men above sixteen, than the practice of Rugby. In his second lecture, however, Dr. Richardson throws "discrimination" to the winds. If the reporter may be trusted, "football he denounced, without qualification, as a brutal, savage, and insane pastime." Probably Dr. Richardson has not played for years and years, and some time may even have passed since he was a spectator of a good football match. At the risk of being thought brutal, savage, and insane, we must admit that football played with temper, fairness, and forbearancce—football like what we see when England encounters Scotland at the Oval or at Raeburn Place—is one of the most pleasant spectacles that our sports can show. We have never heard of a single severe accident at these great matches, where the flower of the lads of both countries meet in a pastime which certainly offers occasion for ill-temper.

There are, however, plenty of games which Dr. Richardson does not forbid, but rather encourages. He has a good word for bowls, cricket, croquet, dancing, swimming, skating, and lawn-tennis. He added, it is true, that "a craving for the repetition of any gratification was a sign of evil"; and this really is alarming. Most persons who like dancing—perhaps all—have a craving for the repetition of that gratification. Let them beware; it is a sign of evil. The man who has just hit Alfred Shaw into the tennis-court has a craving for the repetition of the enjoyment. It is hardly necessary to tell *him* to beware, for he knows that his innings depends on his not yielding to the temptation. Not twice will he receive the exquisite half-volley. But these are purely technical considerations. Morally, and as regards health, we must curb our inclination to have another set at lawn-tennis. In the case of croquet, the temptation is now almost invariably overcome, which is consoling.

Of all sports and pastimes, that which we should have thought most tedious and least attractive proves to be the most perilous. One hears occasionally of "heady debate," but it has been left for Dr. Richardson to pronounce that the exercises of debating societies are dangerously intoxicating. They might make a boy a bore; he might develop into that unparalleled nuisance, a Union orator; and, as the practice tightened its baneful grasp, might become an intelligent M.P., with a special subject, say the Regulation of Playgrounds for the members of Infant Schools. Dr. Richardson avers that "debating on difficult and great subjects by the young and inexperienced is one of the causes of injury peculiar to modern times, and is often extremely hurtful, both to the present and future of the debater." He seems to mean physically hurtful, and he has perhaps forgotten his Greeks, and the Socratic censure of the young men who debated on difficult and great subjects. Let school societies choose topics not too exciting, such as the propriety of substituting a soft ball for that now in use at cricket, and the desirableness of wearing great-coats in paper-chases.

Dr. Richardson might very fairly have said that athletics are overdone, and might have given plain practical rules and cautions. His lectures will not make boys muffs, because no one will attend to an adviser so much too cautious that he "severely reprobates the practice of mountain-climbing by the middle-aged."

AUTHORSHIP OF THE *ICON BASILIKE.*

IT is strange, and at first sight perplexing, to observe the hold which, in spite of all their faults, the Stuart family, and especially the leading members of it, still retain over the sympathies if not the reverence of Englishmen. There is some truth perhaps in the common saying that Jacobite songs began to become fashionable when Jacobite principles had ceased to be practical, and therefore ceased to be dangerous—after the rising of 1745 had been suppressed. No doubt many young ladies have rapturously sung "Charlie's my darling" to admiring audiences, who knew little and cared less about the religious and political issues at stake in the Revolution of 1688. Something of his sentimental popularity Charles I. may owe to Vandyke; something perhaps, as Macaulay suggests, to the wonderful Service for January 30, which has only within our own memory been expunged from the Prayer-book, and which throughout taught the worshippers to associate, almost to identify, the sufferings of the "Royal Martyr" with the Passion of Christ. But even Macaulay does not deny that Charles possessed "rare qualities which insensibly call forth the admiration and love of mankind," and which shone out so conspicuously in the closing scene that "from that day began a reaction which never ceased till the throne had been again set up in all its old dignity." In a subordinate degree that reaction was probably due to the appearance of the remarkable book the title of which stands at the head of this article, which was published immediately after the King's death, and professed to come from his own hand. The claim was indeed from the first disputed, and of late years has been generally assumed to be disproved. It is only incidentally noticed in Macaulay's History, in connexion with the indignation roused against Fraser, the new Whig censor of the press under William III., who in 1692 allowed a book to be printed by "an honest old clergyman named Walker" which, adds the historian, "convinced all sensible and dispassionate readers that Gauden, and not Charles I., was the author of the *Icon Basilike.*" Walker had at one time been curate to Gauden, afterwards Bishop of Exeter, and there can be little doubt that, if the *Icon* was not written by the King, it was written by Gauden. There is in fact no other claimant in the field. But any one who takes the trouble to examine the carefully drawn argument of a paper in the current number of the *Church Quarterly Review* on the subject will see that the evidence, both negative and positive, on the other side is very strong. That Gauden claimed the authorship is of course admitted on all hands, and it must also in fairness be admitted that such a claim would not in those days have been held so discreditable as in our own. The standard of literary honesty was less strict, and to a man of only average moral principle—and Gauden was certainly rather below than above the average—a pious fraud of this kind would hardly have seemed culpable when there was an adequate motive for it. And to wreathe a fresh aureole for the Royal Martyr's brow would naturally appear to a Tory Churchman of the period a very adequate and excellent motive. Still it is difficult to believe that Charles himself would have consented, as *ex hypothesi* he did, to so gross an imposture, and quite impossible to believe that Archbishop Juxon would have done so. We are not left however to inference and conjecture. There is a large amount of evidence available on the subject, of which space will only permit us to give a rapid summary here.

The influence of the *Icon* on its first appearance was so great that Cromwell and his Council found it expedient to do their best to discredit it. Milton accepted their brief, and wrote a book called the *Image-breaker*, one passage in which suggests an authorship other than the King's, but elsewhere it is throughout spoken of as his. Milton's book however was followed up by a pamphlet directly fixing the authorship of the *Icon* on either Dr. Hammond or Dr. Harris, which called forth so conclusive an answer that this theory has not been heard of since. Royston, the King's printer, and William Levett his page, were examined by Cromwell's Council, and both bore witness to the book being the King's, whereupon Bradshaw observed, "Who could think that so wicked a man could write so good a book?" Cromwell himself is recorded to have assured Lady Winwood that it was "Charles Stuart's book," and on her asking if he felt sure of it to have replied, "Yes, most certainly, for he was the greatest hypocrite in the world." And it is mentioned in two Orders in Council in 1634 and 1652, as "the late King's book." Milton also refers to it, as such, in his *Defensio Populi Anglicani* and *Ready Way to Establish a Commonwealth*. So matters continued to the Restoration, when royal letters patent were at once granted to Royston (Nov. 29, 1660), assigning him the sole privilege of printing the works of Charles I. "as a reward for his fidelity in publishing many messages and papers of our said blessed father, especially those most excellent discourses and soliloquies by the name of *Icon Basilike.*"

But at that very time there started up a rival claimant to the authorship, the only one whose pretensions need in any way concern us now, in the person of Dr. Gauden, Rector of Bocking, who was made Bishop of Exeter, December 2, 1660. In six successive letters to Lord Chancellor Clarendon Gauden urges his claim to better preferment, the see of Exeter being a very poor one, on account of his "signal services to the royal family," which are set forth at length in the third letter. Clarendon having professed his ignorance of these services, they were explained to consist in the composition of the *Icon* in the late King's name and with his approval and admiration. He wrote also to the King and the Duke of York, telling them what was evidently untrue—that he had communicated the secret to no one else. Clarendon merely replied that "nobody but Mr. Milton" would be glad to hear his news, when the matter became public, and neither the King nor the Chancellor attended to his request. In 1662 he wrote seven more letters to the Earl of Bristol, referring again to his "*arcanum*" and begging for the see of Winchester, the occupant of which, Bishop Duppa, was dying. He was appointed in July, not to Winchester but to Worcester, from which Morley had been translated to Winchester, and in the following September he died. His widow then appealed to Lord Bristol, on the same grounds, for the remission of certain claims in respect of her late husband's tenure of the see of Worcester, but her letter does not appear to have been answered, and the request was certainly not complied with. She also wrote a long narrative describing how her husband had composed the *Icon*, but her story supplies no fresh evidence except that she speaks of Archbishop Sheldon and Lord Capel as privy to the forgery. But there is no shred of independent testimony that Archbishop Sheldon knew anything about it; Lord Capel was a close prisoner at the time she says he was consulted about it; and both of them were dead when her narrative was published. There is on the other hand direct evidence that Archbishop Juxon asserted the book to have been entirely written by the King himself. Wagstaffe says that in a Life of her husband written by Mrs. Gauden, but which was destroyed after her death by her own order, there is not a word of his composing the *Icon*; Dr. Hollingworth vouches for the statement

that she expressed to a lady friend her fears for her husband's salvation because he had falsely pretended to be the author of the book; and whereas, according to another story, she assured the Bishop of Gloucester (Nicholson) that her husband was the author and that several of her relations could testify to it, the only evidence of any of her relations on record tells just the other way:—

A.D. 1694. The English and Dutch fleet being in Torbay, one Mr. Gauden, a nephew of Bishop Gauden's and Muster Master of the Blue Squadron, made a visit to the Rev. Walter Getsius, rector of Brixham. Mr. Getsius, on hearing his name, inquired of him whether he knew anything of what was then newly published by Dr. Walker and others concerning his uncle's writing the King's book. The gentleman seemed much troubled at the question, and said he was sorry such a false report was spread abroad. For, said he, "such I know it is. *My uncle was not the author.*" He promised Mr. Getsius to tell him another time how he came to be so reputed, deeming it not convenient to make the discovery in the company then present. The fleet soon after sailing out of the bay, Mr. Getsius saw him no more. But the truth of what is here related I have attested under his hand, in a letter dated June 23, 1699.

This brings us to Dr. Walker's *True Account of the Author of a Book entitled Icon Basilike*, which according to Macaulay has settled the question in the judgment of all sensible and dispassionate persons. It was not published till 1692, forty years after the appearance of the *Icon*, and when most of the persons concerned were dead. And it directly contradicts Bishop Gauden's own account of the matter and his wife's in several important particulars. Thus *e.g.* Dr. Duppa is said to have written two chapters of the book, whereas Gauden expressly asserted that it was exclusively his own composition. Dr. Walker says that, when he asked Gauden if Charles I. had seen the book in the Isle of Wight, he replied that he did not know, whereas Mrs. Gauden says that Dr. Duppa read several chapters to the King. Gauden again is made to say that he did not know whether Charles II. was aware of his authorship, though we hear that he himself wrote to tell the King of it. Dr. Walker speaks of Mr. Gifford helping to transcribe the book, but the story already quoted of Mrs. Gauden expressing her fears about her husband's salvation on account of his falsehood about the book rests on the authority of this very Mr. Gifford, and moreover a January 30 Sermon of his is cited in which he speaks of the *Icon* as "one of the most divine books ever written next to Holy Scripture." And Dr. Walker ceased to be Gauden's curate, and entered the service of the Earl of Warwick in 1647, the very year in which Gauden himself tells us that he began writing the *Icon*, during the composition of which Walker professes to have been with him, though he avoids giving dates.

But it may still be asked whether Clarendon and Charles II. believed Gauden's story. As to Clarendon, it is clear that he refrained from making any inquiries at the time, not unnaturally, for, had the matter become public, it would inevitably have discredited either the late King or one of the newly appointed Bishops; but there is no sign of his attaching any credence to Gauden's statement, and he evidently neither cared to reward his alleged services nor to buy his silence. Gauden speaks of Bishop Morley having told him he could have any preferment he wished for on account of his services to the Royal Family. But if Morley did say so, he cannot have referred to the *Icon*, for on his deathbed he sent a message to Clarendon, who was then in exile, to the effect that "the King had very ill persons about him, who endeavoured to persuade him that his father was not the author of the book which goes by his name." And Clarendon, on hearing this message, exclaimed, "Good God! I thought the Marquis of Hertford had satisfied the King in that matter." Lord Hertford is reported to have had in his possession a MS. of the *Icon* confided to him by Charles I. himself. It is clear enough then what Clarendon thought of the matter at that time. It is not equally clear what the King believed about it. Lord Anglesey's memorandum, stating that the King and the Duke of York assured him the book was written by Gauden and not by their father, is declared by his own son, Lord Altham, to be a forgery. Burnet however mentions that on his "talking very freely about religion to the Duke of York, and urging somewhat out of his father's book, the Duke affirmed it was not his father's writing," but Gauden's, and added that Gauden had brought the Duke of Somerset with him to the King to confirm his story. But that is impossible, for the Duke of Somerset died some weeks before Gauden first preferred his claim. All that can be said therefore is that the Duke of York at one time believed or professed to believe that the book was Gauden's, and that perhaps Charles II. did also. But it was obviously convenient to them to be able to keep such a reply in reserve when pressed with arguments out of the *Icon* in favour of the Church of England, which they had deserted or intended to desert for the Church of Rome. And the King at least betrayed no sign of believing Gauden's story at the time in his conduct. There is moreover, not to dwell on internal evidence, a great deal of direct external testimony which we have no room to go through in detail here, for the King's authorship of the book. There is evidence of his having begun writing it in 1641; of his losing the MSS. at the battle of Naseby in 1645, two years before the time when Gauden professes to have begun composing it, and of its being restored to him; also of its being seen by various persons during the three years between that date and his death. And there is evidence of Gauden's borrowing the MS. from Mr. Symmons, to whom it had been entrusted to give to Royston the printer at Christmas 1648, and sitting up all night to transcribe it. To sum up the case in the words of the writer in the *Church Quarterly*:—

Such is a rapid sketch of the origin and history of the *Icon Basilikè*, supported by the testimony of living witnesses whose eyes had seen the ink of the royal handwriting not yet dry upon the page, whose ears had heard the King speak many of the paragraphs as they now appear in the book. They are the links which form an unbroken chain of evidence from the moment when the King first conceived the idea of the book to the day of his murder, when it was published and placed in the hands of the people. These testimonies, though numerous, from all parts of the kingdom, agree together; they are direct and certain; most of them are attested by the hand and seal of one or two witnesses. They do not spring only from the Royalist side; those which bear most directly upon the case are supplied by the King's enemies—the officer who routed his cavalry at Naseby, the major of Cromwell's own regiment of horse, the commissioner appointed by the Parliament to examine the royal papers, the governor of Carisbrook Castle while the King was a captive within its walls. The only direct evidence upon which Gauden's claim may be said to rest is that of his wife and curate, Dr. Walker, testimonies which, it has been seen, conflict with each other and are full of inconsistencies and contradictions. Not one of the witnesses on whom they rely to support this claim can be proved to have ever opened their lips upon the subject. Two of these—Lord Hertford and Bishop Morley—give direct evidence on the opposite side. To Lord Hertford's keeping the original manuscript, in the King's own hand, was entrusted; Bishop Morley with his dying breath sends an emphatic message to Lord Clarendon that the book was written by the King, and by him alone. A third—Lord Capel—is proved to have been in strict imprisonment at the time, and could, therefore, not have been communicated with at all. Lastly, Gifford, the curate cited by Dr. Walker, delivers his opinion on a most solemn occasion that the book was written by the King, and his name suggests a saying of Mrs. Gauden condemning in the strongest terms the fraud practised by her husband in the matter.

On the internal evidence, which is also considerable, we have no room to enter here. But, unless some fresh testimony is forthcoming on the other side, the argument may be said at least to throw the burden of proof on those who dispute the professed royal authorship of the book. And the character of Gauden as known from other sources is not such as to give any independent weight to assertions of his which can be explained by an obviously interested motive.

LORD BEACONSFIELD AND THE YORK CHAPTER.

THE controversy between Lord Beaconsfield and the Dean and Chapter of York affords a fine illustration of the old saying that it takes two to make a quarrel, and the Premier's eagerness to entice his opponents into the legal arena irresistibly brings to mind the conduct of Messrs. Dodson and Fogg on the memorable occasion when these astute practitioners invited Mr. Pickwick to apply vituperative epithets to them jointly or to assault them severally. If the prerogative of the Crown is being impugned or obstructed by the conduct of the Dean and Chapter in relation to Canon Fleming, the Crown's First Minister ought not to be at a loss for means of coercion; but if not, there is something, to say the least of it, undignified in the spectacle of Lord Beaconsfield, so to speak, sparring up to the Cathedral body of York and begging them just to hit him first, in order that they may see what will happen. That this view of the position, though figurative, is not exaggerated, a short quotation from Mr. Algernon Turnor's letter of December 13 last will suffice to show. "Singularly enough," Mr. Turnor says, writing to the Dean and Chapter, "notwithstanding every effort, the solicitor for the Crown has failed to obtain from your solicitors any such refusal to admit Canon Fleming to his rights and privileges as a member of your Chapter as would enable the Crown to apply a mandamus." "Gentlemen of the Guards, please to fire first," is what this comes to, but the invitation, though couched in courteous terms, is possibly not prompted by the same chivalrous spirit. The Premier is, to use a vulgar expression, nonplussed by the passive attitude of the Dean and Chapter; all his stirring with a long pole is of no effect, and, feeling himself bound in loyalty to Canon Fleming to do something, he is not very clear what to do in order to relieve the Canon from his present somewhat anomalous position. Lord Beaconsfield's precise difficulty is this. The remedy which, presumably under the advice of the law officers of the Crown, he conceives to be applicable to the case of Canon Fleming is that by mandamus. Now, in order to found proceedings for a mandamus, there must be an absolute and unqualified refusal to do the act which it is the object of the mandamus to enforce the doing of, and it is just this refusal which the Dean and Chapter of York decline to give, confining themselves to an otiose dissent with regard to Canon Fleming's presence among them. Matters must come to a climax sooner or later. Some question will have to be decided by the capitular body in which Canon Fleming's vote would turn the balance one way or the other, and the point will then be raised as to whether he has a vote or not. Still, if the Dean and Chapter arrange their business well, they may succeed for a considerable time in avoiding this contingency, and preserving that masterly inactivity which has hitherto baulked the ingenuity of the Premier. Mr. Turnor writes as though it were a great hardship that the Dean and Chapter will not concede the opening desired by Lord Beaconsfield. We cannot at all see that this is the case. The very fact that the law prescribes certain remedies against the doing of certain acts affords at least a justification of

the conduct of persons who refrain from those acts; and Mr. Turnor, as representing the head of the State, should address the Cathedral body of York in the language of praise rather than of blame for "the absence of any illegal act of omission or commission on the part of your body." No man has any right to expect another to put himself out in order to afford facilities for legal proceedings. If A is not sure about the title to his land and asks his neighbour B just to walk on to it in order that he may sue him for trespass and settle the question, he has no ground for being surprised or offended if B politely, but firmly, declines to accept the responsibility. It is all very well to say the suit would be a friendly one; but friendly suits are apt to develop into hostile ones, just as sparring matches occasionally end in prize fights; and even if the suit continues on a professedly friendly footing to the close, the legal gentlemen who have to be employed in the course of it do not usually give their services in the same friendly and gratuitous manner.

Matters being thus at a deadlock, and no legal proceedings pending, we are at liberty to discuss the question, as to the settlement of which Lord Beaconsfield is so anxious and the Cathedral authorities of York so indifferent. The facts lie in a nutshell. Dr. Thorold, the present Bishop of Rochester, was, at the time of his elevation to the episcopal bench, Vicar of St. Pancras, a Canon Residentiary of York, and Prebendary of Holme. On his accession to his new dignity Dr. Thorold of course vacated all his previous preferments, and the Archbishop of York presented another clergyman to the prebend of Holme, who was allotted the stall lately held by Dr. Thorold and accepted as a member of the chapter. The Crown then appointed Mr. Fleming Canon Residentiary of York, thus splitting the dignities previously combined in the person of Dr. Thorold. The apparent result of this was to bring a supernumerary into the Chapter of York, who have aroused the wrath of the Premier by declining to accord to his nominee a vote in their deliberations. The right exercised by the Crown is derived from an assumption of the Royal prerogative attributed to Henry VIII., by which, when any spiritual person is made an English bishop, the preferments of which he was possessed at the time of his elevation fall to the sovereign, who may present to them by virtue of such prerogative. The claim of the Archbishop to present to the prebend rests on a statute of 1841, but sec. 25 of another Act, the 3 & 4 Vic. c. 113, vests the patronage of all canonries in York Cathedral in the Archbishop of the province. Section 93 of this Act, however, limits the operation of sec. 25 to residentiary canonries, the reason whereof would appear to be that up to that time the Dean had enjoyed the power of appointing the residentiary canons from among the non-residentiary. Any way Dr. Thorold was a Canon Residentiary, and but for the Royal prerogative, which overrides the Archbishop's privilege under the last-mentioned Act, the Archbishop might have appointed to the vacant residentiaryship. Whether he could have appointed a person other than a prebendary or non-residentiary canon, is another question altogether. The Act simply provides that he "shall collate thereto a spiritual person who shall therefrom be entitled to installation as a canon of the church to which he shall be so collated." At first sight one would think that any clergyman might be included under the definition of "a spiritual person," but a correspondent of the *Times* ingeniously points out that where precisely similar words have been used in the previous section, with regard to deaneries and to the three then existing canonries of St. Paul's, it is specially provided by the Act of 1841 that the holding of a prebend or other cathedral office shall not be an essential qualification for appointment to one of such deaneries or residentiary canonries. On this it is sought to base an argument that as no similar explanatory clause has been superadded to the section giving the Archbishop power to appoint to the vacant residentiary canonries at York, his Grace's choice must still be governed by the rules previously binding the Dean, and which the Act has tacitly recognized The point is distinctly arguable, though we are still inclined to believe that the words "spiritual person" must have the broader meaning accorded to them; that the Act does practically set aside the statutes of the Chapter of York in so far as they require the canon residentiary to be selected from among the non-residentiaries; and that the section in the later Act relating to St. Paul's was merely added *ex majore cauteld*. But in the present instance another point has to be considered. The Crown has not acquired the Archbishop's right to present; it has merely got a vacant place to fill up, and the Archbishop has to stand aside for this turn. The Crown cannot assume to itself a freedom of choice which the statute reserves only and personally to the Archbishop, but must fill up the vacancy in accordance with those statutes of the Chapter which, as Canon Jones points out, are still in force in Cathedrals of the old foundation such as York, save so far as they may have been modified or overruled by specific enactments. Though the Archbishop might, by his personal statutory power, present a person not a prebendary, it does not follow that the Crown can; inasmuch as even the prerogative must be exercised within the limits imposed on each act of its exercise. No one would assert that the Crown could present a person not in holy orders to a living rendered vacant by the elevation of its late owner to a bishopric; and, in a minor degree, this is the objection which may fairly be urged against Lord Beaconsfield's appointment of Canon Fleming.

But, assuming that the Premier had a right to appoint to the canonry residentiary, what is the position of his appointee with regard to the Chapter of York? It is difficult to conceive on what possible ground, save from a desire to create a difficulty, Lord Beaconsfield abstained from following the ordinary course of bestowing the residentiaryship and the prebend on one and the same man, or by what right the Archbishop put in a claim to the prebend apart from the residentiaryship. The Act of 1841, which gives the Archbishop or Bishop the right to present to vacant and unendowed prebends, is just as subject to the Royal prerogative as is the Act of 1840; and when Dr. Thorold was elected bishop, all his preferment, the prebend included, went to the Crown. It is specially laid down in the text-books on ecclesiastical law that, if a prebendary is made a bishop, the King presents to his prebend. Why, unless he was actuated by the motive above referred to, the Premier permitted the Archbishop to present to the prebend, as he is stated to have done with the acquiescence of the Crown, is beyond our comprehension. Still, that is how matters stand, and the two reverend gentlemen are now in the position of rival Popes. Which is to vote in Chapter? The Crown has handed over its nomination to the prebend, so to speak, to the Archbishop, and the Chapter, acting on the rule established in 1868 that non-residentiary prebendaries have not by reason of the changes introduced into their status by the Act of 1840 lost their right to a vote in Chapter, have accepted the Archbishop's nominee. But what is the status of Canon Fleming. The Chapter boast the assistance of "six or seven counsel," past or present, "of the highest professional eminence," and the Crown is not deficient in legal advisers; and, as these learned persons appear to differ diametrically, it is only with the deepest submission that we venture to hazard a conjecture.

The Chapter admit that Canon Fleming may be a canon residentiary; but, say they, he cannot vote because he is not a prebendary, and not therefore a member of the Chapter. Now nobody is a prebendary nowadays, the title having been changed for that of canon by the Act of 1840. But, whether as canons or prebendaries, the test of membership of a Cathedral body has always been the possession of a prebend or endowment in land or money originally given to a cathedral or conventual church *in prebendam*—that is, for the maintenance of a secular priest or regular canon. When monastic institutions vanished from this country, the corporate idea of the Prior and Brothers was perpetuated by the Dean and Chapter to whom the endowments of their monastic precursors were transferred, and the statutes of all cathedrals agree in limiting the governing body to the persons possessed of prebends, whatever differences may exist as to the relative duties of residentiary and non-residentiary members of the body. Much was done in the way of disendowing and otherwise altering the condition of non-residentiary prebends or canonries by the Act of 1840; but the constitution of the governing bodies of cathedrals remained untouched, unless the sections before referred to are taken to have wrought a change in the particular instances to which they apply. Up to that time a prebend was as necessary to constitute a member of Chapter as a constituency to entitle a man to a vote in Parliament, or a fellowship to give a voice at a College meeting; and this is the proposition still maintained by the Chapter of York. But the Acts of 1840 and 1841 conjointly introduced persons not prebendaries into the Chapter of St. Paul's, and it seems very possible that sec. 25 of the Act of 1840 has afforded opportunity for a similar innovation with regard to York. That section says that the person appointed by virtue of it is to be installed as a canon of the church to which he is collated, while sect. 1 of the same Act provides that all members of Chapter, except the dean, in any cathedral and collegiate church in England shall be styled canons. Is not then a canon so appointed and installed a full member of the Chapter by implication, even although he do not possess a prebend? Subject to the doubt expressed before as to the Crown's right to stand in the Archbishop's shoes, this may possibly be the key to Canon Fleming's difficulty. Still the question is a very difficult one, and is mainly due to the vagueness of the Act in merely describing the person eligible to one of the specified residentiary canonries as a spiritual person, and saying nothing about the prebend. In any case, Lord Beaconsfield has raised a perfectly unnecessary difficulty by the arbitrary exercise of only a portion of a prerogative which in itself is little in keeping with the spirit of the times. The Crown has relaxed its prerogative in spiritual matters so far as practically to give up its claim to the custody of the temporalities of a bishopric pending appointment, and also the old-fashioned rights attributed by Sir E. Coke to the Crown on the death of a bishop—namely, to his best horse or palfrey, his cloak or gown and tippet, his cup and cover, his gold ring, and last and most strange, his *muta canum* or kennel of hounds. Surely some concession might be made in the claim now enforced to all the preferment of any one who is made a bishop. It is poor encouragement to a patron to present the best possible man to his living if he knows that he runs the risk of losing his next presentation in case the Crown should approve his choice by bidding his nominee go up higher. At least the prerogative should be exercised rationally, the failure to do which has produced the present very uncomfortable state of things at York.

THE FLOATING DEBT.

THE magnitude which the Floating Debt has been allowed to attain has been the subject of much comment of late, and will probably occupy the attention of Parliament on an early day. Respecting the principle of a floating debt there is no controversy. Every Government has occasion to borrow now and then. Events may happen which render it expedient to incur a sudden and unexpected outlay; or an expenditure may be sanctioned against which ample security is taken for eventual repayment; or there may be demands upon the Treasury at times when it would be very inconvenient to the taxpayer to be compelled to meet the calls upon him, and when, therefore, it is advisable to anticipate the revenue. In any or all of these cases it is possible to avoid debt only by framing the estimates of each year so high above the probable outgoings as to allow a sufficient margin for contingencies. This would be to take out of the pockets of the people a larger sum than ordinarily would be required; and in a constitutional country such a course is liable to the further objection that practically it would be a nullification of the control of Parliament over the expenditure. But, if the Government is to borrow at all, it had better, when its requirements are comparatively small, avoid adding to the permanent debt, and get for itself the advantage to be procured by borrowing in the short-loan market. Usually the rates in that market are very low; and, as the credit of the Government is better than that of any possible competitor, it will secure those advantages in the fullest measure, its paper being eagerly sought after by banks and by those capitalists who desire certainty of repayment at a fixed date rather than high interest. But this, as we have said, is on condition that its requirements are moderate. Even the London market for short loans, vast as it is, may be seriously disturbed by a Government which takes up very large amounts. As such absorption leaves little for other borrowers, and may cause them grave inconvenience, they will of course bid high for the accommodation they want, and may thus raise the rates against the Government, which in this way is made to feel in its turn the inconvenience it has caused to private persons. During the late crisis we had an instance in point. On one occasion the Government was unable to get all the money it required, and for what it did obtain it had to pay four per cent. This is a strait to which a Government disposing of such enormous resources as ours ought never to reduce itself. Our national influence and standing depend largely on the common knowledge that, if need were, we could treble and even quadruple our present expenditure, and keep up the strain for an indefinite number of years. But, if we are often made to pay four per cent. for a temporary advance, we shall do our best to weaken the belief of other countries in the inexhaustibility of our resources. And it was only a chance that we paid as little as four per cent. It fortunately happened that during the crisis money was plentiful and cheap in Paris; otherwise we should have had greater difficulty in supplying our wants. As for private traders who were looking for accommodation at the same time, it is easy to see how they must have suffered from the competition of a borrower with such large requirements that, in spite of its irreproachable credit, it could not get all the money it asked for. We have here an illustration of some of the disadvantages of a very large floating debt, and others could be added. When a Government is constantly going into the market and absorbing a considerable proportion of the available loan fund, it is infallibly frittering away its credit. Much of the money it raises in this way would otherwise have been invested in Consols, and would have raised their price, which is only another way of saying that it would have improved the credit of the Government. Moreover, it is to be borne in mind that it is in the short-loan market that the funds are found for taking loans when first brought out, and holding them till the genuine investors are ready to buy. The largeness of the sum absorbed from that market would consequently have told against the loan which must have been issued had war broken out.

What we have been saying is on the assumption that the floating debt is exceptionally large at the present moment. That this is the case may easily be shown. At the end of the last financial year the floating debt amounted to 20,603,000*l.*; and from the Revenue Returns issued on Tuesday evening it appears that there have since been raised Exchequer Bonds, and Temporary Advances in aid of ways and means and for deficiency, amounting to 5,725,000*l.*, while 1,148,200*l.* has been paid off, leaving the net addition during the year 4,576,800*l.*, which raises the floating debt at the present time to 25,179,800*l.* As the taxes come in this liability will be reduced. Within the past fortnight, in fact, the advances on account of deficiency have been diminished about three millions, and before the end of the financial year they will be cleared off altogether. This will bring the floating debt to a little under twenty-four millions. We have to go back as far as the year 1858 to find it at an equally high figure. Since then it had never reached twenty millions until last year; since 1865 it had never been as large as ten millions; and, when the present Ministers came into office, it was under four and a half millions. The existing state of things is thus contrary to all recent practice, as well as prejudicial to the Government and inconvenient to the money market. This rapid growth of the debt is due partly to the purchase of the Suez Canal shares and to the naval and military preparations of last year, and partly to the system of making advances to local authorities. The Suez purchase and the naval and military preparations, however, were isolated and exceptional events, and they are responsible for the addition only of about eight or ten millions. It is the advances to local authorities that are seriously swelling the debt, and they must continue to do so as long as the system is persisted in. When introducing the Budget last April, the Chancellor of the Exchequer called attention to this effect of the local loans, but he proposed no remedy. It is to be hoped that in the coming Session he will not again content himself with calling attention to it; for it is a matter that requires practical action. The argument for these local advances is that Parliament throws upon the local authorities a great number of very costly duties, such as providing education, enforcing sanitary regulations, and the like, and that it is bound to enable them to comply with the law at the least burden to themselves. It is added that the Government can do so to its own pecuniary advantage. The credit of the State is so good that it can borrow at 3¼ per cent., and, by lending again at a slightly higher rate, can benefit the localities while realizing a profit. We have just seen the fallacy of the latter part of this argument. So long as the floating debt is small, the money market quiet, and trade dull, the Government can borrow in the short-loan market on easier terms even than those stated, but when these conditions are no longer fulfilled, the terms become onerous, as was the case five or six weeks ago. We have further to bear in mind that local authorities are inclined to extravagance, and by and by some of them may perhaps be found ill able to repay the advances. Lastly, the fact is not to be lost sight of that this system lends itself to corruption, and, if allowed to grow indefinitely may become the seed-bed of intrigue and demoralization. The contention, then, that the system is profitable to the State must be dismissed. The plea that the localities need help will just as little stand examination. It is absurd to pretend that such places as Birmingham cannot borrow all the money they require. And the smaller towns also would have no difficulty in getting credit to any reasonable extent. In truth, there is no better security than the rates, and all the help that is needed by the local authorities is an amendment of the law, extending the principle which prevails in London. The Metropolitan Board of Works is authorized to lend to the Vestries, the Asylum Board, and the School Board, and it raises the money it needs on terms almost as easy as those which the Government itself has to pay.

The first thing to be done, then, is to put an end to this system of local advances, or at any rate to reduce it within safe limits. The present Government is not responsible for the introduction of the system, and is therefore not committed to its defence. Nor need it fear the opposition of the localities. When the matter is clearly explained to the country, it is impossible to doubt that public opinion will support a measure for improving and sustaining the national credit. The growth of the debt would thus be stopped, and, if the existing taxation is maintained long enough, it would gradually be brought within manageable dimensions. Assuming that the official estimates of revenue are realized this year, and that no fresh extraordinary expenditure is incurred, the debt caused by the naval and military preparations will be cleared away in about two years, and in two more such a reduction might be made in the remainder as would render it manageable. If this course is thought too slow, there remain but two alternatives—either to issue Consols for the amount by which it is proposed to reduce the floating debt, or to divert to its liquidation the new Sinking Fund. Either alternative is objectionable. To increase the permanent debt of the country for the sake of enabling local authorities to save one-half per cent. in the interest they pay is a course that no statesman would propose beforehand, and it is not more palatable when recommended as a remedy for a blunder. To divert the Sinking Fund is really neither more nor less than to increase the permanent debt, though it would probably be better received by the public than an issue of Consols. But, however objectionable in themselves these alternatives may be, one or other of them must be adopted if the floating debt is to be speedily reduced. If the system of making advances to local authorities is to be continued, there will be no escape from them, unless taxation is increased sufficiently to provide the funds for making the advances. It is unnecessary to say that the country would never submit to additional taxation for the sake of accommodating local authorities, and therefore, if the system of advances is to go on, there must either be an issue of Consols or a diversion of the new Sinking Fund. Altogether, the matter is one that calls for the serious and practical consideration both of the Government and of men of business.

DRAWINGS BY THE OLD MASTERS AT BURLINGTON HOUSE.

IN the very interesting collection of drawings now displayed at Burlington House the art of Michael Angelo, Raffaelle, and Holbein is magnificently represented. To these names might indeed be added that of Lionardo da Vinci; but the studies from his hand, contributed from the ample store at Windsor, do little more than complete the impression left by the larger and more important series of his drawings exhibited last year at the Grosvenor Gallery. This remark does not, of course, apply to the large cartoon of the Virgin and St. Anne, which is without doubt one of the most important and beautiful works of the master in existence. The property of the Royal Academy, it has been hitherto so little known, even to professed students, that the composition has

sometimes been confused with that of the picture in the Louvre. The two works are in reality entirely distinct. The disposition of the principal figures has nothing in common, while in the picture the figure of the little St. John is omitted. There is, however, some little difficulty in identifying the cartoon with the description given by Vasari, who speaks of the Virgin as holding the infant Christ in her arms, and looking down upon the figure of St. John, who is sporting with a lamb. It is to be observed that the lamb has not been introduced into the cartoon possessed by the Academy; and we can only conjecture that Vasari was writing from recollection, and that he confused this part of the design with that of the picture in the Louvre, where we see that the infant Christ is sporting with the lamb. We may note, in connexion with this subject, that in the Print-room of the British Museum is to be found a first sketch, by Lionardo, for the design of the cartoon, and that this same design has been embodied in a painting, ascribed to Luini, in the Ambrosian Library at Milan. The smaller drawings by Lionardo here exhibited are specially instructive, as affording evidence of the many experiments in design which he made in preparation for the equestrian statue in honour of Francesco Sforza.

The drawings by Raffaelle offer a very complete record of the growth of his genius. They refer to nearly every stage of his career and to nearly all the great works upon which he was engaged. The studies in preparation for one of the frescoes at Siena (123) prove with what extraordinary rapidity the student became a master. Raffaelle had scarcely quitted the workshop of Perugino when he was summoned to assist Pinturicchio in the decorations of the Piccolomini Library. There has been considerable difference of opinion among competent authorities as to Raffaelle's share in the work, and attempts have been made to discredit Vasari's statement to the effect that all the designs were by the younger painter's hand. The evidence of such drawings as we possess, however, is decidedly in Vasari's favour. All those studies which are indubitably the work of Raffaelle—and to this class the present example belongs—tend to confirm the impression that he and not Pinturicchio gave the final shape to the composition. The important design belonging to the Duke of Devonshire, which was exhibited last year at the Grosvenor Gallery, exactly corresponds with the arrangement adopted in the fresco to which it refers; while the numerous studies connected with these paintings which are obviously not by Raffaelle, and may therefore with some show of probability be ascribed to Pinturicchio, nearly always reveal a marked divergence from the frescoes. But while the young Raffaelle was helping Pinturicchio he was also at work for himself. In 1503 he executed at Perugia a picture of the "Coronation of the Virgin," and we find two drawings from the University Galleries made in preparation for this work. The first (117) presents two figures from the principal composition, the second (134) is a sketch for the design of one of the compartments of the predella illustrating the Presentation in the Temple. It is very interesting to compare these two drawings, made, as we may suppose, about the same time, and yet so entirely distinct not only in the material but in the manner of execution. The two figures are most carefully finished with the silver point, but the sketch, drawn with the pen, already contains the suggestion of that extraordinary freedom and facility of style which afterwards became Raffaelle's special characteristic. No artist has ever lived who could with a few significant lines so completely embody a dramatic idea. He could record the shapes of an intellectual invention with all the ease that an artist like Rembrandt displays in registering the facts of nature, and when he had thus secured his impression, he could turn again to imitate with the utmost delicacy all the refinements of living form. This is perhaps the rarest quality in Raffaelle's genius. The fertility of his imagination never tempted him to grow insensible to the claims of reality, and we have evidence enough to warrant the conclusion that, if he had chosen to abandon the illustration of ideal themes, he might at any moment have taken the highest place as a master of portrait. One of the most celebrated works of Raffaelle's earlier time is the "Entombment" of the Borghese Palace. Numerous sketches for this composition are in existence, some of which are to be found in the present collection. About this time Raffaelle seems also to have been engaged on a design of a Deposition, afterwards engraved by Marc Antonio. From the University Galleries we have a complete sketch of this subject (155), while in the Grosvenor Gallery may be found a larger drawing for one of the principal groups, lent by Mr. Sacville Bale. These studies may be referred to the year 1507, and in the following year Raffaelle went to Rome and began the series of decorative paintings in the Vatican. It would be impossible within the space at our disposal to notice all the drawings in the present collection which are associated with these magnificent frescoes. For the School of Athens, certainly one of the most beautiful of the set, there are drawings of exquisite quality. Here, again, as we trace the progress of these paintings, we are able to contrast the delicate work in silver-point with the freer handling of the pen, and to observe how the finely finished chalk drawings seem to hold a place midway between the two—less elaborate than the one and more complete than the other. The figure of Poetry for the ceiling of the Stanza della Segnatura (111) may be chosen as an admirable specimen of the master's work in chalk; while the slighter sketch for a part of the Transfiguration (137), executed in the same material, records the manner of his design in connexion with the last great work upon which he was employed. Altogether this superb series of drawings, in which we have only been able to distinguish here and there a prominent example, offers a higher tribute to the strength of Raffaelle's genius than his paintings, taken alone, are able to afford. His artistic nature was so harmonious and complete, and his invention so fresh and spontaneous, that in his first thoughts we get often the best that he had to give. He could not acquire by any amount of consideration that peculiar intensity of style which belongs to Lionardo da Vinci and to Michael Angelo, and what he added in the later stages of his work not uncommonly bore a conventional character which tended rather to impair the impression of his own individuality and to obscure that relation with nature which his drawings always reveal.

The collection of drawings by Michael Angelo is scarcely inferior to the Raffaelle series. Here the most important examples are nearly all from Windsor, and it would indeed be hard to find anywhere finer specimens of the master's style than "The Christ Rising from the Sepulchre" (262), "The Shooters at the Mark" (302), and the "Prometheus Devoured by a Vulture" (301). Some admirable drawings by the master are also contributed by Mr. Vaughan and from the University galleries at Oxford. The latter contribution, it may be said, is by no means of uniform value throughout, but it contains many celebrated designs of the highest interest, some of which are already well known by means of photographic reproductions. Photography, it must be allowed, has done much to vindicate Michael Angelo's reputation. Braun's excellent series of autotypes after the frescoes in the Sistine chapel have availed to dissipate the too-prevalent notion that Michael Angelo's fame rested upon the display of violent and exaggerated gesture. The careful study of his drawings will be no less instructive in helping us to form a truer judgment as to the real sources of his greatness. They prove to us that his strength was associated with the utmost refinement both of idea and workmanship. Endowed with a temperament that may in the truest sense of the word be described as religious, he created for the purposes of his art a type of face and form fit to express all the deeper emotions of humanity. But while he did not neglect the intellectual element of art he was, as the drawings amply demonstrate, equally mindful of the truths of nature and of the claims of beauty. His studies of the human figure have all the modesty of the most careful studentship. The mastery with which they are executed is never carelessly or wantonly displayed, and where there is need of sentiment, it is always expressed with a tenderness that does not exclude the impression of force. How much patient labour went to the perfecting of his great imaginative compositions is very clearly shown by a reference to the series of drawings referring to the subject of the Resurrection. It is worthy of remark that this subject was never painted either by Raffaelle or Michael Angelo, and yet both have left to the world a number of experimental drawings for different versions of the composition. Here we find from the Windsor collection a complete design with numerous figures (268), besides separate studies for the figure of Christ. The British Museum possesses other examples belonging to this series, and a very beautiful rendering of the principal figure belongs to Mr. Malcolm. The Crucifixion was another subject upon which Michael Angelo bestowed a vast amount of thought and labour, as we may see by reference to several sketches in the present exhibition. It is not a little surprising, considering the years of work which he expended upon it, that we do not possess a greater number of designs in preparation for the tomb of Pope Julius II. There is, however, a very interesting sheet of sketches for some of the sculptured figures that were to be placed around the monument (248); and it may be worthy of remark that one of these sketches corresponds with the motive of a larger figure on the reverse of a drawing from the Windsor collection (249).

The magnificent series of portraits by Holbein scarcely require criticism or description. The perfection of workmanship displayed in them almost defies analysis; and, on the other hand, they present no intellectual problems calling for solution. The art of rendering individual character had never before been carried so far, and, we may add, has never since been carried further. It is the peculiar secret of Holbein's power that he could give to all his work a sufficient sense of beauty without at all compromising the impression of absolute veracity. The faces that he has undertaken to preserve for us are not always beautiful, but they are always drawn with such incomparable dignity and simplicity of style that we are sure of a certain beauty in the result. Besides the series of examples from Windsor, the Royal Academy has been fortunate in securing the large cartoon belonging to the Duke of Devonshire.

REVIEWS.

SEELEY'S LIFE AND TIMES OF STEIN.*

MR. SEELEY, the Regius Professor of Modern History at Cambridge, has made a valuable contribution to English knowledge of German history and German politics in

* *Life and Times of Stein; or, Germany and Prussia in the Napoleonic Age.* By J. R. Seeley, M.A., Regius Professor of Modern History in the University of Cambridge. Cambridge: University Press. 1878.

a very elaborate sketch of the Life and Times of Stein. It is impossible to understand the present history of Germany without a previous acquaintance with the history of Germany, external and internal, in the Napoleonic era, with the labours of Stein and Hardenberg, and the preparations for Prussian strength and Prussian ascendency. This field of historical research, so rich in instruction, was almost entirely untouched by English writers; and Mr. Seeley may be congratulated on having found a sphere for his labours which thoroughly deserved the patient industry, the exhaustive inquiry, and the discriminating impartiality with which he has approached his task. He has chosen, and fairly chosen, Stein as the protagonist of his drama, and has combined a minute biography of one statesman of the epoch with sketches of a great number who clustered round him or came in contact with him, and with disquisitions on the leading events and political complications of the period. His work has all the merits and the defects of this plan. It furnishes at once a complete biography, a repertory of information, and a manual of sensible discussion. No one, not even a German, could possibly wish to know more about Stein than Mr. Seeley tells us. Inside the biography of Stein there are biographies of Hardenberg, Niebuhr, Arndt, Blücher, Gneisenau, Scharnhorst, and many other less illustrious persons. The book answers the purpose of a biographical encyclopædia of all the eminent Germans who played a part in the political history of the early years of the present century. There are also interesting and detailed accounts of such subjects as Prussian finance, the Prussian army, and the Prussian bureaucracy, and many remarks sound and sensible, if not very novel or original, on the career and projects of Napoleon. A reader who did not own that the book had taught him much would only proclaim his incapacity for learning. On the other hand, a work so planned has inherent defects. We never know where we are in it. We are swept away into a tide of general reflections and subordinate sketches, and then whirled back into a little eddy of Stein's peculiarities and opinions and anecdotes of his family history. The difference of scale on which Stein and his surroundings are respectively treated is always puzzling us. It is like reading an essay on the reasons and consequences of the Revocation of the Edict of Nantes interlarded with a catalogue of Louis XIV.'s snuffboxes. This defect, however, is perhaps inherent in the plan of the work, and we gain so much from the plan of the work in other ways that we may be content to take that which jars on us along with that which pleases and instructs us. But the work has also defects which do not arise from its plan. The first of these defects is its enormous prolixity. There is a prolixity which is necessary to a large subject, and the life and times of Stein could not be described very briefly. But there is also a prolixity which comes only from the writer. Mr. Seeley is always speculating about something in Stein's life which needs no speculation. He can never rest satisfied without at each point of his career discussing Stein's hidden motives; nor does he merely indicate what he thinks were these hidden motives, but shows that other guesses than his own must be wrong. All these wearisome pages are really written not for any Englishman, but at some more or less obscure German. They are like the footnotes to editions of the classics in which the commentator not only shows what an expression means, but also shows that it does not mean what twenty other commentators have thought it meant. The second defect of the book is a certain flabbiness of style. Mr. Seeley too often writes like a sweet young authoress. He is continually bursting out into notes of admiration at his own remarks. He tickles our interest by keeping us waiting, and mystifies us with arts of infantine simplicity. In order to tell us where Stein's old home was, he invents an imaginary tourist taking a walk from the railway station. The tourist sees a tower. Is this the Burg Stein? Oh no! It is the Tower of Nassau. The tourist sees another erection. Is this the Burg Stein? Oh no! It is the covering of a statue. This is in the style of the Scotch preacher who kept his congregation on tenterhooks while he laboriously asked whether the fish that swallowed Jonah was a cod, a minnow, or a salmon? Mr. Seeley tells us that Stein studied German history in order to instruct his eldest daughter. Subsequently Stein is discovered to be reading more German history. What is this for? The secret shall be told, but not yet. The reader must be patient. He shall know in good time. Ultimately he ascertains that Stein's object is to instruct his second daughter, and Mr. Seeley adds the profound remark that this daughter was not a son, but a daughter—a daughter! with a note of admiration. This is, surely, but poor fooling.

Heinrich Friederich Karl Freiherr vom and zum Stein was born October 26, 1757; and Mr. Seeley points out that it was a great advantage to him through life to have started with this "vom" and "zum," instead of the ordinary "von," as it showed that he was an Imperial Knight—that is, that he belonged to a body which held directly of the Emperor, and had its own small judicial power and a peculiar system of representation. Stein thus started in life free from any ties to any particular German State; and it was only after having considered whether the service of Austria was preferable that he decided on that of Prussia. When he was sixteen he went to a private tutor at Göttingen, and there studied jurisprudence, English history, and English books of political economy and statistics. His first intention was to practise in the highest court of the Empire; but, after visiting the Austrian dominions, he went in 1780 by Dresden to Berlin; and, finding there an old family friend in a Minister of State, received and accepted a minor post in the Mining Department, over which this friend presided. Pausing to discuss the preliminary question whether Stein knew anything about mining or metals before he entered on the duties of his post, Mr. Seeley suggests the plausible theory that Stein knew a little, but knew only a very little, about these things. In 1785 he was sent on a very trifling mission to Mayence, in order to secure the adherence of the ecclesiastical Elector of that place to a league of the minor Powers and Frederick the Great against the innovations of the Emperor Joseph. He then visited England; but of his visit even the patient industry of Mr. Seeley has been able to find no details. On his return in 1787, when he was thirty, he received the offer of an embassy to the Hague, and then of one to St. Petersburg. What these embassies meant is unknown; but the reader will find in Mr. Seeley's pages an ample collection of conjectures as to what they might have meant. Anyhow, he secured in 1787 promotion in the sphere he had chosen; and he was placed at the head of one of those War and Domains Chambers (that of the provinces beyond the Weser) through which local government in Prussia is conducted. Here he remained for the next seventeen years, rising higher and higher in the grades of this department, and becoming ultimately Supreme President of all the Westphalian Chambers. In 1793 he married a young lady after much hesitation whether he could not do better, and enjoyed a mild domestic happiness, congenial work, and the successes of provincial administration, until in 1804 he was lifted to a higher sphere, and was nominated Minister of State at Berlin, with the charge of Excise, Customs, Manufactures and Trade, and a modest salary of about 1,000*l.* a year. As Mr. Seeley honestly owns that Stein's financial administration in the two years which brought Prussia to her great shipwreck was not of much importance, it may be passed over. After Austerlitz, Prussia, under the guidance of Haugwitz, broke away from Austria and England, and accepted Hanover from Napoleon. Stein was altogether opposed to this tame and perfidious policy, and he began to form or head an opposition to the immediate advisers of the King. The Ministers communicated neither with the King nor with each other, and affairs were really managed by a little clique of Court favourites. Stein's main object was to break down this system, and to substitute a Council of Ministers consulting with each other and advising the King without the intervention of interlopers. Throughout the whole of 1806 the contest was carried on, Stein and his friends submitting their views to the King, and the King rejecting them, but with decreasing firmness. At last, after Jena, the King made up his mind to dismiss Haugwitz, and wrote to Stein offering him the Ministry of Foreign Affairs. Stein refused in a reply which Mr. Seeley characterizes as seeming in part strangely pedantic and unreasonable, but as being probably well judged on the whole. It amounted to a declaration that Stein would not accept a department for the efficient carrying on of which he had not had the proper training. The King endeavoured to hit on a compromise, and after a previous failure appointed three Ministers as a Council and without a Cabinet to come between them and the King, but with a Secretary, who was one of the clique to which Stein objected. Stein was to be the Minister of Interior and Finance, and the King understood that Stein had accepted his new office. But on his sending back some papers on the ground that he had nothing to do with them, the King's patience was at an end, and he wrote Stein a very severe letter, in which he roundly informed him that he considered him a refractory, insolent, obstinate, and disobedient official, and on January 4, 1807, Stein was dismissed from the King's service.

Stein was not, however, destined to remain long in retirement. Things in Prussia were in so very piteous a state after its military disasters and its subjection to Napoleon when Russia abandoned its cause at Tilsit, that the necessity for strong remedies and the guidance of a strong man was recognized at once by the nation and the King. Accordingly the King notified to Stein in August 1807 that he would not only make him Minister, but would give him real power. In the October of that year Stein was installed in office, and he and the colleagues with whom he associated himself, of whom the best known and the ablest was Scharnhorst, set about the great work of legislation which is generally connected with Stein's name. In about a year from the time of his acceptance of office Stein was forced to leave Prussia altogether. He had imprudently written a letter in which he very plainly intimated that the successful opposition of Spain to Napoleon was working on German minds, and that he himself was anxious to see a preparation made for a general German revolt against Napoleon. This letter fell into Napoleon's hands, and was published in the *Moniteur*; and as Prussia was completely at Napoleon's mercy, it was impossible that a Minister who had expressed himself with so much freedom about the conqueror could remain at the head of affairs in the conquered country. Stein's legislation was thus crowded into a single year; and that in a single year four measures of great and radical reform should have been drafted or adopted, under Stein's superintendence or at his instigation, amply testifies to his zeal, his energy, his originality of mind, and his power of imposing his opinions on others. These four measures were the reform of the Land-laws, the reform of the military system, the reform of the bureaucracy, and the reform—or perhaps it ought to be said the institution—of municipal privileges. The land-law, or emancipating edict, was not, however, Stein's work. He found it already to his hand when he arrived, as it had been framed by a Commission, and he only added one or two clauses. This was the beginning of the many changes by which the soil of Prussia has gradually assumed a new character. The general

nature of the change is explained with much intelligence and at great length by Mr. Seeley; but there is observable here the same absence of direct and precise statement as to the exact effect of the provisions of the edict which is also to be found at many points in these volumes and which gives the impression that the reader is always being carried round and round a subject, and never quite into it. The description of the law of military reform, which was mainly the work of Scharnhorst, is clearer and more readable, for its importance has to be considered with reference not only to the previous history of Prussia, but to the system of Napoleon which Prussia had to combat, and to the impulse given to national armies by the rising of the Spaniards. Mr. Seeley is never so successful as when he has to make general remarks or surveys, and the relation of the Prussian reforms to the changes produced by the French Revolution and the French Empire—a relation partly of resemblance, partly of difference—could scarcely be better discussed and explained. The other two measures of reform were entirely Stein's work. By the one he recast the Prussian bureaucracy. He had himself worked long enough in the existing system of Prussian administration. He found in it two great defects—laziness and want of cohesion. It was not clear what each department was to do, and who was to see that its duty was done, and the administrators had sunk into a groove of indolent routine. Stein established an elaborate system of bureaucratic hierarchy, and mapped out with minute exactness the provinces and functions of each department. He created a service full of life and zeal; and whatever benefits can be conferred on a country by a bureaucracy have been conferred on Prussia by its bureaucracy as moulded by Stein. But this exhibited only one part of Stein's views of government. Side by side with the bureaucracy, partly as a check on or partly as an aid to it, he wished to see the development of citizen life. The citizen, according to his station, was to help the Government by governing himself. The country districts, the towns, the nation were to have their representative bodies, not for the redress of grievances, but that the provincial and communal authorities, the borough Councils and the Parliament might work in the sphere that belonged to them. Of this comprehensive project Stein was only able to carry out that part which related to the municipalities. But the political greatness of Stein must be judged, not only by what he did, but by his formation of a general conception of what Government meant according as he understood it, and by the idea of this combination of a highly-organized bureaucracy, and an assistant rather than a thwarting civic life by its side. It was in the originality of this conception and in his general attitude towards his country and the men of his time, his longing for national independence, his contempt for the tameness and meanness of vacillating Courts and Court favourites, and his resolute bearing towards the foreign oppressor, that Stein's eminence consisted; and it is in showing the nature of Stein's eminence that the main merit of Mr. Seeley's book is to be found.

Stein's retirement from the Ministry was quickly followed by his proscription. An Imperial decree was issued by Napoleon on December 16, 1808, by which it was declared that, as "le nommé Stein" had endeavoured to excite troubles in Germany, he was declared an enemy of France, his possessions were sequestered, and he was to be arrested wherever found by French or allied troops. St. Marsan, however, the representative of France at Berlin, considerately gave him time to escape; and at the beginning of January 1809 he set out into exile. Thenceforward he ceased to be specially connected with Prussia. He reverted, so to speak, to his "vom and zum"; he was an Imperial Knight labouring for Germany, having the whole country, and not Prussia, in his eye, and not receiving from Prussia after the liberation of the territory any Ministerial post. He crossed into Bohemia; and, after a short stay at Prague, settled at Brünn, the capital of Moravia. Here he passed a life of complete quiet for three years; and the first German rising of 1809, which proved abortive, was not in any way under his guidance. As his estates were situated in the territory of the Confederation of the Rhine, they were entirely under the control of Napoleon; and his anxiety for the future of his daughters or the pressure of present need induced him in 1811 to humble himself so far as to write, through his wife, to Napoleon, and implore the tyrant to remove the sequestration of those estates, and "act in this case as in others in which your Imperial Majesty has displayed, in so glorious and conspicuous a manner, your love for justice and your desire to re-establish the reign of law." But those who were asked to sound the Emperor reported that he was not in a humour to favour "le nommé Stein," and so the letter was not actually presented. The turning-point in Stein's fortunes came from another quarter. In the spring of 1812 it became evident that a war was inevitable between France and Russia, and the Emperor Alexander invited Stein to come to see him and give him counsel in his hour of danger. This invitation was most gratifying to Stein. As Mr. Seeley puts it in his gentle, gushing way:—"The letter must have soothed Stein's wounded feelings with the most delicate consolation. Then he was wanted after all! He was almost a necessary man!" Stein reached Wilna, then the head-quarters of the Czar, on the 12th of June, 1812, and on the 25th Napoleon crossed the Niemen. Stein refused to take any special post in the Russian service, and remained in the position of unattached general adviser, but occupying himself with projects for raising Germany in Napoleon's rear. He went with the Czar first to Moscow, and then to St. Petersburg, where he stayed until he left for Germany at the beginning of 1813. Stein was never actually associated with the Tugendbund, but at this crisis he wrote to inquire whether it would not be possible to set the association and its chiefs in motion. But his principal agent was arrested by the orders of Napoleon, and Stein's efforts to rouse Germany did not produce any immediate effect. It was only after the collapse of the Grand Army that Stein could render any signal service to his country. He more than any other man fixed the wavering purpose of the Czar, and induced him not to rest contented with the enormous success of his defensive war, but to follow up his victory, free Germany, and force back the oppressor into France. It was Russia that freed Germany, and not Germany that freed itself. It was only with great difficulty, and after Stein had given fresh offence by his audacity, that the King of Prussia was persuaded to break with Napoleon. Stein, in fact, now held a most strange position. He was the agent of a foreign prince who freed Germany by conquering it. Stein set up a Government of his own in some parts of Prussia, and, as the success of the Russian arms extended, in the recovered districts of the Confederation of the Rhine, by virtue of a commission given him by the Czar. Where he did not act as Governor he acted as agitator, and he set himself with his usual vigour to carry out all his old projects for raising Germany and especially Prussia, and bringing about not a dynastic, but a popular, war. Step by step Germany was freed. Prussia openly joined Russia, Austria entered the alliance, and the resistance of Napoleon was shattered at Leipsic. Throughout the war and throughout the diplomatic negotiations which followed on the success of the Allies, Stein had a distinct object, and that was to make Germany at once strong and safe, and this result was, he thought, to be brought about by giving all North Germany to Prussia and all South Germany to Austria. He had the strongest dislike for the small princes who had prostrated themselves before Napoleon, and he would have been glad to see them cleared away.

He did not succeed. His policy was set aside in favour of a policy of a very different character, and the endeavours of Prussia, with the support of the Czar, to get possession of Saxony very nearly caused a breach of the great alliance which had conquered Napoleon. Austria, with the support of England, insisted that the little States should be preserved, the offences of the little sovereigns overlooked, and that their defection from Napoleon, even at the eleventh hour and when they had no choice, should be rewarded. Prussia was to be rewarded by a slight increase of territory, but Germany was to be left under the thumb of Austria. Stein was thus defeated in his plans for the distribution of political power. But this was not all. He had headed or instigated a rising of the people against the princes. This was not from any democratic leanings. It was merely because Stein thought the people had the courage to resist Napoleon and the princes had not. After the settlement of Vienna the princes not only got back their territory, but had the power, as they certainly had the will, to show their dread and detestation of this appeal to the people. The King of Prussia shared the views of his fellow-sovereigns on this head. A reign of reaction set in. Thenceforward there was no place for Stein in the political life of Germany. He had tried and tried in vain to thwart the policy of Austria. He had endeavoured to take their crowns off the heads of the minor princes. He had not secured the control of Northern Germany for Prussia, and the King did not want a Minister who had shown himself dictatorial and offensive, and who had associated himself with the dangerous uprising of the people. For the sixteen remaining years of his life, therefore, Stein remained a private gentleman, living on his estates, and taking a leading part in the local affairs of his neighbourhood. But nothing could have been further from Stein's character and the bent of his views than to play the part of a popular leader in enforced retirement. He always remained in the circle of his old ideas, and even got what would ordinarily be termed less Liberal as he got older. He thought there ought to be a Parliament, but he also thought that the patrimonial jurisdiction of the nobility ought to be upheld as a check on the bureaucracy, and he was strongly in favour of subjecting trade to the control of guilds. His mind for a time seemed absorbed in an increasing hatred for his old friend Hardenberg, and when in 1822 the death of Hardenberg at Genoa was announced, Stein wrote that, "if only he is really and downright dead and for the last time, then, in the first place, I congratulate the Prussian monarchy on this happy event." To the last, however, he retained his deep interest in the German nation as distinguished from the States that made up Germany. He occupied himself with German mediæval history; and it was principally through him that the great undertaking of collecting and publishing the *Monumenta Germaniæ* was commenced. In 1819 he lost his wife; he lived to see both his daughters suitably married; and passed quietly away June 16, 1831. He had lived to be forgotten by Europe, and almost by Germany. It was only in the then distant past that he had shone forth as eminent. Twice in his life he had done a great thing. He had recast the administration of Prussia, and he had persuaded the conqueror of Napoleon to free Germany. But he had not been able to do more than begin reform in Prussia, and he had not been able to turn the interference of Alexander to the purposes he desired. At no period of Stein's career is it possible to feel that we are in the presence of a great man. He never did, or wrote, or said anything which was illumined by the flashes of genius. But in his own region of thought he was clear, original, and bold; in the nobler qualities of character he was so far greater than his contemporaries that he seems to stand almost alone; and, when

Germans now study their history of sixty or seventy years ago, and ask themselves what in the record they find to be ashamed of or proud of, they come more and more to the conviction that there is never more cause for pride or less for shame than when Stein is the central figure of the stage.

WYKEHAMICA.*

MR. ADAMS writes of "Magdalen College, Oxford," that it is "the most splendid institution in Europe"; and he has taken pains, by a special reference in the index, to secure for so chivalrous a challenge the widest attention. We do not quote the proposition for the purpose of disputing it; but it is evident, the founder's own school-days notwithstanding, that William of Waynflete's Demy and Fellow can be only half a Wykehamist, and that the title of this volume is very much like the frontispiece, its "Wykehamica" being only a small portion of the complete picture. It is not often the fate of a reviewer to close a volume with regret that there is not another to open, and that even the work in his hands is not long enough. Yet nearly all the criticism which this history appears to provoke must be traced to such a source. The remedy—not a "remedy" in Mr. Adams's sense, but its exact opposite—rests entirely with the author, and the occasion for applying it ought not to be far distant. A list of four or five hundred subscribers would account for a considerable share of this edition, and school libraries, if the managers have their eyes open, will make a large inroad on the remainder. As a boy's book, its popularity is certain; and if we abstain from quoting from its abundant supplies of incident, it is only that we will not spoil the freshness of reading them in the book itself. We have indeed, as reviewers, a humiliating confession to make. In a moment of weakness, the paper-cutter stopped its course not one-third completed, where "Rebellion of 1793" was printed at the head of a page; and the plainest calls of duty were powerless from that moment to induce us to "begin at the beginning" till the end of the volume had been reached. There was always something on the next page too good to wait for. In the interest of non-Wykehamist readers we trust that the next edition will place the much-needed Glossary in the accustomed place at the end of the book. It forms, no doubt, in its present place "a scientific boundary" between the old order and the new; but habit is strong, and the old words will last on Wykehamist lips as certainly as the fingers of readers will turn to the last pages to find out what they mean. What we do find there, unfortunately, is a "list of Messrs. Parker's publications"; a practice now much in vogue among publishers, which really ought to be made a punishable offence.

"Wykehamica," in the full extent of the term, should be more than a "history of Winchester College and Commoners." It should be a "History of the Two Colleges of St. Mary Winton"; and Mr. Adams has provided a valuable series of "Collections" for such a work, at a time when modern change in ancient institutions renders it both specially needful and specially interesting. Common opinion and common language have associated the existence of a "College" with that of a University; and the spectacle of William of Wykeham's two Colleges, that of Winchester being as complete a foundation as that in Oxford, is a standing correction of mistake. The special distinction of names preserved at Winchester, and given in Mr. Adams's title-page, further shows what was the essential character of an ancient college. "Commoners," in Winchester use, is peculiar only as a grammatical form. The word is printed without any inflexional apostrophe; and while its use, as at Oxford, in both plural and singular remains among Wykehamist terms, its more ordinary sense is that of a division both of the school and of its buildings. Thus a Winchester man will ask, not "Were you a Commoner?" but "Were you in Commoners?" or, if he is a sexagenarian, "Were you in Old Commoners?" The distinction between College and Commoners is unknown in modern Oxford, where perhaps it is more usual to find "the man who considers himself the College" in the latter division than in the former; but it is worth notice that, till the most recent changes, Wykeham's College in Oxford never had any Commoners on its books. There were at times a few "commensales superioris ordinis," the "gentlemen-commoners" whom modern Oxford has almost entirely suppressed; and it is a curious fact that these, the "filii nobilium et valentium personarum," were admitted by the Founder at Winchester, while it has been a disputed question whether ordinary "Commoners," the "commensales" of his scholars, were in his contemplation at all. Mr. Adams thinks that the Public Schools Commissioners are wrong in forming a negative opinion on this subject; but surely boys who were not boarded with Wykeham's scholars could not be described as "commensales." The admission of Commoners to New College has in this respect assimilated the practice of the Oxford St. Mary Winton to the now venerable use of the Winchester Foundation; and correspondingly the strict lines of demarcation in the latter between College and Commoners have been destroyed. Mr. Adams complains that "the connexion with New College is severed"; but education in the School of Winchester College" and the former limitation to the College-boys only does not look as if "Commoners" had much reason for any such complaint.

The author was himself "in Commoners"; and while his hearty love for all Wykehamist things, customs, places, and persons does not allow of our accusing him of any prejudice or party spirit as against the "College," we will venture to state some heads of a very tenable case which might be argued against him. His book will be read—we trust, for his sake, that it may not be pirated—on the other side of the Atlantic; and, as he has happily limited his exaltation of the splendour of Magdalen to European supremacy, no wounded national pride will interfere with the full appreciation of his work. The untravelled American, if such a being is supposable, will turn at once to the "List of Illustrations," and will learn that the frontispiece is a "Bird's-eye View of Winchester College." Will Mr. Adams honestly say how much of "Winchester College" either the bird or the American can see in this picture, "in the right-hand corner" (of which the "List" makes no mention) or anywhere else? After much labour and collation of plates, plans, and pages, without even the points of the compass engraved for his guidance, will not the American have to content himself with a bit of the "College" woodhouse, and the Warden's and Fellows' stables as seen in 1690? Will he not be a little perplexed to find not a trace of chapel, hall, quadrangle, or school, as he works out for himself the Sustern Chapel in the foreground and the Sustern Spytal behind—that is to say, the original buildings of Commoners, *et præterea nihil?* A later engraving professes to introduce him to "College Street, Winchester, in 1838." Will the closest examination show him any more of the College, save a few dim strokes behind a tree, than the woodhouse again and a stack of chimneys, while all the rest of the picture is the frontage of Commoners? Next comes the "Back of Wickham's," a very faithful study of chimneys and a wall—in Commoners again; then the Head-master's new house—Commoners *de novo;* and next an admirable ground-plan, which the binder ought to have inserted where he was ordered, instead of some hundred pages later, and which is so clear that we may indicate from it a misprint (south-west for south-east) in a descriptive note in p. 128. But it is all Commoners, as usual. There are, it is true, some charming "college" interiors, including the "cloisters"—almost as perfect as those of Magdalen; but for the external aspect of Winchester College we are forced to content ourselves with a sight of "College Meads," consisting of five trees and a (debased) window, till, just at the end of the book, we are favoured with a "Distant View of the College." This is a pretty river landscape, with a dim vision of some building in the extreme distance, which, by the help of a magnifying glass, we find to be marvellously like Winchester Cathedral. Certainly there is a smaller tower somewhere near; and this is all we can see of the "College." In the engraving of the "Boy at his Scob," the reader will find no trace of the arrangement which in a former chapter had been carefully described: but the discrepancy is itself instructive, as the picture presents the ideal "child" of the Founder, and the letterpress the actual schoolboy in the midst of the ingenious system of fortifications for which the scobs provide material when they do not happen to be requisitioned for barricades.

A ground-plan of the College is wanted to enable the non-Wykehamist world to follow the operations of both the sieges in Warden Huntingford's time; and for this, as well as for some other parts of the history, a list of the Wardens of Winchester would form a convenient appendix. "The Warden" of both sieges can be identified by notes and references scattered through various parts of the book; but some method of addition and re-arrangement will improve the present volume as a permanent work. We observe, for instance, the same incident in the text in p. 303 and in a note in p. 412. The capital retort of the "charity-boy," placed in the Glossary under "Settler," should, for the sake of its point, be inserted at the beginning of the chapter on "New Commoners"; and Christopher Johnson's hexameters deserve to be given in full. The story of the pedlar in 1838 will enlist the sympathies of every sensible reader, boy or man, on the side of "the five Præfects"; but, as Mr. Adams speaks of the "conviction" of the Præfects as the act of the magistrates, is he correct in his statement that the boys were "tried at Quarter Sessions," where "convictions" are usually in the province of the jury?

It is as a collection of school stories and lively narrative that *Wykehamica* will be popular among boys; but its higher value, as the author rightly perceives, lies in its record of the birth and development of the English system of public schools. This is drawn out by Mr. Adams with great clearness and force, and the relation borne by Eton to Winchester, which will be new to many readers, is told with pardonable pride. Both foundations were placed in temporary peril by the sweeping Act of 1545 for the Dissolution of Colleges (the misprint in p. 71 which makes this Statute appear as "for the dissolution of the College" should be corrected); but an exempting Order in Council of 1 Edward VI. limited the operation of the Act. In dealing with the much-vexed question of Præfectorial power and the associated system of fagging, the author has shown both decision and discrimination. He knows how to distinguish between bullying and fagging; he points out the social contrast between the rough semi-barbarism in the customs of past generations and the gentler tone of modern manners, and he admits with perfect frankness that his own experience as a Wykehamist junior was anything but agreeable. Yet he upholds the

* *Wykehamica: a History of Winchester College and Commoners from the Foundation to the Present Day.* By the Rev. H. C. Adams, M.A., late Fellow of Magdalen College, Oxford, Vicar of Dry Sandford, Berks; Author of "Schoolboy Honour," &c. Oxford and London: James Parker & Co. Winchester: J. Wells. 1878.

Præfectorial power and the training of the fags with a firmness which secures—and these lines are not written in an uninformed home—our own hearty sympathy and approval. A few passages, suggestive of an uncalled-for jealousy of the fame of another great school, might be removed with advantage. "Qui s'excuse s'accuse"; and the simple fact that Arnold was a Wykehamist is more effective than an hour of Nisi Prius pleading.

The vocabulary peculiar to Wykehamists is too historically curious to be described as "Wykehamical slang," and we trust that the author will find some more laudatory heading for the Glossary in Chapter XXIII. The list may need some slight revision, as words such as "chisel" and "rot," which are slang pure and simple, are not obviously of Winchester origin: while "gated" and "back up" have a wide range of use, and "beever-time" is certainly not peculiar to Hampshire. We have only to assure Mr. Adams, in conclusion, that, although he has instructed us in the science of "pealing a Præfect," past or present, he must by no means "suppose," from anything which we have writen, "that all 'peals' are uncomplimentary."

VOYAGES OF THE *PANDORA*.*

THIS book has two faults on the surface. One is that it appears somewhat late. The cruises it records were ended more than two years ago, and the author's own account of the volume is compatible with its publication within six months after his return from the second voyage. Of the first voyage an account, only too graphic, appeared long since from the pen of Mr. MacGahan, who sailed in the *Pandora* as Correspondent of the *New York Herald*. The present work is, says the author, in his modest little preface, nothing but a log from notes in his private journal. If so, two years need not have been spent in preparing it for the press. Offered just as it was to the public, while curiosity was still fresh, so straightforward and sailorlike a narrative would have been received with a certain eagerness. This cannot be expected now, when the expedition for which the *Pandora* carried the mails is well nigh forgotten. The second defect of the work is incidental to the supposed relations between the *Pandora* and the *Alert* and *Discovery*. The *Pandora* is popularly believed to have been a kind of tender to the *Alert* and *Discovery*. Any interest which its adventures could excite must, according to this view, be reflected from the general halo shed around the Admiralty expedition. It so happens, however, that the Admiralty expedition has, justly or unjustly, ceased in public estimation to have any halo. Never did an expedition start amid a louder flourish of trumpets, or with so huge a stir of preparation. It did only half what it proposed to do. More it was debarred from attempting, not by any tragedy, before which criticism would have been mute, but by an eruption of scurvy which would have disgraced an ordinary whaler. The most learned and scientific explanations were given for the outbreak, and for the inability of lime juice to have warded it off. The public listened sceptically to the reasoning which had brought home two shiploads of disease instead of the discovery of the magnetic pole. If the log of the *Pandora* had to rest its power of exciting sympathy on its connexion with the Government Arctic expedition, it would fare ill. In fact, its relations with that expedition were in the first voyage mere relations of courtesy and neighbourliness. The *Pandora's* projected route lay past Smith Sound. Its commander offered as he sailed by the entrance to deposit letters and parcels for the two exploring ships. On his second cruise, which, too, had been planned independently, Sir Allen Young accepted a direct commission from the Admiralty to convey despatches to and from the *Alert* and *Discovery*. But on both occasions the *Pandora* had its own scientific objects equally with those ships. Its object in 1875 was to search for relics of Sir John Franklin's expedition, and, further, to navigate through the North-West Passage to the Pacific in one season. The latter part of the plan was frustrated by an impassable ice pack in Peel Strait, and the *Pandora* returned to Spithead in October. Sir Allen Young was preparing for a second attempt in 1876 to traverse Peel and Franklin Straits, and then, by passing east of King William Island, to navigate the North American coast to Behring's Straits, when the Admiralty asked him to make the *Pandora* a medium of communication with its Polar expedition at the points of Littleton Island and Cape Isabella. Very patriotically he consented; but the delay thus interposed disappointed, as indeed he had himself apprehended, his hope of reaching Behring's Straits. Our own chief concern at those two successive failures in Sir Allen Young's direct purpose, we confess, arises from a conviction that he is not of the stuff that accepts defeat. So sturdy a will and such skill in eluding mortal peril we rather grudge seeing spent in continual experiments on the long-suffering of icebergs and ice-floes.

Familiarity breeds contempt in the Arctic seas as elsewhere. Sir Allen Young's two gallant assaults on the North-West Passage read as if surging ice-fields, raging tempests, and the blackness of night at noonday were as holiday a matter as a fresh breeze off the Isle of Wight. An Arctic voyage might seem, to judge from the present volume, to bear the relation to a yachting excursion which lion-hunting in Africa bears to Scotch deer-stalking. The inconveniences are multiplied, but so are the exhilarating humours of the sport. The *Pandora* sailed at the end of June. By the end of July its crew were shooting bladder-nosed seals, making fast to an ice-floe, and amusing themselves at Ivigtut. We wonder how many Englishmen have ever heard of Ivigtut. Yet Ivigtut is an important place, not only because it grows "the most delicious radishes," but because it boasts the one considerable cryolite mine in the world. Cryolite, as Sir Allen Young explains in a footnote, is the double hydro-fluate of soda and alumina. It is imported into the United States for the manufacture of aluminium. Ivigtut cryolite has doubtless helped to scare London gas-proprietors. Kittiwake-shooting, cod-fishing, and salmon-buying occupied the *Pandora's* company of *savants* on their way from Ivigtut to coal at the euphoniously named settlement of Ujaragsugssuk. When they desired it, there was always convenient mooring on an iceberg, except that bergs are given to turn over without notice. Searching cairns for letters from the new Polar expedition, or for relics of the old, were among their pastimes, but the shooting of sea-bears was obviously much more serious work. On one occasion, near North Lincoln and Coburg Island, they had the good fortune to kill a she-bear and one cub, kidnapping a second. Sir Allen describes with dramatic power how the spectacle of the floe-ice rushing past the ship frenzied his involuntary guest. On one stormy night, with the wind howling, the snow blinding the sailors, and rigging and decks sheeted with ice, the bear actually broke his chain in a passionate longing for liberty. It was just a crisis when, the commander of the *Pandora* confesses, a moment's hesitation on the part of the ship to answer her helm might have terminated her career. But for the half-hour before the cub was secured he fears "the ship was left more or less to take care of herself." No harm was done in the end, except to the ship doctor's professional feelings. He managed to make the bear swallow a piece of blubber saturated with enough chloroform and opium to kill a dozen men. But it had no effect on the patient, any more than the iron crowbar which was also used in all fatherly kindness on his person. So far as Bruin was inconvenienced by detention on board ship, he was only suffering vicariously for the sins of his kinsfolk. Sir Allen found on visiting Beechey Island that apparently the whole population of Polar bears had been employing themselves in wrecking the depôt built by Sir Edward Belcher's expedition in 1852, and named magnificently "Northumberland House." The beef-casks had been plundered, and whatever the bears could make no use of they had scattered or torn up. This was the fate of the tea-chests. On the other hand, they had temperately refused even to tap a cask of rum. Sir Allen Young needed no other proof that "neither Eskimo nor British sailors had entered." A brass memorial plate to the Franklin expedition was "quite bright, as if the bears had been lying on it."

Peel Strait was reached towards the end of August, and the cairn examined which was built by Ross and M'Clintock on Cape Coulman. It is sad to think that Ross was here on the direct track of the *Erebus* and *Terror* a single season after the ships were abandoned. Had he sailed down the strait the next summer, instead of coasting along the north shore of Barrow Strait, the anxieties and labours of many years might have been spared. It was Sir Allen Young's first visit to Ross's cairn, though sixteen years before he had been close to it. In 1859, when sailing-master of the *Fox* in M'Clintock's expedition, he had been detached to trace the south and west shores of Prince of Wales's Land. Starting on April 7, after a journey of thirty-eight days he sent back all his men but one to eke out his stock of provisions. For forty more days he pursued his march with one man and the dogs, sleeping in holes in the snow. Pressing on, as he says, for their lives, wading up to their thighs in water, he and his companion might be excused for not having discovered a low cairn amid the mists. This second visit to a remarkably unpleasant region was associated with less fatigue, but with a worse disappointment. Icy skies and a chill in the air had warned the crew of the *Pandora* that a large body of ice was near. Off Roquette Islands it was clear that all hope must be abandoned "of making the North-West Passage this year." Sir Allen had to comfort himself with the confirmation of an old belief that "the only way to accomplish it would be to proceed by way of Bellot Strait, there awaiting the moving of the pack northward, and then pushing as fast as possible down to Cape Victoria." For the present nothing was to be done but to run a race with the sailing floes which were threatening to beleaguer the ship. Sir Allen Young describes this struggle with evident zest. At one moment the floes seemed to have caught them, and at the same instant a ghastly and horrible cliff, "a skeleton of the land," clutched at them on the other side. Fortunately it was early morning, and beyond a barrier of a hundred yards of ice a break in the pack could be just distinguished. All steam and sail were put on; the *Pandora* ran at the obstacle and charged through. An imminent peril had been escaped; but the dangers of Lancaster Sound, with vast packs of ice stretching fifty miles east and west, had still to be surmounted. It was bitterly cold, and the waves froze as they washed up the ship's sides. Neither sun, nor moon, nor stars were visible to steer by; and the violent rolling prevented the binnacle compasses from supplying their place. On the 9th of September the *Pandora* had emerged from Lancaster Sound, and passed Cape Horsburgh; and the crew marked the occasion by a festivity and tragedy in one. At Ivigtut they had bought a young pig, which, under the name of Denis, was forthwith enthroned as the pet of the ship, and "in fact, the only thing worth navigating the Arctic seas for." The Esquimaux dogs had a less sentimental fondness for pork; but, writes Sir Allen Young, "a constant look-out, such as

* *The Two Voyages of the "Pandora" in 1875 and 1876.* By Sir Allen Young, R.N.R. London: Edward Stanford. 1879.

one could never expect for ice, rock, or land, from any seaman on board, was kept, and the dogs were driven off at the moment when victory seemed certain." With September winter had settled down on those Northern latitudes, and the decks froze. The labour of scraping clean Denis's sty alienated the affections of his lovers; and "with the decision and readiness in meeting difficulties for which the seaman is so pre-eminent," the idol of the *Pandora* was converted into pork. Whether this illustration of popular caprice or news of the Arctic expedition were the more important event the *Pandora's* crew would probably have been at a loss to decide. The commander, on the whole, no doubt from official prejudices, inclines to attach superior weight to the latter. On the south-east Cary Island he was so fortunate as to find on September 10 a packet of letters and a description of the voyage of the *Alert* and *Discovery*. After this he had nothing more to do but return to England with as much despatch as he could. He anchored at Spithead on the 16th of October.

He came back resolved upon renewing in 1876 the unsuccessful attempt of 1875 to pass in a single season from the Atlantic to the Pacific. Many of the same officers and men who had served in 1875 rejoined, including a lieutenant of the Dutch navy, and with the addition of a lieutenant of the Austrian. The complement of officers and men when the *Pandora* ran out of Plymouth Sound on June 2 was thirty-three. This total included a photographer and a surgeon. In 1875 it had been thirty-one, and among them, besides the surgeon, were an artist and Mr. Bennett's Correspondent. A formidable gale attacked the *Pandora* in the Atlantic when she had been eleven days out from Plymouth; but Sir Allen Young weathered it by keeping her under as little canvas as possible. His view is that nearly all accidents with deeply-laden ships in the open sea arise from carrying an excess of canvas, in the delusive hope of making quicker passages. Another of his nautical or Arctic doctrines is that a commander should never "trifle with Cape Farewell ice, or on any account be induced by a fair wind and the prospect of making progress to run on in thick weather, if blowing hard and there is any swell on, and if within a hundred miles south of the land." The warning is undoubtedly true; but to some of our readers it may convey less information than the important fact, which is repeated towards the conclusion of the volume, that "Kittiwake stew for breakfast is quite equal to the Bordeaux pigeon, if not better." Godhavn is a principal city of Greenland, and Arctic explorers expect to be welcomed festively there. But the gaiety of Godhavn was clouded when the *Pandora* arrived, in 1876, by a fire which had burnt up two hundred barrels of oil. Ujaragsugssuk was fortunately more itself, and the Esquimaux were ready to coal the ship and be fed in return. An inconvenient superstition of that part of the world, in fact, seems to be that "a ship ought to provide provisions for all comers." Upernivik is apparently another centre of Greenland society where sailors expect to enjoy Esquimaux dances, and tea-parties are given. The *Pandora's* officers and men indulged in both amusements. But from the luxuries of Upernivik we are plunged, without a break, into the savage ordeal of an ice-pack in Melville Bay. For the last ten days of July the ship was feeling her way through thousands of icebergs and floes. Sir Allen Young has usually a light way of touching upon danger which commonly deceives his readers into depreciating it, as he seems himself to do. When he writes, "I never passed a more anxious day than that which ended on Saturday the 29th," we are prepared to sup full with sea perils. The day appeared to him, he adds, "like a year." Every moment might be the vessel's last; and the only refuge was an unknown wilderness of ice broken into large hummocks. While the Commander felt that the *Pandora* "was in her tomb, and that escape was hopeless," the crew "seemed quite happy at quiet prospects of 'all night in,' and were busy in washing clothes and various amusements." One man, however, shared the captain's cares. Clothes and provisions had to be packed in the steam-cutter in readiness for a sudden collapse of the ship. The wardroom steward knew his duty to his master. He was found to have included among Sir Allen's necessaries eau de Cologne, two silver cups, and a dress-shirt. The whole tribe of dogs, scenting plunder and freedom in the approaching chaos, began frantically fighting. Suddenly "a strong south-west wind arose, and a distinct swell undulated through the pack. We could hear the breakers like the roar of surf upon a coast; the fog lifted, and we saw water, large water, open water, two miles off as far as visible." Steam was put on, and "after two hours of forcing inch by inch and yard by yard we got into the sea and were free. Cheers burst spontaneously from the crew as we launched out into the ocean." The Commander's emotions may be understood as "the *Pandora* gave lurch after lurch, the boats and stores and all on deck began to stray and roll about, and I felt that once more I had the dancing waters under my feet."

The *Pandora* was now in the "North Water," and had the whole season before her for the task. But within a day from being released from thraldom in the ice, a south-east hurricane had all but destroyed the ship which had so narrowly escaped almost the contrary disaster. Sir Allen Young considers this experience unique. The storm, however, moderated enough to render possible a re-examination of Captain Nares's cairn, which had been visited by Sir Allen in 1875. Next, Sutherland and Littleton Islands were successively searched for despatches. Sir Allen Young completed his labours in this region by discovering a suitable station for the relief-ship which the Admiralty proposed, should the expedition not have returned meantime, to send out in 1877. It sounds strange to hear of a bay in this melancholy land surrounded by hills luxuriantly green, and with "a beautiful cascade pouring over the summit of the mountains." These are among the attractions of "Pandora Harbour." Cape Isabella was next explored for possible letters; but only New Zealand meat tins were found by Lieutenant Arbuthnot, with a cask in juxtaposition, and therefore inferred to contain provisions also. It illustrates Sir Allen's punctilious honesty as an Arctic explorer that, reluctant to accept an inference for a fact, he persisted in revisiting this desolate country, which "might be said to be one vast glacier with merely the capes protruding towards the sea." A three weeks' struggle against ice and tempest brought him back to Cape Isabella, only to find that the cask was, and had always been, empty.

All that could be accomplished without wintering out had been done. The ice relieved Sir Allen Young from the difficulty of making up his mind in what direction to continue his explorations by simply jostling him out of Smith's Sound. Tempests and floes had so absorbed all his thoughts that, he says, "when we were outside the Straits, with the ice already closed in behind us, and it was necessary to decide what we were to do, I could hardly realize the position." It was well he did realize the position in time to understand that it would be folly to force the *Pandora* through the ice pack to Cape Sabine, for the chance at best of "a day's later news of the outward voyage of the Polar ships." Very fortunately the *Pandora's* prow was turned homewards; for on the 16th of October she overtook the *Alert* and the *Discovery*, themselves bound homewards too. It was a strange encounter. The vessels separated in a great gale which burst upon them four days after, and on November 3 the *Pandora* entered Portsmouth Harbour.

Life in the neighbourhood of the North Pole is not very various. Most of the incidents Sir Allen Young recounts will remind the reader of every tale of Arctic adventure he has read since the days of *Peter Parley*. But if existence in the neighbourhood of the Pole be somewhat monotonous, its few lines are deeply marked. In Sir Allen Young's descriptions they come out with their rough edges or their sharp. We are pleasantly conscious that the narrator is neither a book-maker nor a Special Correspondent. The mind feels free to surrender itself to the passions of an Arctic storm and the battling of myriad icebergs, in the reasonable faith that it is not shuddering at horrors which come from impossible points of the compass. The volume contains, besides its interesting text, some fair illustrations. One among them gives almost too vivid an idea of the propensity of icebergs to reflect the least beautiful of human countenances. The two Polar charts which accompany the book have the merit of explaining not merely the route of the *Pandora*, but Arctic exploration in general.

FORBES'S RÂS MÂLÂ.*

THAT the province of Goozerat should have found an able chronicler more than twenty years ago is not surprising. Even in days when it was not the fashion to write minute statistical accounts of Indian districts, there was very much to attract and interest in that part of the Western Presidency. There were ruined forts and cities built by kings whose origin goes back almost as far as that of the most famous Rajpoot princes. On an extreme point of the peninsula lies the sacred city of Dwarka, which rose from the ocean according to the Hindu legend. Further south is Dev Puttun, or Somnath, inseparably associated with Mahmud of Ghazni and the late Earl of Ellenborough. Shutroonjye, one of the holiest of Jain shrines, and nearly two thousand feet in height, is conspicuous near Palitana, on the shore of the Gulf of Cambay. On the opposite shore the city of Broach, on the Nerbudda River, is deemed by Hindus to be equal to the heaven of Indra. And it may interest philologists to know that Bhrijoo Kucha, by which title this city is locally known, has been thought to explain the Barygaza of Greek writers. Mount Aboo, near the Arawalli range, is more accessible from Goozerat than from the North-Western Provinces. When we come to historical times, the Mahommedans founded their splendid city of Ahmedabad not far from the head of the Gulf of Cambay. Subsequently the Mahrattas, in the general crash of empire, established the kingdom of the Gaikwar at Baroda. Lesser chiefs had obtained renown at Danta, at Eedur, and in the Myhee Kanta, and there is no scarcity of material for those who delight in collecting popular legends, and in extracting from a mass of incoherent tradition a few historical conclusions and trustworthy facts. Then, too, the country presents several elements of beauty. There are fruitful plains covered with noble groves of mango-trees. The fields, unlike the unbroken expanse of plain so familiar to the residents of Bengal and the Doab, are fenced round with strong hedges. In places the country undulates, and on the north and east of the province are mountains, steep and inaccessible, from which numerous streams with deep banks descend to fertilize the plains. Wheat and cotton grow in abundance; there is a well-known breed of horses in Kattywar; and no finer bullocks, not even in Hansi or Purnea, are to be seen than those which draw the country carts of Goozerat.

More than twenty years ago the author of this book, who had

* *Râs Mâlâ; or, Hindoo Annals of the Province of Goozerat.* By the late Alexander Kinloch Forbes, H.E.I.C.S. New Edition. With an Introduction by Major J. W. Watson, B.S.C., and a Memoir of the Author by A. K. Nairne, Esq., B.C.S. London: Richardson & Co. 1878.

spent most of his service in Ahmednugger, Candeish, and Ahmedabad, conceived the idea of collecting all the legends and tales which local bards and tale-mongers could supply, and of writing a history of the province from the earliest times down to the introduction of British rule. From the modest memoir of the author prefixed to this new edition, as well as from his reputation in the political and the judicial departments of the Presidency, we can well believe that he possessed many high qualifications. He was a good scholar and an industrious official. He obtained a legitimate influence over natives, not by flattering them or adopting their customs, but by quietly proving to them the innate superiority of his own. He was one of the first civilian Judges of the High Court when it was established at Bombay, and he died, we believe, at the house of his friend and cotemporary, Sir B. H. Ellis, after a short illness at Poona, in August 1865. The republication of the work is due, we presume, to its intrinsic merits. To officials stationed in any capacity in the province it is doubtless invaluable as a guide. The student of ancient Indian history will find in it much which, when separated from idle traditions and foolish romances, will throw a clear light on the rise and fall of dynasties and on the former condition of the people. And even the general reader may derive some pleasure in contemplating a curious state of society which has only begun to change for the better within the last sixty years. Truth compels us to state that a good deal of the materials, communicated to the late Mr. Forbes mainly by a Jain merchant and by a poetical Brahman, require skilful handling to make them endurable, and that some of the earlier chapters especially are apt to weary. We do not remember ever to have read a book crammed with so many strings of names of persons either vague and visionary or worthless and uninteresting. The author divided his work into three parts. There are the annals of purely Hindu kings. Then the Mahommedan conqueror comes on the scene. He, in his turn, has to give way to the crafty Mahratta. And just at this period we get a glimpse of the British Resident, with the gradual evolution of order out of chaos which ensues whenever he appears on the scene. Not the least important chapter in the book is the concluding one on castes, cultivation, tenures, marriages and funerals, the Hindu's idea of a future state, and popular beliefs. To attempt here anything like an analysis of the events which led to the establishment of dynasties at Unhilpoor or Eedur, or any disquisition about Waghelas or Gohils, is, of course, out of the question. We must observe, moreover, that in a reprint more ought to have been done by the joint editors to improve the book. Notes are very much wanted in some places. We do not find fault with the old-fashioned spelling, which is very different from the accurate—we might say pedantic—system of transliteration patronized by Mr. W. Hunter and the Indian Government, and adopted by Col. Malleson in his latest production on the Indian Mutiny. But every one is not as well read in Goozeratti literature and Brahmanical legends as Mr. Forbes. An ordinary reader, for instance, might like to be told that "Soor Lok" means, not a population of swine, but the "world of heroes," the Indian Valhalla. The term *yuwun* is applied to a Mahommedan Nawab or Viceroy in conflict with a Hindu chief. The expression, we take it, is the same as Yavan or the Biblical Javan, and is used by the Hindu chroniclers to designate foreigners, Greeks or Arabs. We should have been glad of a little more connected dissertation as to the terms *gràs* and *grassias*, which occur frequently. *Gras* in one place is a religious grant. In another it is "black mail." A *grassia* is a village managed by its hereditary chiefs in contradistinction to a *Khalsa* village, with which a revenue settlement was made direct by the Mogul Government. Once or twice we have been puzzled by a tree called a "limb." It occurs to us from the context that this is meant for the *nim* or *neem* tree, of which the leaves are useful for medicines and decoctions. Then it seems altogether foreign to the times and people described to say that a Hindu sovereign, some thousand years back, made a grant of ten thousand pounds or gave a subsistence allowance to any one of two shillings a day. A "Lakh" and a rupee would have been more natural and appropriate. The maps, too, might be improved and coloured, and the index is both perplexing and deficient. As might be expected, we have a good deal of palatial intrigues, sundry massacres, and much fighting in a semi-Homeric style. There are references to famines from drought. Suttees are frequent. Poets and astrologers abound at Courts, and lavish gifts to Brahmans are recommended as the highest of virtues. Prodigies of valour are performed by chiefs in battle; and, while Shiva, the god of destruction, hovers over the carnage with attendant goblins that feed on human flesh, a flight of Apsaràs, or heavenly nymphs, is always in readiness to carry the slain warrior to his celestial abode. In the accounts of Hindu dynasties we have the usual stories of wives who want the succession for their favourite sons, of wicked uncles who usurp the inheritance of their nephews, of cadets who are preferred to their elder brothers; of outlaws taking to the jungles, of unselfish and noble devotion, of absurd liberality, and of rash vows.

Amidst the crowd of half-mythical celebrities the following appear to us to combine some of the elements of romance and poetry. A certain Jug Dev Purmar, to avoid family dissensions and the ire of a stepmother, goes abroad to seek his living, attended by his wife, who has no silly reluctance to appear with her husband in public. In his journey he disposes, by a couple of arrows from his unerring bow, of a man-eating tiger and a tigress, much to the astonishment of some Rajpoots, who term the feat "a great piece of religion for both the world and the cows." The wife of Jug Dev is inveigled by a courtesan of the city of Puttun, who wishes to favour the vile purposes of the son of the keeper of the fort, named Lâll, of the Golo caste. This ruffian comes into the lady's presence flushed and intoxicated, and she quietly disposes of him by cutting his throat, after which, as becomes a high-born Rajputni, she slays five or six more men in succession. At this the Raja of the country is so delighted that he adopts her as his own daughter, and deals with the tribe of courtesans pretty much as Ulysses does with the same class on his return home. In the end Jug Dev cuts off the head of his eldest boy to prolong the Raja's life, at which the Fates are so pleased that they restore the child to his father and grant the Raja a new lease of forty-eight years of existence. At last Jug Dev returns home, succeeds to his father, and reigns for fifty-two years. Râ Khengar is another hero, a younger son, whom his father placed on the throne of Joonagurh because he performed four vows, while his three elder brothers confessed themselves unequal to more than one a piece. He was afterwards betrayed by his sister's sons to Sidh Raj, who slays Khengar, but cuts off the noses of the traitors instead of rewarding them. The people of Soreth or Kattywar, are much attached to the memory of the chief of Joonagurh, and in a proverb still current seem to have anticipated the famous *e poi ruppe la stampa* of the Italian poet:—"The mould in which Soreth land and Râ Khengar were formed has been broken, and the workman who made them is no more." But, in truth, these native chroniclers seem to have drawn on other bards more than once. Veer Dhuwal Waghela, who was one of the most powerful of Goozeratti chieftains, had two Ministers who are described as "the sovereign's arms reaching down to his knees." A note tells us that men with long arms are considered prosperous. We rather think that length of arm is the characteristic of strength. *Mahabahu* and *dirghabāhu* are common epithets of heroes in the Mahabharata. Rama had arms "reaching down to his knees," and Rob Roy, Scott tells us, could garter his hose without even stooping. The name of this Veer Waghela, we are informed, is found on an inscription erected on Mount Aboo by Tej Pal in A.D. 1231.

Amongst the Mahommedan conquerors great is the reputation of Mahmud, surnamed Begurra. When quite young he quelled a rebellion against a faithful Minister, almost by his personal presence; he was favoured by a dream in which he saw the prophet Mahommed himself; and he converted to Islamism the last Râ of Soreth, whose tomb is now worshipped at Ahmedabad by Mahommedans as that of a saint of their own religion. Another hero of later Hindu times is Veerrum Dev of Eedur, who flourished in the reign of the Emperor Akbar. He carried off the daughter of a wealthy merchant from Marwar; caught hold of and slew a tiger which had escaped from a cage, and which Akbar's bravest followers dared not approach; invited a Bheel outlaw named Champo to a conference, drugged him with opium, and smote him under the fifth rib; generously spared a satirist who had made a ballad about the treacherous death of another rival; and finally, after a series of vows, pilgrimages, and battles, ended his life by putting on a sort of garment of Nessus which had been sent him by his own half-sister. There are several other heroes, highly popular and half historical; but, coming to our own times, we confess to an interest in a certain Bhooput Sing, youngest son of Kanajee, whose ancestor had been a barber. This man held out against Mulhar Rao the Gaikwar, plundered his sovereign's villages and preserved his own, and, like Robin Hood, is said to have spared the poor and only to have made war on Rajas. Another picturesque and quite modern rascal is one Dheerjee of Wankaner, who was protected by the Raja of Eedur. This freebooter entered into correspondence with our own political agents some fifty years back, justifying certain excesses with which he was charged and adroitly laying the blame on others. When confined at Baroda he broke his fetters, scaled the wall of the fort, and got clear off. Shortly afterwards, being pursued by a detachment of our troops, he leaped his mare over a frightful ravine, in a style which would have satisfied the late Charles Lever, and then taunted his pursuers with their inability to follow. We regret to admit that, amongst other atrocities, Dheerjee was reported to have ill-treated and maimed sundry worthy Brahmans. In the end, when hiding in the Eedur hills, he was accidentally burnt by an explosion of gunpowder sent him as ammunition by his friends, and was followed to the pile by one of his two wives. The late Sir J. P. Willoughby, of the Indian Council, was then as a young man in charge of Myhee Kanta, and reported the occurrence to Government. The fame of this outlaw is fresh, and the women of the country sing his praises to this hour.

The editor of this volume seems to think that Mr. Forbes did but scant justice to the Mahrattas, and that he somehow preferred the Rajpoots, with their chivalry and their consumption of opium, to the descendants of the marauder Sevajee. The author's estimate of the two races is that of Mountstuart Elphinstone and of other very capable judges, and what the Mahratta policy was, this and other works abundantly prove. If it be true that on their first appearance they were "hailed as deliverers from the Mogul yoke," we can only say that the natives very soon discovered that they had merely exchanged one tyrant for another. Several of the edifying customs of the Mahrattas are noticed. We do not lay undue stress on what is repeatedly called by the native chroniclers "striking a village," for to harry the country with fire and sword, to torture women, to burn villages and plunder their contents, is a widely-spread Oriental maxim. But there is an edifying custom, dignified by the name of *Mulukgiri* and formally adopted by the Mahrattas, on which Mr. Forbes dwells at some length. *Mulukgiri*

is literally "conquest or the taking of a kingdom." Mr. Forbes translates it by "the circuit of a country," which was the practical shape that the measure assumed in the hands of these reckless politicians. They never thought of establishing forts or settling garrisons in towns, still less of administering the country, as the Mahommedans always did in a sort of fashion. What they wanted was a good sum of money without any of the trouble and forethought involved in looking after the people and making a settlement of the revenue. So they sent bodies of three or four thousand cavalry, and occasionally infantry, lightly equipped, to levy tribute from Rajpoots, who resisted as long as possible for the sake of their "honour," to get drafts from fat Hindu bankers, and to waste fields and destroy villages until their demands were granted. These were not mere fortuitous raids or reprisals for wrongs really endured or imagined. It was the Mahratta method of governing and exacting the dues of the sovereign power and of reducing the population to proper obedience. This policy, which existed in full vigour to the commencement of this century and was formally reported on by English officials, is worthy of note in days when natives find Englishmen to aid them in drawing invidious comparisons between British and indigenous rule, and, like Macaulay's "honest citizen" in the preface to *Horatius*, seem much given to pining after good old times which never existed.

Those who prefer disquisitions on caste and customs to poetical accounts of dynasties and battles will find plenty of instruction in the fourth or concluding part of the work. The author had collected and made good use of materials relating to the subdivisions of caste and the well-known elasticity of that social bond, to the indebtedness of cultivators occasioned by extravagance in marriages and funerals, to the land tenures and the effects of British rule in impairing the authority of the chiefs, as well as in benefiting the agricultural and commercial classes, to the employments of the people, to the ceremonial services and the religious beliefs. We should not forget to add that particular passages of poetry and sundry proverbs are literally translated in a sort of blank verse, and convey in a striking manner the force and point of the originals. We could have wished that Mr. Forbes or his editors had told us something of the Goozeratti language, which the author studied practically for seven or eight years. From the most recent and comprehensive work on Indian and other languages we learn that this dialect is spoken by some six or seven millions in the British districts and in the independent territory of the Gaikwar, as well as by certain residents in Bombay itself. It has been termed little more than a dialect of the Hindi; but it bears some similarity to the Maráthi. The literature is poor and the orthography doubtful and unsettled, and there is no sufficient grammar and dictionary. The written character is called Bálbodh, and is an obvious modification of the Nágari form. Mahommedan Khojas from Kutch employ this dialect in addition to their own, while with the Parsees it has entirely supplanted their original tongue. Mr. Forbes in his lifetime founded Vernacular Societies for the advancement of Goozeratti both at Ahmedabad and at Bombay; and we lay down his work with a feeling that, if its author was never likely, from his modest and retiring character, to have come to the front rank of Indian statesmen, he has still left, amongst Englishmen and natives, the memory of an earnest, a blameless, and a not unsuccessful career.

THE HOUSE OF ACHENDAROCH.*

NO doubt a wide knowledge of human nature is a very valuable qualification of the novel-writer. Yet sometimes a book of small pretensions may derive a charm from the freshness and simplicity that imply ignorance of life rather than an acquaintance with it. *The House of Achendaroch* strikes us as a case in point. Judging entirely from internal evidence, we should say that the author had passed her days in the Highlands, that she had paid an occasional flying visit to the Scotch capital, and that she was delighted and impressed with a sojourn she may have made in the rich county of Worcester. The fortunes of the Achendaroch family are by no means very remarkable in themselves, and there can hardly be said to be a plot in the story. There is no great art displayed, either in describing the rather numerous characters or in arranging them. And yet there is an attraction in the book, more especially for Scotch people, which makes us pardon many purposeless moral digressions and complacently endure considerable prolixity. This is partly, perhaps, because the style, in its shortcomings and its solecisms, is as distinctly Scotch as the scenes. We appear to be listening continually to the cheery, unsophisticated discourse of one of those elderly maiden ladies of the old school who used to live in the retirement of quiet gentility in the midst of their own people. The innermost circle of their daily interests lay naturally in the affairs of their next-door neighbours and in the streets of the respectable little market borough. The "families of the county," who formed a society by themselves, were regarded with exaggerated consideration as a superior order of beings; and with some of them the dignified spinster was probably connected. Very likely the lady we have been imagining may have read a good deal in an unassuming way; and it is certain indeed that she must have been something of a student if she was actually practising literature as an amateur. But her lines had fallen in uncongenial places, so far as intellectual intercourse was concerned, while her ideas of the social geography of that great world which lay far beyond the sphere of her everyday acquaintance were necessarily vague and fanciful in the extreme.

We need hardly repeat that we are imagining a type, not describing an individual; yet we surmise that there is something more than a shadowy analogy between the ideal we have been conjuring up and the author of *The House of Achendaroch*. The little country town of Inverdeen might well have been photographed. We can half identify with it at least a dozen of Scotch boroughs that we have in our mind's eye at the moment of our writing. Seeing that it was situated on the border of Lowlands and Highlands, there is a most realistic touch, for instance, in the gunmaker's shop, with the display of weapons of the chase and stuffed *feræ naturæ* in its windows. We recognize the self-satisfied group of the worthy borough authorities—the Provost, the Fiscal, and one or two of the Baillies—who gather on the causeway for their morning "crack." Men of great mark they are in the eyes of the fellow-citizens whose suffrages have raised them to the municipal dignity; men who, after being seated in their civic chairs, come to claim a perpetual reversion of their offices in virtue of their substance and "douce" respectability. But, though they feel it incumbent on them to carry themselves gravely, they are wags in their own way and among themselves. No wonder that Mr. Charles MacRae, who is presented as the hero of the tale, felt it a formidable ordeal to walk past these magnates, knowing himself to be the object of their heavy jocularity. Mr. MacRae was of the age and in the doubtful position which tend to foster a painful self-consciousness. A country solicitor, turned five-and-twenty, he depended on making friends and patrons to help him forward. Naturally it was of extreme consequence to him to stand well with the borough magnates, and yet he knew that they would rather laugh at him than not, since his social position was somewhat superior to theirs. For he is a kinsman of the old House of Achendaroch, and by no means a far-away cousin of its chief. He is received at Achendaroch House on a footing of condescending equality, and has the more solid privilege besides of being "factor" or agent on the estate. So his weakness for affecting airs of county fashion, and the visible signs of it in a "bonnet" which he wears with a stag's head crest, have obtained him the nickname of "Charlie Stag," and the clumsy *sobriquet* "stings him." Charlie's habits and ways of thinking are very naturally depicted. The author goes into the minutest and evidently the most truthful details as to his life in his lodgings and his relations to the landlady. Mrs. Gunn, of Inverdeen, by the way, is very like the Mrs. Hadoway of Fairport in the *Antiquary*. Only, instead of being the "relict" of a minister, she is the widow of a gallant officer. A Scotchman realizes all MacRae's modest surroundings, when he hears him talk of the "press" for a cupboard and the "lobby" for a passage. But when the author proceeds to sketch Charlie's nature, and to illustrate it, we hardly understand what she intends him to be. Now we hear much of his refinement and of the gentleman-like bearing which recommends him to those whose position and breeding should be unimpeachable; for she makes a great point of "gentility" in her ladies and gentlemen, in place of assuming it as a matter of course. In reality we cannot help recognizing Charles to be a shrewd but exceedingly awkward lad, assuming and unduly diffident by turns. He is a rustic dandy, which is always objectionable. But, what is strange, he is a thorough Cockney so far as rural pursuits are concerned. We can only explain this by the author's confounding life in a little town like Inverdeen with life in a great city. We should have said that a Highland-nurtured lad, of hardy frame and of active disposition, would undoubtedly have been a practised angler; that he would have taken as naturally to field sports as a Newfoundland to the water, and trodden the slopes of his native hills with the nimbleness of the sure-footed red-deer. But Charles provokes the ridicule of the shopman and the keepers by the extraordinary collection of gorgeous flies he has purchased for the great occasion of a visit to Achendaroch. His host has to cheer him with words of encouragement when he is descending the steep brae to the river, which the veteran Sir Kenneth himself accomplishes like a Tyrolese chamois-hunter. So that, on the whole, the tiro may be congratulated on killing one small fish to the three heavy salmon of Sir Hector. But, lucky as he seems likely to be beyond his deserts, so far as his social aspirations are concerned, we are warned from the very first that there is a strain of feebleness in his character. He acknowledges a master in his managing clerk, a man very little older than himself, who promises to be the Mephistopheles of some terrible tragedy, but who turns out in the end to be simply a commonplace pettifogger with no more serious failing than a weakness for whisky. Charles falls in love with a daughter of the House of Achendaroch, a lady of beauty, birth, and many accomplishments. We are surprised that he has dared to lift his eyes to her. We wonder more that he has succeeded in making her look kindly on him; and we are more astonished than before when we learn that her friends seem to like the connexion. But the crowning marvel comes when he has the audacity to jilt her, and to jilt her for another high-born cousin of the Achendaroch House, who has been equally favourably impressed by him.

But, indeed, what strikes us most, and what perhaps pleases us the most, is the unconventional unworldliness of everybody in the story. The lack of worldly wisdom is natural enough, of course, in the case of, the keepers and peasants on the Achendaroch estates, and the inhabitants of the back-of-the-world town of

* *The House of Achendaroch: an Old Maid's Story.* By Mary Emily Cameron. London: Samuel Tinsley & Co. 1878.

Inverdeen. But there are obvious traces of it in everybody without exception, and the author appears to reflect something of her own individuality in the people who should have seen most of society. Sir Kenneth MacRae, Mr. Hamilton, who succeeded to Achendaroch on his death, and a certain General Kilvert, who lives near Worcester, are all men of the world of excellent connexions. Mr. Hamilton is an eminent Edinburgh advocate besides. But all three appear to accept Mr. Charles MacRae upon his own valuation, and treat their common favourite both as a gentleman and equal, although, in fact, he is neither the one nor the other. Then Captain Kilvert, the son and heir of the General, regards Scotland as what it must have been in the rebellion of '45, apparently putting it very much on a par with the Fiji Islands. When he has accepted a cordial invitation to Achendaroch, "he expected to find people who were less civilized than himself, and was half disappointed to meet with those who were more than his equals." "General Kilvert himself seemed very anxious to become acquainted with Mr. Hamilton MacRae; but this could not be unless the laird would make up his mind to visit England, for he had an idea that Scotland was a wild, inaccessible, desert land, difficult of access, dangerous to travel in, dirty to dwell in." Yet the events of the story happened in days when the General could have travelled from Worcester seated comfortably in a first-class railway carriage, and when hardy Southern pioneers were already paying fancy rents for lodges and shooting quarters in the Scottish moors. Nor is the behaviour of a certain Captain Engledue much less remarkable. He is an Englishman of birth and station, with a commission in a crack cavalry regiment. His manners are superfine rather than otherwise, and he has been paying marked attentions to the daughter of the late Sir Kenneth MacRae. But, having taken offence at the favour which that giddy young lady has been showing to her kinsman Charlie MacRae, Captain Engledue seeks an interview with the mother to expostulate in such delicate terms as the following:—"Of course, Lady MacRae, it is just like yourself to be civil and kind to a man of that saut, coming from your own neighbourhood, you know; but—a—if your daughter chooses to mix herself up with people of that class, she must not expect—she must take the consequences, in fact," &c. And Lady MacRae, who was originally presented to us as formal and dignified almost to a fault, with a profound notion of her family consequence, in place of ringing the bell and having the gallant officer shown downstairs, is apologetic rather than otherwise, and stands very irresolutely on the defensive. Then in the speculative digressions to which we have referred we come upon such puzzling bits of metaphysical moralizing as this:—"The honest and good heart, like mountain fern, is quite as likely to be met with among men as women." After all, however, on the subjects in which the author is most at home there is a great deal of pleasant description and of sensible writing to counterbalance all that. Donald, the Achendaroch keeper, and his household, with their blending of clan-loyalty, simplicity, and superstition, are just what we might imagine them; while MacRae's landlady is a lifelike old Scotch gentlewoman, who bears her straitened circumstances with resignation and courage, and awakens all our warmest sympathy as the affectionate mother of a scapegrace son. The pictures of Highland scenery are excellent, while those of the homesteads and hop-gardens and apple-orchards of Worcestershire show a lively appreciation of the more luxurious South.

SIR TRAVERS TWISS'S BRACTON.*

It has long been felt that a new edition of Bracton's work on the Laws and Customs of England, the first attempt at a systematic treatise on English jurisprudence, and almost the only such attempt before Blackstone, would be a great boon to students of mediæval English institutions, and particularly of English legal history. Whether it is absolutely necessary we need hardly consider. The old edition of 1569, or the reprint of it which appeared in the following century, may be sufficient for many purposes; but, though these editions cannot be called scarce, the trouble and expense of procuring them, to say nothing of their unhandiness in use as compared with modern books, are quite enough to deter many persons who would gladly possess Bracton if it were accessible in as convenient a form as the Clarendon Press edition of Britton. We could wish, indeed, that one or other of the Universities had taken up Bracton in the first instance. Britton, though curious and interesting, is to a great extent a version of Bracton's work, adapted to the needs of English practice in a generation which, though not far removed in time from Bracton's, had made no small advances on it in both politics and law; and we may observe in passing that there can be no greater mistake than to suppose that the thirteenth century was not a progressive age as regards the arts of civil government. Not only does Bracton come first both in order of time and of interest, but we cannot help thinking that under the auspices of the Pitt or Clarendon Press there would have been such an amount of discretion in the choice of an editor, and of consultation and supervision afterwards, as to ensure the critical part of the work being done in a manner adequate to the importance of the subject, the dignity of the promoters, and the credit of English scholarship. The existing printed text of Bracton is in a condition requiring a good deal of critical industry, though the publisher of 1569 professed to have expended immense pains on it ("ingenti cura nunc primum typis vulgati"), and to have collated twelve MSS., from which he gives a list of various readings, mostly of no importance. Thus the present editor had the opportunity of doing a needful and laudable piece of work once for all. But Sir Travers Twiss's performance as regards the text is, we grieve to say, thoroughly unsatisfactory; so much so that we feel bound to pass over the many interesting questions which a new edition of Bracton might fairly give occasion for discussing, and to show clearly, at the cost of entering into a certain amount of minute detail, what sort of work may be sent forth into the world of letters under the sanction of the Record Office, and (we fear we must add) with a kind of national responsibility.

The principles to be followed in editing the series of national memorials of which this volume is part are laid down in the general statement printed at its head. "The Master of the Rolls" (the late Lord Romilly) ". . . . proposed that each chronicle or historical document to be edited should be treated in the same way as if the Editor were engaged on an Editio Princeps; and for this purpose the most correct text should be formed from an accurate collation of the best MSS." This proposal, along with the rest of the plan, was approved by the Lords of the Treasury. Notes are excluded by the scheme, except so far as necessary for settling the text; a restriction which in the case of Bracton is perhaps unfortunate. For he is not one of the authors who can be as well explained by a translation as by a commentary. On the contrary, Bracton's language presents no difficulty in itself; the difficulties are in references, allusions, and the use of technical terms which mere translation does not explain. Considering how few persons unable to read Latin are at all likely to consult Bracton, we are inclined to doubt if it was worth while to add an English version, as has now been done. It doubles the bulk of the edition, and imposes on the editor an amount of almost mechanical toil only too apt to distract his attention from the more vital part of his duty. Some very competent antiquaries, however, especially in France, have laid it down as a fixed rule that no ancient text of any kind should be republished without a translation; and, if the work were otherwise well done, we should see no occasion to quarrel either with the Treasury or with Sir Travers Twiss on that score.

But the work is not otherwise well done. To begin with, the very first point of an editor's duty—specially impressed on him, as we have seen, by the standing instructions that apply to this series of publications—has been openly neglected. The materials for forming a good text of Bracton are ample; there are probably not less than a dozen easily accessible MSS. of a date not later than the first quarter of the fourteenth century, as appears from the list given by the editor himself. And we are satisfied by inquiries of our own that the printed text of 1569 has no claim whatever to be considered as representing the best class, or even a good class, of MSS. What the old publisher's "duodecim libri antiqui" may have been we know not; either he was unfortunate in their selection, or (which is quite as likely) the one chosen to print from happened to be inferior, and the rest were never thoroughly collated.

Yet Sir Travers Twiss has thought fit to treat this text as classical, and, instead of producing the best text he could from original materials, has "studiously retained" that of the old edition, even when it is obviously corrupt. He has indeed, he says, "subjoined to it in the form of annotations the corrections which have been supplied by the Rawlinson and other MSS." But we shall immediately show that it is impossible to rely on this part of his work. He tells us that, after examining more than twenty MSS., he has chosen a particular one of the early fourteenth century—Rawlinson C. 160 in the Bodleian Library at Oxford—as his standard of collation, and that it "has not failed to supply a correction for every existing error in the text of the printed book of 1569, as far as the present volume extends." What this MS. may really be capable of supplying, or whether its general value is rightly estimated by Sir Travers Twiss, we cannot tell without an independent collation, which we have not been able to obtain. But it certainly has failed to supply Sir Travers Twiss with any correction for two obviously corrupt passages which he reprints without improvement, and which are correctly given in other MSS. apparently seen and more or less used by him.

In fo. 16*a* of Bracton—we cite, as usual, by the paging of ed. 1569—that edition, which we shall hereafter call the vulgate, reads thus:—

> Et in fine notandum, quod si in corpus quod traditur sit consensum, non nocet, quamvis circa causam dandi atque recipiendi sit dissensio: ut si pecuniam numeratam tibi tradam, vel quid tale, et tu eam quasi *traditam* accipias, constat ad te proprietatem transire.

Sir Travers Twiss repeats this without any remark and without alteration, save that for "vel quid tale" he gives "vel quid *tali*," which, though not actually nonsense, is certainly no improvement and is not in any MS. we have seen. Now "quasi *traditam*" is manifestly wrong. A man cannot receive money *as if* delivered to him when it is actually delivered. In fact Bracton is quoting from the Digest, 41. 1. *De acquirendo rerum dominio*, l. 36, where it is said:—"Nam et si pecuniam numeratam tibi tradam donandi gratia, tu eam quasi *creditam* accipias, constat pro-

* *Henrici de Bracton de Legibus et Consuetudinibus Angliæ. Libri quinque in varios tractatus distincti. Ad diversorum et vetustissimorum codicum collationem typis vulgati.* Edited by Sir Travers Twiss, Q.C., D.C.L. Published by the authority of the Lords Commissioners of Her Majesty's Treasury, under the direction of the Master of the Rolls. Vol. I. London: 1878.

prietatem ad te transire." The point is that if money is delivered as a gift, but by mistake received as a loan, the mistake does not prevent the property from passing. Even without MS. authority we might safely replace *creditam* in the text of Bracton, for the confusion is a very easy one both in mediæval MS., especially when the words are contracted, and in Elizabethan printer's work. But *creditam* is the reading of the two good early MSS. in the Library of Lincoln's Inn, and three out of the four in the University Library of Cambridge. Sir T. Twiss gives no marginal reference to the Digest, though he professes to note parallel passages, and might have found the reference in Güterbock's excellent little book on Bracton and his relation to Roman law. Güterbock in this place, we must say, falls short of his usual acuteness; for, instead of correcting the text, he assumes that Bracton misread the Digest.

The next instance is a stronger one. In fo. 19*a* we read in Sir Travers Twiss's text:—

> Istæ donationes [the delivery of anything under the "innominate contracts" *do ut des*, etc.] consistunt sub modo et obligant contrahentes, ita quod si dedero vel fecero tu teneris ad dandum vel faciendum secundum quod convenit, *sed tamen ut repetere possim* quod dedi, si tu non vis facere quod promisisti, *si* ad hoc tantum agere possum [possunt, ed. 1569], quod tu facias, nisi aliter convenerit ab initio. Poterit enim huic donationi sub modo adjici conditio ab initio, ut si dicam, et si non dederis vel non feceris quod convenit, quod ego repetere possum quod dedi vel impensas factas circa rem *quas* feci, aliter non.

This, as it stands, is unintelligible. Sir T. Twiss prints and translates it without remark. Güterbock has pointed out both the disease and the remedy. The sense clearly demands "ut *non* repetere possim . . . *sed* ad hoc tantum agere possum." And this, with a few minute variations in order of words, is in fact the reading of all the Cambridge University and Lincoln's Inn MSS. Further, the true reading of the last clause appears to be "quod ego repetere *possim* . . . circa rem *quam* feci, *alioquin autem* non"; but this is of minor importance. Now of two things one—either the Oxford MS. specially relied on by Sir Travers Twiss affords the correct reading, or it does not. If it does, he has not acted up to his profession of collating it throughout. If it does not, he ought still to have perceived the corruption, already noted as it was by Güterbock, and looked for a better reading in other MSS. He need not have gone further than Lincoln's Inn for it.

After negligence of this kind in the text one cannot expect much accuracy in collateral matters. At the end of Book II., cap. 13, where there are two readings of a passage in the Digest expressly cited by Bracton, Sir Travers Twiss gives it in a note with the reading which Bracton obviously did not follow. In Book I., cap. 8, there is a gross blunder in the translation. Bracton, speaking of the authority and duty of the king's *comites*, and the significance of their being girt with swords, says:—"Ringæ enim dicuntur ex eo quod renes girant et circumdant, et unde dicitur, accingere gladio tuo, &c." He is quoting, of course, the familiar verse in the 49th Psalm, which in the Vulgate reads "accingere gladio tuo super femur tuum, potentissime." Sir Travers Twiss not only fails to see this, but takes *accingere* for an infinitive, and translates "and hence the phrase, to gird yourself with your sword"! Bracton would not have professed to know so much as his present editor about general jurisprudence and reforming the law of nations; but he certainly had a more competent knowledge both of the Vulgate and of Latin grammar than Sir Travers Twiss allows him credit for.

It will be observed that our more serious charges against the competence of the editor's work all lie in a compass not only small by comparison to the whole extent of Bracton, but not exceeding a quarter of the volume now published. We do not profess to have examined the whole of Sir T. Twiss's performance. Whether the rest of it would be found to contain a similar average of oversights, or whether our choice of test passages with which we happened to be familiar has coincided with cases of exceptional negligence, we must leave to the research or conjecture of others. But we think we have shown sufficient cause for holding, in the absence of some further explanation, that Sir Travers Twiss's editing of Bracton cannot be received with any degree of confidence; and that, so far from this edition superseding for the future the necessity of consulting the MS. authorities, we can have no assurance that we possess the genuine text without the whole thing being done over again.

That we may not wholly confine ourselves to the disagreeable task of exposing bad work, we add a few particulars as to the Cambridge University MSS., of which Sir Travers Twiss only mentions the existence. There are three complete copies of Bracton, of which the two finest are part of large folios containing a variety of legal MSS. The later of these two (early fourteenth century) is an especially beautiful MS., and has in many places copious marginal notes, some of them not without curiosity. A third MS. (13th–14th century) is a volume of itself. A fourth (13th–14th century) contains Book I. of Bracton and part of Book II., but in a disordered sequence; the rest is an abridgment, and breaks off in the Tractate *De exceptionibus* (*circ.* fo. 411). Some other leaves of the same volume contain extracts from other chapters, partly copied and partly abridged. So far as we have examined these MSS. they give substantially the same text, and any one of the complete copies is much better than ed. 1569. They are as good as the best of the Lincoln's Inn MSS., and probably not far behind any of the Oxford ones, if at all. As a specimen of their readings we turn to Book I., cap. 5, *init.* The vulgate (repeated in the present edition) reads:—

> Infinitæ vero sunt iuris species, quia infiniti sunt homines et infinitæ sunt res. Nam sic [Sir T. Twiss notes à variant *et sic*] diceretur ius aliud equinum, aliud asininum, aliud vineæ, aliud agri, *aliud pecoris, aliud hominis*. Est autem ius publicum quod ad statum rei *publicæ* pertinet.

Bracton copied this almost verbatim from the Summa of Azo on the Institutes, *De iustitia et iure;* and Azo's text has "aliud Petri aliud Johannis," and "ad statum rei Romanæ." Now these readings are also given in Bracton by all the Cambridge MSS., except that one has "aliud petræ aliud hominis," apparently an attempt to make sense of a confused reading; and by the three Lincoln's Inn MSS., except that the most recent (described as late fourteenth century) has "rei publicæ." There can, therefore, be little or no doubt that these are the genuine readings of Bracton, and should be restored in his text. One is glad to recover the quaint and mediæval particularity of "aliud Petri aliud Johannis," instead of the commonplace given in the printed book; but Bracton's unquestioning retention of Azo's "statum rei Romanæ" has a more considerable significance and interest. The alteration to "publicæ" was a natural one enough to be made by transcribers who thought "rei Romanæ" inappropriate for a book of English law. Perhaps there may have been distinct recensions of Bracton from a very early time; but this question could be cleared up only by a more extensive and minute inspection of MSS. than appears to have been yet undertaken.

We part from the now print of Bracton more in sorrow than in anger. Instead of awaiting the continuance of the work, as we hoped to do, with pleasurable impatience, we can now entertain only anxiety and misgiving. If the execution of such an undertaking is allowed to proceed in the manner in which it has been begun, the result will be a reproach to the learning of this country, and a misfortune to the study of its history.

COAL; ITS HISTORY AND USES.*

A YEAR or so ago Dr. Carpenter, as Secretary to the Gilchrist Educational Trust, suggested to the Professors of the Yorkshire College the delivery of courses of lectures in some of the larger towns of the West Riding upon some common and familiar subject. For several reasons coal was the subject selected. It was both familiar and comprehensive. It had a direct practical and economical interest for the class of hearers for whom the lectures were intended, and in its scientific aspects it was sufficiently novel to have an educational value for popular audiences. Ten lectures on coal were accordingly delivered, in the spring of last year, in Leeds and Keighley, with gratifying results. And the publication of these lectures having been suggested in the hope that a volume on coal might interest a wider public than that originally addressed, their contents have been altered in form, revised, and re-arranged, so as to make up the book now submitted to the public. First come two chapters on the Geology of Coal by Professor Green. Chapter III. on Coal Plants, and Chapter IV. on the Animals of the Coal Measures, are by Professor Miall; Chapters V. and VI., on the Chemistry of Coal, are by Professor Thorpe; Chapters VII. and VIII., on Coal as a Source of Warmth and Power, are by Professor Rücker; and Chapters IX. and X., on the Coal Question in its economical bearings, are by Professor Marshall.

These lectures furnish models of popular exposition. Clear and straightforward in style, and free as far as possible from technicalities, they are calculated to bring their meaning home to the class of minds for which they were intended with a degree of ease only attainable by a confirmed mastery of the subject. At the outset the learner is taken back to the period when coal was in process of formation. He is given a sketch of the state through which the area of the British Isles must be imagined to have been then passing, and is told how the land and water were distributed; what deposits had been laid down in antecedent geological ages, so as to form a floor or substratum for the accumulation of the fuel masses of the future; what plants and animals peopled the earth and seas, and how their embedded remains yield evidences of the various forms of life then existent; the conditions of climate which determined their growth; and especially what organic forms are to be traced making up the compact mineral product familiar to us under the various kinds of coal. Passing rapidly, but with great distinctness, over the composition and the mode of deposit of the underlying sandstones, clays, shales, and limestones, the superposition of which in layers is made clear by a diagrammatic section, Professor Green comes to what forms but a small portion of the overlying carboniferous deposits, but is to be regarded nevertheless as the most important member of that group, both in relation to human needs and to its history in the long range of organic life. That coal is little else but mineralised vegetable matter has been, he shows, one of the earliest facts established by the modern science of geology. Chemical analysis proved it to be composed of carbon, oxygen, and hydrogen, with a small proportion of nitrogen—to consist, that is, of all the elements which make up all vegetable organic compounds. To this fact, which is in itself but a strong presumption of the vegetable origin of coal, is added the convincing proof that plant structure is readily seen in coal of every variety. Microscopical examination of Nova Scotian coal enabled Dr. Dawson to recognize flattened stems of trees or

* *Coal; its History and Uses.* By Professors Green, Miall, Thorpe, Rücker, and Marshall, of the Yorkshire College. Edited by Professor Thorpe. London: Macmillan & Co. 1878.

towering plants known as Sigillaria, presenting an external layer of coal enclosing a film of mineral charcoal. These stems form now columns of shale or sandstone which have infiltrated and taken the place of the original vegetable tissue, remaining in many instances upright *in situ*, the central hollow containing, mixed with mineral charcoal, leaves, shells, and other vegetable or animal remains. These coals, then, were made up, he considered, of three portions; first, mineral charcoal—*i.e.* wood from which the oxygen and hydrogen have to a great extent been abstracted, leaving a carbonized residue in which the original vegetable structure is clearly apparent; secondly, clear lustrous coal, consisting mainly of bark in which the organic structure has been very largely obliterated; and, thirdly, the coarser coal, composed in great measure of leaves and other portions of herbaceous plants. The microscopical examination of our English coals has shown them to consist in the main of the *débris* of plants very similar to those of Nova Scotia. The bulk of them are found to be made up of little else than an aggregation of minute rounded bodies, the spores of the Lepidodendron, a species of lycopod, which tree is frequently met with in a fossil state in the coal measures. Our English lycopods are diminutive plants, and the largest foreign species rise only to the height of a few feet. But the Lepidodendron was a noble forest tree, reaching in some cases to a hundred feet in height. The growth of a forest of this kind is made clearly intelligible by Mr. Green's picture of a broad, flat, swampy expanse, thickly covered by a luxuriant vegetation, like the pestilential marshy jungles of Central Africa, though we should have looked rather for a picture of a lagoon studded with low-lying overgrown islands, such as abound in the South Pacific. The roots and lower parts of the stems were submerged, the trunks and branches rising into the air. Year by year the showers of leaves and spores formed a thickening carpet at the foot of the tree, the root and lower trunk of which are often to be seen still *in situ*, buried under the now mineralized black and brittle mass. Special attention is directed to the formation of cannel coal, distinguished by its hard texture, which does not soil the fingers, takes a high polish, contains an exceptional quantity of hydrogen, and breaks with a conchoidal fracture—*i.e.* in curved surfaces with concentric ridges, like the pattern of a ribbed shell:—

Cannel coals always occur in dish-shaped patches thinning away to nothing on all sides; they frequently merge insensibly into highly carbonaceous black shale; and they contain occasionally the remains of fish.

The presence of fossil fish in cannels show that they must have been formed under water, and they probably consist of vegetable matter which was drifted down into ponds or lakes and lay soaking till it became reduced to a pulp. The deposit was of course limited in extent by the banks of the sheet of water in which it was formed, and hence the lenticular shape which beds of cannel exhibit. A certain amount of mud would of course be brought into the water along with the drifted plants, but being heavier than they it would fall down, first carrying with it enough decomposing vegetable matter to stain it black; in a certain distance all the mud came to the bottom, and the vegetable residue floating on sank slowly and became spread out over the bed of the lake further on. Thus near the mouth of a river deposits of laminated carbonaceous mud were laid down, and these gradually contained less and less mud and more and more vegetable matter till they merged into a mass of vegetable pulp.

The maceration it has undergone has to a large extent effaced all traces of vegetable structure in cannel coal, but spores can now and then be still detected in it.

The difficult task of discriminating the generic and specific affinities of the fossil plants which diversify the structure of coal is ably touched upon by Professor Miall. Besides the lepidodendroid trees, of which the Lepidodendron and Sigillaria are the principal examples, and occupy most of the lecturer's space, the Calamites form a conspicuous group, referred by former students of fossil botany to the class of reeds or bamboos, but now assigned by most authors to the Horse-tails, or Equisetaceæ. They were, beyond doubt, cryptogamic plants, reproduced, *i.e.* not by flower and seed, but by spores. Their fruit consisted of a spike of modified leaves, lodging sporangia, or spore-cases, within which are to be traced numerous single-celled spores. In many points of structure the Calamites differed from living Equisetaceæ, as well as in their vastly superior stature. The animal remains associated with the coal measures furnish Mr. Miall with a no less interesting subject of discussion. The highest of these in the zoological scale are the Amphibia, represented most conspicuously by the Labyrinthodonts, first discovered about fifty years ago in the Triassic rocks of Germany. Professor Miall gives ample details, aided by clear illustrations, of the anatomical characteristics of this group, more particularly the Mastodonsaurus and Archegosaurus, which in the first instance led to their being classed with the Saurians, until their true affinities were pointed out by Professor Owen. Hereby has been exploded the false belief till lately current amongst palæontologists that, owing to the density of carbonic acid gas filling the atmosphere during the period of the vegetation that formed the coal measures, no air-breathing animals could have lived upon the earth—this law explaining the fact of the absence of such animals from the coal measures. The discovery of the amphibian types just mentioned, with that named by Professor Huxley Loxomma, some fourteen feet long, allied to the crocodile in the form of skull and jaws, and the Urocordylus from the coal-fields of Kilkenny and of North America, with curiously marked caudal vertebræ, besides fifteen other species at least, sufficiently attest the presence of air-breathing vertebrates during the Carboniferous period.

Many Ganoid fishes find representatives in the coal measures, whether belonging to the marine or fresh-water species, or, like the salmon, migratory between salt and fresh water. Ctenodus and its allied fossil genus Dipterus are selected by Professor Miall for particular notice, and their affinities with the existing genera (Lepidosiren, Protopterus, and Ceratodus) pointed out. The conclusion made good is that the animal kingdom of the Carboniferous period is the animal kingdom of to-day. Nearly every existing class of animals is represented in the Carboniferous rocks. At the same time the specific difference is not less remarkable than the identity of type, not a single well-understood species being known to descend from Palæozoic to modern times. Here, then, is opened a boundless field for the process of evolution. In a palæontological map, such as that suggested by Professor Miall on the basis of Haeckel's *History of Creation*, we might trace back the genealogy of living forms, if not to a common ancestor, yet to a few converging lines pointing, with whatever degree of vagueness, towards one primordial germ.

The chemistry of coal, the employment of this mineral as a source of heat and mechanical power, and the economical questions relating to its supply and consumption, are treated in the chapters which follow with a fulness and ability to which the limits of our space forbid our doing justice. We are glad to find that Professor Marshall closes the series with words of comfort. Even apart from any prospective reduction on a great scale in the rate of consumption—to which, even since he penned the words, an enhanced probability has been given by the chance of coal-gas being largely superseded by electric lighting—the period of exhaustion, inevitable as it is, must be too remote for practical realization. His ingenious diagrams and tables, showing the calculated available output, together with the growing rate of demand, by the convergence of lines of arithmetical and geometrical progression, point to a period of about 2,150 years. But even here, as he goes on to show, there need be no absolute, sudden, or total stop. New conditions, both of supply and demand, not to be thought of now, may arise. There is no necessity, at all events, for any prohibitive duty upon the export of coal. "On one condition alone can we continue to enjoy the manifold advantages of cheap coal—namely, that we raise and get rid of our coal as fast and as freely as possible." This may be thought a bold conclusion, yet it is by no means incompatible with a real frugality. It lends no encouragement to waste. Coal, which tends to become more and more the staple wealth of our country, becomes the material for building up industries at home and abroad, from which in the course of free exchange a commerce of growing profit may be expected. Beyond all, our island fortunes are being gradually merged in those of a greater Britain, which, largely through the aid of the coal whose prospective loss many persons are lamenting, has grown beyond the limits of the parent island. Philosophy may reconcile us to the fate which is inevitable. But with this there may well blend somewhat of the parental pride and satisfaction with which we may look onward to America, Australia, and New Zealand dealing not unworthily with their rich inheritance.

THE HOUSE BY THE WORKS.*

MR. EDWARD GARRETT is in a very high degree a moral writer. He began, we should imagine, by writing sermons, advanced by slow degrees to the composition of tracts, next wrote pious tales for the publications of some religious Society, and at last blossomed forth as a novelist. We should scarcely have ventured to apply to him this term, which has but an ill sound in the ears of all serious people, did he not expressly claim it for himself. On the title-page of the work before us he calls his story a novel. He is following in the steps of Rowland Hill when that great divine said that the Devil should no longer keep all the best tunes to himself. Mr. Garrett, no doubt, knows his own business best, and is aware of the weight that his name carries. Yet he would have done well, we are inclined to think, had he at least styled his tale A Serious Novel, or a Novel for Sabbath Reading by Serious People. It is, in truth, something like that happy invention the Noah's Ark. It can afford some enjoyment, and yet it need not be put away from Saturday evening to Monday morning. It is sober enough for the Sunday, and yet it has just enough of a romance about it to make it lively reading when compared with a sermon or with Drelincourt on Death. It might perhaps, in its conclusion at least, be found somewhat gloomy; but that will recommend it not the less to that large and respectable party which holds that over one-seventh of life a gloom should be cast. And yet, though the end according to common notions is sad enough, there is not a little cheerfulness in the rest of the work. Mr. Garrett is by no means an ascetic. A teetotaller we should imagine he is, and a determined enemy to tobacco; but, as we well remember from his earlier writings, he has a wholesome relish for buns and ginger-beer. In his present volumes he scorns the brightness of the High Street of the town in which he lays the scene of his story. "It boasted," he says, "several gin-palaces and two or three showy tobacconists' shops, and a foreign confectioner's." On the other hand, he has no contempt for the creature comforts which are supplied in the serious household of a small tradesman. The mistress of the household on one occasion "surrounded" her guests "with her gentle, old-fashioned hospitalities, her honey, her lemonade, and her crisp biscuits." Neither does he see any harm when his pattern lady, Aunt Barbara, prefers biscuits, jams and

* *The House by the Works.* A Novel. By the Author of "Occupations of a Retired Life," &c. 3 vols. London: Tinsley Brothers. 1879.

jellies, and country butter and new-laid eggs, and a few slices of good ham, to the musty eggs and cheap bread and butter on which she had previously fed. We could have wished, however, that he had been willing to allow at least one happy marriage. He does indeed come very near to this, and he only misses it by ten pages. Had he ended his story, as he very well might have ended it, at p. 201, Lois would have had that happiness which she so well deserved. But he gives himself just one more chapter, and her lover is murdered. Was Mr. Garrett afraid to face the festivities of the wedding-breakfast? Surely the bride's health could have been as cheerfully drunk in ginger-beer or lemonade as in champagne. We wonder, indeed, that so good a man as he is had the heart, almost on the very eve of her marriage, to rob so exemplary a young creature of her betrothed. We would ask him to consider whether in so doing he treats his readers with proper consideration. He introduces us to really a model young lady. To describe her excellences he condescends to enter even into a minute account, not of her toilet, which would savour of vanity, but of the arrangements which she daily made after she had dressed and before she left her room. "Not a shred of untidiness must remain in her chamber for a moment. The discarded collars and cuffs of yesterday were already in the clothes-bag. The towels must be hung out smooth and square, the combs and brushes neatly adjusted, the bed folded back with a neatness second only to that with which it would be presently made." Are these, we pathetically ask, are these the habits of a young woman whose intended husband will get shot by two evil-looking men, adventurers and swindlers of the very worst type? Some of Mr. Garrett's saints must, of course, have been sufferers. But one of them he had just married, from a strong sense of duty on her part, to a frivolous dandy. Another he had not married at all, but he had killed off her old father suddenly, and brought her down from a state of great wealth to poverty; while even Aunt Barbara, the virtuous and trim old lady who is introduced to the reader in a long cloak into whose capacious pockets she had gathered all the sundries which accumulate about one in travelling—even she had early in life been disappointed in love. And yet, perhaps, from one point of view the lover who was shot was not to be so greatly pitied. He was a professor, and a professor in a German University. What an amount of what is called "tidying up" did he escape, and escape by a painless death! We are inclined to think that, for a man who is fond of books and who has a study of his own, two evil-looking adventurers and swindlers of the worst type, who however do their work skilfully and quickly, would be almost better than a wife who day after day through many a long year would not allow "a shred of untidiness" to remain in any part of his house, and would adjust his books and papers as neatly as she adjusted her own combs and brushes.

It is difficult to understand why Mr. Garrett is so severe upon the virtuous. It is not that he in the least grudges their happiness or is ignorant of their merits. On the contrary, he has an eye for merit even where merit is not generally recognized. The charwoman, for instance, finds in him the warmest advocate. "That useful factotum" he calls her, "whose helpful presence is often a real charity beyond all payment." We could have wished, however, that that indulgence which the charwoman obtains from him had been extended to the millionaire. We ought not to judge any class harshly, as we are sure he would admit, and even a millionaire may in his way be a kind of "useful factotum." At all events it is just possible that a man may make a million pounds and yet may not owe his fortune, as Mr. Garrett maintains he does owe it, to a judicious mixture of meanness, selfishness, and unscrupulousness with the qualities that belong to one who is punctual, reliable, and painstaking. By the way, would not, we venture to ask, the old-fashioned word "trustworthy" better suit a writer who admires old-fashioned English ways than "reliable," which is neither old-fashioned nor English? It is not merely the millionaire, but the wealthier classes generally, who meet with hard measure from our author. We do not refuse our tribute of admiration to the humbler classes whom Mr. Garrett so greatly extols. We are ready to admire his model servant, not "the very genteel maid-servant with an impassible face" who waits on the millionaire, but his honest middle-aged woman who, "wherever she walked, except when she went to 'worship,' carried with her a wicker basket of some sort." We are glad to learn through him how much merit there is in this basket-carrying, and we are prepared to introduce the practice into our own household. "The wicker basket," said the pious woman who always bore it, "shows I'm a respectable servant. 'Besides,' she added, with that stern practicality which redeemed her fashion from all fancifulness, 'one never knows when one may see something worth the buying. Many a woman passes good fish or fruit selling cheaply because she has nothing to carry it home in.'" While we so readily accept his views, we must ask him to consider for a moment whether there are not virtues to be found outside those who carry baskets, or who wear cloaks with capacious pockets, or who hang out their towels smooth and square, or who surround their guests with honey, lemonade, and crisp biscuits. Does not his Aunt Barbara, his model woman, show some indifference to human suffering—at all events, an utter ignorance of it in one of its worst forms—when she touches on the French Revolution? Her niece had said that she was never tired of reading about the sorrows of Marie Antoinette, for the story is so beautiful and so sad. "It is sad enough indeed," the aunt replied, "but I believe I think more of the thousands upon thousands of poor women who were born to infinitely greater hardships than she ever endured for a day." This is really wonderful. What woman in France suffered more, and even "infinitely" more, than its unhappy Queen? Mr. Garrett would seem to think that the higher the station from which one is cast down the softer is the fall. But what does he know of the commonest history? He would do well to leave Queens, at all events, alone. In one passage he describes some church bells which he says were made in Queen Elizabeth's time. The proof of this fact he finds apparently in the following verse that was engraved on one of them—

> Glory to God in highest heaven.
> Sixteen hundred ninety-seven.

By 1697 children used to be gravely informed that Queen Elizabeth was dead just as they are now informed that Queen Anne is dead.

Mr. Garrett describes in one passage a woman finding in a dark foggy night "the doors" of a rich man's house "fast." It surely requires some ingenuity in a writer to turn this simple fact into a reproach against one class, but Mr. Garrett has a good deal of ingenuity when he wishes to discover faults. She might have expected, he says, to find the doors fast "in the new neighbourhood of a place like Perford, where the poor can hope so little from the rich that the rich have cause to fear the poor." Surely Mr. Garrett in writing this piece of clap-trap falls into a strange blunder. He confounds the poor with the rogues. When he next locks up his own house—and like a wise man, no doubt, he locks it up every night—let him not, we beg him, do the poor such a grievous wrong as to think that it is they whom he fears. Having abused the rich man for making his doors fast, he in the next sentence falls foul of him on account of the scene inside. The woman through the great glass windows discovers a hall where "the rich carpet was spread over dainty tiles," and where a pair of legs in a great Russian leather screened chair gave notice of the presence of a dozing livery servant. For the pair of legs we attempt no defence. They were bad, very bad. But how about the dainty tiles? Certainly there was monstrous ostentation in putting them down when they were to be covered by a rich carpet; but millionaires, we admit, at times do strange things. Still we do not understand how they were discovered by a woman from the outside who merely glanced in through the glass doors. We must protest, moreover, when he allows this millionaire nothing but a rapid succession of drunken coachmen. He should remember that he himself has said that a man who becomes a millionaire must be "punctual, reliable, and painstaking." With such qualities, and with a million sterling to back him, he would have surely managed now and then to break the succession by a man who relished nothing stronger than ginger-beer or lemonade.

We must do our author the justice to allow that there is a moderate amount of wealth which does not excite his dislike. "It would have cheered," he says, "Aunt Barbara's loneliness to have seen some of the old Worcester china and half-worn silver, which would have awakened mutual memories of the past." What he means by "mutual memories" we do not in the least understand. Aunt Barbara could no doubt have remembered the old Worcester china and the half-worn silver, but they, even if they had been carried for years in one of her capacious pockets, could scarcely be expected to remember her. We must be content, we fear, to leave this sentence "to float," where, according to Mr. Garrett, our noblest thoughts are often to be found, "in a suggestive mistiness like sunset glories."

FRENCH LITERATURE.

MANY readers will remember the brilliant series of volumes published upwards of thirty years ago by Victor Cousin, devoted to the biography of French seventeenth-century celebrities. Jacqueline Pascal, Mesdames de Sablé, de Longueville, de Hautefort, and de Chevreuse had been conjured up, so to speak, from the tomb, for the purpose of illustrating that extraordinary vigour of character and earnestness of purpose which distinguished the French ladies of the Richelieu and Fronde epochs. The success of those masterly sketches led many eminent writers to follow in the same path, and thus it was that M. Bonneau-Avenant composed the Life of Mme. de Miramon, while the Count de Baillon published in his turn the correspondence of Queen Henrietta Maria, and M. Romain-Cornut edited Mme. de la Vallière's *Réflexions sur la miséricorde de Dieu.* The present volume (1) is a further contribution to this interesting collection, and we have to thank M. Avenant for an excellent description of French religious life as it was two hundred years ago. The biography of the Duchess d'Aiguillon has this peculiar feature, that it belongs both to the history of polite society and to that of the Gallican Church. Niece of Cardinal Richelieu, Marie de Wignerod de Pontcourlay spent the first thirty years of her life in the midst of all the pleasures which rank and political power can give; then, weary, dissatisfied, and full of loftier aspirations, she forsook the world for the cloister, and retired into solitude without having scandals to atone for like Mme. de Longueville or Sœur Louise de la Miséricorde. The volume before us has been compiled from the most authentic sources, especially the archives of the Richelieu family, and the MSS. of Valant preserved at the Paris National Library.

(1) *La Duchesse d'Aiguillon, sa vie et ses œuvres charitables.* Par A. Bonneau-Avenant. Paris: Didier.

With Mlle. de Condé (2) we are introduced to comparatively recent times, and to a state of French society in which strong affection and genuine devotedness shone as rare exceptions. The quasi-romance of her life is on that account all the more interesting, and the narrative of her love for M. de la Gervaisais reads like a delightful fiction amidst the corruptions of the *ancien régime*, then on the eve of its terrible catastrophe (1780–87). The letters are twenty-five in number, and were first published some time ago with a notice by Ballanche and one by the Countess d'Hautefeuille. The present edition, illustrated with two portraits and a facsimile, is due to M. Paul Viollet, who has added an introduction and explanatory notes. Mlle. de Condé, the last female representative of one of the greatest of French houses, died in 1824; M. de la Gervaisais survived her fourteen years. The publication of her letters was the more necessary because the episode to which they referred had been infamously perverted in a novel entitled *Les amours et les malheurs de Louise*, composed in 1790 by a Republican pamphleteer.

Vauban (3) was certainly one of the most remarkable men of the *grand siècle*, and the history of his life is full of instruction. Besides a collection of extracts taken from Vauban's own unpublished memoirs, and given to the world by M. Poncelet (1841–43), we have a biography by M. de Chambray, and Fontenelle's *éloge*. M. Georges Michel, however, now presents us with a volume which is likely to supersede both those works, and which contains in a succinct and readable shape a full account of the services rendered to France by the illustrious engineer. Thus, in a memoir written in 1689 the necessity of fortifying Paris was demonstrated, and a plan drawn up for the proper carrying out of the requisite works. Again, Vauban protested in the strongest possible manner against the Revocation of the Edict of Nantes, showed the terrible consequences which would infallibly result from it, and addressed both to Louvois and to Madame de Maintenon memorials which of course were not only treated with contempt, but regarded as disloyal and revolutionary. M. Michel has added to his volume a dictionary explaining the technical words used.

The small duodecimo recently published by the Dominican Father Didon (4) comprises seven lectures, preceded by an introduction, on the relations between faith and experimental science. The gravest problems, says our author, have been and still are discussed in this century; and not one of them is yet satisfactorily answered. Social institutions, forms of government, political economy, education, religion, freedom—all these topics are yet *sub judice*. Which of them seems in a fair way of being settled? Father Didon, like most writers on his side, believes in the ultimate triumph of religion over false interpretations of science; and he welcomes the alliance between metaphysicians, such as Cousin, Jouffroy, and Maine de Biran, and theologians properly so called. His lectures treat successively of Positivism, Materialism, Pantheism, practical scepticism, the existence of God, and the knowledge we possess of the Deity. They are characterized by much vigour, and are written in a moderate and impartial spirit.

Two volumes of letters by distinguished artists claim our notice. In one we find the correspondence of the painter Eugène Delacroix (5), from 1815 to 1863, the year of his death; in the other, M. Daniel Bernard has collected the memorials of Hector Berlioz. It is a pity, we think, that M. Burty should have destroyed the biographical sketch he had begun of his friend; and the few notes left by M. Léon Riésener, however interesting, do not supply the place of a regular biography. M. Delacroix spent some time in this country, and it is curious to see his opinions of the English school of painting, the drama, and society in general. The sketches of Wilkie please him a great deal more than his finished pictures. He admires Lawrence, defends Kean against French critics, and speaks enthusiastically about Young the actor. As a leader of the romantic school in painting, Eugène Delacroix excited the most vehement antagonism; and the production he sent to the Salon in 1824 ("The Massacre at Scio") was as much abused as Hugo's *Hernani* was destined to be five years later. The correspondence reflects in various places the excusable irritation which the painter felt at the attitude assumed by the press, and the mixture of ignorance and prejudice displayed by the critics of the day. The volume is printed in the most artistic style, and illustrated with a portrait and facsimiles.

The collection of Berlioz's correspondence (6) is spoiled by the extravagant panegyric which M. Daniel Bernard has added to it, but we recommend the perusal of these hundred and fifty letters to readers who wish to know something of the *irritabile genus*. Berlioz, like Delacroix, was run down with much violence during his life, and whilst a few impartial judges, honestly acknowledging that he had his faults, did at the same time homage to his genius, the majority, bred in the too exclusive admiration of Italian music, regarded as a madman the gifted author of *Harold* and of the *Symphonie fantastique*. Berlioz, let us add, could retaliate; witness what he says about Bellini, Meyerbeer, Rossini, Wagner, and others. As far as music is concerned, France, he says, is merely "un pays de *crétins* et de *gredins*." He far prefers the English, who, he remarks, "ont un violent désir d'aimer la musique." Posterity has given both to Berlioz and to Delacroix their proper place—no mean one—in the Pantheon of art, and they are not likely to be driven from it.

M. Penjon has written a volume on the subject of Berkeley's philosophy (7) which may be regarded as one of the best specimens of the modern French historical school. It is divided into three books; the author dealing first with the dialogues of Hylas and Philonoüs, then giving an account of Berkeley's journeys to France, Italy, and America, and finally describing his life from the period of his promotion to the bishopric of Cloyne. A general summary of the prelate's doctrine, considered in its relation to other schools of metaphysics, terminates the work. M. Penjon takes great pains to show that Berkeley's views have been singularly misrepresented, and that he should not be held responsible for the absurdities palmed upon him by his adversaries. We all know the objections raised by Johnson and Beattie; they are those which would occur to ordinary readers, but they only prove that neither Beattie nor Johnson understood the doctrines which they thought they were exposing to ridicule. The same remark may be made with reference to Kant and Hume.

M. Liard protests loudly and learnedly (8) against the pretensions of the Positivist school; like MM. Lachelier, Renouvier, Martin, Secrétan, and others, he is of opinion that M. Littré and his friends take too much upon themselves, and that their doctrines are assailable on many points. Modern men of science do not, it is true, affirm that they know all things; but assuredly when they tell us that beyond the small circle within which they move, certainty makes way for ignorance, and light for darkness, they virtually claim a monopoly of knowledge. Without following M. Liard throughout all the details of his exhaustive discussion, we may simply note here—and this circumstance invalidates the whole Positivist *corpus doctrinæ*—that Comte's definition of metaphysics is far from applying to the entire subject defined; he seems to confound metaphysics with scholasticism, which was really the perversion of philosophy; and this is so obvious that M. Littré felt the necessity of completing and rectifying the views of his master. Even if we grant the premisses of Positivism, the only thing which its votaries can do is to establish more clearly perhaps than had ever been done before the distinction between natural and metaphysical science—a distinction which no one dreams of denying; but this is not the same as proving the impossibility of metaphysics. We cannot of course here speak in detail of M. Liard's volume. We may mention that this eloquent and learned protest against the undue pretensions of Positivism has been crowned by the Académie des Sciences morales et politiques.

The sixth fasciculus of Messrs. Hachette's Dictionary of Antiquities, published *longo intervallo* (9), is now before us. Beginning with *Cælatura*, it takes us only to *Capsa*, thus covering a very small amount of ground, owing to the importance of some of the articles. The description of the Greek and Roman Calendars fills no less than ninety-seven columns; eleven pages are taken up by a notice of dogs and hounds, and nineteen by an essay on camps and castrametation. The illustrations are 272 in number.

Admiral Jurien de la Gravière is equally known as an intrepid sailor, a scholar, and a picturesque writer; the work he has just published, illustrated with maps and woodcuts, will add to his reputation (10). The first volume discusses the early history of modern navigation; it relates the discoveries made by the Portuguese and the Spaniards, the rapid progress of the English navy, and the early enterprises of the Dutch. Under the title "La mappemonde de Sébastien Cabot" our author then relates the adventures of that celebrated mariner and his companions, their expedition to Russia, and the commercial relations they established between England and the Northern traders. The creation and progress of the Muscovite Company and the travels of Anthony Jenkinson fill the second volume, the concluding chapter being occupied by reflections on the political consequences of the maritime discoveries made during the fifteenth and sixteenth centuries. The decline of Spain and the misfortunes of France have resulted, says the author, in the greatness of England; without colonies, a navy has no *raison d'être*, and if "Britannia rules the waves," it is because her very existence depends upon her taking the lead as a maritime Power.

The translation of Dante's *Inferno* for which we are indebted to M. Littré (11) is, as he himself acknowledges, a work without any precedent, unless we choose to find such in Paul Louis Courier's *Longus* and Vanderbourg's *Clotilde de Surville*. What was the use of clothing the Italian poem in a French mediæval garb, and of publishing a version which the generality of readers cannot possibly understand without the help of a glossary? M. Littré's answer is clear enough; he wishes to encourage the serious study of the French of the middle ages, and to show once more that the *langue d'oïl* was not what, until lately, many people still supposed, an ungrammatical jargon constructed at haphazard and full of solecisms. M. Littré's attempt is an ingenious *tour de force*, a literary

exercise the merit of which we readily acknowledge; but we still believe that the student anxious to become familiar with mediæval literature will do far better to read M. Gautier's edition of the *Chanson de Roland* or selections from Bartsch's *Chrestomathie*, than spend his time over this translation of the *Inferno*.

The second volume of M. Baudrillart's *Histoire du luxe* treats of Roman civilization (12), and is quite as interesting as the former one. Athens, the author remarks, had given an example of luxury in the midst of a rich and commercial democracy. When we come to Rome we find ourselves in the presence of a conquering aristocracy, a society where the most glaring inequalities existed, and where artistic refinement did not give to material prosperity that polish which makes corruption at once more fascinating and more dangerous. The Republic and the Empire occupy the first two books of M. Baudrillart's volumes; we have next a curious account of the strictures passed upon luxury both by heathen and by Christian writers; finally, the funeral ceremonies of the different nations of antiquity are described with reference to the expense which they necessitated and the sumptuary laws passed from time to time for the purpose of regulating them. An alphabetical index to Volumes I. and II. has been added by the author.

M. Victor Duruy has brought down his Roman History to the accession of Diocletian (13); and the long list of tyrants which he unfolds before us, beginning with Commodus, scarcely contains a name which mankind need care to remember. The notes, taken from the best authorities, illustrate all points of importance, and are both copious and accurate. A special chapter is devoted to the history of Christianity during the third century; and, notwithstanding some ludicrous mistakes on points of doctrine, M. Duruy has appreciated with remarkable impartiality the position of the Church between the last representatives of heathenism and the beginnings of heresy. In certain respects the new community had borrowed largely from the constitution of civil society as the Roman *régime* had organized it; in others, particularly so far as the distinction between the clerical and the lay element is concerned, it departed widely from the traditions of the old State religion.

We doubt whether M. Duruy's theological views will please all Roman Catholics; it is pretty certain that they will disappoint the author of the *Récit d'une sœur*, whom the slightest deviation from the strict orthodoxy of Ultramontanism shocks beyond description. The volume of reminiscences (14) collected by Mme. Craven treats of England and of Italy; the various chapters of which it consists were originally published in the *Correspondant*, and the reader sees that the chief object of the book is to exalt Roman Catholicism by drawing a parallel between it and English Protestantism. The mistakes which the author commits, the inferences she draws without the slightest foundation, are so grotesque that the work before us is hardly likely to be of much use in bringing over deluded heretics to the bosom of the Church. We need scarcely say that the writer has lost nothing of her vigour, and the admirers of Lord Palmerston will enjoy the introductory chapter, which describes a visit to Broadlands.

Andreas Memor is evidently a pseudonym (15), and if, as we are told, it is meant for the Duke de Grammont, we may congratulate him on having published a volume on German politics which is at least lively and amusing. The *Souvenirs d'un diplomate*, for which we had some years ago to thank M. Henry d'Ideville, had already given us a specimen of what a politician could accomplish if, instead of being uniformly dry and stilted, and appearing before the public in full dress, he would find room for anecdotes and enliven his reminiscences with sketches of society. Andreas Memor has followed in the same line. The complete study of modern German politics would embrace the whole history of Europe, for the Cabinet of Berlin has interfered with the Pope as well as with Denmark, and with Greece as well as with Austria. Andreas Memor, however, confines his attention exclusively to German topics; and, by limiting the sphere of his observations, he is enabled to give his readers a great number of details.

M. A. Legrelle's pamphlet is intended as an attack upon Germany *à propos* of a well-known episode in the history of Louis XIV. (16) Whether the taking of Strasburg in 1681 was a justifiable act or not is a question on which there is much to be said. M. Legrelle frankly acknowledges that it was indefensible; and he proves his case by narrating in detail the circumstances which led to the campaign, and taking us as far back as Richelieu and the Thirty Years' War. At the same time he endeavours to bring against the Germans an accusation of bad faith in their interpretation of the treaties of Munster and of Niméguen, maintaining that the greatest error committed by Louis XIV. consisted in allowing Louvois to enforce by unjustifiable means claims which in themselves were perfectly legitimate.

The *Bibliothèque Orientale Elzévirienne* of M. Ernest Leroux has often been noticed in these columns. The latest instalment of this valuable collection is a study (17) of Kâlidâsa's heroines compared with those of Shakespeare. A genuine admiration for both poets characterizes this sketch, in which we have, amongst other things, a good analysis of two well-known Sanscrit plays, *Sakuntala* and *Vikramorvasi*. The freedom and breadth of true genius are cleverly contrasted by Mrs. Sumner with the artificial style of the modern French drama.

THE COMING SESSION.

As the Ministers have wisely kept the secret of their intentions, any anticipation of the business of the Session must be conjectural, except perhaps that a Bankruptcy Bill will almost certainly be introduced. If Lord Beaconsfield undertakes to settle the Irish University question, he will furnish an unexpected proof of his preference of public duty to party interests. The difficulty is not so far insuperable that it would baffle a despotic legislator; but it is almost impossible to carry through Parliament a Bill which, by a singular ill-fortune, must dissatisfy one of two hostile majorities. Any arrangement which would satisfy the Roman Catholic bishops would be opposed by the English Nonconformists, by the Irish Protestants, and by a considerable section of the Conservative party. On the other hand, the Liberal Opposition would ally themselves with the Irish Home Rule members against any scheme which failed to conciliate the Roman Catholics. Although Lord Beaconsfield is in no sense a bigot, he has for some years ceased to court the Romish hierarchy. The rejection of the overtures which were made by Lord Mayo eleven or twelve years ago produced an impression which was probably confirmed by the subsequent failure of Mr. Gladstone's experiment. If the attempt is nevertheless renewed, the Ministerial proposals may be expected to follow the precedent of Lord Cairns's Bill of last year; but the Irish newspapers assert with much probability that the Roman Catholic bishops will not be satisfied with so moderate a concession. The rumour of a project of extending household suffrage to counties is more extravagantly improbable. The Prime Minister indeed cultivates illusions on the subject of a popular franchise which might tempt him to an act of political suicide; but his colleagues and his adherents are not prepared to disfranchise or to swamp the landowners and farmers who have always formed the nucleus of his party. The North Norfolk election was a protest, not only against the policy of the Opposition, but against the transfer to the labourers of the control of the county representation. It is doubtful whether the House of Lords would, even at the instance of a Conservative Government, pass on the first occasion the most democratic measure which has yet been proposed. If such a Bill failed, the existing constituencies would not fail to revenge themselves at the election for a wanton attack on their rights and interests.

It is more doubtful whether the County Government Bill of last Session will be again introduced with or without amendments. Mr. Forster, in his speech at Yarmouth, endeavoured to detach the farmers from their party by denouncing the Ministers for their scandalous neglect of an urgent demand for local administration. It was true that he and his friends had for many years acquiesced in the existing system, having not even brought to a second reading a Bill which was at one time printed for the redistribution of rural areas, and for a new machinery of administration; but in an election speech a party politician is not expected to be scrupulously candid. The present Government in 1877 induced Mr. Clare Read to withdraw a County Government Bill on the promise that they would take official charge of a similar measure. The pledge was so far redeemed that a Bill for the purpose was introduced early in the last Session, by which a partially representative Board would have been established in every county. There was no reason to question the good faith of the Government; and several amendments to the original scheme were favourably considered; but ultimately the Bill was withdrawn, not so much through want of time, as because neither the farmers nor any other class of the community expressed or felt the smallest desire for a change. Obstinate resistance to a plausible proposal would have produced a certain agitation; but concession at once disclosed the absence of serious pressure. It is not unlikely that the Government may, after the experience of last year, decline the resumption of a troublesome task; but it is in their power both to perform a public service and to gain a certain amount of credit by passing a well-considered measure. The Justices manage the county finances as well as any Board or Council which could be devised; but they have no administrative powers, and in the present day it would be impossible to create a local governing body which would not be, at least in part, representative. In country districts there is much need of an efficient sanitary authority, and the county is by far the most convenient area. Boards of Guardians are often indifferent to the sanitary condition of houses and villages within their jurisdiction, and their officers are seldom thoroughly independent. A county inspector would not be afraid to offend the owners or occupiers of unhealthy dwellings. There is no reason of public interest or of party expediency for leaving the organization of rural government to a future Ministry.

One important Bill will almost certainly be passed. It is understood that the Commissioners on Mr. Justice Stephen's Criminal Code will have completed their labours by the commencement of the Session; and the Bill which embodies their recommendations will be introduced without delay. It would obviously be absurd to discuss the details of the measure in the House; and it may be hoped that professional members will not insist on the appointment of a Committee to do over again the work of the Commission. Acquiescence in two propositions would justify and require the acceptance of the Code as a whole. If it is right that a Code should be substituted for a mass of statutes and decided cases, and if the Code as amended is apparently well adapted on the whole to its purpose, there can be no reason for further delay. Every Session will furnish opportunities for corrections and amendments which may probably be suggested by experience; and the result of cases hereafter decided will be periodically incorporated in the Code. If the Lord Chancellor and the Attorney-General, who have vigorously promoted the Criminal Code, also succeed in passing a satisfactory Bankruptcy Bill, they will have done much to signalize their incumbency of office. Parliament will scarcely have leisure or inclination for any other measure of law reform. The Government seems to have determined on prolonging the existence of the anomalous tribunal which decides against Railway Companies at the average cost, in salaries alone, of 900*l.* for each case which is tried. It would be in every way better to transfer the jurisdiction to the ordinary courts. As the present system is to be continued, those who are interested in the subject will do well to watch vigilantly attempts which will probably be made to extend the powers of the Commission.

It is impossible to foresee whether the attention of Parliament will be occupied, as during the last Session, by foreign politics. The Afghan controversy was happily

in great measure exhausted during the fortnight's debates in December. Parliament will not encourage further criticism of the transactions of Lord LAWRENCE or Lord NORTHBROOK, nor will it again inquire into the necessity of a war for which both Houses have made themselves responsible. There will be equally little advantage in discussing the physical and political merits of Cyprus, or the remote possibilities of Turkish reform; but new events may at any time revive the excitement which has died away. On the whole, the chances are in favour of a comparatively tranquil Session, as far as foreign affairs are concerned; but the leisure which may be enjoyed will probably not be fruitful of legislation. The lease of the present Parliament has too nearly expired for the outgoing occupiers of seats to devote exclusive attention to improvements. Orators on both sides, and especially on the Opposition benches, will be constantly tempted to address their constituents rather than their colleagues in the House. The promoters of special doctrines and crotchets will appeal to their supporters with an earnestness proportional to their numbers and influence. It is probable that the licensed victuallers will receive the respectful and apologetic notice which was eagerly bestowed upon them by both parties after their brilliant victory in 1874. The Home Rule members, unless they irritate all parties by a renewal of Parliamentary obstruction, will find themselves objects of general deference. It will not indeed be possible to grant them the only boon which they profess to want, but almost any other concession will be freely promised. The main interest of the Session will consist in the influence which it may exercise on the fortunes of contending parties; but in the transaction of ordinary business the Government will find itself for the first time confronted by an eager and united Opposition. The near prospect of office has much effect in removing unseasonable scruples and in reconciling differences which might impede the formation of a Ministry. The Liberal leaders in the House of Commons will lose no opportunity of displaying their great superiority in debating power. With Mr. GLADSTONE, Sir W. HARCOURT, Lord HARTINGTON, and Mr. LOWE watching for every opportunity of attack, it will not be prudent to attempt a paradoxical or hazardous policy.

LORD HARTINGTON AT LIVERPOOL.

THE opening of a new Liberal Club at Liverpool has afforded Lord HARTINGTON a convenient opportunity for reviewing and explaining the policy of his party. Whatever may be the other consequences of his speech, even his opponents would allow that it will considerably add to his growing reputation and influence. Lord HARTINGTON has lately shown that, when he takes up a question, he can make it his own, can contribute the fruits of real thought to its discussion, and pour on it a light which he himself bestows. This, it must be confessed, is precisely what Liberals secretly thought their new leader could not do. They were sure that he would do his Parliamentary work well, that he would go patiently through a heavy amount of labour, that he would be conciliatory to his supporters and courteous to his opponents. But the utmost they looked for was that he should be solid and sensible when he addressed political gatherings outside the House. He himself probably would never have known what he could do had not greatness been thrust upon him. As in the case of some other eminent men, his capabilities have grown on him with his opportunities. At Liverpool he had an opportunity, and he took advantage of it. Other Liberal leaders can make their special contributions to the advocacy of their cause. Mr. GLADSTONE has at his command a perennial spring of passionate declamation, and Sir WILLIAM HARCOURT is a master in the art of brilliant and amusing invective. But Lord HARTINGTON found a new field in considering the policy of the Government from the point of view of a statesman. He did not treat the members of the present Cabinet as a set of fools or scoundrels, nor did he try to make them ridiculous or raise a laugh at their blunders. He acknowledged with frankness that the Conservatives have introduced some valuable measures; and, in attacking the Ministry for its foreign policy, he did not say a word to which the most susceptible Conservative could object as unfair or personally offensive. He endeavoured to make it clear that the Ministry had one policy and that he and his friends had another policy, and to show why he thought the former wrong and the latter right. In accordance with this general view, he explained the past conduct of the Opposition, or, at any rate, of his opposition; and he was perhaps entitled to adopt the consequent position that his opposition is the only opposition which the Liberal party has offered. So long as it was uncertain in what way the Government was going he supported it. He thought it right that England should challenge the settlement of San Stefano, and he did what he could to leave the Government unembarrassed while it merely appeared in the character of the giver of this challenge. It was only when he found that by one secret treaty England had yielded to Russia everything Russia asked for elsewhere than in Bulgaria, and by another had bound itself to Turkey, and asked a price for the bargain, that he offered the utmost opposition in his power. He owns that this opposition was so far indiscriminate that it opposed everything that the Government did. But then he contended that every step taken by the Government was taken in the pursuit of a special policy, and that naturally every step was wrong in the eyes of those who thought the policy wrong. It was high time that the controversy should be placed on this footing, and that the contest should be made to assume the character of a struggle between the rival policies of English statesmen.

The policy of the Ministry, as Lord HARTINGTON described it, is to give Russia great advantages outside what remains of Turkey, but to prop up the Turkish Government and to thwart the aspirations of the subject races of Turkey. The policy of Lord HARTINGTON is to offer a very firm front to Russia, but to aid the subject races in every possible way, and to leave the Turkish Government to itself. The barrier which the Conservatives wish to interpose between Russia and Constantinople is the barrier of a Turkish army in the Balkans. The barrier which the Liberals wish to interpose is that of the freed subjects of Turkey. We will not pause to inquire whether the description of the Conservative policy is perfectly accurate, or whether the policy of firm opposition to Russia has not slowly dawned on the leaders of the Opposition, rather than been distinctly grasped by them from the outset. Nor is it necessary at present to balance the merits of these rival policies, because Lord HARTINGTON promised in his speech to take an early opportunity of explaining in detail what his policy is, and it is premature to bestow criticism before it is certain what it is that is to be criticized. At Liverpool Lord HARTINGTON occupied himself chiefly with the preliminary question whether it is right in the Opposition to invite the constituencies to decide at the next election between the rival policies he describes. Lord HARTINGTON very properly recognized that when an existing Parliament has decisively sanctioned the foreign policy of a Ministry, the Opposition, in order to escape the charge of factiousness and of wasting public time, must show that the matter in question has not been irrevocably settled one way or the other, and that the issues involved are of sufficient importance to the prosperity and strength of England to justify an appeal for the reversal of the policy hitherto pursued. Lord HARTINGTON may be held to have been successful in establishing both these points. Some things that have been done have been done once for all. If Lord HARTINGTON came into office next week, he would have to uphold the Treaty of Berlin, to administer Cyprus, and, if he was conscientiously persuaded that the Turks had reformed themselves, to withstand any advance of Russia in Armenia. But the general policy of propping up the Turkish Government, and of keeping down the subject races of Turkey, is a question not of next week or of this year, but of years and years to come; and is this policy really the secret of European peace, and therefore of English prosperity, so far as European peace ensures it? This, it must be owned, is as important a question as could be submitted to the constituencies. It is conceivable that we may be making vigorous and incessant efforts, spending our money and employing our thoughts, and all in the wrong direction. We may be troubling the peace of Europe, instead of settling it. We may be clinging to a hopeless past, instead of allying ourselves with a promising future. Lord HARTINGTON appears to be honestly convinced that this would be the result of the Ministry's policy; and, if so, it would involve a total departure from the principles of constitutional government to say that he is not entitled to ask the constituencies to pronounce whether the right or the wrong path shall be pursued.

[illegible] of Lord [illegible] was, [illegible] that [illegible] the Ministry has a [illegible], and one that English statesmen may [illegible]. No one, of whatever party, can deny that the policy of the Conservatives is in keeping with the traditional policy of England, and that the policy of the Liberals is not. In order to justify a new departure, it is necessary for the Liberals to show that a new departure is [illegible] needed, and to explain what this new departure practically means. There must, in short, be a Liberal statesmanship as opposed to a Conservative statesmanship. The constituencies, unless the nature of the two policies was explained to them, could not possibly understand the issues they have to decide. They are thus in the position of jurymen who could not understand the bearing of facts and the issues of law unless they were adequately instructed by the Bar and the Bench, but with this instruction they may hope, by a happy chance, or by the exercise of common sense, to arrive at a tolerably fair conclusion. The Ministry has had its say, and has evidently produced some impression on the jury. Lord HARTINGTON and his friends are now stating the case on the other side, and are seeking to make a still stronger impression on those whom they are addressing. Unfortunately for the Liberals there is one conspicuous difference between jurymen and electors. The jury have a special business to do which they must do. Their attention is confined to the case before them, and they have a verdict to give one way or the other. But the electors may attend to the case with which they have to deal, or not attend to it, as they please. They may find it too difficult for easy comprehension, and choose to think of something else. They may secretly be of opinion that, when statesmen ask them to balance the probabilities as to whether something, the character of which they cannot appreciate, is likely, or is not likely, to involve England in difficulties five or ten years hence, the statesmen are asking too much. The electors may prefer to turn to other issues which seem more within their compass, and to ask under which Government they will get most beer, or find the largest room for their religious animosities. They may not even get so far as any general question, and may confine their thoughts to calculating which candidate amuses them most, or is likely to spend the most money in the neighbourhood, or can hurt them most if they go against him. Merely as a guess it may be surmised that the country is rather tired of Turkey. Lord HARTINGTON knows perfectly well that the smaller and more personal or local are the issues with which the country is occupying itself, the better is the chance of the Conservatives. He, therefore, spoke with a gloomy hesitation as to the results of the impending contest. All that he can do is to try to stir the country up to the consideration of big things, and if he fail he will at least have the consolation of thinking that he has done his best, and has done it in a way very creditable to himself.

FRANCE.

THERE is a curious resemblance between the occasion of Marshal MACMAHON's election to the Presidentship of the French Republic and the occasion of his resignation of it. He was made President in the first instance because M. THIERS would not do the very thing which in the end the MARSHAL himself refused to do. In January 1879, the Left were as eager to get rid of Marshal MACMAHON as the Right were, in May 1873, to get rid of M. THIERS. But the Right must have put up with M. THIERS if he would have consented to take his Ministers from the majority in the National Assembly and to be guided by their advice when he had taken them, and the Left must have put up with Marshal MACMAHON if, having taken his Ministers from the majority in the Chamber of Deputies, he would have signed the decrees they presented to him. The Right in 1873 were professedly the champions of that principle of Ministerial responsibility which Marshal MACMAHON has resigned rather than recognize. He has every right, however, to plead that the party which elected him to maintain it had by anticipation condoned his abandonment of it. From the moment that the Ministers were taken from the wrong side the affection which the Right had entertained for Ministerial responsibility gave way to an entirely new conception of the President's duty. Instead of preaching submission to the majority, they preached resistance to it. The MARSHAL, who had been made President expressly to take his policy from his Cabinet, was now urged to choose a Cabinet which would consent to take its policy from him. It remains to be seen whether the new PRESIDENT will be more willing than M. THIERS or Marshal MACMAHON to efface himself in the proper constitutional fashion. There is much less chance, however, of his dispositions in this respect being subjected to any really decisive test than there was in the case of either of his predecessors. M. THIERS was elected by a majority which was pretty certain to turn against him in the end. Marshal MACMAHON was elected by a majority which was certain before his term of office was over to have become a minority. M. GRÉVY has been elected by a majority which to all appearance will outlast his Presidentship, if not his life. The Parliamentary conflicts that are yet to come may break up the deputies who voted for him into mutually hostile camps; but they will still be united in their desire to maintain Republican institutions, and it is scarcely likely that, upon any point which did not even indirectly involve this supreme issue, M. GRÉVY will think himself bound to retire from office rather than do what the Constitution prescribes.

For the present Frenchmen will perhaps be more interested in what the PRESIDENT wears, or lets others wear, than in what he does. According to the correspondent of an English newspaper, fortune has not been content with replacing a President in full uniform by a President in a black coat and a tall hat. She has even arranged that Marshal MACMAHON's successor shall most often be seen in a grey suit and a wide-awake. For the moment Republican enthusiasm is kindled by the testimony borne by M. GRÉVY's clothes to the supremacy of the civil over the military power, and from this point of view no doubt France may be congratulated on the exchange. But if the supremacy of the civil power is to be made evident to the populace, some more positive means must be resorted to than the mere absence of military pomp. The ceremonial side of power has to be considered in all countries and under every form of Government, and it cannot be said that France and a Republic are the country and the form of Government which can best afford to despise it. On the contrary, a wise administration will rather seek to invest the new institutions with as much dignity as can be given to them without descending to a foolish imitation of former Governments. Under Kings and Emperors the first place in the State has always been associated in the eyes and minds of the people with a certain amount of external magnificence. It will not be prudent to mark the change from the Monarchy to the Republic by an entire change of fashion, or to encourage scoffers to argue that the power of the executive is reduced in the same proportion as its state. It is possible that M. GRÉVY, who belongs to an old-fashioned school of Republicans, may desire to see American simplicity reproduced in France. If he does, or rather, if he means to do anything to give effect to his desire, he will show less wisdom in small things than he has shown in great. The circumstances and traditions of the two countries are so entirely different that few or no inferences can be drawn from one for the benefit of the other. The United States have no aristocracy, no army, and outside a few great towns no one low enough socially to be greatly impressed by external pomp. In France there are all these things, and where they exist it can hardly be wise to give every wealthy noble and every successful soldier the opportunity of appealing to whatever admiration for external pomp is still left in France far more successfully than the Chief of the State. It is no part of the Republican idea that the official representative of the Republic should be habitually outshone by individual citizens of it.

The Message of M. GRÉVY to the Chambers was precisely what was to be expected. It defined the position of the President upon the two points in which under Marshal MACMAHON it was unascertained. M. GRÉVY will never enter into conflict with the national will as expressed by its constitutional organs; and he promises on behalf of his Ministers that the Republic shall in future be served by functionaries who are neither its enemies nor its detractors. It may be assumed that M. GRÉVY did not begin his new career by taking more than his proper share in the composition of the Message. Strictly speaking, therefore,

nothing is to be inferred from it as to his own estimate of the policy set out in it. But when a President has been elected under circumstances of extraordinary significance, and has confided the conduct of public affairs to a Minister of his own choice, it is natural to suppose that his first Message will represent in an unusual degree his own views as well as those of his Cabinet. What is declared to be the policy of the Government goes to the country, therefore, with the *imprimatur* of the most consistent and trusted Republican in France. As such the Message leaves nothing to be desired. It is Conservative in the best sense; and if M. WADDINGTON and his colleagues are allowed by the majority to carry out the intentions expressed in it, there is no reason to doubt that M. GRÉVY'S prediction will be fulfilled, and that under the new Government France will find her repose insured and the development of her prosperity, power, and grandeur promoted. It would be idle, however, to assume as a matter of course that the majority will display this commonplace wisdom. The immediate effect of the elections of the 5th of January was to breed an inconvenient elation, under the influence of which the desire of the Republican party seemed to be to put its newly-found supremacy to the test as soon and as often as possible. To dismiss for the sake of dismissing was the rule which it appeared bent on applying to every official from the Prime Minister downwards. How far the retirement of M. DUFAURE was due to some remaining infection of this temper cannot be said with confidence; but it seems hardly probable that, if M. DUFAURE had been able to count on the support of the majority, he would have first consented to remain, and then insisted on going. M. WADDINGTON is the best successor M. DUFAURE could have, but there is nothing in his character or policy which suggests that he will escape the opposition which M. DUFAURE would have encountered. The PRESIDENT'S Message is eminently free from any attempt to perform impossible feats of conciliation. It does not present the Government in any other aspect than that which it has consistently worn since the 13th of December, 1877. M. WADDINGTON is M. DUFAURE over again. Few reasonable observers will doubt that, in the interests of France, nothing better could be desired. The immediate question, however, is—Will the majority in the Chamber of Deputies be guided by a prudent regard for the interests of France? The Republican party have given so many proofs of their power of learning by experience that it would be unjust not to believe that they will be so guided. They have overcome one difficulty after another, and many of those difficulties have been far more formidable than that which now lies before them. But the most formidable difficulty is not always the greatest, and it may almost be said that the prospects of the Republic would be brighter if they were a little less assured. Entire prosperity will sometimes find out weak places which have escaped notice under more chequered conditions, and it is now to be seen whether France is to furnish a new instance of this discouraging truth.

MR. GLADSTONE'S INDICTMENT AGAINST THE MINISTRY.

IT is scarcely a compliment to say that Mr. GLADSTONE'S letter to the managers of the Liberal party in Midlothian is highly characteristic. There was no occasion for any answer to their offer beyond a simple acceptance; but Mr. GLADSTONE cannot express gratitude to his supporters without at the same time making a furious attack upon the Government. When he had announced his intention of retiring from the representation of Greenwich, he received invitations from Leeds, Manchester, and other large towns; but he repeatedly declared that he would not, except on the eve of the general election, finally determine either to remain in the House of Commons or to prefer any particular seat. As he has satisfied himself that he will be returned by a majority of the electors of Midlothian, he has every right to change his purpose, and to pledge himself at once to contest the county. It was not necessary to explain by reference to the misdeeds of his political adversaries his natural disinclination to abandon the scene of his triumphs. Four or five years ago Mr. GLADSTONE felt the weariness which often overtakes statesmen who have long undergone the labours of Parliament and of office. It was said that his personal satisfaction in relief from responsibility and from toil was almost an equivalent for the disappointing result of his ill-timed appeal to the country. Before the beginning of the Session of 1875 he resigned his post as leader of the Liberal party, with the supposed intention of retiring from active political warfare. It is a matter of common experience that men who have been only anxious for rest from toil become, after a time, equally impatient of repose. Mr. GLADSTONE was in no way bound to adhere to his real or supposed purpose of retirement at a time when his mental and bodily powers are in no degree impaired. He has in fact, within the last two or three years, by speech and writing, worked almost harder than in any former part of his life. His resignation of the post of leader has relieved him from official restraint, and from the necessity of consulting his colleagues and followers; but it has not made him less prominent in Parliamentary debate, and the mass of the party out of doors still recognize him as their chief without protest on his part. It is not known whether, if a change of Ministry results from the election, Mr. GLADSTONE will again take office. It may be doubted whether his former colleagues confide in his moderation and judgment; but they would find the conduct of affairs almost impossible if Mr. GLADSTONE assumed the position of an independent patron. While they are still in Opposition, they are not a little embarrassed by the versatile energy of their formidable ally. The violent language of his answer to the Midlothian electors has probably given much more satisfaction to Lord BEACONSFIELD than to Lord HARTINGTON.

Unconscious of the impulse which prompts him to restless activity, Mr. GLADSTONE still persuades himself that in ordinary circumstances he would wish to retire, or to occupy the easiest seat which he could find in the House of Commons; but his burning indignation against the worst of Governments compels him to return into the thick of the fray. Hoping that at the general election the constituencies will definitively condemn the Ministerial policy, he is above all things anxious that they should return a distinct and positive verdict. If it were essential to the purposes of invective to be strictly consistent, Mr. GLADSTONE might perhaps be thought to assign but a fantastic reason for continuing to sit in the House of Commons. The result of the election will be known before he can take his seat for Midlothian, and his language implies a belief that the decision of the country will be final. If there is a Liberal majority Mr. GLADSTONE'S aid in overthrowing the present Government will not be required, and the return of an adverse majority would apparently drive him to despair. Irrepressible pugnacity explains his candidature better than any far-fetched apology. No other member of the Liberal party can deal equally heavy blows; and even if he still finds himself in a minority Mr. GLADSTONE will be a dangerous assailant. For a Parliament which happens not to share his opinions he has the smallest possible respect. His denunciations of the policy of the Government apply almost with equal force to the House of Commons which has steadily approved all the Ministerial proceedings. It could not be expected that Mr. GLADSTONE should submit his own judgment to an adverse majority; but it might perhaps have occurred to him that there must be something to be said in defence of conduct deliberately and repeatedly sanctioned by Parliament. It is also certain that a large and not unintelligent portion of the community shares the folly and wickedness which is imputed to the Government, and by implication to the House of Commons. As the Midlothian managers have shown to the satisfaction of Mr. GLADSTONE that they are strong enough to return a Liberal member, it was unnecessary to stimulate their zeal by polemical violence.

The charge of financial extravagance mainly resolves itself into a reproach against the Government for its foreign policy. The public expenditure would not have been materially increased but for the complications which have occurred in Eastern Europe and in Asia. The commercial stagnation which has now lasted for several years necessarily affects the revenue, which in a season of prosperity had shown its elasticity in the opposite direction. The slow progress of legislation is partially due to the same cause. During the last year it was found impossible to concentrate the attention of Parliament on domestic affairs; and the Ministers themselves were largely occupied in diplomatic transactions. Even if there had been neither a Russian invasion of Turkey nor an Afghan war,

the present Ministers, who were placed in office because the country was tired of incessant disturbance, would have disappointed their supporters if they had attempted to emulate Mr. GLADSTONE's activity. In one of his many recent essays he enumerated more than twenty measures which, in his judgment, urgently required the intervention of Government. As almost all the proposed changes would have been disapproved by the present Ministers, it is not surprising that they have abstained from promoting measures which it would have been their duty to oppose. If they had been guilty only of domestic errors and shortcomings, Mr. GLADSTONE would probably still have sought a seat in the future Parliament for the purpose of again encountering his habitual opponents; but his animosity is more deeply stirred by the foreign policy which he proceeds to denounce in unmeasured terms.

Mr. GLADSTONE evidently believes that his latest paradox, as expounded in his essay on "The Friends and Foes of "Russia," tends to expose the Government to popular odium. At last convinced that the English nation is not credulous as to the generous and disinterested policy of Russia, he complains that the Ministers have by their policy increased the power of their unpopular rival. In one sense the proposition is true. When a great military Power undertakes the conquest of the dominions of a weaker State, a third Government which declines to offer active resistance to the aggressor may be said indirectly to promote his objects. By not repeating the policy of the Crimean war, the Government rendered possible the triumphs which have undoubtedly aggrandized Russia. Lord BEACONSFIELD would perhaps have taken an opposite and bolder course if he had been backed by his Cabinet, by Parliament, and by the country; but it is unreasonable to make his Government responsible for not pursuing a course which Mr. GLADSTONE would have denounced as insane and criminal. From the time when the English Ministers declined to take part in the war, the increase of Russian power and the extension of Russian territory might easily be foreseen; yet Mr. GLADSTONE thinks it worth while to allege as one of his reasons for contesting Midlothian that the Government has compromised the honour and interests of the country by at the same time strengthening Russia and alienating the goodwill of the Russian nation. In another quarter Lord BEACONSFIELD and his colleagues cannot be accused of a similar error. Mr. GLADSTONE of course assures the electors of Midlothian that the Afghan war was unnecessary and unjust; but he could scarcely deny that it has inflicted a serious check on Russia. Before it began, Afghanistan was on the verge of becoming a Russian province; and now the fugitive AMEER can obtain from his patrons neither assistance nor consolation. No opponent of the Government has yet suggested any alternative method by which the same result could have been obtained. Plausible arguments have been urged to prove that the war might have been avoided; but Mr. GLADSTONE stands almost alone in his assumption that the Government is obviously and hopelessly in the wrong. In general an argument ought to have some reference to the conclusion. Mr. GLADSTONE's attack on the Government was in no degree needed to explain his readiness to serve in another Parliament. If acrimony is a proof of vigour, his future constituents may be assured that he shows no symptom of declining energy.

INDIAN FINANCE.

THE manufacturers of Lancashire and Yorkshire have made a new appeal to the new SECRETARY of STATE. They ask Lord CRANBROOK to carry out the promises of Lord SALISBURY. These promises Lord CRANBROOK is not only willing, but, as he assured the manufacturers appealing to him, ardently longing, to carry out; but then all that Lord SALISBURY promised was that the duties on imported cotton goods should be abolished when India can afford to abolish them; and, as India cannot at present, in the opinion of the Government, afford to abolish them, the duties must continue to be imposed. The deputation hinted rather than asserted that India could afford to abolish them, that there was a surplus, and that this surplus was being diverted from its legitimate purpose of removing burdens from English manufacturers. Lord CRANBROOK did not seem quite sure whether there was a surplus or not, and his uncertainty reflects the permanent obscurity in which Indian finance is involved. Mr. FAWCETT, in the current number of the *Nineteenth Century*, has endeavoured to diminish this obscurity, and he succeeds up to the point to which he takes us. He is always lucid, and masters the special subject with which he had to deal. But he treats of the past rather than the present, and leads us to general rather than particular conclusions. Nothing could be more clear or more useful than his dissection of the Budget of 1876-7. He lays proper stress on the distinction between the gross and the net revenue of India. The cost of collecting the revenue of India is so high that the nominal revenue is much larger than the real. The clear sum which the Government had to spend in 1876 was a little over thirty-seven millions, and to get this thirteen millions had to be expended. While, therefore, the nominal revenue was over fifty millions, the real revenue was one-quarter less. When the question to be determined is what the Government can afford to spend, then this distinction between the real and the nominal revenue is most important. But, when other questions are raised, to insist too strongly on this distinction may be misleading. If, for example, the question is, What light does the amount of taxes paid by a country throw on its wealth and on its power of supporting new burdens? it is the nominal and not the real measure that ought to be taken as the standard. What the people of India pay is not thirty-seven millions, but fifty. If they are made to pay a million more, it is an increase of two per cent., not of nearly three. If, again, the question is asked, What proportion does the expenditure on the army bear to the revenue? it is not easy to see why Mr. FAWCETT should compare the cost of the army with the net and not with the gross revenue. The army is a means by which the revenue is collected. Unless the sepoy walked up and down his barrack-yard, the tax-gatherer outside could not collect a rupee. It is the collection of the gross, not of the net, revenue to which the sepoy contributes his valuable aid. He and the tax-gatherer work together, and the cost of each is equally a charge, and is a charge of the same kind on the revenue.

There are many points of the same general nature which might be used to show the difficulties besetting the discussion of Indian finance. But they do not affect matters of immediate interest. What we want to know is, whether India is paying its way, can pay its way, and, if not, when and how England must step in to its aid. Mr. FAWCETT draws attention to two very important topics—the inelasticity of the ordinary revenue, and the extreme difficulty, if not impossibility, of devising new taxes. Lord CRANBROOK fully recognized that there are no new taxes of which he or his advisers can think. As to the inelasticity of the ordinary revenue, much of what Mr. FAWCETT says is incontestable. The ordinary revenue is not elastic, partly because it is limited by the land settlements, and partly on account of the poverty and inertness of the people. But the ordinary revenue is not wholly stationary, and Mr. FAWCETT does not seem to do complete justice to its prospects of increase. He takes canals as examples of unproductive works, but omits to notice railways, which are continually giving a better return. The Northern manufacturers may find the basis of another appeal in the argument that the Indian Government will soon by its purchase of the East Indian line come into a new revenue about equal to the whole sum collected from cotton duties. New export trades, more especially that in wheat and seeds, have lately assumed a very important character, and there must be some parts of India where the exported articles are grown, which must be growing richer, although, in consequence of famines, the whole country may not have advanced in wealth. But the question whether theoretically India ought not to be expected to be paying its way is not so important as the question whether India is practically paying its way. No one who has not tried to answer the question can have any notion how very hard a one it is to answer. In the recent Afghan debates leading members of the Ministry assured Parliament that India could perfectly well afford to provide, or largely contribute to, the cost, because the Indian revenue this year shows an unexpected surplus. Is there such a surplus, and, if so, how has it been obtained? Mr. FAWCETT gives the only information on the point that has yet been published, and says the surplus comes from an increase of

1,200,000*l.* in the revenue from opium. We may discard the suggestion that the Government has been sending larger quantities of opium than usual to the market in order to provide funds for the Afghan war. If it sold more now, it would have less to sell hereafter, and to call the increased proceeds of present sales a surplus would be a piece of dishonesty of which the Indian authorities would never be guilty. If the price of opium has risen, this may be part of a general rise in prices, and then, as the Government will have to pay more in many ways, it may be only gaining in one pocket to lose in another. If the crop has been unusually good, and thus there is more opium to sell, while through an increased Chinese demand prices do not fall, then and then only the surplus is a real surplus. But, if crops are good in one year, they may be bad in another, so that the surplus may only mean a temporary increase of revenue to be balanced by a succeeding decrease, and then, if the average income from opium is taken, there may be no real surplus.

But, if we suppose that these increased receipts from opium are a real gain to the Indian revenue, it is still to be asked whether this gain will show a budget with a surplus. It is probably from his uncertainty on this head that Lord CRANBROOK would not take the bold line taken last December, and refused to commit himself to the existence of a surplus. The receipts from the new taxes fell short of their estimated amount by 300,000*l.* Then the loss on exchange has been greater than was anticipated by a sum which Mr. FAWCETT puts at 500,000*l.* Further, we learn from Mr. FAWCETT that, apart from the war, there is an increase in the cost of the maintenance of the army of 330,000*l.* Add these figures together, and what becomes of the surplus? Lord CRANBROOK does not pretend to know, and outsiders can still less pretend to know. All that Lord CRANBROOK can confidently say, and it is what we can easily believe, is that there is no surplus applicable to the remission of the cotton duties. They must go on, although, so far as they are protective, it is highly desirable they should cease. If the people of India are prevented from buying good English articles at a lower price than they now pay for the products of Indian mills, this consequence of the duties is to be regretted, more for the sake of the consumer than for that of the English producer. But, although it may be true that the duties have in some degree a protective effect, it must not be assumed that the duties are the sole cause why English cotton goods are not more largely consumed in India. Lord CRANBROOK indicated one of these causes when he said that the Bombay manufacturers also were complaining of the impossibility of selling their goods because the famine had so impoverished the people that they could not afford to buy any cotton goods, whether made in India or abroad. Another cause of the assumed reluctance of the natives to buy English goods may be that these goods do not seem to them worth buying. The curious character of at least a portion of our Eastern trade was illustrated by a case reported last week, in which large damages were recovered because it was found that the goods, when delivered, were covered with a tar-like fungus which had grown on the calico in transit, and had found its origin in the queer ingredients used in sizing. The natives are quiet, unassuming people, but it is not strange that they should shrink from walking about in a calico wrap variegated with patches of a tar-like fungus.

LIBERAL STATESMEN ON EDUCATION.

ONE day in last week two leaders of the Liberal party had occasion to express their opinions on education. Mr. LOWE, in distributing prizes at a school, took occasion, as is his custom, to depreciate the training which has raised him to well-deserved eminence. He reserves for the Institute of Civil Engineers his annual statement that the members of the profession are the salt of the earth, partly because they make railroads, bridges, and steamboats, but principally because they have seldom had the opportunity of mastering Greek and Latin. Enthusiastic admiration of strangers and foreigners not unfrequently results from a desire to give pain to countrymen, to neighbours, and to kinsfolk. Mr. LOWE is anxious to convince his equals, and those who share his own pursuits, that he regards them and their studies with indifference and contempt. It is for the purpose of rebuking the complacency of scholars that he expatiates on the incalculable superiority of engineers. In addressing a set of boys, Mr. LOWE was content to propound his paradoxes in a still cruder form. As they are not likely to regulate their practice by the counsels of a condescending visitor, his earnest protest against sound and accurate learning will probably have done neither good nor harm. On the single point of the importance of cultivating a love for reading Mr. LOWE's advice was practical and sound. It is well that a taste for books should be encouraged, though it may at first be exercised only on amusing stories. Many a student has been trained by novels to find pleasure in history, and generally in the gratification of intelligent curiosity. It is true that, as Mr. LOWE says, almost all kinds of knowledge are to be found in English books; but it is no argument against regular education that, when its advantages have not been enjoyed, the defect may be partially supplied in after life. As a reason for not acquiring grammatical knowledge of Greek, Mr. LOWE ironically recommended the study of Chinese, because the grammar of that language is more difficult. His juvenile audience little knew that ridicule of solid and accurate learning proceeded from one of the ripest of English scholars. A mathematician might with equal propriety amuse himself by contrasting the convenience of a surveyor's measuring-book with the severe and barren demonstrations of EUCLID.

Lord HARTINGTON, in his opening address as Lord Rector of the University of Edinburgh, was under the disadvantage of not possessing any special knowledge of the theory or practice of education. Having been elected by a party majority of the boys of the University because he was Liberal leader of the House of Commons, he not injudiciously determined to make a political and even a party speech. As it seemed proper to say something about academic matters, Lord HARTINGTON devoted a few sentences to the expression of his preference for miscellaneous and professional instruction over severer intellectual discipline; but he would probably be the first to admit that he has not reflected profoundly on scholastic questions. The Scotch Universities require no caution against the exclusive pursuit of profound scholarship. No institutions in the world are better calculated to furnish a previously ill-trained body of students with a valuable smattering of knowledge; but Edinburgh and Glasgow have scarcely claims to the character of seats of learning. The professors indeed are, as a rule, accomplished masters of the subjects with which they are severally concerned; but they have little time or opportunity to train a succession of thorough scholars. Lord HARTINGTON's constituents were perhaps gratified by his recognition of the value of an education which is not of the highest order. Some of them may perhaps have been aware that the passage of the address which related to education was a mere digression from the general tenor of the discourse. If they had required a laborious exposition of the nature and uses of knowledge, they might have elected an eminent scholar or man of science. A politician and a candidate for high office was likely to be more instructive when he treated of the party politics which are the business of his life.

As it was necessary or proper to give a local colouring to Liberalism, Lord HARTINGTON, with much ingenuity, pronounced an elaborate eulogy on one of the most celebrated of former professors in the University. DUGALD STEWART's fame as a metaphysician has long since faded, though he is still known to students as a graceful writer on philosophy. Lord HARTINGTON dwelt not on his theories or on his method, but on his relation as a teacher to several eminent politicians of the last generation. It is certainly remarkable that he should have numbered among his pupils three Prime Ministers and some other statesmen of nearly equal rank. Lord LANSDOWNE, Lord PALMERSTON, Lord MELBOURNE, and Lord RUSSELL all attended his lectures, and probably all may have profited by his personal influence. Lord HARTINGTON may be fairly charged with mistake or exaggeration when he asserts that Lord MELVILLE's government of Scotland at the end of the last century "can only be compared with the most overbearing and "insolent despotisms of the Continent." It is doubtful whether DUGALD STEWART assisted even indirectly in the establishment of a more Liberal system. Lord JOHN RUSSELL was born and died a Whig; and he would have been a Whig if he had never been within a hundred miles of Edinburgh. Lord LANSDOWNE was also a moderate Whig; Lord

MELBOURNE belonged in turn to both parties; Lord PALMERSTON was a Tory for the first twenty years of his public life, and he was at all times an implacable opponent of the Radical party. Lord HARTINGTON adds the names of BROUGHAM and HORNER to the list of DUGALD STEWART's disciples in the principles of virtue and freedom. HORNER was a good man of moderate ability. BROUGHAM possessed extraordinary powers, and he is not generally esteemed a model of virtue. Through these men, and by means of the *Edinburgh Review*, it seems that the warfare against Tory ascendency began in the University, and continued across the Border. Whether opposition to Toryism is the proper function of a University is a question which Lord HARTINGTON omitted to raise. It oddly happens that he quotes PITT, who then wielded and represented Tory ascendency, as another proof of the beneficent influence of Scotch professors. It is true that PITT maintained against FOX and SHERIDAN the doctrines of ADAM SMITH; and it might have been inferred that his possession of supreme power was not an unmixed misfortune to the country.

The dark days of Tory ascendency which Lord HARTINGTON desires to dispel are not those of PITT or of the despotic MELVILLE, but of Lord BEACONSFIELD and Lord SALISBURY. Having at the beginning of his speech formally admitted that political controversy was unsuitable to the occasion, Lord HARTINGTON quotes RUTHERFORD and BUCHANAN to prove that the king is not above the law, and that he holds his power from the people. "These doctrines bore fruit in the Revolution of 1688. For "nearly two hundred years they have appeared to be "firmly established." Exactly one hundred and ninety years after the Revolution, Lord BEACONSFIELD and his colleagues have, as Lord HARTINGTON implies, by bringing Indian troops to Malta, by concluding the Cyprus treaty, and by engaging in the Afghan war, declared that the king is above the law, and that he no longer derives power from the people. Whether the charge is well founded the students of Edinburgh University are perhaps scarcely competent to decide. Lord HARTINGTON, indeed, has no intention of consulting them, though he desires to prepossess their minds with the conclusions adopted by the Opposition. His defeated competitor, Mr. CROSS, if he had been chosen by the students, might possibly have enunciated the opposite proposition, that the Government has done nothing inexpedient or unconstitutional. Perhaps it would be well that a Lord Rector should forget for the moment his political prejudices and interests, and condescend for the time to confine himself to philosophical issues. That young men, however ignorant, should hold political opinions with the positiveness of their age is unavoidable, and not wholly mischievous. The wisest of them afterwards reconsider their premature convictions, sometimes with the result of passing into the opposite camp. Those who profess to teach them should as far as possible confine themselves to doctrines which are beyond the sphere of ephemeral controversy. ARISTOTLE, if he is accurately quoted by HECTOR in *Troilus and Cressida*, held that young men were unfit to hear moral philosophy; but they are more likely to profit by ethical instruction than by a repetition of the discussions of more or less factious newspapers. If any of them are alarmed by Lord HARTINGTON's mysterious warnings, they may assure themselves that, if the QUEEN is above the law, her Ministers are subject to the law; and that the tenure of power from the people is a figure of speech which has not been rendered less appropriate by recent transactions. It is unlucky that, in a speech which was able and spirited if it was not wholly suited to the occasion, so temperate and judicious a politician as Lord HARTINGTON should have countenanced a newfangled error. His party is indebted to Mr. DUNCKLEY for the phrase and for the fiction of personal government; and as the charges against the QUEEN contained in the Manchester pamphlet were wholly untenable, Mr. GLADSTONE and others have since affected to apply to Lord BEACONSFIELD an accusation which is wholly unmeaning when it is brought against a subject. The QUEEN would have practised personal government, or, in the words of the old Scotch writer, she would have placed herself above the law, if she had not taken the advice of her Ministers. Having cordially supported a Government which was backed by a large Parliamentary majority, she is not liable to be condemned by the Edinburgh students.

THE GLASGOW BANK TRIAL.

THE end of the great trial which has awakened in Scotland so absorbing an interest, and which was so rich in instruction for all the trading community of England, has been that the manager and one of the directors have been sentenced to imprisonment for eighteen months, and the remaining directors have been sentenced to imprisonment for eight months. The result has not come up to the natural expectations of the public; but, in order to understand and criticize it, an accurate conception of the history of the trial and of the points left to the jury must be formed. When the directors were apprehended they were considered by their legal advisers entitled to be released on bail, and by the law of Scotland the amount that could be exacted by way of bail was ridiculously small. They were entitled to be so released because the only charge against them was that they had published false statements as to the position of the bank. But the Crown quickly preferred other charges of a much graver character, and accused them of embezzlement and theft. The alleged embezzlement consisted in their having appropriated the funds of the bank to their own personal use in the shape of unsecured loans, and the alleged theft consisted in their having raised money on bills entrusted to them for collection. Bail could under such charges be refused, and it was refused except in one instance. The Crown had got hold of the delinquents, and meant to keep them, and the impending trial seemed a very grave trial indeed. Here were men who had long held an honourable position charged with theft and embezzlement, and it might be expected that they would receive a punishment worthy of their crimes. But when the trial really began, it appeared that the Crown had no evidence on which to support the charges of theft and embezzlement. It appeared that some of the directors had had advances, but not advances of a kind that would not have been made to any other customers in equally good circumstances; and, although it may be unwise to lend the money of a bank to solvent directors, it is not in any way criminal. The alleged theft consisted in discounting before maturity bills entrusted to the bank for collection at due date. That is, the directors had been authorized to receive money on a particular day, crediting the account of the owner with the proceeds. They received the money before the day; and, had the bank not stopped, would have credited the accounts of the owners when the day of maturity arrived. As things turned out, the proceeding was adverse to the owners, for they could have demanded the bills themselves when the bank stopped had they remained in its keeping; whereas now they have merely a claim for the proceeds. But this was not technically theft, and it is difficult to believe that the officers of the Crown ever believed that the charge of theft had any foundation. With the accusation of embezzlement it was different. Unfavourable critics might assert that the charges of embezzlement and theft were invented by the Crown in order to deprive the prisoners of their right to demand release on bail, and to place an increased stigma on their characters. But it may be fairly said that the officers of the Crown, finding that some of the directors had received large advances, and it being obvious that the receipt of such advances by directors might, under some circumstances, amount to embezzlement, could not tell without prolonged inquiry what were the circumstances under which the advances had actually been made, and were therefore entitled to assume the worst, and see whether they could prove it.

Anyhow, when the charges of theft and embezzlement were withdrawn, the trial assumed a new aspect. The prisoners were only tried for falsifying accounts; and it so happened that, in the course of the trial, it became clear, and was conceded on all hands, that this falsification of accounts had been made not for the private purposes of the prisoners, but solely in order that the bank might be upheld. If the accounts had not been falsified, the bank must have stopped three years ago. It was not by the falsification of the accounts, but by bad banking, that the bank was broken, shareholders ruined, and customers and depositors sadly inconvenienced. The only difference between the bank stopping three years ago and the bank stopping last October was that the loss fell in some measure on a different set of people. Those who three years ago held shares and have since parted with them, and depositors and customers who then had money in the bank

and have since withdrawn it, have gained by the bank going on, and those who took their place have lost. Further it must be observed that, as the LORD JUSTICE CLERK directed the jury, there was a chance, a ground of hope which directors might really entertain, that, if times improved, the bank, by going on, might so far recover its position that it need never stop at all. But it could not go on unless the accounts were falsified; for, if the truth had been known, the credit, and therefore the existence, of the bank would have been at an end. The directors did falsify the accounts, and the bank went on; and as they knew that the accounts were falsified, and meant them to be falsified in order to secure an object which they thought a good object, they committed a legal as well as a moral crime, and defrauded those who bought shares or lodged money after the falsification began. But it is important to notice in what this falsification of accounts consisted. In the first place, there was the creation of fictitious entries. This especially applied to two sums. One, amounting to little less than a million sterling, was invented in order to be set against the liabilities of the bank. The object of inventing it was to make the liabilities seem less than they were. The fictitious sum was set against the liabilities, and, the liabilities being thus diminished, only the balance was given. The other sum amounted to about three-quarters of a million, and its details were so manipulated that the bank appeared to hold good securities, and especially gold against notes, which it did not hold. The creation of the fictitious million was the work in 1873 of a person now dead; but one director, POTTER, and the manager must, after the finding of the jury, be taken to have known that this entry was fictitious, and they must also be taken to have concocted the manipulation of the second sum by which it assumed its fictitious character. The other directors, as the LORD JUSTICE CLERK directed the jury, knew nothing of the true nature of these sums, and had no part in making or adopting fictitious entries. Their falsification of accounts was of a different nature. But POTTER and STRONACH were guilty, not merely of presenting the condition of the bank in a general way as better than it was, but of fraudulently devising positive misstatements as to special matters of fact. The LORD JUSTICE CLERK had informed the jury that the alleged crime was one involving very heavy penalties, and after hearing this, and hearing the Judge sum up strongly against them, and finding the jury unanimous in pronouncing them guilty, POTTER and STRONACH must have thought themselves the luckiest of men when they discovered that they were merely to be kept in prison for a year and a half.

The falsification of accounts with which the remaining directors were charged was this and only this. They had represented the bank as earning a profit when it was not really earning a profit. The interest which their principal debtors ought to have paid them was treated as if it had been actually paid. If interest is owing by a solvent firm, it is usually and properly taken into account in estimating profits, and, in point of fact, sums had been paid by some of these debtors which went in reduction of what was due for interest. The balance-sheet as submitted to the Board showed a certain sum as profit, and it was in this respect an accurate transcript of the books. As a general rule, the LORD JUSTICE CLERK laid down that if a director who finds a sum stated by the officials who have charge of the books to be the amount of profit treats it as profit, he is not criminally responsible, although it is not really profit. It is not his business to go behind the books. But he may have received notice of the facts which would divest the sum of its assumed character. The duty may be cast on directors of challenging statements as to profits. This was what happened in the case of the directors of the Glasgow Bank. At a particular epoch the character of the advances to the principal debtors was brought to their special notice. They knew that these debtors owed the bank four millions sterling, and that little or no interest was being paid on it. They were seriously frightened, and made some feeble attempts to put these accounts on a better footing. Otherwise they did nothing. When the balance-sheets were submitted to them they simply asked no questions. They did not inquire how it could be that the profits were so large when so much capital was lying idle. In one case it was even shown that the director in question had not seen the balance-sheets before they were issued to the public. The other directors did nothing, but he did not even place himself in a position to do anything at the time. The question for the jury was, therefore, whether these directors had been affected with a general liability to do something, or to place themselves in a position to do something—that is, to inquire into the mode in which the profits were calculated, in view of the nature of the accounts of the principal debtors. Nor was even this enough. The neglect of such a duty might form the ground of a civil action; but in order to be a crime it must arise from the wish to impose on the public. What, therefore, these directors were accused of was that they had forborne to ask questions which they knew that they ought to have asked, and that they had so forborne with the express intention of deceiving the public. The summing-up of the Judge, although strictly impartial, might be taken to show that he was not at all clear as to their guilt in this sense. A majority, but only a majority, of the jury found them guilty. It is impossible not to suspect that, with an English jury, they, or at least some of them, would have been acquitted; and their very light punishment may perhaps reflect the faintness of the conviction of the Judge as to their guilt. They grossly neglected their duty; they were more of dummies than ornamental directors usually are; they let the bank go on with a false basis. But these were not the things for which they were tried. They were tried for consciously, and with a distinct fraudulent intent, forbearing to ask questions which they knew they ought to ask; and, without in any way impugning the verdict of a jury, it may be believed that the minority who disagreed had what seemed to them strong reasons for thinking that this particular form of guilt had not been brought home to the poor bewildered indolent dummies who stood before them.

THE LIBERAL CATHOLIC PARTY IN FRANCE.

THE half-century which has nearly passed since the French Catholics first contended for freedom of education against the University promises to close with matters very much in the state in which it saw them at the beginning. There can be little doubt that one of the measures of the new French Ministry will be to repeal the law regulating University degrees which was passed by the National Assembly; and it is exceedingly probable that the reaction will not stop at this point. The one question upon which all sections of the Left seem able to unite is the religious question; and the influence of the Church in education is so great that nothing but a love of liberty for its own sake, which unfortunately few Continental Liberals possess, can prevent the opponents of the Church from subjecting that influence to serious restraints. Probably it will not be long before the old struggle will again begin. The Church has been so long accustomed to have things her own way that she hardly realizes what it will be to be deprived, not only of power, but of freedom. As yet indeed the Education laws which are in the air alike in France and in Belgium purport only to deprive the clergy of the vantage-ground in educational matters which they have hitherto enjoyed. It is possible, of course, that the secularist party in those two countries may themselves have learnt moderation from experience, and may propose to be content with leaving the Church and the State to contend on equal terms—equal, that is, so far as the word can be used when the one combatant has the means of raising money by legal process, while the other has only voluntary benevolence to appeal to. The whole drift of Continental Liberalism suggests, however, a different conclusion. As soon as it is discovered that, when the State and the Church meet on equal terms as candidates for the function of teaching, the Church is in the end the favourite, it will probably be found necessary to ensure that she shall start weighted in the race. Freedom to educate your children as you like is an admirable cry when it is the Church that is withholding this freedom. But when the Church is availing herself of it, the Continental Liberal begins to ask himself whether the formula has not served its purpose, and whether the moment has not come for applying obscurantist methods to the suppression of obscurantist opinions. It will be surprising if by and by this doctrine does not for a time prevail. As regards the political prospects of Catholicism in Europe, things seem on the whole likely to be worse before they are better.

Catholics would have a better claim to sympathy in this matter if they had not in a great measure themselves to thank for the reverses which threaten to overtake them. The history of the education question in France is mixed up with the history of the Liberal Catholic party in that country. That history may be read to great advantage in a paper on Bishop DUPANLOUP which appears in the *Nineteenth Century* for this month. "C. "DE WARMONT" is a name unknown to literature; but the wide acquaintance with that least known part of history, the period immediately before our own day, and the acute appreciation of the political issues involved in the controversies with which that period was occupied, displayed in the article suggest that we may become better acquainted with it by and by. Nothing can be more melancholy than the retrospect of the part which the Liberal Catholic party played from the day when, after twenty years of conflict, it carried the FALLOUX law to the day when Count FALLOUX raised his voice against the identification of religion with the counter revolution without meeting a single response. "Disownod by "PIUS IX., abandoned by its own followers, overtaken "by the events of the time, that whole school of thought "has ceased to exist; and if the present generation are "reminded of it, it is only by the insolence of its "enemies." It is true that by its death it will have dealt a heavier blow at its adversaries than it was ever able to deal during its life. Whatever may be the misfortunes in store for Catholicism in France, they will be traceable to its identification with the aims and the machinery of despotism. It is because there are no longer Liberal Catholics that the conflict between Catholicism and the State is apparently about to be fought over again. The Ultramontanes crushed Liberal Catholicism because it proposed to be prudent in the hour of victory, not to bear hardly upon beaten enemies, and not to deny to others the liberty which it claimed for itself. There was not one of these characteristics which the Ultramontanes did not reject with scorn. They refused to believe that any political resurrection could be in store for the foes they had slain; they gave no quarter; and they thought no freedom worth having which did not include freedom of oppression. The spirit which was conspicuous in Rome in 1870 had shown itself in France in 1844, when Archbishop AFFRÉ condemned the unchristian manner in which Catholic journalists were defending Christianity; in 1849, when M. VEUILLOT condemned the FALLOUX Education Bill as a compromise, and proclaimed that, as every compromise contains in itself the seed of future dissension, it would be better to reject the Bill and to continue the contest; and in 1850 when Archbishop SIBOUR declared that M. VEUILLOT was insulting bishops and priests under pretence of avenging the Holy See. Three years later M. VEUILLOT was recognized by PIUS IX. as a chosen soldier of the Church, and Archbishop SIBOUR had to retract his condemnation of the *Univers*. From that time forward things grew worse and worse. The old liturgies were replaced by the Roman, the old text-books gave way to the latest glosses of Ultramontanism, the ecclesiastical seminaries were remodelled to ensure a steady supply of Ultramontane clergy. Those members of the Episcopate who endeavoured to do their duty in the ways to which they had been accustomed were severely taken to task by the Roman authorities. "Religious liberty and toleration "were daily declared to be the worst of evils, and "the most exorbitant pretensions were revived." If the Liberal Catholics had been able to achieve their object none of these excesses would have been committed, and Catholicism in France would not have laid up for itself that store of hatred which is now apparently about to be unlocked. When the Ultramontanes reduced the Liberal Catholics to silence, they hushed the only voices that could have pleaded in the hour of the anti-Catholic victory that the Church had at least done unto others as she wished others to do unto her. When GUIZOT was in office, DUPANLOUP could declare without inconsistency that if by the spirit of the French Revolution were meant free institutions, or liberty of conscience, or political, civil, individual liberty—liberty of opinion, of education, and of the family—Catholics likewise desired all these things, and demanded them for themselves and for others. No French bishop would be able to make that declaration now. It would be felt that, if Catholics still desired these things for themselves, their whole efforts have for years been devoted to withholding them from others.

Unfortunately the career of the Liberal Catholic party in France is not one which those who realise how much there was that was excellent in their intentions and actions can regard with solid satisfaction. The article which has suggested these observations brings this out very clearly. The danger of the Liberal Catholic position, says the writer, "arose far less from opposition to the Ultramontane "school than from those questions upon which they stood "on more or less common ground with it." It was not the blows they received, but the concessions which they made, that brought them to ruin. They were quite as anxious as their adversaries to retain the approbation of the POPE, and the approbation of the POPE could be retained by nothing short of absolute submission. From 1856 to 1870 the *Correspondant* was directed by DUPANLOUP, MONTALEMBERT, COCHIN, Count FALLOUX, and the present Duke of BROGLIE. During the whole of this time the controversy regarding the Temporal Power was going on, and from first to last the attitude of the party on that question was in direct opposition to their own principles. With the exception of LACORDAIRE, the Liberal Catholics "sacrificed to this darling idea of "PIUS IX. one position after another. They approved ". . . at Rome what they condemned at Naples, and "refused to the Romans what they demanded for the "Poles." And what was their reward? The misfortune to avert which they sacrificed their convictions on the Roman question fell on them just as soon and just as severely. The Syllabus was universally regarded as a condemnation launched at the friends whom PIUS IX. distrusted almost as much as at the enemies whom he detested; the gallant resistance which DUPANLOUP and Archbishop DARBOY offered to the proclamation of infallibility was utterly ineffectual; and when MONTALEMBERT died the POPE could find nothing better to say of the man whose life had been spent in defending the interests of Catholicism in Europe than that he was "only half a Catholic." That, with all the merits of individual members of the party, there was something unsound at the core of Liberal Catholicism in France, has been shown by the political apostasy of two of its chief ornaments. It is a strange ending to the career of DUPANLOUP, a strange incident in the career of the Duke of BROGLIE, that the men who twenty years before had taken part in the conduct of a Liberal journal should have been united in the direction of the 16th of May. The writer of the article in the *Nineteenth Century* may well say that the Liberal Catholics perished because "under the pres- "sure of circumstances they lowered their standard." Some of the greatest among them were, happily for themselves, taken away before this last temptation was presented to them. It would have been well for DUPANLOUP's fame if he, too, had died before his indefatigable activity had been wasted on an enterprise which contradicted the whole promise of his earlier life, and condemned the cause which he so ardently desired to serve to languish, perhaps for more years than it would be safe to predict, under the blows of an inevitable reaction.

THE HOME RULERS.

THE proceedings at the meeting of the Home Rule League in Dublin last Tuesday are, on the whole, encouraging. Even the violent resolutions for which Mr. DILLON vainly endeavoured to obtain consideration indicate that the passion for Home Rule is beginning to decay. A good number of Irishmen are no doubt anxious to obtain it; but the motive of their desire is not so much the wish to get Home Rule for its own sake, as to get it for the sake of sundry other things which they hope to get by means of Home Rule. The gist of Mr. DILLON's resolution was that the Home Rule party in Parliament should immediately commence a vigorous course of action, not to obtain an independent Legislature for Ireland, but to induce the Imperial Parliament to do certain things for Ireland. Mr. DILLON's idea of Home Rule seems to be that, provided the Irish members can secure measures protecting Irish tenant-farmers from rack-renting and eviction, and can do away with the Irish Constabulary, it does not much matter whether they sit in London or in Dublin. It was explained to him several times over that the object of the Home Rule League was to establish a national Parliament for Ireland, and that, until the rules were altered, nothing not directly bearing on that object could be discussed at the meetings of the League. Mr. DILLON evidently re-

garded this in the light of a logical subtlety in which no genuine Irishman could acquiesce; but though his reading of the objects and rules of the Society differed from that adopted by the chairman, he did not persist in pressing it on the meeting. Probably Mr. DILLON is the spokesman of a considerable section of the Irish people, and, if so, it seems likely that for the future more attention will be paid than heretofore to the solid pudding which the Home Rulers are prepared to ask for in the shape of Irish measures, and less to the obstructions they throw in the way of English measures. Mr. PARNELL and Mr. BIGGAR may be trusted to note the meaning of this change. Wedded as they may be to the policy in which they have earned such exceptional distinction, they have naturally no desire to pursue it, if to do so will put their seats in peril. Obstruction is a game which cannot be played except in the House of Commons, and it would be of no avail to play it with such uncalculating devotion as would result in turning the players out of the field. If the Irish Home Rule constituencies share Mr. DILLON's views, it will be to no purpose that Mr. PARNELL recounts his journeys into the lobby, or that Mr. BIGGAR reckons the hours that he kept Saxon members out of their beds. They will be asked, not what they did not allow English members to do for England, but what they persuaded English members to do for Ireland. Even this prospect is not without its dark side, for the measures which will approve themselves to Home Rulers will seldom be such as it is possible for Parliament to accept. But it is better to spend time in discussing impracticable Bills than in dividing on endless motions for adjournment, and to this extent the change of purpose evidenced in Mr. DILLON's resolution promises to yield some fruit.

When Mr. DILLON had at last been got out of the way the business of the evening began. The attack on Mr. BUTT ingeniously took the shape of a quotation from one of his own speeches. In November 1873 Mr. BUTT had said that the more Irish members kept aloof from private communications with English members and English parties the better it would be for Ireland. Since that time, the mover implied, Mr. BUTT's conduct has completely changed. Instead of proclaiming inexorable hostility to the English Government, he is in constant communication with them. The war between the Irish nation and the English Parliament which he then declared to be eternal has given place to a truce. Mr. BUTT very often does not go over to England at all, and when he does go he does nothing to make English people uncomfortable. Mr. BUTT's answer was to the effect that he declines to be bound by this narrow interpretation of words spoken more than five years ago. He is willing to deal with any Ministry for the good of Ireland. Indeed, he modestly hinted, it was rather that Ministers had dealt with him than that he had dealt with them, and if there had been none of the communications to which the resolution objected, the Intermediate Education Act would never have been passed in its present shape. If his strategy had not been as successful in other respects, that was the result of the miserable divisions which a policy of obstruction had introduced among Irishmen. If those divisions are to continue, it is of no use for him to remain the nominal ruler of a party which rejects his counsels. If the Home Rulers are guided by him, they will return members who will keep in view the necessity of conciliation, and who will force Englishmen to acknowledge that they are capable of administering constitutional government at Westminster, and consequently that they would be equally capable of administering it at Dublin.

The difference between Mr. BUTT and the obstructives is obviously too vital to be bridged over, and Mr. PARNELL apparently did not think it worth while to answer his leader's speech at any length. His real reply was to vote for the resolution which Mr. BUTT had accepted as a censure on his policy, and in this Mr. PARNELL found twenty-three members of the League to support him as against thirty-one who supported Mr. BUTT. Whether this division can be accepted as at all indicative of the extent to which the opposition to Mr. BUTT prevails in the Home Rule party we do not know; but the change of tone of which Mr. DILLON's speech was an indication hardly points to this conclusion. If Irishmen want to get this or that particular thing out of the Government, they will undoubtedly find Mr. BUTT a more useful leader than Mr. PARNELL. The slightest association of an Irish Bill with obstruction or obstructives is sufficient to make its adoption hopeless; whereas when Mr. BUTT has charge of a Bill, there is usually a disposition to show it at least courtesy, in order to mark the readiness of the House of Commons to distinguish between legitimate and illegitimate methods of Parliamentary warfare. The resolutions actually adopted were little more than formal. They advise additional activity on the part of the League, vigorous organization of the constituencies, and diligent attendance in Parliament on the part of the members. These counsels are but commonplaces which can be equally accepted by both sections of the League. The strictly personal object with which the meeting had been called together was clearly shown by the colourless character even of the motion on which the decisive division was taken. The purpose of the meeting was to choose between men rather than between measures, and anything which had enabled those present to show their preference either for Mr. PARNELL or for Mr. BUTT would have answered that purpose equally well.

It is at all events certain that the Irish constituencies will have the issue between the two leaders very plainly set before them at the general election. As yet there has never been any means of ascertaining to what extent the Irish electorate have approved the tactics of the obstructives. They may have been only amused by them, and have regarded Mr. PARNELL and Mr. BIGGAR rather as good jokes than as serious politicians. That section of the nation which is ill disposed towards the Imperial Parliament would naturally be pleased to see the House of Commons reduced to the necessity of walking in and out of the lobby half-a-dozen times an hour at the bidding of an Irish member rather than see the despatch of public business brought altogether to a stand. Now, however, that this ennobling sensation has grown a little stale, it is possible that the electors may ask themselves what their representatives expect to gain by humbling the House of Commons afresh. If once this question is seriously raised, it is hardly possible but that Mr. BUTT's arguments should have some weight. Mr. PARNELL's policy cannot be expected to reap in the future any successes different in kind from those which it has already reaped in the past. Are those successes such as are calculated in themselves, and with no chance of their leading to anything further, to give Ireland an independent Legislature? At all events, is it so certain that they are calculated to do this as to induce any considerable section of the Home Rule electors to desert a leader in whom they have hitherto placed so much confidence as they have placed in Mr. BUTT, on the chance, whatever it is, of sharing Mr. PARNELL's triumphs? These are the questions which the Irish constituencies will have to answer, and for their own sake, rather than for ours, it is to be hoped that they will answer them in Mr. BUTT's sense, and not in Mr. PARNELL's. Parliament can deal with obstruction if it is driven to do so, and no reinforcement that Mr. PARNELL is likely to bring to Westminster need give us any uneasiness on that score. But, if it has to be dealt with in this fashion, a feeling about Ireland will undoubtedly grow up on both sides of the House which will make it difficult to obtain a hearing even for the most legitimate Irish demands. It is because we have no wish to see Irish Bills either passed or rejected in this temper that as against Mr. PARNELL we wish success to Mr. BUTT.

THE POPULAR JUDGMENT IN POETRY.

WHEN amœbean essays in magazines were called *Symposia*, some distinguished persons discussed the worth of the popular judgment in politics. The worth of the popular judgment in poetry is perhaps at least as difficult to estimate. To many critics, of opposite views, the thing seems perfectly easy. We have the theorist who declares that the judgment of the populace is instinctive, and absolutely correct. The people, he cries, never makes a mistake. Your cultivated poets, with their fine-spun notions and "alembicated" manner, are mere triflers, whom the true public will never listen to for a moment. Give us Burns, Shakspeare, Scott, and we are content. Minor poets are intolerable prigs, and in short the modern Philistine says, with the Alexandrian Philistine of two thousand years ago, "ἅλις πάντεσσιν Ὅμηρος—the fine old favourites are enough for all the world." On the opposite side the superfine critic, who is often also an unpopular poet, frequently makes himself heard. He maintains that the populace is utterly incapable of judging poetry. If a man has a doubt in his own mind on a question of taste, he consults another person of letters, another trained judge; he does not go into the highways and byways and inquire of the vagrants. He does not walk into his grocer's shop and say, "Mr. Brown, I have a high opinion of the instinctive taste of the people. Will you kindly

desist from your useful business for a moment, and grant me your attention while I read this little rondel of Mr. Frothingham's?" From the point of view of the literary exquisite, he and his peers are the judges, and nothing is so bad a sign of a poet as success and popular appreciation.

It is impossible to get the rough-and-ready man and the dainty man to agree; but really great difficulties attend both their theories. If one could enter into a dialectical discussion with the first speaker, with him who stands up sturdily for the popular judgment, we might easily perplex him a good deal. In the first place, he will probably find that he has to do what he detests doing—that he has to take distinctions. He cannot maintain that what he thinks is a universal rule as far as poetry is concerned is a universal rule about the other arts. And he will have to define rather strictly the meaning of the words "popular" and "populace." What the populace like in painting we know very well, and we know that it is not the best, the most permanent, sort of painting. They like the "Derby Day" and the coloured designs in illustrated newspapers; they like Munich glass in church windows, and they are fond of chromo-lithographs. It must be admitted that in this matter the popular taste is not good, and it will also be allowed that the "Derby Day" and chromo-lithographs do not correspond to the poetry of Mr. Tennyson, the battle-lyrics of Campbell, and other verses which are undeniably at once popular and admirable. If we look at music, the difficulty is the same. The strains of the Great Cad, and the battle-lyrics of Mr. Macdermott, are truly popular; yet we know "better than prophets" that they will not stand the test of time. In the same way it is unlikely that the verdict of the ages will prefer the Albert Memorial to the Elgin Marbles, and yet there can be no doubt that the populace is much better pleased with the Albert Memorial. If the truth of what has been said is admitted, it will follow either that poetry differs very much from all the other arts, so that the popular judgment about it is valuable, whereas in painting, music, and sculpture it is valueless; or it will appear that the word "populace" has more senses than one. What do we mean when we say that this or that poem is popular? Do we mean that it pleases the people who flock in their millions to music-halls? Or do we mean that it charms that comparatively small public which in each age really cares for poetry? The fact is, that poetry which is "popular," and runs through several editions, and gets itself quoted in the papers, does not exactly appeal either to the friends of music-halls and the admirers of the "Derby Day" or yet to the public which really and intelligently cares for verse. It owes its success to another class, which has one foot in the land of the music-hall populace and the other in the territory of true, though plain, lovers of song. Poetry which has an instant success owes its triumph to the people who buy books to give away as presents. Prose does not make up into such neat little volumes as poetry. Prose has not the sentiment which a present ought to convey. Yet of course it is not every pretty little book of verse that reaches the gift-giving class—very far from it indeed. The amusing lyrist who made a grocer give his daughter Mr. Swinburne's *Poems and Ballads*, with the remark, "If she knows what all this means she must be wiser than her pa," went a little too far. The grocer might have selected this inappropriate gift, but he was far more likely to pick up a volume with a decorated cover, or one which clearly contained religious and didactic matter.

The popularity, then, of a new poem (in the sense in which popularity is short-lived and no test of skill) is decided partly by accident, partly by the presence of domestic verses and pathetic pieces about barrel-organ boys and their well-merited misfortunes. There would be no difficulty in proving that the kind of popularity to which we refer is secured, not by the strong but by the weaker parts of really excellent works. Mr. Tennyson would have had to wait far longer for the approval which he deserved if he had not written "The May Queen," and "The Miller's Daughter," and "Lady Clara Vere de Vere." These at once attracted the gift-buying public, and brought their opinion into harmony with that which had long been held by a small set of critics. It is clear that a judgment of this sort may often be absolutely wrong. The future will make short work with many a poet whom the public applauds, as the present has made short work with Robert Montgomery and Mr. Tupper. It by no means follows that the future will applaud any given poet who is now vainly pining for recognition. There are examples—Shelley is the most famous—of men whom their age neglected or insulted, and whom posterity delights to honour. In "Shelley's case," however, it must be remembered, first, that his poetry was not judged on its merits; next, that it is not, and perhaps never will be, "popular." In his lifetime the poet affronted society, and the representatives of society in the press affronted the poet. None but a fearfully conceited young man of to-day can explain his own literary unpopularity by the intolerance of society. The days when Keats was condemned offhand because he lived near London and knew Leigh Hunt are far away in the past. Nay, a venturesome youth who held original ideas about the table of prohibited degrees might leap into a kind of popularity by mere dint of being shocking. So many critics are looking out for a new poet, as old ladies sometimes look out for a young beauty to introduce to society, that merit is not likely to be long concealed. Thus a disappointed bard must either make up his mind that there is nothing very striking in his genius, or he must say to himself that it is too striking, and that the public never appreciates originality. What we, on the other hand, wish to prove, is that there exists a popularity which is merely accidental and transitory, and a popularity which is perhaps the only real test of poetic excellence.

The critic who says that the "public knows nothing about poetry" is like the believers in patent religions, who call a little group of thirty or forty odd people "the Church." Yet, just as the number of the names in the Church was once about seventy, so there really have been periods when poetic cliques were in the right *contra mundum*. It is this which gives the exquisite, the dandy among critics, a kind of excuse and justification, which is all that he needs. Wordsworth, Shelley, Coleridge, Keats, were certainly in the right about poetry, and the public which neither bought nor read their works was, as certainly, to some extent in the wrong. Yet the almost instant approval which was given to the works of Byron and of Scott (both of them as strange, as novel, as original in their way as Coleridge or Wordsworth), shows that the populace often does know what it is about. One must ask the theorist who believes in himself, and in his set alone, whether, on a calculation of the odds, he is likely to be on the winning side? It is not an easy calculation to make, and he may so make it as to confirm himself in his conceit. The truth will always lie between him and the man who decides everything by the popular applause of the hour, and by the number of editions which a publisher advertises that he has sold.

Taking the word "popularity" in the rather restricted sense which we have given it, taking it to mean the judgment of the vast majority of people in whose life poetry has any conscious part, it is almost a truism that popularity is the touchstone of merit. In dramatic poetry this will scarcely be denied by the most exquisite of the people who have failed. Shakspeare, the three Greek tragedians, and Molière are plainly in a different class from all other dramatic writers, and, just as plainly, they are and have been the most popular. In all the long and illustrious roll-call of poets there is not perhaps one great name which had to wait thirty years for its renown, for its reward of the widest acceptation. Much as the taste of men varies about the verses of the day, about poetry which is removed from our petty spites and prejudices, the verdict of all who read is practically unanimous. The qualities of true poetry are thus proved to be widely human, its subjects to be normal and necessary passions and common situations. This alone seems to prove, by the vast induction of historical experience, that the popular taste of the hour chances to be rightly guided when it rejects the scented poetry of the boudoir and the fantasies of the studio. These have their merit, as *bric-à-brac* has its merit, and little more. It does not follow that the popular approval of the moment means more than does the general amusement provided by the *Pink Dominoes*, or the vogue of the moving tract which has a wide circulation in evangelical society.

The accidents that give or defer popularity have been so many and perplexing that they ought not perhaps to encourage or to depress any adventurer in poetry unduly. He who catches the applause of the hour may at least say to himself, "There is something good in this," for every success has its reason, and is justified by some quality. Mere badness never yet gave wide pleasure, whatever writers who do not give pleasure at all may comfort themselves by supposing. Again, the artist in verse who fails, who only gets a good word from his friends and acquaintances, need neither despair nor think himself a neglected genius. The odds are immense that he has not drawn the *gros lot* in the lottery of talent, but he may try another chance. Cases like that of Balzac, who was informed that he might be anything but a man of letters, seem to be provided "that none may despair," while their extreme rarity warns us that none should too presumptuously hope.

There is a sense in which the populace is a judge of poetry. The popular lays that the country peoples of Europe have orally preserved, through ages which we cannot attempt to number, show that a natural and unspoiled people instinctively knows what is good, and retains it in secular possession. Unfortunately this quality seems to be lost under the influence of trade and of primary education. We must still wonder, on the occasion of each popular success, whether it is the success of Byron or of Robert Montgomery. We must still pause in the face of each æsthetic failure, and ask is this the failure of Wordsworth or of—but it would be cruel to name names in this connexion.

ETNA.

A WORK on this mountain by Mr. G. F. Rodwell, the Science Master at Marlborough College, lately published by Messrs. Kegan Paul and Co., certainly fills a gap in the traveller's library. Voluminous as is the literature concerning Etna to which the learned of England, France, Germany, and Italy have contributed, there was not, until Mr. Rodwell's volume appeared, any English book giving in a popular form a description and history of this great volcano. Scientific memoirs there were, and there was also a well-written account of the mountain by a traveller of the last century; but the majority of readers care little for purely scientific writings, and many eruptions of Etna have occurred and a greatly increased knowledge of the volcano has been gained since 1776, when the work referred to appeared. Such a book as Mr. Rodwell's may therefore almost be said to have been wanted; for, besides those who have visited Sicily, there must be many who, without being inclined to hunt up information in numerous volumes difficult of access, will be glad to know something of the most famous mountain in the world. This may seem an exaggerated expression when applied to Etna, but it will scarcely be deemed so by any one who remembers the attention which the volcano has attracted

from the earliest times, or who has any idea of the mass of literature of which it is the subject. Mountains possessing active craters have usually a title to fame very similar to that of some celebrated men. They have generally destroyed a great amount of life and property. Etna has not been wanting in this respect, having done a vast deal of mischief at times, and on one memorable occasion having, it is said, destroyed fifty towns and sixty or seventy thousand human beings. It was natural that a volcano capable of doing such harm should have been thought well worthy of men's notice, and a great deal of notice has certainly been given to Etna, concerning which there has been, in early days much legend, in later ones an infinite amount of elaborate disquisition.

It is to this latter that we propose now to draw attention; for it is scarcely necessary to point out how ancient the first records of the mountain are, or how often it is mentioned in the classical writers. Most people who are likely to feel the smallest interest in the subject know that Etna was described by Strabo, that there are notices of it by many others, and that its summit is said to have been sought by the greatest of Greek philosophers and one of the greatest of Roman Emperors. The curious poem in which an attempt is made to give something like a scientific explanation of the volcanic phenomena does not perhaps come within the range of ordinary classical reading, but is abundantly well known, and has been the subject of a considerable amount of controversy. Of the fame of Etna amongst the ancients there is then no occasion to speak. What is less known and appreciated is the immense amount of attention which has been given to the mountain in comparatively modern times, and the strange devotion with which the mass of lava and ashes seems to have inspired some enthusiastic observers. One of the best chapters in Mr. Rodwell's clear and simply-written book is that in which he gives a short account of what may be called the literature of Etna; and probably there are few readers who will not be astonished at the amount and weight of the writings he mentions which describe the examination of the mountain that has been carried on during a period not far short of three centuries. So long ago as 1591 Etna was made the subject of a book which, according to the fashion of the day, was written in Latin. This work was an account of the volcano and of its eruptions by Filoteo, a Sicilian who a very long time before his work appeared had descended into the crater, and had witnessed the great outpour of lava in 1536. In the next century Etna and its eruptions were described by a considerable number of writers, amongst whom were some attentive observers, some men of considerable acquirements, and an English ambassador, who condescended to pen "A true and exact relation of the late prodigious earthquake and eruption of Mount Etna or Monte Gibello," at which he was, according to Mr. Rodwell's account, not a little frightened. In the same year, when the outburst to which this description related occurred, the first map of the mountain was published. It could hardly be expected that this would be very accurate, and Mr. Rodwell, who has inspected a copy of it, which is to be found in the Paris Library, is inclined to think that it must have been drawn from description, or altogether from the imagination, as he says that "it is utterly unlike the mountain, an impossible steepness being given to the sides." This seems a fatal objection to the map or drawing; but it must be remembered that until very lately artists and draughtsmen have rarely been able to resist the temptation to exaggerate greatly the steepness of the sides of mountains.

Many were the writers who treated of Etna during the eighteenth century, the principal amongst them being Sir W. Hamilton, the Abate Ferrara, and Brydone, an early and excellent representative of the class of humorous travellers to which, since his time, so many people have unfortunately desired to belong. In one respect he resembled certain of his successors, for he occasionally sinned both against good feeling and good taste; but his work had some value, as he was a careful observer and possessed some literary power. The like cannot be said of the companion of one of his expeditions, the Canon Recupero, of whose enormous History of Etna, published long after his death, Mr. Rodwell speaks with a little of that horror which is felt by compilers who have had to toil through pages unread of all the world besides. After the days of Brydone and Recupero, in the early part of the present century, the late Admiral Smyth, an officer of great scientific accomplishments, determined the position and height of the volcano, which, before, during, and after the time when he was thus employed, was examined and observed by three brothers—the Gemellaros of Catania—with a patient and long-continued devotion which has assuredly never been shown to any other mountain. The most remarkable of the three was Carlo Gemellaro, who laboured at his beloved volcano for forty years, and to whom its eruptions seem almost to have endeared it. Mr. Rodwell, who has given attention to the writings of this observer, which are for the most part contained in the not very accessible *Atti dell' Accademia Gioenia* of Catania, is apparently of opinion that they have considerable merit. The work of Carlo Gemellaro and of his two brothers has however attracted, naturally enough, but little notice compared with that of the very distinguished scientific men who have studied and written on Etna. Elie de Beaumont made a minute examination of the mountain, and subsequently described it. Abich, who afterwards wrote so valuable a work on the geology of the Caucasus, visited Etna and contributed to the scientific knowledge of the volcano. Sir Charles Lyell gave the fruit of his careful observation in the well-known chapters of his great work; and Baron von Waltershausen, after six years of labour, produced a most elaborate map of the mountain, which probably, at the time when it was finished, was almost perfect. But unfortunately the incessant activity of a volcano which sometimes changes the face of a country in a manner so very unpleasant for those who inhabit it, also nullifies to a certain extent the labours of the map-maker, and since Von Waltershausen's map was made there have been several eruptions of Etna, so that his work is now in some respects obsolete. The volcano seems, however, to have a wonderful power of stimulating industry, and another map has since been made. Scientific examination also continues, for Mr. Rodwell states that Signor Silvestri, Professor of Chemistry at the University of Catania, who has for long been studying the mountain minutely, has recently enjoyed the unspeakable pleasure of discovering a new kind of mineral oil, the existence of which in its lavas was previously unknown.

Down to our own days, therefore, Etna has been observed and studied with the closest attention, and the title of the most famous mountain in the world may well be claimed for it, as probably about no other has so much been said. Readers will therefore be grateful to Mr. Rodwell for giving them very clearly and in a small compass a great deal of information respecting this much-observed volcano, which, without his aid, they would have no small difficulty in obtaining; but in one respect some disappointment will perhaps be felt. It may naturally be expected that a great increase to knowledge has been the result of all this work by highly competent men; but on this point Mr. Rodwell's statements are not so definite as could be wished. A minute knowledge of the mountain has been obtained by the investigations which have extended over so long a period of time; but it is not easy to discover that any large advance in understanding the operations of nature has been due to them. As need hardly be said, geologists are not agreed as to the manner in which a volcano is formed; and, after all the labour which has been bestowed on Etna, we find that Sir Charles Lyell holds one view, other men of almost equal celebrity another, so that the outside world which wishes to be instructed is left in bewilderment. The attempts which have been made to get some idea of the age of Etna by ascertaining the thickness of the matter added during the historical period to mountains, and comparing this with the thickness of the beds of old lava and scoriæ, seem to have had little success. The last-named geologist states that "the successive envelopes of lava and scoriæ are not continuous, like the layers of wood in a tree, and afford no continuous measure of the time," and the only conclusion arrived at is the somewhat vague one that it is impossible not "to form a most exalted conception of the antiquity of this mountain." It was doubtless impossible to discover anything more definite, but it must be said that this may seem to some a rather poor result for so much labour. In one respect, however, very clear knowledge has been obtained from the examination of Etna. The lavas have been analysed, and their constituent elementary bodies determined; but only a few persons are likely to take any very keen interest in the results arrived at. Those who are given to chemistry may learn with true pleasure that the lavas of Etna consist of labradorite (augite), peridot (olivine), and titaniferous iron, and that the latter is composed of 11·14 parts of titanic acid, 58·86 of sesquioxide of iron, and 30·0 of protoxide of iron; but the ordiary reader, even if fairly desirous of scientific information, will hardly feel greatly impressed by these facts. If it were possible to form any idea of the age of Etna, if the long observation of its cones and lavas had led to anything like a generally accepted theory of the causes of volcanic action, a result well worthy of the enormous labour which has been given to the mountain would have been achieved. As it is, there is some difficulty in avoiding the conclusion that as yet the acquisition to knowledge obtained from this volcano has scarcely been proportionate to the immense amount of careful observation which has been devoted to it.

Of Etna as a most interesting mountain for the ordinary traveller to visit, as easy of ascent, and as offering a magnificent view from its crater's edge, space does not now allow us to speak. Mr. Rodwell describes an expedition which he made to the crater, and, with a wisdom which travellers do not often show, refrains from sacrificing himself on the summit; that is to say, he does not attempt an ecstatic description of the view, though he does inflict on his readers a quotation from Brydone, who, like most men who have attempted to describe rapturously what they saw from high summits, talked nonsense. Strangely enough, Mr. Rodwell seems to have been disappointed at finding the crater free from smoke, which is exactly the best condition for seeing one, because then the whole of the huge cavity can be observed. When smoke is issuing of course this is more or less prevented. Still it is easy to understand that a traveller who has come from far to visit a volcano feels somewhat annoyed when he stands on the edge of the crater and finds that but very small sign of volcanic powers is given, and the disappointment which Mr. Rodwell felt has doubtless been experienced by others; but probably in every case where the provokingly pacific behaviour of the volcano has caused some little annoyance, it has speedily been forgotten in the contemplation of that wonderful expanse of sea and land which is beheld from the summit of the great Sicilian mountain.

A PLEA FOR WREN'S CHURCHES.

THERE is something almost grotesque in our having at this time to protest against the wanton destruction of some of the noblest and most thoroughly national works of art that England has to show. The Turk who burns to lime the sculptures of Phidias or Praxiteles, or the "navvy" who with a stroke of his pickaxe smashes to pieces a priceless vase, may be excused on the ground of gross ignorance. They are utterly unconscious of the value of what they destroy. But the present age is, if anything, æsthetic. Art is the ruling craze. Unless a man would be set down as a mere Philistine, unfit to appear in the selecter circles, he must know, or pretend to know, something about æsthetics in one form or other, and be able to chatter about "tones" and "symphonies" and "arrangements," in the now fashionable gibberish by which, to the utter perplexity of those who fancied they understood their own tongue, the terms of one art are boldly, if not very intelligently, transferred to another. It is therefore somewhat remarkable that this should be the very time when, one by one, the works of one of the infinitesimally small list of architects of European reputation whom England has, till within our own memory, produced—works all bearing the stamp of inventive genius, and thoroughly national in their character—are being quietly swept away by the fiat of the Bishop of London and other ecclesiastical and parochial authorities. The prevailing taste of the time renders this wholesale destruction of Wren's churches the more surprising. For while, half or even a quarter of a century ago, our *cognoscenti* looked on these churches with pity and contempt as "pagan abominations," as not conforming to the Gothic style to which was then alone assigned the title of Christian architecture, now the tide has turned among our self-constituted teachers. The so-called "Queen Anne" mania looks fondly on all art-work of the Wren period, and that immediately succeeding, as something only "too precious," and our architects, having received their cue, leave off copying fourteenth and fifteenth-century work, and fill their portfolios with tracings of the designs of Wren and Hawksmoor, Vanbrugh and Kent, and—so violent is the recoil—even the flat insipidities of the "Adelphi" Adams.

And yet, in the face of this classical revival, the best classical works that England has ever seen, the productions of that truly great and national genius of whom Mr. Fergusson justly says that, "though he did fail sometimes, it cannot be denied that he was a giant in architecture, whose greatest praise is that, though he showed the way and smoothed the path, none of his successors have surpassed, if indeed they have equalled, him in what he did"—the churches in which the originality of his genius shines most conspicuously, and in which he specially appears as an inventor, are being gradually demolished. That forest of spires and towers which excited good Sir Roger de Coverley's admiration as he was rowed from the Temple stairs to Spring Gardens is falling, and the "heathenish sight" which he viewed with so much sorrow to the west of Temple Bar is being extended to the City. From this point of view alone the loss of the churches is incalculable, for his steeples are the most signal proof of Wren's genius. None of his works more distinctly show his sense of proportion, his command of variety of outline and detail, his eye for the picturesque, than that group of campaniles which soar above the habitations around them, and, clustering like satellites round the majestic dome of the Cathedral, to whose swelling outline their taper spires form so striking a contrast, impart a picturesque grandeur to the general aspect of the City which it is hard to rival. Within our own memory at least ten of Wren's City churches, including some of his most original designs, have passed away; their materials have been sold to the highest bidder, their stones ground down for Portland cement; their rich carved oak-work, bearing the touch of Grinling Gibbons's magic chisel, gone to furnish new "Queen Anne" mansions; the remains of the dead carted off, and their monuments huddled away in alien churches, which, if the bold designs of our church-destructives take effect, will afford them only a temporary resting-place. In fact, by the disastrous "Union of Benefices Act," only four out of the fifty City churches are safe from destruction; and, unless some more decisive measures are taken than have yet been adopted to stay the rage for devastation, the noblest triumphs of Wren as a church architect will soon exist only on paper.

The first City church removed subsequently to the great fire of 1666 was St. Christopher le Stocks, with its pinnacled Gothic tower, which somehow managed to escape the conflagration, absorbed in 1781 by the Bank of England, which had already swallowed up the whole parish. Its preservation as a private chapel for the Bank Directors would then have been deemed a flagrant anachronism. But that would have been the right use to make of it. Half a century passed before a second church was doomed—St. Michael's, Crooked Lane—which, with its stately tower and spire, one of Wren's characteristic works, was removed, we suppose necessarily, in 1830, for the northern approaches of new London Bridge. The facility with which this church was got rid of made the fingers of our destructives itch for employment. There are always men who must be busy about something; if there is nothing to build up, they will be equally happy in pulling down. Mr. Richard Lambert Jones was then a leading member of the Corporation and the moving spirit in the erection of the new London Bridge. In this capacity he attracted the attention of the Duke of Wellington, who took a warm interest in the Bridge, and who, as recorded in Rennie's Life, was struck by Mr. Jones's shrewd common sense and business-like habits. Mr. Jones, having so easily abolished one church, found his appetite whetted, and proceeded, with powerful help, to draw up a monstrous scheme for the extinction of twenty of the City churches. This wholesale demolition, which was justly denounced by the late E. J. Carlos, the veteran London archæologist, in the *Gentleman's Magazine* of 1834, was happily quashed by the decided refusal of Archbishop Howley and Bishop Blomfield to entertain the project; and the churches had rest for a dozen years. Then came the conflagration of the Royal Exchange, followed by the erection of a new and larger building and the remodelling of the adjacent streets. Here two of Wren's best known and most historically interesting churches fell a sacrifice to the march of improvement. One of these was St. Bartholomew's, the burial-place of Miles Coverdale, whose tall rugged tower (a relic of London before the Fire, to which Wren had added a singular and picturesque cresting of open arches, wisely reproduced by Mr. Cockerell in his new church of the same dedication in Moor Fields) must be fresh in the memory of the older of our readers. Internally it was one of the best of Wren's Basilican churches, "strikingly effective from its harmonious proportions, and the good keeping of all its parts." But not all its architectural merits, nor the ashes of Bishop Coverdale, could save it. The site was wanted for the Sun Fire Office, and down it came. So, too, did its neighbour, St. Bennet Fink, on the other side of the street, overshadowing Leman's biscuit shop, long famous before Huntley and Palmer had made Reading celebrated by their crisp delicacies. If St. Bartholomew's could plead in stay of execution that one of the leading members of the Protestant hagiology was buried within its walls, St. Bennet's could urge that its registers recorded the marriage of one of the highest names on the Puritan bede-roll, Richard Baxter; as well as the baptism of Speed the historiographer, and—though to be connected with the name of such a woman is a disgrace—the burial of Mrs. Manley, the shameless author of the infamous *New Atlantis*. Architecturally, too, this was one of Wren's most successful designs. A decagon externally, its domed ceiling was supported by eight Corinthian columns with a very happy effect. It was, in short, a composition which could be ill spared.

This instalment of sacrilege was speedily followed by the ill-starred "Union of Benefices Act," which, however well intentioned, has been so worked as to accomplish a far smaller amount of benefit for the outlying portions of London, which were to be aided out of the ecclesiastical resources thus set free, than the promoters of the measure hoped. Certainly the net results do not balance the architectural and historical loss, or compensate for the reckless spirit of dealing with sacred things which it has done so much to foster. This Act at first worked slowly. So many consents were essential to put it in operation that the machinery was clogged and impotent. As long as Archdeacon Hale lived, his burly form was a bulwark to many a threatened edifice. His death, and some modifications in the Act, removed the obstacles and oiled the wheels, which began to grind up their prey with alarming rapidity. We cannot linger over the victims of this Act. It is sad enough to enumerate them. One or two, not the works of Wren, may have passed away unregretted, artistically. Allhallows Staining (where happily the old fifteenth-century tower has been preserved), St. James's, Duke Place, and that unworthy example of a truly gifted architect, Cockerell, St. Martin Outwich, with its stable turret—have gone, and leave no blank. But the list of Wren's works which have perished is alarmingly large. It includes St. Bennet's, Gracechurch Street, and St. Michael's, Queenhithe, with their tall and slender spires; St. Mary's, Somerset (the truly fine pinnacled tower of which has happily been preserved, though in a sadly uncared-for condition); St. Mildred, in the Poultry (the materials of which were purchased by a former High Sheriff of Lincolnshire, to save them from the cement-works, and now lie in his park near Louth, ready for reconstruction); St. Dionis Back-Church, with its Ionic eastern façade, one of Wren's most classical compositions; Allhallows, in Bread Street, whose lovely pinnacled tower not even the memory of Milton, whose baptism is recorded in the register, could save from the operation of the Act. Here is the entry:—"The 20th day of December, 1608, was baptized John the Sonne of John Mylton, Scrivener." We wonder where the register is now. And last, but not least, St. Antholins, with its delicious spire, a veritable little gem inimitable in its way, has been levelled to the ground, and all its memories of the religious life of the sixteenth and seventeenth centuries wiped out—the lecture set up, "after the Geneva fashion," at 5 A.M., in 1559, which Lilly, the astrologer, attended, and which kept alive a puritanical fervour in the parish, often referred to by our early dramatists; the gallery where the Scotch Commissioners in 1640 attended service, and heard sermons from Alexander Henderson and their other chaplains, not of the most pacific order—sermons which brought such a crowd that, as Clarendon tells us, from the first appearance of day to the shutting in of the light the church was never empty. The steeple survived for some little time, but even that has now utterly disappeared. They are gone, all gone, and we are told more are to follow. "L'appétit vient en mangeant." Each morsel swallowed makes the process of deglutition more easy; and, unless some means are taken for checking their voracity, we must be prepared to see the remaining churches fall a prey to the sacrilegious hands of the church demolishers.

Already we are told that St. Mildred's, Bread Street, which has one

of Wren's characteristic tall spires, rising from a well-proportioned red-brick tower, and a truly exquisite interior, where a hemispherical cupola is supported on four deeply recessed and caissoned arches, showing Wren's perfect eye for proportion, and command of detail, is threatened. Threatened, too, is St. Margaret Pattens, one of Wren's most happy classical adaptations of a Gothic spire, dignified and harmonious, the loss of which to the general view of London, already, as we have said, too much impoverished, would be irreparable. Threatened, too, is the neighbouring little church of St. Mary-at-Hill, which, however unattractive in its exterior, which is long subsequent to Wren, exhibits one of his most picturesque compositions internally, and is rich beyond description in the stately oaken fittings carved by the hand of Gibbons. Only the other day, so to speak, when the late Dr. Crosthwaite was rector, large sums were expended on the woodwork of this church, which was then lovingly repaired by Mr. Rogers, who added the exquisite panels to the pulpit, and other delicious pieces in the altar screen and organ loft. But this interesting church, with its stately domed interior—a first sketch as it were of St. Stephen's, Walbrook—and its historical memories of Margaret Beaufort, "my lady the King's grandam," who gave 20s. towards the rebuilding of the old church, and of the Abbot of Waltham, whose town mansion stood hard by, on the site of whose kitchen the south aisle was built, and of the many brotherhoods of which it was the seat, the representatives of one of which, the Fellowship Porters, still meet, or did so till recently, for worship within its walls—this church, where Dr. Young of the *Night Thoughts* was married, and of which Dr. Brand of the *Popular Antiquities* was rector, with a resident rector and well-attended services—is wanted for the Inner Circle Railway, and all architectural and historical considerations are scattered to the winds. The Bill for carrying out this project has, we observe, just been abandoned for the present year; but the attempt is likely enough to be renewed in a future Session, and we trust that the scheme and its promoters will be vigilantly watched and resolutely opposed. We are glad to know that the rector and the inhabitants are determined not to submit tamely to such a wrong. They will not be robbed of their church without a struggle, and not only are they resolved to fight for their own, but they invite the public to join with them in doing battle for the protection of other churches. At their instance a "City Church and Churchyard Protection Society" has been started, with the view, to quote their circular, of "fighting out the battle in each case where a church or churchyard is threatened with destruction." Such a society has our heartiest sympathy, and we sincerely hope that the response to the appeal issued by the preliminary Committee will be such as to enable them to start it on its career, and that the support it receives will be so large and influential as to show unmistakably that the citizens of London are resolved not to be deprived piecemeal of the churches which are their glory and their pride. The earnest protest of Mr. Carlyle against this wholesale destruction, recently issued by the "Society for the Protection of Ancient Buildings," is probably known to many of our readers, and there are few, we think, with any feeling for art, religion, or history, who will not echo his words that "it would be a sordid, nay sinful piece of barbarism to do other than religiously preserve these churches as precious heirlooms; many of them specimens of noble architecture, the like of which we have no prospect of ever being able to produce in England again." The very questionable sayings and doings of the last-named Society ought not to make us unjust on occasions, like the present, when it may do really useful work. The result of Mr. Carlyle's appeal will, we trust, be such as to prove to that justly honoured man that his words have not been thrown away, but are bearing good fruit in an increased reverence for the genius of Wren and for the churches which exhibit his powers so markedly, and which are so intimately bound up with the religious and historical life of London. If no longer needed parochially, they have a distinct use, as Dr. Liddon has shown, as the religious centres of the Guilds, Confraternities, Sisterhoods, and the like which are being called into existence by the pressing needs of our City population.

VONDEL.

LAST Wednesday, the 5th of February, was the bicentenary of the death of the most considerable writer that Holland has produced, the typical example of Dutch intelligence and imagination at their highest development, the poet Joost van den Vondel. No outline of European literature can be considered complete that does not find space for the merits of this famous personage. Not merely is he to Holland all that Camoens is to Portugal and Mickiewicz to Poland, but he stands on a level with these men in the positive value of his writings. Just below the topmost height occupied by the six or seven supreme poets of the world, there lies a broader range for those illustrious and potent minds which have barely failed to exercise an influence over European thought in general; and in this second rank of greatness Vondel holds a secure position. Had he been born with precisely the same qualities of mind in a larger country than Holland, and trained in a more cosmopolitan tongue, he might have been more widely read, but he would scarcely have attained so original a standpoint. It was better to reign in Amsterdam than to be second or third in London, and, as the limitations of Vondel's genius are precisely those of the Dutch nation, they are scarcely felt in Holland. As it is, he is great enough to be compared, without any sense of monstrous misproportion, with his greatest contemporaries in England and France. Compared with the Elizabethan school of tragedy, in the atmosphere of which his youth was cast, he is conventional and classical, his picturesqueness being seldom of a romantic cast. He crosses the stage in a stiff, brocaded robe of alexandrines, while the English playwrights of his time hasten over it in the flying garments of an easy and flexible blank verse. But his classical manner was interpenetrated by that curious heresy of the age, for which literary history has not yet found a name, the passion for conceits and the ornament of a far-fetched imagery. When he was a young man the three darling poets of Europe were Marini, Gongora, and Donne; and from the first and third of these directly, and probably from the second also, indirectly, Vondel, who was a far greater man than either, gained no little of the purely external glitter of his style. The last great Italian poets, Tasso and Guarini, died when he was a child, and their florid genius tinctured his. We find in Vondel, therefore, the remarkable phenomenon of a strong and simple Batavian nature, thoroughly composed of homely and popular qualities, tinged, as it were, with the colour of the age he lived in, and adopting into his own massive style the tricks and harlequin beauties of the dying Renaissance. He is the greatest poet in whom the transformation of the seventeenth century into the eighteenth, the flowing love-locks into the full-bottomed periwig, can be studied in its full proportions. His long life of nearly a hundred years saw the world of Spenser transmuted into the world of Racine.

Joost van den Vondel was the eldest son of a merchant of Antwerp, who was obliged to leave that city in 1585 on account of his adherence to the sectarian doctrines of the Mennonites, the followers of the mad heretic Simon Menno. He settled at Cologne, married one of his fellow-exiles, and on the 17th of November, 1587, became the father of a child destined to become the most illustrious of Dutch writers. Driven out of Cologne, the family took refuge for a little while at Utrecht, and finally, in 1597, settled at Amsterdam, where the father opened a hosier's shop in Warmoesstraat, near the heart of the city. Here in 1608 the father died, and two years later, in his four-and-twentieth year, the future poet married into a Mennonite family that had shared the exile of the Vondels from Antwerp. It was not till the same age that he showed any aptitude or even tendency to the poetic art. His juvenile verses are very few and very poor, and his first considerable work was an elegy on the French King Henry IV., murdered in 1610 by Ravaillac. About this time Vondel seems to have entered upon a literary life by joining one of the three guilds called Chambers of Rhetoric which then existed in Amsterdam. These peculiar institutions dated, in their original form, from the end of the fourteenth century, having been founded under the Dukes of Burgundy in almost all the towns of the Low Countries as centres of intellectual vitality. It was by the Chambers of Rhetoric that mystery plays were got up, that prizes were given for dissertations and disquisitions in which the scholastic learning of the middle ages was tortured into fresh forms, and that poems in praise of the Virgin and the patron saints were recited and rewarded. For a long time these Chambers of Rhetoric preserved a purely mediæval character, even long after the revival of learning; but the ideas of Humanism and Protestantism by degrees found their way into the most influential. Each Chamber took the name of some flower or charming object. We find the "Violet," at Antwerp; the "Marigold," at Gouda; the "Cornflower," at the Hague; while more ambitious were the Chambers of "Jesus with the Balsam," at Ghent; of the "Holy Ghost," at Bruges; and the "Alpha and Omega," at Ypres. The last-mentioned Flemish Chamber is supposed to have been the most ancient. At the beginning of the seventeenth century three Chambers of Rhetoric flourished side by side in Amsterdam. These were the "Eglantine," native to that city, and the "White Lavender Blossom" and the "Figtree," guilds of Brabant origin which had taken refuge in the United Provinces after the fall of Antwerp in 1585. To the second of these, the "White Lavender Blossom," Vondel seems to have attached himself; and, by so doing, to have deprived his youth of all the advantage that accrues from companionship with genius, since all the other rising youths of the day were associated with the "Eglantine."

In 1612, being twenty-five years old, he brought out his first work, *Het Pascha*, a tragedy or tragi-comedy on the exodus of the Children of Israel, written, like all his succeeding dramas, on the recognized Dutch plan—in alexandrines, in five acts, and with choral interludes between the acts. There is comparatively little promise in *Het Pascha*. It was much inferior dramatically, to the romantic plays just being produced by Brederoô, and in verse to the clear and eloquent tragedies and pastorals of Hooft; but it secured the young poet a position inferior only to theirs. Yet for a number of years he made no attempt to emphasise the impression he had produced on the public, but contented himself, during the years that are the most fertile in a poet's life, with translating and imitating portions of Du Bartas's popular epic. The short and brilliant life of Brederoô, his immediate contemporary and greatest rival, burned itself out in a succession of dramatic victories, and it was not until two years after the death of the great poet of *Griane* that Vondel appeared before the public with a second tragedy, the *Jerusalem Laid Desolate*; this was in 1620, when

he was thirty-three years of age. In the contrasted careers of Bredero and Vondel we have an extraordinary instance of the way in which genius seems to provide against the early coming of death. The first compressed into his brief life of thirty years all the stress and passion of an age, while the latter, secure in his ninety years, developed leisurely and gravely like a forest-tree. Vondel was not idle, however, during his eight years of silence; he had transferred his talents to the reformed and vivacious Chamber of the "Eglantine"; he had been received into the circle of poets and artists that met in the first Northern *salon*, the house of Roemer Visscher; he had paid poetical tribute, as was due, to Tesselschade, the beautiful and gifted daughter of Roemer; and, more than all, he had been giving his whole energy to the study of French and Latin, taking the pseudo-Seneca for his first dramatic master. It was a great judicial crime that opened the flood-gates of his genius, and first taught him those master-accents of indignation and horror which cannot even now be read, after two centuries and a half, without quickened pulses. In the great religious and political schism in the State Vondel threw his whole heart into the losing scale, and the triumph of the Calvinists in the execution of Barneveldt in 1618 roused him to a white heat of indignation. The edicts of the Synod of Dort in 1619 made it dangerous even to incline to the party of the Remonstrants. A certain sheriff of Amsterdam, whose sympathies lay wholly with the cause of the defeated, proposed to the poet to write a tragedy satirizing the conduct of the Synod, and suggested the Euripidean story of Palamedes as a suitable theme. Vondel was charmed with the idea, and in 1625 published what seemed an innocent study from the antique, his tragedy of *Palamedes; or, Murdered Innocence.* The whole city discovered with smothered delight that under the name of the hero was thinly concealed the figure of Barneveldt, that Diomedes was Willem of Nassau, Agamemnon Prince Maurits, and the chorus of Peloponnesians the pestilent and tyrannous Counter-Remonstrants. Thus, at the age of forty-one, the obscure Vondel became in a week the most famous writer in Holland. But such insolence could not remain unpunished; his life was threatened by the Government, and the greatest influence had to be exercised to turn this sentence into a heavy fine, which, be it added, was most honourably paid by the sheriff who had suggested the form and subject of the tragedy.

For the next twelve years, and till the accession of Prince Frederick Hendrik, Vondel had to maintain a hand-to-hand combat with the "Saints of Dort." This was the period of his most resolute and stinging satires; Cats took up the cudgels on behalf of the Counter-Remonstrants, and there raged a war of pamphlets in verse. The return of Hugo Grotius out of exile in 1632 strengthened the hands of Vondel, and gradually all things in statecraft and literature tended once more towards liberty and peace. A purely fortuitous circumstance led to the next great triumph in Vondel's slowly-developing career. The Dutch Academy, founded in 1617 almost wholly as a dramatic guild, had become so inadequately provided with stage accommodation that in 1638, having coalesced with the two Chambers of the "Eglantine" and the "Lavender Blossom," it ventured on the erection of a large public theatre, the first in Amsterdam. Vondel, as the greatest poet of the day, was invited to write a piece for the first night, and accordingly, on Sunday, the 3rd of January, 1638, the theatre was opened with the performance of a new tragedy out of early Dutch history—the famous *Gysbreght van Aemstel.* This play still keeps the stage—that is to say, it is regularly acted every New Year's Eve. With this brilliant success, which raised Vondel finally above any fear of competition, his career as a public man culminated. He still had forty years to live and to work in, but he became from this time forth less in sympathy with his fellow-citizens. The chief reason for this was his apostasy, as it was called, to the Roman Catholic faith. This step he finally and publicly took on his fifty-fourth birthday, the 17th of November, 1641; but since his early manhood his Flemish blood had been always stirred by the mysteries of the altar, and in this at least he was no Dutchman. The hand which led him to the Church of Rome was, if we may believe Brandt, his first biographer, that of the beautiful poetess Tesselschade Visscher, who had been brought up in that faith, and whose influence over Vondel remained very strong until her early death in 1649. The ten years which followed the production of *Gysbreght van Aemstel* were rich in dramatic work from Vondel's hand; he supplied the theatre with heroic Scriptural pieces of which the general reader will obtain the best idea if we point to the *Athalie* of Racine. In 1654, having already attained an age at which poetical production is usually discontinued by the most energetic of poets, he brought out the most exalted and sublime of all his works, the tragedy of *Lucifer.* This drama Milton read in the last hours of his failing eyesight, and in all probability it decided him to produce that poem on the Fall of Man which is still the main epic glory of our language. The subject of Vondel, indeed, was somewhat different, as it dealt mainly with the Fall of the Rebel Angels; but the style and treatment, as well as many of the best passages, remain the most Miltonic things outside Milton. Very late in life, through no fault of his own, financial ruin fell on the great Dutch poet, and from 1658 to 1668—that is, from his seventieth to his eightieth year—this venerable and illustrious person, the main literary glory of Holland through her whole history, was forced to earn his bread as a common clerk in a bank, miserably paid, and accused of wasting his masters' time by the writing of verses. The city released him at last from this wretched bondage by a pension, and the wonderful old man went on writing odes and tragedies almost to his ninetieth year. He died at last in 1679, of no disease, having outlived all his contemporaries and almost all his friends, but calm, sane, and good-humoured to the last, serenely conscious of the legacy that he bequeathed to a not too grateful country.

In no more than eight years' time the tercentenary of Vondel's birth will come round, and we believe it is intended to celebrate the day somewhat upon the same plan as our own Shakspeare's tercentenary in 1864. A birth is certainly a more seemly and a more auspicious opportunity for festivities than a death. The most prominent mode in which the present date has been observed has been the opening on Wednesday last of a Vondel Exhibition at Amsterdam, to which amateurs, not only in Holland, but all over Europe, have been asked to contribute portraits of the poet, first and early editions of his works, the quarto plays especially, volumes bearing on the literary history of his times, and prints or pictures illustrating the early condition of the stage in Holland. This Exhibition will be open to the public for a month, and offers such opportunities as have never before been met with for the study of the greatest of Dutch writers.

THE CATHOLIC DOCTRINE OF REBELLION.

IN a favourable notice of the recent Papal Encyclical one of our contemporaries took some exception to Leo XIII.'s teaching on rebellion, which is represented to be—the italics are our own—that "a government, *however bad, is never to be resisted*, except it require from its subjects that which is rebellion against God, but that in that case God is to be obeyed rather than man." The writer adds, justly enough, that this theory, unless very freely interpreted, "would hardly cover the ground of most Catholic rebellions." But we are not at all clear that this is the theory intended by Leo XIII.; his words in the original Latin, the sense of which is somewhat obscured in the English version of the *Tablet*, are patient, to say the least, of a more liberal construction. The passage runs as follows:—"Si tamen quandoque contingat temere et ultra modum publicam a principibus potestatem exerceri, Catholicæ Ecclesiæ doctrina in eos insurgere *proprio Marte* non sinit, ne ordinis tranquillitas magis magisque turbetur, *neve societas majus exinde detrimentum capiat.*" The phrase "proprio Marte," especially when coupled with the reason added for this prohibition, seems to point to violent and seditious actions on the part of individuals, who have not the general body of the nation at their back. And as the Pope does not profess to be laying down any new doctrine of his own, but only recording "the doctrine of the Catholic Church," it may be worth while to inquire what that doctrine is, as a matter of history, which is in itself a question of considerable interest. We say, as a matter of history, for there is not, so far as we are aware, any formal dogma or definition either of the ancient or mediæval Church on the subject, and the "Catholic doctrine," if there be any, must therefore be gathered from the general Christian tradition and the teaching of accredited divines. And if we go back to the Fathers, it cannot be denied that the most stringent interpretation of the Pope's language would be supported and even demanded by the almost unanimous tenor of their teaching on the absolute duty of submission. The very few apparent exceptions occasionally quoted only serve to prove the rule, as *e.g.* when St. Gregory Nazianzen and St. Cyril inveigh against the memory of Julian the Apostate, after his death, and St. Hilary denounces the Arian Emperor Constantius as a precursor of Antichrist and the like, when he may be supposed to have already been virtually deposed for his heresy. As a rule, the early Fathers seem to have taken St. Paul's admonition to obey the powers that be in its most rigorous sense, and would admit no right of rebellion against a Nero or a Caligula, though Nero was by many of them regarded as the personal Antichrist. That the maintenance of this principle, which was not only taught but consistently acted upon by the early Christians throughout the ages of persecution—and whereby, as a modern writer expresses it, they constituted themselves the champions of legality in an age of turbulence and disorder, when the rival forces of civilization and barbarism were engaged in an internecine strife—was salutary in its results may be readily admitted. It would have introduced fresh and disastrous complications if the Christians, when they became strong enough, had assumed the position of insurgents against the persecuting Empire. They acted on a true and generous instinct, but their theory was certainly an excessive one, and this became manifest when it was reproduced under altered circumstances in the English Church of the sixteenth and seventeenth centuries, where the doctrine which has been ascribed to Leo XIII. was persistently inculcated in all its fulness.

We need not endorse the characteristic maledictions of Macaulay against the Church he so little loved, which "continued to be for one hundred and fifty years the servile handmaid of monarchy, the steady enemy of public liberty," and "once, and but once—for a moment, and but for a moment—when her own dignity and property was touched, forgot to practise the submission she had taught." But he has not misrepresented what may be called the *consensus* of the great Anglican divines on the duty of passive obedience. Their teaching is summed up with unmistakable emphasis and precision in the authorized Homilies on *Obedience* and on *Wilful Rebellion.* We are there taught that

"eternal damnation is prepared for all impenitent rebels in hell, with Satan, the first founder of rebellion," while "heaven is the place of good obedient subjects, and hell the prison and dungeon of rebels against God and their prince." Nor does the badness of the government make any difference in the paramount obligation of obedience, for "a rebel is worse than the worst prince, and rebellion worse than the worst government of the worst prince hath hitherto been." Bad government is indeed to be accepted as a righteous punishment, not made an occasion of fresh sin. "God placeth as well evil princes as good," and it follows that "for subjects to deserve through their sins to have an evil prince, and then to rebel against him, were double and treble evil by provoking God more to plague them." And the example of the Jews submitting to Nebuchadnezzar, and St. Paul to Nero, are cited in evidence of this view. Jeremy Taylor, in the chief Anglican work on Moral Theology, the *Ductor Dubitantium*, lays down the same doctrine, declaring it to be so plainly set forth in Scripture as hardly to need the comment supplied in the teaching and practice of the Church, which is however equally unmistakable. Hooker, whose moral and philosophical teachings are much more shaped on scholastic than patristic models, though he does not always acknowledge his obligations, takes a different line, but he stands almost alone. And even he, though he lays down principles very like those of Suarez—of whom something will be said presently—hesitates to draw the natural conclusion. He considers the royal power to be derived from the people, and subject to the law; and yet when he comes to inquire whether "the body politic" may withdraw the authority it has delegated, when it is misused, he only ventures to reply that "it must be presumed that supreme governors will not in such cases oppose themselves and be stiff in detaining that the use thereof is with public detriment; but surely without their consent I see not how the body should be able by any fresh means to help itself, saving when dominion doth escheat." We need not follow here the course of this absolutist teaching in secular and even sceptical English writers of later date like Barclay, Filmer, Hobbes, Bolingbroke, Hume, and others, as we are at present concerned with the theological aspect of the question, as it has in successive ages presented itself to the mind of the Church. We have seen that the great Anglican divines reproduced on this matter the stringent teaching of the Fathers, without making any allowance for the altered social and political conditions of their own day. But they certainly did not inherit that teaching by unbroken succession from the earliest ages to their own, as Taylor's language would imply when he says that the doctrine of the Church is, "without any variety, dissent, or interruption, universally agreed upon, universally practised and taught, that, let the powers set over us be what they will, we must suffer it and never right ourselves."

Two distinct and in some sense opposite tendencies of mediæval thought conspired to induce a gradual modification of the patristic doctrine of passive obedience. On the one hand, the growth of the Papal power, with its steadily ascending claim of supreme jurisdiction over all temporal governments, introduced a new element into the discussion. In deposing tyrannical and heretical sovereigns, who, unlike the Pagan Emperors of a former day, had become by baptism her own children and subjects, the Church professed to act, and to a certain extent did act, as the organ and executor of the moral sense of the Christian community, and thus the idea was at once suggested, under whatever limitations and control, of the nation having rights as against its rulers. On the other hand, the rise of the scholastic philosophy marked a great upheaval of thought, struggling to emancipate itself from the fetters of a mere dead traditionalism. It has been called, and not unjustly, a rationalistic movement, for it aimed at bringing all questions within the sphere of its cognizance under the domain of reason, though it accepted as ultimate premisses and starting points of inquiry revealed as well as scientific truths assumed to be certainly and finally fixed. Archbishop Trench speaks of the Schoolmen as seeking "to inaugurate a supernatural rationalism in the Church." Thomas Aquinas, the greatest of them, was probably influenced by both religious and rational considerations when he argued that the duty of obedience to secular princes is only obligatory *in quantum ordo justitiæ requirit*, and is therefore forfeited by an unjust or usurping ruler. It was the general teaching of the Schoolmen that the power of Kings is derived mediately, not immediately, from God, and directly from the people. And this doctrine was reasserted and developed by Bellarmine, Suarez, and other great Jesuit theologians of the Reformation period, mainly of course, but by no means exclusively, in the interests of Papal supremacy over civil governments. The Gallican divines naturally took a different line, harmonizing much more closely with that of the Caroline school in England, and Bossuet quietly observes that the Schoolmen, who for some centuries after St. Thomas were nearly unanimous in maintaining the view he opposes, are manifestly mistaken. The works both of Bellarmine and Suarez were publicly burnt by order of the Parliament of Paris. The work of Suarez—which was, by the way, written in reply to one bearing the name of James I. of England—distinctly subordinates the rights of the sovereign to those of the nation, even independently of the interposition of the Pope, or the lapse of the sovereign into heresy, which *ipso facto* annulled his right to the throne, though in that case it was better to await a definitive sentence of deprivation from the Pope; nor does he shrink from maintaining, as indeed Aquinas had done before him, that in extreme cases the sovereign may be put to death. But the most remarkable work on the subject is that by the Spanish Jesuit Mariana—who was at once one of the ablest and the most honest and independent writers of his order—*De Rege et Regis Institutione*, which elaborately vindicates the doctrine of tyrannicide, and pronounces a warm eulogium on those who have had the courage to practise it, from Harmodius and Aristogeiton and Brutus to the young Dominican Clement, "the eternal glory of France," who killed Henry III. And it is carefully explained that a tyrant does not mean only a ruler who had originally no right to his throne, but a sovereign who by governing on selfish principles, instead of for the interests of his people, has forfeited his right to govern them. Of course this extreme remedy of assassination was only to be resorted to in extreme cases, and when all constitutional methods of putting down the tyrant had failed or had been rendered unavailable, but Mariana evidently supposes such cases not to be so very uncommon. The same doctrine of tyrannicide was defended by other Jesuit writers, though it had been expressly condemned by a decree of the Council of Constance, occasioned by Jean Petit's advocacy of it at Paris. This decree Mariana rejects altogether, as not being confirmed by the Pope, while Suarez, who admits its authority, explains it as only applying to a legitimate sovereign. Many Protestant writers of the Reformation period advocated the same principle, which was acted upon in the assassination of the Duke of Guise and of Cardinal Beaton. But its systematic elaboration and defence was the special work of the Jesuits. It would of course be most untrue to say that the Church of Rome is in any way committed to the doctrine of tyrannicide, though canonized Saints and Popes, like St. Pius V. and St. Charles Borromeo, as well as Protestants like Buchanan and unbelievers like Sarpi have deliberately maintained it. But it would be equally untrue to say that the duty of passive obedience, as taught by the Caroline divines, is a "Catholic doctrine" in any intelligible sense of the word. It was an ethical principle generally asserted and acted upon by the early Christians, but never thrown into a formal or dogmatic shape; and when questions of this kind came to be handled as matters of philosophical discussion, which was not the case in the early ages, it was at once challenged and very generally repudiated. In practice both Catholics and Protestants in periods of fierce religious conflict have been too apt to bend their theories into conformity with the immediate exigencies and interests of their respective causes; but a close similarity may be traced between the abstract theories of Ultramontane and Puritan divines as to the proper method of dealing with "heretical" or "idolatrous" sovereigns. But, putting aside the extreme theory of tyrannicide, which is condemned to say the least by the verdict of enlightened experience, the doctrine of Mariana that nations have an ultimate right of resisting an unjust ruler, whether his title be legitimate or not, has never been either formally or practically rejected by his Church, and most persons in our own day would probably agree with him in thinking that it is supported by "the voice of nature and the common sense of mankind."

THEATRICAL SLANG.

A GOOD deal has been said lately in the papers concerning the state of the English stage, of which curiously different accounts have been given by people differently interested in the question. Much complaint has been made of the constant borrowing from the French theatre which goes on. Authors and managers have both given their view of the matter; and, on the whole, it must be confessed that the position taken by managers is by no means unreasonable. Without support assured by the State, or in some other yet undiscovered manner, the director of a theatre cannot be expected to be so patriotic as to prefer producing a possibly unsuccessful English piece to giving in an English form a French play which already bears the mark of success. And there can be little doubt that, although we have a few clever dramatists and a great many clever actors in England, thus far the French capital is far ahead of ours in being able to produce good original pieces well acted. Under these circumstances, it is pleasant to find the French theatre acknowledging its indebtedness in some respect to ours; and those people who have far too fine a taste ever to go to an English theatre, but who will rush with eagerness to see any rubbish which a Parisian manager chooses to put on the boards, may possibly be pleased to learn that one of the most useful devices of the stage was unknown to the French theatre until it was brought over from England. This is at least a fair inference from the fact that one of the most ingenious trap-doors ever invented goes in France by the name of *Trappe anglaise*.

This piece of information we have got from a little book called *La Langue Théâtrale*, compiled by M. Alfred Bouchard with the assistance, as he modestly says in a preface, of his collaborator, "Ciseaux," who he goes on to say, "a joué un rôle aussi important que notre plume"; he hopes, however, that the work "pourra être utile aux personnes qui aiment le théâtre; c'est là notre seul but," and his intention is certainly carried out with very considerable success. One of the earliest passages in M. Bouchard's work, which does not confine itself to theatrical slang, but deals at large with many things of and belonging to the theatre, conveys another proof that we are not so far inferior to the French in all theatrical matters as some folk would have us believe. Under the heading, "Acteur, Actrice,"

M. Bouchard observes that there was a great contrast between the social positions of Greek and of Roman players, and goes on to say that the same difference has held good in modern times in England and France. Garrick, he notes, enjoyed the very highest social consideration, but in France burial was refused to Molière and to Mlle. Lecouvreur. "Cette déconsidération s'est beaucoup amoindrie, mais elle existe encore, ne fût-ce qu'à l'état de préjugé. C'est à ce point que le ruban de la Légion d'Honneur, qui s'épanouit à la boutonnière de tant de nullités, ne décore aucun acteur, en tant que comédien." On *accessoires* the compiler of the dictionary has some amusing remarks. This branch of theatrical art naturally receives less careful attention in provincial theatres than in the capital, and M. Bouchard remembers having heard an impassioned address delivered to a portrait which was entirely absent. Perhaps this was a better device than one which we have seen employed when a long invocation supposed to be inspired by a picture of Beethoven was given to the portrait of a young Lifeguardsman in full uniform. Several anecdotes might be collected to rank with M. Bouchard's of the actor who, having in the character of a villain to burn an important document, found that the necessary candle had been forgotten, and was obliged to use the footlights. In this case there was at least a substitute for the missing "property" at hand; but there was none when, many years ago, a German actor playing Faust in London, interrupted his opening soliloquy by starting up, rushing to the wing, and shouting to the prompter, "Du hast das verdammte Buch vergessen." On one occasion at least on an English stage, the flood of light which mysteriously fills the scene on the appearance of a single candle or the turning up of a lamp appeared even more remarkable than it generally does, because the player unfortunately turned the lamp which was to cause the illumination not up but out. In connection with the word *accessoire* we find mention of "Utilité," to which English theatrical slang affords an exact equivalent. M. Bouchard has one good story of an "utilité" employed to deliver a letter, written, as it was a long one, to an actor against whom he had a grudge. For the written letter he substituted a blank leaf. Had he been content with this his vengeance would have been satisfactory; but, unfortunately for the utility man, he thought to improve his position by saying "Pray tell me the contents of that letter." To which the other promptly replied, handing it to him, "Tiens, lis toi-même." In the matter of *accessoires*, at least one clever French critic, M. Jules Claretie, is of opinion that they are generally much more complete on the English than on the French stage; another fact which we commend to the notice of people who think that they cannot praise French without decrying English acting. Turning M. Bouchard's pages at haphazard, we come upon one or two words which would certainly not be intelligible without a special explanation. Among them is *semainier*, which is thus defined:—"Fonction de régisseur, que chaque *sociétaire* du Théâtre Français remplit à tour de rôle. Ce titre de *semainier* en indique la durée." Such a method as this, which makes each member of a small society in his turn a despot over the others, would probably be impracticable under any but the special conditions that belong to the Français.

Not the least remarkable thing about French theatrical slang, as exhibited in the pages of the amusing little book from which we have quoted, is that most of its terms explain themselves much more readily than do those employed in England. Any Englishman with a tolerable knowledge of French and of theatrical matters could decipher for himself the meaning of four out of six of the words given. But very few Frenchmen, we fancy, however well up in English and in the slang of their own *coulisses*, could make out the intention of the advertisements contained in the pages of our chief theatrical newspaper—the *Era*. What, for instance, can be the meaning of this:—"Wanted, immediately, two or three useful gentlemen (single); also one to sing between"? What are useful gentlemen, and what is the meaning of the mysterious qualification in brackets? And, supposing the "one to sing between" were found, how could he sing between three gentlemen, however useful and however single? Here is another notice, which is far more startling:—"Wanted, a Novelty, a big Man, Woman, or Dwarf, or others." The mind, if not the will, of a person unversed in these mysteries is completely puzzled by such an announcement as this. Why should a big man or woman be a novelty? What is a big dwarf? What can be the "others" who are thus invited to compete with bigness? The answering of these questions may afford a pleasant relief to people who are tired of double acrostics; but we defy any of the acrostic-solving craft to make anything of this:—"Wanted, a first-class Herculanian (*sic*) performer; one who can fire either from the Shoulder or the Chest; also good skaters, gymnasts, Singing and Knockabout Clowns, or any great Novelty may send dates and lowest terms."

This advertisement is so completely amazing that we cannot even put into shape our dim speculations regarding it, and must leave it to speak for itself, passing on to one which seems at least to have the merit of common sense. "Wanted, Talent in all branches for present and future dates, Stars, Novelties, Specialities, &c. &c. Write at once. Good Niggers who can dance; Serio-Comic Ladies. Outsiders, please don't waste time and stamps." About the end of this notice there is a business-like air of which the plainness is refreshing after the vague awe inspired by the notion of a "Herculanian who can fire either from the shoulder or the chest". Perhaps however the mystery of the "Herculanian" is rivalled by this:—"Wanted, the Address of Biven's Wooden Headed Family." One wonders whether this has any connexion with the "Heavy Men," who seem to be in some request, and one is disposed to wonder still more at "a respectable young man" announcing that he wants "a situation as pianist for the Free-and-Easy business." It is easy to believe that a person combining such apparently opposite tastes is a "good Vamper for Song and Dance Music." To expressions of this kind we fail to find any parallel in M. Bouchard's dictionary of French theatrical slang, although one certainly could not divine that "gratter au foyer" meant waiting, in the case of an actor, for a part, or in that of an author for the production of his piece, any more than one could that "se gourer" was to commit some such gross absurdity as appearing in a snow-scene clad in thin muslin or playing a blind man with an eyeglass stuck in one's eye. Nor perhaps would any one naturally imagine that "feux" meant extra sums given to players beyond their fixed salary, whether for an unusual number of rehearsals or for unusual cost incurred in costumes. The origin of the phrase is that in ancient days fire and lights were supplied to actors by the management as a gratuity. Now, according to M. Bouchard, in the case of "star" actors the "feux" often amount to a great deal more than the nominal salary. "Brûler les planches" is a phrase which might seem at first sight to have some natural connexion with "feux," but which is in fact used to express the violence and hurry which some actors substitute for vivacity. "Quelques bons acteurs brûlent les planches; alors c'est pour sauver la pièce, ou bien parce qu'elle les ennuie, ou qu'ils ont un souper fin qui les attend"! On the whole, comparing *La Langue Théâtrale* with the *Era*, it seems to us that French is a good deal more simple than English theatrical slang.

ARTISTIC COPYRIGHT.

THE meeting of artists at the Grosvenor Gallery has provoked a good deal of ignorant comment on the subject of artistic copyright. To judge from the articles in several of the daily papers, it might be supposed that the claim of the artists involved the creation of a new kind of property hitherto unknown to the law. The real points of difference between the recommendations of the Royal Commission and the wishes of the artists have been obscured beneath a quantity of vague generalization upon matters that are not in dispute; and it may be questioned whether the general body of the public has now any sort of notion either as to the provisions of the existing law or the changes which the Report of the Commission proposes to introduce. And yet the whole question is capable of such clear and simple statement that it is difficult to understand how those who have professed to explain its bearings have contrived to go so far astray. The law of copyright in paintings is governed by the Act of 1862. The sculptor and the engraver have enjoyed the advantage of copyright for a much longer period; and the principal claim that is now urged on behalf of painting has been from the first conceded in the case of sculpture. By the Act of 1862 the sole right of copying a picture by means of engraving or other process is vested in its author; but, if the picture is sold, the author, if he still wishes to retain his copyright, must specially reserve it by an agreement in writing, signed by the purchaser; and, on the other hand, the purchaser, if he desires to acquire the copyright, must in like manner have an agreement in writing signed by the painter. There is an exception in the case of pictures painted on commission, where the copyright passes without stipulation to the purchaser; but this exception has but small application, and as a general rule a mutual agreement, signed by both the vendor and the purchaser, is necessary to create a copyright for the benefit of either. The working of this law, as might have been foreseen, has been productive of needless confusion and much practical injustice. As a matter of experience, it has been found that in nine cases out of ten a painting is sold without any written agreement at all, with the very ridiculous result that the copyright is then altogether lost, and the painting can be copied without hindrance by any one who contrives to gain access to it. There is no need of argument to show that this is a state of things which ought not to be allowed to continue. In the words of the Report, "It is clearly undesirable that copyrights which are in many cases of great value should in this way be left free to piracy. The law, therefore, should distinctly define to whom, in the absence of an agreement, the copyright should belong." The Report then proceeds to set forth the views of the Commissioners on this important question. It is admitted that "the artists, as a body, are unanimous in their desire to have the copyright reserved to them by law"; and it is not contended that any other class would be injured by such an enactment. But, although the Commissioners, as a body, do not urge anything against the principle which the artists seek to establish, they nevertheless decline to sanction its acceptance. And, if we rightly understand the process of reasoning by which they have arrived at this conclusion, they would seem to have been mainly influenced by a desire for ideal simplicity in the expression of the law. They foresee that, if copyright were generally reserved to the artist, an exception would have to be made in the case of portraits; and in the justice of this exception the artists entirely agree. But the Commissioners are apparently appalled by the difficulty of defining a portrait; and they accordingly take refuge in the simpler recommendation that, in all cases where there is no stipulation to the

B

contrary, the copyright in a picture should belong to the purchaser, and not to the artist.

This, it may be observed, is the decision to which the artists, as a body, take exception. But, before we proceed to consider the justice of their case, it may be as well to point out that the practical difficulties which are here so prominently put forward are entirely ignored in another part of the Report. When the Commissioners come to deal with copyright in photographs, they do not hesitate to make that distinction as regards portraits which had seemed in the case of paintings to baffle all their skill in definition. We have therefore the right to assume that the distinction can be made, and the juxtaposition of these two clauses in the Report would seem to prove that the difficulties had only been suggested in order to show how easily they might be overcome. We are then at liberty to consider the suggested alteration of the law purely upon its merits, and here it must be confessed that the Report has but little to oppose to the claim put forward on behalf of the artists. That claim may be said to rest on the assumption that a picture or a drawing is the subject of two separate properties which are in their nature entirely distinct. There is, in the first place, the property in the canvas which contains the embodiment of the painter's invention, and there is besides the property in the invention itself, which is capable of being expressed in another material, and of being circulated by various processes of reproduction. In the view of the artists these two distinct kinds of property should only be acquired by separate acts of purchase. They deny that, in acquiring a picture, the purchaser has any right to expect that he has also acquired a right to trade in the painter's invention. If he wishes to possess himself of this right he is always at liberty to stipulate for its purchase, and they think that, in the absence of such stipulation, it should remain vested in the producer. The question is, in reality, more important than at first sight appears, and it involves a principle that is of considerable value. Dismissing, for the moment, the practical advantage to the artist in thus being permitted to retain the control over his work, it is essential to remark that the recommendations contained in the Report would leave the recognition of copyright to individual arrangement. They declare, in effect, that the different rights which are derived from a painting are such as the Legislature cannot undertake to distinguish; that these rights, in short, although they may be separated by contract, are not to be created by law. It is interesting to contrast this imperfect and undeveloped conception of an author's interest in his work with that which is put forward in another part of the Report. In treating of literary copyright, the Commissioners were called upon to consider the question of the dramatization of novels. Hitherto, as is well known, the author of a novel has had no kind of control over any adaptation of it that may be prepared for stage representation, nor has he enjoyed any share in the profits that may accrue from the adventure. The Commissioners are very properly opposed to the continuance of this injustice. They spontaneously recognize in this instance that "an author should be entitled to the full amount of profit which he can derive from his own creation"; and they recommend that for the future the right of dramatizing a novel or other work should be reserved to the author. We need not say that we entirely approve of this recommendation; but it is impossible not to feel that their decision has here been swayed by a more refined conception of the extent and nature of an author's rights than they have been able to realize in the case of painting.

Nor in this is there any matter for wonder. If the Report shows a keener sensibility to the claims of literature than to those of art, it is doubtless because literature was adequately represented upon the Commission. Artists, as a body, have, we think, good reason to complain that those who are supposed to have the charge of their interests took no means to urge the advisableness of including in the Commission at least one member of the artistic profession. It might have been thought that upon a subject of such importance the Royal Academy would have been induced to make a representation to the Government; but, as far as can be judged from the evidence, the Academy seems to have taken no step in the matter. A letter from one of the Academicians, printed in the appendix to the volume of evidence, would seem to show that, even at the time the Commission was sitting, the subject was not thought of sufficient importance to deserve a special meeting of the Council. A paragraph in the papers announces that, since the issue of the Report, a more vigorous policy has been adopted, and that a memorial is in course of preparation, which is to be presented to the Government. Unfortunately this activity comes rather late. If the memorial had been laid before the Commission, a different character might have been given to the Report, and the prejudice that has been established against the artists' claims would perhaps have been avoided. In the meantime the general body of artists have been well advised to take the matter into their own hands, and the meeting at the Grosvenor Gallery will, at any rate, serve to record the views which they entertain, and to direct public attention to the true significance of the questions in dispute. For it must not be forgotten that the public, as well as the purchaser and the producer, have a real interest in the future settlement of the law upon this subject. It is to the public interest that, if paintings are to be reproduced at all, the reproduction should be under the control and authority of the artist, who is manifestly the fittest guardian of his own reputation. Hitherto the uncertainty and confusion of the law have had the effect of throwing the art of engraving almost entirely into the hands of dealers, who have encouraged a kind of work that rarely reflects credit upon English taste. It is notorious that English engraving was never in a worse plight than now. The laboured and lifeless performances which are produced at the command of the dealers have seldom any claim to artistic consideration; and it may fairly be urged that the main reason of their inferiority lies in the fact that the painter and the engraver no longer work in concert. The question then arises whether matters would be much improved by the reforms recommended by the Commission. If their suggested settlement of the law is adopted, the purchasers of paintings will supplant the dealers as the guardians of artistic copyright, and it will scarcely be urged that the purchasers of modern paintings are, as a class, at all better fitted to discharge the duties of the position. The painter alone can be deemed a competent judge as to the capabilities of his work for the purposes of reproduction, and as to the technical process that should be adopted to give to the picture its due value. He is equally interested with the purchaser in the success of the work, and he possesses a knowledge of the means by which success may be attained, which the purchaser cannot boast, and from the point of view of the public, therefore, he is obviously the person in whom the right of engraving should be vested.

THE FAILURES OF 1878.

BANKRUPTCY statistics of recent date are of special interest just now, as they enable us to trace the progress hitherto of the crisis through which we are passing, and help us in some measure to forecast its probable future course. In the inflation period that followed the Franco-German war, it was inevitable that much bad business should be engaged in. The characteristics of that period were a sanguine expectation of prospering in every undertaking, and a consequent readiness to embark on rash enterprises. Vast loans were advanced to bankrupt States and Companies that had no reasonable prospect of success; a wild speculative spirit got possession of Germany and Austria, and in both those Empires, as well as in Russia and the United States, there was a reckless over-construction of railways. It could not but be that there should be in those years an accumulation of bad business, which required to be cleared off when the crash came. A writer in the *Statist* has pointed out another cause of rash trading. The heads of our great financial and commercial firms are changed very often. They generally realize fortunes quickly, and retire to enjoy them early. On an average, this writer estimates, they do not remain in office more than ten years. Their successors have to buy caution by experience, and at first they are over-ready to embrace specious and risky proposals. But, without further investigation of causes, we may take it as proved that, when the prevailing depression set in, there was an extensive liquidation to be effected. The important question now is, has the process been brought to an end? It is almost five and a half years since the panic in New York which caused widespread ruin in the United States, and which five or six weeks later was followed by such a perturbation in our own money market that the Bank rate was raised to 9 per cent., 50 per cent. above the highest point in the late crisis. It would seem, therefore, that abundance of time has elapsed to allow of the completion of the liquidation. But it is to be borne in mind that the disturbance of the money market in November 1873 was caused quite as much by the German withdrawals of gold as by the American panic, and that, in fact, there was at the time no crisis in this country. The progress of our trade was slackened for a while, but that was all. Consequently the clearing off of bad business did not begin at that time, nor for long afterwards. The statistics of failures will enable us to see this very plainly. Those collected by Mr. Richard Seyd we shall use for the past year. For previous years we shall take as our authority a circular issued last April by Messrs. John Kemp and Co. And we shall compare these with the American statistics published by Messrs. Dun, Barlow, and Co.

We find, then, that in 1867 the total number of failures in England and Wales was 15,850, and that in 1869 they rose to 16,518. In the following year they dropped to less than half as many, or 8,151, and they remained at very nearly that figure during the two following years. In 1873 they began to increase; and, for three years remaining a little above 9,000, they in 1876 jumped up to 10,848, in 1877 to 11,247, and last year they reached 15,059. It will be seen that, great as is the increase upon 1872—which, judged by bankruptcy statistics, was the most prosperous year of the period included in our review—the number of failures in 1878 was still much under that of 1869. What inference are we to draw from this fact? Is it that the depression which followed the Overend failure was more extreme than the present? In commenting upon Mr. Giffen's paper on the fall of prices a fortnight ago, we saw that one list used by him suggested that the fall of prices also was heavier at that period, which, taken along with the conclusion we have just arrived at, would go to prove that the depression was really more severe. But just as we saw that the omission of the metals from the list in question exaggerated the fall which had actually occurred, so here we discover a cause of error in these statistics of failures. The Bankruptcy Act of 1861 was unduly favourable to debtors, and as it disappeared from the Statute Book at the end of 1869, there was a rush towards the close of that

year of dishonest debtors to avail themselves of its advantages. The figures of 1869 are, therefore, higher than they ought to be. Making allowance for this circumstance, 1868 would seem to furnish the greatest number of failures—greater even than 1878, notwithstanding the growth of wealth, population, and trade in the interval. It is possible that the different Bankruptcy Acts in force in the two years may account for this. On the other hand, it is to be noted that 1868 was the second year after the Overend panic. Are we to infer, therefore, that the full effects of the Glasgow Bank crisis have not yet been realized, and that 1879 will show an increase of failures upon 1878? Whatever answer is to be returned to this question, it is to be observed that the year of maximum bankruptcies was the turning-point in our trade, that in 1870 the revival was manifest, and that shortly afterwards we were in the midst of that extraordinary prosperity which Mr. Gladstone described as advancing "by leaps and bounds." From this we may draw the encouraging conclusion that the liquidation which is going on was indispensable, and that its completion, now nearly attained, may possibly usher in the revival for which we have so long been looking.

Turning now to Messrs. Dun, Barlow, and Co.'s American statistics, we find them precisely similar to those we have been examining. In the United States also 1872 was the year of fewest bankruptcies. It does not follow, of course, that that was the most prosperous year, only that it was the year in which the pressure upon debtors was least, in which credit was most easily obtained, and consequently there was the smallest need for suspension. And it is a remarkable proof of the commercial solidarity of nations in our day that on both sides of the Atlantic the same year witnessed not only the same facility of credit, but its manifestation in the same form—a minimum number of failures. That number in the United States was 4,089; in 1873,5, 183; in 1874, 5,830. The small increase in the year after the great panic will be noted, but the augmentations were then more rapid, being in the years that followed successively, 7,740, 9,082, 8,872, and 10,478. Here, again, as with ourselves, the full effects of the depression have only gradually made themselves felt. But whereas in our case the movement has been constantly ascendent, in the United States there was a slight diminution in 1877, followed by a large increase, the maximum being reached there likewise in 1878. One explanation of this is that the American bankruptcy law was repealed last year, and, as happened with ourselves ten years ago, there was a rush of debtors to take advantage of its provisions. The numbers last year, therefore, are too high. Thus it is probable that in the United States the turning-point has been passed, and that a revival has begun. The exceptionally bountiful crops of all kinds during the last two years have contributed to help the Americans over their difficulties. The great demand in Europe for their produce, and the blockade of the South Russian ports during the war, have made these harvests exceptionally profitable. The prosperity of the United States will react upon this country. The prohibitive tariff will weaken the effect no doubt; still it is certain that, as wealth pours in upon the farmers in return for the corn and cotton, the pork and beef, the tobacco and sugar they have sold, they will begin to buy English goods more largely, and thus to give employment to our manufacturers.

Perhaps the most remarkable feature in last year's statistics is the proportionately much greater increase in the failures of retail dealers and professional men than in those of manufacturers, financial houses, and wholesale dealers. The bankruptcies of the latter class rose from 2,172 in 1877 to 2,643 last year, or about 21½ per cent.; those of the former class from 8,850 to 12,416, or about 40¼ per cent. The increase in the retail trades and amongst professional and working people was therefore nearly twice as great. One would have expected the contrary. We hear of mills stopped, of furnaces blown out, of mines closed, of stocks nevertheless accumulating, of prices falling until they leave little or no margin above the cost of production. We look, therefore, for widespread embarrassment among manufacturers. And the banking crisis, by diminishing the accommodation to be obtained from bankers, would lead us to anticipate an aggravation of that embarrassment. Retail dealers, on the other hand, have now no need to keep very large stocks. Railways and the telegraph enable them to supply themselves as they may require, and thus save them from the necessity of buying in a falling market. Besides, the fall of prices has been slight in retail trade. It is the wholesale trades and the manufactures that are affected by it. We suppose the explanation of the puzzle is that the general trade of the country has been carried on upon sound principles; that, although such firms as those bolstered up by the Glasgow Bank needed to be swept away, the bad business was very small in proportion to the good. Consequently, traders who had not committed themselves to rash speculations had larger resources to draw upon. And successive reductions of wages had adjusted, step by step, the cost of production to the prevailing prices; so that merchants in general did not suffer actual loss. But the main point is that the extreme depression to which we have referred is confined to a very few great industries—iron, coal, cotton, and farming. Outside these there has been stationariness rather than depression, and the business done has been fairly prosperous. As regards the great increase of failures among small people, it is due, we apprehend, to the fact that they are small. In their day of prosperity they laid by nothing, and when the pinch came they succumbed. The numerous discharges of workpeople, the reduction of wages, and the prolonged strikes, also told heavily upon the struggling shopkeepers. Depression is not felt by the working classes until it has lasted for some time. Employers shrink from trade disputes as long as they can; they know all the suffering entailed by them, and they hope that business will soon become brisk again, and save them from the necessity of acting harshly. Over-production and fall of prices go on, therefore, for a long time before the consequences are experienced by the workmen. But when they have reached a certain point, great establishments are closed or run short time, wages are cut down unsparingly, and hands are discharged in multitudes. This of course reacts upon the retail dealers who depend on the working classes. But when matters have reached this length we may reasonably hope that the depression is drawing to an end. The employers of labour have adjusted the cost of production to existing circumstances, and are prepared once more to produce at a profit. In the United States the same process has been gone through. Although, as we have seen, the number of failures was last year twice those of 1873, the liabilities of the bankrupts were but a trifle greater. It was the small people, not the captains of industry, who went down.

THE CARL ROSA OPERAS.

On last Monday week the opera of *Rienzi*, by Herr Richard Wagner, was introduced for the first time to a London audience by Mr. Carl Rosa, who is repeating his former successes on smaller stages at Her Majesty's Theatre; and on the following Wednesday *Piccolino*, by M. Ernest Guiraud, was performed—a work also new to an English audience. It may be well to begin by considering the less known work.

M. Ernest Guiraud, the composer of *Piccolino*, was born in New Orleans in 1837. He studied music at the Conservatoire at Paris, where he gained the Prix de Rome, and he is at present the Professor of Harmony at that institution. Although a composer of great promise, his name was known only to the few until the year 1876, when *Piccolino* made its appearance at the Opéra Comique in Paris, and was very favourably received. In the beginning of this year Mr. Rosa produced this opera in Dublin, and the success it then gained may be the reason of its reproduction in London. The libretto—neither a striking nor original one, though well suited for a light opera—is the joint work of MM. Victorien Sardou and C. Nuittier, adapted for the English stage by Mr. Sydney Samuel, and runs as follows:—Marthe, the ward of a Swiss pastor, named Ziegler, loves Frederic Auvray, a volatile French artist, who, regardless of his promise to marry her, has gone she knows not whither. The first scene opens with Christmas festivities at the pastor's house, which are interrupted by the arrival of three travellers who have lost their way. These prove to be three friends of the artist Frederic Auvray, who are going to meet him at Rome. Marthe, overhearing their conversation, and learning that he is at Rome, determines to follow her lost love. Disguised as a boy she finds him at Tivoli, where he is staying in the hopes of gaining the affections of the Countess Elena Strozzi, a fair Italian noble. Of course Frederic takes a fancy to the boy, and after taking a portrait of him, prevails upon him to become a pupil, christening him at the same time Piccolino instead of Antonio, the name chosen by Marthe. Elena's brother, the Duke, enraged at Auvray's attentions to his sister, employs an assassin to rid him of the painter, a crime which is frustrated by Piccolino, who receives the blow intended for her lover. The scene then changes to Auvray's studio at Rome during the Carnival, where the students are disturbed at their work by an invasion of clowns, harlequins, &c., who make merry at their expense. When they are gone a bouquet is discovered on the floor which Piccolino picks up and refuses to give to Frederic. In this bouquet Piccolino finds a note to Auvray from the Countess, who in no very long time after presents herself at the studio masked. Piccolino purposely mistakes her for a model, and treats her very rudely, which makes the Countess declare herself, and then follows the best scene in the whole opera. Piccolino confesses that she is a woman, and Auvray's intended wife, while Elena treats the assertion with scorn. Indignation gives way to entreaty, and on her knees Piccolino begs Elena to be merciful, and not to rob her of her lover. Suddenly Duke Strozzi and Frederic make their appearance, and Elena seeks refuge in an adjoining room. In a thinly disguised allegory the Duke gives Auvray to understand that if he does not desist from his attentions to the Countess she will have to retire to a nunnery, and end her days there. In desperation Auvray determines at all hazards to elope with Elena, who, however, seems not of the same mind, according to a polite note which Auvray finds in the next room. With the natural inconsiderateness of a lover, he turns upon poor Piccolino, and bids the boy depart from his presence for ever, as he has always been unfortunate since he met him. Piccolino, or Marthe, in despair goes out and throws herself into the Tiber, and Auvray on his way to elope with Elena is met by some men bearing a half-drowned woman. The boatman who saved her presents Frederic with a ring (within which is engraven "Marthe—Frederic"), which he had taken from her finger. Softened by the devotion of the little Swiss maiden, Frederic gives up his idea of elopement, and offers up a prayer for Marthe's recovery instead. This of course takes place; and Marthe, dressed as a woman, rushes into Auvray's arms; and all ends happily.

When we say that M. Guiraud's music is well suited to the libretto, we do not feel that we are overloading it with praise;

and, indeed, we cannot help thinking that the composer is capable of producing better work than he has chosen to give us in this opera. He seems to be afraid of writing too well. For instance, in the overture, we have a subject in fugue form introduced; but suddenly M. Guiraud becomes ashamed of it, and lapses into the tamest of opera-bouffe styles. The effect is absurd. The attempt at fugue was unnecessary; but, once having introduced it, he might as well carry it out, as Mozart does in the *Flauto Magico*. Several times during the performance of this work the thought recurred to us that M. Guiraud was writing down to a popular level, and did not dare to do his best. The music suffers doubtless from the interruption of the very copious dialogue, which makes *Piccolino* rather a play with incidental music than an opera. The duet for Elena and Frederic, the serenade, and Piccolino's song "Sorrento," all in the second act, are perhaps the best pieces in the opera; while in the song, "It was a Shepherd Maiden," M. Guiraud has shown what he can do as an arranger of a favourite and well-known theme; but the music generally is weak and devoid of dramatic interest.

The acting of Miss Julia Gaylord deserves the highest praise, as does her singing. From first to last she displayed much artistic power, and in the scene with Elena, and in the subsequent one where Auvray dismisses her, she showed considerable talent as a tragic actress. Mr. Packard, though suffering from a cold, sustained the part of Auvray with success. Miss Georgina Burns was an efficient Countess, and Messrs. Charles Lyall, Leslie Crotty, and Snazello, did the best they could for their respective parts. From *Piccolino* to *Rienzi* is a pleasant change. It has always struck us as remarkable that *Rienzi* has not before been brought to the notice of the English public, for of all Herr Wagner's works it is the only one, unless we count the *Flying Dutchman*, that can be called an opera in the sense in which that word is generally used, the latter efforts of that great composer being rather musico-dramatic poems. *Rienzi* was written, as Herr Wagner himself tells us, when he was at Paris, under the influence of the grand opera, and the traditions of Meyerbeer and Spontini; but, nevertheless, there are strong indications of the independent genius that, at a later period, produced *Lohengrin*, *Tannhäuser*, and *Tristan and Isolde*. Although he distinctly tells us that *Rienzi* is not of the same family as his later works, yet it is to this opera that Herr Wagner owes his first introduction to the world as a composer of the first rank. It may be remembered that Weber always spoke badly of *Der Freischütz*.

Completed in 1841, the score of *Rienzi* was rejected by one opera director after another until, in the spring of 1842, Herr Wagner had the gratification of hearing that it was accepted at Dresden, where, on the 19th October in the same year, it was produced. Since that time it has grown in the favour of the German public, and still holds its place in the répertoires of the principal opera houses in that country. The story of the opera is compiled from the novel of the late Lord Lytton; and, as in all his other works, Herr Wagner is his own librettist. The translation of the German words has been entrusted to Mr. John P. Jackson, the adapter of the *Flying Dutchman*, who has done his work with great judgment. The first act opens in the Piazza of S. Giovanni Laterano, where Rienzi's house stands. The Prince Orsini has succeeded in intercepting Irene, Rienzi's sister; and, in carrying her off, is met by Adriano Colonna and a party of his followers, when a street fight ensues. Adriano takes Irene under his protection, and the Orsini and Colonna factions continue their fight, when Rienzi appears, and, aided by the populace, puts an end to the riot. Upbraiding the nobles for their disgraceful conduct to his sister, denouncing their lawlessness and licence, and contrasting the former glories of Rome with its present degradation, he closes his speech with the indignant exclamation, "Banditti! Tell me. Are there yet Romans?" The incensed nobles determine to continue the fight outside the walls of the city, whither they repair, and Rienzi closes the gates upon them. After a scene, in which Adriano declares his love for Irene, a chorus is heard from within the Basilica, and Rienzi, appearing in armour upon the steps, is hailed by the people as Rome's deliverer. In the next act we find ourselves in a large reception-hall in the Capitol. Messengers of peace arrive to inform the Tribune that "Freedom reigns o'er all the land," and the vanquished nobles return to pay their homage to Rienzi. But all this outward show of peace is only intended to conceal a deep plot that the nobles have concocted against the Tribune's life, which Orsini in the next scene undertakes to carry out, despite the vehement opposition of Adriano. Rienzi, warned by Adriano, at the banquet given to the nobles and ambassadors, points to the coat of mail he wears under his robes, by which means the attempt is rendered unsuccessful. The nobility acknowledging their responsibility for the deed are condemned to death. A very touching scene follows, in which Adriano and Irene plead for the life of old Colonna, and the result is that Rienzi persuades the people to pardon the conspirators. The third act opens with a chorus announcing that the nobles have fled from Rome, and are collecting their forces without the walls, awaiting an opportunity to attack. In answer to the call of the people, Rienzi appears mounted on horseback, and delivers the celebrated battle hymn "Santo spirito cavaliere," and with much martial music and clash of arms the soldiers depart for the battle-field. The last act, a wisely condensed version of Herr Wagner's fourth and fifth acts, shows us the discontent of the people at Rienzi's government, which has already lost the support of the Church and is threatened by the Kaiser. The victory gained over the nobles seems to have damped the ardour of the ecclesiastics in favour of free Rome, and to counteract its influence in Rienzi's favour, the papal legate, Raimondo, denounces him as he is about to enter the Lateran at the head of a triumphant procession. Rienzi, struck dumb, as it were, at the awful sentence of excommunication, falls down upon the steps of the church, while the people fly from his presence with horror. Irene, however, is strong in support of her brother, and although Adriano entreats her to leave the outcast and to fly with him to safety, with the fortitude of a Roman woman she repulses him and rushes into Rienzi's arms. "Rome is not yet dead," cries the Tribune, reanimated by the heroism of his sister. The second scene of this act contains the celebrated prayer, in which Rienzi implores the Almighty to strengthen him in the hour of danger, to lead him to do what is right and just, and to save Rome from sinking into the degradation he had raised her from. Another attempt by Adriano to persuade Irene to leave her brother brings us to the last scene of the opera. The infuriated populace have surrounded the Capitol and clamour for vengeance, as Rienzi, clad in armour, steps out to address them. His voice is drowned in the roar of the mob. He sees the flames bursting out on every side of him. The Capitol on fire, the people against him, there is nothing to do but to die, and to die like a Roman:—

> Let death, yes, death and destruction come,
> So wills the Roman folk once more.

With these words the curtain falls.

Rienzi is essentially an opera of choruses, relieved by a few declamatory passages, which at first appear somewhat uninteresting. At the same time this opera, like most of Meyerbeer's operas, is by no means one to be judged of by a first hearing. The airs in many cases come upon us without the customary introduction of a few bars of music, which divide them from the recitative, tending, perhaps, to make them less important than they would otherwise be. And this may account for the criticism we overheard on Thursday night, that there was not a tune in the whole piece. We venture to think that a second hearing may correct this judgment. The duet between Irene and Adriano, the song of the Messenger of Peace, Adriano's song in the third act, and Rienzi's Prayer (which, by the by, we are not so enthusiastic about as some are), are full of very charming melody and will repay study. The managers are to be congratulated upon the way in which they have placed *Rienzi* upon the stage. The scenery and costumes are new and tasteful, and, as a spectacular display, the opera may be considered a great success. A little more drilling on the part of the chorus will doubtless get rid of the confusion in the grand ballet scene; and a better knowledge of their parts will improve the street fight in the first act, where, on Thursday night, the combatants appeared much more anxious to attend to the conductor's beat than to defend themselves against their adversaries. Mr. Rosa has reduced his orchestra to a minimum, and, as the reduction is in the string parts, an undue prominence is given to the wind instruments, which increases the already too brazen effects in Herr Wagner's score. The noise in the battle-hymn scene is deafening. At the same time, all praise is due to the orchestra under Mr. Carl Rosa for the conscientious way in which they rendered the very difficult music entrusted to their performance.

Mr. Maas's singing in the part of Rienzi deserves great praise. Although his voice is hardly fitted for so large a house as Her Majesty's, it is of a rich and sympathetic quality, and well suited for the declamatory passages the opera contains. A little more vigour in his acting would be an improvement. Those who have seen Tichatscheck in the part will remember the effect produced by his entry in the first scene amidst the fighting *nobili*, and will regret that Mr. Maas should have lost so excellent a point. In the other scenes the forced stateliness of his acting is more in keeping with the character of the new-made Tribune. In the address to the people in the second scene of the first act, and in his speech beginning, "In Roma's name welcome to all" in the second act, Mr. Maas's singing appears to the greatest advantage, while in the Prayer he showed some high powers of vocalization. Irene fell to the lot of Mme. Crosmond, who rendered a not very interesting part in an artistic manner. Mme. Vanzini appeared as Adriano. Her voice is perhaps better suited to the requirements of so large a theatre as Her Majesty's than any of the others engaged in the principal parts of *Rienzi*. It is the more to be regretted that her intonation should have been somewhat unsteady throughout, and that in her great song she not only lost herself so much that nothing short of Mr. Carl Rosa's presence of mind could have saved the situation, but attempted to repair the error by introducing a cadenza of her own invention. The composer is exacting enough towards his performers, and would, we feel sure, resent any embellishments added to his writing even by the most finished of bravura singers. Mr. George Olmi and Mr. W. Bolton, as Colonna and Orsini, sustained their parts with credit, while Miss Georgina Burns's rendering of the melodious Peace Messenger's Song did not meet with the applause it deserved. Taken, as a whole, we may congratulate Mr. Rosa upon the complete success of at any rate one of his novelties for the season.

On Tuesday evening *Faust* was given, with Mr. Packard as Faust, Mme. Helen Crosmond as Marguerite, Mr. Celli as Mephistopheles, Messrs. Leslie Crotty and Leaky as Valentine and Wagner, and Misses Josephine Yorke and Ella Collins as Siebel and Martha. It will be enough to say that we have seen better and worse representations of this favourite opera, although there

was many points for which it deserved praise. Mr. Celli's voice is well suited to his part, and his acting is creditable. All the performers, however, laboured under the disadvantage of the unavoidable comparisons which rise up in the minds of an audience who have seen the leading operatic singers of the world in the same parts upon the same stage. A great deal of latitude is therefore a necessity in judging of last Tuesday's performance. Mme. Crosmond's Marguerite was a pleasing rendering of the part, while Mr. Crotty's singing as Valentine showed him to be capable of sustaining a leading part in a serious opera.

Mr. Rosa's semi-novelty of *Carmen* in English was the opera for Wednesday, and the announcement that it was to be degraded to the rank of a dialogue opera created some alarm amongst the lovers of Bizet's masterpiece. An agreeable disappointment, however, was the result. It is true that dialogue has been introduced, but with such judgment that the effect as a whole is in no way seriously impaired. After the artistic impersonation of the gipsy girl made familiar to us by Mme. Trebelli, Mme. Selina Dolaro's rendering was anxiously looked for, although of course a strict comparison between them would be unjust. The new Carmen is a passionate, wayward girl, giving free scope to her own desires, and impatient of restraint from any quarter, but at the same time a little more inclined to violence of action than the character warrants. Miss Julia Gaylord as Micaela gained the applause she deserved, not only for her admirable singing, but for her powerful delineation of the part. Signor Leli sustained the part of Jose with considerable success, while Mr. Walter Bolton as Escamillo delivered with much spirit the now celebrated song of the Toreador. The singing of Misses Yorke and Burns was also worthy of praise. The other parts fell to Messrs. Lyall, Snazelle, Pope, and Cadwalader. To the excellent conducting of Signor Randegger, however, may be mainly attributed the complete success that the new version of *Carmen* attained on Wednesday night.

REVIEWS.

THE ENGLISH CHURCH IN THE EIGHTEENTH CENTURY.*

In a brief and modest preface "the authors of this work" say that "some years have elapsed since they first conceived the idea of writing upon certain aspects of religious life and thought in the eighteenth century," and their volumes show that the interval has been employed in careful study and examination of a very wide range of literature belonging to the subject. They add that, "if the ground is no longer so unoccupied as it was then, it appears to them that there is still abundant room for the book which they now lay before the public." This is almost too unassuming an introduction to a work which is manifestly an important and much-needed contribution to English Church history. The eighteenth century has popularly been regarded as a kind of ecclesiastical night intervening between two days, and some sort of excuse has hitherto been possible for the neglect of its history, because no sufficiently condensed guidance has been available for its connected study; while, on the other hand, the want of any general interest in the subject may be supposed to have reacted upon historical writers, and to have discouraged them from undertaking a task which seemed to promise so little appreciative recognition. To both the great divisions of current ecclesiastical thought the last century has presented an unattractive, if not even a repulsive, aspect. To the Evangelical it has exhibited the Church of England as spiritually dead; to the disciple of the great Oxford movement, as Erastian, Hanoverian, or whatever else may designate a total eclipse of true Church tone and feeling. Accordingly, while one party has thrown back its interest by a long and unbroken flight to the Reformation—the Puritan period having too strong an affinity with modern Dissent to afford a resting-place—the "Tractarian" sought refuge in the Stuart days of the Church of England; and, at least in the early days of the movement, was content to accept that period as sufficient for his need. That Stuart churchmanship has not satisfied the cravings of a later generation is not to our present purpose. To both parties the eighteenth century ecclesiastically was, like the interregnum of the Commonwealth to monarchists, so much time in parenthesis or non-existent; and was most closely represented, perhaps, in idea by the "lost eleven days" which marked its course midway. When the present century had reached its turning-point, and Oxford undergraduates were more actively engaged in theological polemics than are their competition-ridden successors of the present time, a "man" who cared anything about the Church of a hundred years earlier would have been looked on as a specimen to be placed in a museum; and the classman whom no examiner could floor in his "Butler" would have gazed across the table in blank dismay at a question as to the Bishop's diocese or date. It is not, therefore, without an intelligible curiosity that we search the opening pages of this History to ascertain the motives or circumstances which led Mr. Abbey and Mr. Overton to undertake a work which bears evidence of many years of reading and thought before the task of writing began. As they do not satisfy this curiosity, we can only hazard a probable conjecture. At the date to which we have referred, the scholars' table in almost every college was marked, at least in common fame, by some special and traditional character of its own. The æsthetic type, as expressed by the talk "at Trinity wines, about Gothic buildings and beauty," has acquired a classical fame; and in the more retired quadrangles of "the Turl," the contemporary scholars of Lincoln bore a reputation for hard thinking and solid work. Of this body Mr. Abbey and Mr. Overton were members, both taking high honours and graduating in 1856 and 1858. It will be in the recollection of our readers that the "Tendencies of Religious Thought in England from 1688 to 1750" formed the subject of the Rector of Lincoln's contribution to a volume much discussed some years since; and it is amusing to find in the preface to his pupils' work the repetition of a statement which at that time was criticized with extraordinary bitterness, but which is now as simple as it is natural, that the authors "desire to be responsible each for his own opinions only," and have therefore marked each chapter with the initials of its writer. As they have taken consistent pains to present their readers with facts as little as possible marked by the expression of their own opinions, the slight differences which may be detected in the points of view taken by each writer increase rather than diminish the general clearness of the work. Certain discrepancies in form, indeed, are not found to be due to this cause, and it may be by an oversight that the "Revolution" is in some places dated as "of 1688" and in others "of 1689." It would be more convenient to adhere to the former and usual date, which under the old style covered the whole period of the Revolution.

If we may hazard the conjecture, we should trace the origin of this valuable book to the abiding memories which associate the Foundation of Bishop Fleming with one of the greatest names in the Church history of the eighteenth century—the Scholar and Fellow of Lincoln College, John Wesley, of whose life, character, and work an admirable sketch has been drawn by Mr. Overton in his chapter on "The Evangelical Revival." This chapter, with that written by Mr. Abbey on "Church Fabrics and Church Services," and indeed nearly the whole of the second volume which includes them, will attract the interest of general readers as well as the attention of historical students. Men whose earliest years were passed under Evangelical influences, before the Oxford movement had spread from the common-room to the country, will remember the entangled maze of contradictory opinions which seemed to create separations and heartburnings among those who professed to be united under the same standard of the Gospel, and which were to children's minds as confused as they were unintelligible. A new company of apostles, living or departed, had arisen; all alike were held in a reverence denied to any others—save to some few of the Reformers—outside the Bible records; and yet these men, or many of them, were commonly spoken of as leaders of sections in bitter discord on questions of the most vital religious moment. Mr. Overton's careful analysis reduces all this perplexity into order and shape. Dividing the general subject of the Evangelical revival into the three heads of (1) the Methodist movement, (2) the Calvinistic controversy, (3) the Evangelical school, as first known by that designation, he has traced the influence of all the parts upon the whole, and has introduced separate and well-drawn notices of every one with any claim to be a leader, and of several of the more prominent followers, in the great spiritual reaction from the more dry and rigid habit of thought which had given to the early part of the century the name of "sæculum rationalisticum." Mr. Abbey has applied to ritual the same method of analysis which his colleague has used with reference to doctrine. The ardent undergraduates who once constituted themselves the exponents of Church principles, first to their sisters and cousins, and through them to benighted parishioners, and who, it is to be feared, were better read in Mr. Paget's stories than in the *Tracts for the Times*, would have summarized their account of ritual, as inherited from the last century, in very brief form. There had been, they supposed, no ritual at all, and in fact they never used the word, which is of much more recent introduction into common language. They regarded the church-order of the whole Hanoverian period as one unbroken system of whitewash, Tate and Brady, and the Lion and Unicorn. The true record of gradual change and decadence, with occasional and more or less successful effort to preserve or restore earlier usages, is given by Mr. Abbey in great minuteness of detail; and the arrangement of the Table of Contents for this chapter, which closes the work, will probably secure the first attention of many readers, as a subject of most immediate interest.

Among the commonplaces of popular oratory it has been customary to insist on a certain rooted and inbred detestation for "Popery" as an element in the English character; and experience has shown that a No-Popery agitation may be worked in our own time with telling and mischievous effect. But the cause of this phenomenon is not matter of such general agreement as is the fact of its existence; and much help is given by the authors of these volumes towards an impartial examination of the question. To some minds the solution appears so obviously religious or doctrinal that any discussion relating to it is held to be superfluous or disloyal; but it cannot be accepted as a truth universally evident that Roman Catholic doctrine or worship is essentially at variance with the character of the great mass of the English people. The theory that "the fires of Smithfield have burnt too deeply into the memories of Englishmen to be forgotten" may be

* *The English Church in the Eighteenth Century.* By Charles J. Abbey, Rector of Checkendon, Oxon., late Fellow of University College, Oxford; and John H. Overton, Vicar of Legbourne, Lincolnshire, late Scholar of Lincoln College, Oxford. Longmans & Co.

rhetorically effective; but, apart from the inquiry whether this form of public execution did really excite any deep popular horror at the time, it may be asked whether any one does practically believe that, if Cardinal Manning were now reigning at Lambeth instead of Dr. Tait, the existing chances of the burning, say of Lord Shaftesbury, before the gates either of Balliol or of Victoria Park, would be in the slightest degree affected? Among those who hold the "No-Popery cry" to represent a political and not a religious sentiment of the English people, it has been not uncommon to trace back its source to the days of Henry VIII. and of Elizabeth, as expressing the resistance of a proud and independent nation both to Papal interference in public affairs and to the formidable power of Spain. Such a motive may have existed, and yet may in time have exhausted its force; but the revival of the same feeling in a very intense form during the eighteenth century is described by the authors of this work in connexion with the prevailing anti-Jacobite sentiment, and with the support accorded to the exiled dynasty by France. The latest phase of the Vicar of Bray's ecclesiastical principles was, it will be recollected, the abjuration of "the Pope and the Pretender." Whether the nation can ever again be stirred by a tempest resembling the "Papal Aggression" movement of 1850 remains to be tested by the course of events.

The subject of "Church Cries" and that of "Church Abuses" are dealt with in two chapters contributed by Mr. Overton, while Mr. Abbey has supplied an essay of great interest upon the Sacred Poetry and Hymnology of the century. To readers who are unable to follow the authors through the intricate and uninviting controversies of the earlier half of the period, of which the history is given in the first volume, the changing character of the poetry and of the hymns of the century as it advanced will present a sufficiently clear view of its contrasts of religious thought and life. To the balanced and correct, if rather cold and formal, rhythm which accompanied the prose of the Essayists and the logic of the Trinitarian and Deist controversies succeeded the fervent spiritual outpourings of the Evangelical revival—rude and inartistic at times, subjective in undue measure, occasionally sensuous, and sometimes carrying familiarity with things divine almost across the boundary of reverence, but heartfelt and sincere throughout. The impulse which has driven the Old and New Versions alike, first from the "singing gallery" and then from the Prayer-Book, originated not in the stately stanzas of Addison and Pope, but in the eager and unequal verses of Watts, Doddridge, Charles Wesley, and their followers, among whom Watts belongs to the earlier portion of the century, but, like many other writers and thinkers, may be regarded as having lived in advance of his time. The exigencies of hymn-writing necessarily involved great license in respect of strict poetical laws, and opened the way to a simpler and more natural style in verse than had formerly been allowed. Liberties were taken with the customary rules of rhyme which, except in satire, had been inadmissible before; and it is not matter for wonder that some protest under this head should be put on record by Mr. Abbey. But we think it hardly fair to Toplady that he should be singled out to bear this burden of censure. Mr. Abbey has not even the plea which justified a county historian of 1780 in hanging upon one unhappy parish and its church the weight of his strictures on the ecclesiastical neglect and slovenliness which he saw all round him. That parish was the first in the alphabetical order of the county, and the antiquary, who only delivered his soul, as he confessed, on this the earliest opportunity, remained unforgiven in the parish at a very recent date, if he is not so still. Toplady only wrote the same rhymes as his fellows; and, bad enough as some of them were, his critic has laid himself open to a distinct charge of inconsistency in adducing as one instance of Toplady's "carelessness" the rhyme of "given" with "heaven." Right or wrong as this may be in theory, it is universal in practice. It closes the two fine hymns for the dead, by Watts and C. Wesley, which Mr. Abbey marks with deserved appreciation; it appears in a stanza quoted later from Burns; and it is sanctioned by the authority of Milman, of Heber, and of Keble. But perhaps no strict canons of rhyme can ever be laid down. A wide borderland must be left for the play of personal fancy, unfettered by any reasons given or asked. We could not ourselves account by any logical process for the feeling that the rhyme of "even" with "heaven" in a well-known Pentecostal hymn is harmonious, while that of "Stephen" mars the stirring song of triumph of the Moravians by a discord at its close.

We commend these instructive volumes to the attention of theological students, especially those in the Universities. Historically they exhibit the links which connect the Church of England in our own day with the past; and, practically continuing the narrative to the close of the "Georgian Age" in 1830, they bring out into startling relief the change which the last half-century has wrought, and thus supply a wide base of experience on which to found a thoughtful estimate of the probable or possible future.

MOLIÈRE.*

MOLIÈRE is, after Shakspeare, the writer who most successfully baffles the biographer. Absorbed in observing the humours and fortunes of men, *le contemplateur*, as he was called, did not care to leave any records of his personal history and feelings. The ceaseless labours of the author, the actor, the manager, the arranger of musical interludes, the Court official, left him no time to write about himself. His longest autograph does not exceed six lines, and is a receipt for money. If Molière "made little marvel of his own fortune," his contemporaries were still less concerned with his authentic history. A few friends preserved anecdotes; a number of foes lied, sneered, and garbled; a faithful comrade, La Grange, collaborating probably with Marcel, composed the brief sketch which heads the edition of 1682. The posthumous persecutors of the poet robbed us of the one careful and satisfactory biography which Boileau helped to compile. From a letter of Thierry, the Paris publisher (one of the booksellers who brought out the shabby edition of 1681), we have lately learned this great loss. Writing to a customer on January 5, 1686, Thierry says, "You cannot get the works of Molière in two folio volumes which the company meant to publish. Only the preface and the Life of Molière have been printed, and when the proof sheets were sent to the censorship, so many passages were expunged that M. Boileau and the other friends of the poet who worked at the biography have refused to go on with it. There have also been difficulties about the *privilége*. When you come here in October you may see the proofs." Great would be the joy among *Molièristes* if the proofs of this lost biography could only be found. In place of Boileau's work we have only the book that Boileau condemned, the timid, garrulous, and inaccurate *Vie de M. de Molière* of Grimarest (1705). The notes of Bayle, and the biography ascribed to Bruzen de la Martinière (1725), with the notice by Titon du Tillet (1732), and the letters by a daughter of Molière's comrade Du Croisy (*Mercure de France*, May and June, 1640), contribute a number of anecdotes and describe some personal traits. By help of these materials and of countless satires, libels, legal documents, the *Archives de la Comédie Française*, parish registers, and other scattered papers, the biography of Molière has to be written.

Even this brief enumeration, though it does not give a fair idea of the multitude and miscellaneous nature of early writings on Molière, proves that Mrs. Oliphant and Mr. Tarver have attempted a difficult task. They have tried to compile a brief sketch of the poet's history and to make a short estimate of his genius. This book is one of the class which those who run are supposed to have time to read. To make it what it ought to be, great literary tact and sympathy are needed, in combination with rather wide and careful reading. The works of the eighteenth century on Molière—the works of gossip, reminiscence, anecdote—are a mere handful compared to the voluminous researches of the nineteenth century. The old biographers collected tattle; the new specialists pass their lives in the offices of notaries and the archives of parishes. Beffara gave the example, and after him M. Soulié (*Recherches sur Molière*, 1863) was the most successful labourer. He printed sixty-five original documents—wills, baptismal registers, marriage settlements, inventories, and so forth. Since M. Soulié's great work was published, M. Lacroix has compiled his invaluable *Bibliographie* and *Iconographie*—volumes full of facts and hints—and has printed a *Collection Molièresque*, to which he means to add a new set of reprints. M. Bonnassies and M. Livet have edited, with serviceable notes, *La Fameuse Comédienne*—a disgusting libel on Molière and his wife, which has been impudently attributed to La Fontaine and to Racine. M. Campardon has twice published collections of documents discovered by himself; various inquirers have grubbed up traces of Molière's early years of strolling in Languedoc and elsewhere. M. Loiseleur has minutely investigated *Les Points Obscurs dans la Vie de Molière*; the *Registre* of La Grange has been reprinted; and, above all, the regretted M. Despois wrote his delightful volume on *Le Théâtre Français sous Louis XIV.* (1874), and enriched the edition of Molière in the series of *Les Grands Ecrivains de la France* with erudite and ample notes. We can only mention the researches of M. Louis Lacour, M. Thoinan, M. Fournel, and the rest.

This enumeration of documents and authorities is not made without a purpose. We are naming the works that the authors of *Molière* have too much neglected. They base their book on the biography by M. Moland (1863) and the critical sketch of M. Bazin (the second edition is of 1851); and they even speak of M. Bazin's "careful examination into . . . all the documents on record." Now M. Bazin died before 1850, and M. Moland had not the chance of using M. Soulié's "epoch-making" collection of documents. Thus he dates in 1645 the formation of Molière's company of young actors—L'Illustre Théâtre. Documents, however, prove that L'Illustre Théâtre was in existence in June 1643. Mrs. Oliphant and Mr. Tarver have here avoided the error which was natural in Moland; and indeed they always give fewer dates than we could desire. We shall go on to point out several passages in which a knowledge of what has been written about Molière would have saved our authors from errors which are not unimportant.

In p. 1, Mrs. Oliphant and Mr. Tarver say that Molière was born in "the Maison des Cygnes, or sign of the Swans," and add, in a footnote, "sometimes also called Maison des Singes." We do not know what authority is responsible for this "sign of the Swans." In 1637 the house had for its sign "le pavillon des Cinges." It took its name from an ancient carving which represented apes playing in an apple-tree. When the house was demolished (1800?) the sculpture was removed to the *Musée des Monuments publics*. There is an engraving of it in the third volume of Lenoir's description of that museum. The original work is lost. Molière's father got rid of all interest in this house except

* *Molière*. By Mrs. Oliphant and F. Tarver, M.A. "Foreign Classics for English Readers." Blackwood & Sons. 1879.

the rent for which he sub-let it, in 1638. Our authors, therefore, are in error when they say (p. 5) "Of what character the brothers were who remained behind him (Molière), at the sign of the Swans . . . and whether they had shared his advantages of education, or were content to settle down to their father's trade, there is no information." Long ere Molière took to the stage his family had left the "sign of the Swans," or rather of the Apes, and were living at the sign of St. Christopher, "devant le pilori." As for Molière's brothers, Louis died in 1633, aged ten, Nicolas was six when we lose sight of him (1633). Jean, born in 1624, died in 1660. A son of his, Molière's nephew, was alive in 1720. As to Jean, the brother who neither died young nor was lost sight of by history at the age of six, the curious will find full details in M. Soulié's *Recherches* (pp. 197–200). He "settled down to his father's trade," and his marriage settlement is replete with information. Our authors are too sceptical about the story that Molière was a schoolfellow of Conti, a point which M. Loiseleur has illustrated. We think they are wrong when they say that Gassendi taught philosophy in the Jesuits' Collége de Clermont. Gassendi's epicureanism had an immense influence on Molière's genius, but it is pretty certain that he was the private tutor of young Poquelin and others, not a college lecturer. Though the liberal Jesuits made their pupils dance in ballets, they could hardly encourage Gassendi. There are some reasons, in spite of our authors' disbelief, for supposing that Molière did accompany Louis XIII. to the South of France, not in 1641 (p. 4), but in 1642. The facts are that old Poquelin was in Paris when, by the terms of his appointment, which was anything but "nondescript," he should have been with the King (May, June, July 1642). Tradition has it that Molière took his father's place, and we find him much later (1655) in friendly relations with Dufort of Sigean, at whose house the King's servants lodged (June 10, 1642). This may be an accident; but, again, Molière *may* have witnessed the arrest of Cinq-Mars. If the office of *valet de chambre tapissier* was settled on Molière (as it was) in December 1637, it is not easy to see how the document by which he resigns the succession (6th January, 1643) can be "the earliest document in his history." The Register of his baptism is a good deal earlier. If the document of 1637 is lost, at least the official record of it remains in Molière's inventory. We do not understand what our authors mean when they say that the theatre in the Marais was afterwards removed to a hall in what was called the "Hôtel de Petit Bourbon" (p. 9). The theatre in the Hôtel du (not de) Petit Bourbon was destroyed in 1660. The *Marais* was closed in 1673; some of the company joined the Hôtel de Bourgogne, some followed the fortunes of the *troupe* that had been Molière's. We have only arrived at the ninth page, and begin to weary of these corrections. It does surprise us that our authors call Joseph Béjart "a lawyer"—he was *huissier audiencier*, his humble function *d'appeler les causes*. Again, there are records of Molière's passage through Fontenay-le-Comte, Agen, Toulouse, Vienne, Narbonne, and so on, which cannot be dismissed as "apocryphal." It is not "hopeless to attempt to trace the poor players," and Molière frequently "reappears out of the mist" between 1648 and 1653. Once more, Cosnac was not "secretary" of Conti—an unenviable position occupied by Sarrazin. By the way, it is extremely improbable that Conti was one of the "persons of consideration" who in 1658 got Molière an introduction to the Court. Before 1658 the reprobate Conti had become the convert and the puritan whom some recognize in Molière's *Don Juan*, "revenu de toutes ses erreurs." Conti is even said by M. Lacour to have written in 1658 his attack on the theatre. That he inspired Roquemont, one of his household, to write the famous "Observations" on *Le Festin de Pierre* seems a mere clever conjecture of M. Lacour's. To return to Molière's friends at Court, may not his own uncle, Michel Mazuel, whom, in 1654, Louis XIV. retained as "Compositeur de la musique de sa chambre," have aided the poet?

To make constant minute corrections is tedious work, and yet it is hard to know where to stop. In a matter of wider importance we think Mrs. Oliphant and Mr. Tarver censure too severely the petulance displayed by Molière in the *Critique de l'Ecole des Femmes*, and in *L'Impromptu de Versailles*. Already, in 1663, the author of *Nouvelles Nouvelles* was taunting Molière with his domestic unhappiness. In vain he implored his enemies to ridicule his manner, his writings, everything but his private life. The Corneilles, we fear, were in the hostile camp. If he hit back, he hit no foul blow, and he was reconciled to honest Boursault, to spiteful De Visé, and even befriended the furtive pirate of his books, Jean Ribou. Our authors have a wise disinclination to make a martyr out of Molière, but he suffered more than they suppose. The *Festin de Pierre*, for example, which was only played for fifteen nights, was not withdrawn because it was "unpopular," as Mrs. Oliphant imagines. Here are the receipts of each night:—1,830 liv., 2,045, 1,700, 2,036, 2,390, 2,108; and so on, till we find as low a sum as 500 livres, at the beginning of Passion week. Compare the famous *Ecole des Femmes*, that splendid success; the sums are 1,518, 1,144, 1,253, 812, 1,088, 1,348, 832, and so on. This shows how rash it is to declare that *Le Festin de Pierre* did not hit the popular taste. The proof of the play is in the large sums taken at the doors. Molière's *Don Juan* was stopped, it is plain, by the private influences that arrested *Les Précieuses Ridicules* and delayed *Tartufe*. Molière never printed the piece, and even the expurgated edition of 1682 was covered with *cartons* by the censorship. Our authors are mistaken when they say that the play "did not see the light" in its integrity "till so late a period as 1819." The Amsterdam edition of 1683 contains the famous scenes of the beggar, "printed for the first time *dans toute leur intégrité*."

The little volume of Mrs. Oliphant and Mr. Tarver offers occasion for really countless corrections which our space does not permit us to make. Their knowledge of the theatre of the seventeenth century, and of what has been discovered about Molière, is, it must be said, most inadequate. For example, Molière was not driven to write by want of pieces for his company to act. He was not left "with but two plays, besides his trifling stock of farces 'to the good.'" At the very time of which our authors speak his company played *Jodelet Maître et Valet*, *Dom Japhet* (a very great favourite and standing piece), *Le Menteur*, *Sancho Panse*, *L'Héritier Ridicule*, *La Folle Gageure*, *Le Campagnard*, and other pieces of Scarron, Bois Robert, Mlle. des Jardins, De Bouscal, and others.

In leaving a book of the very utmost inaccuracy, we must note the tact and sagacity with which our authors handle Molière's domestic sorrows. Enough is said, and said in the right spirit, on a subject which too many of the poet's countrymen and countrywomen have discussed with extremely bad taste. The criticism, too, of *Tartufe* and of *Le Festin de Pierre* is earnest and intelligent. The plots of the slighter plays are often analysed with skill. We might have expected some account of Molière's theory and practice as an actor—of his personal appearance and manners; and certainly stress should have been laid on the singular delicacy of his filial kindness to a father who was almost morose.

LANCASHIRE AND CHESHIRE HISTORIC SOCIETY'S TRANSACTIONS.*

THE Historic Society of Lancashire and Cheshire would do better work if it would do a good deal less; and it would enhance its reputation by sticking closer to its text, by submitting all the papers to a judicious editorship, and by substituting for its annual publication a volume issued every three or five years. In 1874, at the close of its twenty-fourth year, the then President, Dr. Hume, presented to the members an index to the first and second series of the Society's Transactions. A casual glance over this pamphlet shows that a considerable proportion, probably five-eighths, of the papers printed have no connexion with the history of Lancashire and Cheshire. We are told that the object of the Society is "to prepare materials, of as many kinds as possible, for future use in illustrating the history of either or both the counties on the banks of the Mersey." Yet we find such entries as the Medallic History of Napoleon I., Curious Mask of Punishment at Nuremberg, Attempt to identify "Parathalassus," the Poems of Oisin, Fungoid Diseases affecting Pear-trees, German Thalers, the Use of Clay Tobacco-pipes in England, Saxon Element in English Poetry, Micro-Geology, Classification of Human Knowledge, the Greenwood of Shakspeare, Scarcity of Home-grown Fruit in Great Britain, Preparations for the Spanish Armada in Kent, and a host of equally remote and diverse miscellanies. Nor is the result much more assuring when we come to examine the contributions which are really within the sphere and purpose of the Association. The literary skill displayed in the presentation of the several subjects is, with rare exceptions, of the smallest. The "materials" which the Society has managed to obtain are for the most part mere fag-ends, shreds, and patches; and there is altogether an absence of method and of persistency in some well-defined groove which leaves on the mind a general impression of feebleness and disappointment. One can only wonder and grieve that a machinery so elaborate should have existed for more than a quarter of a century, and have produced a result so inadequate and poor.

The Society's thirtieth volume, for the session of 1877–8, is no improvement upon its predecessors, and is of the same disappointing character. Three of the longest papers—"The History of the English Word 'Serjeant,'" "The Etymology of the Names of Timber Trees," and "Remarks on the Irish Dialect of the English Language"—have no right to take a place in the book. If the members choose at their monthly meetings in Liverpool to listen to dissertations on extraneous subjects, well and good; no one outside the Society has the power or would care to interfere. But when the same things are published as contributions to the history of Lancashire and Cheshire, the matter assumes a different complexion; the title of the book leads us to expect one thing, and we get another entirely foreign to it. Of the three papers named, the only one calling for notice is the Rev. Canon Hume's on the Irish Dialect of the English Language. Dr. Hume's essay has the merit of dealing with a comparatively fresh subject, and it contains some interesting information. Early in the present century the Irish language was spoken more or less in every county throughout Ireland. It is estimated that one-fourth of the gross population, or about one million people, spoke English exclusively, while probably an equal or somewhat greater number knew Irish only. In the intervening period down to the present time a great change has taken place, as is conclusively shown in the censuses of 1861 and 1871. In all Ireland now only about 162,400, or one in thirty-six of the gross population, still know no other tongue than Irish. When Carleton first issued his *Traits and Stories of the Irish Peasantry* his narrative contained a large number of Irish

* *Transactions of the Historic Society of Lancashire and Cheshire.* Third Series. Volume VI. Session 1877–8. Liverpool: Adam Holden. 1878.

words which in subsequent editions he found it necessary to remove, as they were no longer understood; and Dr. Hume tells us that even in their modified form, there are hundreds, probably thousands, in Dublin who cannot enjoy Carleton's stories. The existing dialect, which is more or less prevalent over the thirty-two counties, with of course local variations here and there, is the result mainly of the successive English and Scottish immigrations. The largest of these is thus described by Dr. Hume:—

About the year 1607, when much of Ulster required to be planted or re-settled, immigration, instead of being as previously a mere rivulet, or largely dependent on the condition of the regiments serving in the country, became a flood, and strangers settled not by tens, but by thousands. A large number of these were from the apple districts of Warwickshire, Worcester, and Gloucester; several were from Chester, through which the adventurers passed to take shipping at the mouth of the Dee; a few were from the neighbouring county of Lancaster; and some from London. The great English settlement commenced on the two sides of Belfast Lough; at Carrickfergus on the west, and Ballymacarrett on the east. It included the town of Belfast, which was at first English, but, like Londonderry, became Scotticized, owing to the preponderance of North Britons in the rural districts on both sides. Pressing on by Lisburn and to the east bank of Lough Neagh, the English settlers cover eleven parishes in Antrim alone, all of which preserve to this hour their English characteristics; and crossing still further, over Down to Armagh, they stopped only at the base of the Pomeroy mountains in Tyrone. Thus, from the tides of the Channel to beyond the centre of Ulster there was an unbroken line of English settlers, as distinct from Scotch; and the district they inhabit is still that of the apple, the elm, and the sycamore, of large farms and two-storied slated houses.

In three counties only, Antrim, Down, and Londonderry, do the descendants of Scottish immigrants outnumber those of English origin. The effect of the inroad from England upon the language of the country has been sure though slow, until now, as we have seen, the Irish language has all but disappeared before it. Meanwhile a dialect remains which has its own peculiar and distinctive features, and Dr. Hume maintains that its basis is the current English of the time of Elizabeth—the language of the immigrants of 1607 having been handed down unimpaired, or very little altered, to the present time. Dr. Hume asserts that whilst an Englishman requires a glossary of two thousand words, now obsolete, to understand Shakspeare, an Irish peasant would not need a glossary of more than two hundred; and this, if true, is a fact strongly in favour of his contention. Dr. Hume, it appears from some remarks in the course of his paper, has been engaged for many years in the compilation of a glossary of the Anglo-Irish dialect, and it seems to have been one of the chief objects of the paper to make known the existence of this glossary. The author has not yet succeeded in getting his manuscript into type, for, as is well known, glossaries, like bibliographies, do not pay; and it is difficult to find a publisher who will, for the sake of a public service, burden himself with an inevitable pecuniary loss. We believe we are correct in saying that both the Royal Irish Academy and the English Dialect Society have declined to undertake the responsibility of publishing Dr. Hume's work in its present form; and, when we come to examine the specimen which is appended to the paper, we are not surprised at their decision. To judge by these examples, the work is of formidable dimensions, and is largely occupied by elaborate disquisitions which are entirely beyond the province of a glossarist. The word Aboo (the ancient Irish slogan) occupies a page and a half, the greater part of which is devoted to an enumeration of English and Scottish war-cries; and under "A.B.C.'s, the Alphabet," nearly four pages are given up to superfluous commentary and unnecessary illustrative quotations. It is painful to see so great a waste of labour, and such an astounding ignorance of "the fitness of things."

One of the few contributions relating to Lancashire is on "Ptolemy's Geography of the Coast from Carnarvon to Cumberland." In this Mr. Glazebrook Rylands essays once more to settle the vexed question of the identity of the Belisama and Seteia estuaries. From Camden downwards a score of antiquaries have done fierce battle on this disputed ground, and no two have managed to agree. Mr. Rylands is convinced that "Belisama can only be the Mersey, and Setantiorum Portus the Ribble." It is not necessary to follow the calculations and somewhat confused arguments which have led Mr. Rylands to his conclusions, for, to our thinking, far too much paper and ink have already been wasted upon a point of very slight importance. Mr. James Dixon has three short papers concerning Ormskirk Church. Various circumstances conspire to invest this edifice with interest. It is closely associated with the fortunes of Lathom House and the Stanley family, many of whose remains lie buried in the Bickerstaffe Chapel. The building, too, is a singular admixture of styles, and is remarkable for possessing two towers, one large and square, and the other surmounted by a spire in the angle between the main tower and the south aisle. The date of the building of the church has hitherto been lost in obscurity. It is recorded to have been endowed A.D. 1273, but the name itself suggests an earlier date for the erection. Ormskirk is not mentioned in the Domesday Survey; but there is a generally accepted tradition that the parish belonged to Orm, the Saxon, or more probably Danish, proprietor of Halton, who, driven from his lands in Cheshire, established himself in Lancashire, and was the founder of the kirk or church which took and still commemorates his name. About eighteen months ago a "restoration" of the church was undertaken, and the process of partial demolition and rearrangement has enabled Mr. Dixon to record some discoveries which throw a light on its earlier history. Remains of a Norman church have been brought to light, including an excellent Norman window which has long been hidden by an old benefaction board. Mr. Dixon comes to the conclusion after the presumed wooden building erected by Orm, there was a Norman church, of which the north wall of the present chancel is still left. The size of this, together with the fact that the population of the locality long continued to be scanty and scattered, is a sufficient proof that the original stone edifice was a small one. In the thirteenth century there appears to have been an early English enlargement, with attached chapels, a south aisle, and spire termination; then, after the ruin of Burscough Priory in 1536, the erection of the huge square tower for bells, the materials being partly derived from the monastery. The church suffered considerably during the Civil War, and other structural changes and additions were made in 1690, 1729, 1766, and 1770. To the latest "restoration" a good deal of opposition was raised, but Mr. Dixon gives a painful picture of the state of the interior. In addition to the unsightly and inconvenient character of the church as a place of worship it appears that

The whole area has long been little better than a common grave on a large scale, within walls and amid ruins of a departed splendour. Only about three feet of depth intervened between the recent modern floor and the rock, yet within this space very many, probably thousands of persons, have been buried (I have tested the number carefully by the registers) by repeated turning over of the remains of those buried before. As many as twenty skulls have been found in one mass, just below a pew constantly occupied; and, while I am writing this, a skull—which I reasonably infer is that of a young lady of a very ancient and wealthy family in the parish—lies less than six inches from the still undisturbed pavement of a chapel partially restored, exposed to view by adjacent removals. . . . Even the Stanleys and other distinguished families around must, though buried in their respective chapels or other places of distinction, have been laid in the general composition of accumulating remains.

Restoration on the site of such a charnel-house as this is surely unwise; unless, indeed, the remains are to be entirely removed. Mr. Dixon gives a biographical sketch of Nathaniel Heywood, "the only vicar of Ormskirk, out of a long list, who has attained to historical distinction," and who was one of the ejected ministers of 1662; and a series of extracts from the churchwarden's accounts of 1665-6. A considerable number of the entries have reference to the vermin which at that time infested the south-western part of Lancashire. Large tracts consisted of peat-moss, which have only been reclaimed and brought under cultivation within the last fifty years. A shilling was paid by the churchwardens for every fox's head, and twopence each for kites, hedgehogs, magpies, moles, and jays—called respectively in the accounts "kydes," "orchants," "pianots," "moulderts," and "gees." Altogether, Mr. Dixon's contributions, though unassuming in character and on a subject of almost purely local interest, are a real addition to the materials of Lancashire history, and are a credit to the book.

The only remaining paper of any importance is on Roman Ribchester. Mr. W. T. Watkin, the author, is a dry and unattractive writer. His essay is little more than a collection of notices of this large Roman station by Leland, Camden, Dr. Leigh, Dr. Stukeley, Horsley, the Whittakers, and other antiquaries. It contains no fresh information. But, taken in conjunction with a similar paper on Roman Lancaster, by the same writer, in the twenty-eighth volume of the Society's Transactions, it indicates a too long neglected work which might usefully engage the energies of the members—the careful and exhaustive investigation, by means of systematic excavations, of the Roman dominion in Lancashire. Ribchester, now a mere village, stands on the banks of the river Ribble, and is about equidistant from Blackburn and Clitheroe. From the discoveries already made there it would appear that the station covered about ten acres. A fourth of it has been washed away by the river, in the bed of which the sunken Roman wall of the rampart is still, or was recently, discernible. The whole of the site demands and would repay a thorough examination. The soil of Lancaster, the county town, teems with unearthed remains. It is scarcely possible to dig anywhere without coming upon traces of the Roman occupation. Mr. Simpson, the historian of the town, states that wherever cellars have been sunk, or similar excavations made, antiquities have invariably been discovered. Near the church and in the vicarage fields the ground is full of unexplored foundations, and the tracks of ancient streets are still visible. Another interesting relic of the Roman occupation, which has never been adequately examined, is a dock in the river Keer, a few miles north-west of Lancaster. The outlines of the dock are still perfectly clear, and in it, on the removal of the alluvial soil, large quantities of timber, some unwrought, and others partly formed into vessels, have been found. The sea is now two miles off, though it is evident that some eighteen hundred years ago it must have come up to it. From these facts it is evident that at Lancaster and Ribchester, not to mention other known sites in the county, any historic or archæological association might find abundant occupation for its members. We fear, however, that the task is too onerous, even if it were not beyond the capacity of the Historic Society whose records we are considering. Although it has a numerous body of members, its proceedings display a lack of vitality and of originating force, a deficiency of scholarship and a feebleness in literary power, which are painfully reflected in its recent yearly publications. If not exactly moribund, it shows none of the evidences of a strong and healthy life. Many years ago (October 21, 1865) the sixteenth volume of the Society's Transactions was described in these columns as "far below the standard of any other volume of local Transactions that we ever saw." Of the thirtieth volume the same verdict is pertinent and true.

A MIGHTY HUNTER.*

IT is a pity that the hero of this Memoir has not had the luck to find a better biographer. We are not at all sure that he would not have been more fortunate still had he found no biographer at all. His life when it closes may be fitly summed up in one text from the Bible—"He was a mighty hunter before the Lord." We doubt not that for many a day to come it will be said by the men of Devonshire, when they want to praise some great hero of their time, "Even as Parson Jack Russell the mighty hunter before the Lord." For "Parson Jack Russell"—to give him the familiar term by which he is known all over Devonshire—who in these degenerate days is perhaps the most famous man of the West, is no less known for his hard riding, his love of the chase, and his knowledge of the whole craft of the huntsman, than for the manner in which he discharges his duty as a parish priest. "To enter minutely," says our author, "into the abstract question of Russell's clerical life would scarcely be consonant with the general tenor of this memoir." What he means by the abstract question of a man's clerical life we certainly do not in the least understand. Probably he does not understand it himself. However, he tells enough to make it quite clear that a large and poor parish which has had for nearly fifty years the services of Mr. Russell at the modest salary of 180l. a year has had little cause to complain. We doubt also whether his brother parsons have not had much reason for thankfulness. A man of Mr. Russell's restless energy, "to whom the want of something to do became almost a torture," must have passed his life in hunting something. If he had not spent his strength on stags, foxes, and otters, who knows but that he might have taken to badgering his neighbours with ecclesiastical suits? A man surely had far better be employed on the moors of Devonshire in hallooing on his dogs than in feeing counsel in the Ecclesiastical Courts of Westminster. However much we may excuse, nay, even may praise, this great hunting parson, still we must return to what we said, that his life scarcely affords materials for a biography. We are ready to allow his unequalled merits. We have no doubt that he deserves to the full the praise that has been bestowed upon him by the son of the gentleman who succeeded the late Earl Fortescue in 1818 as Master of the Dulverton Staghounds, and who writes that "down to the present year Russell has always stuck to the staghounds with a consistency unequalled by any living man." But then unfortunately consistency, even the consistency of a stag-hunter, affords but little variety. Mr. Russell saw his first stag killed in 1814, and he has most consistently seen them killed every year since. This would go far in an epitaph no doubt; but what can be fitly spread over a grave-stone scarcely fills a volume of three hundred and sixty pages. A short sketch might well have been given of this tough old gentleman, but the length of this Memoir is intolerable. The language moreover in which it is written, when contrasted with the entire simplicity of the man who is described, is ridiculously fine. The hero could scarcely make a less absurd appearance if he were to go hunting dressed up in all the tinsel of a theatrical wardrobe. It shows indeed the entire simplicity of his character that, in spite of the absurd style in which his actions are described, he himself is never for a moment made ridiculous.

It is a strange thing that those who write about sports, of whatever kind, are almost always given to the finest and most foolish language. These authors delight in synonyms, for they think that there is no greater impropriety of which a writer can be guilty than to repeat a word in the same paragraph. Thus in the book before us we find one of Mr. Russell's schoolmasters described "as a disciplinarian strict as Draco." We next come to "the educational advantages" which his school "offered," and then we find it called "a Spartan seminary." We ought perhaps to be thankful that the author did not bring in "plagosus Orbilius" and a Roman academy. In like manner, a man who in one line is a country blacksmith in the next is a worthy Vulcan. A fox on one occasion is a gay Lothario, bright as a new guinea, to which "Parson Jack" sticks like the Old Man of the Sea to Sinbad the Sailor. Elsewhere Mr. Russell is like the Colossus of Rhodes, for he had one foot on Broadbury and the other planted on the Bodwin moors. In one hunt some of the riders—men whom nothing but the Styx itself could stop—had leapt over a stream, while others had not yet crossed the Rubicon. The most absurd display of this classical ignorance—learning we cannot call it—is in a passage where we are told that "in all the annals of the chase few men, if any, taking the outside of a horse as their conveyance have equalled him in this respect." The author goes on to say:—

> Wheels, indeed, would have been impracticable, for without the help of a Julius Cæsar, who gloried in the motto "Hanc viam, inviam, rotabilem fecit," the obstructions he would have met with on his way to cover would have stopped the course of Hannibal himself.

To think of Hannibal riding to cover—we ought to say, taking the outside of a horse as his conveyance—along a road made by Julius Cæsar! We trust that our author's hero, at all events at the time when he took his degree, was somewhat surer in his historical learning. If he was not, it does not say much for the amount of learning required at Oxford in those days. His success in his final examination is thus described:—

> Once more, before he quits the University, but this time with a light and elastic step, if not "with pride in his port," he crosses that same Quadrangle where
>
> Bacon's mansion trembles o'er his head
>
> to put on his Bachelor's gown.

There were three good reasons, we could point out, why Bacon's mansion did not tremble over his head. In the first place, Mr. Russell was too modest a man to have supposed for a moment that he had more learning than Friar Bacon. On the head of a less learned man there was no risk that the mansion would fall. In the second place, long before Mr. Russell's time, the mansion had been cleared away. In the third place, it never had stood anywhere near the Quadrangle which Mr. Russell crossed with a light and elastic step, but a good half-mile or more away on the bridge over the river. The author certainly could not well have quoted the other verse of the couplet, "O'er Bodley's dome his future labours spread"; for though Bodley's dome is hard by the Quadrangle, yet the statement in other respects would have been somewhat wide of the mark. Nevertheless, in a note the reader might have been told that Bodley's dome was merely a kind of synonym for hedges and ditches and five-barred gates. Nine out of ten of such readers as the author is likely to get would have believed it.

Besides this display of learning, which goes not a little way to swell out the volume, lists are given of the most foolish kind—lists that would have been dull reading even on the day they appeared fresh in the columns of some country newspaper. Who can there be so hopelessly stupid as to be interested in reading a list of the members who on Thursday, the 3rd day of June, 1824, were present at a meeting of the Teignbridge Cricket Club? Has gaping come to an end, and yawning, and stretching one's arms, and looking out of the window, and talking about the weather? are village gossips silent, have parsons ceased to preach, are there no bores left to fill up the time, are all the stories about the old grouse in the gun-room forgotten, that any one is reduced to reading such a list as the following? Let the reader first mark the solemnity with which it is introduced:—

> For a copy of that document I am much indebted to the kindness of Mr. John Divett, of Bovey Tracey, for so many years the courteous and able secretary of the Teignbridge Cricket Club.
>

> W. Russell.
> M. Russell.

The heaviness of such writing as this is relieved at times by quotations from a local poet of the last generation. Was ever poet introduced in a stranger sentence than the one in which this Devonshire bard is thus brought in?—

> Mr. Templer, a gentleman of brilliant intellect and most charming manner, had for some time previously established at Stover a pack of dwarf fox-hounds, averaging nineteen inches at the shoulder, with which he hunted, when he had the luck to find him, the real wild article; but, when a blank was apprehended, a bagman, which, always at hand, was turned down in view of the hounds.

As to the average height of Mr. Templer's foxhounds we do not pretend to offer any opinion; but the brilliance of his intellect, if it was shown in his dealings with "the real wild article," is scarcely apparent in his verses. The following lines may have been written, as the author says, in the strain of the truest admiration, but they are at the same time bad enough to have fairly deserved the birch:—

> Fearless and first Ninth Harry urged his course,
> Charging the fences with resistless force;
> Poor Nunky pays for all, a friend indeed
> So good a Nunky proves in time of need.

What have fox-hunters to do with poetry? We like far better than this writer of the brilliant intellect old Squire Western, who, when his sister quoted to him "the great Milton," answered, "Damn Milton, if he had the impudence to say so to my face, I'd lent him a douse, thof he was never so great a man."

We are scarcely leaving ourselves space in criticising the writer to say anything about the hero of his memoir. Mr. Russell ought to have had his lot cast in the Far West. He is lost in England. The field is too small for him; the animals he hunts are too insignificant; even in the moors of his native country the space is too limited. He scarcely feels that he has elbow-room. Nature, it might be said of him, made him a hunter, and man made him a parson. He has, as we have said, managed to combine the two fairly well, but they would have been better kept apart. He should have lived in some savage country where he could have hunted wild beasts and tamed still wilder men. The curious influence that he has gained over the gipsies shows that he would have been well fitted for dealing with half-civilized races. At one time, when a desperate gang of burglars had infested his neighbourhood and had especially broken into the parsonages, it was found out that for many nights together Mr. Russell's house was watched by the gipsies. He met the son of their King, and asked him whether it was true that they had thus guarded him? "Quite true, sir," he answered, "and let me tell you, if we had caught them on your premises, they would never have gone home alive." But, limited though was Mr. Russell's field, yet he did something, as we learn

* *A Memoir of the Rev. John Russell, and his Out-of-door Life.* By the Author of "Dartmoor Days," &c. London: Richard Bentley & Son. 1878.

from this Memoir, to reclaim his fellow-men and to civilise their barbarous instincts. No man did more than he to restrain the lawless destruction of foxes. There was more than one "notorious vulpicide" in his part of the country when he began to run his civilizing course. When a fox was tracked to its hole the church-bell was rung, and all hurried up to dig it out, and kill it in the most barbarous manner. "The scum of the county, headed, I am almost ashamed to say," said Mr. Russell, "by two gentlemen," on one occasion hurried up. "I remonstrated with these gentlemen. . . . Impressed apparently by what I had said, both gentlemen instantly bade me 'a good morning,' and left the place." Though almost every one was open to argument, unhappily there was one country gentleman who not only ordered his keepers to trap, shoot, and destroy every fox they could, who not only thus killed 250 foxes, but who in large placards "set forth this gross statement, and justified the slaughter as one of meritorious service to the whole community." Though this unhappy squire has long gone to a place where he must give an account of his deeds, we will not follow our author in publishing his name. On the contrary, we are glad to learn that "there are good grounds now for believing that he was, in truth, influenced by conscientious scruples." Things had got indeed to such a pass that one day a man put his head inside the church-door at service time on a Sunday, and shouted "I've a-got un." Whereupon "almost every man of the congregation, knowing a fox had been traced to ground, seized his hat and quitted the church." Now, thanks almost entirely to Mr. Russell's efforts, "no such barbarisms exist in the north of Devon." The barbarism, as our readers will notice, consisted not in the interruption of divine service, but in the entire absence of fair play to the fox. Now he gets killed like a Christian, and no longer like a heathen or a Turk.

It was not only with the gipsies that Mr. Russell soon gained a great influence. "The feelings of the farmers towards him amounted," we are told, "almost to a devotion." It was curiously shown many years ago, when that cruel law was still carried out by which a man was hanged for sheep-stealing. A poor fellow whom Mr. Russell knew was thus hanged. Not long after he met one of the jury; but here the author shall tell the story:—

"Why, Jem," said Russell, accosting him in a tone of strong remonstrance, "how came this about? You were on the jury which tried Tom Square!—there surely was something to be said for the poor fellow. I've been told it was the first time he had ever done so. You know what a quiet man he was, always ready to do a good turn for a neighbour. 'Twas a pity, Jem, that you should have given your voice against him."

"Bless us, Mistre Rissell, you doan't zay zo. My senses! If us had on'y but knaw'd *they* was your honour's thoughts, us wid ha' put it right, *fai'*. But there, my Lord Jidge said he did ouft to be hanged—and zo us hanged un. But, bless 'ee, if us had on'y knaw'd yeur honour cared about un, us wid ha' put it right in quick time."

Through this dull volume there are not a few other anecdotes scattered about which are interesting in themselves, and are at the same time curious signs of a state of society which is as much unknown to many a man as the habits of a tribe of wild Indians. But space fails us to set them forth. We must not conclude without expressing an ardent wish that Devonshire may for many a long year yet be able to boast of its Parson Jack Russell. It seems likely that it may keep him, at all events, to the end of this century. A few days after his eighty-first birthday, when he had had a long day over the hills, partly on foot and partly riding, he danced till three in the morning, and then retired at that early hour with the excuse that he had to be up at eight o'clock to ride over forty miles to be present at a fox-hunt. When he was in his eightieth year he spent a week in hunting. On the Saturday he hunted till two o'clock, and then started off for a seventy miles ride home. The next day "he performed three full services with his wonted animation, earnestness, and effect." He has always lived a temperate life, and now he lifts up his voice against "the rising generation—the gourmandizing battue-shooter—*et hoc genus omne*." Like old Adam, he can boast, and will, we trust, boast for many a day,

My age is as a lusty winter,
Frosty, but kindly.

VILLARI'S MACCHIAVELLI.*

THOSE who have read Professor Villari's valuable Life of Savonarola—in which the great Florentine preacher appears as the object of a profound, but not unmerited, homage—will be curious to see the way in which the same writer treats a character and genius which offer in almost every respect the most striking contrast to the character and genius of Savonarola. It is not every one who can do justice to greatness of two such different orders. Those who are most attracted by the one are likely to be most repelled by the other, and even those who can admire both do so in very different moods of their own minds. So far as the volumes before us enable us to form an opinion, Professor Villari appears to have formed his estimate of Macchiavelli with great discrimination and impartiality. But the volumes already published only carry the biography of the Florentine Secretary down to the year 1507—that is to say, to the thirty-eighth year of his life. The last twenty years of it still remain to be told. And the full analysis and criticism of Macchiavelli's works is also reserved for the future, and only touched on incidentally in the course of these volumes. The first volume, indeed, is merely introductory, and gives a general sketch of the social, political, and literary conditions of the period, without treating of Macchiavelli at all. It is not till the second volume that he himself appears upon the scene. And in the stormy years which are here described Macchiavelli is a good deal lost in the greatness of the events which were then taking place, and a good deal thrown into the shade by the more commanding characters of others. These volumes can be read and criticized only as an instalment.

Professor Villari's estimate of the Renaissance agrees in the main with the views which recent writers have made familiar to English readers. He begins with a few pages on the general spirit of the time. Of all periods of history, this is probably the one of which it is most difficult to form a just and impartial estimate. It is in many of its aspects intensely, almost overpoweringly, attractive, and in many others as irresistibly shocking and repulsive. And the strongest forces of attraction and repulsion are often combined in the same person, without, so far as one can see, creating in his own mind any sense of incongruity or discord. The man whose talents, accomplishments, gracious manners, even, in a certain sense, kindliness of nature would seem to make him the most desirable of companions, is also often the man who will stick at no act of villany to rid himself of an enemy or of an inconvenient friend. The proneness to evil for its own sake which may be charged on exceptional men in this as in other periods is in no sense characteristic of the period as a whole. On the contrary, purposeless evil, wrong-doing that serves no object or defeats its own object, was probably discountenanced by public opinion in Italy far more strongly than in other countries at this time. What seems the characteristic feature of the period is rather that men were insensible to moral considerations altogether, that the human conscience was as far silenced as it can be without human society being utterly dissolved. At the same time all other sides of human nature attained a complete and brilliant development to which we cannot find a parallel without going back to the best days of Greek civilization. A period like this must of necessity be full of the most startling contrasts and contradictions. The manner, often so misleading, in which Macaulay deals with history, a manner in which antithesis is put in the place of discrimination, is here less objectionable, because the antitheses are not merely rhetorical, but lie in the nature of the subject itself. A point of great interest is touched on by Professor Villari when he asks if the judgment in matters of morals which may be fairly passed on the upper classes in Italy at that time can be justly extended to the people as a whole. He is of opinion that it cannot. And certainly he has every antecedent likelihood on his side. It is inconceivable that any society could continue to exist, much less be capable of future regeneration, which practised and tolerated, not only in particular sections, but throughout the whole of it, the crimes which were practised and tolerated among certain classes at this epoch. Anyhow, the evil was sufficiently widespread to bring on an utter breakdown. It was want of character which caused the ruin of Italy in the sixteenth century, notwithstanding all the gifts and graces which distinguished the people; and the rise of Italy to new life in our own day is a sign that this defect has been largely repaired.

But no nation, however gifted, has more than a certain amount of force to dispose of; the fascination which matters of intellect and taste then exercised over Italians tended to blind them to moral distinctions, and the work which the resuscitation of ancient literature and art, and the transformation of mediæval into modern civilization gave them to do, absorbed all their energies. A nation must be judged, if at all, as a whole. Professor Villari, though marking distinctly the bad sides of the Italian Renaissance, is free from the puritanical narrowness which looks only at the moral and religious aspect of a question, and judges even this by a uniform standard applied indiscriminately to all times and peoples alike. There is no man in whose case this way of judging things would bring out more ludicrous results than in the case of Macchiavelli. There is no need, however, nowadays to argue against the old legend which represented him as a monster of craft and dissimulation. That legend was destroyed in this country, where it had taken as firm root as anywhere, once for all, by Macaulay's essay and there is no danger of its being revived. Still, although the phantom which used to stand for Macchiavelli has vanished before the light of a sounder criticism, there is much about the real man which still remains obscure. The circumstances of the strange and paradoxical age in which he lived are now indeed understood as they were not formerly, and thereby an indispensable step has been taken to the right appreciation of the great men who belonged to it. But in Macchiavelli's case there are some special difficulties. In the first place, impressive as his writings are, he does not appear to have been a man who exercised any profound personal influence on others. We are thus left without those detailed records of the impression made by him on contemporaries which abound in the case of many other men of more striking personality. Again, of the first twenty-seven years of his life nothing whatever is known. It may be that fuller knowledge of his early history would not make us much the wiser. It is very possible that, as Professor Villari suggests, he was one of those men who show themselves best and most fully in their writings, and the qualities which

* *Niccolò Macchiavelli and his Times.* By Professor Pasquale Villari, Author of the "Life of Savonarola." Translated by Linda Villari. London: C. Kegan Paul & Co.

especially distinguish his writings certainly point in this direction. What strikes one most in them, and what constitutes their chief value for us now, is the wonderful clearness and breadth of judgment and accuracy of observation which they show. Whatever subject Macchiavelli speaks of—the force of some motive or tendency in human nature, or the national characteristics of some foreign people, or the measures to be pursued in some hypothetical case of public policy—we feel that he has seen everything, just as it is, with his own eyes and not somebody else's, and that in his inferences from what he has observed we have a reason not less vigorous and acute than free from any perturbing mixture of feeling or prejudice. If literature were the organ by which Macchiavelli expressed himself best, we have the less reason to regret our ignorance of many interesting points in his biography.

Nearly all that these volumes tell us of Macchiavelli is comprised between the year 1498, when, just under thirty years of age, he became Secretary to the Ten, and the year 1507, at which time, mainly under his influence, the Florentine Militia had just been formed. Macchiavelli's life during this period is described with great minuteness. His marriage, which took place in the year 1502, shortly before his mission to Cæsar Borgia in Romagna, is the subject of some very interesting remarks. His wife was Marietta, daughter of Ludovico Corsini, and it seems to be satisfactorily proved that the marriage was a tolerably happy one, notwithstanding that Macchiavelli was the reverse of a faithful husband. The mission to Cæsar Borgia following soon upon the marriage, the wife was left alone in Florence—a position which she did not at all seem to relish. On the 18th of October Macchiavelli's friend, Buonaccorsi, wrote to him at Imola, "that Marietta asked about him and complained of his remaining absent so long when he had promised to come back to her in a week." She would not write to him herself, "and she does thousands of mad things; so, in the devil's name, pray come back." And in another, of the 21st December, 1502, he says to him:—"Monna Marietta blasphemes God and thinks that she has thrown away both herself and her property. For goodness' sake give orders that she may have her own dower, like others in her position, otherwise she will lose all patience with you." "Your wife," he adds in another letter, "desires you, and often sends here to ask of you and of your return." The embassy which interrupted the domestic bliss of Monna Marietta gives Professor Villari occasion to discuss the relations between Macchiavelli and Cæsar Borgia:—

> Almost unconsciously his ideas assumed the form of an ideal personage, representing the acute, able, and audacious statesman, restrained by no scruples of conscience, no moral influence, from trying to achieve his fixed purpose, no matter what obstacles stood in his path, no matter what acts of treachery and bloodshed had to be performed. In short, in examining the actions of Valentinois, his mind had created an imaginary Valentinois, to which latter he continually recurred. . . . At a later period he obeyed a similar impulse in writing his *Vita di Castruccio Castracane*, which, as all know, is no history, but rather an effort to glean from history his own political ideal. This explains the great praise, coupled with severe blame, accorded by him to Valentinois. His praise is generally bestowed on the ideal personage, his blame on the historical. The one, however, is not so different from the other as to prevent our sometimes confusing them, especially as the author himself occasionally does so, when carried away by his imagination, which seems especially to dominate him when he is apparently reasoning in cold blood. Nor is it an uncommon case to find that men of the most reflective and cautious temperament will at times fall a sudden and complete prey to their own imaginations.

Professor Villari argues from the discrepancies between Macchiavelli's report to the Florentine Government of Cæsar Borgia's treacherous capture and murder of the revolted *condottieri* at Sinigaglia, and the well-known *Descrizione*, written later, which treats of the same event, that the latter narrative is a more or less idealised picture:—

> How [he says] can patent contradictions like these be accounted for without admitting that this *Descrizione* is something different from exact history? The Duke, whom Macchiavelli depicts here as calumniated by the Florentines, and far more able and acute than the personage described in the *Legazione*, is, in fact, the precursor of his *Principe*, in which we shall behold later, put in a theoretic form, that which we now see only in an individual and concrete shape.

We must refrain from commenting on the foregoing passage till future volumes of this work give us Professor Villari's view of the "Prince" in full. But, considering what Macchiavelli was, what the age was, and what a spell Cæsar Borgia managed to exercise on the minds of contemporaries, one need not scruple to think it exceedingly likely that at one time or other Macchiavelli may have entertained a most genuine admiration for the real as well as for the idealized Cæsar. On the vexed question as to the death of Pope Alexander VI., Professor Villari takes the view, now generally received, that the Pope died of fever, and not of poison. According to the old story, Alexander and his son went to supper with a Cardinal, and by a mistake of the cup-bearer drank themselves of the poison which they had intended for their host. It is not a matter of any great importance by what means the world was rid of such a man, but the popular belief in the story of the poison, whether well founded or not, is characteristic of the time.

It is not possible at present to offer any final opinion as to this work. Half of it is still to come, and that the more interesting half, in which we may look for a full discussion of the writings of Macchiavelli. They offer abundant materials for criticism and controversy, and the judgment upon them by one of the latest and most learned students of the Renaissance will be awaited with interest.

INDEXES AND INDEXERS.*

THE one tangible result of the conferences of Librarians of which the reading public has heard so much recently has been the establishment of an Index Society. And the first publication of this youngest among our literary institutions is the very amusing and very well-filled pamphlet before us. Mr. Wheatley has gathered a mass of facts under two heads; we find, first, an historical account of indexes, and, secondly, an essay on the principles and practice of index-making; and it is something to say which we could not have expected to be able to say, that the whole work is so entertaining that even a child may enjoy it. The great utility of the index, even to a novel, such as *Clarissa*, and its absolute necessity to the historian, are points on which Mr. Wheatley forbears to dwell. He assumes at once that every book should have its alphabetical table of contents, and begins with an analysis of the meaning of the word index, its early use, its naturalization in English, and the use of the plural, "indexes," by Shakspeare. Curiously, the French "indice" has a different meaning, being derived from *indicium*, and the Germans use "Register" instead. Our own early books were generally furnished with "tables," and as late as 1749 the *Monthly Review* has its "table." By the present usage—one which is productive of no inconvenience—the word "table" is reserved for the summary of contents, and the word "index" for the alphabetical list; and we thus obtain an advantage not enjoyed in other languages. It is recorded of Thomas Fuller that so well was his work always arranged in his mind before he committed it to paper that he could write the first and last word of every line on a page. It is therefore not surprising to learn from Mr. Wheatley that he "was a true index-connoisseur," or to read a passage from his *Pisgah-sight of Palestine* in which he ascribes, on the completion of his index, "soli Deo gloria." Of a different opinion was Howell, who in his discourse of *The Precedency of Kings* excuses himself from making an index on the plea that it would be as large as the book itself—a plea which the true index-lover cannot for a moment admit. An index at the present day usually means an additional expense to either the author or the publisher, and the profession of index-making is not unknown in certain walks of literary life. The author who wishes to be well served in this respect, however, must serve himself; and it is impossible not to hold with the opinion of Nicholaus Antonius, a Spanish bibliographer, "Indicem libri ab auctore, librum ipsum à quovis alio, conficiendum esse"; which Mr. Wheatley makes into a rather greater bull by translating it "that the index of a book should be made by the author, even if the book itself were written by some one else." A great book without an index is like a great library without a catalogue; and as no library worthy of the name is so small as not to be the better for a catalogue, so few books of any pretensions to permanent value should be without an index. Every reader has felt the inconvenience of having no table of contents in books otherwise of importance; while it would be difficult to say what book, except a trashy novel, does not want an index. What a useful thing it would be in Mr. Morris's *Earthly Paradise*, for example, or Lane's *Modern Egyptians*, or half the books of travel? Mr. Carlyle, Douce, Baynes, and others, are quoted by Mr. Wheatley as denouncers of unindexed books, and Lord Campbell is reported to have proposed "that any author who published a book without an index should be deprived of the benefit of the Copyright Act." It is amazing that a general index to the *Archæological Journal* was never published before the present year. There is only an *Index Locorum* to the *Codex Diplomaticus*, and no index of any kind to Kemble's *Anglo-Saxons*. The new Society, it would seem, are more intent on indexing whole sets of books, or entire subjects, than on supplying the wants of any particular work; but in time probably we shall see their attention directed to less extensive projects than those put forward in their present programme. It includes a Guide to the Literature of Botany, another to the Literature of Political Economy, an index to British titles of honour, and a list of Municipal Corporation Offices. The first volume is to contain the names of the Royalists whose estates were confiscated during the Commonwealth.

Mr. Wheatley deals incidentally with catalogues. "What," he asks, "is a surname?" It seems that on this simple question the greatest difficulties of indexers and cataloguers turn. We have frequently heard the story quoted in Mr. Burton's *Book Hunter*, itself a work which wants an index, of "Mr. Justice Best, his great mind"; but Mr. Wheatley gives many almost equally amusing examples while on the subject of names. In a French biographical dictionary, Brigham Young is placed under B, as "Brigham le jeune." In a bibliographical list, Whiteknights, the former seat of a Lord Blandford, is given as "le Chevalier Blanc"; and another foreign book explains that a learned Society of the West Riding is not a "société hippique." In one of the volumes of the Rolls series there is a blunder of a different kind. "Jude" is misprinted "Inde," and the "land of Jude," that is, Judea, is indexed "India." In the case of people who have two or three surnames the indexer is often at fault, as he is also where a title has been added to a well-known name. It would not be easy at a first attempt to assign his proper position to "Edward George Earle Lytton Bulwer Lytton, first Lord Lytton, and a baronet"; and similar difficulties are suggested by the names of Robert Harley, Earl of Oxford, and Horace Walpole, Earl of

* *What is an Index?* Henry B. Wheatley, F.S.A. London: Henry Sotheran. 1878.

Orford. A long list might be made of supposed authors, for, besides the celebrated and prolific "Anon," we have "Enrichi de Deux Listes" and "Acuerdo Olvido"; while Dr. Buckland is said to have written a book on "ponts et chaussées," by a Frenchman who had seen, but not read, the Bridgewater Treatises. Booksellers' catalogues frequently contain works by "Incipit"; and we lately observed a set of tracts under the heading "Iste," the first line of the title-page being "Iste liber continet." For this sort of sin the catalogue of the British Museum comes under Mr. Wheatley's disapproval more than once. Thus, "Could any plan be adopted by which the following books would more thoroughly be hidden out of sight than by the present arrangement:—

Kind.—A Kind of a Dialogue in Hudibrasticks; designed for the use of the Unthinking and Unlearned (1739).

Kinds.—How to make several kinds of miniature pumps and a fire engine; a book for boys (1860)."

He describes also pathetically a vain search for the date of the first edition of the Latin *Gradus*, which eventually turned up among "Dictionaries." While on the subject of surnames he gives us the surprising information that in the same catalogue Sir Francis Palgrave's works are arranged under his former, but now half-forgotten, surname of Cohen. Peers, too, as a rule, are placed under their family names, instead of their titles, of which practice the American Library Association well remarks that "a catalogue is not a biographical dictionary or a genealogical table, and its efficiency is in danger of being lessened if its makers confound the two purposes." But bishops, deans, and other dignitaries holding official titles should be placed under their family names. Gilbert Burnet and Robert Cecil should not both figure under "Salisbury." The strangest method of indexing names is that sometimes pursued in old English, and frequently in modern Spanish, books. Among Spaniards the Christian name is that by which a man habitually goes, and under it, in the *Bibliotheca Hispana*, an author is usually catalogued; but in Lhuyd's *Cambria* English and Welsh names are similarly placed, and the Henries, Roberts, and Richards, whether Bohuns, Veres, or Neviles, are classed in a manner most confusing to the searcher.

The prefixes of foreign surnames are a source of woes unnumbered to indexers. Half the names in a French list would be classed, according to one plan, under D. But the rules of the new Society specially provide for the difficulty. "If the prefix be a preposition it must be rejected, and the name arranged in alphabet under the following letter—thus D', De, in French, Da in Italian, Von in German, and Van in Dutch are no real portion of foreign names, which can stand very well without them. If, however, the prefix be an article, such as the French La, it must be retained; for instance, the full name of the great astronomer La Place is De La Place, but it is under L that it could alone be placed with propriety." Such a rule does not, however, or should not, apply to foreign names naturalized here, and De Quincey or Le Fanu should not appear under Q or F. But most index-makers, we take it, would under this rule leave out the De of Dutch names as well as the Van. De Jongh is not "of Jongh," but "the young"; and the De in Holland does not mark a noble family as it does in France. Yet we have seen De Tromp written for Van Tromp, a translation, perhaps, rather than an error; and Van Ruyter for De Ruyter, which is wholly inadmissible. Indexers, however, unless they are as intelligent as Mr. Wheatley himself, will seldom be much troubled about such niceties.

Among curiosities of indexes Mr. Wheatley treats us to an enumeration of absurdities like the well-known entries:—

Mill on Liberty,
" on the Floss.

This, he asserts, actually occurred; but the following, selected from a long list of such examples in the *Companion to the Almanac* and *Pepys's Diary*, are quite as good:—

Cotton, Sir Willoughby	New Annuities
" price of	" Brentford
Court ladies, masculine attire of the	Old age
" of Arches	" Bailey
Lamb's Conduit	Scotland, state of
" Wool	" Yard

He also notices some mistakes in classified catalogues:—"Edgeworth's Essay on Irish Bulls and a Treatise on the Great Seal have been placed under the heading of *Zoology*; Napier's *Bones* under *Anatomy*; Swinburne's *Under the Microscope*, under *Optical Instruments*; a volume of poems entitled the *Viol and the Lute*, under *Musical Instruments*; Ruskin's *Notes on the Construction of Sheepfolds*, under *Agriculture*; McEwen on the Types, under *Printing*; and, most famous of all, Link *de Stellis Marinis*, under *Astronomy*." That there should be room for satire, personal feeling, and spite in indexes every reader who remembers Prynne will acknowledge; Swift's analytical table prefixed to the *Tale of a Tub* is an important part of the work. Every one has enjoyed the humorous index to the *Biglow Papers*, in which we read of the comfortable accommodation in Spanish castles, of the convenience in time of famine of the habit of eating words, and of the safety of opposing wrong in the abstract. Mr. Wheatley gives somes entertaining extracts from the index of Bromley's *Travels*, made by his political opponents to bring him into ridicule when he was the Tory candidate for the Speakership of the House of Commons:—"Boulogne, the first city on the French shore, lies on the coast, p. 2. The English Jesuites Colledge at Rome may be made larger than 'tis by uniting other buildings to it, p. 132. The Duchess-Dowager of Savoy who was grandmother to the present Duke was mother to his father, p. 243." King, the author of the well-known *Anecdotes of his own Time*, made an index of this kind to an examination of Bentley's *Epistles of Phalaris*. Macaulay, who strangely enough did not make his own index—though in his youth he had indexed a volume of the *Christian Observer*—was much afraid that a Tory should be employed on the *History*. A recent work of considerable pretensions unquestionably suffered in public estimation by the peculiar views of the index-maker, who could no more exclude them than one of Dickens's characters could keep the head of Charles out of his petition. Mr. Wheatley's little book will afford a reader the indulgence of a very pleasant hour's reading, and yet leave the feeling that all the time he has been engaged in improving his mind.

MAUD LINDEN'S LOVERS.*

THIS is a book which, in a certain sense, may be said to be remarkable—whether remarkably good or remarkably bad we will leave to our readers to decide. The plot of the story is much as follows:—There lived a "weak-minded and profligate man," named Sir Felix Estcourt, who "contracted a most imprudent marriage with a woman below his own rank, though, if she had been a good woman, that would have signified not." Sir Felix "became more deeply steeped in profligacy than ever, in gambling, drinking—and worse. He died a disreputable death in a gambling-saloon at Homburg, his wife having previously given birth to three sons." The eldest of these three boys died of small-pox, having been somewhat assisted in so doing by his mother, "who never relinquished a wild career of frivolous gaiety, even while the poor boy languished at the doors of death, nor scarcely (*sic*) shed a natural tear when they placed him in the grave." Nor scarcely did she pay more attention to number two, her affections being entirely centered on number three. This charming woman "entertained an affection for her youngest child as unaccountable and, I might almost say, as ferocious as her detestation of" the elder one. When they were good-sized boys, Felix, the elder, administered a thrashing to Jasper, the younger; but he made a fatal mistake in so doing, as he was subjected in return to a severe maternal flogging, followed by a week's solitary confinement on bread and water in a certain eastern tower of the family mansion, which frequently figures during the course of the story. Nevertheless, when the boys grew up they appeared to get on tolerably well together, and they deliberately began to play at the amusing game of Faust and Mephistopheles, the elder assuming the former character and the younger the latter. Having selected as a Marguerite the daughter of a poor schoolmaster, they enjoyed themselves very much, until Sir Felix, "to his own detriment and loss," committed the blunder of marrying the object of his affections. Of course the ill-conditioned mother was furious with her son for making such a marriage, and the schoolmaster, instead of being pleased at his daughter's union with a baronet, broke his heart—probably, we should think, from fatty degeneration. The bride and bridegroom, not finding things very pleasant at home, started for a cruise on the coast of France. There they were wrecked, and the excitement of the story forthwith begins. Marguerite was rescued, and found her way home to her loving mother-in-law, who was delighted at the idea of the probable death of her eldest son. Still there was a thorn to this rose, for there were symptoms of the approaching birth of a grandchild, who might prevent her dear youngest son from enjoying the title and estates; therefore she took the youth into her confidence, and the mother and son proceeded to conceive "a fiendish scheme." First they shut up the expectant mother in the eastern tower, in which her husband had been formerly punished. Then Jasper, the youngest son, followed a celebrated ladies' doctor as he was taking a walk in the dark, and conveyed him, with a pistol at his head, in a carriage with all the blinds down, to the home of the Estcourts, and took him up the backstairs to the bedside of his sister-in-law. Presently a male child was born, with a "most singular, though distinctly-formed mark, somewhat resembling a small pink cross," upon its left breast. Then the doctor was taken out again (pistol business as before), and driven in the same carriage, with the blinds down, to the spot whence he had been taken, after which he was allowed peaceably to resume his quiet walk.

Having hatched the pink-marked baby, Jasper got rid of it by placing it, with a candour worthy of a better cause, in the hands of a woman who had formerly known its mother; and he even told her whose child it was—not that the good woman made much use of her knowledge. Lady Estcourt died very soon after the birth of her child; but whether we are intended to suppose that her mother and brother-in-law helped her to die we do not clearly understand. Soon afterwards Sir Felix reappeared, not having been drowned after all. His mother and brother at once assured him that trustworthy information had been received that his wife had been drowned. Why they should have adopted such a dangerous course of proceeding it is rather hard to say, as her death might easily have been proved, and the child had been got rid of. We are informed that only two or three servants could have disclosed the truth, and

---

* *Maud Linden's Lovers.* A Novel. By George W. Garrett, Author of "Squire Harrington's Secret," &c. &c. 3 vols. London: Tinsley Brothers. 1878

that they had been replaced by new ones; but a secret confided to two or three servants would not be in very safe keeping, especially when those servants had been sent away. Sir Felix, on being told that his wife was drowned, at first contemplated suicide, but, changing his mind, he decided to exist, and become callous to all earthly things. "Callousness towards all earthly things," in his case, meant a voyage to Australia, New Zealand, and Van Diemen's Land. In Australia he dug for gold, with the hope that he might have his head broken by night for the sake of the nugget he discovered by day. Whether he failed to discover the nugget we are not told, but he certainly failed to get his head broken. After more than twenty years of voluntary exile, the idea suddenly occurred to him to revisit England, and look up his mother and brother—"by which," he says, "it will be perceived the romance in my bosom was not yet extinct." Pleased with the idea of the little surprise which his fertile imagination had prepared for his dear relations, he landed in England, and presented himself without the slightest warning at the home of his ancestors. As his brother had been enjoying the title and estate for twenty years, it can readily be imagined that he did not enter very keenly into the spirit of this little pleasantry, nor was his mother any better pleased. Neither mother nor brother would recognize him, and Sir Felix found himself elevated to the proud though unsatisfactory position of an "unhappy nobleman." Instead of allowing the claimant to go up to London and consult his lawyer, his judicious relations locked him up in the well-known and extremely convenient eastern tower, and made preparations for his removal to a private lunatic asylum. When all arrangements had been made, the patient was placed in a close carriage, and packed off for the asylum. But the journey was rudely interrupted by the long-lost baby with the singular mark, who, however, did not know that the prisoner in the carriage was his father. The now grown-up baby seized the horses' reins, knocked the coachman off the box, and proceeded to attack the three other custodians of the patient. Between the two horses and his four assailants, the gallant youth was about to be overcome by numbers, his only ally having been knocked down and rendered helpless, when some detective policemen opportunely arrived upon the scene, and the unhappy nobleman was at once liberated. The magnanimous policemen appear to have made no attempt to arrest the wicked brother and his hired ruffians, and their whole behaviour was utterly unlike that of emissaries from Scotland Yard.

It is now time to mention that the boy with the singular mark had been making love all through the book to the betrothed of his wicked uncle, without knowing until late in the third volume who his own parents had been, although he had previously had cause for suspecting that he might possibly be connected with the Estcourts. Of course when his uncle's wickedness was discovered, the heroine threw him over and married the nephew, with whom she lived happily for ever after. The number of curious coincidences in these volumes is wonderful. The sailor who saved Sir Felix's life when he was wrecked off the coast of France happened to adopt the singularly marked baby. A friend of the sailor happened to be also a friend of the ladies' doctor who happened to assist at the said baby's birth. The baby, when grown up, happened to meet his father without knowing him, at a roadside inn, and saved his life from a bull. And a friend of the baby's happened to marry a daughter of the very woman who had farmed him.

The love-making in this book is not its least remarkable feature. When the hero is declaring his passion to the heroine, he says, "Of a night I used to dream of you—nay, by heaven! *I do* dream of you. Of a day I have indulged in dreams sweeter and more foolish than those which soothed my sleep at night." But we suppose we must excuse this amazingly silly speech, for shortly afterwards he explains, "I should not have said it, but it has burst from me quite unawares." The author would have done well if he had refrained from attempting to be poetical. The heart of a man who has never been in love is, he tells us, "like an album in which is written no poetry." The best kind of album, he might have added. The hero, when in love, became fond of "Mr. Alfred Tennyson and some of that gentleman's exquisite poems." He spent much of his leisure also in composing on his own account, with "ink and paper—tinted and perfumed paper, look you—outspread before him." First let us observe the graphic force of the "look you," and then let us meditate on the charming idea of a poet, say Dante, Milton, or even that gentleman Mr. Alfred Tennyson, sitting down to write poetry on tinted and perfumed paper. The heroine's poetical attempts—"juvenile outpourings" the author calls them—were locked up in a "specially private drawer, along with bags of lavender and rose leaves, and various gushing letters"; but her lover "turned over the pages of his album" (*i.e.* his heart) "and gloated over the imperishable poetry which Maud's bright eyes had written there." We would modestly suggest that, if a second edition should be brought out of *Maud Linden's Lovers*, it should be printed on tinted and perfumed paper, and illustrated with valentines; and that it should be exposed for sale only in perfumers or hairdressers' shops. And the author is as fond of confectioneries as of perfumeries. Here is a description of a wedding-breakfast:—

> Such a breakfast! Epergnes brimming over with the loveliest of perfumed flowers; wonderful dishes with still more wonderful things to eat inside of them; everything so grand and fairy-like, and possessing such extraordinary names that the waiters stared and gaped and said, "Yes-sir; beg pard'n! what d'you say, sir?" when Uncle Josh., or his equally jolly wife, essayed to mention them.

All these excellent things were served by "the most immaculate of waiters as to temperance," and when the bride "cut the first slice of that wondrous wedding-cake" she was "blushing like a peony."

A chapter in the second volume, headed "The same—The Light in the Turret," is a good specimen of the author's attempts at agony-writing. He tells us that it was getting dusk when the wicked Sir Jasper Estcourt took his guest for a walk in the grounds of his lonely old mansion, and casually observed to his companion:—"The old place has a grand local reputation of being haunted; so if you wake in the night and find a hideous old woman, in high-heeled shoes and the costume of Queen Anne's time, peering into your face, you must not be surprised." Then the appearance of the old house is described. A glimpse of it was caught through the thick foliage, a light or two shining "through the lower windows of the western wing of the building, while the other end of it loomed, black and forbidding, against the sky." The pale crescent moon suddenly disclosed itself, as a thick cloud, driven by the wind, flitted away, and seemed to rest on the very centre of a certain round tower or pinnacle (two very different things we used to imagine), which peeped up above the general outline of the building. "The wind," wrote the guest, "howled through the trees dismally; the leaves and the grass seemed to bend and shiver in the way that is frequently the precursor of a storm. A rushing sound of footsteps, near a cluster of fir-trees at the back of us, startled me." His host assured him that this was only caused by one of the few deer that stocked the park. "And that other strange noise, what is that?" "The shrieking of the wild geese." All went on pretty well, however, until the visitor went to his bedroom for the night. The bedstead was a "four-poster, one with faded drapery; and in a corner of the room was an old screen of tapestry work." Besides these horrors, there was "an antique cabinet, the brass handles of which jingled with a mocking sound as though the brass lions' heads that held them were laughing and chattering at every step I took across the room. It was a grotesque piece of furniture, truly, with numberless drawers, besides two lofty doors which opened in the centre." After this kind of thing, one feels certain that something terrible is about to happen, and in this case the agony soon begins. When he looked out through his latticed window, "the foliage of clambering ivy partially obscured" his view, but he fancied he "perceived *a ray of light falling from that turret window*" which his host had assured him was now merely a lumber-room, but which had the reputation of being the specially haunted chamber. Turning from this awful scene to the account of a picnic, we find that the holiday-makers gathered violets and primroses at a time of year when standard roses, geraniums, and mignonette were in full flower in their gardens at home. When girls went out to stroll in country lanes, they put on bonnets, "and, my goodness! such captivating bonnets they were!" After these things we become quite hardened, and can even read unflinchingly of a young lady deftly presiding over a tea-table, and "dispensing with her soft white hands the balmy cup that soothes, and with her eyes glances and smiles that intoxicate." This was the same lady whose "juvenile outpourings" had been locked up along with bags of lavender and rose leaves.

We do not think it necessary to offer any criticisms on a book from which it is possible to make such quotations as these. We have had a large experience of what modern novelists are capable of, but we had not conceived it possible that quite so much vulgarity and nonsense could be crammed into one novel as we find in *Maud Linden's Lovers*.

GREEK PLAYS AND SCHOOL EDITIONS.*

Candidates for the Cambridge Previous Examination or Little-go in the autumn of 1879 may be congratulated on the fact of the authorities having chosen the *Ion* of Euripides for the Greek subject, inasmuch as it cannot but extend more widely than heretofore the too narrow range of the ordinary University subjects. And when so experienced an editor as Mr. Paley, the value of whose Euripides and Æschylus in the "Bibliotheca Classica" is recognized on all hands, is early in the field with a brief-note edition of the *Ion* for the Cambridge Texts series, there is ground to hope that a considerable number of junior undergraduates will by the end of the year have added more or less to their knowledge of Euripides as seen in an exceptionally fine play. For, although it does not abound in great or marked characters, there is more of complex and intricate plot in the *Ion* than in almost any other play of Euripides—plot that holds the reader on the proper stretch of suspense, and only terminates its surprises after a series

---

* *The Ion of Euripides.* With Brief Notes for Young Students. By F. A. Paley, M.A. Cambridge: Deighton & Bell. London: Whittaker & Co.; G. Bell & Sons. 1878.

Æschylus.—Prometheus Vinctus. With Introduction and Notes. By A. O. Prickard, M.A., Fellow and Tutor of New College. Oxford: Clarendon Press. 1878.

Homer.—Iliad. Book I. By D. B. Monro, M.A., Fellow of Oriel College. Oxford: Clarendon Press. 1878.

Xenophon's Anabasis. Book II. Edited, with Notes, by C. S. Jerram, M.A., late Scholar of Trinity College. Oxford: Clarendon Press. 1878.

Stories in Attic Greek. A Greek Reading-book for Junior Forms in Schools. By the Rev. F. D. Morice, M.A., Assistant-Master in Rugby School and Fellow of Queen's Coll., Oxford. London, Oxford, and Cambridge: Rivingtons. 1878.

of startling incidents. The character of Creusa, the daughter of Erechtheus, who, after her early and clandestine union with Apollo, and the exposure and supposed loss of her babe, Ion, is led unwittingly to accompany her later husband, Xuthus, to the Delphian Oracle to consult the god respecting their childlessness, and the complications arising out of the wire-pullings of the god who is really the "rogue in the play," with the skilful management of the tokens of recognition produced at the needful time by the Delphian priestess, and the eventual happy reunion of the long-lost Ion with his mother, are features in the story which can only be held in the mind by careful perusal of the whole play. We may hope that the attention called to the *Ion* in the present year may have the result of producing a better translation of it than the inadequate versions of Potter and Woodhull, and affording a just estimate of a drama of so much picturesque beauty, so much "tragic irony," so much bearing upon Attic mythology, topography, and legend-lore. It need scarcely be said that, beautiful as it was, Judge Talfourd's *Ion* was only in name, scene, and some of its surroundings indebted to the Euripidean play; so that any reader who should dream of gleaning the one plot from a general knowledge of the other would find himself completely mistaken. For instance, the character of the temple-reared sacristan Ion, charming as it is in Euripides, has scarcely, with all his devotion to the shrine and the god, with whom he does not know his real connexion, the reverence and reticence which the modern dramatist would have considered necessary as regards his divine patron. The Ion in the play before us is well described by Mr. Bodham Donne in the *Euripides* of the "Ancient Classics for English Readers" as "by turns an expert ritualist or a polite cicerone." But Talfourd's *Ion* would have figured more aptly as an early Basil or Gregory of Delphi than as one who, in v. 437 (*seq.*), does not scruple to lecture his patron god upon his illicit amours, and his heartless desertion of the unlucky fruits of them. Yet this is quite in keeping with the outspoken language of Creusa in two passages of the play, and notably at v. 859 *seq.*, an anapæstic monody where she reproaches herself with hesitation, Xuthus with perfidy, and the god Apollo with fraud. Mr. Paley's preface succinctly points out the drift of the play—namely, to enforce caste, to exclude aliens, and to limit civic honours to the well-born, a process which eventually ruined Athens. He fixes its date some four years after the death of Pericles. In his notes on the topography of Creusa's misfortune, *e.g.* on v. 13, Mr. Paley gives sufficient general aid to the reader, and refers him for further particulars to the delightful pages of Dr. Wordsworth's *Greece*. Where, as in the Prologue of Mercury (v. 20), reference is made to the necklace of snake ornaments (*cf.* v. 1431) which Creusa affixed to the child when she exposed it, Mr. Paley has a note which will be of interest to archæologists, as broaching the topic of such ornaments as worn for a charm or fetish in Etruscan, Pompeian, and it might perhaps be added Romano-British jewelry. Equally helpful are his explanations of passages connected with the temple precincts at Delphi and the neighbouring oracle of Trophonius; and he is apt in his comparisons of the old pagan custom of strewing boughs of bay, myrtle, and rosemary at processions on the pavements of Continental churches with the tasks assigned to the young *νεωκόρος* or temple sweeper at Delphi. *A propos* of the mention of the *ὀμφαλὸν* which Delphi represented in classic legends, Mr. Paley quotes the old maps (he might have cited the Mappa Mundi at Hereford) which make Jerusalem the centre of the round world. In the labour which Mr. Paley has bestowed on this edition, both in the recension and interpretation of the text, there is proof of concentration and compression, while in many instances he finds confirmation of his first views.

Mr. A. O. Prickard's edition of the *Prometheus* of Æschylus for the Clarendon Press deals with a play the subject and language of which are more widely familiar. From the editor's reputation as a scholar and as a friend and pupil of the late Professor Conington we entertained hopes which the work before us has not disappointed. Steadfast in the aim of blending the practical advantages of a familiar text with a greater respect for Æschylean MSS., he has mostly followed Dindorf's 2nd edition (Oxford, 1851), though admitting now and then a few variations that are found in that of 1869. The notes profess to be meant for students of Greek at an early stage, and our examination of them shows how well this object has been kept in view, both in such prefatory counsel as that Æschylus is his own best interpreter, and that careful reading of any part of Homer is an excellent preparation for the language and thoughts of Æschylus; and in his careful indication of notable features of the poet's style, such as his habit of repeating words—*e.g.* *ἀκοντά σ' ἄκων* in v. 19 (*cf.* 192, *σπεύδων σπεύδοντι*, and 276) to mark a special force. This is a habit borrowed from Homer. Mr. Prickard has evidently studied the interest of tiros in his note at v. 21, *ἵν' οὔτε φωνὴν οὔτε του μορφὴν βροτῶν ὄψει*, where he illustrates the figure Zeugma by showing what would be the "plena locutio"; and again in the note at v. 62 on the Oxymoron, as well as the Greek use of the participle for the infinitive on *μάθῃ σοφιστὴς ὢν Διὸς νωθέστερος*, and that at v. 85, illustrative of the play on words so frequent in the Greek dramatists, which he caps with Shakspeare's "Old John of Gaunt, and gaunt in being old." Very lucid, too, are his notes on the peculiarity of Æschylean compounds such as *ναρθηκοπλήρωτον* (109), *ἀδαμαντοδέτοισι* (147), and *δακρυσίστακτον* (399). On the problem of v. 210, where Gaia and Themis are said to be one in contradiction to v. 874, and *Eumenides* v. 1, where Themis is made Gaia's daughter and successor, his solution is reasonable, that the personality of these early Nature deities was very vague, the tendency being to form one person out of two or more names with which legend associated like attributes. When, further on in the play, he has to deal with Prometheus's prophetic sketch of Io's wanderings, his elaborate notes on the elucidation of the geography (l. 705, *seq.*) deserve close attention. Of many introductions to Greek plays we have seldom read one so readable and helpful as Mr. Prickard's, and we particularly thank him for a trait which he insists on in all the Æschylean gods and heroes, "that in them the poet depicts character as truly human as Milton's Satan or Abdiel in the great English epic."

Mr. Monro of Oriel's notes and essay on the grammar of the First Book of the Iliad are in part specially designed for rudimentary students; but we are bound to add that the thirty pages devoted to an essay on Homeric grammar furnish good meat for full-grown Homerists. A young beginner who should take it up with an honest determination to comply with the editor's directions, and, after well digesting the grammar and the peculiar dialectic and grammatical forms, should diligently hark back upon every occasion to the sections of it referred to in the notes, could hardly fail to find himself at the close of the book wonderfully well equipped for the study of the rest of the Iliad, and, generally speaking, fortified against any difficulties of construction or dialect. The sections of this essay which treat of metre and the quantity of doubtful vowels, the digamma, and the epic dialect and style will be found most useful reading; and the constant references to them in the notes will afford an invaluable exercise in the practice of the principles they enunciate. For a first book to Homer we could not wish a better than Mr. Monro's.

Of Mr. C. S. Jerram's edition with notes of the Second Book of Xenophon's *Anabasis* we are prepared to think well by his excellent work on the Tablet of Cebes which we reviewed some months ago; and, though we cannot help feeling that the *Anabasis* has had more than a fair share of competent editors of late years, and that spare energy might be better expended on a good edition of the same author's *Œconomicus*, the very work to put into a schoolboy's hand, we welcome this volume as culling the best notes of the best English and German editions, and embodying the most recent results of geographical research. One feature is very notable in it—namely, that Mr. Jerram sends even old scholars to their Liddell and Scott oftener than his contemporaries—*e.g.* in c. ii. l. 82 at *εὐθύωρον ἄγων*, where the absence of a note, which would be simply a "construe," is a virtue in a school edition. In elucidation of the grammar of Xenophon, Mr. Jerram is usually quite at home, as where, on i. 68, he gives a note on the four forms of a conditional sentence and (*ibid.* 93) illustrates the use of the adverb with the article in *τὸν ἔπειτα χρόνον*, by St. Paul's expression, "thine often infirmities." He is doubtless right in adopting the view that the *Τιγρὴς ποταμός* of c. ii. l. 15 cannot be the Tigris proper, but a branch, once much larger than it is now, which is known as the *lesser Tigris*. This, as he says, may be seen by studying the map. We are glad to observe that Mr. Jerram promises an edition of Lucian's "Vera Historia."

The last volume on our list is Mr. Morice's happy endeavour to introduce beginners to Attic Greek in a more palatable form than that in which it is presented in the Delectus or the (pseudo) Æsop. He seeks to effect this "not *per saltum*, but gradually and with preparation," and carries out his purpose by means of a very copious vocabulary, and ten prefatory pages of capital "Hints to Beginners." Some of the stories are now given for the first time in a Greek dress; others are taken mostly from the less read Greek authors, and, in the case of the later and longer stories, from Thucydides, with adaptations. Perhaps it would be a good precaution in reading these stories to make sure first of all that they are new. One at page 18 is entitled "Nelides and his Grandmother," and as its point turns on the reply of a future admiral, at the age of five years, that "he did not know who *fear* was," it soon occurred to us who "Nelides" was, and we discovered that we were reading an anecdote from Southey's *Life* of Nelson in Attic Greek. Some other stories—*e.g.* 187 and 128 on "Old Wine"—are happily turned Joe Millers, which we can conceive affording amusement to beginners of Greek.

MINOR NOTICES.

MESSRS. MACMILLAN have produced an English version of Dr. Busch's now well-known work (1) which will doubtless be of great service to people who want to become acquainted with the whole of the book without encountering the trouble of reading it in German. Perhaps Dr. Busch's likeness to Boswell comes out more strongly in the translation than in the original. Here is a passage which is in a way curiously Boswellian:—"In the bright autumn nights we used in our walks in the park to see the tall form and the white cap of the Chancellor issue from the shadow of the bushes into the moonlight and walk slowly up and down. What was the unsleeping man thinking of? What ideas were revolving in the head of the solitary wanderer? What plans germinated or ripened in the still midnight hours? Another friend of the park inspired us with less reverential feelings, that ever-young disciple of the Muses, Abeken, as we heard him reciting in the evening, with no melodious voice, strophes from the Greek

(1) *Bismarck in the Franco-German War, 1870–1871.* Authorized Translation from the German of Dr. Moritz Busch. 2 vols. London: Macmillan & Co.

tragedians or the *Wanderers' Nachtlied*. It looked almost comical when the old man's feelings made him search in the morning under the dry leaves for violets to send to his wife, the 'Frau Geheime-Legations Räthinn' in Berlin. But it was not pretty in me to laugh inwardly at him, for I must confess that, instigated by him, I afterwards sent some myself to my own Frau Doctorinn to give her pleasure."

One of the oddest results of universal competition is found in the atlas-like volume (2) which Mr. Marsh has prepared for the solace of the miserable wretches who are doomed to a course of examinations. The purpose for which it is, we are told, intended, "is not to supersede the use of books, but rather to jog the memory and test the methods adopted for preparing for the ordeal of a public examination, affording them, as it were, an opportunity of examining themselves beforehand and supplying their own deficiencies." In the space afforded by seventy-six pages of clear type the memory is jogged on the subjects of English, French, German, Italian, and Spanish, Greek, and Latin; general geography, English history, the British Constitution, arithmetic, elementary and advanced, algebra, and mensuration. English history is disposed of in four pages, and, for some reason best known to those versed in examinations, the only reign to which any but passing mention is given is that of Queen Elizabeth, whose general character is sketched in this brilliant manner:—"She ruled with absolute sway, yet chose wise and grave counsellors. Elizabeth never married. Her favourites were the Earl of Leicester and the Earl of Essex, whose generosity merited a better end than his own rashness and false friends brought him to." Perhaps Mr. Marsh, having produced a book for the help of those subject to the general ordeal of public examination, will now devote his attention to preparing one for the use of persons intending to submit themselves to the Caucus.

Mr. Haslam's *First Latin Book* (3) is a good specimen of the improved elementary manuals turned out under the reign of modern and scientific scholarship. It obviously requires more personal trouble and attention on the part of the teacher than the old-fashioned grammars, which were mere collections of matter to be learnt by rote, and left understanding to take care of itself; but this is probably intended, and in any case is not undesirable. A short introduction endeavours to set before boys the advantages of learning Latin; we conceive that its success will depend more on its falling upon willing ears than on its own merits, but it is very sound as far as it goes. The following paragraph may indeed deserve consideration among those adults who talk about the virtue of learning science, as if natural science were easier to teach thoroughly than anything else, or enumerations of phenomena could not be learnt by heart as unintelligently as inflections:—"I daresay you will have been told that it is very important for you to learn what is called Natural Science. Learning Natural Science teaches you how to notice things that you see and hear, and make rules about them for yourself, in just the same way that learning arithmetic teaches you to notice numbers and make rules about them; and learning Latin teaches you to notice your words and make rules about them. But neither your numbers nor the things that you see and hear will be so much use to you if you cannot speak about them and write about them in careful words; and, to get this carefulness about words, your best way is to learn Latin thoroughly as well as these other subjects."

The miniature octavo lettered "Divine Breathings" (4) is, in its outward aspect, one of those dainty reprints which Mr. Whittingham knows so well how to produce; and in this case the trouble has been worthily bestowed upon a book of real merit as a serviceable manual of practical devotion. We learn, both from the preface which the Rev. W. J. Loftie has prefixed and from our own examination, that a certain mystery attaches to the authorship and to the literary history of the volume. The title-page of the, we believe, unique copy from which the present edition is reprinted announces that it is the "fifteenth edition with additions," and it is "printed for G. Keith in Gracechurch Street, 1775." On the other hand, the "Address to the Christian Reader" is signed, without date, by a certain "Christopher Perin," who states that, though "the author's name is not prefixed, his piety these heavenly breathings speak; which being found by a person of no mean degree, among the writings of an eminent divine, have been by him communicated only to his dearest relations, as a celestial dove to carry the olive-branch of peace unto their souls." A copy fell, so Perin says, into his hands, and he published it. Such are the indications on which Mr. Loftie had to work, and the only Christopher Perin on whom he has been able to light is one of whom he learns from Le Neve's *Fasti* that he "occupied a Stall in Winchester Cathedral Church and died before the year 1610, having held the prebend above twenty-seven years." Mr. Loftie contends that two perfectly different theories may be formed out of these facts—one being that the Perin of the book was the Prebendary of Winchester, and therefore the editor of the lost first edition; the other, that he was some unknown bearer of the same name of a later generation, who floated that fifteenth edition of the year 1775, from the sole existing copy of which, as we have explained, this reprint has been made. For our own part, taking the facts as stated by Mr. Loftie, we have no doubt that the first is the only tenable hypothesis. Not only would the latter one imply that the copy of the book which came into Perin's hands was one of the printed editions, which would be a very strained meaning to put upon his words, and that somehow he had an unexplained familiarity with the circumstances of its composition, but there is the internal evidence of his own phraseology, which seems to carry its own date with it. The extract which we have given is in itself enough to prove that his style is natural to a writer of the end of Elizabeth's and beginning of James I.'s reign, while it would have been simply impossible to a contemporary of Dr. Johnson. Moreover, the book ends with "Pious Reflections of a Devout Reader," who is made to apostrophize the "blessed author" with the question "Art thou yet alive?" composed in language which the original Perin might have used, but which is inconceivable from the pen of a Georgian editor. These considerations, however, are far from exhausting the difficulties attending the book. The total destruction and absolute oblivion which have attended fourteen editions, and the all but total loss of the fifteenth, would be very puzzling, while we have only the word of the publisher of the latter for the existence of those fourteen. The only thing certain from internal evidence is the correspondence in date between the portion which professes to come from the pen of Perin and that which he attributes to the unknown author. This correspondence would, of course, be intelligible if the whole book were in reality the production of "Perin" himself—whether "Perin" were the Prebendary or some later namesake—just as it would be found under the first of Mr. Loftie's conjectures. In our ignorance of G. Keith's antecedents, it might not be uncharitable to go one step further in our conjectures, and ask whether it is quite certain that the fourteen editions had any existence except on his title-page? If they have not, and if, as is quite possible, he may have got possession of the Perin MS., or have been imposed upon by some literary man who had done so, the difficulty is reduced to the disappearance of the 1775 edition, which may, after all, have been an abortive publication. There is yet another incident about the book which may give some clue to the mystery. Various authors, as might have been expected in a work of its date, are quoted in the course of the excellent "Breathings"; but we have failed to discover any of a later date than St. Bernard. Such a peculiarity in a book of devotion written in England about the close of the sixteenth or beginning of the seventeenth century can be most readily explained by supposing that the writer's sympathies were not much with the Reformation; and in this case there may have been good reasons both for suspending publication and for some mystification respecting the authorship.

M. Rambaud's valuable History of Russia (5) was reviewed at length in our columns last year, when we observed that "M. Rambaud does not pretend to give an exhaustive account of the details of Russian history. He occupies himself with the causes that bring about events, and with the events that tend to shape the causes." In the course of our remarks on that occasion, we called attention to the various points of interest which offer themselves in M. Rambaud's work, and it is now not necessary to do more than to point out the fact that Mrs. Lang's translation has made the book accessible to all English readers. We must, however, give a word of special praise to the translator's easy and correct style. The volumes are adorned with well-executed illustrations.

A new and enlarged edition has appeared of Messrs. Northcote and Brownlow's authorized compilation from the well-known and valuable works of Commendatore de Rossi on the Roman Catacombs (6). The additions to this revised version of the work are mainly the incorporation of the substance of the third volume of De Rossi's work which appeared in 1877. Also marginal references to De Rossi are given, and a separate volume, uniform with the one before us, and already reviewed in these columns, is devoted to the inscriptions of the Catacombs. A letter from Commendatore de Rossi, printed in the preface, serves to answer the charge of inaccuracy which has been brought against the compilers and translators.

Messrs. Bell have issued a most handy and well got-up edition of that most delightful book the *Essays of Elia* (7). It is possible that those who know and love their Elia will prefer their own well-thumbed copy, if it is not in absolute tatters, to any new one, however convenient; but readers who are yet in darkness as to Lamb will find themselves attracted by the outside excellence of this edition before they are fascinated by its contents.

Attempts to combine instruction with jocosity are not, as a rule, desirable or successful. It is fair to Mr. Drury to say that in his venture in this direction (8) there are one or two amusing

(2) *The Students' Reminder and Pupils' Help in preparing for a Public Examination.* By Thomas Marsh, Author of "An English Grammar," &c. London: Stevens & Haynes.

(3) *First Latin Book.* By F. W. Haslam, B.A., Second Master of United Service College, Westward Hô. London: Whittaker & Co. Rugby: A. J. Lawrence. 1878.

(4) *Divine Breathings; or, a Pious Soul thirsting after Christ in a Hundred Pathetical Meditations.* London: Pickering & Co. New York: Dodd, Mead, & Co. 1879.

(5) *The History of Russia; from the earliest times to 1877.* By Alfred S. Rambaud, Professeur à la Faculté des Lettres à Nancy, &c. Translated by Leonora B. Lang. 2 vols. London: Sampson Low & Co.

(6) *Roma Sotterranea; or, an Account of the Roman Catacombs.* Compiled from the Works of Commendatore de Rossi, with the consent of the Author, by the Rev. J. Spencer Northcote, D.D., and the Rev. W. R. Brownlow, M.A. New Edition, re-written and greatly enlarged. London: Longmans & Co.

(7) *Essays of Elia and Eliana.* By Charles Lamb. With a Memoir by Barry Cornwall. 2 vols. London: Bell & Sons.

hits, but that is about all [illegible]. As a whole, the work will neither amuse nor teach its readers. Those who want really to learn will be bored by the constant attempts at joking; those who want to be amused will probably seek entertainment elsewhere.

A seventh edition has appeared of Dr. Abbotts's pamphlet on impediments of speech (9). What Dr. Abbotts says on this matter is sensible, if commonplace; but it is somewhat remarkable that the promise of the title-page is practically but half fulfilled. Dr. Abbotts tells us a good deal about the causes of these impediments; as to their cure, he tells us that Dr. Abbotts can effect it, and very little more. No doubt it is impossible to recommend in writing any general remedy for an affection which takes such various forms, and which is at present so little understood. Many quacks—among whom Dr. Abbotts is not to be classed—have taken up the matter, and have advertised wonderful cures for stuttering and stammering, which have been invariably unsuccessful. The truth, which Dr. Abbotts recognizes, and even insists upon, is that almost every case requires a special treatment. We remember being told by an old West-countryman, who was especially clear of speech, that he had been an inveterate stammerer in his youth, and had cured himself by resolving to repeat one of the Psalms straight through every morning, and whenever he had odd time to fill up, without hesitation. There is of course little doubt that most forms of exercise in reading or speaking aloud will effect a temporary improvement, although a permanent cure is very rare. Our objection to Dr. Abbotts's pamphlet is that it really throws no new light on the subject, although it must be credited with the negative merit of recommending no quack remedies.

Mr. Hamilton ends a slightly tedious preface to his work on the Poets-Laureate of England (10) by an appeal to critics to be merciful as they are strong. "Blame me not," he writes, "if the flavour do not suit your palate, for here is no pretension to the poetry of a Hogg nor the philosophy of Bacon." Before so curiously-worded and so candid a confession we feel ourselves disarmed, and will merely do Mr. Hamilton the justice of quoting his judgment upon Mr. Tennyson. "Tennyson's poetry will eventually be treated in much the same way as posterity has dealt with that written by the more admired of his predecessors. His longer works will become standard classics, read by thoughtful students, and the few people who really care for good poetry, and who can and will spare the time to ponder over its beauties. Some of his grandest passages will appear as disjointed extracts in school books and ladies' albums, whilst by the general public his name will be remembered chiefly in connexion with the brief and more trivial productions of his pen; and poems by which he now sets little store will then probably be chosen as examples of his skill." The gift of prophecy is a rare and wondrous thing.

A second edition has appeared of a little work (11) written by one who has evidently studied Mr. Tennyson's writings with the utmost care and minuteness, and has given in this volume some of the results of his researches. Amongst other things of interest the volume contains some curious instances of parallel passages in "In Memoriam" and Shakspeare's sonnets.

Mrs. Heaton's work in editing the *British Painters* (12) of Allan Cunningham, whom she calls "our shrewd Scottish Vasari," has been done with care and skill. No alteration beyond mere verbal correction has been made in the original text, but a good deal that is useful has been added in foot-notes. Mrs. Heaton may be congratulated on the success of her work as editor, and on the interesting Life of Cunningham which she has prefixed to the biographies.

The same publishers gives us a new edition of Mr. Redgrave's Dictionary of English Artists (13), a work of which the value has long been recognized.

The many admirers of Mr. Locker's verses (14) may perhaps be disappointed at finding that a new book bearing his name contains but a small proportion of his own work. The volume is, in fact, a selection from his commonplace book of stories, verses, and reflections which, when they were originally collected, he had no idea of publishing. In such a work there must of course be some stories that are not absolutely new; but almost all of these are so good that we are glad to meet with them again and to know that they are preserved. Of the stories that are new by far the best to our thinking is that of Mr. Doo and his "little book," which will be found in p. 125. In p. 77 Mr. Locker gives four of the titles supplied by Hood for sham books:—"Percy Vere," in forty volumes; "Life of Zimmermann," by himself; "Tadpoles, or Tales out of my own Head"; "Voltaire, Volney, Volta," three vols. Surely "Cursory Remarks on Swearing" was worthy to be ranked with these.

(9) *Impediments of Speech—Stammering, Stuttering, Lisping, &c.: their Causes and Cure.* By William Abbotts, M.D. Seventh Edition. London: G. J. Pitman.

(10) *The Poets-Laureate of England.* By Walter Hamilton. London: Elliot Stock.

(11) *Tennysoniana.* Second Edition, revised and enlarged. London: Pickering & Co.

(12) *The Lives of the Most Eminent British Painters.* By Allan Cunningham. Revised Edition. Annotated and continued to the present time by Mrs. Charles Heaton. London: George Bell & Sons.

(13) *A Dictionary of Artists of the English School: Painters, Sculptors, Architects, Engravers, and Ornamentists.* With Notices of their Lives and Work. By Samuel Redgrave. New Edition, Revised to the present date. London: George Bell & Sons.

(14) *Patchwork.* By Frederick Locker. London: Smith, Elder, & Co.

Professor Morley has issued a new edition of his Life of Palissy (15). He observes that when the book first appeared in 1852 practically nothing was known of Palissy in England. "Even in France one who then knew his whole worth remarked, 'How completely Palissy has remained unknown, to the peasants whose tongue he employed so well—to the wise men whose science he should have reformed.'" It was necessary, therefore, in former editions to include much matter which is now either abridged or omitted. The new edition is welcome, and will doubtless be widely appreciated.

Mr. O'Flanagan's book (16) reminds us somewhat of the Prince's comment on Falstaff's reckoning. There are some very good stories in it, as one would naturally expect in a book dealing with such a subject, but there is also an intolerable deal of dulness.

We cannot, we fear, compliment Captain Chawner highly on his translations (17). He appears to have very little knowledge of the laws of rhyme and metre, and without some learning in this direction it is not altogether easy to produce good verses. Here is a stanza from "Lenore" by way of a specimen:—

> But hark! without, trot, trot, trot heard
> As of a charger's gallop,
> The clank as of a knight that spurred,
> And at the postern drew up.
> And hark! and hark! that portal's ring,
> Then soft and gentle, ting, ting, ting,
> There came in at the gate
> These sounds articulate.

Miss Edwards, in a little volume which she announces as the first of three series (18), gives us various selections from English poetry, chiefly lyrical, beginning with Chaucer and ending with Gray and Cowper. The second series is to begin with Burns and come down to to-day, and the third is to contain specimens of English prose. The hope of the compiler that the three volumes taken together will "afford a pleasant bird's-eye view ranging over nearly five hundred years of English literature," is perhaps a trifle extravagant; but it may at least be said that the selections in the first of the series have been made with judgment, and that the notes are on the whole excellent. We must, however, protest against their writer making, even "with much diffidence," an alteration which seems utterly weak and needless, and which does not pretend to be supported by any authority, in a line of Burton's ode "On Melancholy." The love of emendation seems to be growing to such proportions that it will soon have to be classed as a new vice, and we are sorry to find it encouraged in a volume which otherwise has much to recommend it.

The publisher's note to the two volumes extracted from Mr. Spedding's well-known edition of Bacon's (19) occasional writings shows what would otherwise only be apparent from the spelling adopted, that the work is originally American. The note explains that the work was projected and executed to meet what was believed to be the demand among American readers for a biography of Bacon, which "should present the result of the most thorough criticism and inquiry, and include so much of contemporary history as is needed to give the life its proper setting. . . . The editor of this American abridgment has followed Mr. Spedding's order and authority in all points; his part has been to retain those portions which he judges to be of most interest to American readers." The result of this is that the commentary has become the most important part of the work, the writings serving only to illustrate it. It is certainly true that in any popular and brief Life of Bacon most of the letters are not necessary to the reader, although they are to the writer. The work was undertaken with Mr. Spedding's permission; and, when the selections had been made, he revised and corrected them; so that "the book as it now stands may be regarded as embodying the editor's conception of what would be chosen by an American reader who should judiciously skip in his reading of the original work, and Mr. Spedding's final literary revision." Such a work has an obvious and undoubted value, and ought to find many readers here as well as in America.

THE ZULU WAR.

THE defeat of the head-quarter column of the troops operating against the Zulus is the heaviest disaster which has been incurred by an English force since the destruction of General ELPHINSTONE's army in the retreat from Cabul. The valiant resistance offered to overwhelming superiority of numbers might afford a melancholy consolation, if the heroism of the officers and men had not illustrated the strategical blunders which gave occasion to its display. If it is true that the enemy numbered twenty thousand men, the force which has been utterly crushed must have been dangerously weak. Lord CHELMSFORD's conjecture that the troops had been enticed away from the camp will no doubt hereafter receive further explanation. Rorke's Drift Fort, which seems to be the same place with the camp, was successfully defended by a handful of men, until it was relieved by Colonel GLYN with the remainder of the head-quarter column. For the present it must be assumed that the officer in command of the camp had been induced by a feint of the enemy to take the offensive, and that he unexpectedly found himself in the presence of the main Zulu army. It is useless to deplore a humiliating calamity which will probably have changed the whole character of the war. The English army has been compelled to recross the border; and the campaign will be suspended until the arrival of reinforcements from Mauritius or from home. In the meantime serious danger is apprehended in Natal and in Pondoland; and there can be no doubt that the confidence of the Zulus and of other Caffre tribes will be dangerously increased. As in the case of the loss of the army of Cabul, military failure will affect the general judgment of the policy of the war. Yet in one sense the Zulus have justified the declaration of war by proving that they are formidable enemies. The reasons assigned for the rupture were obviously fictitious; and those who objected to the war were sometimes inclined to deny the existence of a danger which now appears to have been underrated.

Sir BARTLE FRERE probably hoped, in the interest of humanity, as well as for more selfish reasons, that the war would be successful and short. In his declaration of war he announced, in language which has almost become a common form, that he was at war not with the Zulu nation, but with the KING alone. As the tribe had to suffer all the consequences of hostility, the distinctions had little meaning. Lord LYTTON lately gave a similar explanation of his motives for invading Afghan territory; and his statement has been partially confirmed by the flight of the AMEER and the submission of some border tribes. Even the German Government, in beginning the war with France, professed to have no quarrel except with the EMPEROR; and after the establishment of the Republic simple-minded French politicians were unable to understand why the siege of Paris and the occupation of the conquered provinces continued. In Zululand, as in Afghanistan, the native ruler has perhaps disaffected subjects who might have been inclined to take the part of the invader if he had proved himself the stronger. There is no other reason for professing special enmity to the KING. CETEWAYO has furnished no excuse for war except his representing and directing a military organization, which was always alarming to his neighbours, [illegible] and which now proves itself unexpectedly formidable. He always professed friendship to the English until he was offended, and perhaps puzzled, by the annexation of the Transvaal. Before that event he had regarded the English authorities as his friends and allies, and he lately accepted the arbitration of the Natal Government in his frontier dispute with the Dutch settlers. The award is to a considerable extent a recognition of the justice of his claims; and there is no reason to doubt that he would have acquiesced in the result of the reference.

Public attention will now be concentrated on transactions which have hitherto attracted only a languid and intermittent curiosity. If the melancholy catastrophe announced in the late despatches could have been anticipated, either the war would have been postponed or greater care would have been taken to prove that it was urgently necessary. The formal exposition of the causes and objects of the war varied in some respects from the earlier document in which the HIGH COMMISSIONER had demanded redress; but, except in the omission of some trivial pretexts of quarrel, it was not more forcible or more convincing. It was apparently thought, on fuller consideration, that the detention of two sketching Englishmen for an hour and a half was not an adequate justification of war. Sir BARTLE FRERE also omitted in the declaration of war to mention the border award, perhaps because it was not unsatisfactory to the Zulu KING. The only offence of which he still formally complains is the seizure by a subordinate chief of two Zulu women who are supposed to have been afterwards put to death. Even in this case CETEWAYO was willing to pay damages; but he failed to comply with the HIGH COMMISSIONER's demand that he should surrender the perpetrators of the outrage for trial. It might have been thought that, if his offer was unsatisfactory, there was still room for negotiation. It must be difficult to ascertain whether the KING is so far absolute that he can with safety and in conformity with the national usages surrender a subordinate chief to be punished for an act which is probably not considered as a crime. If the women were accused of infidelity, it may perhaps have been a point of honour to inflict upon them the penalty of their misconduct. The real offence against the English Government was confined to a violation of territory which could scarcely have created an inconvenient precedent if it had been followed by payment of compensation; yet Sir BARTLE FRERE takes the opportunity, not merely to demand further satisfaction, but to insist on the harsh terms which he had already announced his intention of imposing. The war could only have been averted by the disbandment of the Zulu army, and on the more singular condition of a fundamental change in the local law of marriage. As the married men are not released from military service, it would seem that the removal of existing restrictions would have afforded no additional security for peace. Sir BARTLE FRERE's later Memorandum adds nothing to his Proclamation, if indeed it does not rather weaken its effect by reference to grievances of old date and to vague complaints of CETEWAYO's tyrannical despotism.

It has been customary from time immemorial to publish fictitious apologies for wars which may not always have been unjust. It is difficult to believe that Sir BARTLE FRERE would have engaged in a contest which may be costly and difficult without more solid reasons than

the recapture by their relatives of two female fugitives. The colonial opinion that war was necessary or expedient is not founded on grounds so transparently frivolous. It is difficult to understand why a document which was intended for the satisfaction of the HIGH COMMISSIONER'S countrymen in England, in South Africa should not have been more candid, and consequently more intelligible: The only admissible justification of the war would be the duty of providing for the public safety. The Zulu KING had a large army on the frontier of the Transvaal with no employment or purpose expect the invasion of the province at some unknown time. The most plausible declarations of war in modern Europe have often been preceded by demands for the reduction of menacing armaments; and in some instances the combatant who has been the first to engage in war has been really acting on the defensive. CETEWAYO would not have failed to understand a notice that he could not be allowed to menace the safety of the neighbouring colonies; and if savages have in a rudimentary form the understanding and feelings of civilized men, a practical and intelligible argument would have been less irritating than an artificial pretext. If the Zulu KING had consented to partial or complete disarmament, the proposed change in the Zulu marriage laws might well have been reserved for further negotiation. Colonial interests cannot be injuriously affected by institutions which tend to check the growth of the Zulu population.

Paradoxical transactions generally admit of explanation; and Sir BARTLE FRERE'S character entitles him to provisional confidence. His case has still to be fully stated, although he has given CETEWAYO all the information to which he deems him to be entitled. The Blue-book just published shows the caution and reluctance with which the Government at home accepted the conclusion at which he had arrived. There is little advantage in reverting to the original and indirect cause of the quarrel. Lord CARNARVON'S annexation of the Transvaal has precipitated a collision which might perhaps have been in any case unavoidable. A principal object of the measure was to acquire control of the relations between the Transvaal and their savage neighbours. The Dutch farmers often gave provocation to the Zulus, and there can be no doubt that they sustained injuries in turn. Lord CARNARVON and Sir THEOPHILUS SHEPSTONE thought that an impartial authority would check encroachments on both sides. It had not been foreseen that the English Government, which had formerly maintained friendly relations with the Zulus, would command less confidence when its interests were identified with those of the Transvaal. CETEWAYO'S Spartan institutions had been regarded with toleration as long as he was friendly to the English in Natal, and while he refrained from actual invasion of the Transvaal. It is now impossible that he should employ his army against any but an English enemy. The advocates of annexation argue, not without reason, that even while the Transvaal Republic retained its independence a neighbouring State of European descent would not have allowed it to be crushed by savages. The Dutch had shown unexpected inability to defend themselves against a less formidable adversary, and if a Zulu war was inevitable, it might have been inconvenient to act in concert with independent allies. At present the war itself, in a sense, supersedes all inquiry into its causes. The tranquillity of the neighbouring provinces will undoubtedly be promoted by the dissolution of the Zulu army, which must be an ultimate result of the war, unless the enterprise which has begun so inauspiciously ends in total failure. International casuistry has not yet defined by any general formula the cases in which an offensive war is justifiable against a barbarous enemy who cannot be trusted. The time of the present war was chosen when there was a comparatively strong force in South Africa, and before the crops have been gathered. It was hoped that the enemy might be compelled to yield through inability to replenish his stores of weapons and provisions. It could not be foreseen that his wants would be largely supplied by the capture of an English convoy.

THE BEGINNING OF THE SESSION.

THE real work of the Session began on Thursday night, when the respective leaders of the two Houses of Parliament unfolded the list of measures which the Government intends to propose, and some of which it may hope to carry. It was, however, impossible that home subjects should engross the attention of Parliament on the first night of its meeting for ordinary business. The disaster in South Africa was a topic of too absorbing an interest to be omitted, and the Ministry gave explanations of their South African policy, which were not meant to be complete, but which were sufficient for the purpose immediately in hand. It was satisfactory to learn that they had sent Lord CHELMSFORD all the reinforcements he asked for before the war began, and have now despatched with creditable promptitude a larger force than he anticipated would be necessary to retrieve the disaster he has experienced. What probably had more of novelty for their hearers was that the Ministerial speakers made it clear that the Home Government, far from seeking the war, had earnestly deprecated it. The papers showing the latest communications between the Cape and England have not as yet been printed; but, from the assertions of the representatives of the Cabinet, it would certainly appear probable that, if there had been telegraphic communication with the Cape, there would have been no war. It is Sir BARTLE FRERE and the colonists, and not the QUEEN'S Ministers, who are primarily responsible for the war, whether necessary or unnecessary. Now the Government has no choice but to place the resources of the Empire at the disposal of those who are engaged in carrying on the campaign. In precisely the same way, when communications between England and India were tedious and uncertain, the Court of Directors found themselves over and over again committed to wars of which they did not approve, but in which they found themselves involved by the zeal, the foresight, or the ambition of their distant subordinates. On the vexed subject of Turkey there was little to be said that was new on either side. The provisions of the Treaty of Berlin are being slowly carried out, and Lord BEACONSFIELD cannot be contradicted when he asserts that the postponement of Turkish reform is due, not to the SULTAN'S want of will, but to his want of power. Lord HARTINGTON, on the other hand, took the opportunity of disavowing the absurd notion that a great English political party thinks that it would be possible or right to ignore or set aside a treaty made in the name of the nation. The real contest between the opposing parties is as to what shall be done when the treaty has been nominally executed. But it may be observed that every day the Government and the Opposition are coming nearer to an agreement on this head. We now hear nothing of the fulfilment of the expectations of those sanguine Turks of Lord SANDON'S acquaintance who were enraptured with the thought that the English were coming. We hear nothing of guaranteeing loans to Turkey, which a short time ago Sir STAFFORD NORTHCOTE contemplated as a possibility. As to Cyprus, it is represented as susceptible of improvement, but as capable of itself finding the necessary funds for the task; and the controversy as to the harbour has dwindled into the assertion, which the evidence of experts may be taken to have established as true, that, if we ever chose to make a harbour there, we could make a fairly good one. The British Government, in short, will be satisfied when it has accomplished its main object of getting the Russians out of what remains of Turkey, and the British taxpayer will not be asked to incur new burdens in order to fortify Turkey or to renovate Cyprus. This is a very modest programme as compared with that which was put forward last summer, not so much by the Government as on its behalf; and it is not easy to see how it varies from that which the Opposition would pursue if it came into office.

The list of Ministerial measures contains all that it was expected to contain, and nothing of much importance that it was not expected to contain, all projects of dealing with an Irish University having been prudently abandoned. Two of the proposed measures are outside the field of political controversy. The portion of the Mutiny Act which constitutes an army code has been the subject of an exhaustive consideration bestowed on it by a Select Committee; and while no one thinks for a moment of withdrawing the army from the annual control of Parliament, no one can deny that it is in the highest degree expedient that there should be a permanent code of military discipline. The consolidation of the Criminal Code is equally removed from the sphere of political controversy, and every one allows that a satisfactory Criminal Code would be a great national advantage. But although, as Lord HARTINGTON remarked, these Bills

are not so much Government Bills as Bills which it falls on the existing Government to conduct in their passage through Parliament, it is obvious that a very great part of the time which Parliament has at its disposal may be spent in carrying them. Irish members have taken the cause of the refractory soldiers under their special protection, and a code of permanent discipline will necessarily be exposed to their long and pertinacious criticism. Sir HENRY JAMES hinted, too, at what may prove a serious obstacle in the path of the Criminal Code. It is not the business of the framers of this Code to legislate. They have to state with accuracy the existing law. But part of the existing law is absurd or obsolete, and Parliament may hesitate to give what will seem a new sanction to provisions of which it disapproves. On the other hand, if it once begins to mend the Code, and to make it express, not what the law is, but what the law ought to be, the topics of animated and protracted discussion which will be suggested will be endless. Among the Government Bills which are really the creations of the Government the chief is perhaps the Bankruptcy Bill. This being in the hands of the CHANCELLOR will be begun in the House of Lords, and the criticisms it will there provoke may do much to clear up matters of controversy before the Bill reaches the Commons. Unless, however, the Bill as it finally leaves the Lords is generally recognized as the best Bill that can be hoped for, it will afford so ample a field for difference of opinion that to carry it through the Commons in the hurried hours of a closing Session will be a work of extreme difficulty. As the term for which the Railway Commission was created expires this year, it will be indispensable during the present Session to dispose of the many thorny questions raised by the existence, the composition, and the powers of that curious tribunal. The Government has also made up its mind, apart from the field of legislation, to raise and settle after its own plan the delicate and debatable issues involved in the adoption of new rules for the conduct of Parliamentary business, and in the payment of the cost of the Afghan war. The House of Commons is to begin its labours by determining its own procedure, and it is announced that India is to bear the whole cost of the war, but is to be aided by a temporary loan from England of two millions without interest. We have to add the Army and Navy Estimates, the Budget, and the questions which are sure to crop up when the period for the final execution of the Treaty of Berlin arrives, and it will readily appear that, even in what has been already enumerated, the Government has enough work for a very arduous Session.

But the measures mentioned above are a very small fraction of what the Government proposes. In all it has no less than eighteen Bills ready for the consideration of Parliament, if Parliament will but find the time or show the disposition to consider them. Of these it may be supposed that those which both leaders took the trouble to announce are considered by the Government as the most important. Those noticed by Lord BEACONSFIELD, as well as by Sir STAFFORD NORTHCOTE, were a Summary Jurisdiction Bill, a County Boards Bill, our very old friend the Valuation Bill, a Grand Juror Bill for Ireland, and a Poor-law Bill for Scotland. As Lord BEACONSFIELD said in his ironical way, he would rejoice if, when the QUEEN closes the Session, all those measures had become law. But no one can hope that this source of legitimate pleasure will be granted him. Among the minor measures announced only in the House of Commons were a Corrupt Practices Bill and a Bill for regulating the national contribution to Public Loans. The first of these in view of an approaching election, and the second in view of the derangement of national finance caused by the increase of the floating debt, will probably be passed. All parties agree that they are matters as to which something must be done, and done soon. Then there is to be a measure about banks, from which all grand notions of remodelling our banking system are to be excluded, and which is to aim at nothing more than to give banks new facilities for limiting, if they wish, their liabilities. The only opposition that such a Bill will provoke will be that of theorists unacquainted with banking business, who will urge that their hobbies ought to be included in it. Lastly, there is ready for Parliament, if Parliament would like to see it, a Bill as to the liability of employers for the accidents befalling their workmen. This is a measure which the ATTORNEY-GENERAL last Session promised to take into his own hands. But he now candidly owns that, when he came to carry out in detail his undertaking, he found that what he was asked to help in enacting was so absurd, so little needed, and so dangerous, that he handed the whole affair over to the HOME SECRETARY. A Bill on which the chief Law Officer has passed this anticipatory criticism is certainly a legislative blossom of very precarious promise. What the rest of the eighteen Bills may be about is equally unknown and immaterial. The prospect of an electioneering contest evidently looms before the eyes of the Government. If it is reproached with being ambitious and expensive, it will reply that it is not mixing itself up with the internal affairs of Turkey, that it does not wish to spend a penny of English money on Cyprus, and that it is not the Government, but the Opposition, that seeks to shift the burden of our Indian war from Indian to English shoulders. If it is reproached with the barrenness of its domestic legislation, it will triumphantly retort that the reproach is ludicrous when addressed to a Government which has eighteen Bills all ready by the beginning of a Session.

GERMANY.

THE opening of the Session of the German Parliament was graced by the attendance of the EMPEROR in person, who appeared before the deputies for the first time after his dangers and illness. This appeal to the loyalty of Germany received a cordial answer, and the Parliament gave an adequate expression to the affectionate interest with which the country regards an old man who has always tried to do his duty, and has lately suffered in its discharge. In his Speech the EMPEROR took an opportunity of thanking his son for his recent management of affairs; and such a recognition of the merits of the CROWN PRINCE could not have come from any one in a lower position than his father. The great pleasure with which he stated himself to have watched the efforts of the Parliament to repress Socialism was also, no doubt, a manifestation of personal feeling. But the rest of the Speech could scarcely have been different had it come from the lips of Prince BISMARCK. Some topics of foreign policy were touched on, but the bulk of the Speech referred to home affairs. Germany will do her best to carry out the Berlin Treaty, and to see it carried out. Regrets were expressed at the spread of the plague in Russia and at the stringent measures of precaution which have been adopted by Germany to secure herself against contagion. At the earliest possible moment all new barriers between two nations which ought to be on the most friendly footing with each other will be removed. Some slightly greater interest was probably felt by his audience in what the EMPEROR had to say as to the alteration of the Treaty of Prague. The fifth article, by which the prospect was held out of a retrocession of a part of North Schleswig to Denmark in conformity with a popular vote, was exclusively the invention of France, and was inserted in a convention between Austria and Prussia to please the Emperor NAPOLEON. No one in France now cares for an article which had never anything to do with French interests, and Austria had no motive or power to enforce it. If Prince BISMARCK thought it worth while to have the article abrogated, there was no one interested in refusing his wishes. The only curiosity that could be felt was as to the reason that would be alleged for now formally putting an end to the article. It appears that Prince BISMARCK professes himself tired of negotiating with Denmark on the subject of North Schleswig. These negotiations have been entirely fruitless, and they could not possibly be otherwise, as Prince BISMARCK never had the remotest intention of letting territory he had once acquired slip out of his fingers. Decency, however, compelled him to go through the wearisome farce of discussing with Denmark whether the fifth article of the Treaty of Prague might not possibly mean something. The farce has now got wearisome, and Prince BISMARCK is too much bored with it to let it go on. This, at least, is the light in which he likes to put this small matter before the world. No change of policy is to be gathered from it, no new intricacy of alliance with Austria, nor any special displeasure with Denmark. It is merely

that Prince BISMARCK, like the editor of a newspaper, has had enough of a particular correspondence, and intimates that letter-writing on the special subject must cease.

All doubt was removed by the Speech as to Prince BISMARCK's determination to restore or invent protective duties. The EMPEROR was made to say that he had not observed that the departure from the old system under which the Zollverein flourished had done any good to any one. There is a deficit in the German Budget, and it is proposed that up to the 1st of April next the proportion of the deficit belonging to the previous period shall be made good by assessing the allied States in an augmented contribution. But the allied States do not by any means like these augmented contributions, and therefore, as a permanent measure, some other means of making good the deficit must be found. It must be assumed that Germany is not going to balance her Budget by reducing expenditure. She must, or thinks she must, have a very large army, and the cost of this army becomes yearly greater. Prince BISMARCK must have more money, and how is he to get it? Any temporary increase of revenue would give him no comfort, and the position of the Empire will always seem to him insecure unless it can reckon on having enough money for its needs, and unless this happy state of things is the result not of a casual vote, but of a recognized and unquestioned system of finance. After making several experiments in other directions, and having failed in them; after suggesting schemes for a tobacco monopoly and for a new duty on beer, and finding that Parliament would not entertain his projects, he has at last made up his mind that protective Custom duties are the only sources of increased revenue of which he can practically get hold. Probably Prince BISMARCK does not see any very great advantage in Free-trade. He and his master may be expressing their real sentiments when it is said that Germany got on very well before Free-trade was heard of, and can get on very well without it now. But the PRINCE does not rest his protectionist proposals on any theoretical basis. If it could be shown that they were in themselves bad, and he could be made to admit that in the long run they must diminish the national wealth, he would not the less insist on them. At any rate they will give him some money. He cannot get money in any other way, and money he must have.

The proposed Bill which has provoked by anticipation so much hostile criticism, and which is generally known as the Muzzling Bill, was referred to with so much cautious vagueness that until it is known in what shape it will be finally presented to Parliament, it is useless to conjecture how much opposition it will provoke. But it seems probable that it will not be the cause of any serious conflict. Its most objectionable clauses are said to have been removed during its passage through the Federal Council; and Prince BISMARCK is rumoured to have stated that he did not care whether it was passed or not, as its only object was to give Parliament proper powers, and if Parliament does not wish to have such powers, that is its business, and not his. The scheme of protectionist finance stands on a very different footing, and there is every appearance that Prince BISMARCK means to carry it; and that, if he really means this, he will succeed. If political economy is to be looked on as concerned with what men practically do in regard to wealth, and not only with what they ought to do if they wished to be as wealthy as possible, it may be taken as an axiom of political economy that great military expenditure leads to protective duties. Immediately after the German war, France largely increased its protective duties. Russia since its recent efforts is engaged in making its exaggerated system of protection still more extreme. Austria, Italy, and now Germany, are getting more and more protectionist as the burdens of their enormous armies press on them more severely. The reason for this is a most serious obstacle in the way of general Free-trade. It is serious precisely because it is a practical, not a theoretical, reason. The money, it is alleged, and apparently with truth, cannot be got in any other way. Nations will only stand a certain amount of rational taxation; and if more money is wanted, recourse is had to foolish taxation. The proper answer to Prince BISMARCK is not to show the advantages of Free-trade, but to suggest new taxes in harmony with Free-trade, and to express the readiness of Parliament to impose them. This is exactly what Prince BISMARCK calculates none of the leaders of the Free-trade Opposition can or will do. He will propose a duty on iron and a duty on cereals; and the manufacturers, although they may dislike dear food, and the agriculturists, although they may dread dear tools and machinery, will vote with him rather than submit to new taxes which they altogether detest. The arguments, in short, by which the revival of protection is defended in the great military States of the Continent are very much the same as those by which the Governments of Italy and Spain defend the maintenance of lotteries. Moralists easily prove that lotteries are immoral; but those Governments assert that their taxpayers will pay money for lotteries which they would not pay for anything else. Morality retires shocked, but dumb, and Free-trade unhappily finds itself in something of the same position.

EASTERN AFFAIRS.

THE signature of the definitive treaty between Russia and Turkey is doubly reassuring, both as it removes immediate pretexts for a fresh rupture, and because it will be at once followed by the withdrawal of the Russian army. When the troops have once returned to their own country, the Russian Government will not, except for urgent motives, undertake a new invasion. Experience shows that financial difficulties are seldom allowed to interfere with the progress of a struggle which has once been commenced; but the late war of conquest would not have been undertaken if the depression which is its consequence had then existed. Less than a year has passed since the rapid advance of the Russian army towards the capital caused great and reasonable alarm. The fall of Constantinople was probably averted only by the entrance of the English fleet into the Sea of Marmora; and there was reason to fear a collision which must have been followed by immediate war between England and Russia. The danger would scarcely have arisen if the Turkish Government had not neglected to construct in proper time the works of defence which had been designed by English engineers; but at one time the SULTAN and his advisers seemed disposed to abandon further attempts at resistance. One of the Turkish Plenipotentiaries who were sent to negotiate an armistice with the Russian COMMANDER-IN-CHIEF published in the sympathetic columns of a London Liberal paper a statement that his Government had resolved to abandon the English alliance and to enter into cordial relations with Russia. The Treaty of San Stefano seemed to record the utter prostration of Turkey at the feet of an implacable enemy; but the firmness of the English Government allowed breathing time; and the Treaty of Berlin superseded the capitulation of San Stefano. At a later time the conduct of some high Russian functionaries appeared to indicate a purpose of disregarding the conclusions of the Congress; but after some vacillation the Emperor ALEXANDER finally resolved to comply with his engagements. The definitive treaty seems, as far as its terms are known, to be comparatively moderate, except in the enormous fine imposed on the defeated belligerent. Although there may perhaps be some secret understanding as to the mode of liquidating the debt, no immediate pressure for payment of compensation is put upon the Porte; and the clauses of the Treaty of San Stefano which were not confirmed at Berlin are expressly declared to be invalid. The treaty may perhaps contain phrases inserted for the purpose of giving colour to Russian interference in the internal affairs of Turkey; but the practical pretensions of the stronger Power would in any case have been limited only by opportunity and convenience.

There is no reason to doubt that the difficulties which impede the organization of East Roumelia will be overcome, though both Russians and Bulgarians derive encouragement from the language of the English Opposition. There is little probability of a change of Government before the date at which the Russian army of occupation must evacuate the province; and it is certain that Lord BEACONSFIELD and his colleagues will not abandon the main position which they defended at Berlin. Their assailants have the disadvantage of being forced to adopt the Russian arguments, with the additional objection, which could scarcely have been raised by the Russians themselves, that East Roumelia will afford facilities for future Russian intrigue. The Russian Plenipotentiaries at Berlin, who attached primary importance to the extension of the

territory of Bulgaria to the limits provided by the Treaty of San Stefano, can scarcely have agreed with Mr. GLADSTONE, Sir W. HARCOURT, and Lord HARTINGTON that the division of the province is specially advantageous to themselves. The object of securing to the SULTAN the defensible frontier of the Balkan was better understood by Count SCHOUVALOFF than by the English critics of the treaty. The final conclusion of a solid and permanent peace would not be promoted by a capricious change of policy. If Lord GRANVILLE and Lord HARTINGTON were in office, they would almost certainly feel that it was their duty to require the full execution of the treaty. It is possible that the enlargement of Bulgarian territory might have been innocuous; but the separate organization of East Roumelia under the sovereignty of the SULTAN is also compatible with the maintenance of peace. The Duke of ARGYLL indeed remarks that the English Plenipotentiary agreed at the Conference of Constantinople to the concession of administrative autonomy to the Bulgarians north and south of the Balkans; but the province was, according to the scheme of the Conference, to be divided into two Vilayets, and both were to remain subject to the SULTAN. Events are rapidly justifying Lord BEACONSFIELD's announcement three months ago that the stipulations of the Treaty of Berlin would be strictly enforced. The districts which were to be ceded to Montenegro have already been transferred; and it only remains to create an administration in East Roumelia and to settle the frontier in Epirus and Thessaly. For some time past nothing has been heard of the disputes between Turkey and Austria with respect to Bosnia and Herzegovina. Before Midsummer the long and complicated controversy will have closed, to the embarrassment of politicians who hoped to keep the question open for use at the general election. A minor dispute between Russia and Roumania as to the delimitation of the frontier in the neighbourhood of Silistria will probably be settled to the disadvantage of the weaker litigant. Roumania forfeited by participation in an unjust war all claim to the good offices of England in the allocation of the spoils; but it is not altogether unsatisfactory that the alliance of the giant and the dwarf should produce analogous results to those of the fable. There is some reason to believe that the feelings of the Roumanian Government and people to their powerful patron are far from cordial.

After a time the unfriendly feelings which have been aroused both in England and Russia may probably subside. It is only for purposes of faction that hostility to Russia is affected as a claim to the favour of the English populace. And the Duke of ARGYLL, in his thoroughgoing apology for Russia, has not countenanced Mr. GLADSTONE's novel affectation of hostility to the most faultless and beneficent of European Powers. If Mr. GLADSTONE had been justified in the statement that Lord BEACONSFIELD's policy has tended to the aggrandizement of Russia, any supposed feeling of ill-will on the part of the English Government would have been forgiven in consideration of its results. It is, in fact, much easier to resume friendly relations with an antagonist who has made himself respected than with a helpless victim. The late conduct or inaction of the Russian Government during the Afghan war is a proof of deference, if not of friendship. The encroachments of a zealous functionary have been withdrawn and practically disavowed. If the position of the Russian Mission at Cabul had been only morally untenable, some excuse might perhaps have been found for its continuance; but the Russian Government was not disposed to undertake a conflict in Asia which would have been at the same time unjustifiable and hopeless. Asiatic potentates, large and small, are by this time convinced that, whatever may be the case in other parts of the world, the power of England preponderates on the frontier of India. Acquiescence in a Russian protectorate of Cabul could scarcely have failed to produce frequent causes of offence and eventual collision. The advance of the English army into the passes of Afghanistan has afforded a proof that contumacious chiefs must rely exclusively on their own resources. Opponents of the Indian policy of the Government contend that it would have been possible to secure the good-will of SHERE ALI, although he had for some years past lost no opportunity of displaying ill-will to the English Government.

Until the season allows the opening of a spring campaign it will not be known whether any extensive operations will be necessary in Afghanistan. In any event considerable expense will have been incurred, and it will be incumbent on the Government to apportion the cost between the English and Indian treasuries. In Europe preparations for war are no longer required. On the departure of the Russian troops from Turkish territory the English fleet will be withdrawn, and the naval force in the Mediterranean may probably be reduced. There will be no immediate motive for strengthening the slender garrison of Cyprus; and if official statements may be trusted, the expense of civil administration will not exceed the revenues of the island. The estimates of next year ought to bear little trace of recent political disturbance; and consequently the party which hopes to obtain office at the next election will perhaps find it difficult to keep alive popular interest in foreign politics. Parliament will be disinclined to revive discussions which are now barren; and, having repeatedly expressed an opinion in favour of the Government, it will not be inclined to acknowledge that it has been in the wrong. Demonstrations that the settlement of Turkey as it was arranged at Berlin must lead to war and revolution will produce little impression when there is a probability of continued peace. The Afghan war, as long as it lasts, may perhaps furnish a more legitimate occasion of controversy; but, if it ends without disaster, the good fortune of the Government will render attacks on its Eastern policy comparatively harmless. Thus far, notwithstanding the sanguine predictions of its enemies, the Government has not, in Europe and Asia, conspicuously failed either in diplomacy or in war.

MR. W. H. SMITH ON THE DEPRESSION OF TRADE.

MR. W. H. SMITH rightly devoted a large part of his speech at the Westminster Conservative dinner to the present depression in commercial affairs. Although fortune has placed Mr. SMITH at the head of one of the great spending departments, the country does not forget his antecedents any more than he does himself; and it naturally regards him as a principal representative of the business element in a Cabinet in which the business element is not so strong as it might be. We expect Mr. SMITH to give us good ships and plenty of them; but we are not sorry when he trespasses a little on Lord SANDON's province, and says something in a leisure moment upon the state and prospects of English trade. It is the more expedient that he should do so because during the short Session before Christmas there seemed to be a disposition on the part of one or two Ministers to treat the subject rather too lightly. It is only fair to say that the tone they took has to some extent been justified by the event. In the strict and technical sense of the word, the distress has not proved to be so great as was at first feared. There has been little or no call for exceptional measures of relief on a great scale. No large section of the community has been dependent on public or charitable aid. The experience gained in the Indian famines has not had to be drawn upon in order to keep hundreds or even tens of thousands from dying of starvation. Yet, for all that, the distress has been very general and, in many cases, very severe; and it has been largely felt among classes which have ordinarily been somewhat removed from it. It has not been of a kind or amount which demanded, or even admitted, Government intervention; but it has been, and still is, of a kind and amount which claims Ministerial sympathy. There may be truth in the assertion that the Opposition have made the most of the distress for party purposes; but those who are actually suffering under it naturally think that to make too much of it is a lesser evil than to make too little of it.

Mr. SMITH has not fallen into this error. He does not exaggerate the evil, but frankly admits that it exists. He does not seek to persuade the sufferers that they are not in a bad way; he contents himself with showing that when the distress comes to be traced to its origin it is neither mysterious nor likely to be lasting. In itself, of course, the assertion of a Minister that the policy of the Government to which he belongs is not the real cause of the ill results attributed to it is not specially convincing. But Mr. SMITH was able to quote a neutral authority in support of his position. "The truth is," say Messrs. ELLISON and Co., in their Report on textile manufactures, "that "the harvest of bad things reaped between 1874 and 1878

"was sown between 1870 and 1873, before the scapegoat "of political disquietude came into existence, and what is "equally true is that the bad harvest would have "had to be gathered even if no Russo-Turkish war "had been made." The depression of 1878 was mainly the result of the immense and unreal prosperity of the years from 1870 to 1873. During that time the trade of the country was advancing, as we were repeatedly told in Budget speeches, "by leaps and bounds," and it was only to be expected that after a time these leaps should carry traders beyond the firm ground which, had they been prudent, they would have kept to. It was not that traders were wrong in availing themselves to the utmost of the immense opportunities offered to them; it is hardly a matter of choice to a man whether he shall do this or not. The error lay in the assumption that the advance would be continuous and permanent. The preparations made were not calculated on a scale which should simply meet each particular increase in the demand. They were such as were only justifiable on the hypothesis that the process, once started, would go on in almost geometrical progression. A period like this not merely supplies great opportunities for sound traders; it is equally rich in temptations for unsound traders. What over-production began, unsound financing completed. By 1874 the catastrophe was seen to be impending, and it was only made worse by the desperate efforts made to stave it off. The part which political disquietude has played in the matter is altogether subordinate, though we are not inclined to put it so low as Mr. SMITH or Messrs. ELLISON do. An unfounded feeling that the distress had originated in the political circumstances of the time tempted traders, who had better have yielded to a catastrophe which they could not avert, to make desperate efforts to keep their heads above water until peace was assured. When peace was assured after a fashion, they found themselves just as badly off as before, and they then set up the still unsettled state of the East as an explanation of the bankruptcy to which they had after all to submit. Those who still hold that the political situation has had more than an incidental and auxiliary part in bringing about the present depression will do well to read the description of the state of things ten years ago which Mr. SHAW-LEFEVRE gave in his address to the Statistical Society last November. "The decade," he says, "began, as it has ended, "in great complaints, in universal gloom, and in low "prices and small profits." A Report of a Committee of the Manchester Chamber of Commerce speaks of 1869 as a year of almost unparalleled disaster. The number of failures was enormous. Mill property fell to a third or fourth of its former value, and was even at times unsaleable. Millowners were driven to take subordinate situations or to emigrate in order to find a bare subsistence. Protection once more raised its head under the name of reciprocity, and even found expression in the House of Commons. With the exception of the last fact, this might serve equally well for a description of 1879, and yet the time to which it really applies was only separated by little more than a year from a period of unparalleled prosperity.

It would be rash to predict, and even to desire, the recurrence of a similar contrast. The prosperity of 1871 and the two following years was turned to such bad uses, and was made an occasion for so much reckless trading, as to suggest a doubt whether English manufacturers can bear good fortune with the calmness necessary to prevent its becoming a snare. But those who think that the prosperity of England is gone may fairly be reminded that the more complete the stagnation in any trade is, the more certain it is that a revival must come, and the nearer a revival is likely to be. The capital which was so recklessly destroyed or locked up in prosperous years grows again by degrees, and by the time that it is once more available for the supply of the world's wants, the world's wants will have grown up to meet it. If no one buys calico this year, it only means that everybody is using up the calico which he bought last year, and when once this process has been worked out, the want of more calico must make itself felt.

Mr. SMITH, perhaps wisely, prefers to take his consolations mainly from the present, and it must be acknowledged that the facts which he mentions do not suggest a wholly despairing view. It might be expected, for instance, that in a time of great and general destitution there would be a great diminution in the deposits in the Post-Office Savings Bank. When a working man has managed to save a few pounds, he usually regards it as put by against a rainy day. As soon as that day has unmistakably come, the ordinary thing is to draw out enough of the money to tide him over the worst. According to this view, the working classes in the aggregate are still very far from being at the worst. In 1877 the deposits so far from growing smaller, were increased by 2,600,000*l.*; in 1878 they were increased by a further 1,300,000*l.* During the present year this increase has been maintained in a very striking way. In the week ending the 18th of January the balance of deposits against withdrawals amounted to 88,000*l.*; in the following week the balance of deposits was 93,000*l.*; and in the week after that the deposits were more than double the withdrawals. This is a fact which, though it may not prove quite all that Mr. SMITH thinks, is still important. It shows that a very large number of persons belonging to the poorer classes have turned the present low prices to account, and have laid by the savings which they have been enabled to make in their expenditure. If the working classes were universally given to putting money into the Post Office Savings' Banks, it would be difficult to reconcile the distress that undoubtedly exists with this increased power of accumulation. The explanation is that, among skilled workmen at all events, the Savings' Bank is not a popular institution. They prefer the system of insurance against the chances of life which is afforded by Trades-Unions.

THE FRENCH MINISTRY.

THE new French Ministry have now settled comfortably into their places; and, when the very composite character of the Liberal majority is taken into account, they may be said to be more firmly seated in them than at first seemed likely. The opposition of the Extreme Left is rather an advantage than an injury; while the Opportunist Left appears inclined to view their policy with less disfavour than they showed to the same policy when it bore the name of M. DUFAURE. The best course that the Cabinet can take for its own interest is to keep the Chambers well supplied with fairly interesting measures. This may seem inconsistent with the still more imperative necessity of doing nothing to alarm the country. The contradiction, however, is easily explained. That the legislation effected at the instance of M. WADDINGTON and his colleagues ought not to be of at all a violent kind does not need proof. But the way to avoid violence is not to leave the Chambers unemployed. Even the august hands of a Senator or a deputy may itch to be at mischief if they are left idle, and any indolence on the part of the Ministry would be the signal for the introduction of Bills dealing in a far more drastic spirit with the subjects which ought to have found a place in the Ministerial programme. A Cabinet must be very weak if it cannot make a better thing of a Bill of which it is the author than of one which has been thrust upon it by others. There is sometimes a great deal in the choice of a framework. A measure can be made to look almost innocent by a judicious arrangement of its clauses. If Ministers were to wait until the Extreme Left formulated its demands in the shape of specific proposals, the burden of watering these proposals down to the proper limit of safety would fall upon themselves. If they anticipate the Left in introducing them, it is the Left that will show itself captious and unreasonable.

We do not in the least mean that M. WADDINGTON and his colleagues ought to bring in extreme measures in order to retain the support of the Advanced Left. Putting aside the principle of the thing, it would be the most short-sighted expedient possible. The Advanced Left have no real desire to see their own policy carried out by the hands of others; and if the present Cabinet were to attempt to conciliate them by a late and partial conversion, it would very soon discover that it was only kept in office until it had made itself sufficiently ridiculous to amuse the malice of the party waiting to supplant it. The motive with which the present Ministers should show themselves active in legislation is precisely the reverse of this. Instead of desiring to efface the distinction between themselves and the Extreme Left in the minds of the electors, they should rather seek to accentuate it. The immediate need in French politics is to give the moderate Republicans

a real Parliamentary representation. It is commonly believed that this section of opinion does in fact dominate the constituencies; that France is still what M. THIERS used to say that at heart she always would be—Left Centre; and that, if past elections have seemed to throw doubt on this fact, it is only because they have turned on issues in which the existence rather than the administration of the Republic was at stake. Looking only at the Chambers, it must be confessed that this picture seems hardly justified by facts. The party which is supposed to be so strong in the constituencies is exceedingly weak in the Legislature. Partly from the ability of its leaders, and partly perhaps from the suspicion that it would be impolitic to provoke an election which should turn wholly on the difference between Left and Left Centre, it has obtained a disproportionate share of Ministerial places. Properly used, this circumstance ought to be a very great advantage to the Left Centre. It gives it the means of strengthening whatever hold it has on the country, and consequently of preparing the way for obtaining a stronger hold on the Chambers. If the electors had now to determine whether M. WADDINGTON should remain in office or make way for a more Radical politician, they would have to frame their decision on strictly *à priori* principles. They might feel an abstract preference for moderate opinions, but they would have no materials for constructing a moderate programme. The present Cabinet has now an opportunity of providing them with these materials. It can let the country see what are the measures which it has determined to bring forward, and which, if it has the power, it intends to pass. It is essential, however, to the success of this process that, having decided on its measures, it should stand by them, at all events to the extent of not accepting Radical alterations from the Left. A Ministry which begins by being moderate because it wishes it, and ends by being extreme because other people wish it, would neither alarm its enemies nor give confidence to its friends. Nothing could better serve the purpose of the reactionary parties than the discovery that moderation was not to be had from a Republican Government. But moderation, like other good things, is not to be had by simply wishing for it. A Ministry which has made up its mind that certain measures ought to be carried, and that certain other measures ought to be rejected, will do well to give effect to its convictions, and to resign rather than acquiesce in the rejection of the former or in the passing of the latter. The effect of the resignation would, no doubt, be to put more extreme men in the temporary possession of office. But it would also give France what she greatly needs—a really Parliamentary Opposition; an Opposition, that is, which frankly accepts Republican institutions and seeks to administer them in the way it thinks best for the country. The formation of such an Opposition would inflict a decided check alike on the reactionary and the Radical parties. The reactionary party has derived considerable advantage from the arrogation to itself of the name Conservative. The Radical party has derived considerable advantage from its arrogation to itself of the name Republican. The real Conservatives, the men, that is, who desire to keep the Government pretty much what it is, and to secure to the country a long period of political and social tranquillity, have been thrown into the shade by one or other of these misleading assumptions. They have been confounded with the Radicals by men who are Conservatives first and Republicans afterwards. They have been confounded with the reactionists by men who are Republicans first and Conversatives afterwards. It should be the business of M. WADDINGTON and his colleagues to take care that there shall be no room for any similar confusion in future.

The first question with which the Cabinet has had to deal is one which has been complicated by the mistakes, perhaps the inevitable mistakes, of their predecessors. When the Commune was overthrown, the then Government fell into the error of needlessly multiplying political prisoners. Partly from the panic fear into which the country had been thrown by the insurrection, and partly from the rage and horror naturally excited by the incidents which accompanied its close, the reasonable and convenient practice of distinguishing between leaders and followers was departed from, and large numbers of persons were tried and punished whose crime really did not go much further than taking part in a street riot. The proper course to have taken would have been to inflict prompt and exemplary punishment upon the chiefs of the insurrection, especially those who had been concerned in the murder of the hostages, and to have included the undistinguished throng that had followed them, without being associated with the conception or execution of their crimes, in a common amnesty. Instead of this, the trials before the military tribunals went on year after year, until no purpose whatever was served by their continuation, except that of keeping alive a constant irritation in the class from which the prisoners were mostly taken. The demand for an amnesty has continually grown stronger, because the majority of those to whom it would apply have long ceased to be distinguished in the popular recollection from the men who have taken part in any other of the many insurrections of which Paris has been the theatre. This demand is at last to be conceded; but, when the Cabinet came to consider under what conditions it should be conceded, it was plain that public opinion would be disturbed rather than conciliated by any attempt to ignore the peculiar features of the Commune. Consequently the idea of an amnesty in the proper sense of the word was put aside, and a compromise adopted, by which those and those only are to be amnestied whom the PRESIDENT has already pardoned or shall pardon within the next three months. The area of clemency is also extended by the inclusion of persons condemned in their absence. The responsibility of distinguishing between those whose offence is political in its nature and those whose offence brings them within the scope of the ordinary criminal law, as well as of determining when the punishment already undergone by this latter class is adequate to their guilt, is thus thrown upon the Executive. It was plainly impossible to throw it upon the Legislature, and supposing that it is wisely exercised, the compromise seems to be the best which it was open to the Government to arrive at.

RAILWAY AND GAS PROPERTY.

WITH the exception of the Great Western and of the great Scotch railways, all the Companies have now issued their reports and announced their dividends. In several instances the shareholders have probably been agreeably surprised. One or two of the Companies give a slightly increased dividend; and the others either remain stationary or undergo a fractional loss. Before the publication of the reports, confidence had been so far restored that the market price of railway stock had in some degree recovered from extreme depression; but it had not been generally foreseen that the reduction of working expenses would almost compensate for a heavy falling off in traffic. The returns, as they are generally made up to the end of December, include a month of severe frost, which discourages passenger traffic. The goods traffic, which corresponds more closely to the activity of trade, shows a considerable diminution. The traffic returns in general have fallen off largely since the beginning of January, with results which will probably be felt by shareholders during the current half-year. Railway statistics thus far indicate no revival of prosperity, but they undoubtedly show the extent and importance of the industry which has been destroyed by long continuance of unfavourable circumstances. Proprietors and purchasers of railway stock will derive confidence from the falsification of many alarming rumours. Most of them have probably the good sense to consign to the waste basket the letters and circulars which are from time to time circulated by disinterested benefactors who undertake to prove that the affairs of this or that Company are grossly mismanaged. It is possible that an honest malcontent may waste time and money in denouncing the conduct of Directors; but genuine suspicion would more naturally express itself by selling out than by proving that a still cherished investment was worthless. It is unfortunate that attacks on railway administration should usually be intended to affect market prices rather than the conduct of traffic or the management of the finances of Companies. Boards of Directors and managers often commit errors; but those who undertake to expose their misconduct can seldom be trusted. An Opposition of which the motives were habitually and presumably corrupt would not exercise an effective check on the Government.

The greatest surprise produced by the recent railway

reports was caused by the North-Eastern dividend, which was only one per cent. less than in the corresponding half-year of 1877. No other great Company depends so largely on mineral traffic; and it was known that the stagnation in the iron trade had been unprecedented, and that the gross revenue of the Company had largely declined. A partial compensation seems to have been supplied by the extraordinary cheapness of coal and iron. The reduction of wages on which the Board has lately been engaged can probably not have produced a perceptible effect on the returns of the autumnal half-year. The North-Eastern has the advantage of a monopoly over a mileage which is greater than that of any other Company, with the exception of the Great Western. The manager can consequently, as occasion requires, consult economy by reduction in the number of trains, without incurring the risk of competition. Holders of North-Eastern stock may reasonably anticipate, on the revival of trade, a resumption of the liberal dividends which they earned three or four years ago. The London and North-Western, which has suffered by the depression of textile industries, as well as by the stagnation of the iron trade, has reduced its working expenses by a diminution in the number of trains, and in the staff employed in its manufacturing establishment at Crewe. In common with other Companies, the London and North-Western begins to profit by the large expenditure which has been incurred during many years in the substitution of steel rails for iron. The change was long since completed at the principal stations and sidings, where, but for the introduction of a more durable material, it would have been almost impossible to meet the modern requirements of traffic. The almost total discontinuance of the manufacture of iron rails is one of many causes of the depression of the iron trade. Only certain kinds of ore are suited to the production of steel. It has hitherto been found impossible to make steel from Cleveland iron.

Some attention has lately been called to the Southern lines, both by the dispute as to the cost of season-tickets and by the division in the councils of the South-Eastern Board. The shareholders were disappointed in the amount of profit which was derived from the Paris Exhibition; but their dividend was slightly increased, and the Railway has greatly risen in prosperity under the administration of the present Chairman. His colleagues were dissatisfied by his proposals for connecting their railway with the East London and the Metropolitan Railways, both of which he administers as Chairman. To disinterested observers there seems to be no conflict of interests between the lines within the metropolis and the South-Eastern. Sir EDWARD WATKIN is strongly convinced that all parties would derive benefit from a more abundant exchange of traffic; but there are generally two sides to railway controversies, and a natural or plausible doubt was raised as to the impartiality of a representative of three separate and independent interests. Sir EDWARD WATKIN is in the habit of boasting, not without reason, of his own experience, industry, and vigour, and he accepts with much complacency the charge that he is an autocrat at the numerous Boards over which he presides. Less powerful members of the same bodies are jealous of autocracy, and like to have a voice in the policy for which they are responsible. The majority of the South-Eastern Board have consequently made an attempt to depose their Chairman, and, though they have been defeated, they were supported by a large minority of shareholders. The victorious party was probably in the right. Sir EDWARD WATKIN has in the exercise of his autocracy improved the financial condition of every railway which he has managed; and he is a competent judge of the interests of the South-Eastern, as well as of the East London and the Metropolitan. It would seem that the public advantage must be consulted by the freest possible intercourse among all the lines which traverse or approach London. The East London, traversing the old Thames Tunnel, is now practically useless, although it constitutes the shortest connexion among many populous districts.

Another system of undertakings in which large sums were invested has lately undergone extraordinary fluctuations in value. Two or three years ago the 100*l.* Ten per cent. shares of London Gas Companies sold at 220; but, in consequence of doubts as to the possible substitution of electricity for gas, they had fallen in last summer to 189. Other gas securities in and out of London bore a corresponding price. In the month of October it became known that several new patents for electric lighting had been taken out; and accounts were published, probably for the purposes of the Stock Exchange, of statements by the well-known American inventor, Mr. EDISON, that he had overcome all the difficulties which had impeded the subdivision of the light. The electric light has been tried out of doors in London, and on a larger scale in Paris, with satisfactory results as respects illumination; but the cost has not been accurately ascertained. The best authorities seem to concur in the opinion that the light is not at present applicable to ordinary domestic use. The Gas Light and Coke Company has circulated among its shareholders the results of experiments made under the direction of the Board, which seem to show that electric lights at present are more expensive than gas, and that they produce greater heat and stronger smell. The general opinion, founded on the more or less positive judgments of men of science, has expressed itself in an extraordinary range of prices. The 100*l.* shares of the Gas Light and Coke Company fell in November to 135. They have since steadily risen, and they are now quoted at about 184. Another cause has lately tended to the rise in value. Under the sliding scale which was sanctioned by Parliament two or three years ago, the Gas Light Company, having reduced the price of gas, divides for the autumn half-year 11 per cent. instead of 10. The Gas Companies profess their ability to compete with electricity in brilliancy as well as in cheapness. The depressing dimness of the streets of London is due to the thrift of Vestries, which fix the lamp-posts too far apart, and consume too little gas.

THE LIVERPOOL STRIKES.

THE Liverpool strikes have differed in one serious respect from other similar movements. For one day the town, or at all events the district affected by the strike, was given over to mob law. The men who remained at work in the docks were driven away, and there seemed every prospect of an organized attack upon the enormous mass of property there collected. What has happened since goes to show that this apprehension was unfounded. If the assailants had laid their plans at all carefully, they could evidently have done a great deal more damage than they actually did. And if the intention of attacking property had originated with the class concerned in the strike itself, it is clear that the plans would have been laid more carefully. The suddenness of outburst, coupled with the fact that it was checked with almost equal suddenness, points to the conclusion that the violence was an after-thought, not forming part of the original plan, and not contemplated by the framers of the plan. Even the terrorism exercised on the men at work, though a more usual accompaniment of a strike, was probably in this case rather an accidental than a designed addition. The more public the exercise of terrorism is, the more likely it is to defeat its object. A system of picketing which keeps just within the law, and which consequently the law is powerless to deal with, is a far more formidable instrument. So soon as open violence is resorted to, terrorism gives place to warfare; and in war the masters are able to do far more to help the men who have taken the place of those on strike than they can possibly do in peace. The peculiarities which have disgraced the Liverpool strike may probably be traced to the fact that it happened in Liverpool, and these peculiarities themselves throw some light upon the state of things from which they take their origin.

Liverpool has long been unfavourably known for the large percentage of the rough element in its population. Some years ago, when murder and maiming by kicking caused a passing alarm in the minds even of the classes who are not ordinarily in any danger from this cause, it was in Liverpool that the most startling cases occurred. It was stated at that time that there were some parts of the town in which the peaceably-disposed inhabitants went about in terror of their lives, not from any special hatred which the violent classes bore them, but simply from the neighbourhood of a large number of persons who would as soon murder them as not, and who consequently were not likely to require much in the way of provocation. In one or two instances this fact was very plainly brought out. The mere presence of a

man or woman not a comrade of his own seemed enough to irritate some rough who happened to be lounging at the street corner into delivering that "running "kick" which was then, and may perhaps be still, a Lancashire speciality. The presence of the police was an incident apparently too rare to be worth calculating. Indeed it was hardly denied that, so long as the roughs kept within their own quarters and molested only their own neighbours, it would take more than usually gross violence to constitute a case for interference. Nor could it be denied that under the circumstances the police had much to say for the view they took of their duty. They are an extremely small body in comparison with the extent of Liverpool and the character of its population, and they had necessarily to husband their resources with the foresight appropriate to small bodies. Whether it was wise in the ratepayers of Liverpool to take a similar view is a different question, and one to which the events of last week may possibly suggest an answer. To have violence permanently reigning in certain streets may be a very much less serious thing in the eyes of owners of property than to have it reigning, if but for an hour or two, in the docks or on the quays. But, if the one leads to the other, it becomes infected with its importance; and it is impossible to allow the Liverpool rough to have his own way where the persons of his equals are concerned, if at the same time it is desired to keep him in leading strings as regards the property of his betters. In the present case it can hardly be doubted that the strike was seized as an occasion by a number of persons whom habitual abstinence from work had made wholly indifferent to the amount of wages paid for it. There was a prospect of amusement in the shape of some booty and some violence, and, most of all, perhaps of that rapid and aimless destruction of property that has cost time and labour to get together which to the genuine rough is almost as precious as either.

When it is considered that Liverpool contains more elements of disorder in proportion to its population than any other town in the United Kingdom, it will hardly be maintained that twelve hundred men can constitute an adequate police force. The opinion of the Liverpool Town Council seems, however, to be, that whether the force be large or small in itself, it is all that the ratepayers are prepared to pay for. No town, probably, has suffered more from that unfortunate distrust of the police which seems to be ineradicable among the poor. In theory the constable is the protector of peaceable people in every class, and in practice he very often is so. But to peaceable people of the lower classes he is a protector at best in the sense in which a solicitor is a protector to the well to do. Except in cases of very great need, it is held that to call him in is likely to prove more dangerous than to endure the evils which his presence might entail. This misapprehension is in some degree inevitable from the many aspects of poverty towards which a policeman can hardly appear otherwise than harsh. But we cannot but think that in Liverpool and in other similarly situated places the feeling that the police is a luxury for the rich has been increased by the very sharp line which magistrates and judges have drawn between offences against the person and offences against property. The leniency with which brutal assaults have been treated, compared with the severity with which robberies have been punished, naturally points in this direction. The poor are ordinarily the sufferers by the former and the rich by the latter; and it is not surprising that they should draw the obvious, though unjust, conclusion that, as the rich use the police, the rich ought to pay for them. The form which this conclusion assumes in practice is somewhat different. The rich cannot be made to pay more than their share; but the poor, who are a very numerous section of the ratepayers, can take care that as little as possible is paid for the police by anybody. The result is that the police arrangements of the town are starved, and that the roughs, who are left to do pretty much what they like in their own quarters, occasionally take leave to act with equal freedom elsewhere.

The MAYOR'S decision to call in the troops was undoubtedly sound under the circumstances. Liverpool is not adequately protected in the matter of police, and as there was not time to remedy this deficiency, there was nothing for it but to go elsewhere for help. At the same time the necessity of doing this reflects grave discredit on the administration of the town. The riot seems to have been nothing more than might arise any day in Liverpool if any local squabble provided the roughs of the town with an opportunity of gratifying their love of certain mischief combined with possible plunder. If the military is to be appealed to on such an occasion as this, the town had better be garrisoned at once. The duty of the Town Council is plainly to ask the Chief Constable what is the minimum force with which he would undertake to maintain order without being reduced on the first symptom of riot to send off for the nearest regiment. It has always been an honourable distinction of English, as opposed to Continental, administration that there should be no confusion between the function of the soldier and the function of the police constable; and this distinction ought not to be obscured merely because the second seaport in the kingdom will not be at the cost of maintaining a proper police force. It argues exceedingly bad economy on the part of the Liverpool authorities, inasmuch as the injury done to property by a strike which is accompanied by a riot is incalculably greater than that which is done by a simple strike. There can be little doubt that, in the present instance, the moving cause of the riot was the knowledge on the part of the rioters that, for a time at all events, they would be able to defy any force that the authorities could bring against them. So soon as the force at the command of the authorities became presumably equal to the need, all thought of resistance was over, and if that force had been there all along, the need for it would never have been disclosed. Now that it has been disclosed, it is to be hoped that the Town Council will take prompt and efficient measures to meet it.

FRENCH SOCIETY AND THE REPUBLIC.

THE establishment of the Republic in France has been attended with so many remarkable political incidents that we have been apt to overlook that aspect of the subject which most strikes an English resident there—namely, the struggle between what is called "good society" and the men who have finally succeeded in setting up the new form of government. We do not mean to imply that there is any truth in the old prejudice against the Republicans as a pack of hungry adventurers whose political programme consisted simply in taking other men's goods. A large proportion of the Republicans of the present day belong to the well-to-do middle classes, without whose aid, indeed, the Republic could not possibly have been established; and still it remains true that what is called "good society" in the provinces is bitterly opposed to it, even in the most Republican of the French departments. The following observations are those of an English resident who has watched the progress of Republicanism, and the opposition to it, for many years. They are not collected from newspapers, but taken directly from life itself.

The first thing to be said is that the profession of Monarchy or Republicanism does not precisely go by money. A Frenchman living in the country may be very well off and still be an ardent Republican; but when this happens he seldom has any pretensions either to birth or fashion; the rich Republican is almost invariably a man of the middle class, whose forefathers were laborious and economical, and so accumulated wealth. At the same time the rich Republican is a man without social ambition, a man who does not care to push his way into the society of the aristocracy. His friends are of his own class, and generally poorer than himself. He is plain in his dress and manners, generally drives a one-horse carriage, and gives himself no airs of superiority, which indeed would not be tolerated by the equality-loving society which he frequents. He is often fairly well educated, and either a doctor or a lawyer by profession, though his independent fortune relieves him from the necessity of practising. He gets elected to some post of trust by the votes of his fellow-citizens, and is satisfied with some degree of local usefulness and importance, though he may aspire to the *conseil général* of his department, or even to *la députation*. He has no notion of ever abandoning his Republicanism, however rich he may become; he will never, so long as he lives, stick a *de* before his name or do anything to conceal his origin. Just at present there is a worthy provincial of this type at the Élysée, who has accepted the Presidential chair.

The *nouveau riche* who wants to leave his own class and get into the local aristocracy is well aware that even the most moderate and circumspect Republicanism would ruin all his prospects. The rural *noblesse* used to hate Republicanism with much warmth, but since the elections the word hatred is much too mild to characterize their sentiments. They detest it utterly; they abhor, execrate, abominate it; they loathe the very sight of the initials R. F., and cannot be got to pronounce the words they represent; or, if ever by chance they do pronounce them, it is with a tone of contempt mingled with disgust. They have ingenious periphrases to avoid the odious word, and speak of "le gouvernement qui nous régit," or of "cet état déplorable des choses que nous voyons aujourd'hui." It is not in

accordance with the tone of polite society to admit th[illegible]e Republic can effect any good whatever. The correct thing is to deplore the wretched state of the country, the absence of a *lendemain*, the degradation of France in the eyes of Europe, and to anticipate a tremendous cataclysm in which all property will be swept away. Since the Senatorial elections gave a Republican majority to the Upper House it is the mark of a gentleman to express a grim satisfaction in the idea that his country is going to the Devil with greatly accelerated speed. "We have but one chance now," he is expected to say, "and that is the suicide of the democracy in the intoxication of its perilous freedom. The sooner it destroys itself by its own folly the better for the future of the country—if it is to have any future."

The most moderate Republican, the mildest Liberal even, soon finds himself out of place, unless he has hypocrisy enough to say these things himself, and to approve of them energetically whenever they are said by others. But he has to tolerate much more than this if he intends to keep his place in good society. He must listen to long accounts of Republican rapacity, to stories of the enormous fortunes which Gambetta and others have created for themselves by robbing the public purse. He must accept and maintain the theory that selfish greed is the only motive which can possibly animate a Republican. The received doctrine is that when a Royalist gets elected to the Chamber of Deputies his object is to maintain moral order; but when a Republican aspires to the same honour he thinks of nothing but the pay. The Prefects appointed by the reactionary Cabinet after the *Seize Mai* were men devoted to a sacred cause; the Prefects appointed by Dufaure are devoted to filthy lucre and the lusts of the flesh. The courts of justice are generally occupied by reactionary magistrates who have often hunted down Republicans without mercy, these same Republicans being now in many instances elevated by the votes of their fellow-citizens to positions of trust and influence as a protest against what they look upon as persecution. The rule in good society is to treat all these condemnations seriously, and speak of their victims as people in England speak of ticket-of-leave men.

Here and there a nobleman, like the Marquis de Talleyrand Périgord, revolts against the opinions of his class, and says that he has hopes for the future of his country; but these exceptions are extremely rare, and will hardly ever be found in the smaller *noblesse*. "La République," says the Marquis himself, "étant privée de la faveur des hautes classes, ne peut chercher son appui que dans ce que l'on est convenu d'appeler les couches inférieures de la société." This is true; so true that, not only the Republic as an institution, but even each individual Republican, whatever may be his personal merits, is "privé de la faveur des hautes classes." He can associate with a wealthy Republican middle class, but not even with the smaller aristocracy. It might have been supposed that in a country like France, where there are so many political parties, a man belonging to one so influential and so well behaved as that of the moderate Republicans might be tolerated anywhere if he were well educated and had pleasant manners; but the theory of good society is that there are no moderate Republicans—they are all "Communards." Merely to express his approval of any degree of political or religious liberty is quite enough to draw down that evil name upon a man, and, when once it has been applied to him, it is an indelible stain. Suppose you venture to say, for example, that the liberty of the press is not an unmitigated evil, that a general liberty of public worship might be desirable, that the liberty of political meeting is compatible with social order, you are a marked man, you are set down as a "Communard" at once. You may say such things in *cafés* where Republicans meet, you are not allowed to say them in good society in the presence of ladies. You may not even express a liking for representative government, or speak respectfully of the Parliament. The proper tone is to sneer at all popular representation, to declare that there is no necessity for any kind of liberty, and that the country could be much better governed without any Houses of Talk. You are not allowed to say anything in favour of popular education, because that is desired by the Republicans. In short, "the tone of good society" is reactionary to a degree utterly unknown in England; and a moderate Liberal, in rural France, has to avoid the gentry and keep to the middle class.

If the whole of the middle class were tolerant of modern ideas, the position of the moderate Liberal would still be endurable enough. He might do without the gentry and associate with people who are often equal to them in wealth and much superior to them in mental culture; but here again, in many localities, our moderate Liberal encounters a serious social difficulty. The middle class which has no social ambition will accept him, but that which aspires to enter the ranks of the gentry in the next generation sets its face against all the forms of Liberalism as resolutely as if it were descended from the Crusaders. It is not that the class really hates Liberalism quite so ardently as it pretends to do, but it is well aware that such hatred is the best passport to good society. A rich *bourgeois* who wants to ennoble himself must begin by declaring his detestation of the Republic, must be, in outward seeming, an obedient son of the Church, must buy land, and put a *de* before his name. The process is as well known as the art of turning a schoolboy into a lawyer or a physician. You may see future nobles in all stages of development, but you will never by any chance meet with one of them who professes Republican opinions.

Besides these aspirants to nobility you have a commercial class in country towns which is often strongly Bonapartist, and therefore quite as hostile to the Republic as the Legitimist aristocracy itself. In some towns this class is Republican, in others Bonapartist; in former times it used often to be Orleanist, but that party has lost so much ground of late years that it does not count for much at the present day. We know a town where all the rich people are, or have been, in trade, and where fortunes are unusually large. In that town the political colour of all wealthy society is strongly and intolerantly Bonapartist, yet the lower classes elect a Republican Municipal Council, and return, with the help of the surrounding peasantry, a well-known Republican to the Chamber of Deputies. The reader may imagine the position of a man with Republican opinions, however moderate, in such a town as that. So long as he keeps to the society of the lower middle class or the populace, he is comfortable enough, being in unison with the people he meets; but, if his professional avocations require him to penetrate into the upper social strata, amongst the wealthy families, political hypocrisy, or at any rate the greatest patience when politics are the subject of conversation, becomes an absolute necessity of his position. The difficulty may be much enhanced by certain personal considerations. The defeated parties in France are exasperated to such a degree that they have bidden farewell to everything resembling delicacy where political questions are concerned. The consequence is that a Republican, however moderate, cannot go into the reactionary society of a country town without hearing the characters of his friends attacked in the most merciless way. If he defends them, he is at once looked upon as an enemy; if he sits tamely at a dinner-table when a friend is slandered without uttering a word in his defence, he feels himself, and he is, a cowardly wretch who has no claim to the respect of others or to his own. Then why not leave such society at once, and confine himself to his own political friends? It is easy to say this; but what if the man belongs to some profession in which success is not possible without the countenance of the rich? Take, for example, the case of an architect in a country town who has to make his way in the world, has the misfortune to cherish moderately Liberal opinions, or, in other words, to feel a sentiment of loyalty towards the present Government of his country. The poor do not build houses; so he must know rich people in order to advance in his profession. The difficulty is complicated in his case by the necessity for standing well with the clergy if he is to work for churches and convents. Political animosity is so strong in France that people would rather employ an inferior man of their own colour than a clever man who is suspected of Republicanism; and the consequence is that an architect, in such a town as we have been describing, is placed in a most embarrassing position if he happens to be a Republican.

Another great social disadvantage resulting from the hatred of certain classes to Republicanism occurs in matrimonial alliances. A young man's chances of making a good match are terribly curtailed by even a suspicion of Republicanism; we mean, of course, in the provinces. The best matches, from the worldly point of view, are nearly always made by young men who have attracted some degree of notice as reactionaries; and the more violent and intolerant they are the better their chances seem to be. The hands of most French heiresses are directly or indirectly at the disposal of the clergy; and the clergy, perhaps with good reason, both dread and dislike the Republic. The consequence of this is a constant tendency to keep wealth that is already earned in the hands of the reactionary parties, and to keep the Republicans as a class down in the social scale within the limits of the smaller *bourgeoisie*. How long this will last if the Republic continues to be the political *régime* of France it is of course difficult to determine; but there are few signs at present that the aristocracy, or what considers itself such, will ever frankly reconcile itself with the democracy; and we are inclined to believe that France has before her a social future of a most peculiar kind, in which disloyalty to the established Government will be one of the marks of good breeding, and fidelity to it the recognized sign of what in England we should call a cad. It would be far better for the country if there could be something like a cordial reconciliation between classes; but the Republicans avenge their social slights by carefully excluding the aristocracy from the Government, both of the State and of the departments and towns. Then the aristocracy complains that it has no chance of taking office under a real Republic, and the social warfare is handed down, with all the hatred and prejudice which it engenders, to be continued by another generation.

SENSATIONAL SERMONS.

PREACHERS have perhaps the right to complain that their hearers are very difficult to please. They can scarcely avoid being accused either of dulness or of unworthy levity. In America the ministers of all denominations seem to prefer incurring the latter charge. The *North American Review*, a periodical which cannot be called gay, and which, according to Edgar Poe, is entirely written by cultivated elderly clergymen, has very seriously rebuked the "sensationalism" of the Transatlantic pulpit. Dr. Taylor, who lectures his brethren, is himself a very austere writer. He seems to have a charming topic, and to know a hundred good stories about the devices of the popular New York preacher. So intent, however, is he on edification, that he only now and then lets out one of the anecdotes with which he is obviously primed. We are compelled to imagine what a screaming pulpit farce in America must be by aid of a few hints, and by reflections on the

performances of the more daring and original of our own theological buffoons.

The preachers who are accused of sensationalism naturally take refuge in arguments like those of sensational novelists. The romancer points out that there are some "sensational" incidents in *Hamlet*, that there is a good deal of stabbing and poisoning in *Romeo and Juliet*, that the *Bride of Lammermoor* is more intense than most of Miss Yonge's stories for girls. Hence he or she argues in favour of the unlimited use of crime and horror. The reply is easy; crime and horror are not the only elements of interest in the *Bride of Lammermoor* or *Hamlet*, as they are in a great many stories that it is needless to name. The arguments of the dramatic or comic preacher are of the same flimsy kind. He points out that Bossuet and Bourdaloue were most successful when they "improved" the events of the day. He excuses the lugubrious rhetoric of his orations on royal deaths, and the copious quotations from *In Memoriam* and Lord Lytton's poems which he mingles with his tears, by the example of the funeral sermons of the great Frenchmen. It is only necessary to reply that their performances were something more (though, after all, perhaps not very much more) than Sunday substitutes for the *Mercure Galant*. Again, the comic preacher will maintain that all "means of grace" are justifiable, which is rather a Jesuitical doctrine. He will defend his weekly drivel about evening parties, railway accidents, commercial panics, and what not, by saying that only by these devices can he secure the attention of men and women. Their lives run so much in a groove that he must follow in the track, and must tell them better stories from the pulpit than they are likely to hear in the smoking-room. Thus we possess several preachers who rival Mark Twain or Artemus Ward in gay profanity, and who certainly are "doing a great work in our midst," if spiritual success is to be estimated by the numbers of people who enjoy being chaffed from the pulpit. Those courageous divines still lack the boldness of their American models; besides, *carent vate sacro;* the daily papers do not yet devote their Monday columns to minute reports of their jests and eccentricities.

The American newspapers have not neglected this branch of business. Every Monday a kind of *Symposium* is held in the edifying pages of the *New York Herald*. For weeks the preachers have been vying with each other in original ideas about eternal punishment. Fashionable people go to hear Mr. Howler (who is a "hard-shell," or very convinced and condemnatory person) in the morning, and in the afternoon Mr. Honeyman charms them with his gentle and genial universalism. On Monday the discourses are served up for the business-men who flash past the upper floor windows in their delightful trains, which add a new ornament and luxury to civilization. Egged on by the press, the clergy are reduced to the condition of the French poet who thinks it his duty to say something more startling and disgusting than the poet who preceded him. By this time the sensations which can be stirred by the ideas of eternal punishment are pretty nearly exhausted, and the pious public of New York is really to be pitied. No topic admits of being peppered much hotter, and preachers are descending in despair from high tragedy to low comedy. The press not only reports all that has been said after the event, but advertises beforehand the preachers and the titles of their sermons. On Sunday morning the jaded lover of excitement looks down the list of sermons as he scans the list of plays at the theatres. Shall he go and hear the latest effusion of the Rev. Henry Ward Beecher, or shall he try some less familiar favourite? The titles of the sermons provoke rather than satisfy curiosity. Here are some of the announcements:—"A Man getting out of a Ship," "How Jonah lost his Umbrella," "The Speckled Bird," "A Little Man up a Tree," "The Runaway Knock," and so forth. These titles have the quaintness, without the humours, of our old English Puritans. When Richard Taverner, Esq., of Woodeaton, preached in the University pulpit in Queen Elizabeth's time, he said, quite naturally, "I have brought you some fine bisketts baked in the oven of Charitie, carefully conserved for the chickens of the church, the sparrows of the spirit, the sweet swallows of salvation." The Yankee notions, however, are not natural, but forced. To advertise thus, as Dr. Taylor says, is "a deliberate letting down of the great aim of the Christian Ministry." After all, the titles are not very taking. We can all imagine what will be said about Zacchæus, "the little man up the tree," and the withering of Jonah's gourd is but poorly concealed by the jape about the prophet's umbrella. It appears that several American parsons curse and swear in the pulpit. "The profanity of the oath which is common in the streets has a peculiar piquancy when it is quoted, even if it be quoted only to be condemned, in the house of God, and the gusto with which it was given will be commented on when other things of great value are entirely lost sight of." Thus it may be doubted whether any one was sincerely edified when an English Dissenter began his sermon with the words, "It's devilish hot." The old Scotch minister who, when young men outdid him in eloquence, "mounted the white horse o' the Revelations, and he aye dings them a'," really chose a more appropriate form of rhetoric than his modern brethren.

When churches, like theatres, are merely speculative proprietary concerns, it is natural that experiments should be tried by managers who wish to fill their pews. A very feeble joke from the pulpit goes a long way, and you will see an audience titter over a jest that would hardly get a laugh even in the House of Commons. The tendency of men and women to giggle when they are got together in numbers in a sacred place has been made use of by reckless preachers of Buddhism no less than of Spurgeonism. The Bonze seldom made a better hit than when he described the final doom of the indolent temple-servant. "The man, my brethren," he cried, "was the slave of this holy place for many years. He never swept it out as I like to see it done. I remonstrated with him; but in vain. I pleaded with him; but in vain. He died. Where is he now? *That* is he; he is there!" thundered the Bonze, pointing to a dirty old broom which stood in the corner. It was in this shape that the hieratic serf was to expiate a life of laziness. Our creed scarcely permits such flights; but the comic parson who was preaching a sermon in aid of the restoration of his own chapel came near the humour of the Bonze. "My friends, the gilding is off the ginger-bread, the paint is peeling from the walls. But I do not think of that; I think," he said, with a solemn gesture, "of what is above; there is a great hole in the roof." The French at this moment are much troubled by the bad taste, the jigging buffooneries of their small adventurous theatres. They think that to subsidize more houses, and so enable a larger number of actors to play for art's sake without loss, would be a plan worth trying. The antics of the preachers in "private adventure" chapels, whether in England or America, are certainly an argument in favour of an established church, if an analogy may be drawn from the theatre. It would be by no means amazing to learn that some speculative person had engaged Zazel to illustrate the flight of angels, or Messrs. Maskelyne and Cooke to demolish the rival pretensions of the Church of spiritualism.

It is the competitive and commercial spirit that begets modern theological sensationalism. No one can "draw" if he does not advertise himself; if he does not "draw" he must be removed, and other persons substituted; and so every kind of *affiche* is employed. The sensational sermons of the *libres prêcheurs*, concerning whom M. Meray has made what we think a dull and disappointing book, were the result of similar ambition. The monk who told a few risky stories about saints was certain to be asked to dinner in the hall, and thus hagiology was enriched by some comic stories. Perhaps the force of competition in producing a sensational discourse was never so well illustrated as by the case of the Scotch probationer at Greenock. A "probationer," it may be necessary to say, is a young minister who has not procured a living. He engages in rhetorical tournaments with his fellows; they preach in turn before critical congregations, like Liberal politicians before the Two Hundred of Southwark. It chanced that the probationer of the story had to preach before a shipbuilding parish in Greenock, and he could conceive no topic more likely to interest his audience than the construction of the Ark. After commending the faith of Noah, he pointed out to his listeners that this faith was of a sort which they, hard-working shipwrights, were peculiarly fitted to appreciate. Noah's difficulties were just those practical ones, he said, which they could understand and sympathize with. "Here was this poor man, living in a land where, as I am credibly informed, there is no watter, nothing but the dew on the herbs in the morning, and the wells from which the women fill their pitchers at the going down o' the sun. And this poor man was told to prepare for a flood, and how he could tell what a flood might be (in a country where, as travellers say, there is no watter) is clean beyond *me;* but if any o' the congregation has received any light on the subject, I will be most happy to speak to him in the vestry. Well, this poor man was told he must build an ark, and how he was to set about that in a country where, as I am informed by the writings of the learned, there is no wood, is also a matter quite beyond me, and a most beautiful illustration of the faith of the Patriarch. But if any member of this intelligent congregation (and ye are all interested in this question) thinks he has received any light on the matter, I will be most happy to meet him in the vestry." After awakening the scepticism of his listeners by these absurd difficulties (much as University preachers delight in introducing the very latest heresy to the undergraduates), the probationer ended with a picture of Noah at work in his "bit yairdie," and of the boys looking over the fence and derisively observing, "Weel, Noah, how are ye getting on to-day, and when's the launch to be?"

Competition but rarely produces, perhaps, discourses so naïve as that of the Greenock probationer. It is plain enough, however, that the public is really responsible for the vagaries of the sensational preacher. By the beautiful working of the laws of social economy, the demand obtains the supply, while still larger and showier supplies are laid in to tempt a fresh demand. If Mr. Spurgeon rivals *Our Boys* at the Tabernacle, Mr. Charles Honeyman must vie with the *Pink Dominoes* in his chapel in May Fair. Just at present, perhaps, politics supply the readiest material to the heated pulpiteer. He either swells all over with imperial pride, or he prays for the prompt defeat of the British forces by those interesting children of the lost Ten Tribes—the Afghans. When politics are more quiet, social scandal will doubtless be introduced, if indeed competitive sensationalism has not already pounced on this tempting prey. Nothing would "draw" better than an unctuous description of a contemporary elopement, followed, of course, by a gloomy view of the consequences of that arrangement. When once preachers have begun to try to create an effect by illegitimate means, there is no subjective reason why they should ever stop. When once the public has tolerated a certain amount of profane bad taste, no one can say where it will draw the line. It may become expedient to have a censor of sermons as we have a censor of plays. His office will neither be easy nor enviable.

BURGLARS AND BUSHRANGERS.

THE Leeds prison authorities deserve great credit for the reserve they have evidently opposed, with more or less success, to the energetic reporters who have been indefatigable in their inquiries after the convict Peace. We have but the vaguest and most unsatisfactory information as to the health of the notoriety who for the last few weeks has been more of a public character than the Prime Minister or the commanders of the Afghan columns. We are left much in the dark as to his appetite; we scarcely know whether his thoughts have taken a sentimental or repentant turn, or whether he justifies the hero-worship that has been lavished on him by living "game," with the honourable ambition of dying so. We repeat that we approve the reticence of the prison authorities; and only hope that they may persevere in it to the end. We own to a nervous horror of the apotheosis of the famous murderer, expanded into sundry columns of picturesque description and sensational moralizing. We have no doubt that even the hoisting of the black signal flag will be made the text for many a lurid article; but at all events imagination must halt on its pinions when it has only the reflection of one ghastly fact to go upon. Yet we cannot help sympathizing in some measure with the sensational journalists, because it is seldom they have had such a chance, since the days of the famous Jack Sheppard. And even the hero of Mr. Harrison Ainsworth's Newgate romance was necessarily inferior in many respects to the latest product of our modern civilization. He was of a lower type of intellect, and relied less on his brilliant prevision and his powers of strategical combination, than on mere mechanical skill as a "cracksman" with wiriness and pluck and unflinching determination. And even in those more corporeal qualities, Peace appears to have been at least Sheppard's equal. We can conceive his breaking through massive stone walls, prising locks and bolts with the leverage of the crowbar, and filing the most ponderous padlocks and fetters. But he showed himself capable of higher things than merely gnawing himself out of a trap like the fox or the weasel that leaves a limb behind it. We assume that he has been more largely lied about than any other public man whom the present generation has execrated or honoured. But making every allowance for sensational embroidery, his career was certainly an original and striking one; and should be pregnant with inspiration and practical lessons for the laborious young burglar who is striving to better himself, or for the scapegrace who stands hesitating on the confines of crime. It seems almost a pity, we grant, that the clouds of mystery should lie so heavily on his closing scenes, for none but himself can possibly have the key to the most suggestive passages of his eventful biography, and he may be wasting his treasures of cynicism and stoicism on the unreceptive minds of turnkeys and gaol-chaplains. But, after all, Peace's would-be biographers may find some selfish comfort in the thought that there has seldom been a time when those offences in the refinements of which he has graduated as a master have been so rife as at present. Lately, indeed, hardly a week has gone by without the report of a burglary in a lonely dwelling, accompanied by circumstances of special atrocity.

We do not believe much in epidemics of crime, though no doubt so shining an example as Peace, especially when improved by descriptive reporters and sensational leader-writers, may tend to turn dreamers into earnest practitioners. There are precedents enough for breaking into your neighbour's house, especially when that neighbour is feeble and unprotected, without having recourse to contemporary police reports. And at the present moment, unfortunately, we can trace the multiplication of these crimes to obvious causes. Philanthropists may discuss the extent of the existing distress, but there is no doubt whatever that it is real and general. The least unobservant lounger in the West End of London must have remarked an unusual number of "loafers," who have the ugly features of the lowest type of rough and yet seem to have fallen from some higher grade. They look like skilled mechanics who have been going gradually to the bad, till, being miserable and half starved, they are become well nigh desperate. Many of these men, though once respectable, have lost both heart and moral fibre till they have hopelessly succumbed to their troubles and are fit for nothing but begging. But there must be not a few of the sterner of them who are ready and willing to turn their talents to profitable account. As they slink along the streets they instinctively keep their eyes open for opportunities. Setting the remonstrances of conscience aside, if they have kept a mind equal to adversity there is little in a burglarious venture to alarm them. If they succeed they may live comfortably on the proceeds of the "swag" even after it has been "sweated" by some grasping receiver. If they are caught and condemned they can hardly be worse off than before; and at least they will have shelter and food during their term of penal confinement. When we consider the desperate condition to which so many bold and unprincipled scamps are reduced, we are rather inclined to be surprised that burglaries are not even more frequent than they are. More especially is this the case when one recalls the fashions that are introduced by modern architects. Formerly a well-to-do householder, building a habitation for himself, subordinated decoration to solidity and security. We subscribe entirely to the maxim which Sir Walter Scott's sheep-stealing client impressed upon him at his first Jedburgh assizes by way of fee. He told his young defender to take care to have heavy bolts to his doors, and, if possible, to keep a yelping terrier behind them. Nowadays your architect will tell you that shutters to the lower windows are quite gone out of date; and even in solitary suburban residences you are advised to rely upon having the good fortune to be overlooked by the housebreaking gangs. Had this newfangled notion been adopted in the country districts where miners, colliers, and metal-workers are on strike and out of employment by tens of thousands, it would have simplified the tasks of some active amateurs and possibly induced them to dispense with dangerous acts of severity. We can imagine the adventurers who broke in upon the elderly maiden ladies near Bristol; or those who made their way into the mansion of old Mr. Smith, and, having subsequently "knocked him out of time," heaped a pile of furniture upon him; or those others who met with so courageous a reception at the Rectory of Edlingham, near Alnwick—we can imagine these men making their preliminary observations and prowling about the windows on the basement. Had they found only glass with no wood behind, they might noiselessly have disposed of a pane, and placed their hands on the bolt, with the most elementary knowledge of their new profession. They might have slipped off their boots, and glided quietly over the house, and ransacked it without needless disturbance. As it was, they became rough and savage in spite of themselves. They were compelled to knock at the front door, and open a formal parley with the inmates whom they had subsequently to reduce to silence. Where the house is defensible and the garrison reasonably strong, we are all in favour of the old-fashioned shutters, especially if they have bells attached for better security. But perhaps when one is old and feeble, and lives almost alone, there is something to be said for making entrance easy; for though the chances of losing your valuables are increased, you are more likely to escape personal violence. It is not everybody who, like the brave Northumbrian vicar, can put his hand to the sword which he keeps hanging by his bedside; and we should take the moral of these recent burglaries to be, that if you live lonely and without suitable protection, you had better send all your valuables to the bank, and take care to let the fact be known in your neighbourhood.

For, in England at least, banks are safe for the most part—from everybody, that is to say, but the managers or directors. And this is more than can be said for those establishments at the antipodes, where the feats of English burglars are far surpassed by the bushrangers. Here our night prowlers have merely to do with the metropolitan police, who cannot be omnipresent, or with the more stolid county constabulary, who are generally conspicuous by their absence. It is true that if they get away with their booty, detection dogs them, though it may be with uncertain step and faltering nose. In Australia, on the other hand, they appear to bid defiance to the detectives altogether; and, in place of having to dodge the movements of some solitary peace guardian, they provoke the intervention of the colonial troops, who are sent to mount guard over the stable doors after the horses have been stolen. Dan Kelly may take such rank in the romantic legends of the New World as the Fra Diavolos and their Neapolitan and Sicilian successors in the stories of unregenerated Italy. Happily, as Mr. Kelly is strong, he is merciful; and there is something in the reports of his latest exploit that reminds us of the humorous generosity of the outlaw of Sherwood Forest. One fine forenoon Mr. Kelly, with three of his gang, made his appearance at the station of Faithfull's Creek, having first sent a scout ahead to see that the coast was clear. Having secured the inmates, the party turned the station into what used to be known to the French police as a "rat-trap." Each new arrival was seized, so that no one should go out again to give the alarm. Among other visitors fortune sent them a hawker, whom they laid under contribution for a change of wardrobe, borrowing his cart and his pony. Leaving a guard over their captives, they drove off to the local bank in the neighbouring township of Euroa. It was during business hours and in broad daylight that they dropped in upon the manager. They called for his whisky and kindly pressed it upon him; they ransacked his repositories and made free with the safes, and stowed away in a sack notes and gold and nuggets to the value of 2,000*l.*, besides securities they carried away for subsequent inspection. Next they requisitioned sundry carts; they forced Mr. Smith, with his wife and children and maid-servants, to take their seats in them; when the whole company were driven back to the station at Faithfull's Creek, passing under the noses of the Euroa policemen. Nothing has since been heard either of Kelly or his plunder, although a reward of 2,000*l.* has been offered; but in the meantime there is very general apprehension that he may choose his own time and place for reappearing. At all events we are told that the various banks are being protected by outlying detachments of artillery; we cannot doubt that the occupants of lonely stations are kept in a lively state of alarm; and we may imagine that the balance-sheets of those central banking establishments which, being in cities, may be supposed to be comparatively secure, will show in the meantime a marked influx of bullion and "other securities." It seems clear that our Australian colonies still keep their superiority in some respects as fields for the enterprise of adventurous youth; although the prospects of the squatters are no longer what they once were, and commerce in the towns is suffering from depression.

LELAND'S ITINERARY.

"ANCIENT monuments," as understood by John Leland "the King's antiquary," who was born in London about 1506, were manuscripts, not buildings. As a worthy scholar of Lyly, the famous grammarian, he found an abbey or cathedral interesting chiefly for the library within its walls. To bring the literary remains of genius and erudition "out of deadly darkness to lively light" was the confessed object of what his friend and editor, Bishop Bale, calls his "Laborouse Journey and Serche for England's Antiquities." Though sometimes impressed by the grandeur of the Gothic buildings he met with, Leland rarely attempts architectural description. That "Margan an abby of White Monks" had "a very large and fair church"; that the like Cistercian fabric in the picturesque valley of Neath, whose smoke-discoloured ruins sometimes yet detain an indignant antiquary, seemed to him, with its emblazoned roof and gilded choir and tabernacles, "the fairest abbey in all Wales," is all he tells us in his *Itinerary* of these two noble monasteries; and such brief mention is typical of his treatment of the structural character not only of religious houses, but of buildings in general. It is but rarely that he is moved to the enthusiasm with which he views the venerable abbey church of Malmesbury, which he calls a "right magnificent thing." Glastonbury he must have seen previously to its overthrow, for he speaks of the crucifix before the choir; but though he observed "six goodly windows in the top of each side of the east part of the church," and tells us that Abbot Bere "made a vault to the steeple which he supported by two arches like St. Andrew's cross, else it had fallen," yet this church, one of the most majestic fanes in Christendom, he makes no attempt to describe as a whole. Leland, in fact, was not an architectural student; he never uses a technical term. William Wyrcestre, his forerunner, on the other hand, was devoted to architecture, and furnishes the first glossary of terms in Gothic construction. The former boasts that after six years roving over England and Wales there remained "almost no cape, nor bay, nor haven, creak or pier, river, or confluence of rivers, breeches, waschis, lakes, meres, fenny waters, mountains, valleys, moors, heaths, forests, chases, woods, cities, burghs, castles, principal manor places, monasteries, and colleges, but I have seen them." Much may be done in six years' exploration; but Leland's time was chiefly spent in the libraries of cathedrals and monasteries, or wherever else "records, writings, and secrets of antiquity" were preserved; while his diligence is shown by his *Collectanea* and *Scriptores*, and numerous other works, as well as by his *Itinerary*. Bale, with his usual sweetness, characterizes monks and canons as "antichrist's noyful cattle and execrable sects of perdition," yet at the same time attempts not to deny that these "unprofitable clods, laysy lubbers, and popyshe belly goddes," whom he can compare for worthlessness only with the "oyled bishops and priests" around him, were the conservators of ancient learning, while English history would have been almost unwritten but for their labours. A fiat from the King would have saved the libraries from the sordid spoliators of the abbeys, and thus indefinitely extended his chosen antiquary's field of search. If the gleaning was so great to the reapers of knowledge, what would have been the full harvest? Bale tells of a merchant who bought the contents of two noble libraries for forty shillings, and after using the books for "gray paper" during ten years, had store enough to last ten years longer. The same authority, no doubt in his usual style of exaggeration, says that "at times whole ships' full" of books were exported for the use of grocers, soap-sellers, and book-binders, a waste which he reasonably adds "will be unto England a most horrible infamy among the grave seignors of other nations."

We have but to look into Fuller's *Worthies* to see how much quaint and curious lore was latent among the people a hundred years after Leland's time. The collection of anecdotes, traditions, and old beliefs contained in that work, the numberless local proverbs and sayings, with occasional touches upon the customs and observances and grotesque delusions and superstitions of village life, make us regret that the earlier traveller had not conversed with peasants in cottages as well as with doctors in learned halls. Twenty towns, castles, or churches are mentioned in a page of his *Itinerary*; but it is seldom that Leland halts to unfold a tale of any person, place, or object. Sometimes indeed he forgets to be dull, and favours us with a brief story. For instance, he gives a characteristic anecdote of Archbishop Peckam, which we are surprised to find overlooked by Dean Hook. When that haughty prelate came charged with the Pope's Bull which raised him to the see of Canterbury, "he entered the Chapter with the monks, beginning his communication to them with the words, 'Non vos me elegistis sed vos elegi,'" a note of defiance that epitomized in spirit his whole after course. Again, in explaining the origin of the arms of Fawey, our antiquary relates that the prosperity of that town was originally owing to piracy and feats of warfare. Their successful enterprise on the sea made the mariners proud. "The ships of Fawey," he continues, "sailing by Rhy and Winchelsea about Edward the Third's time, would vail no bonnet being required," whereupon the Rhy and Winchelsea men fought with the men of Fawey, the latter gaining the victory; which caused the men of Fawey to impale the arms of Rhy and Winchelsea with their own. Fawey, he adds, was subject to incursions of the French. On one occasion they attacked the house of Thomas Treury, whose wife gallantly repulsed them in her husband's absence. Treury, in consequence, built a strong tower and castellated his house, which, "unto this day," says Leland, "is the glory of the town." At Bath our traveller found nearly the whole of the walls standing, a piece about Gascoyne's tower being the only part destroyed. The walls are now as completely vanished as a curious observance that he also mentions:—"At Whitsuntide, at the time which men say that Edgar was there crowned, there is a king elected at Bath every year of the townsmen, in the joyful remembrance of King Edgar and the privileges given to the town by him. The King is feasted and his adherents by the richest men of the town." The Puritan dynasty no doubt terminated this interesting custom, which was never revived. As a contribution to local botany we may recite the following. Radnor, he says, was partly destroyed by Owen Glendower, and the "voice is" that after he had won the castle he took threescore of the garrison and "caused them to be beheaded on the brink of the castle yard, since which time a certain bloodworth groweth there where the blood was shed."

For one who, like Leland, had changed his religion there is an unusual absence of the convert's virulence against the party he had left. We find him on agreeable terms with abbots, priors, and monks, and gleaning from them points of information to be set down in his note-book. With the Abbot of Cirencester he had a conversation about the two great consular ways, Ermine Street and the Fosseway, which intersect each other, and are joined with the Ickneild at Corinium. The Abbot of Whitelaw told him a "merry tale," which, however, seems to us rather pointless. Thomas Cleobury, late Abbot of Dore, gave an account of a Bishop of Lichfield who, in the days of Offa, King of the Mercians, retired to a hermitage at Buildwas, "after such time as the pall of the Archbishop of Lichfield was taken from Lichfield and restored to Canterbury." The last Prior of Winchelcomb pointed out a spot in that town where a castle formerly stood. The Prior of Bath informed him "that after the Nunnes time there were secular canons in S. Peter's Church at Bath—peradventure, Offa, King of Merches, set them there." Leland, however, was a scholar and *antiquarius*, not a theologian. He had been granted by the King (July 12, 1536) a dispensation from the living of Popeling to go upon his six years' wandering; and his absence would have been no less a blessing to the flock than to the shepherd if his sermons were as dry as his writings. His Romish biographer Pitseus attributes the melancholy and insanity of his latter days to remorse of conscience at having deserted the faith of his fathers; but there is no evidence that Leland changed his opinions with less apathy than a thousand of his brother divines. There was one adherent of the old faith, Polydore Vergil, against whom he conceived a lasting dislike — not on points of doctrine, but of learning. Vergil, Archdeacon of Wells (A.D. 1507), had been sent by Pope Alexander VI. to collect the annual tribute of Peter's Pence. At the desire of Henry VIII. he wrote a History of England, which contained so many errors that, to prevent their discovery, he is said to "have collected and burnt a greater number of ancient histories and MSS. than would have filled a loaded waggon." Amongst the falsifications of English history imputed to him was his attack upon the veracity of Geoffrey of Monmouth's *History of Prince Arthur*. If the rest of his perversions of the truth were no more indefensible than that, the destruction of the records in question was quite unnecessary. Leland vindicated the authority of Geoffrey under the title of *Assertio inclytissimi Arturii Regis Britanniæ* (Lond. 1544), which has been reprinted in Hearne's edition of the *Collectanea*, and should be consulted by the student of Arthurian lore.

The subversion of ancient architectural monuments was perhaps less grievous to Leland than the wasting of literary records. Possibly it was rather from political considerations, for he was an arrant Erastian, that he expresses no regret at the destruction of so many magnificent buildings going on before his eyes. It has hardly been considered how much the dilapidation of monastic structures in particular has been owing to the sordid notion that money or plate was to be found concealed within their walls or about their foundations. Leland speaks of one of three stone crosses at Brackley in Northamptonshire having been lately thrown down by thieves that sought for treasure. This gives a hint of how other ecclesiastical structures must have been weakened or overthrown by licensed depredators. Glastonbury was dissolved at the time when the King's antiquary was in the middle of his famous journey. In September 1539 the visitors spent a week in ransacking the abbey, and daily found money and plate "muryd up in wallis, vaultis, and other secret places." This concealment was called robbery, and, as is well known, the abbot and two monks were hanged—or, as more correctly expressed by the peasantry of the district at the present day, "murdered"—for holding back the goods of their house. A belief survived that even the penetrating eyes of King Hal's Commissioners had not detected all the riches of the monks. What these searchers had left behind we find Mary Middlemore, one of the maids of honour to Queen Anne of Denmark, hoping at least in some measure to secure for herself. According to Rymer's *Fœdera*, that lady obtained in 1613 a license from the King to ransack Glastonbury and two or three other of the principal abbeys, in search of certain "treasure trove" which she had been informed was to be found on these estates; and during five years she was empowered to demand the keys of such abbeys, and to employ workmen to pursue the inquiry. In 1611 Samuel Atkinson and Symon Morgan received like royal authority to dig and break up the "earth, ground, or soil of the said abbies," &c., for the "finding out, getting, and obtaining all manner of Treasure Trove, Plate, Jewells," &c. The rude treatment which Glastonbury and like ancient structures

must have suffered in these explorations may account for much of their dilapidation and overthrow. The Abbey of Malmesbury, more fortunate than Glastonbury Abbey, found a friend, we are told by Leland, in John Stump, the rich clothier, whose homely name must always be honourably associated with the superb fragment which remains of that Benedictine house. Though he converted the monastic offices and even one of the chapels into workshops for his looms, he persuaded his fellow-townsmen to save the abbey church, and himself largely contributed towards the purchase of it for parish worship. A headstone to a recently departed Stump may be seen lying off the churchyard path of the abbey, which should remind worshippers of their benefactor. Leland, as we have already said, was much struck with Malmesbury.

The present great Northern centres of population were in Leland's time not much more than villages. Liverpool was a "pavid Towne" with but one "chapel"; it was resorted to by merchants, he says, on account of the smallness of the Customs. Warrington also, with one church, was "a better market than Manchester." The latter, however, was "the fairest, best builded, quickliest, and most populous Towne of all Lancashire; yet in it but one Parish church." Of Birmingham he gives a fairly graphic sketch. The town consisted chiefly of one street a quarter of a mile in length, which he calls the "Beauty of Birmingham." "I saw," he says, "but one paroch church in the town. There be many Smiths in the town that use to make knives and all manner of cutting tools and many Loriners that make bittes, and a great many naylors. So that a great part of the Towne is maintained by smithes who have their Iron and Sea Cole out of Staffordshre." Birmingham, it might be thought, would have familiarized him with chimneys. These, however, meaning flues or enclosed passages for conducting smoke, were in Leland's time rare, for in relating his visit to Bolton Castle, he says:—"One thynge I much noted in the hawle of Bolton, how chimeneys were conveyed by tunnels made on the sides of the walls betwixt the lights in the hawle, and by this means, and by no covers is the smoke of the harthe wonder strangely conveyed." The word chimney indeed is used by Chaucer and Piers Ploughman, but as synonymous with fireplace or furnace, in which latter sense Wyclif employs it—"their schulen send him into the chymeney of fier;" and Leland defines the word with evidently the like meaning.

Included in Hearne's editión of the *Itinerary* is a queer treatise on the mystery of masonry, said to be in the handwriting of Henry VI., "and faithfully copied by me John Leland, Antiquarius, by the command of his Highness Henry VIII." A copy of this translation was obtained by John Locke from the Bodleian, which he annotated for the benefit of Lady Masham, who was so fond of masonry as to say that she more than ever wished herself a man that she might be capable of admission into the fraternity. That Leland did not originate some of the strange errors corrected by Locke may be well believed, but it seems incredible that he should retain them in his translation. Masonry, we are told, began with the "first men of the East," and was brought into the West by the Venetians, a nationality which the annotator is not surprised to find, "in times of monkish ignorance," to be confounded with the Phœnicians. Moreover, the mystery was introduced into England by Peter Gower, a Grecian, a "mighty wiseacre," who had journeyed for "cunning" into Egypt and into every land where the Venetians (Phœnicians) had planted masonry. Even the author of the *Essay on the Human Understanding* was at a loss to guess the identity of "Peter Gower," until, suddenly illuminated by the thought of Petagore, the French form of Pythagoras, he solved the difficulty; Pythagoras, Peta Gore, and Peter Gower being evidently one and the same persons. Notwithstanding the grotesque blundering of this treatise, Locke confesses that it determined him to seek the honour of initiation into the "mystery of masonry."

Leland's enemies, says Wood, charge him with being "vainglorious" and promising more than he was able to perform. Certainly his high conception of his work much exceeded what he effected. His *Itinerary* is merely a huge heap of unshapen stones for a palatial edifice that he intended to build. The work he designed was to be divided into as many books as there were shires in England and Wales, each to contain the "Beginnings, encreases, and memoriale acts of the chief Tounes and Castelles of the Province allotted to it." He complains that, "except truth be delicately clothed in purpure, her written verities can scant find a reader"; but he did not despair of satisfying even such delicate tastes. As "Carolus Magnus," he says, "had among his treasure three large and notable tables of silver, richly enamelled, severally representing Constantinople, Rome, and the world at large," so he (Leland) designed a work more durable than engraved silver or brass by making so complete a description of the whole realm that it should be easy for the painter or engraver to translate the result into a perfect picture. But Leland would have needed to carve his living marble in Latin. His English style was as rude and grating as the roads he travelled; but his Latin, at least his Latin verse, flows as smoothly as his own royal swan in her course on the stormless Thames. The *Cygnea Cantio* is a poem of 700 lines in a choriambic tetrameter of a spondee, a choriambus, two iambi, and a long syllable; and the Swan, instead of foolishly singing in doleful hymn her own departure from the world, more sensibly chants in lively phrase the praises of the successive towns and villages which she passes between Oxford and Greenwich. The verses are supplemented by an elaborate commentary, also in Latin, one of the longest descriptions being devoted to Windsor, which he extols even more than does the author of the *Ode to Eton College*, declaring that the sun himself views no scene more splendid than the landscape beneath the castle towers.

THE STANDARD OF HEROISM.

IN discoursing the other day in the Schoolroom at Hawarden on Dean Hook's life Mr. Gladstone took occasion to describe him as "a hero," and was thus led to define his idea of what constitutes heroism. He began by remarking, what indeed is sufficiently obvious, that a man need not be any the less a hero because he is a Christian or a clergyman. It seems that in Dr. Latham's Dictionary a hero is defined to be "a man eminent for bravery"; but Mr. Gladstone not unnaturally thought this definition too narrow, seeing that bravery may be a merely animal quality, while on the other hand there are certainly many other kinds of excellence. On turning to Dr. Johnson's Dictionary he found a second description added to bravery, "a man of the highest class in any respect." And we may add that much the same alternative definitions are given by Richardson and Webster. But if the first definition is too narrow Mr. Gladstone thought the second too vague, for there are surely some kinds of greatness, or what is commonly so called, which are far removed from heroism. And we are still inclined to agree with him. He instances Napoleon, who is one of Mr. Carlyle's "Heroes," and who was indeed "one of the most extraordinary men ever born," and had a concentration of brain-power almost or quite unrivalled, but whose life was throughout predominantly tainted with selfishness, and could not therefore be considered truly heroic. And there can be no doubt whatever that, if Napoleon's genius was gigantic, the supreme and absolute selfishness which shaped and dominated his entire career, and which no principle, no affection, and no obligation, however sacred, was ever suffered to thwart even for a moment, was at least equally gigantic. Casabianca calmly awaiting "on the burning deck" the death which he preferred to even a possibility of disobedience to the command of his dead father was more really "a creature of heroic blood," absurd though his conduct was, than the cruel and unscrupulous despot who made Europe tremble at his nod. There are others of Mr. Carlyle's heroes whose claim is open to challenge on similar grounds, such as Mahomet, Rousseau, Frederick the Great, and Cromwell. All of these were unquestionably in their way great men, but a great man is not necessarily a hero. A hero must, as Mr. Gladstone put it, have "ends beyond himself," and must pursue them by honourable and legitimate means. In other words he must be high-principled and unselfish. We are not equally clear as to the lecturer's further condition that a hero must not be a man of one idea, in the sense of giving to certain cherished objects so disproportionate a weight and prominence as to forget other and equally excellent objects. A man who does this is no doubt wanting in ideal harmony and perfection, and his very earnestness may be—though it does not at all follow that it would be—productive of more harm than good. But if his mistakes are not moral but intellectual only and spring from no root of selfishness, still more if they are rather the faults of the age than of the man, they need not detract from his claim to the praise of a hero. Let us take for instance two very different types of religious heroism in different ages, St. Anselm and Luther. Many will think the ideals both of the mediæval Saint and of the Reformer very one-sided, and nobody could consistently sympathize with both alike. Yet Anselm has been canonized by the public opinion of posterity no less than by the formal sentence of his Church, and few dispassionate readers of Dean Church's excellent biography of him would care to dispute the verdict. Luther is one of Mr. Carlyle's heroes, and many have been willing to accept this estimate of him who nevertheless think he gave a very "undue prominence to his own idea" of the *articulus stantis vel cadentis Ecclesiæ*, and thereby very completely "lost the just proportion of things" in matters ecclesiastical. Or, again, take two heroes of the late Dr. Mozley's, Strafford and Laud. Both of them were men of one idea, and both—especially Strafford—pursued their aims by some means which, to our notions at all events, appear more than questionable. Yet they were men of remarkable capacity and energy, who devoted their lives, even to death, to the unwearied pursuit of what they firmly believed to be the highest public good. It would surely be too narrow a conception of heroism which excluded such examples from its range.

But the question still remains, in what heroism properly consists. Is it synonymous with bravery? or with sanctity? or is it something different from either? There is some dispute as to the derivation of the Greek word from which our own is taken; but the definition which stands first apparently in all our English dictionaries of "a man eminent for bravery" has thus much to say for itself, that bravery is the distinctive characteristic of the earliest recorded types of heroism, like the Homeric heroes who "mowed down rows of men." Yet the name is also applied in the Odyssey to the minstrel Demodocus and the herald Mulius, as well as to the peaceful Phœnicians, so that bravery was not the sole standard of heroism even in "the heroic age." But it remains true, as a modern writer has observed, that "war, which brings with it so many demoralizing influences, has always been the great school of heroism," inasmuch as it familiarizes the mind with the performance of noble actions from pure and unselfish motives, and elicits

strength of character and self-control while it teaches men how to die cheerfully "for an idea," that is for something outside themselves. Hence perhaps the same word in Latin serves for courage and for the highest moral excellence, for courage was the highest, almost the sole, measure of virtue (*virtus*) to the she-wolf's warrior brood. On the other hand a utilitarian code of morals is eminently unfavourable to heroism or self-sacrifice. But if heroism is not synonymous with bravery, is it to be identified with saintliness? Not exactly that either. But here again there is an historical explanation of the confusion. The heroes of classical antiquity had been great warriors and patriots; the mediæval heroes were the Saints. In the technical language of the schools "heroic" virtue was an indispensable requisite for canonization. Now the same man may, like St. Louis, be a mighty leader in court and camp and a Saint, or, again there may be a great patriot statesman and ruler of lofty religious aims like Charlemagne, who narrowly missed canonization, but whose private life was tainted with faults which would have made his appearance in the Calendar rather strange. The fact is that there is an antithesis between what may roughly be called the natural or Pagan and the Christian standard of excellence; not that the two are irreconcilable, or are not sometimes reconciled in the same character, but that they are distinct in theory and not unfrequently separated in fact. Christianity introduced new types of virtue into the world, though it did not therefore supersede the old. It added what theologians would call the supernatural to the natural order of merit. Now the heroic ideal of classical antiquity springs mainly from a sense of the dignity of human nature; the Christian ideal of sanctity grows out of a sense of sin. And hence, as has sometimes been remarked, the latter conduces most directly to theological and ecclesiastical activity, the former to political. The one develops the distinguishing qualities of a patriot, the other of a saint. Yet the two kinds of energy may be combined in the same character, as in the nobler spirits among the Crusaders, while the concurrence of both is required for the general welfare of society. There is an unselfish grandeur, which is truly heroic, in the character and career of Hildebrand, whatever we may think of the abstract justice of his cause or of some of the methods he adopted for promoting it. His dying exclamation sounds almost like an echo of the story of Regulus.

But if there is a heroism which is not synonymous with sanctity, there are forms of saintliness, well deserving of reverence and love, which can hardly, without some strain of language, be termed heroic. To take two examples of our own day; Mr. Matthew Arnold has paid a graceful tribute to the exquisite piety and religious refinement, so to speak, of Eugénie de Guérin, nor would it be easy to find a more touching record of "a beautiful soul." Another English writer has described, under the title of "a Dominican Artist," in a work reviewed some years ago in our columns, the career of Père Besson, a young French painter who afterwards became a priest and a missionary. Both lives appeal with irresistible force to the Christian instinct of sympathy for whatever things are pure and lovely, yet neither can exactly be called heroic, in the ordinary sense of the word. The Greeks designated moral and physical beauty by a common term, and there are various manifestations both of saintly and heroic virtue which at once command as by spontaneous attraction the love and admiration of mankind. But still there is one beauty of the hero and another of the saint, even if they are sometimes united in the same person. In the highest type of perfection the two characteristics would perhaps be found to coalesce with one another, but as a matter of fact and experience there have been many genuine heroes whom it would be extravagant to qualify as saints, and many genuine saints, whether canonized or not, whose temperament or outward circumstances did not lead them to the achievement of any heroic work. Even the vulgarized use of the word hero, as when we speak of the hero of a novel—who may be a Dick Turpin or a Tito—bears witness to external energy of some kind being essential to the heroic idea. But no such necessity is recognized in the *De Imitatione Christi*, which the common instinct of Christendom, Catholic and Protestant alike, has accepted as an almost inspired manual of the saintly life, or indeed for that matter in Law's *Serious Call* or the *Pilgrim's Progress*. It would not be a complete statement of the case, but it would perhaps be as nearly a correct indication of the contrast as can be compressed into a few words, to say that heroism is understood to consist in noble action and saintliness in patient endurance. And just as a man may be eminent both as a statesman and a writer though politics and literature are distinct pursuits, so he may unite in himself the characteristic claims of a hero and a saint.

STEEL SHIPS.

It has for some time past been evident that in the construction of vessels of a certain class steel was not unlikely to supersede iron. When Lloyd's allowed twenty per cent. reduction in the scantlings of vessels built of mild steel, or, in other words, settled that steel ships much more lightly built than iron ones might be placed in the same rank with the latter for purposes of insurance, it was obvious that the men who had the best opportunities of forming an opinion on the matter had come to a very definite conclusion as to the advantages of steel for shipbuilding. A like decision was arrived at by the accomplished naval constructors of the Admiralty. At the meeting of the Iron and Steel Institute which was held in Paris last year, Mr. Barnaby is reported to have said that the Admiralty had determined that men-of-war should be constructed entirely of mild steel with the exception of the armour plates; and indeed several steel ships have been built, and are being built, for the navy. Where there is such complete agreement between the authorities at Whitehall and those who are most competent to decide on questions relating to the construction of merchant vessels, it may seem presumptuous to express any doubt as to the justice of the conclusions come to; but nevertheless there is nothing overbold in the statement that it cannot be considered certain at present, from such knowledge as has been made public, that steel possesses all the good qualities which have been ascribed to it, or that it is free from very grave defects. Science ought to be able, and doubtless will be able, to decide the questions which have arisen with regard to the use of this metal for ships; but it must be said that hitherto the utterances of science have not been so definite as might be wished; and it is much to be desired that careful and comprehensive experiments should be made before steel shipbuilding on a large scale is undertaken. With regard to vessels intended for the Navy there is no reason to fear. The Admiralty can always afford to pay for the best material that can be procured, and commands the services of a highly scientific staff, who may be trusted to make themselves thoroughly acquainted with all the properties of any metal the use of which they sanction. With private shipbuilders the case is to some extent different, and, unless they are able to benefit by the result of a full and thorough investigation, it is possible, not only that large sums of money may be spent in building vessels which, after a comparatively short period, may be found useless, but also that the dangers of the sea may be increased.

In order to show what may perhaps be apprehended if steel is used largely in the construction of merchant vessels it is necessary to state briefly what is at present known on this subject. There has been, as need hardly be said, a good deal of discussion about it, but the best exposition of modern knowledge with regard to this matter is to be found in two articles in the *Nautical Magazine* for November and for last month, giving an account of the as yet unpublished papers read at the meeting of the Iron and Steel Institute already mentioned. The most important contribution on this occasion appears to have been that of Professor Akerman of Stockholm, who describes some remarkable experiments made to test the comparative strength of mild steel and iron. The result certainly seemed to show the very great superiority of steel. Plates of this metal which were tried by allowing a weight of seventeen hundredweight to fall on them from a height of fifteen feet received from five to nine blows before they gave. Plates of the best Swedish iron, far exceeding in strength the best English iron, were tried with a weight falling only five feet, and gave after receiving from four to six blows. When a plate of this kind was tried with a weight falling fifteen feet, this passed through it on the first fall. A plate of mild steel on the other hand, when tried with a weight falling five feet, withstood twenty-five blows before it failed. The weight used in these trials was spherical in its lower part and of about ten inches diameter, and the plates were rather more than a third of an inch in thickness. The method followed was to stretch them over a cup larger than the weight, and the test to which they were exposed was certainly a severe one, as the work must have been 19,992 foot-pounds. The results obtained certainly made manifest the extraordinary power of resisting a percussive strain which one kind of mild steel possesses, and its huge superiority to iron; but it must not be forgotten that this steel, made in Sweden from Swedish iron, was the best that could possibly be obtained, and would probably be far too costly for use in ordinary shipbuilding. It is well worthy of note that some experiments with other kinds of steel which were recorded in a paper read by Mr. Adamson gave rather different results. In this case the plates were tested by placing them on a cast-iron anvil in which was a spherical cavity and exploding gun cotton at a height of ten inches above it. Five steel plates of which four were annealed and one unannealed were tried against four plates of the best Yorkshire and Lancashire iron. The results were singular. All the iron plates gave way. Three of the annealed plates stood the test and a second test; but the other annealed plate and the unannealed one were no better than those made of iron. It was discovered, however, that the annealed steel which failed was faulty, having too much sulphur and phosphorus in it; but, if this defect existed in a specimen carefully selected for trial, it is certainly doubtful whether it would always be avoided in common manufacture. Even more important in connexion with the subject than the failure of this plate was the fact that the unannealed steel seemed—so far as resistance to a percussive strain went—not to be more strong than iron. From the discussion which followed the reading of Mr. Adamson's paper it appeared that the mild steel plates used for men-of-war are annealed when the work can be done at the Royal dockyards, but that, when ships are built in private yards, the Admiralty do not insist on the steel being annealed, as they consider it better that this should be dispensed with than that it should be attempted when there is not absolute certainty that it will be done in the right way. It seems tolerably clear, therefore, that the steel plates which would be used in the construction of merchant vessels would not, save in very exceptional cases, be annealed, and they might be found not to be superior to iron in one kind of strength. It should be added, however, that Mr. Adamson's experiments as to tensile strength showed, as others on the same subject have done, that mild steel,

especially the best kind, is in this respect very much stronger than iron.

It will be seen, then, that, though mild steel of a certain description possesses far greater strength than iron and is better suited for shipbuilding, there are reasons for supposing that the steel of which ordinary vessels would be constructed would not have so marked a superiority over the simple metal. That it would in some ways be better there can be no doubt; but it must not be forgotten that the valuable qualities of steel have been supposed to be more than counterbalanced by a defect which would to a great extent unfit it for use in shipbuilding; and that it cannot be said at present that this opinion has been clearly shown to be erroneous. The objection which has been urged against mild steel is that it corrodes in salt water more quickly than iron. Experiments are said to have shown that this is not the case; but, though the matter might be thought to be one which could be absolutely decided without great difficulty, no conclusive series of experiments appear yet to have been made, and the results of some of the latest investigations seem to be contradictory. Thus Mr. Adamson placed hard steel, mild steel, and four kinds of iron, in a bath containing one per cent. of sulphuric acid, and carefully observed the amount of corrosion. The mild steel was found to corrode less than any of the other specimens except one, a very pure iron not suited for shipbuilding. This result seemed strongly in favour of steel; but some experiments made by the Admiralty officers are said to have led to a different conclusion. The writer of the articles in the *Nautical Magazine* states that these experiments are supposed to indicate "that most of the cases of rapid corrosion are due to galvanic action, in some instances clearly between the black oxide which adheres to the plate and the parts of the plate where the oxide has been removed. The black oxide is produced on the plate during rolling, being what is technically known as 'scale.' It is electro-negative with regard to the plate itself, and consequently, when some of it is knocked off in the process of working, galvanic action will be set up in salt water between the covered and uncovered portions of the plate. It has been observed that the scale adheres much more firmly to mild steel than to iron." Whether these conclusions are correct or not, there can be no doubt, as the writer goes on to remark, that more experiments are required, and that these should be made by placing the metal in salt water, not in water and sulphuric acid. Compared with much experimental investigation which is carried on, it would seem to be an easy matter to determine beyond all doubt the effect of sea water on such steel as would be used for shipbuilding. At present the question cannot be considered to be clearly decided, and, considering its importance, it is not a little singular that this should be the case.

Another question relating to steel, considered in the articles referred to, has also to be dealt with. In most mild steels manganese is present, and it is by no means certain that it has not a highly prejudicial effect. Dr. Siemens, perhaps the first living authority on this subject, considers that manganese causes the rapid corrosion of steel, and also that inferior materials may be "cloaked" by it, so that poor steel may be passed off for good. It is true that manganese can be dispensed with when a certain kind of iron is used; but the steel produced from this would probably be far too expensive for shipbuilding. Obviously, then, it is most necessary to determine what is the effect of manganese on steel, as well as to ascertain how that metal is likely to be affected by sea water. Before a large number of steel vessels can be set afloat, it will surely be well to know whether many of them will not be liable to rapid decay. It must not be thought that this matter concerns only the shipbuilder and the naval architect. The constantly increasing number of those who travel by water are also largely interested in it, and it is for this reason that we have drawn attention to the facts set forth in the *Nautical Magazine*. Within the last few days it has been stated that a large steel steamer is to be built which is probably intended to carry a large number of passengers. There could not be clearer evidence that steel is coming into favour; and, though this vessel is to be made safe by having a double bottom, she will probably be followed by others in which this expensive method of construction will not be adopted. Clearly, then, if safety to life is to be considered, it is most important that systematic attempts should be made to ascertain whether steel is well fitted for shipbuilding or whether a cardinal fault in the metal will aggravate what is undoubtedly an existing danger. Few of those who embark on board the great passenger steamers of the present day realize one risk to which the immense vessels propelled at very high speeds are exposed. How thin is the skin or plating with which these huge vessels are covered, and what would be the result of a small fracture incurred in any part of this a little distance below the water line, are things fortunately unknown to nervous travellers. It may seem startling, but is nevertheless true, that one of these huge ships might be sunk by a hole half a foot square, and five or six feet below the water line; that is to say, anywhere in hundreds of feet of thin iron plating. It is true that most of these great vessels are supposed to be divided into water-tight compartments; but it may be asserted without temerity that in many cases the so-called water-tight bulkheads would be found to be useless, and that if the water once entered it would penetrate everywhere. Now this danger, which is a real one, may be increased or decreased by the use of steel. There will be greater strength, and perhaps much greater power of resisting a percussive strain; but, on the other hand, it must not be forgotten that the steel plates will be even thinner than the iron ones, and if they corrode very rapidly there will be a certain peril to steel ships. If there really is this defect in the metal, means may be found to overcome it; but the question should certainly be carefully considered before vessels are constructed which, when to all appearance strong and seaworthy, may be in reality as dangerous as the most crazy craft that makes its way from port to port.

LITTLE RED RIDINGHOOD IN THE COURT OF APPEAL.

ON Wednesday last a most curious illustration of the vexed question of copyright was presented to those persons whose strange delight it is to pass their time as spectators and hearers in courts of law. It is matter for wonder what these people are, and what is the mysterious attraction which makes them like to sit for hours in a stuffy, dingy court, listening to case after case which has no possible interest for any one but the persons immediately concerned in it. Possibly they find a pleasure in expectation, and are content to wait patiently through days of dulness for the chance of hearing some such case as that of Hengler *v.* Myers, which was heard in the Court of Appeal before Lords Justices James, Bramwell, and Brett. These three learned Judges were occupied for a considerable time—if we can judge from the length of the *Times'* report—in hearing "an appeal from an order of Mr. Justice Fry awarding the plaintiff the sum of forty-eight pounds damages for an infringement of his copyright in two songs, and granting an injunction to restrain any infringement of the plaintiff's copyright in the dramatic entertainment or spectacle called *Little Red Ridinghood*, in which the songs in question were introduced." The facts of the case were tolerably plain. Both the plaintiff and the defendant were circus proprietors of considerable fame, and in 1874 a Mr. Henry wrote for Mr. Hengler "a grand juvenile spectacle" called *Little Red Ridinghood*, the sole acting right of which was assigned to Mr. Hengler. In 1876 Mr. Myers brought out at the Crystal Palace a pantomimic performance, of which the title also was *Little Red Ridinghood*, and of which the plaintiff complained as a piracy of his juvenile entertainment, on the ground of its being identical, with the exception of the absence of spoken dialogue, with the defendant's piece in plot, incidents, properties, and business. The plaintiff more especially relied on the identity in both performances of two songs—"The Huntsmen's Chorus" and "Beautiful Flowers"—which had, as he alleged, been written and composed expressly for the plaintiff. The defendant denied that his piece was copied from the plaintiff's, and also said that the story, incidents, and dramatic situations contained in the plaintiff's *Little Red Ridinghood* were not new—a statement obviously difficult to upset. As to his own version of the story, Mr. Myers stated that in 1856 he brought out in America a pantomimic spectacle called *Cinderella*, in which various fairy scenes and "the ordinary and extraordinary circus troop of camels, giraffes, horses, &c." were employed as attractions. This spectacle he intended to produce in Paris in 1875; but, as M. Franconi was at that time exhibiting a *Cinderella* of his own at the Cirque Napoléon, Mr. Myers, to avoid competition with him, adopted the simple expedient of changing his exhibition's name and plot, but retaining the spectacle which was its attraction. The device is not unknown; and it will be remembered that Mr. Crummles was far more concerned about the appearance of his real tubs than about the play which was to serve as a setting for them. It was the *Cinderella* translated to *Little Red Ridinghood* which Mr. Myers exhibited at the Crystal Palace and on the performance of which Mr. Hengler founded his action. The case was heard in June last before Mr. Justice Fry, who held that "the plaintiff was entitled to relief to the extent of the infringement committed by the defendant in taking the two songs of 'The Huntsmen's Chorus' and 'Beautiful Flowers' from the plaintiff's piece. From this decision the plaintiff had appealed."

Eminent counsel were engaged on both sides; and their Lordships, recognizing the importance and gravity of the case, decided that they could not properly determine the question without having both versions of *Little Red Ridinghood* read aloud, which was done, "to the great amusement of a crowded court." The legend had been closely followed in each case, and the situations, the *Times'* reporter observes, "were necessarily very similar." "The plaintiff's piece, however, consisted of spoken dialogue," while the defendant's was chiefly pantomimic, "and the wolf, represented as a funny rascal, indulged in well-known music-hall songs of the day." The second act in both pieces represented a garden, through which an elaborate procession marched. Lord Justice James observed that "in point of fact, in the one case the tale of Cinderella and in the other of Little Red Ridinghood supplied a very slender thread of plot into which were woven what constituted the substance of the piece—namely, ballets, dances, ballads, costumes, political allusions, miniature equipages and ponies, and allegorical cars drawn by camels and other animals. These latter"—that is, we suppose, everything contained in the heterogeneous list, which Peacock might have put into the mouth of one of his characters—"were fitted into either plot indifferently, and could be and were changed and modified at will, but were for twenty years substantially the same, and were never copied or imitated by the defendant from any representation by the plaintiff or any one else."

Lord Justice James proceeded to inquire whether, in tak-

these songs, Mr. Myers had taken a material part of Mr. Hengler's piece. To support his view that this was not so he went on to read or recite the words of the "Huntsmen's Chorus," which run thus:—

We mount our steeds at break of morn
And gaily forth we go,
While cheerily sounds the bugle-horn
And the huntsmen tally-ho!
Tally-ho! tally-ho! tally-ho!
Hark forward, hark forward, tantivy!
Echo. Hark forward, hark forward, tantivy!
The echoing words reply.

Lord Justice James, without going into the question whether, as the defendant alleged, the words and music of this song were old, decided with much wisdom that "any other song or any nonsense verses would have done quite as well to meet the situation in which they were introduced—namely, to alarm the wolf and rescue Little Red Ridinghood from his clutches." The same view, he went on to observe, was applicable to the other song, "Beautiful Flowers"; and, on the whole, he was of opinion that "no case of piracy had been established against the defendant, and the order of Mr. Justice Fry must be dismissed, with costs."

Lord Justice Bramwell, who was of the same opinion, and "only thought it necessary out of respect to Mr. Justice Fry to add anything," did nevertheless say nearly as much, according to the report, as Lord Justice James had said. The subject was, no doubt, an attractive one, and must have been almost as agreeable a relief to the judges as to the "crowded court." Lord Justice Bramwell, after briefly reviewing the circumstances, stated that the story of *Little Red Ridinghood*, which was the common groundwork of both pieces, "was no novelty; it was known in every nursery, was the common property of all mankind, and any one might dramatize it." Then, bringing his critical skill to bear on an analysis of this story, he pointed out that there must be certain incidents common to any version of the story; for "first you must have a little girl who wore a red hood; there must be a wolf, and the little girl must have a grandmother, and the grandmother must go to bed and be killed by the wolf, who then took her place in the bed." While observing that his memory did not serve him to say whether or not in the original legend the little girl was killed by the wolf, Lord Justice Bramwell found occasion to make a strangely recondite joke, the point of which still remains obscure from us. It seemed, he said, that in the modern version she was rescued from the wolf by some one, "not, I suppose, by a lawyer or a clergyman, but by a handsome young prince who comes in the garb of a huntsman." Noting that the question of piracy was limited to the garden scene and two songs which were greatly alike, Lord Justice Bramwell observed that the differences must also be looked to. The plaintiff's piece was a spoken piece, containing jokes and allusions likely to make people laugh, and which had certainly made him laugh even when they were merely read out in court. (This, by the by, should surely prove a valuable advertisement to the plaintiff.) The defendant's piece, on the other hand, was a "mere ballet d'action," and there were many points of difference between his garden scene and the plaintiff's; as to the question of the songs, Lord Justice Bramwell referred to the case of Planché *v.* Braham, in order to say that it was not an authority for the plaintiff's contention. He further said, in connexion with that case, that "any one who knows the drama of *Oberon* set to music by Weber would know that the song in question, 'Ocean, thou mighty monster,' was a most important part of the drama." This is a somewhat surprising statement, and we may next expect to hear that the Queen's song in "the drama of the *Huguenots* set to music by Meyerbeer" is of the greatest dramatic importance.

"These pieces," said Lord Justice Bramwell in conclusion, "are very good things to make children laugh, and may also amuse their elders" (we have seen that one of them did amuse Lord Justice Bramwell); "but it does seem to me to be perfectly idle to found an action of copyright on these alleged similarities. . . . Actions of this sort, when there is no substantial grievance, ought not to be encouraged." Lord Justice Brett concurred, and therefore "the injunction granted by Mr. Justice Fry was dissolved, and judgment entered up for the defendant with costs, including the costs of the appeal." With Lord Justice Bramwell's concluding remarks we entirely agree; and possibly some people will be sorry that so much time and trouble should have been expended by the Court of Appeal over so trumpery a case. Philanthropists, however, may console themselves by reflecting upon the "great amusement" afforded to "a crowded court" by the criticisms, remarks, and recitations of the Lords Justices.

THE WORLD'S PRODUCTION OF SILVER.

THE silver market continues to baffle all calculation. Barely nine years ago the metal was selling at the mint price of sixty-two pence an ounce; even six years since it fetched sixty pence; but then a rapid fall began, and went on until in August, 1876, the quotations sank below forty-seven pence. At this point a recovery set in, and about twelve months ago the price had risen to fifty-four pence halfpenny; but there was another reaction, and at the close of the year forty-nine pence was again reached. Once more there was an improvement, which, however, only went as far as fifty-one pence, when another fall occurred, and this week the price is down to a fraction over forty-nine pence halfpenny. We have so often explained the serious consequences of this state of things to the Indian Government and to all who have to transmit money from the East to Europe, that we need add little to what we have already said. But we may give one illustration. The Indian Council Bills offered on Wednesday last were tendered for at 1*s.* 7$\frac{1}{16}$*d.* per rupee—that is, fivepence within a very small fraction was lost in every rupee, or almost one-fifth. If present rates last, therefore, all who have to send money from India to England will have to look forward to a loss by exchange of one-fifth of the sum transmitted. So far as the Indian Treasury is concerned, this would be over three millions per annum. It is little wonder, then, that there should be persistent reports that plans have been submitted to the Indian Government for the correction of the exchanges. We commented upon one of these plans some time ago, and there is talk of others. But we do not propose to consider them at present. Our object just now is rather to direct attention to the causes of the depreciation. Those causes are twofold—an increase of supply, and a decrease of demand. But we think it can be shown conclusively that the increased supply is not sufficient to account for the alarm it has excited. What we witness is to a very large extent pure panic. The estimate of the world's production of silver laid before the Silver Committee by Sir Hector Hay is generally accepted as the nearest approximation to the truth which the existing data admit, and from that document it appears that the production amounted in 1852 to about 8,120,000*l.*, and in 1875 to about 16,100,000*l.* In the four-and-twenty years, that is, the production had just doubled. The whole increase was in the yield of the United States. At the beginning of the period that yield was practically *nil;* in 1862 it had risen to 900,000*l.*; and afterwards it augmented rapidly, being estimated by Sir Hector as high as nine millions for 1875. But when we turn to the reports of the United States Mint we find that in fact the production that year was only 7,140,000*l.* The real production of 1875 was, therefore, only 14,240,000*l.*, or an increase of about seventy-five per cent. in the twenty-four years. We saw a few weeks ago that, according to Wells, Fargo, & Co.'s report for 1878, the yield of the United States mines has not since 1875 sensibly increased; so that, even if all other countries were as productive as before, we cannot estimate the world's production at above 14¼ millions. But is it probable that all other countries have yielded as much as formerly? The evidence laid before the Committee was all to the effect that, while the United States mines were marvellously rich, those of other countries were becoming exhausted. Their production had long been stationary, and would almost certainly fall off under the influence of depreciation. It now appears that even the United States mines have felt the influence of the depreciation, and although we have not trustworthy statistics for the others, it is almost certain that their yield has been much more considerably checked. It is incontestable, then, that the world's production has not increased within the last three years; it is in the highest degree probable that it has materially diminished.

A great body of evidence might be brought forward in support of this conclusion, but we need cite only two or three facts. The Bland Act, passed by Congress twelve months ago, requires the American Government to coin in silver every month not less than 400,000*l.*, nor more than 800,000*l.* The Act was passed in spite of the influence of the Secretary of the Treasury and over the President's veto. It is reasonable to assume, therefore, that the Government coins the legal minimum, which would be only 4,800,000*l.* for the whole year. Yet on one occasion the American Government bought silver in the London market. The metal, that is to say, was cheaper here than in the producing country. Another notable fact is that, even before the passing of the Bland Act, the imports of silver from the United States did not materially increase in consequence of the augmented yield of the mines. And a third fact of significance is that the supply of silver in the London market is exceedingly small. All this goes to prove that it is not increased production which has mainly caused the depreciation, and that the apprehensions felt, at the time the Silver Committee was sitting, of the result of the working of the new American mines were greatly exaggerated. The point is of the highest importance in fixing upon a remedy for the present state of things in India. If the views we have stated are correct, we have to look for the cause of the depreciation either in a temporary increase of the supply, which by and by will be exhausted, and which therefore may either be endured for the time or may be counteracted by temporary measures; or else in a contraction of the demand, whether temporary or permanent; or, lastly, India is suffering from a combination of both causes. This last is the true state of the case. The production of the metal, though it has been considerably increased, would, if acting alone, have exercised but slight influence. Indeed the increase would have no more than sufficed to keep up the silver coinages of the world, and to meet the requirements of the arts, had no change been made in the order of things existing at the close of the Franco-German war. But the substitution of a gold for a silver currency by Germany disturbed the equilibrium. And the way in which the measure was carried out aggravated the mischief. Had the German Government taken the world into its confidence, ascertained as nearly as possible the amount of silver it had in circulation, decided how much of this was needed by it, and frankly stated how it would dispose of the excess, it would at any rate have prevented ignorance and the uncertainty and panic that are bred of ignorance. Other countries would have

known exactly the facts with which they had to deal, and would have been able to take their measures intelligently. The market would have adapted itself to the provisional state of things; and the German Government itself would have been in a position to profit by the criticism of experts. It preferred, however, to conduct its operations in secret. Nobody knows exactly how much silver Germany still has to sell, or at what price it will dispose of it, or at what moment. There is the uneasy feeling that the instant an improvement occurs a sum will be thrown on the market large enough to depress it, and consequently the depression continues. It is, in fact, the German supply, not the increased production of the mines, which has chiefly caused the depreciation. In 1877, for example, the total quantity of silver imported into this country from the United States was only 2,615,000*l.*, while the import from Germany was 13,747,000*l.*, or about five times as much. Indeed, it will be observed, the German import was almost equal to the whole production of the world in that year. The import never before reached so high a figure, but the knowledge that an indefinitely large supply existed, and was kept back only in the hope that the price would improve, acted upon dealers quite as powerfully as if the metal had actually been offered in the market. In the period 1872-7 inclusive, the imports of silver from Germany exceeded 23,000,000*l.*, and, supposing that only 7,000,000*l.* were disposed of elsewhere, we have a total of 30,000,000*l.* in the six years, or 5,000,000*l.* per annum on an average sold by Germany alone. In other words, the direct result of the demonetization of silver by Germany has been the same as if the production of the mines had been increased five millions a year. Of course the secresy in which Germany wrapped her policy greatly magnified the effect. The sums she had to dispose of were grossly exaggerated, and the fear was always present to the minds of dealers that she might at any moment ruin them by suddenly flooding the market. Indirectly also there was the effect of the contraction of the demand, as Germany had previously been a consumer of silver.

The obvious conclusion from what we have been saying is that, the cause being temporary, the effect also must be temporary. The truth of this inference, however, depends upon the willingness of other nations to restore the old state of things as soon as the German supply is exhausted. There is reason for assuming the existence of this willingness. At the Paris Conference last summer France still expressed the opinion, often previously enunciated by M. Léon Say, that the fall of price is only a fluctuation. And Italy clung to the double standard. Austria stated that she preserved an expectant attitude, and Holland wished to be guided by the action of the Indian Government. Thus there is a considerable probability that a full remonetization of silver outside Germany and the Scandinavian kingdoms might take place if the German stock of the metal were disposed of. But to this it is essential that no inducement should be offered to any country to part with its silver. The experience of Germany has been a warning to her neighbours. In spite of the immense war indemnity, her finances have suffered heavily from the losses incurred in her coinage operations, which at the end of eight years are still incomplete. Were any other Government to follow her example it would suffer still more severely. It would begin to sell its silver in a market excessively depreciated. The best safeguard against further change is thus the difficulty of selling any large quantity of silver, and the certain heavy loss that would follow an attempt at a sale. Prudent Governments will be careful not to weaken this safeguard by giving attention to proposals which would offer a premium upon heavy sales. It does not seem that they will have to exercise their patience very long now. The estimates generally received put the amount still to be disposed of by Germany at about 15,000,000*l.*, or not very much more than she exported to England in 1877. A revived demand in India in consequence of the Afghan war and an improvement in trade would absorb the amount in a year.

REVIEWS.

McCARTHY'S HISTORY OF OUR OWN TIMES.*

MR. McCARTHY has undertaken a difficult and an ambitious task. A History of England during the reign of the present Queen is not only a welcome addition to current literature, but is the very work which most readers would like to have, if only, when undertaken, it was found to be well done. To write such a History well, however, demands a combination of qualities which is not very easy to realize. The History must be just and yet entertaining, and a man who writes of his contemporaries is apt to combine partisanship with smartness, or moderation with dulness. It must give enough of facts to be a history, and yet must not seem like an abridgment of the *Annual Register*. Above all, it must be on the right scale. Successive subjects must be treated not only in the right spirit, but at the right length, and this is perhaps the hardest part of the task. In short, nothing would justify the attempt but success; and in reading these volumes our first feeling is that of wonder that any one should have been found to succeed as Mr. McCarthy has succeeded. He is always lively without being flippant. He is sympathetic without being gushing. He pronounces opinions without the air of dogmatism. He is scrupulously just, not as if he screwed justice out of his conscientiousness, but because he likes being fair to every one. Above all, he has conquered the difficulty of saying enough and not too much. With rare exceptions he instructs without wearying, and drops a topic when he has done with it, and is capable of the heroic sacrifice of leaving materials unused in order that the picture he presents may not be overloaded with details. Criticism is disarmed before a composition which provokes little but approval. This is a really good book on a really interesting subject, and words piled on words could say no more for it. To urge such objections as suggest themselves, it may however be added that Mr. McCarthy, in imitation perhaps of Mr. Carlyle's *French Revolution*, has thought proper to give his chapters sensational headings. The quarrel over the Ladies of the Bedchamber is headed "Question de Jupons," and the Repeal of the Corn-laws is headed "Famine forces Peel's Hand." This is rather too much in the line of comic or popular histories to be quite in keeping with the work itself, which bears the stamp of a writer who, in the midst of his liveliness, has the consciousness, not only of his own ability, but of high and serious aims. The concluding chapter, too, of the volumes now published appears to us to be a mistake. It contains a survey of the literature of the period. We fail to see the good of such a survey. It is not part of the history of the times, except in the sense that a survey of the engineers, the Governors of India, or the astronomers of the day is a part of such a history. And for literary purposes it is far too scanty and short. A very brief statement of Mr. McCarthy's literary opinions is not history; and the reader gains less than nothing by being told that about this time Sir E. Bulwer and Mr. Disraeli wrote novels in which Mr. McCarthy finds something to admire. Although, too, the scale on which Mr. McCarthy sets himself to work is for the most part properly maintained, it must be owned that there are occasional exceptions, and he sometimes seems too long in his dissertations and too short in his contributions of information.

The whole work is to be in four volumes, and is to carry the reader to the Berlin Congress. The two volumes now published take him to the end of the Crimean war. The first division of the period now covered may be said to be from the accession of the Queen to the beginning of the Peel Ministry. What difficulties had to be overcome in handling this division of his subject may be conceived when it is remembered that Mr. McCarthy had to sketch the characters and careers of persons so eminent and so different as Lord Melbourne, Lord Russell, Lord Palmerston, Lord Durham, Lord Brougham, Lord Lyndhurst, Lord Stanley, Sir Robert Peel, and Prince Albert, and of minor, but still striking, personages, such as William IV., the Duke of Cumberland, and Sheil. Among events, he had to treat the Canada rebellion, the outbreak of Chartism, the institution of the penny post, and the first Chinese war. In his sketches of statesmen Mr. McCarthy is not only graphic and just, but he almost always manages to insert some sentence which in a new and original way sums up the person sketched for the reader. Thus, of Sir Robert Peel he says that his speeches told of the feelings and the inspiration of Parliament "as the ballad music of a country tells of its scenery and its national sentiments." Of Lord Russell he says:—"He had in truth much less genius than his friends and admirers believed, and a great deal more of practical strength than either friends or foes gave him credit for." After describing Lord Melbourne's affectation of levity, Mr. McCarthy remarks:—"Such a masquerading might perhaps have been excusable or even attractive in the case of a man of really brilliant and commanding talents." The character and position of Lord Durham are brought home to us by saying of him, before he went to Canada, that "there was a general impression, perhaps even among those who liked him least, that he was a sort of unemployed Cæsar." These, however, are but the felicities of a clever writer. Mr. McCarthy shows himself to be at once a thoughtful and an impartial politician when he treats of such matters as Chartism, Canada, and the Chinese war. The great theme of Mr. McCarthy's book is the immense difference between the England of the Queen's youth and the England of her maturer years; the strides that have been taken in the right path, the new spirit that has pervaded politics, the desire to do right that makes itself felt even in the strife of parties. When the Queen ascended the throne there was really something of that division of England into two nations which Mr. Disraeli pourtrayed with his usual effective exaggeration in *Sybil*. The distinction has faded away, if not entirely, yet to a large extent, because there has been gradually formed a controlling tribunal of enlightened public opinion. So far as it existed at all, this opinion was in its infancy in the days of Lord Melbourne. The leaders of parties neither created nor represented it, but were rather in slow process of time moulded by it. Chartism was the last attempt England has witnessed of the desire to anticipate public opinion by the use of force; and, as such an attempt, nothing could have been more feeble or silly. But Mr. McCarthy points out with great distinctness that, if we merely consider the articles of the Charter, they were all fair subjects for the decision of public opinion; and that in recent years some of the points at issue have been decided by public opinion in favour of the Chartists. The singular proceeding known as the Opium War is described by Mr. McCarthy with his accustomed piquancy. From a moral point of view no war could be more unjustifiable. But it must be owned that to gain unjustly

* *A History of Our Own Times, from the Accession of Queen Victoria to the Berlin Congress.* By Justin McCarthy. London: Chatto & Windus. 1879.

and to reign justly is something like a maxim of English politics, and seems to be in accordance with that admixture of unrighteousness and righteousness, that curious turn for making the best of both worlds, which is a conspicuous element in the national character.

The next division of the subject may be taken as that which precedes the great Continental outbreak of 1848. It includes, because it finishes, the Afghan war, and it comprises the contest between the Government and O'Connell, and the repeal of the Corn-laws. Even after all the descriptions of the first Afghan war recently compiled or revived, Mr. McCarthy's account of it strikes us as singularly picturesque and vigorous. Mr. McCarthy also, before proceeding to the main subjects of this division, had to perform a task less interesting, but not less difficult, in giving a sketch of the religious movements which ended in the disruption of the Scotch and the loss to the English Church of some of its most distinguished members. The writer, however, has the great advantage of being honestly in that frame of mind which, viewing them all from the outside, can see the merits of all religious parties, and he is thus able to write so as to describe faithfully and yet give no offence to any one. When he passes to write of Ireland and O'Connell Mr. McCarthy is on ground specially his own. He knows Ireland well enough to judge accurately the position of O'Connell. Why O'Connell was not only distrusted but hated in England, why he was beloved and once all-powerful in Ireland, and why his life ended in a collapse in both countries, is described by Mr. McCarthy with the distinct touch of a writer who is sure of his facts and his inferences. O'Connell was hated in England because he combined what was thought to be a hypocritical loyalty to the Queen with a fatal and absurd animosity to the Saxon. He was beloved in Ireland because he stirred the worst as well as the best passions of the Irish. He collapsed because he was an agitator who shrank from the consequences of agitation. The Irish people were alienated by a leader who puzzled them by alternately telling them that the English Government was composed of tyrants and scoundrels, and that every order of this Government must be reverently obeyed. All this is treated of by Mr. McCarthy at ample length, and with unfailing vigour. So, too, is the Free-trade controversy. But occasionally Mr. McCarthy's plan, which mainly consists in writing essays on leading topics, leads him to pass over important subjects in the style of the dreariest annalist. It seems strange that an historian of our times should have nothing more to say of Peel's Bank Act than that it was a characteristic and important measure, or of the establishment of the Income-tax than that it was a doubtful boon. We seem to have got back to the Mrs. Markham of our youth, and expect to find a picture of a sword or a slipper at the end of the chapter. We are transported into a very different atmosphere when we get to a just and striking comparison of the agitation of O'Connell and the agitation for the Repeal of the Corn-laws, which Mr. McCarthy ends by saying that "the most impassioned Celt will admit that in the Anti-Corn-law agitation of Cobden and Bright, with its rigid truthfulness and its strict proportion between capacity and promise, there was an entirely new dignity lent to popular agitation, which raised it to the condition of statesmanship in the rough."

The next division takes us to the beginning of the Crimean war, and finally we have the Crimean war itself. The foolish and ineffective outbreak of Young Ireland was the faint echo of the great Continental commotion, and Mr. McCarthy despatches it in a strain of gentle ridicule. Two subjects succeed which afford equal openings for his perception of the comic or humorous to display itself—the woes of Don Pacifico and the Ecclesiastical Titles Bill. The despatch of the English fleet to the Peiræus to enforce claims so glaringly ridiculous as those of Don Pacifico's, and the ignominious straits to which Lord Russell was reduced in having to pass a Bill of which he disapproved in order to guard against an imaginary danger of which he was the chief inventor, are fair subjects of historical mirth; and Mr. McCarthy has a fund of exuberant mirth at his command. As the volume goes on Lord Palmerston becomes more and more, if not the hero, yet the first actor of the piece; and nowhere does Mr. McCarthy show more nice discrimination and critical fairness than in treating of Lord Palmerston. In his quarrel with the Court and with Lord Russell Lord Palmerston was, Mr. McCarthy thinks, wrong; and most people would agree with him. He would keep on committing the Queen and the Cabinet without letting any one know what he was doing, and a Ministry with so wayward a member in it must inevitably break up. Mr. McCarthy also brings into strong light the curious method in which Palmerston regarded politics as a scene of his own personal struggles, and other politicians as chiefly existing in their relations to himself. The death of Sir Robert Peel mainly presented itself to him as that of a person "who would never be disposed to do him a good turn," and the death of Louis Philippe "delivered him from his most artful and inveterate enemy." But the good qualities and the great powers of Lord Palmerston are equally recognized—the good taste with which he quietly accepted his dismissal by the Queen, and the vigour he infused into the conduct of the Crimean war and into the negotiations which concluded it. A whole chapter is devoted to Mr. Gladstone, which seems rather more than even Mr. Gladstone is entitled to; but as an essay on Mr. Gladstone in which he is made neither too great nor too little, and in which his opinions and speeches are analysed with impartial penetration, the chapter perhaps deserves its large place in the work. It would be difficult to characterize Mr. Gladstone's Parliamentary oratory more neatly than by Mr. McCarthy's epigrammatic account of it as a "circumgyration of coherent words." Men interest Mr. McCarthy much more than events, and books seem to him valuable, not so much for the materials they supply, as for the indication of character they afford and the points of artistic treatment they suggest. When he gets to the Crimean war he passes lightly over the military part, having satisfied himself that it was a soldiers' war, and not a war in which there was any generalship to interest him. To correct the errors of Mr. Kinglake is one of the main duties he sets himself, and if Mr. Kinglake's paradoxes are taken seriously, the duty is not difficult to fulfil. But Mr. Kinglake is the most puzzling of writers, and, as volume after volume of his History appeared, the mystery whether his seeming admiration of his heroes was not a piece of elaborate *persiflage* grew deeper and deeper. Mr. McCarthy's account of the incidents and negotiations that preceded the war is lucid and adequate; and whenever Mr. McCarthy takes a subject in hand, he always makes himself understand it, and conveys what he has learnt to his readers. If he does not ordinarily display any great power of narration, his style lends itself to intelligible statement as readily as to entertaining comment. Where it errs, it errs, we think, on the side of the irrepressibly comic. We scarcely expect an historian to tell us of the reading of the Duke of Newcastle's despatch that "in the language of Sam Weller poppies were nothing to it." But it would be very unjust to judge the book as a whole by its occasional blemishes; and such is the effect of its general justice, its breadth of view, and its sparkling buoyancy, that very few of its readers will close these volumes without looking forward with interest to the two that are to follow.

WILKINSON'S ANCIENT EGYPTIANS.*

We gladly welcome the issue of a new edition of Sir Gardner Wilkinson's *Manners and Customs of the Ancient Egyptians*. From the date of its first publication more than forty years ago this admirable compilation has held its place as a standard work in English literature. The amount of learning, of observation, and of industry which must have gone to make it up is such as can rarely be looked for in any single author. The value of the immense store of facts accumulated for the purpose of this portrayal of early Egyptian life was enhanced by sobriety of judgment and conscientious respect for the limits of fact. With its more ambitious scope and its far wider grasp of learning Baron Bunsen's great work combined a tone of speculation, of bold and broad hypothesis, which has kept cautious scholars from committing themselves to his leading. In the modest programme in which he sought to lay down the outline of his undertaking, Sir Gardner Wilkinson disclaimed the intention of settling abstruse and mysterious questions regarding the religion of ancient Egypt, or of dissipating the mythological clouds which envelop the origin and the ethnological affinities of its people. It was enough for him to bring together the results of careful and conscientious study of monumental remains and literary records carried on upon the spot, in combination with the historical notices handed down by writers of antiquity, and made the subject of critical discussion and sifting by the learned of modern times. The great merit of his work was felt to lie in the acute observation of the writer, and his exhaustive illustration of Egyptian manners and customs as depicted upon the monuments. Such was the passion of that singular race for setting out upon their walls or other available space every detail of their life, that it may be doubted whether we have gained from the copious literature of Greece and Rome anything like the vivid conception we are able to form of the ways and doings of every day in olden time upon the banks of the Nile. And the unwearying pains taken by Sir Gardner Wilkinson in collecting and arranging his materials, throwing upon his graphic descriptions the collateral light of his extensive classical reading, and enriching the text with a profusion of faithful and admirably chosen woodcuts, have had the result of bringing home to us the history, the arts, the manners and customs of that long bygone race, with a degree of reality which makes them seem to us like living people. Having continued to the last his Egyptian studies and researches, Sir Gardner Wilkinson left, at his death in 1875, a mass of additional notes and other materials which have been employed in the preparation of the present edition and supplemented with much fresh matter by the editor, besides having been subjected to a careful revision throughout, and brought up to the latest standard of Egyptological science. Pending the adoption of some fixed scheme of transliteration of Egyptian words and names, strongly urged by the Oriental Congress, it has been sought to give the utmost scientific precision to the equivalents assigned to the hieroglyphic forms. Egyptian ideas derived directly from Egyptian sources having become largely available in the course of the last quarter of a century, thanks to the labours of scholars both English and foreign, of whom a list is given in the preface, the loose information handed down by the classical authorities of Greece and Rome is now but of secondary value. A new and more authentic tone has been imparted to the work throughout. Whilst but little of the original text has been

* *The Manners and Customs of the Ancient Egyptians.* By Sir Gardner Wilkinson, D.C.L., F.R.S., &c. A New Edition, revised and corrected by Samuel Birch, LL.D., D.C.L., Keeper of the Egyptian and Oriental Antiquities in the British Museum, &c. 3 vols. with Illustrations. London: John Murray. 1878.

omitted, a store of fresh facts and views has been incorporated in the work, the new materials which have been drawn from the author's MSS. being designated by the initials G. W., the contributions of the editor by the letters S. B.

Concurrently with the progress made of late years in the decipherment of the monumental inscriptions there has been a collapse of belief in the chroniclers or historians on whose fragmentary notices all previous knowledge of ancient Egypt had been built up. Whether it had been the policy of the priesthood to play upon the credulity of inquirers like Hecatæus and Herodotus, reserving the esoteric meaning of the national cult and the sequence of the historical and dynastic records—whether the authentic history had been but imperfectly made known to Manetho, intentionally obscured by him, or falsified by pretenders who traded upon his name—the fact is beyond dispute that the lists of early kings compiled from those authorities cannot bear the light of monumental discovery. From the nineteenth or eighteenth dynasty back to Menes there is not only hopeless confusion among the chroniclers themselves, but an utter want of correspondence with the evidence of the monuments. Sir Gardner Wilkinson had, of course, no choice but to exhibit these lists as transmitted by Herodotus and Diodorus, with the usual attempts to check and supplement them by the help of readings from the monuments or cross lights from Biblical or Babylonian records. Of later discoveries the most pertinent to Scriptural history is the recognition upon tablets, as far south as the Fayoum, of notices of the Shepherd Kings bearing the Semitic name of Shasu, or "pillagers"; their princes, called *haq*, being the hyksos of Manetho. Established at Memphis, four of the Shepherd Kings, Buon, Apachnas, Apappus, and Iannias, carried on war for two centuries with the southern princes, and King Asses subjected Northern Egypt. The Theban princes of the sixteenth dynasty seem to have been subject to them. They were in the end expelled by the monarchs of the eighteenth dynasty, as MM. Chabas and Maspero have told at length in their interesting history. The monuments of these Shepherd Kings found at Tanis represent them, as Dr. Birch urges, with Asiatic features, and with other characteristics very different in type from the Egyptians. At the same time all evidence goes to substantiate the derivation of the Egyptian race from no Ethiopic or other African stem, but from a source to the east of the Isthmus of Suez, and consequently Asiatic in origin, the primitive Nigritic inhabitants being by this invasion expelled from the Nile Valley. Nile or Neel means river, there being the Neel-el-Azrek, the Blue or, more properly, the Black Nile, in contradistinction to the Neel-el-Abiad, the White Nile. A similar division marks both the Hebrew designation of the country and the usage of the monuments; the plural form Mizraim, the "two Misr," denoting Upper and Lower Egypt, the white crown on the head of the sovereign being typical of the south, the red crown of the north. The origin of the name Egypt, applied originally both to the land and the river, which has come down to us through the Greek form, has always been open to conjecture. It has of late been thought traceable to *Ha-ka-ptah*, the sacred name of Memphis. Pharaoh is no longer held derivable, as Sir G. Wilkinson once held, from the Egyptian Pire or Phre (pronounced Phra), the sun; still less, as Josephus supposed, from *ouro*, "king," but is traced to *Per-âa*, the great house or court, suggesting to us the analogy of the "sublime porte." It is only in the Hebrew form that the title comes down to us. The royal high priests, of whom a series of three hundred and forty-five were shown to Herodotus, had, he tells us, the title "*piromis*, the son of a *piromis*." The word *rômi*, signifying "man," is found in the later Demotic and Coptic, the idea in the old language being expressed by *rot*. No deity, the priests asserted, had ever ruled or lived upon earth; yet in works of imagination deciphered of late years the gods are represented as coming upon the earth and walking there, and the historical lists supposed that they reigned upon earth. Beyond the human dynasties, beginning with Menes in the Manethonic and Greek lists, the reigns of Osiris and other gods fill up fabulous lengths of time, settled or authentic history dating in no sense earlier than the reign of Usertesen I., of the sixteenth dynasty, whom Sir G. Wilkinson conceives to be the Pharaoh of Joseph (*circa* 1740-1697 B.C.) It is under Thothmes III. that he considers the Exodus to have taken place, whilst Brugsch's latest researches refer that event to the reign of Mineptah I., the son and successor of Rameses II. There is nothing to be wondered at in the absence of any notice of such a discomfiture among the royal records, and in the consequent difficulty of assigning to it a definite place in the chronology of Egypt.

Among the points more decisively cleared up in the present edition is the system of nomes (in the native language, *Sep* or *Hesep*, or sometimes *Tash*), which formed the keystone of the internal scheme of government, going as far back as the dawn of Egyptian history. On monuments of the fourth dynasty some nomes are mentioned by name, as are also the towns belonging to them, the same names reappearing on monuments of the Ptolemaic and Roman times. Upper Egypt had twenty-two nomes, Lower Egypt twenty—the total being forty-two nomes. The numbers are variously given by the Greek historians. The number thirty-six is explained, in a papyrus quoted by Brugsch, as resting on a peculiar mystical or astrological view which connected the terrestrial division into nomes with the thirty-six ruling houses of the heavens. Both in the terrestrial and the celestial Egypt the first nome—that of the first ruler—was dedicated to the goddess of the star Sothis (Sirius). The twelve kings who, according to Herodotus, reigned over all Egypt, were most probably governors of the twelve principal nomes, not of all Egypt, but of the Delta, to which Strabo gives ten, and Ptolemy twenty-four, and which in later times contained thirty-five, including the oasis of Ammon. From the great Harris and other papyri a flood of light has been thrown upon Egyptian tenets and practices in relation to religion, moral teachings, the state of the soul after death, the final judgment, and the constitution of the invisible world. The metempsychosis is shown by the Ritual to have been an ancient Egyptian doctrine, the soul of man transforming itself in the after state into the form of a man, the god Ptah, Osiris, the chief of the gods, a hawk, heron, swallow, serpent, crocodile, or lotus-flower; in fact, any form the deceased wished. Besides the soul, *ba*, represented as a hawk with a human head, man had a shade, *khebi*, a spirit or intelligence, *khu*, into which he became wholly changed or absorbed as a "being of light," and an existence, *ka*, in addition to *ankh*, life. The soul, *ba*, alone revisited the body. It is thought to have been immortal. Much of the Egyptian psychology seems to have passed into the Hebrew system of belief, though the future state, perhaps by way of natural reaction from its excessive hold on Egyptian thought, had little or no place in the Mosaic economy or creed. On the other hand, amongst ideas connecting the Egyptian religion with the Greek may be cited the *Aahenru Aaru*, or *Aalu*, the Elysian fields, depicted in the 110th chapter of the Ritual, cultivated by the departed spirits or manes, and producing divine or supernatural corn. Mysterious roads led to this paradise, and it was surrounded by a wall of iron pierced by many gates, and traversed by a river with branches in many respects resembling the Hebrew or Babylonian Eden. The fifth chapter of the Ritual has for its subject "The Avoiding of Work in Hades; or, How the Departed Soul may be Spared the Toil of the Field." With this view, the curious little figures called *Ushetiu*, or "respondents" of wood or vitrified earthenware, alabaster, rarely of metal, were laid on the breast of the corpse in the mummy coffin. Most of these statuettes hold in their arms, which are crossed over the chest in imitation of the attitude of Osiris, a hoe and a bag of seed. They were supposed to answer the call for help, and to act as labourers for transporting the sand of the West to the East, to till the sacred fields and water the furrows. Great numbers of them have been found in royal tombs. This singular trait of Egyptian belief and usage forms the subject of the final note with which the editor has enriched the original work.

There is scarcely a page that does not attest the unflagging pains no less than the critical learning which Dr. Birch has lavished upon his task. In some places, as in the chapter upon the music of the Egyptians, he has made judicious retrenchments, whilst retaining all that was needful to set before the reader the manifold forms of instruments shown by the tablets, tombs, or rolls, without undue digression into the boundless field of primitive harmonics and the musical lore of all nations. This admirable manual of Egyptian history, art, and archæology has gained a new and more sterling value from having been retouched throughout by a master hand.

LIFE AND LETTERS OF SYDNEY DOBELL.*

WE fear it must be said that life is not long enough for books like this biography of Mr. Sydney Dobell. Mr. Dobell was a man who well deserved that some record of his pure and generous character, of his thoughts and purposes (most of them thwarted by bad health and domestic cares), should be compiled. But the nine hundred pages of the work before us would more than suffice for the story of the life of a thinker and an invalid as great as Pascal. It is pure waste of time and space to record all the phases of the health, to print so many of the letters, the scraps, the old reviews of Mr. Dobell. His friends, who were many, may be interested in these things; but for the world the book is too heavily handicapped. To have done with fault-finding, it must be said that too much is told us in these volumes about that interesting creature, Blank. There are too many passages like this:—

> Some time ago B—— got me to write a sketch of Dr. Simpson for his *Men of the Time*. As I wished —— to have the money for it, and —— had commissions to do other portraits for B——, I sent my sketch to B—— through ——; who, in addition to giving it to B——, used it in a New York paper. There was no great harm in that, if B—— was "agreeable," but —— did more; he inserted in my sketch—inlaying them so that no one could suppose they were interpolated—slanders upon some of my best Edinburgh friends (the Blackies).

This is like nothing in the world but Humpty Dumpty's poem:—

> They said that I had been to her
> And mentioned you to him,
> They gave me a good character,
> But said he could not swim.

Very often the blanks are too thin a disguise. Thus Mr. Dobell writes about a Professor Blank who—

> had a new Greek book to prepare for the University classes, and every morning he sat down to it. As soon as he was in deep, the house began to ring. . . . The sudden lapse into silence gave one the feeling of falling out of window; *e.g.*
>
> Scots wha hae wi' Wallace bled,
> Scots whom Bruce has (*sic*) often led,
> Welcome——

* *The Life and Letters of Sydney Dobell.* Edited by E. J. With Steel Portrait and Photographic Illustrations. London: Smith, Elder, & Co.

profound stillness—

> And for bonnie Annie Laurie
> I——

dead silence for five minutes. Fancy this going on for hours in a voice that could be heard all over the house.

Surely this particular Blank prepares his lectures for classes neither in Aberdeen, Glasgow, nor St. Andrews. Certainly we have heard that voice on board the *Clansman*, drowning the noise of the storm and of the piper!

The Life and Letters of Sydney Dobell is infinitely too long, and far too full of transparent mysteries. It might have been condensed into a study of a curious and interesting personality. Mr. Dobell, who was born in 1824, was a descendant of a Cavalier family. His immediate ancestors had fallen into ways which, on the whole, were rather Puritan. They were members of what they called "The Church," a Church which at one moment was chiefly composed of the sons-in-law of a Mr. Thomson. Family quarrels intensified the sectarian disputes which rent this Church; but Mr. Dobell never lost the "freethinking Christian" ideas of which he was a disciple and, in very early life, an exponent. His father, a business man who led a singularly retired life, seems almost to have hoped that the promising boy might possibly "be called out as a special instrument of our Heavenly Father for some great purpose with His Church, or with the Jews." Young Dobell was educated at home, and in childhood devoted his thoughts a good deal to the Trinitarian controversy. It is curious to note how the old ideas about the Millennium and the battle of Armageddon clung to him. He hoped to write a kind of millennial epic, and during the Crimean war he was interested in the Apocalyptic philology of persons who identified Armageddon with Sebastopol. Even when he was a boy, he worked too hard and thought too much. He fell in love at the age of fifteen with the lady whom he married, and it is certain that "a long engagement" (which terminated happily when the poet was twenty-one) must have been a severe ordeal. But for his love of the open air—of riding, angling, shooting, and other sports—this premature young gentleman might have become a person of colossal conceit. His friendship with the late Mr. Gilfillan, a critic who had a generous, if indiscreet, way of discovering and pushing obscure poets, probably confirmed him in the belief that he was "a mouth of the Muse." In his early boyhood Campbell had said that, "with care," he might become a poet. Sydney Dobell does not seem to have spared care, but he did not think enough about his audience. Mr. Dante Rossetti has well remarked that thought for a poet's hearers is absolutely necessary. Mr. Dobell's works were rather fantastic and were constantly misunderstood. He himself was happy in the belief that his *Balder* must receive recognition as soon as England had a truly great poetical critic. The advent of the critic who shall see *Balder* with the eyes of Mr. Dobell is still expected. Perhaps a man of talent who saw far more in all the productions of art and nature than his neighbours could behold saw also more than the common eye could detect in his own epic. Himself an unpopular poet, he "was quite certain that the populace knows nothing about poetry, and that the worst testimony any poem could receive would be that they, unled, and of their own mere emotion, voluntarily adopted and admired it." Yet, in the long run, the voice of the world and of the ages is found to be at one with the verdict of the soundest critics. It is difficult, indeed, to remember the name of a poet of great and signal merit who has not, sooner or later, won the popular ear.

Mr. Dobell was little influenced by criticism, and rather inclined to fancy that the writing of poetry was a thing between a man and his Maker. Unfortunately, the selling of poetry is a thing between a man and the public. Thus Mr. Dobell's early *succès d'estime* with *The Roman* (1850) was more brilliant than that which he won by *Balder* (1853-54), while his *England in Time of War* did not gain the popularity which many of the poems in the volume seem to deserve. As a critic of the performances of others, however, he showed very great acuteness and common sense. No one could better describe the position of the late Mr. Dawson, the lecturer, than he did, (vol. i. p. 130), in a passage which is not too enthusiastic. *Aurora Leigh* did not persuade him that a woman can be a poet, and when he read the first verses of Alexander Smith, who afterwards became his friend, he could not help feeling that he had already met with the more ambitious images in which that writer dealt. The constant misfortunes which made Mr. Dobell a wanderer in search of climate or medical advice, the long malady of his wife, and his own frequent accidents and illnesses, broke up the plan of his life and of his work. It is impossible to say what he might have done; it is certain that in his ballad of *Keith of Ravelston*, and in his *Song of Sleep* (to mention only these two examples), he gave positive proof that he was indeed, and at moments, a poet. Poetry we cannot define, but we have a sense of its existence, whether it be present or absent. In several of Mr. Dobell's writings it is undeniably present.

It is impossible here to follow the whole story of Mr. Dobell's life, his migrations from Coxhorne to Edinburgh, to Clifton, to Italy. In Edinburgh he pitched his camp for several years, and was a figure of considerable importance in the society of that city, where he good-humouredly bore with the fun of *Firmilian* and the chaff of Aytoun. The kind things he did and said live after him and "blossom in the dust." The young men whom he described as "not fit for anything but literature, and not fit for that," found in him a most generous and judicious friend. He really took pains with the manuscripts which these obtrusive lads sent him in hosts, and, when occasion offered, his purse as well as his advice were at the service of those who appealed to him. The austerity of his character—perhaps, too, a slight want of humour—is revealed by his indignation at the remarks of a lady who "marvelled that a poet should be a good young man." The lady ought certainly not to have put her amazement into words; but, as a matter of history, poets of merit have very rarely been "good young men." There is something much worse, however, than a poet who is a bad young man, and that is a poetaster who thinks it his duty to be dissipated. Mr. Dobell may have seen a good deal of this common and most disgusting form of affectation.

The too numerous letters published in this volume contain expressions of Mr. Dobell's opinions about a variety of subjects. He was one of the earliest and most energetic of English believers in a free and united Italy. His letter to Mazzini (vol. i. p. 199) is written in that style of almost too exuberant enthusiasm which some admirers of the great Italian are accustomed to employ. Mazzini himself (his criticism of Victor Hugo proves it) was most temperate in the use of fine language, and his reply to Mr. Dobell seems more like the letter of an Englishman to an Italian than of an Italian to an Englishman. It was natural that Mr. Dobell should differ from the policy of the *Times* in 1853, but it seems rather curious to-day that he should write, "Of all the clever, powerful, prosperous, doubly-damned profligates, it is, I think, the most consummate."

In his political opinions Mr. Dobell was, unawares, rather commonplace. He began life as a Liberal, he ended it as a Conservative. He always was on the side of freedom, however, in Italian matters, and, to tell the truth, the blending of his political notions was not unlike that which we admire in Colonel Newcome. He was interested by the obscure and, as it then seemed, dramatic character of the late Emperor of the French. Here is a curious passage from a letter written during the fever of the Crimean war:—

> A report came to Edinburgh last night that the Emperor of Russia is dead: but I fear it is mis-telegraphed for the Empress, who has been dying for some time. Till this solution struck me, my blood ran back cold with the divineness of the catastrophe.
>
> It may still be true, and if true who shall foresee the next step of the Angel? If true, it casts a curious glare upon Louis Napoleon's indomitable determination to go to the Crimea. I should be inclined to think that Nicholas died of the "disease of Russian Sovereigns," and that the dark fateful French Emperor had warning of the conspiracy. . . .

His opinion about three distinguished English statesmen is thus expressed:—

> It seems to me, after long and careful observation, that Mr. Disraeli is the most adroit and audacious acrobat that ever turned somersaults at Westminster; that Mr. Gladstone is a political talkee-talkee, with neither the eye nor the hand for government; and that Mr. Bright is a forcible rather than a powerful man, in whom talents, originally fitter for the stump than the council room, have been so stimulated and biassed by the life of a professional agitator, that he can perceive no subtler organization than that of a mass-meeting, and is incapable of any nobler public duty than the vulgar work of demolition.

In the Franco-German war Mr. Dobell, like the majority of his countrymen, sided with the Germans till Sedan, after which he sympathized vigorously with the French. He wrote a very long letter to a newspaper, in which he said that "the German arrogance was as much above the usual lust and swagger of conquest, as Anti-Christ transcends the peddling of common sinners," &c. "The editor to whom these letters were sent declined to print them," and it is a pity that the biographer of Mr. Dobell has not imitated the discreet editor.

The later years of Mr. Dobell's life were embittered by long and severe illness, increased, and perhaps caused, by a series of accidents. His spine appears to have been injured by two unfortunate falls, one from horseback, the other into a pit among some ruins. The leisure which he enjoyed for the greater part of his career was thus broken up and made, for literary purposes, almost useless. His patience and courage in the midst of the suffering which robbed him of time and strength seem to have been admirable and exemplary. His private life and character appears to have deserved the praise conveyed in a stanza quoted by his biographer:—

> High nature, amorous of the good,
> But touched with no ascetic gloom.

This might have been made apparent in a biography of briefer extent, and by aid of much more concise epistolary extracts.

HUXLEY'S HUME.*

THE history of philosophy may be likened to a gallery of arms and armour, where we see ranged in due order the weapons borne by many champions of old time. Here are marshalled, with imposing show, the suits of harness which adorned mediæval tournaments, so cumbrously complete, so bristling with manifold devices of defence, that we marvel how human beings encased in them can ever have moved their limbs. The ponderous lances and unwieldy partisans would be harmless against a modern trooper who knew the elements of his business. As we go further, our sight is caught by arms of more practical and modern fashion. Here stands the rapier of Descartes—a goodly sword in its day, piercing and true of temper, but something stiff and

* *English Men of Letters.* Edited by John Morley. *Hume.* By Professor Huxley. London: Macmillan & Co. 1879.

antique. The duello was still a formal and stately ceremony when its hilt was grasped by the living hand. Hard by, in the compartment dedicated to our own heroes, is much for the eye to admire. Hobbes's blade is a stout Andrew Ferrara, fit to deal shrewd blows alike with edge and with point. Locke's is a solid English weapon, mounted a trifle too heavily for the present taste, but of right good metal, and serviceable in all essential respects. When we come to Berkeley and Hume, the perfection of workmanship is attained. Hume's arm is the small-sword, the king of single weapons; and its qualities are unsurpassed. Never can man hope to handle an instrument more keen, more flexible, or more justly balanced. Science wages war on the grand scale, and wins victories with her new artillery; but she will scarcely help the combatant who fights for his own hand to better Hume's cunning of fence. Happy is he who is swordsman enough to perceive the beauty of the weapon; happy also are they to whom a guide himself expert in arms is ready to show its uses and recount its exploits. Such a guide is Mr. Huxley; his own steel is not apt to lie idle for long together, and, unless we are much mistaken, he disdains not the joy of battle. Certain it is that in more than one quarrel he has so borne himself as to teach opposers to beware of him. From no one could we hope to learn more profitably the points of Hume's mastery.

To drop metaphor, Mr. Huxley combines many qualifications for helping a generation which is in danger of forgetting Hume and his work to understand them better. Not only is he thoroughly acquainted with Hume's writings, but he is skilled in the art of exposition, and his manner, if it does not attempt the subtle felicity of the original, deserves to be compared with it for lucidity. Not the least pleasure that we find in Professor Huxley's work is that of having for once a philosophical book written in clear and plain English. Year after year we have seen men of great ability and critical powers, notably the ingenious Oxford editors of Hume himself, distorting the English language into a copy of the most obscure manner of German philosophers; and it seemed to us a shame and a rebuke that such things should be in a country whose native masters of philosophy have also been masters of style. Professor Huxley comes opportunely to redress the balance. We have the greatest respect for Mr. Green's intellect, although we wholly differ from him on the main questions of philosophy. But our general recollection of his Introduction to Hume is that nobody can hope to understand it who has not read Hume first, and a good deal of later philosophy besides. Professor Huxley takes the old-fashioned view of an introduction; and, while he deals with philosophical questions no whit less thoroughly than Mr. Green, he has so ordered matters that, if any reader fails to understand him, with or without previous knowledge of Hume or later philosophy, it will certainly not be the writer's fault.

We may pass lightly over the account of Hume's life, which is only just so much as may serve to preface the real business. In some incidental remarks on the political essays we are of opinion that Professor Huxley somewhat overrates the author's sagacity in that direction. It appears to us that in politics Hume is at his weakest. His conceptions of the springs and currents of public action are but poor and mechanical, not only as judged by the standard of later historical science, but when we regard what was being done in his own day by his great contemporary Montesquieu. In Montesquieu we find already vigorous that which is now compendiously, if not adequately, called the historical spirit. He treats men as organically, not identically, alike; he allows for the varying influences of race, belief, custom, and circumstance; he understands that human institutions have elements which grow and are not made, and even the most absurd show a certain relative fitness by the mere fact of their continuance. Hume has nothing of all this. He considers forms of government as things which can be made to order, and sketches out an ideal constitution without any reference whatever to place or persons; admitting, indeed, that it would not be wise in practice to try sweeping experiments, "the bulk of mankind being governed by authority, not reason." The amount of political foresight which he obtained by this method of speculation may be seen in his prediction of absolute monarchy as the true euthanasia of the British Constitution. But there is nothing peculiar to Hume in these defects; they were the common ones of his time, and persisted long afterwards. Another weakness which he shared with the best Scottish society of the day was a vehement dislike of England and Englishmen, which, if Dr. Johnson may be taken as fairly representing English opinion, by no means went unrequited as to Scots in general or Hume in particular.

Turning to the account of Hume's philosophy, we find it dealt with in broad outlines, as was needful in the space at command, but nothing material omitted. While Professor Huxley does not dissemble his admiration for Hume, he is far too sincere an expounder ever to become a flatterer. The shortcomings of Hume's psychology, the opening made by them for Kant, and the necessity and value of Kant's contribution to philosophy, are distinctly pointed out. Descartes also, of whose writings Hume seems to have had but little knowledge or appreciation, receives due honour in more than one place; and Professor Huxley does not hesitate to call him the father of modern philosophy. The reader is not assumed to be provided with any technical knowledge; and this part of the book faces at the outset the question of what philosophy is and what it aims at. Philosophy is described as being fundamentally the answer to the question, What can I know?—the inquiries of science being distinguished from this by seeking an answer in every case in terms of what is actually known. The science of psychology, however, being, among other things, the science of what knowledge actually is, and how it in fact arises, has a peculiar connexion with the problems of philosophy. Its business is to furnish the data of philosophy; and we cannot have a satisfactory treatment of philosophical questions unless there is a groundwork of scientific psychology, and the philosopher has enough scientific training to make a right use of it:—

> On whatever ground we term physiology science, psychology is entitled to the same appellation; and the method of investigation which elucidates the true relations of the one set of phenomena will discover those of the other. Hence, as philosophy is, in great measure, the exponent of the logical consequences of certain data established by psychology; and as psychology itself differs from physical science only in the nature of its subject-matter, and not in its method of investigation, it would seem to be an obvious conclusion, that philosophers are likely to be successful in their inquiries, in proportion as they are familiar with the application of scientific method to less abstruse subjects; just as it seems to require no elaborate demonstration, that an astronomer, who wishes to comprehend the solar system, would do well to acquire a preliminary acquaintance with the elements of physics. And it is accordant with this presumption, that the men who have made the most important positive additions to philosophy, such as Descartes, Spinoza, and Kant, not to mention more recent examples, have been deeply imbued with the spirit of physical science; and, in some cases, such as those of Descartes and Kant, have been largely acquainted with its details. On the other hand, the founder of Positivism no less admirably illustrates the connexion of scientific incapacity with philosophical incompetence. In truth, the laboratory is the fore-court of the temple of philosophy; and whoso has not offered sacrifices and undergone purification there, has little chance of admission into the sanctuary.

We doubt whether Hume would have gone so far as Professor Huxley in making familiarity with the practical work of some natural science a necessary condition of philosophical competence. Nor are we clear how far Professor Huxley really means to go. Does he intend to exclude mathematics and mathematical physics on the one side, and the scientific study of philology, law, politics, and history on the other, from the branches of knowledge capable of affording the needful discipline in method to a student of philosophy? If so, we must venture to differ from him; but this can hardly be his opinion; for Hume himself "seems to have had very little acquaintance even with such physiology as was current in his time." If, again, Professor Huxley means to imply that knowing physiology will of itself be enough to save a man from failure in philosophy, we must differ on that point also. Such knowledge will indeed save one from taking certain kinds of nonsense for philosophy; and the same thing is equally true, and is hardly less overlooked, as regards the elements of general physics. But a man may be a very good craftsman in the physical or intellectual workshop of a special science, and yet may have no aptitude for seizing the point of a philosophical question. Philosophy cannot take people's competence on trust on the strength of their achievements in other departments any more than physiology or law. We fully agree with Mr. Huxley, however, as to the credit Hume deserves for seeing the necessity of a scientific psychology. He was here on the path of Descartes and Locke, but he followed it with such native genius and vigour as to make it his own. So far, indeed, is Hume from being open to any charge of imitation that he may rather be censured for not having taken even ordinary pains to acquaint himself with existing philosophical literature. Thus his work would have been the better, as Mr. Huxley points out, if he had known Spinoza's analysis of the passions.

The account of the human mind and its furniture which Hume actually gave is here set forth clearly and critically. His omission to note that perceptions, or in his own terminology "impressions" of relation are an elementary class by themselves is carefully discussed and corrected; and it is explained how Kant "started afresh on the track indicated by Descartes," and brought into prominence "the great fact that co-existence and succession are mental phenomena not given in the mere sense experience." Professor Huxley deserves the thanks of all those readers, probably an appreciable number, who have not time to grapple with the *Kritik* for themselves, and have sought in vain for a clear statement of what Kant actually did among the endless controversies of commentators who for the most part expound their author on the principle of *obscurum per obscurius*, and are far too much occupied with maintaining their rival interpretations in detail to think of affording help to a simple inquirer.

The physiological aspect of Hume's psychology gives occasion for some brief but weighty remarks as to the speculative indifference of his doctrine between materialism and idealism. If we establish a strict and unvarying connexion between the facts of consciousness and certain facts of matter and motion taking place in the brain and nervous system, yet matter and motion themselves are names for "other phenomena of consciousness":—

> All material changes appear, in the long run, to be modes of motion; but our knowledge of motion is nothing but that of a change in the place and order of our sensations; just as our knowledge of matter is restricted to those feelings of which we assume it to be the cause.

Pure idealism, therefore, is incapable of disproof on scientific grounds; "the more completely the materialistic position is admitted, the easier is it to show that the idealistic position is unassailable, if the idealist confines himself within the limits of positive knowledge"; or rather, perhaps, if he takes care not to contradict any matter of positive knowledge. For if he could bring himself "within the limits of positive knowledge" as understood by Professor Huxley and ourselves he would reduce metaphysics to a pure science. The point here made is one which it is essential to understand if one is to enter on the discussion of meta-

physical problems with any chance of a profitable issue; it is also constantly misunderstood in this country, and Professor Huxley has done very well to mark it with a certain emphasis. We should have been glad if he could have seen his way to pursue it further; but to do so would have been a digression from his text, as Hume studiously leaves the matter at large.

The short chapter on Necessary Truths gives a compendious view of the empirical theory as built on Hume's lines, with certain corrections by his followers. Professor Huxley's own summary of his conclusion is as follows:—

> If what are called necessary truths are rigidly analysed, they will be found to be of two kinds. Either they depend on the convention which underlies the possibility of intelligible speech, that terms shall always have the same meaning; or they are propositions the negation of which implies the dissolution of some association in memory or expectation, which is in fact indissoluble; or the denial of some fact of immediate consciousness.

We would add that the canon already noticed is here applicable, that the question of what we can know implies the question of what we do know. If we have knowledge transcending the limits of our possible experience, then must we look beyond experience for its origin. If not, then we have in experience and association, working on our already organized capacity for perceptions, a sufficient *vera causa* for the phenomena of so-called necessary beliefs, and it is useless to seek further. Here the speculations of modern geometry, still unfamiliar to students of philosophy, have an important philosophical bearing to which Professor Clifford, we believe, was the first to call attention in this country.

The famous essay on Miracles is analysed and criticized with some severity; and the criticism, as regards the actual inconsistencies of Hume's language, is just enough. But we conceive that hardly sufficient allowance is made by Professor Huxley for Hume's deliberate irony, which in this essay is at its height. Hume cared very little for establishing any position of his own, so that he could leave his adversaries in confusion. He is arguing against people who define a miracle as a violation of the laws of nature, and thence infer that the supposed miraculous event is pre-appointed evidence of an agency superior to nature. And he shows that this definition involves a plain contradiction—a feat which may now seem tolerably easy, for the very reason that on this point Hume was thoroughly successful. The theory of miracles current in the last century, which was itself a pretty modern invention, is now as completely exploded among theologians as among philosophers. An excellent specimen of the effect of Hume's work may be seen in Babbage's *Ninth Bridgewater Treatise*, where the whole question is raised to a higher level. As to Hume's language, it seems to us that in this and other parts of his writings the apparent laxity is nothing but an ironical adoption of the phrases affected or passed as current by the other side. Even in the *Dialogues concerning Natural Religion*, a work to which far too little attention has been paid, and in which there is a genuine endeavour to do justice to all sides of the argument, it is difficult to be sure where dialectic irony ends and the serious definition of possible conclusions begins. Professor Huxley manfully undertakes this task, in which, however, we are unable to follow him. Nor can we do more than barely mention his account of Hume's moral system. Its high and strenuous tone should alone be enough to silence those ingenious and charitable persons who go about assuring the public that Professor Huxley and other men of science are materialists, and that no materialist has any business to be a good man. But we can feel no serious regret in being thus cut short; for the book sufficiently explains itself, and we have done our part in giving some general notion of its quality. Besides its value as an exposition of Hume's thought, it will be found of great use as a first introduction to modern philosophy; and we could almost hope that it might convert some of the educated readers of older growth who have given up philosophy as hopeless or repulsive.

L'IDÉE DE JEAN TÊTEROL.*

IT has been lately said in the pages of a literary magazine that the horror with which many good English men and women regard French novels in the abstract is not altogether unreasonable; and in this statement there is, no doubt, a certain amount of truth. French novelists, for reasons which Mr. Hamerton pointed out in his *Round my House*, are apt to deal with subjects which we have not the least desire to see introduced into English fiction, and there is probably no English romance so profoundly immoral as some French ones which set up for inculcating virtue. But there is another side to the question, which the majority of English novel-readers are too apathetic and too ignorant to perceive. It is not improbable that, in many cases, a stern disapprobation of anything improper is a convenient excuse for not encountering the difficulties of an unfamiliar tongue, and it is more than probable that various worthy people who regard the name of M. Feuillet with something like holy horror are unaware that in his early days he was accused of writing too exclusively for bread-and-butter misses, and was called the "Musset des familles." The English, or rather American, translation which has appeared of M. Cherbuliez's *L'Idée de Jean Têterol* should have some effect in convincing devourers of novels that it is possible for a French master of fiction to produce a book which is both interesting and harmless.

Some time ago, when we had occasion to review a work by M. Cherbuliez—*Samuel Brohl et Compagnie*—we expressed our admiration of the daring and success with which he reversed a method commonly in use among novelists. He had for the basis of his story such a secret as Gaboriau would have artfully concealed from the reader till the very last moment, enmeshing it with numberless subsidiary mysteries. M. Cherbuliez boldly revealed this secret at the beginning of the novel, and depended for the interest to be aroused upon a desire to see how the personages of the story discovered, and how they were affected by, a thing known to the reader but unknown to them. In a certain sense this might be called a more dramatic device than the one more usually employed by writers of fiction, inasmuch as on the stage the spectator generally sees through the disguise of the wily villain or the virtuous detective long before the actors are supposed to do so. It certainly showed a contempt for all tricky ways of catching attention which is even more strongly exemplified in the work by M. Cherbuliez we are now considering. *Samuel Brohl et Compagnie* had a certain amount of what is called sensational interest, because one was never sure what would be the end of the clever rascal's schemes. *L'Idée de Jean Têterol* deals with schemes which are innocent indeed compared to those of Samuel Brohl, and of which one can readily anticipate the result. The story depends entirely upon the skilful and delicate handling of its teller, and can well afford to do so. If M. Cherbuliez had always written as he has in this instance, he might, with the help of translations, have become a serious rival to the lady novelists who delight to introduce every form of crime into their pages. Possibly Musset was as right in prophesying that what he called, before it had any definite existence, "Kitchenmaid literature" would wear itself out, as he was in predicting that its time of success in France was coming. It is, at any rate, to be hoped that the day of grace foreseen by him will come before very long to England, and that works of the calibre of *The Wish of his Life* will be preferred to the combination of the most commonplace and vulgar gabble with the most improbable feats of villany which appears to be the chief delight at present of the ordinary English novel-reader. We have been led into this digression partly because *L'Idée de Jean Têterol* is completely unlike what the typical well-informed English reader—the kind of person who says to one with a tone of virtuous backsliding, "Paris is so wicked but so pleasant"—imagines a French novel in the abstract to be; and partly because it suggests curious speculations as to what direction the taste of French novel-readers may finally take. If the notion that French taste is much better than English were perfectly true, there could be little doubt that *L'Idée de Jean Teterol* would rank higher with the French reading public than the same author's *L'Aventure de Ladislas Bolski*, a work which has gone through several editions, and from which a lately deceased English novelist borrowed one of his most striking incidents, but which must, we think, appear to the judicious far below the simply meritorious novel which M. Cherbuliez has now produced.

Jean Têterol, a foundling, was an assistant-gardener to a certain Baron de Saligneux, who had some dislike to him:—

> Il lui reprochait d'être enfermé en lui-même, absorbé dans ses pensées, taciturne, sournois. 'On ne peut pas savoir,' disait-il, 'si ce garçon vous est ami ou ennemi, ou plutôt il n'est ni l'un ni l'autre: c'est l'éternel étranger.' Il lui en voulait surtout d'avoir une tête de fer et le dos peu flexible. Le baron tenait par-dessus tout au respect, et Jean Têterol n'était pas né respectueux. Il était venu au monde avec la pensée qu'un baron de la vieille roche et un enfant trouvé si valent à peu près l'un l'autre, qu'ils ont été petris du même limon.

One day the baron, walking, clad in an apple-green dressing-gown, in his garden, found Jean Têterol pruning a pear-tree:—

> Jean Têterol faisait bien tout ce qu'il faisait, non qu'il se souciât de plaire à ceux qui l'employaient et de s'attirer leurs éloges, mais il tenait beaucoup à plaire à Jean Têterol, qui n'était pas facilement content de lui-même.

The baron, whose dislike for the foundling increased every day, upbraided him for using a pruning-knife instead of the shears, and offered to give him a lesson in gardening. Jean Têterol quietly replied that he knew his own business, and that sometimes the pruning-knife is better than the shears. The baron scolded him violently for his insolence:—

> Jean l'écouta d'abord sans mot dire; bientôt, la patience lui échappant, il se mit à fredonner l'air de Malbrough. C'était la seule chanson qu'il eût apprise, et il aimait à la chanter; par malheur il avait la voix fausse, et étant très appliqué à tout ce qu'il faisait, il chantait faux avec méthode et avec délices.

The baron was less displeased at his singing out of tune, or, as the American translator puts it with charming accuracy, "singing false," than with his extraordinary insolence, which he immediately punished by a violent kick. Jean Têterol fell into a fury of shame and rage. He remained for two hours meditating in a thicket. His first notion was to set the castle on fire; his second, to kill the baron unawares. He cut himself a holly stick, and examined it complacently. By degrees he grew calmer. He believed in very little, but he did believe in law courts and gendarmes, and resolved to keep clear of them. Accordingly he secretly collected his few belongings and went to say "Good-by" to the Abbé Miraud, his first patron. When the Abbé asked him whither he was going, he replied, "Ah! ça c'est mon secret, j'ai mon idée"; and when the Abbé pointed out to him that one cannot

* *L'Idée de Jean Têterol.* Par Victor Cherbuliez. Paris: Hachette et Cie.

The Wish of his Life. From the French of V. Cherbuliez. 2 vols. [illegible]: Bentley & Son.

live on an idea, he replied, "C'est égal, j'ai mon idée." So, still humming Malbrough out of tune, and supported by his idea, he set out on his way.

These events occur in the first chapter; the second takes us at once some thirty years on to the time when Jean Têterol, at the age of fifty-two, has made a handsome fortune, and in an interview with his friend Pointal, a notary, he gives a sketch of his life. He had found that the Abbé Miraud was wrong, and that a man could live upon an idea. His idea gave him courage while he was a labourer to endure all kinds of privations for the sake of being able to buy books and study them hard. From being a labourer he became a mason, and a very good one. His comrades did not like him because, to quote from the translation—

> I never went to the wine-shop, and had a taste for inexplicable things. There is nothing in the world more useful than the things which seem to be good for nothing. But, out of a thousand masons, how many do you find who prefer a hard book to the wine-shop? Only one, and sooner or later, with perseverance, that one makes his mark; the others remain in the lowest rank, and cry out against injustice with their hands on their hips.

From being a mason he became a contractor, and so made his fortune, the exact amount of which no one ever knew. "Avec l'âge il était devenu communicatif; il aimait à raconter ses affaires; mais, quoi qu'il racontât, il y avait toujours quelque chose qu'il ne disait pas; il joignait le parlage à la cachotterie." He had married a worthy bourgeoise, and had a son named Lionel, whom he adored. When the war broke out, Jean Têterol's first notion was that it was a conspiracy between the reigning powers of the two countries to prevent his returning to Saligneux, and he did all he could to prevent his son from serving in the French army. When Paris capitulated Jean Têterol was filled with the deepest sorrow for his country's misfortunes; but was consoled in the midst of his lamentations by a sudden recollection, and said to himself, "Well, at any rate I shall now be able to go to Saligneux." When he did go there he learnt from the Abbé that the old baron was dead, and that his son Patrice, having entirely neglected all business affairs, had been compelled to sell half his property and incur heavy mortgages on the other half. Left alone, he joined his hands together "en forme de coupe, et au fond de cette coupe il aperçut distinctement un château, une tour ronde, un pavillon cassé, des lucarnes à pinacles, une pelouse, des champs, des prés, des bois, et un baron mort qui, s'arrachant les cheveux, criait à un baron vivant, 'Quelle honte! Tu as souffert que ce diable d'homme nous prit tout! Aujourd'hui Saligneux est à lui.'"

This is of course the idea which has been such a comfort to Jean Têterol; and what finally came of it we will leave readers to find out for themselves, either in the original or in *The Wish of his Life*, only mentioning the fact that the Baron de Saligneux has a charming daughter. The plot is arranged with considerable dexterity, although there is not much of it; but, as we have already said, the attraction of the book lies in the style and the characters. The translation is neither better nor worse than such translations generally are, but some of its mistakes are curious. Its producer talks of a "lavatory" in Saligneux where linen was washed; and when a French noble is described as occupying a "petit hôtel," gives the same word in English as an equivalent. On the whole, however, the rendering is tolerable enough.

SPORT AND WORK ON THE NEPAUL FRONTIER.*

It is by no means desirable that works concerning districts or provinces in India should proceed exclusively from the official pen. The Anglo-Indian civilian or staff-officer is generally accurate and sometimes scholarly, but his production may take the tinge of a Blue-Book. His facts may be too many for him. And, whether he is humorous and discursive, or precise and formal, or terribly in earnest, he is liable to the criticism that he understands and therefore describes only one or two sides of the native character. To him the Hindu is a wayward child, who must alternately be coaxed and bullied into the performance of his duty; or a tiresome obstructive to be summarily put out of the way; or a humble suppliant, who at last discovers, to his extreme amazement, that in the eye of the English law one man is thought to be as good as another; or a selfish and high-handed oppressor, who has to be taught, by salutary and severe chastisement, that he must not deal with his Ryots as if they were chattels and brute beasts. The planter, or merchant trading in country produce in the interior of Bombay or Bengal, has, it is often argued, opportunities of seeing the cultivator and the artisan when they are off their guard. The indigo planter, especially, has to farm large tracts of land, to drive bargains with Orientals ever ready to take advantage of his weakness or his misfortune, to collect, feed, and house scores of day labourers, to exact his rents, to enforce the performance of his contracts, and to contend, in the revenue and civil courts, with unscrupulous adversaries backed by a crowd of law agents ready for any amount of chicanery and dirty work. To such the native is no fawning parasite or baffled suitor. He must be watched and unmasked, and, in or out of court, must be confronted and beaten at his own game by the superior resources, skill, honesty, and determination of the Englishman. A picture of Oriental society drawn by a man who has got to the back of the north wind is, it is urged, very likely to be true; and at any rate it must be striking and worth inspection.

Though we do not entirely concur in this reasoning, we have every motive for welcoming a graphic and unvarnished account of experiences gained during twelve years of a planter's life in North Behar. The author, who calls himself "Maori" in the title-page, but gives his name as Inglis in his preface, has been in charge of indigo factories in Chumparun, Tirhoot, and Purneah; or, at any rate, he has made excursions into those districts as well as the Purnea Morung and the Nepaul Terai. He entitles his volume *Sport and Work*. Charles Fox once said of a "pious fraud" that he saw the fraud plainly, but not the piety; and in like manner we may remark that for six chapters about rents, indigo, and business, there are more than twenty devoted to tigers and deer. We do not expect information showing how agriculture might be improved or the chances of famine lessened from one who states that he is "no politician," and that he merely wishes to tell us, in a quiet and unpretentious way, how an Englishman passes his life in a bungalow while his nearest neighbour lives in a similar tenement some ten miles off. Nor do we complain of the free introduction of "Anglo-Indian and Hindustani words." What we do find fault with is that the words are badly spelt and improperly used. Of the real meaning of some phrases the author is evidently quite ignorant, and others, which he must have had occasion to use two or three times a day, are strangely metamorphosed. The revision of the letterpress seems to have been most carelessly and hurriedly done. It is impossible to believe that an active gentleman who has passed most of his time on horseback, in "humming bazaars," amongst crowds of petitioning Ryots or busy labourers, ever pronounced names and titles in the way in which they are allowed to appear before the world. We have "Logouli" and "Rottiah" for "Segouli" and "Bettiah," both being as well known to a planter of North Behar as Cannock Chase or Clumber to a resident in our Midland Counties. "*Tuccaree*" occurs for "*Tuccavi*," and "*Kooskee*" for "*Khuski*." Indigo dye is technically called "*Mall*," we are told. This is the common word *māl*, literally "wealth" or merchandize, the term given to the manufactured indigo to distinguish it from *pāt* or the plant in the leaf and bundle. The head factory becomes the *bead-factory*. A fisherman, we are told, in Bengal is called *nikaree*, while in Behar he is a *mullah* or *machua*. This latter is correct. But *nikaree* is not the class which catches fish, but the caste which takes it from the fisherman and sells it in the market; and in the hot season the approach of a string of *nikarees* on their way to dispose of their consignment at some bazaar removed from the river is perceptible by other senses than the eye. A fisherman in Bengal is *Jaliya*. In p. 55 we learn that a fishery or a right of fishing is called "*Shilkur*," from "*Shal*," a net. The author probably wrote, or meant to write, "*julkur*," properly "right of water." But the first syllable is derived from "*jāl*," water, and not from "*jāl*," a net. "*Kūr*," it is well known, is the Sanskrit term for tax or tribute. *Derah* is everywhere written for *diarah*, a phrase which answers to "*chur*" in Lower Bengal, and signifies the long rich alluvial flats which generally line the banks of such rivers as the Gunduk, the Ganges, and the Kosai, and increase, diminish, or completely melt away, owing to the action of the stream in the rainy season. A threshing-floor is commonly *Kāliyān*, and not "*Karehan*." "Like a court of justice" is, in ordinary Urdu, *Adālat Ke muwafik*, and not *Adawlut lea mafick*. A poor man is *gharib*, not *greel*. The term *gumāshta* or agent is spelt in three different ways, none of them correct. In a nocturnal visit from a leopard, which is not badly told, the *choukidar* or watchman is represented as shouting out, "*Chor, chor, lagga, lagga*," which phrase is translated as "Thief, thief; lay on, lay on." If the village functionary did utter the sounds expressed, he really said that the thief had "caught it." "*Lagga*" is the *habet* of the Roman populace, signifying that something, man or animal, has been struck. The *choukidar* probably shouted out "*Māro, māro*," this being the word that comes uppermost on such occasions to every native. We need not, as we might do, enlarge the catalogue of grammatical blunders and annoying misprints. Neither do we wish to be unduly severe on the style. There are, however, far too many epithets. "Noble stream," the "stately Ganges," "trees of wondrous dimensions rearing their stately heads," "the steely blue of a lovely lake"—these and other epithets are piled up much too often; and Mr. Inglis might write simply of a tiger, instead of a "whiskered monarch," the "yellow-striped robber," the "bounding robber," and the "magnificent robber." He really has something to tell us about his work in the vats and his tent-life in the jungles, and he might relate it in a more unaffected style.

As we have said, we do not blame Mr. Inglis for not filling his pages with statistics of the revenue or the judicial courts, with an account of the genealogy of Rajendra Kishor Sinh, the present Maharaja of Bettia, or with a disquisition on the question whether a certain black mound capped by a solid brick tower to be seen near the police station of Kesareya in Chumparun was really intended for a gigantic sepulchre or was merely a monument of one of the doings of Buddha. Ample information on these and kindred subjects is now accessible in Mr. Hunter's Statistical Account of Behar. We are glad to meet an independent and unofficial Englishman on his own ground, and turn to his account of the cultivation and manufacture of indigo. His description of the system by which the plant is grown and delivered at the factory, though tolerably correct in its broad features, is deficient in precision, and Mr. Inglis's pages would not convey to readers unfamiliar

* *Sport and Work on the Nepaul Frontier; or, Twelve Years' Sporting Reminiscences of an Indigo Planter.* By Maori. London: Macmillan & Co. 1878.

with the subject the distinction between the cultivation by means of advances and the cultivation on the planter's home farm. In Chumparun as in Behar, and, indeed, in Bengal proper as distinguished from the North-Western Provinces, indigo is grown in three different ways. 1. Asamiwar or Ryotty. 2. Zerat or Zerat. 3. Khuski. Nothing can be done in the first method unless the planter purchases an estate or takes a lease of a number of villages, and then collects the rents and acquires for the time the position and privileges of a landholder. The prestige attending the possession of manorial rights enables an energetic Englishman to persuade or compel the Ryots to grow indigo on a portion of their tenures, which, according to Mr. Hunter, does not exceed 15 per cent. of the whole area. Under this arrangement—while the factory supplies the seed and gives advances in cash at a time of the year when they are rather wanted—the Indian cultivator bears all the burden of ploughing, sowing, weeding, cutting, and delivering the plant. Under the *zerat* all this must be done for the planter by his hired servants and his own ploughs. Mr. Inglis says truly that this description of land is, if possible, acquired in the neighbourhood of the factory; and he dwells with pardonable exultation on the comparatively high farming which distinguishes such tracts. The clods are pulverised; the land is cleared of thistles and weeds; silt is regularly removed from the ditches; roads are constructed; and everything betokens order, superintendence, and skill. The third and last method, *khuski*, is simply that of giving advances to Ryots outside the tract farmed directly or taken on lease. It is, in short, a case of a contract pure and simple between two independent parties, one of whom pays the other to deliver him so many bundles of indigo at the ruling price. But this system only prevails to a very limited extent. If it gives the planter less trouble it brings him in less profit, and it is not favoured by the native Zemindars or holders of superior rights in lands, for the simple reason, that under it they do not obtain the bonus which the planter has to pay down before the Zemindars will grant leases. Indeed there is no shirking the fact that the larger part of the indigo produced is cultivated under the Ryotty system, and that, as conducted in past years, that system has on more than one occasion raised such discontent in both Behar and Bengal that Government has been compelled to interfere. Mr. Inglis waxes indignant over the wrongs of the planter, and talks of foul slanders, obloquy, and persistent misrepresentation, while he candidly admits that there was much in the past over which a veil must be drawn. The truth is that a good deal of moral and some physical coercion was employed by Englishmen to gain lawful ends, in days when districts were of huge size, official inspection was rare, and a British-born subject was amenable to the highest Courts of the Company only for trivial offences. There has been a marked improvement in late years, but, after all, it is not so very long ago that the discontent in Behar was such as to call for the decisive interposition of Sir Ashley Eden; and it is amusing to find our author telling us that, amongst the employments of the planter in his morning ride, he has to "look out for good lands and to give up bad ones," and to bring pressure to bear on agricultural operations which, in theory at least, are left to a Ryot, who ought to be able to do what he likes with his own tenure, and to grow the crop which pleases or pays him best. However, we are quite ready to believe that many kind acts are constantly done by the planter in his intercourse with the cultivators, and to allow that, as an element of strength and a link between the official hierarchy and the subject population, his value is not to be slighted in times of scarcity or famine.

The account, too, of the ploughing and weeding is animated and even picturesque, and the description of the manufacturing process is worth the perusal of any one who wishes to know what trouble and toil go to the preparation of rich blue cloth. By the aid of two or three illustrations we see the vats foaming, like those of Luna in Horatius; the plant worked up by coolies; the change of the water in a few hours from clear to green, and from green to blue; the settlement of the dye at the bottom of the vats; the process of boiling, pressing, stamping, and packing the cakes for despatch to Calcutta. If dealing with some hundreds of Ryots belonging to different villages involves much physical activity, and if the news of a "sowing shower" in March or April is a source of joy, the season of manufacture in July probably crams the heaviest work and anxiety into the shortest space. Sometimes the coolies fall sick or strike. A change in the weather from sunshine to wet will reduce the outturn. A whole vat may be ruined by the infusion of a few bundles which have been scorched or withered while in transit. And Mr. Inglis admits that, although the dye has been improved of late years by the introduction of mechanical appliances instead of hand labour, there is ample room for a scientific and close observation of the chemistry of the manufacture. Fluctuations in the yield of different factories, and of the same factory under different climatic conditions, have hitherto been only causes of perplexity and despair.

While Mr. Inglis is most deserving of attention when his gangs of workmen are treading the vats of Nilgunj or Nilabad, there are several other chapters in which his observations of native life and peculiarities show intelligence. A description of a wrestling match between a Brahmin and a blacksmith is well told, and it may gratify readers who are convinced of the superiority of "blood" in a set-to, to learn that the muscles developed by hard work at the forge and anvil had to succumb to the wrestler who boasted a hundred victories and a high and unblemished descent. Those who have seen exhibitions of this kind in Devonshire and Cornwall may be surprised to learn that the "fall" is not over when one Hindu combatant touches the ground. A wrestler is allowed to try to turn over his antagonist when the latter is lying flat on his chest. The endurance and pluck shown by crack native wrestlers would do honour to any Englishman. We recollect a story told of a military officer in the Punjab who could throw any of his native subordinates. One man, reputed never to have been beaten, stood up against his superior officer and was soon locked in a grip of steel. "You will have to give in, or your arm must be broken," said the Englishman. "I cannot help it, Sahib," was the answer, "but I must not yield, as my *hurmat* (honour) is at stake." And so the bone of the Sikh was broken, as Mr. Inglis expressly tells us might have been the case with the blacksmith had he not thought it prudent to yield to "caste." The account of village life is not without merit, and the opinion given as to native proclivities is one which most officials would endorse. But the remarks on legal reforms are too vague and inconclusive to carry much weight, and sufficient credit is not given to the Indian Government for the introduction of Courts of Small Causes, the simplification of evidence and procedure, the subdivision of large districts, and other remedial measures of the last ten or fifteen years. We have no room for accounts of battles with royal tigers, though we agree with the writer in thinking that a compact line of ten or a dozen elephants affords quite as good a chance of sport as one of eighty or a hundred. We may also draw attention to the rescue of an elephant from a quicksand, to the account of a *batan* or shed for tame buffaloes in the jungles, and to a night adventure when the author and a companion lost their way in the jungles of the Kosai, as novelties. Besides floundering in quicksands and being drenched with dew, they heard overhead the flight of waterfowl and around them a chorus of jackals and the roar of the tiger rather too near to be pleasant. In conclusion, as Mr. Inglis intimates that he may be tempted to give the public more of his reminiscences, we recommend him to prune his style, to avoid slang, and to add to his knowledge of the rustic Hindi phrases of Behar some moderate acquaintance with the Urdu as spoken by the higher classes. By this means he may secure a hearing from the English public, and he will certainly command more respect when he returns to Motihari if he can address a Raja or a Brahmin in phraseology different from that which he may lawfully employ in scolding one of his own West-country Dangur coolies.

ARUNDINES STURI.*

It is not altogether easy to guess the motive with which this prettily printed book has been compiled. If the editor's purpose is to present to our view a selection from the works of Buchanan and Muretus, we ought to feel grateful to him. Although they were among the most important writers of Latin poetry whom the period of the Renascence produced, their poems are comparatively neglected by classical scholars of the present day. But in this case, why are so many copies of verses by inferior hands included in the volume? If, on the other hand, the object was to introduce his own compositions to the public, and to support their weakness by the strength of the two eminent names mentioned, the editor may be forgiven for the obtrusion of his own work for the sake of the good things to which he introduces us. The title of the book is somewhat inappropriate. *Arundines Cami*, from which the idea is of course borrowed, was very happily named, for all the reeds which it contains are of native growth; but surely the Stour must be surprised to see so many foreign rushes transplanted to its banks:—

Miraturque novas frondes, et non sua poma,

like the tree in Virgil's Second Georgic. No doubt it would be difficult to find a suitable and at the same time epigrammatic title for a book so heterogeneous in composition. It is divided into three parts. Part I. is entitled "Poemata Sacra," and includes versions of some of the Psalms, and a selection of hymns, mostly by Buchanan and Muretus. Part II. is entirely devoted to the epigrams of Muretus; while Part III., "Poemata Varia," contains several pieces by the same author which might well have been included in Part II., a few by other writers of that period, together with a couple by Milton, and is filled up with original verses and translations from English poets by various modern hands. These last might well have been omitted. Their only possible use is to enhance the value of the earlier poems by proving what very much poorer Latin verse is written, or rather printed, at the present day. Each part is prefaced by a few lines from the pen of the editor, which, though not very re[illegible], are much better than his more ambitious efforts include[illegible].

Most of the translations from [illegible] are by Buchanan, whose work is characterized by [illegible] with the best Latin models which, while it ensures [illegible]tion, at the same time goes a long way towards de[illegible] poems of the spirit of the originals. In proportion a[illegible] stanzas approximate in style to those of Horace, they [illegible]ous tone and feeling of the sacred writings from which [illegible] translated. There is

* *Arundines Sturi.* Collegit atque edidit Robertus B. Kennard. Oxford: Parker. 1878.

such a want of devotional feeling in the writings of the Augustan age that we shall not be inclined to blame Buchanan for his inability to reconcile two things so utterly incompatible; we can only regret that he did not make a happier choice of style and metre. The rhyming Latin of the middle ages fulfils so admirably all the requirements of such a task, to which indeed it was first applied, and for the purposes of which it may be said to have been invented, that there was no need to have recourse to classical metres. For this, however, the period in which Buchanan lived, rather than the man himself, is responsible. At the revival of letters, what had been a learned language in the hands of Bernard and Map, Peter Damian and Jacopone, was no doubt thrown into discredit, and no other course was open to the writers of Latin Psalms and Hymns than that which Buchanan adopted. In spite of the disadvantages under which he laboured, there is very much to admire in his versions, even where they fail to satisfy the reader who compares them with the renderings of mediæval authors and their modern imitators. To these they are no doubt inferior; they are in many places extremely diffuse, and contain ideas not to be found in the originals; while the elaboration required by the Horatian stanza or Ovidian couplet often destroys the simplicity and directness which is one of the great charms of the Hebrew writings. To take an example from Psalm i.; three hexameter lines are required to translate the words "Therefore sinners shall not stand in the judgment":—

Ergo ubi veridicus judex in nube serena
Dicere jus veniet, scelerisque coarguet orbem,
Non coram Impietas mœstos attollere vultus
Audebit.

The words "in nube serena" surely savour rather of "stuffing." Again, in Psalm lxxxviii. v. 8, "Thou hast put mine acquaintance far from me, Thou hast made me an abomination unto them," is turned by the use of a metaphor which, though suggested by the previous verse, can scarcely be considered as a fair rendering:—

Me veluti scopulum fugiunt horrentque sodales:
Quos portum afflictæ spes erat esse rati.

The idea is neat and epigrammatic enough, but does not occur in the original. In Psalm xc. the rendering of the words "Even from everlasting to everlasting thou art God" reads much more like an explanatory paraphrase than a translation:—

Tu manes idem, pater orbis, unus
Nec vices rerum patiens, nec ævi
Termino clausus brevis; unus expers
Finis et ortus.

Once more, in Psalm cxxxvii., the simple pathos of the original is quite lost in the flowing elegiacs of Buchanan. But when allowance has been made for the unsuitability of the style, nothing remains but praise for the execution. Many of the very lines quoted above are, when considered apart from the originals, extremely good; we can only point out a few of the passages that seem to deserve most admiration. Beauties abound on every page. In Psalm xlv. the latter part of the first verse is turned very elegantly:—"I speak of the things which I have made touching the king: my tongue is the pen of a ready writer":—

Certat lingua animum fando, manus æmula linguam
Scribendo exæquare, meo nova carmina regi
Dum meditor.

The whole of this Psalm is very well done. Psalm lxv. is one of the best of the collection. Its merit is so equal throughout that we cannot mention any one stanza as being better than the rest. The Sapphic metre, in which it is written, is admirably suited to a poem which in several points resembles the Second Ode of Book I. of Horace. Psalm lxxxviii. is well turned; vv. 10-12 are especially good. The latter part of xc. is also very good; but it may be doubted whether Horace would have accepted "actiones," which occurs in the last stanza, in the sense of actions. The following, from Psalm cxxv., recall, perhaps too strongly, two well-known lines from Horace:—

Si fractus illabatur orbis
Incolumis fugiet ruinam.

The next stanza is, however, quite good enough to atone for the plagiarism:—

Ut civitatem mœnia montium
Sanctam tuentur, sic Dominus suos
Vi cingit arcanâ, nec unquam
Præsidii viduos relinquet.

Besides being beautiful in itself, this is also a very close translation. Space does not admit of any more quotations. Those who are interested in the subject must read for themselves, and will be amply rewarded for their trouble. It is no exaggeration to say that the works of Buchanan are, with the exception perhaps of Milton's, the finest examples of classical Latin poetry which post-classical times have produced. Of the Psalms by other translators in Mr. Kennard's collection [illegible] great part are by modern authors, and require little attention [illegible] said of most of them that they are rather more literal, [illegible] much less poetical, than those of Buchanan. Muretus [illegible] works fill a large part of the rest of the volume, is put [illegible] contribution for three. They are not perhaps of equal [illegible] the best by Buchanan, but are well worthy of a place be[illegible]

We now arrive at a [illegible] of hymns for the chief festivals of the Church. With the exception of that for Advent, they are all by Muretus, whose chosen metre is one of the varieties of the Asclepiad. The Advent hymn is interesting as being the work of Lord Wellesley. It is written in very smoothly-running hexameters; but, if we subtract from it the ideas suggested by Virgil's *Pollio* and Pope's *Messiah*, there is not much original matter. The hymns of Muretus are not very interesting. When compared with Buchanan's Psalms they are somewhat inferior in execution, while they are open to the same objections. The best are perhaps those for Palm Sunday and Easter Day. The last stanza of the former is very Horatian in sentiment and expression:—

Nil in vitâ hominum perpetuum datur,
Rebus ne nimium fidite prosperis.
Plerumque hic lacrymis gaudia temperat
Certo consilio Deus.

In the last stanza of the Easter hymn we have "non amplius" in the sense of "no longer"; this is scarcely a classical usage. These lines in the Christmas hymn might have been written by Horace himself:—

Grata est haud dubie simplicitas Deo,
Grata est vita, dolis quæ procul omnibus,
Rectum sponte sua perpetuo colit,
Et priscam retinet fidem.

One or two clumsy lines occur here and there. We find an unmusical elision at the end of the Epiphany hymn:—

Qui et Rex est et homo et Deus.

The following, from the hymn for Ascension Day, is also very harsh:—

O per qui te hominum, Dux bone, detulit
Sanctæ Sanctus Amor, Virginis in sinum.

Part I. closes with a rendering in hexameters, by the editor, of the epitaph on Bishop Butler—a respectable translation enough, but why introduce the line

Felix qui potuit rerum cognoscere causas.

It translates nothing in the original, and is not particularly appropriate to the subject of the epitaph. Perhaps the editor has intended it as a compliment to Virgil, just as Virgil took it from Lucretius.

The epigrams, letters to friends, and other short poems by Muretus in Part II., are very elegant specimens of Latin composition, and will, we think, be found more pleasing than the hymns by the same author. The first few epigrams are graceful expressions of the poet's admiration for Scaliger; next follow some passionate verses to his mistress, which are in many respects worthy of comparison with Ovid's love songs; but we cannot help regretting that Muretus allowed himself so much license in the construction of the elegiac couplet. Such elisions as the following, occurring in the latter half of the pentameter, are most unmusical:—"deserere illa leve est"; "quin etiam ipsâ animâ"; "Suaviloquum aspiciam." The tenth number expresses the somewhat exaggerated estimation in which Virgil was held till comparatively recent times. He is made to say of himself—

Par fieri volui, major sed factus Homero—

an opinion which modern scholars will scarcely endorse. The poem addressed to Margaret of Navarre is very pretty, especially this couplet:—

Delicium cœli, terræ decus, accipe quæ se
Advolvunt pedibus carmina pauca tuis.

One of the best is that dedicated to Petrus Quintius, and the last also is very graceful. The following epigram on a drunken poet is good:—

Cur tua vix umquam sint salsa epigrammata, quæris?
Diluis hæc nimio, Pontiliane, mero.

And here is a very neat one, on a statue of Bacchus among the nymphs:—

Qui colitis Bacchum comites simul addite nymphas,
Nam sine ope illarum munera nostra nocent.

Nor should we omit to notice an admonition to literary men which is given at the end of some lines on friendship:—

Nos quoque qui colimus divas Helicone morantes
Capta pari studio pectora amare decet.

Enough has been said of the writings of Muretus to induce classical scholars to read those pieces in Part III., which also bear his name. There are several panegyrics on the poet written by his pupil Fremistus in much the same strain as that employed by Muretus himself in honour of Scaliger. The grace and power of Milton's Latin verse are too well known to need any comment here, and the Latin versions by various hands of English poetry are very similar to those found in *Arundines Cami* and *Sabrinæ Corolla*. It is impossible to deny that the original compositions of the editor are the weakest in the volume. Among them are some lines on a photographic album, which appear to have afforded the writer so much satisfaction, that, by varying a few words, they are given to us in both hexameters and elegiacs. Next we have several short poems, the chief point in which is the oft-repeated jingle on the name of Venus, venustus, veneres, and so on. The last which calls for notice is an "epithalamium," in which the line

Huc ades, O Hymenæe, Hymen ades, O Hymenæe,

is made very useful, while another well-known line is pressed into the work:—

Omnia vincit amor, et nos cedamus amori.

Unless we are deceived by a printer's error at p. 111, Mr. Kennard should be congratulated on the advanced age to

which he has attained, for a poem bearing his signature is stated to have been published in the *Anti-Jacobin* in 1797, when, unless, in despite of Mr. Thoms, he is a centenarian, he must have lisped in numbers and studied Latin verse composition in the retirement of the nursery. But few readers will find any difficulty in identifying the sounding hexameters of Wellesley.

CARTOUCHE.*

A NOVEL founded on the character and exploits of a dog is likely to be dreary reading. The creature may be interesting enough to his master, but to those to whom a good plot or lifelike characters make the charm of fiction it is hardly satisfactory to have an elaborate description of the snaps and barks and short runs and tumultuous welcomes of a black-haired poodle, with small eyes and a long tongue. And, unless the more important actions of the four-footed hero are both told graphically and are true and natural in themselves, the whole thing falls to the ground, as an artificial structure badly put together always must. When we took up *Cartouche*, and learned from the title-page that the hero who had given his name to the book was "only a dog," we confess to a strong feeling of misgiving. Also, we may say, we felt from the outset of the story considerable compassion for the poor beast himself. He had evidently endured the heat of an Italian summer with an unclipped coat, seeing that "he leaped upon the new comer, barking and rushing about with every hair flying out from his body"; and, again, "rushed wildly round and round the open place under the plane-trees, his black hair streaming in the wind." Now it may not be pretty or becoming, but the shaven poodle is undoubtedly the right thing for Italy in summer, and the long-haired beast would have a right to complain of neglect in the dog days. By the way, the wind spoken of above rises very suddenly; for in the preceding page we have "a hot and languid glow lying on the violet-tinted hills"; and Jack Ibbetson, the owner of "Cartouche," falls asleep, or the next thing to it, in the garden. If the wind was so strong as to make the dog's long black hair stream and fly, that was an imprudent proceeding on Jack's part.

The plot of *Cartouche* is slender in kind and not very interesting in treatment. A young man, this same Jack Ibbetson, who opens the story by calling his dog, thereby causing him to leap from the upper window at the risk of breaking his legs, if not his neck, is engaged to a nice girl by name Phillis Grey. He loves her fairly well, but because, if he marries her, she (not he) is to be made his and her uncle's inheritor, while, if he does not, she is to be left penniless, he fumes and frets at his prospective advantage, and thinks it a bore that his wife will be well off when a gouty old tyrant dies, and that her inheritance is to depend on her marriage. Had she been as poor as himself he would in all probability have married her out of hand, seeing that "he liked no one better, or so well." But her future wealth worried him, and he fancied himself ill used by fate because he was to be well dowered by fortune. This, we venture to say, is one of those essentially feminine views of human life and the masculine nature which carry no likelihood or common sense with them, and which therefore vitiate the whole thing as much as if the hero and heroine were set floating in the air. Of course being disgusted at the smooth ordering of his social life, where the only thing to find fault with is his good luck, Jack Ibbetson does that which he might be expected to do in the circumstances—allows his fancy to stray, and so disturbs poor Phillis and deranges all the plans. His innocent enchantress for the time is an impossible little half-breed, a certain English-Italian, Beatrice Capponi, whose acquaintance he makes through the delinquencies of Cartouche in the matter of a basket of turkey poults, one of which the poodle incontinently slays. Beatrice, or, as she is familiarly called, Bice, also allows her fancy to stray in the direction of this good-looking stranger, whose intimacy she claims in return for the loss of her turkey poult. Beginning with a scene of fury, wherein she stamps her foot and calls bad names, she shades off into pity for the delinquent dog as soon as she hears that he is to be chastised; then brightens into interest for the dog's fair-haired and good-looking master, whom she invites then and there to dinner, and from whom she will take no denial. We do not profess to know much about English-Italian girls brought up in the country near Florence in strict seclusion by a mother who "had gone through such ill-usage and insult as would have scared (*sic*) most women's lives; and, when it was all over, feathered out again, with no more result than a mild assurance that from that time forward she had a right to whatever comfortable compensation she could get out of existence." But it does seem to us the funniest thing possible, if to be taken as descriptive of girl-life in Italy, that two young creatures should haul in a good-looking stranger to dine with them and their mother, and make fast and confidential friends with him on the spot, with no more introduction than is to be found in a black long-haired poodle and a dead turkey chick. The author of *Cartouche*, however, has evidently been in Florence, where this extraordinary bit of Arcadian simplicity took place. She knows Rome, too, and has profited by Ouida, Ruskin, and the Handbooks. Wherefore we must, in all modesty, accept her pictures as at least possible, and not allow ourselves to suppose that she has drawn on her imagination out of reason and given no facts which will not pass muster even in fiction.

The hero's interest in Bice, though it never passes the boundaries of the purest friendship, so far influences the story that it causes Phillis Grey to break off her engagement. She gives no explanation why she breaks with Jack; but a fancy "like the dull tick of a great clock in her brain" says with persistent effort, "He—loves—her—he—loves—her"; and, "though no one suspected it of her, her heart was sometimes nearly breaking." We are thankful that she escapes fever—malarian, gastric, or other. A heart nearly breaking because of its own supererogatory generosity of renunciation while looking at Botticelli's "Fortitude" in the Uffizi, and a fancy that speaks with persistent effort in the brain like the dull tick of a great clock, are perilously like forerunners of at least a gastric fever, if not a *perniciosa*. But she escapes; and as at the end all comes right and Jack blossoms out into common sense, we are spared any unnecessary harrowing of our feelings and sympathetic calculations of the cost and worry of an illness in an hotel. We would remark, in passing, that "persistent effort" is an unhappy expression to be applied to anything so automatic as the ticking of a fancy in Phillis's brain. There are other oddities of phrase in the book. In a slight description of the "beautiful rooms" of the well-known Roman artist, Signor Vertunni (not Vertumni), we are told that "you lose yourself in a sea-mist where a boat floats between sky and earth"; and to illustrate what we said of our author's obligations to Mr. Ruskin we give the following passage:—

> But, indeed, the wonder of Florence lies in her perpetual youth. She is old, and yet no touch of age seems to have passed over her. All around are the memories of past ages, but they are alive and present, and time scarcely seems to separate you from them. It would not surprise you to see Giotto standing under his tower, to meet Dante turning towards his house, Savonarola passing to the preaching, Romola—as real as any—hurrying back to old Bardi. Our past grows mouldy, whereas here it keeps life, and colour, and reality. Is it that we are always trying to escape from it?
>
> The Uffizi was rather empty. There were plenty of copyists, most of all, as usual, round the great Fra Angelico, with its praising angels, in the passage, but otherwise strangers were few. Jack, who had a craze for Botticelli, would not let Phillis rest until he had taken her to the Judith in the room next the tribune. She comes towards you more lightly than Judith would have done after the deed, but the strong purpose, the self-forgetfulness of the face, are wonderful; and as the yellow morning light catches the grey blue of her dress, she looks far beyond you, and beyond what you are ever likely to see. Presently from her lips will come the cry of deliverance, "Open, open now the gates!" and all Bethulia will press round to see and hear. Jack, who had learnt Botticelli from Ruskin, was full of enthusiasm, and dragged Phillis off to the Calumny, the Fortitude. He made her sit down in a corner where she could see the last-named well, and then a thought struck him.

Verily Mr. Ruskin has much to answer for.

The halting love affair between Jack and Phillis, and the dreamy relations between Jack and Bice, are complicated by a rather obscure episode concerning Bice's brother Clive, wherein one Oliver Trent plays the part of villain. That this gentleman may have a better claim on the gratitude of Bice, which he hopes to work up into love, he acts as only the merest tiro in knowledge of the world could have acted, and makes a mud-pie for Clive, into which he ends by tumbling headlong on his own account. Jack is the good genius of this part of the story, but it is all so confusedly done that we confess we did not follow the complications very carefully, and do not quite understand the whole matter. All we can make out is that Clive had got into a mess about money which appeared to be dishonourable and was really unfortunate; and that Oliver Trent made it look blacker than it was for his own purposes, while Jack ferreted out the truth and brought it triumphantly to the surface.

The end of the book is happiness dashed by one strain of tragedy. The Tiber overflows, and Jack standing on the brink sees a dark object caught by a tree; he makes this out to be a cradle and thinks he discerns therein a child. He dashes in and partly swims, partly wades, to the point where the cradle is caught, his face bleeding from the twigs which whip it as he passes, "and feeling each moment that he must be sucked under in a resistless eddy." At last he reaches the cradle; Cartouche following him at his cry for help. The dog brings the cradle safely to land, then turns back to his master, whose "foot had become entangled in some of the small submerged branches." He extricates himself:—

> But Cartouche? Through the tossing waters the dog, with a faithfulness which never faltered, struggled slowly back to his master. Beaten by the waves, with safety close behind within his reach, he needed no call to keep him resolute to his purpose. To Jack, with the river hissing in his ears, with the angry dash of foam blinding his eyes, the sight of that black and curly head coming steadily towards him seemed to give hope and power once more. As the dog reached him he bent his head down, and Cartouche by a great effort licked his face. Then Jack called all his failing strength together; the tree itself swayed violently, he felt that he was free. Free, but could he reach the shore? The horror of that frightful imprisonment was so strong, that he dared not trust to the help of the branches, and the struggle was almost superhuman. Cartouche swam close to him, swam round him, more than once when he thought he must give up, the gaze of those faithful eyes, the touch of the dog's body, brought back the hope which had all but deserted him—and now, he had just cleared the roots of the tree, was just venturing in towards the bank, when, caught in some tremendous eddy, the tree swung completely round, and with its bare branches tossing wildly upwards, the old river whirled away its prey in triumph.

His apotheosis comes when "a peasant woman in a southern country has taught her children to love animals, to be good to them, and one of them she says was once saved by a dog. The children listen, thrilled by the familiar story. '*Eccolo!*' cries a

* *Cartouche.* "*Only a Dog.*" By the Author of "The Rose Garden," "Unawares," &c. 2 vols. London: Smith, Elder, & Co. 1878.

g, and they all turn and look up where, over the door, is the carved figure of a dog, with a date." This ending is really the best part of the book, which by no means equals in merit the pretty story of the *Rose Garden*; though that, too, had its shortcomings, as we pointed out at the time.

THE BELVEDERE GALLERY AT VIENNA.*

GERMANY commands a wide empire of art within the walls of the four great galleries of Munich, Dresden, Berlin, and Vienna. Each of these rich collections is strong in some special point, and together they fill up well-nigh to completion the entire circuit of pictorial art. The Old Pinakothek, Munich, is unrivalled in its assemblage of early Flemish and German masters, from the time of Meister Wilhelm of Cologne downwards. The Museum of Dresden is distinguished by two chief works of two great painters—the "San Sisto" of Raffaelle, and the "Meyer Madonna," by Holbein. The gallery of Berlin is strictly based on chronology—an arrangement which induces the filling up of missing links in a consecutive series. Then comes the Belvedere in Vienna, which, fortunate in the pretty even representation of most schools, shows special force and fulness in the master works of the Flemings, of the Venetians, and the Lombards. Among the galleries of the world doubtless that of Madrid is foremost; but which collection has a right to the second place, whether either of the four great museums of Germany already enumerated, or the Louvre in Paris, the Hermitage in St. Petersburg, or some one of the galleries in Italy, or indeed our own national collection in London, can make the best claim to distinction, it is hard to determine. Our National Gallery, however, is in the exceptional position of being the only collection which owes nothing to conquest and everything to gift or purchase. How ill we could afford to lose any one of these museums may be judged from the blank left some years since by the destruction in Venice of a single work—Titian's "Peter Martyr." Each prominent gallery in Europe fulfils a service somewhat by virtue of its geographic position. What the National Gallery is to England the Louvre is to France; and as the Museum of Madrid illumines the far West, so the Belvedere Gallery throws the light and colour of art over the widespread Austrian dominions in Eastern Europe.

Vienna, among the most ancient of German cities, dates her foundation from the time of the Romans; and yet it is only in comparatively modern days that she has been in a condition to cultivate the arts. It is true that her magnificent cathedral belongs to the fourteenth and fifteenth centuries. Nevertheless, two hundred years have not elapsed since the Austrian troops which defended the city from the inroad of the Turks reconnoitred from the square and from the spire of St. Stephen's. But peace, with her attendant arts, may be supposed to have been assured when one hundred and eighty pieces of cannon taken from the enemy were cast into the largest bell within the cathedral tower. The pictures now collected in the Belvedere indicate the chequered history of the Empire; they do not pertain to the spot, but are gathered from afar; they come from the South, the North, and the West; they are the heirlooms of families, the accumulated possessions of dynasties. The Gallery was enriched by Maximilian I.; Rudolph II. gathered in his castle at Prague pictures from Italy and Spain, which afterwards were transferred to Vienna; and Charles V. divided his favours between Vienna and Madrid. Treasures from the scattered collections of our Charles I. and of the Duke of Buckingham also found their way to Vienna. The Archduke Leopold William, when Stadtholder in the Spanish Netherlands, made valuable acquisitions among collectors and artists, and effected purchases at the great sales in Antwerp. Further accessions followed under Maria Theresa, and additions are from time to time made down to the present day. Austria, it would seem, took possession of works which might be deemed rightly to belong to England, such as the portraits of Queen Seymour and of Dr. Chamber of Oxford, severally by Holbein, and a half-length figure of Charles I., which Dr. Waagen ranks as "one of the finest of the numerous portraits of the unfortunate King from the hand of Van Dyck." On the whole, the Belvedere owes more to happy accident than to deliberate design; but here fittingly are found the magnificent posthumous portrait of Maximilian I., clad in armour, by Rubens, and Titian's full-length portrait of his patron, Charles V. Sir William Stirling-Maxwell remarks upon the singular poverty of the Gallery in the Spanish schools, considering the old relations between Madrid and Vienna. The only Spanish works, he adds, that have found their way to Vienna are a mediocre picture by Murillo, a portrait by Coello, and a few paintings by Velasquez. But by this prince of painters stands supreme "the artist's family picture." "This priceless picture" is, in the critic's opinion, the single production out of Spain that deserves to rank with the master's grand compositions in Madrid. Connoisseurs who watch critically the ambitious career of Herr Unger in the publication now before us will be only too glad to find that this clever etcher seems likely to prove himself, in breadth of effect, in power and precision of touch, a match for the great master of Castile.

The reputation of Herr Unger, gained in the Galleries of Cassel and Brunswick, is here in Vienna more than confirmed. The increased scale of the plates, and the wider diversity of pictorial styles, call forth from the etcher his utmost resources; as a translator he is faithful; his transcripts seldom, if ever, fall into the license of paraphrase; he enters heart and soul into the spirit and technique of the great masters, and in thinking of them he is willing to forget himself. In portraiture he proves himself specially powerful; he reflects the pervading idea which the original painter embodied with a singleness of purpose which permits no distraction from excess of detail or contrariety of motive. How far he succeeds in adapting his manner to each master in succession is illustrated by two strikingly diverse portraits—the one of Jane Seymour, by Holbein, the other by Titian of Giacomo Strada, architect and antiquary in the time of Maximilian II. In the etching before us of the Queen's well-known head, Holbein's style is scrupulously preserved; the features are mapped out with a few firmly pronounced boundary lines, the contours, as might be expected, are somewhat hard, and the touch of the etcher's needle indicates that the master used his pigments sparingly, leaving the surface thin, and yet the hands are modelled with a suppleness indicative of a tenderness of tissue yielding to the touch. Infinite care, too, has been expended on the richly brocaded dress, jewelled with pearls and precious stones — all painted by Holbein with the minuteness of a miniature. A greater contrast can hardly be imagined than that of the head of Giacomo Strada, as portrayed by Titian. We feel that the master has put forth all the power of his richly-laden palette; we see how he has played with his pigments, how he has laid on the colours lavishly—here thickly loaded, and there thinly washed; but, thin or thick, always transparent, lustrous, and gem-like. Herr Unger manages to translate those qualities into a chiaroscuro that is never quite white, and yet never black, but golden in its lights, and of slumbrous fire in its shadows. How the etcher here manages to convey the idea of colour is worthy of observation. Lines rapid in movement, dexterous and dazzling in cross hatchings, throwing off light from the interstices; a touch, sensitive and vital, which leaves the surface palpitating, so that life throbs beneath the form—all these conspire towards the Titianesque colour of this cunningly elaborated plate.

The Vienna Gallery is not surpassed by Munich or Antwerp in the master works of Rubens. The painter is nowhere more fervid and florid than in copious compositions recording the histories of St. Ambrose and of St. Ildephonso, and the miracles of St. Francis and of Ignatius Loyola. Here, as usual, the artist gains astounding effects by the slightest of means; and the etcher, in his version of the landscape known as "the Phrygian Flood," emulates the master in bravura of touch and in translucent depths whence colour seems to glow. The aspects of nature are tumultuous; waters rush wildly, trees bend beneath the wind, and clouds are driven by the storm. In painter and etcher alike skill and care are needed to escape confusion. Rubens, in common with Salvator Rosa and the two Poussins, succeeded in transferring to canvas those scenic phenomena which in a pre-scientific age were roughly assigned to the four elements of earth, air, fire, and water. Herr Unger has here, through light and shade, elaborated the linear perspective on earth and the aerial perspective in sky, wherein our English engravers, after the pictures of Turner, obtained their triumphs. In the plate before us the eye is carried forward from foreground into a cloudland of mists, nebulæ and cumuli, the darkness of the tempest being made visible by lightning. Only an artist knows how hard it is to save such skies from extravagance. Herr Unger lacks the passionate impulse of the French etchers, and hence the spectator sometimes remains comparatively cool; but, on the other hand, he is endowed with German calculation and insight, so that he sees clearly and renders truly the meaning of artists however diverse. His methods of treatment are wide as the poles asunder, and, becoming all things to all men, he passes, as we have seen, at will from Dutch minuteness to Italian breadth and freedom.

It is the custom of national museums to parade on the walls a considerable proportion of spurious pictures. M. Viardot, comparing the disorder existing in the Belvedere to that in Hampton Court, complains of the intolerable mixture of copies with originals, of mediocrities with great works. In private collections such falsities are excusable; but in public galleries people should be saved from imposture by appeal to the most trustworthy results of the latest research. Our National Gallery long maintained a traditional nomenclature which in some instances could not stand scrutiny. But at any rate charitable credulities ought to find no place in critical publications which are expected to state facts and opinions on the spot where they can best be verified. The letterpress here put forth, though it comes from a high authority, errs on the side of amiable acquiescence. Professor Lützow seems to shrink from personal responsibility; his descriptions are for the most part laudatory, and when he cannot praise he preserves silence. In extenuation it may be pleaded that explanatory letterpress to richly illustrated books mostly indulges in encomium, and certainly the critic may be excused on the present occasion for upholding within the Imperial Gallery reputations which have been hastily assailed. Assuredly he can scarcely be expected to sanction the wholesale way in which Messrs. Crowe and Cavalcaselle have thrown aside as "Uncertified Titians" no less than nine pictures which adorn the Gallery. Ancient tradition and the general assent of mankind, as well as the authority of the late Dr. Waagen, are urged in support of names long accepted. In some few cases of difficulty, judgment is here rightly as yet held in abeyance. For example, there is a humble domestic scene still accredited to

* *Die Kaiserl. Königl. Gemälde-Galerie in Wien.* Radirungen von William Unger. Text von Carl von Lützow. Lieferungen IV., V., VI. Wien: H. O. Miethke. 1877-1878.

Terburg, notwithstanding that some authorities ascribe the picture to Van der Meer; here the author wisely waits for further evidence before passing a final verdict. We have reason to believe that this little known painter will receive further elucidation in the form of a monograph; thus, little by little, historic and biographic doubts are in course of being cleared away.

Criticism in such matters can never secure absolute certainty, and yet in many ways it may rise above the region of mere conjecture. The surest basis is documentary or historic evidence; when, for example, a picture can be traced from generation to generation, when it can show a written pedigree, when the original commission given to the artist is on record—the evidence may grow as conclusive as the title deeds to lands and hereditaments. Not a few of the works in the Belvedere are thus assured; but in many of them the testimony is sufficiently conflicting to need sifting and balancing. Sometimes a picture may have obtained mention by Vasari or other contemporary authors, and yet a doubt arises as to identity or as to whether the extant work is a replica or copy of the original. Such obstinate questionings go far to invalidate certain pictures in Vienna which we have known as tacitly assigned to Fra Bartolomeo, Raffaelle, or Murillo —not to mention masters less signal. It would seem, however, but charitable to allow to passable works the benefit of a doubt. We have known connoisseurs who seem to find a positive pleasure in scepticism; but if one of two extremes is inevitable, happier is the man who can take his full enjoyment without stopping to ask the why or the wherefore. Such a man in walking through the rooms of the Belvedere may not care to be always using the dissecting knife or the magnifying lens, but rests content to be moved as his intuitions prompt. On the other hand, there have been evenly-balanced critics, such as the late Professor Kugler, who, trusting much to inward sense, still strive to fortify their conclusions by outward or circumstantial evidence; and in the text before us Professor Lützow, though sometimes not so thorough as might be desired, belongs to the number of those who seek on all sides for lights which may illumine the dark places of history.

GERMAN LITERATURE.

HERR VON ROSENBERG (1) is one of those travellers who lay, as it were, siege to a country, and make it their own by patient and continuous observation. His acquaintance with the Malay Archipelago is derived from his position as an officer in the Dutch Civil Service, where he remained for nearly thirty years. Being frequently removed from place to place, and yet remaining long enough in each place to obtain a thorough acquaintance with the district, he has been enabled to make a tolerably complete survey, not only of Java, but of those portions of Sumatra, Celebes, and the Moluccas which belong to the Dutch, or in which their influence is paramount. He has also visited New Guinea, his account of which island, as well as of Java, will appear in a third volume. His valuable work is at once a complement and a contrast to that of our countryman, Mr. Wallace. The latter offers a signal example of the power of generalization from accumulated facts; the former is a mere register of observations. Yet the observations afford a most valuable basis for further generalizations, and have the additional merit of relating in great measure to regions unvisited or imperfectly explored by the English traveller. Some parts of the Batta country were first visited by Herr Rosenberg, and he there discovered the remains of some ancient temples, probably Buddhist. He was also the first European to make a thorough exploration of the islands on the western coast of Sumatra. Nias, the most important, is thoroughly described in the present work. Celebes, Ceram, and the Aru Islands occupy the greater part of the second volume. The first-named large island does not seem to have been very fully examined by Herr Rosenberg, but his description of Ceram is minute. Among the more remarkable circumstances enumerated are the strange dissimilarity of the seasons on the northern and southern shores of the island, and the existence of a secret society, the "Kakean," designed to resist the introduction of Christianity or Mohametanism, and apparently accomplishing its purpose. The Aru Isles are chiefly interesting for their fauna, especially the birds of paradise, respecting which the author gives several additional particulars. The inhabitants occupy a low stage of cultivation in comparison with the other natives of the Archipelago, but some of their customs are interesting. Contrary to the general usage of barbarous people, they welcome the birth of a daughter with excessive joy, while a male child is treated with indifference. The value of Herr Rosenberg's work is increased by numerous woodcuts, poorly executed indeed, but taken from photographs for the most part.

The very meritorious investigation of ancient Jewish commerce for which we are indebted to Dr. Herzfeld (2) suffers from a lack of material in so far as the most interesting of the periods it embraces is concerned. We should like to have a picture of Jewish commercial activity during Biblical times; but for these Scripture is almost our sole authority, and the scanty notices it contains have been already developed by previous writers. Dr. Herzfeld shows clearly that the frequent mention of objects of luxury implies an active trade with neighbouring nations, and an advanced condition of manufacturing industry among the latter; but for anything more he is reduced to mere conjecture and inference. Perhaps his most important contribution to the subject is an able discussion of the locality of Ophir, in which he shows that India is too remote and the Midianite peninsula too near, and contends forcibly for Arabia Felix and the Somali coast. It is not until Dr. Herzfeld has reached the post-Biblical period that his materials become copious, and derived from sources not generally accessible. The legal treatises which constitute so large a portion of the Talmud abound with incidental observations referring to commercial matters, which Dr. Herzfeld cites, with remarks tending to show their bearing upon his subject. It appears, for instance, that rice, unknown in Western Asia until the time of Alexander the Great, was not only cultivated, but made into bread in the days of the Talmudical writers; that some of the Palestinian wines required to be mixed with three parts water; that the Jews said "Send fish to Acre" as we say "Carry coals to Newcastle." The classical writers also afford a rich store of material, especially in the evidence they afford of a wide dispersion of the Jews during the Macedonian and Roman ages, and of the wealth attained by most of their communities. Inquiries respecting the commercial routes of antiquity; disquisitions on Jewish coins, weights, and measures, and the ordinary prices of articles of consumption; and excursuses on various problematical points connected with finance and merchandise complete the contents of a very interesting volume.

An exhaustive account, by Richard von Kauffmann (3), of the various institutions, public and private, existing throughout Europe for the protection of commercial interests, and the legislation respecting them, is intended as an introduction to a forthcoming project for the reorganization of German Chambers of Commerce and Agriculture, and the institution of an "economical senate" to evoke and control their action. Whatever the merits of this scheme, which remains to be expounded, it has certainly led to the accumulation of a great mass of interesting information, including the text of official statutes and regulations, to which considerable additions are promised in subsequent volumes.

Friedrich Goldschmidt, the biographer of the eminent economist List, contributes an important pamphlet to the discussion of the proposed alterations in the German Budget (4). He protests against any increase of indirect taxation, and shows that, when the losses occasioned by compulsory military service are taken into account, the Germans are one of the most heavily taxed nations in the world. He especially resists any additional impost upon two of the great national articles of consumption—tobacco and beer. The case of the German brewers must indeed be especially hard if it be the fact that, however unfavourable the yield of malt and hops may have been, public feeling never allows them to raise their prices.

The Hanoverian archives naturally contain many documents throwing light on the accession of the House of Brunswick to the English throne. From these Dr. Schaumann (5) has compiled an instructive and unpretending little volume. One of the most interesting circumstances mentioned is the idea at first entertained by King William of betrothing the Princess Anne's infant son to a Hanoverian princess. After the young prince's death, the project of the direct Hanoverian succession acquired consistency, and we find the Electress Sophia endeavouring to construct a Hanover party out of such members of the two great English parties as were most zealously addicted to Protestantism, without reference to minor differences of opinion. At a later period the Electress is anxious that she or her son should reside in England, and receives a decided rebuke from Queen Anne. Throughout these negotiations Leibnitz appears as Sophia's principal counsellor. Characters, apparently very just, of Prince George of Denmark and the Duke of Marlborough are now published for the first time from his MS., as well as sarcastic portraits of Englishmen of rank resident at the Hanoverian Court, in which the philosopher appears in the unwonted light of a satirical humourist.

As Herr Edmund Hoefer (6) very properly lays it down that the precise nature of the relations between Goethe and Frau von Stein is not a matter with which the world need concern itself, it is not quite easy to see why he should have devoted so much space to its elucidation. His investigation, however, is able and acute, not very favourable to the Platonic theory, and still less so to Frau von Stein, agreeing with Mr. Lewes's verdict upon that lady in all essential respects. It is to be observed, however, that the truth cannot be fully known until the publication of Frau von Stein's own letters, which are probably in the custody of Goethe's family.

Sören Kirkegaard (7) has been pronounced the first prose writer

of Denmark in point of style, and is undoubtedly entitled to the elegant tribute which Dr. Brandes has paid to his memory, and perhaps all the more so as it is likely to remain his sole passport to a European reputation. Kirkegaard, who was born in 1813 and died in 1855, was a writer exceedingly difficult to class. He has been compared to Pascal, and may perhaps be said to have occupied much the same position towards the recognized ethical creeds and literary forms of his country that Mr. Carlyle has assumed in England. In a series of books neither strictly belonging to the domain of philosophy nor of *belles-lettres* he propounded original ideas bearing on questions of morality and aesthetical criticism in a style which produced a great impression in Denmark, but which, if we may judge by Dr. Brandes's too scanty examples, will hardly bear transplantation to the soil of another literature. In their egotistical character, in their energy and incisiveness, and in their strong impress of individual self-culture, they frequently remind us of Hazlitt, another author of the highest merit who has found no audience out of his native country. He differs from Hazlitt, however, in his habitual pessimism and despondency, a peculiarity sufficiently explained by the circumstances of his parentage and education. The child of elderly parents, Kirkegaard seemed prematurely aged from his birth; his father's fanatical creed and eccentric nature aided in destroying all trace of the natural joyousness of youth; and his own singularities in apparel and demeanour tended, by the ridicule they excited, to estrange him further from his fellow-men. His life was further embittered by a very foolish quarrel with the *Corsair*, an influential satirical print; and his dissatisfaction with what, to one of his ascetic bent, appeared the unreality of Danish State religion, impelled him, towards the end of his life, into a vehement crusade against all religious forms. Thus at variance with all, he died obscure and neglected; but Dr. Brandes's substantial tribute to his memory after nearly a quarter of a century is a sufficient proof that he will not be forgotten by his countrymen, although foreigners must always take his merits upon trust.

A collection of Paul de Lagarde's political and religious writings in the vernacular (8) is a healthy and refreshing volume, though few may entirely assent to the writer's views, and his uncompromising language is likely to exasperate opponents who have not sufficient liberality to appreciate disinterestedness and manliness on the part of an antagonist. Herr de Lagarde is at once intensely patriotic and constitutionally aristocratic; his objects are those of German patriots everywhere, but he has little sympathy with the ideals or the methods of modern Liberalism. He carries, in fact, his disdain of mobs and chatter to an extent dangerous to liberty. As a candid and fearless man he abhors the modern Roman Catholic spirit, and his political foresight renders him extremely apprehensive of the consequences of coquetting with Russia. He craves a new and specifically German civilization, while advocating a system of political repression which would keep the country in the old grooves. The general impression of his writings is hence somewhat discouraging; all the more remarkable, therefore, is the inspiriting effect of his nervous style, an example of the excellences in which German prose is commonly most deficient. Some short poems interspersed prove that it has been within his power to achieve equal distinction as a poet.

Dr. Schaffle's "Encyclopædia of Polity" (9) is as characteristically German as Lagarde's writings are the reverse. It is very learned, but deficient in form and clear definition of purpose, and chiefly valuable for the copious references to authorities. Lagarde has hardly a single quotation.

The second part of Professor Teichmüller's "New Studies towards the History of Conceptions" (10) contains, as was to be expected, important contributions towards an acquaintance with Greek philosophy. The most important essays are one on the treatise on Diet falsely ascribed to Hippocrates, which, in opposition to Zeller's opinion, Herr Teichmüller holds to have been composed in the fifth century B.C., and to afford a valuable indication of the state of philosophic thought at the time, and on the theology of Heraclitus. Professor Teichmüller, who has been getting himself initiated into hieroglyphic lore under the auspices of Dr. Brugsch, considers that Heraclitus derived his ideas from the Egyptians—a most important conclusion, if it can be sustained.

A reprint of twelve essays on Shakspearian subjects contributed to the *Shakspere-Jahrbuch* by Nicolaus Delius (11) will be most welcome to Shakspearian scholars. The most important, perhaps, is that on the Sonnets, in which, after an exhaustive review of the various hypotheses, the writer decides that these enigmatical poems contain no autobiographical element, or that at least any personal allusions they may have contained are irrecoverable. In his essays on *Timon of Athens* and *Pericles*, Delius contends that Shakspeare founded both these plays on the works of earlier writers—in the case of *Timon*, adhering to his conception of the character of Timon, and rewriting almost every scene in which this leading personage appeared, leaving the rest nearly as he found it; in the case of *Pericles*, correcting and inserting throughout, wherever the play seemed to require revision. The opposite view of Shakspeare's unfinished work having been completed by an inferior playwright is ably contested; and Shakspeare's unknown predecessor is identified on apparently good grounds with George Wilkins, the acknowledged author of the novel of *Pericles*. Essays on Dryden's treatment of Shakspeare, on the prose and on the epic element in Shakspeare's plays, on the relation of Shakspeare's *Coriolanus* to Plutarch and of his *Hamlet* to the *Hoffman* of George Chettle, are also exceedingly interesting, and composed in a most agreeable style. The collection is prefaced by a review of the additions made to the literature of the respective subjects since the original publications of the essays, in which the labours of Mr. Minto, Mr. Fleay, and Mr. Skeat are particularly noticed.

Dr. J. P. Richter's account in the "Mosaics of Ravenna" (12) will provide serious students of those remarkable remains with an admirable handbook. Three distinct eras of execution are pointed out—the Latin period, comprehending the mosaics in the Catholic Baptistery and the mausoleum of Galla Placidia; the Gothic, in the Arian Baptistery and S. Apollinare Nuovo; and the Byzantine, in the remaining edifices. An interesting dissertation is appended in which attention is directed to the remarkable revival of architecture and mosaic decoration under the immediate impulse, as would appear, of Constantine and his successors, one of the most instructive examples of what an intelligent despotism is able and unable to effect for art.

Wasielewski's history of the instrumental music of the fifteenth century (13) is evidently a work of much research, and calculated to interest and assist the student of the development of music. The first part is devoted to an inquiry into the construction of the instruments of the period, which is followed by an investigation of the principles and methods of musical composition. An appendix gives delineations of the instruments, and numerous specimens of the music itself.

An anonymous writer has conceived the happy idea of filling 421 pages (14) of small type with the most dismal reflections in prose and verse upon the misery of human existence and the general unsatisfactoriness of the scheme of things. Many of his remarks are ingenious; but, as a whole, they fail to impress us, probably because the writer has not taken the precaution first to convince himself. The "Poems of an Idealist" (15) apparently enforce an opposite view of things; but we have experienced some difficulty in assuring ourselves of the fact, from the prosaic reason of the illegibility of the beautiful but most irritating type. Another equally elegant, but less ambitiously printed, volume, from the same press, Julius Hart's *Sansara* (16), shows many tokens of genuine poetical feeling. The activity of the writer's imagination and his width of cultivation are further proved by the great variety and general effectiveness of his themes; and hardly one of his pieces is entirely destitute of power, while at the same time scarcely one is entirely up to the mark. Even such moderate promise is not to be slighted in the present forlorn estate of the German Parnassus. Herr Siegert's tragedy, *Clytemnestra* (17), combines the plots of the *Agamemnon* and the *Choephoræ*, and hence violates the unity of action. It is nevertheless by no means a contemptible performance, though with much more affinity to Goethe than to Æschylus.

Theodor Fontane's "Before the Storm" (18) scarcely justifies the praise which it has received from the German press. It is well written, but all conversations and descriptions are spun out to too great a length, the personages come on and go off without apparent motive, and the general impression is one of tedium and unreality. Herr von der Düna's story from the Baltic provinces, and Herr von Stengel's professedly philosophical romance, have respectively too little either of special local colouring, or of philosophy, to take them out of the category of average circulating library novels.

The *Rundschau* (19) has the continuation of Dr. Brandes's essay on Lord Beaconsfield's youth, treating particularly of his travels in the East, and their influence upon his thoughts and style of composition. It may be thought that Dr. Brandes treats such compositions as *Alroy* too seriously; they must be admitted, however, to possess a psychological, if hardly a literary, interest. Professor Nöldeke's sketch of socialistic movements in the East would appear disappointingly slight if it were not explained that it is merely preliminary to a book on the remarkable communistic religion proclaimed by the Persian Mazdak about the end of the fifth century. Professor Nöldeke seems hardly justified in classing the servile revolt of the Syrian Eunus as a socialistic movement. The continuation of the series of papers on the Crimean war is interesting, but treats principally of diplomatic and military episodes already amply

detailed. Franz Dingelstedt, eminent as a novelist and dramatist, and now director of the Imperial Theatre at Vienna, begins what promises to be a very lively account of his experiences in the latter capacity at Munich. An article on the history of landscape-gardening is agreeably written, and exhibits considerable knowledge of the subject, notwithstanding the writer's strange assertion that no trees of the fir kind are to be found in the English parks.

WREN'S CHURCHES.—*We are indebted to a correspondent for a correction of an error which occurred in our article of last week on this subject. It is unfortunately not the fact that the Railway Bill for destroying the church of St. Mary-at-Hill "has been abandoned for the present year." Our correspondent informs us that there have been before the public two schemes for completing "the Inner Circle." One is the "Metropolitan and Metropolitan District Bill," which, drawing its line of deviation through the centre of the church, has scheduled the church and churchyard. The other is the "City Union Railways Bill," which scheduled the rectory-house, but carried its line round the church. It is the latter Bill which has been abandoned. The former is still before Parliament, threatening with destruction one of the most precious architectural and historical possessions of London.*

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE UNITED STATES.

The Annual Subscription to the SATURDAY REVIEW, *including postage to any part of the United States, is £1 10s. 4d., or $7 58 gold, and may be forwarded direct to the Publisher,* Mr. DAVID JONES, *at the Office,* 38 *Southampton Street, Strand, or to* Mr. B. CONTENTS OF No. 1,215, FEBRUARY 8, 1879:

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

LIFE ASSURANCES, &c.

HAND-IN-HAND FIRE and LIFE INSURANCE OFFICE,
NEW BRIDGE STREET, BLACKFRIARS.
Instituted 1696.
The OLDEST Insurance Office in the World.
The WHOLE OF THE PROFITS are divided amongst the Policy-holders.
Applications for Agencies are invited from persons of influence.

PHŒNIX FIRE OFFICE.
LOMBARD STREET AND CHARING CROSS, LONDON.—ESTABLISHED 1782.
Prompt and liberal Loss Settlements.
Insurances effected in all parts of the World.
JOHN J. BROOMFIELD, *Secretary.*

IMPERIAL FIRE INSURANCE COMPANY.
Established 1803.—1 OLD BROAD STREET, E.C.; and 16 & 17 PALL MALL, S.W.
CAPITAL, £1,600,000. PAID-UP and INVESTED, £700,000.
E. COZENS SMITH, *General Manager.*

NORTHERN FIRE and LIFE ASSURANCE COMPANY.
ESTABLISHED 1836.
OFFICE IN LONDON—1 MOORGATE STREET.
Accumulated Funds (December 31, 1877) .... £2,215,000.
Insurances effected in all parts of the World.

THE AGRA BANK, Limited.—Established in 1833.
CAPITAL £1,000,000.
HEAD OFFICE—NICHOLAS LANE, LOMBARD STREET, LONDON.
BRANCHES in Edinburgh, Calcutta, Bombay, Madras, Kurrachee, Agra, Lahore, Shanghai, Hong Kong.

Current Accounts are kept at the Head Office on the Terms customary with London Bankers, and Interest allowed when the Credit Balance does not fall below £100.

Deposits received for fixed periods on the following terms, viz.:

At 5 per cent. per ann., subject to 12 months' Notice of Withdrawal.
For shorter periods Deposits will be received on terms to be agreed upon.

Bills issued at the current exchange of the day on any of the Branches of the Bank, free of extra charge; and Approved Bills purchased or sent for collection.

Sales and Purchases effected in British and Foreign Securities, in East India Stock and Loans, and the safe custody of the same undertaken.

Interest drawn, and Army, Navy, and Civil Pay and Pensions realized.

Every other description of Banking Business and Money Agency, British and Indian, transacted.

J. THOMSON, *Chairman.*

DIAMONDS. JEWELLERY. WATCHES. CLOCKS. SILVER.	MR. STREETER, F.R.G.S. NEW BOND STREET, LONDON. ORIGINATOR AND SOLE INTRODUCER OF STANDARD EIGHTEEN-CARAT GOLD JEWELLERY. Ready Money Value given for Ready-Money Payments.

Catalogue post free for Two Stamps.

E. LAZENBY & SON'S PICKLES, SAUCES, and CONDIMENTS.—E. LAZENBY & SON, Sole Proprietors of the celebrated Receipts, and Manufacturers of the Pickles, Sauces, and Condiments, so long and favourably distinguished by their Name, beg to remind the Public that every article prepared by them is guaranteed as entirely Unadulterated.—92 Wigmore Street, Cavendish Square (late 6 Edwards Street, Portman Square), and 18 Trinity Street, London, S.E.

HARVEY'S SAUCE.—Caution.—The Admirers of this celebrated Sauce are particularly requested to observe that each Bottle, prepared by E. LAZENBY & SON, bears the Label used so many years, signed "*Elizabeth Lazenby.*"

MR. ERASMUS WILSON, F.R.S.
Writes in the "Journal of Cutaneous Medicine," that
PEARS' TRANSPARENT SOAP
"Is an article of the nicest and most careful manufacture, and one of the most refreshing and agreeable of balms for the skin."
Of Chemists and Perfumers everywhere.

WILLS' "THREE CASTLES" TOBACCO.
IN 1-oz., 2-oz., and 4-oz. PACKETS LINED with TINFOIL.
WILLS' "THREE CASTLES" TOBACCO.—There's no sweeter Tobacco comes from Virginia and no better brand than the 'THREE CASTLES.'"—Vide "The Virginians." Only in Packets and Cigarettes, protected by the Name and Trade Mark.
WILLS, W. D. & H. O.

"PRIZE MEDAL" WHISKY of the CORK DISTILLERIES COMPANY, Limited. Philadelphia Centennial Exhibition, 1876. Jurors' Award:
"VERY FINE, FULL FLAVOR, and GOOD SPIRIT."
This fine Old Irish Whisky may be had of the principal Wine and Spirit Dealers, and is supplied to Wholesale Merchants, in casks and cases, by
THE CORK DISTILLERIES COMPANY, Limited,
Morrison's Island, Cork.
GOLD MEDAL at PARIS EXHIBITION, 1878.

BRAIN WORK is undoubtedly far more exhausting than bodily labour. Great thinkers, and persons burdened with cares, have the most need of those sustaining and restorative agents so mercifully supplied in the vegetable world, which, wisely used, go far to support the powers of nature.

Dr. T. LAUDER BRUNTON says, in the *Contemporary Review*: "The late Lord Derby, when translating Homer, was accustomed to eat Brandied Cherries"; and Dr. ALBERT J. BERNAYS says: "If I come home after any worry I shall never hesitate to set myself right by taking my favourite and perfect remedy, five or six Brandied Cherries. In three or four minutes I find myself wonderfully soothed and quieted, and I have never experienced any ill effects."

The essence and virtue of the Morella Cherry in a concentrated form, combined with the finest Cognac, is now to be found in that well-known and delicious Liqueur, "GRANT'S MORELLA CHERRY BRANDY," which, taken alone or with water, produces in a greatly increased degree all those good effects above described.

The Liqueur may be procured through any Wine Merchant, at all Bars and Restaurants, and of the Manufacturer,
THOMAS GRANT, Distiller, Maidstone.

GOLD MEDAL, PARIS.
"THE fresh and splendid distinction of a Gold Medal, now given in 1878."—Paris Correspondent of the *Daily Telegraph.*
FRY'S COCOA EXTRACT.
Guaranteed pure Cocoa only, deprived of the superfluous oil. Sold in Packets and Tins.

EPPS'S COCOA.	GRATEFUL AND COMFORTING. JAMES EPPS & CO. HOMŒOPATHIC CHEMISTS.

THROAT IRRITATION.
EPPS'S GLYCERINE JUJUBES.
Soreness and dryness, tickling and irritation, inducing Cough and affecting the Voice. Sold only in Boxes, 6d. and 1s. labelled thus: "JAMES EPPS & CO., Homœopathic Chemists, 48 Threadneedle Street and 170 Piccadilly."

DINNEFORD'S MAGNESIA.—The best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion.

DINNEFORD'S MAGNESIA.—The Safest and most gentle Aperient for Delicate Constitutions, Ladies, Children, and Infants.
OF ALL CHEMISTS.

ANOTHER Cure of Cold and Sore Throat (this week) by Dr. LOCOCK'S PULMONIC WAFERS.—Mr. WILKINSON, Chemist, 23 Watson Street, Birkenhead, writes: "Mr. Ravenscroft (a neighbour of mine) the other day took cold and sore throat, and was quite cured by *one* box."—Sold at 1s. 1½d. per box.

THE ZULU WAR.

THE news from South Africa is so far reassuring that it removes or greatly diminishes some of the gravest apprehensions caused by the disaster of the 22nd of January. It may now be hoped that no serious calamity need be anticipated during the anxious interval that must elapse before the arrival of reinforcements from England. On the 24th Colonel WOOD's division engaged and completely defeated a body of 3,000 or 4,000 Zulus, after which he fell back to cover Utrecht; and a very formidable and determined night assault on the position at Rorke's Drift had previously been repelled with heavy loss to the assailants. The colony, it is believed, is now saved from immediate peril of invasion. It is added, however, that the gravity of the position of affairs has not been exaggerated, and that the British forces will maintain a strictly defensive attitude until they are strongly reinforced from England. The Zulus clearly possess military qualities which make them no contemptible foe. The fight at Rorke's Drift was kept up the greater part of the night. The Zulus "six times got inside the barricade, and were as often "driven out at the point of the bayonet." They "fought "with infuriated zeal, even coming up to the loopholes, "and seizing the muzzles of the rifles." The gallantry of the defence made by the handful of men under Lieutenants BROMHEAD and CHARD is beyond all praise. It is satisfactory to know that no avoidable delay has been incurred in despatching the reinforcements which are so urgently needed.

In the meanwhile the published Correspondence confirms the impression that Sir BARTLE FRERE thought it prudent to precipitate a war which the Home Government in vain attempted to prevent or postpone. The COLONIAL SECRETARY, acting with the concurrence of the Cabinet, claimed and ultimately exercised supreme authority, only tempered by comparative ignorance of the circumstances on which peace or war depended. Sir M. H. BEACH is not to be blamed for his recognition of the superior knowledge of Sir BARTLE FRERE; but it will be his duty, when the subject is discussed in Parliament, to assume the responsibility of measures which he has not officially disapproved. His despatch of January 23 virtually sanctions any measure which the HIGH COMMISSIONER might think fit to adopt. "I do not desire to question "the propriety of any policy which you have adopted in "the face of a difficult and complicated condition of "affairs." Lord CARNARVON, who by his annexation of the Transvaal furnished one of the indirect causes of the war, justly remarked that the concurrence of Sir BARTLE FRERE, Sir HENRY BULWER, and Sir THEOPHILUS SHEPSTONE raised a strong presumption in favour of the policy which they jointly approved. The Correspondence raises a doubt whether Sir HENRY BULWER was as strongly convinced as Sir BARTLE FRERE of the immediate necessity for war. Sir THEOPHILUS SHEPSTONE, in an elaborate Memorandum of November 18, thinks interference with the Government of the Zulu KING indispensable, but reserves his opinion on the time and method of remonstrance or coercion. All the principal authorities agreed in the conviction that CETEWAYO could not be trusted; but there is no reason to believe that, if his country had not been invaded, he would have chosen the present time for a conflict. Lord CHELMSFORD judiciously warned the HIGH COMMISSIONER that it was essential to an effective defence to have the power of assuming the offensive on due occasion; but he was only obeying orders when he began the concentric march on CETEWAYO's headquarters which has been interrupted by the destruction of one of his columns and by the loss of the accompanying convoy. The reinforcements which had been refused in October were sent in November, after the receipt of Lord CHELMSFORD's detailed plan of a possible advance into Zululand. Sir M. H. BEACH had expressly directed that the war should not be begun if it could be avoided; but he can scarcely have failed to observe that Sir BARTLE FRERE has for some time past entertained no hope of a peaceful solution. The operations which are for the present suspended were the same which Lord CHELMSFORD had explained in his plan of the campaign. He there stated his reasons for thinking it proper to advance into the enemy's country with five columns, each sufficient for its own protection. He had apparently been misinformed as to the force of Zulus which could be concentrated to crush any single detachment. Difficulties of transport would probably have alone rendered it impossible to advance in a single column, even if such a plan would not have exposed the Transvaal or Natal to a counter-invasion.

Before the annexation of the Transvaal CETEWAYO's menaces were directed exclusively against the territory of the Republic; but, since both provinces are now subject to the English Government, Lord CHELMSFORD thinks that Natal, as the more fertile and more accessible country, is in greater danger than the Transvaal. Two or three months before the outbreak of the war some alarm was created on the border by the assemblage of some Zulu regiments on the left bank of the Tugela River, on pretext of a hunting expedition. It was known that there was little game in the district; and some of the soldiers were reported to have said that, if a buck crossed into Natal, they would immediately follow it. Measures were taken for local defence, and for obtaining fuller information; but after a time the Zulu force was dispersed without having done any mischief. A more alarming symptom of warlike designs consisted in CETEWAYO's withdrawal of protection from the Norwegian and English missionaries who had long resided in his country. He appears to have provided for their safe retirement from his territory; and he probably held that he was only exercising his ordinary prerogative in capriciously murdering some of their native converts. As he put to death about the same time a number of young women who had committed the crime of objecting to marry elderly soldiers, there is no reason to suppose that he entertains any special prejudice against Christianity. CETEWAYO's insolent replies to Sir H. BULWER's remonstrances were perhaps more significant than the eccentricities of his domestic administration. He said that it was true that he killed, but he did not consider that he had done anything yet in the way of killing. "I have yet to kill. It is the custom of our "nation, and I shall not depart from it. My people will "not listen unless they are killed." He added that, as Governor of Zululand, he was the equal of the Governor of Natal; and that, as he did not interfere with the institutions of the colony, he was not disposed on his part to tolerate foreign interference. The jurists who lately contended that Asiatic potentates were entitled to the pro-

tection of international law may perhaps hold that an African chief is equally exempted from violation of his independent sovereignty.

The High Commissioner and the local administrators in South Africa are of an entirely opposite opinion. To them the recognition of technical equality among Powers essentially unequal is a pernicious fiction; and the right of Cetewayo or any other savage chief to do what he will with his own is subject to the contingency that he may at any time meddle with the affairs of his neighbours. If Zululand were separated from the English possessions by an impenetrable barrier of mountain or sea, his mode of governing his own subjects would concern Colonial Governments as little as the not dissimilar customs of Dahomey or Ashantee; but his despotism and cruelty are subsidiary to his main object of maintaining an army which before the English invasion had no intelligible purpose except to invade either Natal or the Transvaal whenever it might suit his purpose. In one of his latest communications Cetewayo reproduces his ancient grievance that he had been vexatiously prevented by the Government of Natal from "washing his spears." It is not surprising that Sir Bartle Frere should infer that the peaceable professions which he sometimes makes are not to be more implicitly believed than similar declarations of some European Powers. It is not known that any civilized Government has of late years candidly expressed a wish to wash its spears, or, in more civilized language, to try its breechloaders. The effect on Zulu policy of an unexpected triumph must remain doubtful until further information is received. In default of a native insurrection in Natal, which appears not to have been seriously apprehended, Lord Chelmsford, who seems to have retired beyond the Tugela, will be strong enough to repel invasion. He had some time since established a fortified port at the mouth of the river; and the commander of the naval forces will co-operate with his movements. It is possible that Cetewayo may have ingenuity enough to understand that the success which he at first achieved will eventually prove to be a doubtful boon. He is consciously unable to calculate the resources of the great country beyond the sea, which will, as he is probably aware, be applied without stint in reparation of the recent failure. If it is true that reinforcements from Mauritius and even from India are on their way to Natal, the enemy will be puzzled and alarmed by the arrival of troops from opposite quarters. The forces which are now under orders in England ought alone to suffice for the emergency. In three or four weeks the English General will dispose of an army twice as strong as that with which he thought it prudent to enter the enemy's country. The war has the inconvenience of being waged against an adversary with whom it will be difficult to make a treaty. Cetewayo, though he may not be dethroned, must be reduced to a state of dependence; and, above all, he must be compelled to disband his army. If it is true that all the able-bodied men in the country serve in the ranks, it must be difficult to fill up vacancies caused by war. It will also be necessary to retrieve the failure of the expedition against Secocoeni, who will probably have been encouraged by the success of his superior chief.

Events have shown that Sir Bartle Frere had not exaggerated the greatness of the danger which, notwithstanding the doubts and warnings of the Secretary of State, he regarded as imminent. It is still difficult to understand why he should in several public documents have vindicated his conduct by arguments which were remote from the reasons which determined his course. Neither a single violation of English territory nor the misgovernment of the Zulu King justified a war which may, nevertheless, have been politic and necessary. The merits of the case will be best understood by those who have industry to study the Correspondence, not only on the immediate issue of war and peace, but on the disputes which are constantly arising when white settlers come into contact with natives. In a rude state of society power naturally devolves on those who have more ability and vigour than their neighbours. In Pondoland great influence is exercised by the widow of a missionary who has made the country her home. In a wider sphere Sir Theophilus Shepstone has long controlled uncivilized tribes by force of character united with sympathetic knowledge of their customs and feelings. It is only since the annexation of the Transvaal that the Zulu King regards the Administrator as an enemy. The frontier officers will for the present find their task more arduous, as the pretensions and audacity of every native chief will be increased by the success of the Zulus; but there is fortunately little concert among the petty potentates. All questions as to the permanent defence of the South African colonies must be for the present adjourned. Sir Bartle Frere refers with grateful satisfaction to the measures of his Ministers at the Cape, who, by providing for the defence of their own colony, have released all the Queen's troops for service at the seat of war. The inhabitants of Natal are still more urgently required to contribute to the protection of the province.

THE BUSINESS OF THE HOUSE.

The new gathering of Parliament for the despatch of business has been marked at its opening by a curious incident. The despatch of business has been wholly suspended by an attempt to facilitate it. The Chancellor of the Exchequer thought it advisable to clear the way by inducing the House to adopt a number of rules intended to make business go on more quickly and smoothly; but the House evidently does not like the rules, and prefers to do its business in its old way. The discussion has hitherto been directed entirely to the first of these proposed rules. This referred to the discussion of any subject of any nature on the motion that the Speaker leave the chair on the House going into Committee of Supply. This was considered by the Chancellor of the Exchequer to give far too great a latitude to miscellaneous conversation interrupting the proper examination of the Estimates; and he accordingly moved on Monday his first resolution, which was that whenever the Committee of Supply or the Committee of Ways and Means stands as the first order of the day on Monday, Mr. Speaker shall leave the chair without putting any question. The House has in past years adopted resolutions pointing in the same direction, but not going nearly so far. In 1872 and in 1873 it was resolved that, in going into Committee of Supply, no question should be put unless, on first going into Committee on the Army, Navy, and Civil Service Estimates, amendments were moved relating to the division of the Estimates proposed then to be considered. The present Ministry did not, when it came into office, think proper to have this resolution renewed; but in 1876 it was revived for the Session of that year, with the modification that amendments could be moved not only on the first, but on all subsequent, occasions when the House went into Committee on the Army, Navy, and Civil Service Estimates. The new rule was, therefore, more stringent than that of 1872, and far more stringent than that of 1876. It also applied to the Committee of Ways and Means, as well as to the Committee of Supply; but this part of the proposal was at once abandoned by the Chancellor of the Exchequer, on an appeal being made to him. He also, at the suggestion of Lord Hartington, limited the operation of the rule to the case when the ordinary estimates of the services were to be discussed, so that it should not apply on special occasions, such as that when the credit of six millions was asked for. The proposed rule as thus shaped was the subject of long and animated discussion on Thursday night, and ultimately the Chancellor of the Exchequer gave up his rule, and proposed to return to the rule of 1872. Lord Hartington stated that he preferred the rule of 1876, the difference being, as above stated, that amendments relative to the Estimates would be permitted by the earlier rule on the first occasion only, and by the later rule on all occasions of going into Supply. Thus at the end matters were in the strange position, that the Conservative leader wished for the rule invented by a Liberal Government; the Liberal leader wished for the rule invented by a Conservative Government; and unofficial members wished for no rule at all.

Questions, however, of very considerable importance were at the bottom of this discussion of technicalities. No one can deny that it is one of the first duties of the Government to frame its Estimates properly, to let them be subjected to fair criticism, and to get them passed when the House can attend to them. It is very difficult, if not impossible, for the Government to discharge this

duty in anything like a complete manner as matters now stand. No one knows at what hour the discussion of the Estimates will begin. The hours that were expected to be devoted to it pass by while the attention of the House is being directed to the various motions of various members; and either the Estimates are taken at an hour when every one is wearied to death and criticism becomes impossible, or they stand over, and then are hurried through at the fag end of the Session, when nothing can be thought of except the fate and shape of Government measures. Votes on account have accordingly to be taken, in order that the financial business of the departments may not come to a standstill, and the national money is thus voted away without the House of Commons exercising any supervision over its outgoing. This cannot be right, and successive Governments have felt that it is not right, and have tried to devise a remedy; and at first sight it certainly seems strange that it should be the Government that implores the House to study and check the Estimates, and the House that wishes that the Estimates should not be studied and should not be checked. But the power of raising any questions that specially interest them or their constituents is very precious in the eyes of private members. They do not like, and very properly do not like, that the leaders on the front benches should settle everything between them. They wish to assert their own position as having the right to criticize and suggest, and no doubt they may also wish to secure an opportunity of heightening their personal importance, but generally with the aim of keeping Parliament alive as the exponent of the feelings, the ideas, and the grumblings of the nation, and preventing it becoming a piece of official machinery. They have, indeed, other opportunities offered to them of carrying out their purpose, but they set special store by the opportunity offered by going into Committee of Supply. Friday night is nominally their own; but then it is too much their own. As the Government is not interested in their projects or fancies, it leaves them to themselves. Each private member is interested in his own motion, but is quite indifferent to the motion of his fellows, and so the House only meets to be counted out. When Supply is to be discussed private members are in a much more comfortable position. As the Government wants to get the Estimates forward, it must keep a House while preliminary motions are being discussed, and no preliminary motion can be said to be irrelevant. For, according to the old maxim, grievances precede Supply, and no one knows what a grievance is sufficiently well to pronounce that anything alleged to be a grievance is not one. The maxim is now a pure anachronism. It meant formerly what it does not mean now. But it serves a purpose now, although that purpose is a new one. Through it, and through the necessity of a House being kept on Supply nights, private members know that there are occasions when they must be heard, whatever they may wish to say.

Both the rule of 1872 and the rule of 1876 invade this privilege of private members. It may even be said that they agree in abrogating it. For, instead of allowing a preliminary discussion on any subject whatever, disguised under the cover of a discussion of grievances, they confine this discussion to questions relevant to the Estimates that are going to be discussed. If either rule were adopted, private members would lose their special opportunity of having any subject discussed which they seek to bring into prominence, and would be left very much to their Fridays and their mournful anticipation of addressing a few words to the Speaker and the reporters, and then being made to go home and keep their eloquence, their wrongs, and their suggestions to themselves. If only amendments relevant to the Estimates are to be raised, there is no other question for the House to determine than that of the best method of discussing Estimates. The truth is that the House feels itself incompetent to discuss the Estimates in detail. Any member who tries to raise an objection is overwhelmed by the technical knowledge of the representatives of departments, and by the intricacy with which one item dovetails into another. It has often been suggested, and it was proposed by Mr. Dillwyn on Tuesday, that what the House and single members cannot do, a Committee should do. But the proposal met with no favour, and was especially condemned by Mr. Lowe, who asserted that a Committee would always be more facile than the Chancellor of the Exchequer, and that the Chancellor, who now has some motive to withstand applications for public money, as he may fear that the Ministry, if too extravagant, will become unpopular, would be inclined to refer these applications to the Committee, which, like the House itself, would be always inclined to extravagance, and would have no popularity to lose. A general persuasion has thus grown up that the only effectual mode of criticizing the Estimates is to raise questions as to the general principles which underlie groups of items. It is possible occasionally to do this with some effect; and even if Ministers successfully defend, as they generally do defend, the principles on which the Estimates are framed, yet there may be a sufficient indication of the opinion of the House to cause a modification in the principles adopted in the Estimates of another year. If this is to be the real form of criticizing the Estimates, it may be said to be natural and expedient that these preliminary discussions of principles should not only precede, but should be marked off from, the discussion of details, and that this is best effected by the discussions taking place before the Speaker leaves the chair. The rule of 1876 gives opportunity for more of these preliminary discussions, and the rule of 1872 for fewer, but that is the only difference between them. The effect of another proposal made by Lord Hartington would lie in quite another direction. This proposal was that the general discussions which now take place on going into Supply should take place on the report. This is to return to the maxim of grievances before Supply, and to allow the exercise of the present privilege of private members, but to curtail it. The proposal may probably not meet with general acceptance; for the Government wishes to abolish the privilege, and private members do not wish it to be curtailed. But, at any rate, it serves to keep before the House that it has to settle two quite distinct questions—namely, whether the privilege of starting and discussing anything technically called a grievance is to be retained, and, if not, what practically is the best and most effectual way of criticizing the Estimates.

RUSSIAN APOLOGISTS.

THE Foreign Office continues to issue miscellaneous correspondence on Turkish affairs. Some of the papers may perhaps hereafter furnish materials for history, though most of the information which they convey had been anticipated. A separate publication is devoted to the reports of the Austrian Military Attaché on the Rhodope atrocities. One of the most unscrupulous of partisans had asserted that the Austrian delegate had withheld his signature from the general report because he was not satisfied with the evidence. That officer, in a separate report to his own superiors, says that it is easy to observe on the spot how much the reports of the Consuls fall short of the truth. In another document he states that the Mussulman fugitives had alleged, "with startling una-'nimity, that the murderers and plunderers were Russian 'soldiers. Repeatedly the declaration was made that 'the Russians had fired with cannon on defenceless women and children, as was the case near Hermanli." In the next paragraph he significantly remarks that, as President I had to take especial care that the action of the Committee should not, as the Russian 'delegate proposed, be interrupted." In a report to Sir H. Layard, Vice-Consul Calvert, referring to an accusation which had been brought against him in Prince Dondoukoff Korsakoff's official journal, corrects a statement that he had charged the Russian and Bulgarian soldiers in a certain district with outrages on women by the remark that he had said nothing of Bulgarians. It is nevertheless clear that the Christian natives have revenged themselves on the Mahometans by the most revolting crimes. Competent witnesses declare that the atrocities committed since the war have far exceeded in number and brutality all the outrages which had been perpetrated during many years by the formerly dominant race. The Bulgarians seem, with the connivance of the Russians, to have justified to the best of their ability the caution of those European Governments which had hesitated to accelerate their liberation. Although the supremacy of the Turks may have been in itself objectionable, it was not the business of statesmen to give facility for reprisals.

The Duke of ARGYLL, in his powerful and passionate attack on the Eastern policy of the Government, contrasts the faithful record by the English Consular agents of the many instances of Turkish maladministration with the uniform bias in favour of Turkey which he attributes to the same functionaries. It is the business of political critics, though not perhaps of impetuous advocates, to account for supposed paradoxes as well as to record them. The good faith with which the Vice-Consuls supply ostensible arguments against their own practical conclusion is the best ground for relying on the impartiality and soundness of their judgment.

Of all the literary assailants of the Government, the Duke of ARGYLL is the most formidable; but he shares with many writers on the same side the error of proving too much. If it were possible that any capable critic should derive from the Duke of ARGYLL's work his exclusive knowledge of Eastern transactions, his first impression that the whole contention of the other party had been suppressed would be perfectly just. As the DUKE was himself in office during the Crimean war, he finds it necessary to reconcile the policy embodied in the Treaty of Paris with the unqualified hostility to the Turkish State and people which he blames the Government for not sharing with himself. Some energy is wasted in proving that the independence of the SULTAN as recognized in 1856 was only nominal, or at best provisional. The European Powers, while they disclaimed any right of interference in the domestic administration of his Empire, expressed in the demand of promises of reform an interest which might afterwards furnish reasons for intervention. The whole controversy is barren and useless. The independence of weak States is always in some degree fictitious, because powerful neighbours can, if they think fit, always exercise over them a certain control. The primary object of the allied Governments in concluding the Treaty of Paris was undoubtedly to secure the peace of Europe by placing obstacles in the way of Russian aggression. The Tripartite Treaty of England, France, and Austria had no other possible object; and the Duke of ARGYLL overstrains the astuteness of advocacy when he suggests that the document was limited by the supposed conditions of the general treaty. The immediate occasion of the Tripartite Treaty was the desire of Austria to provide security against Russian resentment by a close alliance with France and England. It suited the purpose of the principals in the war to encourage the overture, as it tended to impose an additional check on Russian ambition. It might perhaps have been expedient in 1875 or 1876 to reverse in all respects the policy of 1856; but it is idle to argue that Lord BEACONSFIELD departed from the policy of Lord PALMERSTON and Lord CLARENDON.

During the greater part of the interval the Duke of ARGYLL and his friends had been in office. As late as 1871 they were absolutely silent as to the conviction which they now imagine themselves to have formed, that it was proper to form an alliance with the malcontent subjects of the SULTAN rather than with his Government. In 1863 Lord PALMERSTON, in a letter to Baron BRUNNOW, expressed his regret at the beginning of the insurrection in Poland, because he foresaw that the Poles themselves would be the sufferers. He expressly added that he should otherwise regard the insurrection as a righteous judgment on the Russian Government for its encouragement of rebellion in Roumania, Servia, Bulgaria, Bosnia, and Herzegovina. He told the Russian Ambassador that he could furnish him with a statement of the number of rifles which had been imported by Russian agents into Bosnia. His letter assuredly indicated no sympathy with conspiracies among the subject population against the authority of the SULTAN. The Duke of ARGYLL, who with Mr. GLADSTONE formed a little section of the Cabinet which was partially opposed to the PRIME MINISTER, may probably not have known at the time of the letter to Baron BRUNNOW; but he has since read it in Mr. ASHLEY's Life of Lord PALMERSTON, and he must always have known that the policy of the Cabinet was strongly accordant with the tone of the communication. It is true that from time to time the English Government remonstrated against the neglect of the Porte to redeem its pledges of reform. When it was the duty of Lord JOHN RUSSELL as Prime Minister to reprove a humble ally, it could not be doubted that he would use for the purpose the most contumelious and offensive phrases. Rightly or wrongly, the English Government never deviated from the system of supporting Turkey against foreign ambition, and of endeavouring to diminish the causes of weakness which invited Russian aggression.

Further experience may show that the constitution of an independent Bulgarian Principality tends to promote the happiness of the majority of the inhabitants, though it has involved frightful hardships to the Mahometan part of the population. It is possible, and even probable, that when the force of the first reaction has spent itself, and when the Russian army is withdrawn, some trace of humanity and justice may be found even among the liberated Bulgarians; but the fact that some benefit had resulted from the Russian conquest would not prove retrospectively that prudent statesmen ought to have voluntarily overthrown the Turkish dominion. The dominant race was recognized and tolerated, not on account of its merits, but because it was in possession. For the same reasons the most urgent political need of the present moment is the complete execution of the Treaty of Berlin. It is easy to show that the arrangement has many defects; but it is the only security of peace, for the simple reason that it is paramount and final. Some stipulations which offered grave difficulties have been already performed. The Austrians have, at the cost of a not unimportant struggle, obtained possession of Bosnia and Herzegovina; the instances of the English AMBASSADOR and his agents induced the tribes in the neighbourhood of Batoum to abandon hopeless attempts at resistance to the Russian occupation; and the districts allotted to Montenegro have been peaceably transferred. It only remains to finish the organization of East Roumelia, and to settle the frontier of the Greek kingdom. After much hesitation the Russian Government has lately shown itself disposed to perform its engagements with good faith, and even Prince DONDOUKOFF no longer openly intrigues for the annexation of East Roumelia to Bulgaria. The Porte is willing to make to Greece part of the cession of territory which was recommended, though not enacted, by the Congress. The representative of the Turkish Government on the Commission alleges that the proposed rectification of the frontier in Epirus would transfer to Greece a Mahometan population which desires to retain its present allegiance. As the French FOREIGN MINISTER, now President of the Council, has thought fit to interest himself in the Greek claims, this question also will probably be decided against Turkey. When the arrangements are completed, Russia may probably rest for some years before promoting fresh troubles.

EGYPT.

THE news from Egypt is sufficiently alarming to cause anxiety to those who are interested in the progress of the country. That, in consequence of a military revolt, the KHEDIVE should have taken on himself to dismiss NUBAR PASHA, and in doing so have disregarded the remonstrances of his English and French Ministers, shows that the new order of things rests as yet on an insecure foundation, and has awakened the suspicion that the whole proceeding was a device of the KHEDIVE himself to show that he could at any time upset the coach which so much trouble has been taken to induce him to set running. At the same time, it must be remembered that he was not under any international obligation to retain NUBAR PASHA, and, while maintaining his arrangements with England and France, he can appoint and dismiss his Egyptian Ministers as he pleases. At many points of the series of events and negotiations by which he has been led to accept European control, the KHEDIVE has suddenly shown himself in a combative or recalcitrant attitude, and then has as suddenly yielded. For the present, therefore, we may be content to ask how things are going on in Egypt without reference to this new crisis, the real import of which cannot be estimated as yet.

Much light is thrown on the general situation, and especially on the financial situation, of Egypt by the Report for the year 1878 of the Commissioners of the Public Debt, to whom is assigned a leading part in the experiment of reorganizing Egyptian administration under European control. This control is now exercised in three ways. There are the International Tribunals which enforce, or seek to enforce, the claims of

foreigners against the Government of the KHEDIVE. There is a Ministry, without which the KHEDIVE cannot do anything, and of which an Englishman and a Frenchman are permanent members. Lastly, there are special officials charged with the duty of seeing that the arrangements made with public creditors are respected. Putting aside the officials charged with the control or administration of the Dairas, the principal of these officials are the Commissioners of the Public Debt. There were also appointed in 1876 two Controllers-General, one of the receipts, and the other of the accounts of the State, an Englishman and a Frenchman respectively, who, in concert with one of the KHEDIVE'S sons acting as Minister of Finance, exercised a general superintendence over the money affairs of Egypt. The new Ministry, however, appointed last year declined to take office unless this superintendence was given over entirely to them, and the functions of the two Controllers-General were accordingly suspended, and they are now added to the long list of European officials in Egypt who have salaries to draw but no work to do. As the work of reorganization has proceeded piecemeal and to meet the special wants of the day, it is not surprising that its framework is always being recast. Although, for example, the office of the Controllers-General was practically abolished, the Ministry felt that their Budget ought to be submitted to an independent audit; they accordingly invited one of the Commissioners of the Public Debt to act also as Auditor-General, and he accepted the invitation. Further, a general Commission was instituted last year to report on all the fundamental questions of Egyptian finance, and all the Commissioners of the Public Debt were placed on this Commission. Thus, in some respects, the controlling forces in Egypt work together; but they always remain independent, and sometimes become antagonistic. For instance, the Commissioners of the Public Debt are entitled to receive monthly statements as to the money on its way to them; but the Ministry of Finance did not, or would not, furnish these statements. The Commissioners brought an action before one of the International Tribunals, and obtained an order directing the rendering of these monthly statements. How such an order could be practically enforced no one seemed to know or care. Still there appears to be something awful and solemn in even an inoperative legal judgment, and the Commissioners relate with much satisfaction that they obtained it. The truth is, that the three controlling forces—that is, the Tribunals, the Ministry, and the Commissioners—all exist, all are necessary for the present, and all work with honourable zeal; but their respective functions are not as yet defined, and must undergo considerable modifications. The Egyptian Code is very defective, and the powers of the judges are theoretically much too large and practically much too small. For the five years during which the Tribunals are appointed to work this Code, the legislative power, which every country must possess if it is to be alive, is extinguished in Egypt, and the judges are placed by the vice of their position in an attitude of hostility to the Government, although the Government may be under the direction of the best of all possible Ministries.

The time will soon come for the revision of the Code and the re-appointment or reconstruction of the tribunals, and it is essential that the Code should be largely altered, and that the power of the Tribunals should be much more clearly defined, and should be restricted within the limits in which it can co-exist with the due discharge of its functions by the Government, and with the exercise of legislative power. Some alteration in the arrangements of the State with its creditors may also be necessary. It is in throwing light on the necessity of such an alteration that the chief value of this Report consists. Besides the payment of the tribute and the interest of the purchase money of the Suez Canal shares, the Commissioners have to make payment of what is due on the short loans, of which only two and a half millions now remain outstanding, and which will be rapidly extinguished by the Moukabala receipts, on the Preference and on the Unified debt. The Preference debt is so amply secured that no great attention need be paid to it. Its primary security is the profit of the railways, and although last year the receipts from this source left a deficit of 300,000*l.*, half of this sum was due to the falling off of the grain traffic in consequence of an exceptional drought; and as the deficit has to be made good out of the general receipts of the Commissioners before anything is paid to the holders of the Unified debt, and the deficit cannot possibly amount to more than a very small portion of these receipts, the Preference debt is as well secured as anything can be in Egypt, and no one dreams of reducing the amount of its interest or of lessening its securities. The critical point is reached when we come to the Unified debt. This debt now amounts to 56,000,000*l.*, and carries an interest of six per cent., and a sinking fund ought to be added, but has now been suspended. For the interest alone 3,360,000*l.* is wanted. To provide for the payment due on the Unified debt certain revenues have been specially assigned to the Commissioners, and in 1878 these revenues, after providing for the deficit on the Preference debt, yielded 2,450,000*l.* What is wanted beyond has to be provided by the State; and if the sinking fund is added to the interest, the amount which the State ought to have provided in 1878 was 1,480,000*l.* It is notorious that it has not hitherto met the payments required for the Unified debt out of ordinary and legitimate resources. Taxes have been anticipated to meet coupons, and the last coupon could not have been paid unless a part of the new ROTHSCHILD loan had been used for the purpose.

In the first place, it is to be observed that the year 1878 was a bad one in Egypt, drought having been followed by floods. In the next place, the Commissioners insist very strongly and in great detail on the fact that the whole revenues assigned to them do not pass into their hands, the Government making certain unauthorized deductions for local administration and taking payment to some extent in acknowledgments of indebtedness, which, when paid off, are not accounted for. The amount, too, which had to be paid on account of the Preference debt was larger than it would be in an ordinary year. Therefore we may on the whole conclude from the Report that in an average year, with a normal amount of railway traffic, and with no deductions made, the assigned revenues would give 2,800,000*l.* per annum, or five per cent. on the Unified debt. This must, however, be taken subject to two limitations. These revenues are derived for the most part from special provinces. What is true of the rest of Egypt will probably be true of these provinces; and, as to the whole of Egypt, it is not as yet ascertained what the taxpayers can fairly be called on to pay to the State. The Commissioners state that they are still in the dark as to this, and it will only be after a long and minute inquiry that an opinion on this point can be formed. Then, again, the payments on account of the Moukabala will before long cease; and, when they cease—when, in short, a portion of the Land-tax has been redeemed—there must be a diminution of receipts from this source. If the figures given in Mr. CAVE'S report are at all accurate, it would be prudent to allow 400,000*l.* per annum for the diminution in the Land-tax caused by the cessation of the Moukabala payments in the assigned provinces. On the other hand, in the seven years which have still to run before this diminution makes itself felt, a better Government ought to have made the assigned provinces richer, and more lands may have been brought into cultivation. The position of the holders of the Unified debt may therefore be said to be that they have got a cumbrous but vigorous system of control exercised in Egypt on their behalf, and that the special revenues assigned to them may be expected to give them something like five per cent. on their money. Can the State give them anything more, and, if so, how much towards the extra two per cent. which they ought to have? The Commissioners prudently abstain from giving any definite answer to the question; but they say enough to show that in their opinion the State cannot afford to pay all that the holders of the Unified debt can claim. There was a deficit of two millions sterling in the Budget of 1878, which was no doubt an exceptionally bad year; but still, even with a fairly good year, there would probably have been some deficit. Then Egypt has a floating debt which it cannot pay. This debt is nominally nine millions, but two millions may be deducted as being covered by special securities or owing to the KHEDIVE himself or members of his family. The ROTHSCHILD loan was intended to make a provision for the floating debt, but a part of its proceeds was appropriated to the payment of the last Unified coupon, and it cannot possibly suffice to pay off more than perhaps two-thirds of the floating debt. Reductions in expenditure will of course be made; but the great difficulty in making them is that

there is no money in hand to pay the arrears due to the officials discharged, and the danger of such a state of things has just been forcibly illustrated by the recent *émeute*. In calculating the future Budgets of Egypt it must be remembered also that the KHEDIVE, having given up the family lands, must have a larger Civil List to live on; that he has to fulfil his engagements to the creditors of the Daira Sanieh; and that, if the whole revenues of the assigned provinces are paid to the Commissioners, the Government must find from other sources the sums it has hitherto been accustomed to deduct. In order to put Egyptian finance on a sound footing, it appears necessary that the holders of the floating debt and those of the Unified debt should make some abatement in their claims. The difficulty is not to show this, nor even to induce all reasonable persons to acquiesce, but to point out how it can be done so as to be legally effectual. For dissentient creditors can always appeal to the International Tribunals, and those Tribunals only look to the letter of the contracts and give judgment for the full amount. The question of the financial reform of Egypt is therefore inextricably bound up with its judicial reform, and it will probably be found impossible to carry out the former, except in a tentative and faltering way, without also carrying out the latter.

THE BANKRUPTCY BILL.

THE CHANCELLOR'S Bankruptcy Bill may be described as a measure for retaining the present system of dealing with defaulting debtors, but weeding it of its abuses. At present there are two methods in which an insolvent may be treated by his creditors; he may be made a bankrupt, or he may escape the ignominy of bankruptcy by being allowed to compound with his creditors. The latter is the method of treatment which debtors naturally prefer, and which creditors, through supineness, good nature, or a calculation of their interests, are generally willing to sanction. It is around the working of this method that the frightful abuses which now call for the intervention of the Government have gradually sprung up. The chief of these abuses is that insolvency has lost all its terrors. Many men think no more of not paying their debts than of taking a trip to Brighton. A little friendly manœuvring is exercised in their behalf by persons who have made this curious art their profession, and they are completely whitewashed. They are at once released from the effects of the past without any inquiry into their conduct, and a future exactly like the past is immediately opened to them. Through the facilities thus opened to dishonest or reckless trading the national loss through bad debts has risen to the startling amount of eighteen millions per annum. The existence and profit by wrongdoing of the persons who work this system may rank next in the order of abuses. The person who manipulates the affair gets himself appointed trustee, and, when he is once appointed trustee, he does exactly what he pleases. He fixes his own remuneration, his accounts are never audited, he gives no security for proper administration, he keeps in his own hands as long as he likes the monies he collects. What he gains the creditor loses, and two shillings in the pound is the average dividend distributed to those who have placed him in a position to fleece them. In 1877 there were four-and-a-half millions of money in the hands of trustees who were entirely exempt from control. It may be thought surprising that creditors should acquiesce in a state of things so very mischievous to themselves. That they should be easily induced to give their sanction to their own loss is the third great abuse of the present system. They are isolated, they have each their own business to attend to, and the manipulator of the scheme can canvass and influence each separately. In order to increase their impotence, the manipulator is allowed by the present law to have the proceedings carried on in any place where the insolvent has traded; so that if a Bristol trader has, for a few months before his impending collapse actually arrives, been adroit enough to open a small shop at Newcastle, all the bankruptcy proceedings may be carried on hundreds of miles away from the place where the bulk of his creditors reside. What are these remote and forlorn people to do? The canvasser arrives, paints the sorrows of the poor good defaulter, and earnestly insists that the best thing for all parties is that no court should interfere, and that the money that can be got in should be paid over to every claimant by an honest, independent person like the canvasser himself. All that is needed is that a proxy shall be signed by the creditor in favour of the canvasser. The canvasser gets his proxies signed and goes away triumphant, calls sham meetings, votes for himself, and passes at once into the luxurious and lucrative indolence of uncontrolled trusteeship.

These are the principal evils of the present system, and the CHANCELLOR'S Bill deals with them one after another. All proceedings against a defaulting debtor are to begin in the same way, whether he is ultimately made a bankrupt or liquidates by arrangement. The Court will take the initiative, and make a provisional order securing the property of the debtor, and directing a meeting of the creditors to be held. This is to be a meeting for the general investigation of the bankrupt's affairs. The bankrupt will attend and explain his conduct and position. After hearing him the creditors may decide that further investigation is necessary, or they may decide to make the debtor a bankrupt, or they may decide to liquidate by arrangement. Over these proceedings the Court will exercise a control. It will decide whether and in what cases proxies shall be allowed, and will take care that the proceedings are conducted in the place most convenient to the creditors. If an arrangement by composition is decided on, then the CHANCELLOR proposes that the debtor shall not be released under it unless a minimum dividend of five shillings in the pound is paid to the creditors. Of all the proposals of the Bill this is perhaps the best and the most effectual. It strikes at the root of the system of sham insolvencies. Two shillings, and even one shilling, in the pound is the ordinary dividend under the present system. The creditors will obviously never consent to a proposal for arrangement by composition unless the debtor, at the meeting for preliminary investigation, can show good grounds for estimating that his estate will pay at least five shillings in the pound. At present experience proves that in seventy-five per cent. of arrangements by composition less than five shillings in the pound is paid, and thus the debtors who will henceforth escape bankruptcy will be persons who will have at least shown themselves more prudent and trustworthy than three-fourths of the general class of insolvents. Further, if, during the course of the proceedings the creditors see reason to think that the debtor deserves a less considerate mode of treatment, they may at any time agree to rescind the deed of composition and make the defaulter a bankrupt. Next it may be said that the whole position of the trustee is changed. He is to be appointed, not by the general body of creditors, but by a committee of investigation; and if he has canvassed for his appointment, all remuneration is to be denied him. If, after he has been appointed, the creditors do not like him, they may remove him. His remuneration is to be limited by a maximum, and at the end of a year he must pay into court all he has received. His accounts will be audited, and for every farthing he receives he will be responsible to the Controller in Bankruptcy. In short, the sweet career of the canvassing manipulator is at an end. Lastly, in order that creditors may know exactly what they are doing, they will themselves have to sign the deed of composition, and will no longer be bound by the mere resolution of a meeting; and if the Court finds that the deed has been improperly obtained, it may set it aside.

Similar provisions are to be enacted as to the supervision of the trustee when bankruptcy has been decided on; and in a separate Bill the CHANCELLOR deals with the punishment of criminal acts for which the bankrupt may have made himself liable. If, again, the bankrupt has been guilty of reckless trading or extravagance, or has not kept his books properly, the Court may suspend the order of discharge. Further, all offences of a criminal kind not amounting to felonies are to be tried and punished by the Court itself. The Court has thus very large powers and very onerous duties, and it is proposed to entrust them to a new judge, who will rank as one of the judges of the High Court of Justice. Out of London bankruptcy proceedings will, as at present, be conducted by the County Court judges; but any case may, by the desire of the parties or the direction of the inferior Court, be transferred to the superior Court in London. The new judge is to be a person distinguished by his mastery of commercial law, and thus one of the suggestions of the merchants has been adopted nearly in the form in which it was made

Their other suggestion, that the new judge should also have control over all proceedings in the liquidation of Companies, has not been adopted by the CHANCELLOR, for reasons which he promises hereafter to disclose. One obvious reason is that the new judge will in all probability have his time fully occupied with proceedings in bankruptcy. He will have not only to perform his strictly judicial functions, but to keep his eye fixed on the vast insolvent world generally, and this will be a very laborious task. When it is added that the whole law of bankruptcy is consolidated in the new Bill, the outline of the CHANCELLOR's scheme is completed, and the impression produced by this outline is in the highest degree satisfactory. The merits of the scheme must, indeed, in a great degree depend on the choice of the new judge, and on his vigilance and acuteness. But the CHANCELLOR habitually takes a sanguine view of the competence of courts. On a subsequent evening he informed the Lords that he had carefully examined the statements submitted to him as to the alleged blocks in the Courts of Law. He has come to the conclusion that there is no block that deserves the name; and, so far as it is true that the superior judges have more cases submitted to them than they can deal with, he thinks he can cure the evil by raising the amount of claims within the compulsory jurisdiction of the County Courts from 50*l.* to 200*l.* If the change throws more work on the County Court judges than they can be fairly asked to get through, nothing, he thinks, can be easier than to appoint new ones perfectly competent to do County Court work. This view of the County Court judges and this proposed increase in their powers may be reserved for discussion until the proposal which the CHANCELLOR indicated has been formally made.

MR. BALFOUR AND BURIALS.

THE Burials controversy would be much simplified if both parties to it would consent to realize the fact that, apart from the practical policy of minimizing its area by closing churchyards and opening cemeteries, there is no middle term between the *status in quo* and absolute surrender. The claim on one side is urged in the name of religious freedom, and is based upon the allegation that the churchyards are national property; while the party bidden to capitulate and evacuate replies that, whatever colour of equity might have attached to the demand some years ago, those who now press it have deliberately contracted themselves out of any right to urge it. They have taken their pay not to do a certain thing, and now, with the money in their pockets, they repudiate the engagement, and press on for the accomplishment of those projects for which they have got their compensation. It is wearisome to be continually reverting to the same not very old story. Still, so long as the Burials question occupies Parliament, we must continue to remind the public that, when the Dissenters demanded and Churchmen conceded the abolition of compulsory Church-rates, the churchyards passed into the undisputed possession of the latter, subject to the double liability of having to keep them up at their own cost, and of being still compelled to find room in them for the bodies of those who had while living saved their own pockets at the cost of their still contributory fellow-citizens. The situation was very simple; the Churchman paid and buried, the Dissenter repudiated and was interred. This common-sense way of looking at the matter would reduce the present strategy of both sides to elementary principles—that of pegging away by the Liberationists and of holding on by their opponents. Whether they win or lose at last, Churchmen have to fight under the conviction that no compromise could give them anything which they would care to retain; while defeat, however absolute, would leave them in possession of their consistency and their honour, ready to adapt themselves to the new state of things and untrammelled by any entangling engagements. This position—taking results at the worst—would be not only intelligible, but respectable, which is more than can be assumed as self-evident by the other side so long as it remains under the imputation of having successively pocketed the compensation and the thing for which that compensation had been given.

Less than two years elapsed between the pecuniary settlement involved in the abolition of compulsory Church-rates and its repudiation by the Liberation Society. According to the frank confession of Mr. CARVELL WILLIAMS, the secretary and fighting-man of what he himself pronounces to be an agitation, "It was then "resolved by the advocates of religious equality that "the agitation should henceforth assume the form, not "of an occasional attack, but of a regular siege; that "the political strength which had already successfully as-"sailed other ecclesiastical monopolies and disabilities, "should be brought to bear on the restrictions imposed "on burials in English churchyards. The Bill introduced by Mr. OSBORNE MORGAN (in 1870), as a consequence of this resolve, was the most decisive measure of the kind "which had yet been proposed." The ultimate object of the agitation is, according to the prospectus of the Society which enjoys the services of Mr. CARVELL WILLIAMS, "The application to secular uses, after an equitable satis-"faction of existing interests, of the national property "now devoted to the uses of the Church of England and "the Church of Scotland; and, concurrently therewith, "the liberation of those Churches from State control." Comparing these two passages—not to encumber our pages with a cartload of even more outspoken proclamations—the conclusion is irresistible that the avowed intention of the series of measures of which Mr. MORGAN's Bill is only the first and mildest instalment is the confiscation of church, glebe, and tithe, no less than of churchyard.

We find the most convincing arguments in support of the opposition to Mr. BALFOUR's compromise now before Parliament in the quarter which is now, as ever, foremost in the advocacy of Mr. OSBORNE MORGAN's policy. The *Times*, moralizing on the fate of Mr. BALFOUR's Bill, observes that "the opportuneness of Mr. BALFOUR's action "lies in this—that he proposes to seize the moment when "a Conservative majority may still prevail to fix the con-"ditions on which the churchyard should be thrown open." This is plausible enough; but the *Times* with stupendous *naïveté* adds that it may indeed be replied, "that though "the conditions and reservations embodied in Mr. "BALFOUR's Bill would have been kept now, they would "in all probability be repealed the next time a wave of "Liberalism gave the Liberal party a majority in the "House of Commons. We may frankly say that this re-"sult would not be unacceptable in our eyes." In less dignified language this means, as addressed to Churchmen, "Dilly, dilly, come and be killed." Their answer is that instead of surrendering the dignity and consistency of their position in return for concessions which, as they are assured, the next wave of Liberalism is sure to sweep away, they prefer to retain dignity and consistency and not to lean for a few years on the broken reed of illusory limitations. At the same time they cannot, and will not, make a capitulation. If in time to come Mr. MORGAN and the Liberation Society are destined to prevail, on them shall rest the whole discredit of a greedy policy.

It would be waste of time to dwell at any length upon the details of that delicate bantling, Mr. BALFOUR's Bill. It stands self-condemned by the single fact that it is based upon the principle of revocable concession. After drawing an untenable distinction between parish churchyards more or less than fifty years old, and between those more or less than three miles from a cemetery, it enacts in regard to the two former categories that they are to be open to all kinds of "solemn and Christian" burial-services, conducted so as to be "agreeable with the usages "of the religious society" to which the deceased belonged (thereby irritating the Jew and the secularist, and dissatisfying the Dissenter, who refuses to have the idea of any usages thrust between him and his freedom), until somebody gives the parish a cemetery, on which event they are to revert to the exclusive use of the Church. The whole drift of modern legislation calls out against such a principle. But in this case the proposal is not only vicious in its essence, but it involves a fatal disturbance of sound practical policy. The one good thing hitherto got out of the troubles of the Burials controversy is that people's eyes have been opened to the evils of crowded cemeteries, and that even those persons who were most susceptible to the conservatism of sentiment have come to understand that, in view of greater mischief on the other side, the trouble, expense, and soreness of feeling involved in the substitution of cemeteries for churchyards must be faced. Mr. BALFOUR, if he carried his Bill, would absolutely succeed in forcing the Liberation Society to take up crowded churchyards as a plank of its platform, and raise the cry of "liberty and typhus." He deserves, at all events, the praise of originality for having been able to present legislation in so grotesque a guise.

With such a proposal gravely submitted for the acceptance of Parliament, we cannot be angry with Mr. MORGAN and his friends for the intention which they announced of voting for the second reading of Mr. BALFOUR's Bill, in the expectation of sweeping away its fantastic restrictions, not upon the recurrence of the next wave of Liberalism, but so soon as the Bill got into Committee. Supposing the House of Commons to assent to the second reading, an assembly which had stultified itself by accepting so incongruous a patchwork could have only opposed a feeble and desultory resistance to the most extravagant amendments. Anyhow, the candour of Mr. MORGAN's confession leaves those members without excuse who proposed to vote with Mr. BALFOUR by way of compromising the matter. They would only have been voting for Mr. MORGAN, and ultimately therefore for the secularization of all Church property.

Mr. BALFOUR used one argument which was so peculiar that we cannot pass it over quite unnoticed. The English law of burial, so he informed the House, was not understood in Scotland or Ireland, where a different system prevails, and accordingly the people of those two countries believed the prevailing sentiment in England to be the "insanity of intolerance"; and, as he contended, because Scotland and Ireland were ignorant and mistaken, therefore the conclusions of Scotland and Ireland, which had no interest in the matter, were to prevail over the well-informed opinion of England, where the question was one of practical importance. This bold contention was all the more judicious and logical in view of the fact that, while the majority against Mr. MORGAN in the Session of 1878 was only fifteen, the minority was largely swelled by votes from uninformed and uninterested Scotland and Ireland, while the majority of English members only was no less than 101. This fact does not at all reconcile us to the pernicious theory of Home Rule, but we must note that in the only case where our Imperial system seems to have pressed hardly on one member of the Empire, the aggrieved country was England.

FRENCH PARTIES.

THE position of the French Ministry cannot yet be regarded as assured. The hope that the Republican majority would become homogeneous as soon as Marshal MACMAHON had retired has not been fulfilled. Indeed, it was hardly possible that it should be fulfilled. A mass which has not been kept together by external pressure will hardly be more coherent when that external pressure has been removed. So long as Marshal MACMAHON remained at the head of affairs he, at least, did the Republic the service of making prudence and moderation obviously useful qualities. Even then the Extreme Left usually forgot to practise the lesson whenever things had gone quietly for six months; but, at all events, the MARSHAL was there to recall them at intervals to a better appreciation of these unpopular virtues. Now that the MARSHAL is gone there is no such possibility in the background. M. GRÉVY may disapprove of Radical measures, should they be submitted to him by his Ministers; he may even resign office rather than promulgate them; but he will not be the author of a *coup d'état*. Consequently the one fear which seemed to have much influence on the Extreme Left is completely laid to rest, and it remains to be seen whether any other motive will have at all a similar influence on their actions. Why, they will say, should we support the present Ministry? It is not a Ministry of our choosing; we are not represented in it; we do not like the measures it brings forward; we see no chance of its ever bringing forward any measures that we should like. What possible claim, therefore, can it put forward to our good will? and why should our votes be given where our good will is withheld?

These are questions which it is not at all easy to answer, nor are we at all sure that it is of much importance that they should be answered. There was a time when union in the Republican party was essential to the existence of the Republic, but that time came to an end when the administration of the Republic ceased to be in the hands of its enemies. From that time forward union in the sense of party organization became unattainable. The Republic used to be little more than a party within the nation. Now it is for practical purposes co-extensive with the nation; and the necessary consequence of this is that the divisions which used to exist within the nation may be expected to reproduce themselves within the Republican party. There is nothing to retain men as Conservative as M. DUFAURE and men as Radical as M. NAQUET within the same party limits. So long as they both wanted Republican government they might agree to put all considerations aside; but now that they have got Republican government, why should not each labour to get it administered after the fashion that he likes best? Union can be no longer maintained, except at the cost of surrender on the part of one or the other. Either the moderate party must give up what they think it essential to preserve, or the extreme party must give up working for what they think it essential to obtain. Nothing but dissatisfaction would be likely to come of such a compromise as this. It could breed nothing but mutual distrust and constant uneasiness. The fact that the Republic does embrace men of very different views, and that the word Republican implies nothing more than an opinion about a form of government, without any necessary agreement as to the objects which that Government should propose to itself, cannot be ignored any longer, and nothing is gained by trying to conceal it.

There is an important section of the Left which does not reconcile itself to this necessity. What is the need, it asks, of destroying the majority which has done so much for the Republic? A wise Government will rather do everything in its power to keep it together. It is the union of the several sections of the Left that has placed it in power, and it is to this same union that it should naturally and properly look for the support which is to keep it in power. It is mere Anglo-mania to wish to reproduce in the majority the division into Whigs and Tories. The circumstances of the two cases are altogether distinct. Parties in England have only each other to reckon with. There is no third party, hostile to the institutions under which it lives, and watching its opportunity to overturn them. This is the language of the *République Française*, and, but for one drawback, the argument would be entitled to great weight. This one drawback, however, is of a very serious kind. It is simply this—that the section of the Left which employs the argument is not in the least disposed to make the sacrifices necessary to make it applicable. Union between an advanced and a moderate party necessarily lasts but for a time, and while it lasts it necessarily depends for its maintenance on the forbearance of the advanced party. The moment that any specific change, whether constitutional or administrative, comes to be regarded by this party as indispensable, the motive for union no longer exists. That motive is always the conviction on both sides that the points upon which they are agreed are of more importance than the points upon which they differ. When some point upon which they differ becomes, in the estimation of the advanced party, of such paramount moment that it must be secured at any cost, the moderate party has nothing to gain by keeping up an unreal appearance of union. It would, in fact, be no longer a union; it would be a surrender. The position of the two parties in this respect is in no way identical. The advanced party, believing the future to be with it, has only to wait for the accomplishment of its end. The moderate party, existing as in a great measure it does to prevent the accomplishment of that end, can only co-operate with the advanced party on condition that this accomplishment is put aside while the co-operation lasts. When this condition is broken, it is plainly better for the moderate party to withdraw such strength as it can from the advanced party than to increase the strength of the advanced party after it has ascertained that this strength is to be used for purposes which it disapproves. The application of this rule to the French Left is obvious enough. The several sections of the party have hitherto been of one mind. They all wished to set the Republic firmly on its legs, and for a long time it took all their strength to do what they wished. Now the Republic is established, and the next question that presents itself is in what spirit it shall be governed. The moderate Left say, With as little change as possible; the advanced Left say, With a great deal of change, and especially with a complete change in such and such particulars. This is a very fair issue to raise, and it will be for the country to decide at the next general election which of the two views it wishes to see prevail. But the men who think certain

specific measures indispensable, and the men who think these alleged indispensable measures mischievous, cannot continue to work together. That is an object that can only be attained by the advanced party ceasing to think these measures indispensable, and consenting to postpone their execution. They may be quite right in refusing to make this sacrifice, but the union they want to preserve is plainly to be had on no other terms.

It may be objected that this reasoning leaves out of sight the existence in France of a reactionary party waiting to take advantage of Republican mistakes. Disunion in the majority will give this party an advantage, and it is consequently the duty of the moderate party to yield to the advanced party, provided that this is the only condition on which disunion can be averted. The general answer to this argument is that, if this process is once begun, there is no reason why it should ever stop. The advanced party would only have to hold out the threat of separation, and the moderate party must at once do its bidding. This is not union; it is unconditional submission. As regards France, moreover, there is a particular answer also. The Moderate Left are persuaded, rightly or wrongly, that the country, while sincerely attached to Republican institutions, is at the same time sincerely desirous that they should be administered in a strictly Conservative spirit. Consequently, what it will look for in its representatives is a determination to resist all attempts at administering these institutions in a Radical spirit; and, if it fails to find this determination in the Republican majority, it will be tempted to look for it in the reactionary minority. From this point of view few things could be more disastrous for the prospects of the Republic than the maintenance of union in the majority on the terms proposed by the advanced section of it. The whole majority would thus come to be regarded as infected with Radical ideas, and at a future general election the reactionary candidates would be enabled to present them selves as the only exponents of a Conservative policy.

THE IRISH FRANCHISE DEBATE.

THE debate on the Irish Borough Franchise was un satisfactory; and the division was a mere test of the strength of parties. If it were possible to estimate the sincerity of votes, it would probably appear that all the members of the majority thought the proposed extension of the franchise a bad thing, and that half the minority agreed with them; but almost all the opponents of Mr. MELDON'S Resolution, with the exception of Mr. LEWIS, hesitated to express their real opinions. Sir STAFFORD NORTHCOTE evidently intended to reserve to his Government the right of bidding for popularity at any future time by a concession which, however mischievous in itself, would be consistent with the legislation of 1867. When a Minister objects to a Resolution because it is not a Bill, and to a project of legislation because it is fragmentary, he probably foresees contingencies in which it may be expedient to change his course without a compromise of his consistency. Mr. FORSTER has earnestly supported every extension of the franchise which has been proposed in his time, and he would perhaps, like Mr. GLADSTONE, approve of universal suffrage. So ingenious a reasoner had no difficulty in finding special arguments for a conclusion which he would have accepted on general grounds. There are, according to Mr. FORSTER, three ways of dealing with Ireland; by identification of English and Irish institutions, by a deliberate maintenance of inequality, and by the method of Home Rule or insular independence. It follows, according to a certain kind of logic, that Liberal members who are not supporters of Home Rule must vote for the same borough franchise in Ireland which already exists in Great Britain. Symmetrical demonstrations produce little effect on the minds of serious politicians, but they provide a party with plausible reasons for concluding a profitable alliance. The Liberal leaders, who have lately repeatedly made overtures to the Home Rule members, eagerly welcomed an opportunity of showing sympathy with the proselytes whom they hope to win. Mr. FORSTER, with creditable candour, included in his statement of reasons for lowering the Irish borough franchise his well-known desire to extend household suffrage over the entire kingdom. Mr. LEWIS had pointed out the probability that, if Mr. MELDON'S Resolution were adopted, every cottager in Ireland would probably in a short time become a voter. Mr. FORSTER welcomed the cheerful prospect of a constituency which might perhaps at some future time become competent to discharge its duties.

The mischief of household suffrage in Irish boroughs would not be great, although it might be unmixed. It was stated in the course of the debate that ten or twelve Conservative members, probably of respectable character, would lose their seats; and a few Liberal members would be turned out to make room for more violent and less responsible successors. Mr. LEWIS said that the Protestants of Ireland would be deprived of representation, inasmuch as the lowest class in the boroughs almost always belongs to the Roman Catholic Church. He added that the influence of the priests would be proportionally increased; and Mr. FORSTER, while he doubted the accuracy of the conjecture, remarked that the influence of the priests was always used to promote family union, thrift, and morality. That it is also frequently applied to the encouragement of disaffection and of agrarian spoliation is a fact not inconsistent with the encouragement of domestic virtues. The private morality of the Irish people and of the Roman Catholic clergy has not been disputed; but Parliamentary electors are concerned with politics rather than with ethics. The householders of Irish boroughs would prefer a Home Rule candidate to a supporter of national unity; and, among those who nominally belong to the same section, Mr. BUTT would have no chance against Mr. PARNELL or Mr. BIGGAR. The House of Commons may perhaps survive a partial deterioration of its character; but the process, even on a limited scale, cannot be regarded with enthusiasm. The arguments of several of Mr. MELDON'S supporters might equally well have been urged in recommendation of universal suffrage. If it is desirable that every man should as soon as possible have a vote, there can be no doubt that in the meantime as many persons as possible ought to be admitted to the franchise. One or two speakers indeed dilated on the qualifications which adorn a householder who may probably be the father of a family; but equally graceful eulogies might easily be composed on the householder's sons and brothers and unmarried cousins.

Lord HARTINGTON, who has committed the Liberal party to household suffrage in English and Scotch counties, naturally spoke in favour of the same franchise in Irish boroughs. The party is of course not permanently bound by its concurrence eleven or twelve years ago in the establishment of the present franchise. Mr. GLADSTONE himself, who had emancipated the British compound householder, allowed Mr. CHICHESTER FORTESCUE to institute a different system for another state of society. At that time even the Irish members were not greatly shocked by the inequality which now moves their indignation. According to Mr. LEWIS, Mr. MELDON'S clients have not taken the trouble either to ask for the franchise by petition or to adopt any other kind of agitation; but Mr. LOWTHER was scarcely well advised in his reference to the supposed indifference of the lowest class of Irishmen. A similar challenge, imprudently issued by Mr. LOWE in 1866, was answered by Mr. BRIGHT'S advice to the mob to intimidate the House of Commons, and by the riot which is remembered in consequence of the destruction of the Hyde Park railings. It might be possible to organize similar disturbances in three or four of the largest Irish towns, though the population of most of the boroughs is barely large enough to furnish materials for a riot. Lord HARTINGTON raised the real issue in his thoughtful and just remark that in a Parliamentary Constitution the object is to obtain the most genuine representation of the community. His further inference that the greatest number of electors complies most fully with the required conditions was in itself unsound, and the theory pointed directly to universal suffrage. If Mr. LEWIS is right in thinking that household suffrage would deprive the Protestant middle class of electoral power, Mr. MELDON'S Constitution would be less truly representative than that which he wishes to supersede. It has been found by experience that a too select and too narrowly limited constituency is not qualified to represent the mass of the population; but the few represent the many more approximately than the rabble represents the respectable classes. The Municipality of Paris, which votes away the civic funds for the benefit of the incendiaries

and assassins of the Commune, is chosen by universal suffrage. No oligarchy of privileged citizens would be capable of committing a similar outrage. If the old-fashioned doctrine of constitutional checks and balances were in fashion, it might be plausibly argued that the most effective of all checks on tyranny is the separation of physical force from legal authority. Numbers offer a silent menace to minorities which abuse their power; but with universal suffrage all forces, material and legal, operate in the same direction.

When there is no sufficient reason for diversity, the presumption is in favour of uniformity; but before this rule is applied it would be well to ascertain that the circumstances are the same. Most of the Irish boroughs are themselves anomalies, intentionally created or preserved. The greater number would long since have been disfranchised if the same system had prevailed in Ireland and in Great Britain. Except in Dublin, Belfast, Cork, and three or four other towns, there is no urban population in Ireland; and consequently legislators have treated villages as if they were towns. The Irish members have, when the question has been raised, not injudiciously insisted on the maintenance of a distinction, which is perhaps arbitrary, between counties and boroughs. One of the consequences is that some of the most wretched hovels are to be found within the borough boundaries. As Mr. FORSTER observes, the establishment of the English borough franchise in Ireland would greatly facilitate the extension of household suffrage to Irish counties; and, when uniformity had been carried so far, it would be difficult to oppose the redistribution of electoral districts, and the consequent withdrawal from the boroughs of their separate right of representation. The result would not be absurd in itself, but it is probably not accepted in anticipation by Mr. MELDON and his Irish supporters. On the whole, the majority was probably well advised in rejecting the Resolution; but the promoters of the change have some reason to complain of the inconsistency of the House. The motion has been brought forward in every Session of the present Parliament, and it has been on two occasions only defeated by a few votes. The Ministers have now made it the subject of a regular party division, which might as well have been taken on an earlier occasion. Schemes of Parliamentary Reform, or rather of extension of the suffrage, may always be defended by reference to precedents. The same reasons were given for change, and the same objections were raised in 1832, and on all later occasions. Society has hitherto survived dangers which were seriously and not unreasonably apprehended, and some advantages have resulted from the latest and most questionable extension of the suffrage. Sceptical politicians who have feared that each addition to the constituencies would render the pressure from outside more irresistible by providing confederates within are not convinced by precedents. The best excuse for the introduction of household suffrage into Irish boroughs is that it would be a small measure.

MR. CROSS AND THE ARTISANS' DWELLINGS ACT.

AT the time when the Government was receiving at least its due meed of praise for passing the Artisans' Dwellings Act, we pointed out that, whatever might be the merits of that measure, there was a considerable danger that they might be neutralized by the absence of any provision for putting it into force. Mr. CROSS had chosen to assume that the municipal authorities whose powers it was intended to enlarge were burning to follow the example of Glasgow, and to set about rehousing their poor, as soon as the disabilities under which they laboured in this respect should be removed. He did not see that the parallel between Glasgow and other cities broke down in one most important particular. They, equally with Glasgow, had been at liberty to apply for a special Act of Parliament to enable them to make the desired improvements. But they had not, equally with Glasgow, made such an application; and it was not an unnatural inference that towns which had shown no desire to obtain the powers it was proposed to give them might not be disposed to use them when obtained. Mr. CROSS refused to believe that such a conclusion could be fairly drawn from the past inaction of the great towns, and determined to stake the success of his Bill on their readiness to carry it out. He disclaimed all thought of coercing the municipal authorities, and declined to contemplate the possibility of any such coercion being necessary. The Artisans' Dwellings Act was passed in the faith that it stood alone among laws, and needed not that any penalty should be imposed for disregard of its provisions. There have been, no doubt, some notable instances in which our forebodings have come to nothing. Birmingham, for example, has carried out the Act to the fullest extent, both in the letter and in the spirit. But there has been at least one equally notable instance in which those forebodings have been borne out. Wherever the Act may have been a success, it has been a complete failure in London, and in London the need for a measure of the kind is naturally greater than in any other city. In answer to a question put to him by Mr. HOPWOOD on Tuesday, Mr. CROSS had to confess his sorrow that he had no power to compel the Metropolitan Board to carry out the statute. The facts, as stated by Mr. HOPWOOD, certainly justified the HOME SECRETARY'S regret. The neighbourhood of Gray's Inn Road is one of the districts which stand most in need of that sweeping reformation which the Act contemplates. On Mr. CROSS'S reading of the dispositions of municipal bodies, the Metropolitan Board should have set to work to prepare a scheme for its improvement the moment that the Act had become law. They did so far bestir themselves as to submit such a scheme to the Home Office in the following year; but unfortunately this scheme proved so wholly, and even ludicrously, inadequate to the needs of the district that Mr. CROSS was obliged to reject it. Thereupon the Metropolitan Board washed their hands of the Act altogether, and devoted itself to the welfare of the more respectable element among their constituents. They did not, indeed, neglect the neighbourhood of Gray's Inn Road; but, instead of making it healthy for the poor, they confined themselves to making it more convenient for the well-to-do. In the pursuit of this latter object they were even willing that the last state of the poor in the district should be worse than the first. In order to widen Gray's Inn Road a large number of houses had to be pulled down, and the result of this was necessarily to make the overcrowding of those that remained proportionately greater. How much greater it has become may be judged by Mr. CROSS'S statement that, under the Bill for widening Gray's Inn Road, nearly the whole of the area included in the original scheme was destroyed, without any provision whatever being made for the housing of the inmates. So far as this part of London is concerned, the Artisans' Dwellings Act might as well never have been passed.

Upon the case as thus stated the HOME SECRETARY seems to have been to blame for not opposing the Bill promoted by the Metropolitan Board. If he had said in Parliament that that Bill, though dealing with an area which needed to be dealt with under the provisions of the Artisans' Dwellings Act, was not framed in accordance with those provisions, and did indeed aim at a wholly different object, and that on this ground he must ask the House of Commons to reject it, there is no doubt that the Bill would have been defeated. The Bill for the widening of Gray's Inn Road was, so to say, a sort of fraud upon the Artisans' Dwellings Act. It dealt with a district which had already been marked out as one in which there was urgent need for some remedy to be applied to overcrowding, and it dealt with it in a way which only made that overcrowding worse. A Bill of this kind ought never to have been passed; and, if the HOME SECRETARY had described it in its true colours to the House, it is certain that it never would have been passed. The Artisans' Dwellings Act gives the Government no power to enforce it upon unwilling local authorities; but when a local authority which has omitted to carry out its provisions comes to Parliament for leave to do something which positively conflicts with the Artisans' Dwellings Act, it is within the competence of the Government—and being within their competence it is, we submit, their duty—to move Parliament to withhold that leave. The Metropolitan Board have absolutely no title to the consideration of Parliament in this respect. They have grossly neglected the duties imposed on them by the Artisans' Dwellings Act. They have allowed the riverside districts of London to remain exposed to inundation, while they have been higgling as to who shall pay for giving them proper protection. They have persisted in bringing in a Bill the principle of which has been condemned by a Select Committee of the House of Commons, and which, as it has no chance of passing, is only valuable

as a means of staving off legislation on the opposite principle. A body which plays such pranks as these has no claim to anything more than bare justice at the hands of Parliament. Even if the Bill relating to the Gray's Inn Road district had been in itself harmless, it would still have been a question whether Parliament ought not to have rejected it by way of penalty for the neglect of the Board in respect of the Artisans' Dwellings Act. But when the Bill was not harmless—when, on the contrary, it aggravated the very evils which the Artisans' Dwellings Act had been framed to remedy—its rejection ought to have been a matter of course. It could only have become a matter of course by the interposition of the Government, and Mr. CROSS cannot be held blameless for not having moved in the matter.

This is not the only lesson which these facts may convey to Mr. CROSS. The Artisans' Dwellings Act has been tried and found wanting. It has broken down on the very point at which, when it was on its way through Parliament, Mr. CROSS claimed for it especial strength. It was to be the very crown and triumph of permissive legislation. The local authorities were to be left free to act, or not to act, as they thought fit; and Mr. CROSS refused even to imagine the possibility of their preferring to do nothing. The confidence he then displayed has not been justified. The greatest of all the local authorities, having regard to the area over which its power extends and the number of human beings living within its jurisdiction, goes on as though no such measure as the Artisans' Dwellings Act had a place in the Statute Book. It is plain that, if no change is made in the constitution of the Metropolitan Board, and no additional powers are given to the Home Secretary to enforce the Act, it will remain the nullity which in London it now is. It may be safely assumed that the Cabinet have no intention of taking up the thorny question of the government of London, and in that case the only way of mending the present overcrowded state of many parts of London is to insert in the Artisans' Dwellings Act a provision investing the Home Secretary with the power of doing, under certain conditions, the work which the local authorities ought to do, but sometimes do not do. Under an amending statute of this kind, the omission of the Metropolitan Board to submit a proper scheme for the reconstruction of the Gray's Inn Road district would only have worked a year's delay. The SECRETARY of STATE would have inquired whether any such scheme was in preparation, and, finding that the Board proposed to do nothing, he would himself have ordered a scheme to be drawn up, and—if the Board still refused to be the instrument of putting it into execution—to be carried out in due course. The knowledge that the SECRETARY of STATE possessed this power would probably be a sufficient guarantee against any call being made on it. The Metropolitan Board is not one of those petty local authorities which can trust to their own insignificance to hold them harmless if they leave their duties u performed. The fact of its having refused to obey an Act of Parliament would be so notorious that a Home Secretary would feel himself forced, for very shame's sake, to exercise the powers vested in him. The Board would be perfectly aware of this, and they would consequently take care not to push resistance to a point at which it would involve so serious an inroad upon their independence as the reconstruction of large districts in London over their heads would undoubtedly constitute. It behoves the Government to see to this question, because, judging from the speeches which were made from time to time during the recess, the Artisans' Dwellings Act is regarded by them as perhaps their greatest achievement in domestic legislation. Their list of passed measures is neither so long nor so brilliant that they can afford to let the Artisans' Dwellings Act remain the laughing-stock which it has become in London. All that is wanted is to make the Act the success everywhere that it is already in some places, and the only way in which this can be done is to create an authority which, in the last resort, can insist upon being obeyed.

A NEW PANCIROLLUS.

GUIDO PANCIROLLUS, an author more frequently quoted than read, compiled a book about the Lost Arts of the Ancients. The belief that the Greeks and Romans knew a number of things which the lapse of years and the invasion of the barbarians buried in oblivion was common in his time. In ours, perhaps, it is more usual in artistic circles to hope that the lapse of ages, or some new invasion of still undiscovered tribes of decent taste, may at last abolish some of the arts with which we are too familiar. A new Pancirollus, instead of deploring lost arts, would rather construct a catalogue of the arts which we could well afford to lose.

As science advances, and as the fancy of Mr. Edison becomes more and more prolific, the need of a new Pancirollus is, by many persons, more keenly felt. Within the last three years even, a number of fresh inventions have been made which threaten to render life more intolerable than ever to people of taste. The discovery of the microphone, for example, is a singular example of the perversity of man. The aim of every rational being is to lessen, if possible, the amount of noise and din in this bustling world. If science were truly benevolent, she would hit upon a simple instrument which should soften or suppress the vibrations of sound. An ingenious person is believed to have devised a machine which, being attached to the ordinary piano, enables that instrument to produce a noise equal in volume to that of a cathedral organ. The machine which people of sensibility wished to see invented is just the reverse of this musical affair and of the microphone. The "megalophone," if we may coin a term, ought to be of light and simple construction. It should be capable of being applied without inconvenience to railway-engines, babies, undergraduates, Home Rulers, and everything that loveth and maketh a noise. The megalophone would restore slumber to the eyes of people who live near railway stations and suffer from railway whistles. It would permit the dons of fast colleges to sleep in peace. It would impart a singular calm and harmony to political discussion. It would lull and soothe us as nothing else can, not even poetry, or the aspect of the mountains and the sea. When all this is so obvious to the meanest capacity, what does science do? She patents the microphone, an instrument by aid of which you can hear the sounds to which nature had mercifully made us deaf—the thundering tramp of the house-fly's feet, the yell with which a beetle meets his doom, the surge and thunder of the pulse in the veins of a human being.

The microphone is doubtless one of the first inventions that the Pancirollus of a new æsthetic age would wish to inscribe in his *Liber Rerum Deperditarum*. There are dozens of other inventions which it is at least as desirable to forget. Mr. Ruskin, indeed, would probably put railways, telegraphs, the printing-press, and the art of binding books in cloth covers, with that of half-binding them, into his black book. Sir Wilfrid Lawson and his friends would gladly see the arts of the distiller, the brewer, the fermenter of the juice of the grape, pass into the condition of encaustic painting, of the Tyrian purple, of Greek fire. If every one who chose to proscribe an art had his way, from the inmates of the casual ward in a workhouse, who heartily regret the invention of soap, up to the British mariner, who detests ironclads, we should be reduced to something very like the state of nature. Such extreme simplicity is not desirable, especially in our climate. Perhaps the shortest way of coming to an understanding about the arts which it would be well to lose is to examine Pancirollus's schedule of the arts which are lost already. For many of his *res deperditæ* we have some unhappy equivalent, which posterity, let us hope, will only know from fragments of ancient newspaper advertisements.

Pancirollus writes first of all about the Tyrian purple, "the king of colours," as he calls it. Purple was made, by some unknown process, from a certain shell-fish; and our author well observes that the species is not likely to have become extinct. It is only men that have forgotten how to deal with the crustacean. "Syria and the other countries where the shell was found have fallen into the hands of the Turks and of other barbarous and uncultivated races." In the proud position of purple, which heads Pancirollus's scheme of things lost, we might place magenta, which, of all aniline dyes, it would be most agreeable to lose. Unhappily the "barbarous and uncultivated races" which once knew not aniline dyes have fallen in love with them, and the pious Bonze kneels on a rug streaked with mauve, while the skilled Japanese daubs his fans with the hue which is fancifully supposed to overspread the face of *Bismarck enragé*. Even if our feelings as patriots could permit us to welcome a barbarian invasion (and there is no saying to what lengths patriotism will go), nothing would be æsthetically gained.

The art of encaustic painting is the second in the catalogue of Pancirollus—a method by which colours were burned in, by aid of melted wax, so as to be imperishable. The history of the solitary example of this art which has reached our time is curious. On the marches of the territories of Cortona and of Montepulciano there is an estate called La Stella, belonging to a family called Tommasi. In the year 1732 some ancient statuettes of bronze were found on this farm, and with them a painting on a tile or smooth stone. This painting fell into the hands of a peasant, who at first took the female head for that of a Madonna. On discovering his error he cut off the upper part of the tile, and fixed what remained into an inconvenient hole in the wall to keep the wind away. Here Giovanni Tommasi found the very beautiful and singular work of a lost art, which has successfully defied damp and heat to destroy its brilliancy, and science to discover the technical method of its colouring. It is pleasant to dream of a distant future when some peasant of a truly æsthetic age shall discover in some ancient chest the very last chromolithograph. We can imagine the horror of the worthy man—his first impulse to destroy the glaring and perishable object; his second, perhaps his less

sagacious, impulse to hand it over to the Committee of the Grosvenor Gallery, which shall have taken the place of the Royal Academy. We can fancy the curiosity of thinking men, their surprise at the barbarous arts of their ancestors thus unexpectedly revealed, their inability to conceive the method of chromo-lithography, and to understand the taste to which it appealed. May they be as unsuccessful in their guesses as our archæologists are in their attempts to revive the encaustic art!

When Pancirollus writes *de aurichalco*, "a metal made of brass, which was partly like gold," we cannot escape the sad thought that perhaps *aurichalcum* is not lost at all. Pliny, to be sure, says that for many years it has been impossible to obtain any *aurichalcum;* but then it was Pliny's business to make more mistakes than the facts seemed to admit of, and to be eternally in the wrong with perverse ingenuity. Martianus, who lived in the time of the Emperor Alexander, certainly mentions the substance, and, even if it has been lost, the race of jewellers *audax omnia perpeti* has discovered it again. There can be little doubt that *aurichalcum* is the stuff out of which the majority of wedding presents are made. It appears in clocks, photograph cases, candlesticks, letter-weights, ink-stands, everywhere, *metallum ex aere, quod auri simile.* Speaking of wedding presents reminds us that Pancirollus describes the wedding ceremonies of the ancients among "things lost." They were certainly rather appalling, and it is no wonder that the Romans were obliged to pass laws making wedlock compulsory. Brides may be congratulated on the fact that it is not any longer thought necessary to comb their hair with the point of a spear; while the bridegroom has escaped the necessity of stuffing his pockets with nuts. The new Pancirollus, however, will find many bridal customs to proscribe, such as wedding-breakfasts, bridesmaids (with their lockets), speeches, and other annoyances too numerous to mention. If Pancirollus deplores the loss of certain precious stones, such as *Achates*, it must be remembered that he had not to regret the discovery of gutta-percha ornaments. If he sighed over the decline of the old Arena and the *Ludi Circenses*, he did not survive (he would have been about four hundred years old in that case) into the age of Mr. Weston and long-distance walking. The art of going round England on foot and of being hustled and kicked by the roughs of every large town is peculiarly modern, and peculiarly worthy of a place in the list of the successor of Guido Pancirollus. Where the mediæval writer regretted the *ludi veterum*, the new one would condemn the art of modern burlesque. Where Guido bewailed the old Roman roads and the *curatores viarum*, his imitator would denounce the tramways, the Vestries, the ingenious persons who wish to add the horrors of steam to the noise and tumult with which tramway-cars make the roads hideous, and the rails with which they render them inconvenient and dangerous. To the statues of mosaic work, which Pancirollus is anxious to restore, he would oppose the statues of London, which many are eager to destroy. In place of asking for more triumphal arches, he would pray for the removal of those more mutable advertisements, the monstrous and many-coloured sheets which decorate or disfigure every hoarding.

The dispute between the two Pancirolli, on the whole, is very like that between Themistocles and the man with the short memory. The latter wished to remember, the former to forget. If modern civilization goes on as it is doing, if it still strives after more noise, more glitter, more bustle, more machinery, while modern "culture" becomes more melancholy, lachrymose, and retiring, we may ultimately construct a strange and not comfortable world of opposites. It will be time to lose all the existing arts and begin afresh from the state of nature. The poets will all have retired into hermitages, and will only, in their dread of cruel criticism, whisper their effusions to the nettles of the grave-yards. The painters will practise in cellars or catacombs, lest perchance Mr. Ruskin come by and speak his mind. The musicians will have become so sensitive that they will only touch silent pianos, or merely take an intellectual pleasure in reading scores. Meanwhile, rampant Philistinism will have placarded every house with advertisements of cough mixtures and patent matches. Ormulu and gutta-percha will be, in jewelry, the only wear. It shall be a criminal offence to read Greek. Trains elevated to the level of the drawing-room floors shall run whistling through the ambrosial night every quarter of an hour. Widowers shall be compelled to marry their deceased wives' sisters. The march of progress will have reached its goal; material civilization will have become complete and unendurable.

THE FÖHN.

A MONTH ago English lakes were frozen, Scotch railways were blocked with snow, and Londoners were rejoicing, let us hope, in the realization of a conventional winter. To some persons the severe weather suggested a flight to regions where existence of the sun had not become a matter of dim tradition. To others, and, for the nonce, let us say more virtuous, persons it appeared that an admirable opportunity was presenting itself for seeing true winter in the region where winter should be most imposing. Newspapers had announced that the winter was so severe in the Jura that herds of wild swine were descending into the villages; nay, it was said that wolves had presented themselves at railway stations. It was impossible not to feel some pity for these unfortunate animals, driven, it would seem, to eke out their miserable existence by picking up the remainder biscuit at a buffet. One could scarcely grudge them a stray porter to relieve such a diet; but it might be hoped that no danger would result to passengers if the windows of the carriages were closed, and there was little temptation to open them in such weather. In fact, neither wolves nor wild boars presented themselves. And so it came to pass that the January sun rose one morning upon a small party of tourists and guides breaking their fast upon a lofty ridge of the Titlis. Though in mid-winter, and at a height of some eight thousand feet, the travellers were seated upon a patch of grass, and the cold was not sufficient to cause any discomfort. During the remaining climb of some two thousand five hundred feet, which was rendered laborious by the quantity of snow, they complained a good deal more of heat than of cold. But the view had already a strange beauty which would have reconciled them to anything short of downright bodily pain. To all appearance they were looking over a vast ocean. It is only at a very few points where high mountains approach the shore that any such view can be gained of an actual sea. Far away in one direction was a group, as it seemed, of purple islands, representing the higher ridges of the Black Forest. The Jura, on the West, looked like a vast promontory, a "Land's End," running out far into the waters from some hidden continent. In the landward direction it retired behind some of the mountains—green pasturage for the most part in summer, but now savage wastes of snow except where broken by precipitous rock—which rise south of the Lake of Lucerne. Such a picture may present itself occasionally in Arctic seas, where rugged peaks rise steeply along the coast. The illusion was strangely perfect, for the so-called sea was as uniform and apparently consistent as though it had been genuine water, and the play of light and shadow exactly mimicked the grey and purple stretches of the ocean-flow seen on a misty day from some prominent headland. To realize the fact that it was nothing but the upper surface of a vast mass of vapour, covering the whole lower country, for hundreds of square leagues, it was necessary to look at what ought to have been the coast line. The valley of Engelberg might have represented a deep fiord running into the high country. But, here, where the cliffs should have dipped into level water, the cloud ocean terminated in light feathery mist, wandering vaguely through the higher zones of pine forest. Thus sunlight and a moderate degree of warmth might be enjoyed by any one at a height of some three thousand feet above the sea; for that was about the upper level of the mists; whilst the dweller in the plains looked up to a dreary roof of vapour and was exposed to the bitter cold of a genuine winter.

Such weather as is implied by these conditions lasted for a considerable time in Switzerland; and it may be well for travellers to bear in mind the probability of such a combination. Travellers, it is true, are scarce in the winter Alps, though the growing popularity of Davos shows that they have a real charm even at this season. The highest peaks, indeed, lose much of their beauty; the uniform snow hides the glaciers; and they no longer stand out in solitary majesty above the inferior ranges. They are, strictly speaking, accessible; for an English lady ascended Mont Blanc in January two or three years ago, and an American gentleman climbed the Schreckhorn this year. The snow does not, as a rule, gather heavily upon the higher and steeper ridges, though here and there it makes them more dangerous; and the main objection to high ascents in the winter is that the long cold nights enormously increase the discomfort of sleeping out. But moderate walks are perfectly easy, and have a peculiar charm of their own. Huge cliffs draped from base to summit with vast curtains of icicles, pine-forests lapped in their becoming dress of white robes and grotesque mittens, harsh lines softened by the graceful contour of a snowfield, the monotonous greens changed into the exquisitely delicate hues which the snow alone can display—these and other charms peculiar to the winter season often give it a clear superiority to the summer. The form of a broad mountain valley seems to be more delicately modulated when every rock or chalet is hidden under a gentle dome of snow; and, as a prismatic cloud passes over the sun, the vast undulating surface suddenly arrays itself in a shifting play of colour as brilliant and subtly blended as those of an opal. Nor is there any serious difficulty as to material comfort. The snow may form deep drifts and lie in continuous masses up to a considerable height, but communications are kept open or rapidly restored after a fall; innkeepers are more hospitable than in the season; and paths are trodden, not only to the highest dwelling-houses, but up to the forests for the convenience of the woodcutters. If, above this point, the traveller has to wade kneedeep or waistdeep in snowdrifts, and to be careful in avoiding the possible tracks of avalanches, the lover of scenery will hold it a small price to pay for many new sensations.

But we have not quite done with the Titlis. That respectable mountain is peculiarly easy of access, as is proved by the fact that it was climbed early in the last century. The early climbers had not that severe hatred of all exaggeration which is the prominent virtue of their successors; and, not content with declaring the Titlis to be the highest mountain in the Alps—and that with the giants of the Oberland frowning right over their heads—they added the picturesque circumstance that when they were on the summit they saw a huge valley of ice stretching from their feet the whole way to Mont Blanc. We would hope that the solid Archdeacon Coxe, to whom we owe this detail, may have slightly misunderstood his informants. The view, however, is a very fine one, though stopping a little short of "Jerusalem and Madagascar"; but, on the occasion of which we are speaking, one

part was strangely obscured. Northwards the sky vault above the ocean of mist was pure and stainless. Scarcely a breath of wind whispered round the highest rocks. But the huge mass of Oberland peaks, generally so conspicuous, was blurred and indistinct. There was no positive or defined cloud; and yet, if one gigantic form loomed into distinctness for a few seconds, it presently disappeared into mysterious shadows. It seemed as though great tracts of the atmosphere in that direction were somehow ceasing to be transparent, and changing into an opaque and formless white. The meaning of the phenomenon was simply that the Föhn—the warm south wind, hated by mountaineers, and with better reason than they can assign for some of their hatreds—was breathing upon that region like the blast from a furnace. A violent wind in the mountains is not amongst the risks ordinarily taken into account. What passes for a very moderate gale by the seaside is a rarity in the Alps. A *tourmente*, however, when it blows across an exposed ridge or down a gulley in the right direction, is no joke; its influence is disastrous, though its area is limited; and such a vague blur as now showed itself upon the Finster Aarhorn was all that appeared upon Mont Blanc when eleven travellers and guides were bewildered and frozen to death upon the Calotte. Doubtless such a storm in winter might be a still more dangerous enemy; but, in the lower regions, the influence of the Föhn is of a different kind. It had already been blowing for some days when it thus blotted out part of the view from the Titlis. It announced its unwelcome presence one morning by whistling in a disagreeable and petulant fashion round the eaves of that most desirable winter quarter, the "Bear" at Grindelwald. The same afternoon the whole of the long valley which descends from the Scheideck to Meiringen was sensitive of its presence. High up, beneath the huge cliffs of the Wetterhorn or Wellhorn—the cliffs which have been painted till the view has become almost tiresome in its familiarity—the snows were still externally as pure and beautiful as ever. The glades through the pine forest were still exquisite under the undulating snowbeds; the basins scooped by the wind under the huge trees and the domes above the scattered boulders were as perfect as ever. But the snow itself had suddenly changed its consistency. It was in the condition dear to schoolboys who want a match at snowballing. It caked into heavy masses with surprising facility. To wade through it was as troublesome as to walk through honey; great balls gathered round the ends of alpenstocks like the lumps of molten iron which a puddler draws out of a furnace; and, after crossing the well-known plain below Rosenlaui—that plain where, as Mr. Ball says in his Guide, it is usual to see several artists engaged in the hopeless but exciting task of painting the Wetterhorn—a ghastly change was revealed. What is to be said of a journey from London to the Alps in search of the perfection of winter when the winter has, so to speak, slipped through one's fingers? "Où sont les neiges d'antan?" as the poet pathetically inquires. All gone away in *die Ewigkeit*, like Hans Breitmann's party; or, rather, changed into a vile collection of sloppy dirty puddles, slowly trickling down the hillsides into the rushing and rapidly swelling Aar. Alas! here was a wretched compromise between winter and summer; no snow, but also no verdure. The hillsides for many hundreds of feet have discharged their burden; the snow has slid off them in great sheets, forming small avalanches; the grass below is withered, and looks as though it had been scraped with a harrow. The icicles are rattling down by tons at a time off the black rocks' faces above the Reichenbach. Up in the Urbach Thal, beneath the giant cliffs of the Engelhörner, a perpetual cannonade is going on. The frost has been ornamenting them all winter through by its delicate lacework wherever a thread of water trickles across them in summer. Delicate as it looks it is massive enough in reality, and now it is descending in avalanches to the valley; and at every minute a small puff of powder is followed by a loud report, echoing far and wide along the flanks of the mountain.

In fact, the valley of Meiringen is a funnel so placed that the Föhn blows down it from the Grimsel with peculiar vigour. When it had been completely bared of snow, it was only necessary to cross the low pass of the Brünig, which diverges at no great angle but is protected by a mountain-ridge, in order once more to come into the unbroken reign of winter. But Meiringen in the midst of winter is parched by the hot wind; the roofs of the houses have discharged their burdens of snow; every gutter has become a stream; and the stranger imagines that the torrents which descend by the town and which the inhabitants have been embanking with laborious patience, are likely to overflow and cause fresh mischief. The real danger is of a different kind, and the traveller is soon informed of the fears of the inhabitants. If he walks into the street smoking, he is warned at once that to smoke during the Föhn is a punishable offence. If he asks for fresh bread at an inn where all other comforts are provided, he is told that the baker has not been allowed to light his fires whilst the dangerous wind is blowing. The village is, or rather was, constructed entirely of wooden houses, and when they are parched and a steady wind blowing, it is obvious that to set a stray spark flying may be in reality to set fire to a prepared train of touchwood. He acknowledges the reasonableness of strict regulations. He feels rather glad to get out of a place in which so constant a danger seems to be always present to the minds of the inhabitants, and yet he imagines that where so much care is taken the danger can hardly be serious.

Unfortunately we have heard within the last few days that at last the care has been fruitless. There were few more picturesque villages in the Swiss Alps than Meiringen, and it is dear upon many accounts to innumerable tourists. A large part of it is now a mere heap of ashes, and many families of an industrious population are homeless and ruined. Switzerland, too, is suffering like other places under the prevalent distress; and the woodcarving which is the staple employment of the valley is of course one which suffers very quickly where people have to retrench superfluous luxuries. The moral which some people will draw will doubtless be that the inhabitants of a valley exposed to the Föhn ought not to live in wooden houses, placed carefully end to end in the direction of the wind. It is certainly to be hoped that that reflection will suggest itself to whomsoever it may concern when the village is being rebuilt. But it may also be worth saying that the present race has been only doing what its forefathers have done for many generations, and that it has certainly not been reckless in the sense of neglecting any feasible precautions, except that of entirely rebuilding its houses. And perhaps so thinking, they may, if they are lucky enough to have superfluous funds, bestow some slight fragment of them upon the sufferers from this very serious catastrophe.

TURKISH REFORMS AND INDIAN SETTLEMENTS.

WHILE some partisans indulge sanguine hopes of the ultimate conversion of the Turk, and others talk of him as an irreclaimable savage, it may not occur to either party to discuss seriously the practicability of the reforms pressed on the Porte by Lord Salisbury through our Ambassador at Constantinople. As we lately remarked, they are three in number. First, there was to be a new gendarmerie or police. Next, the judicial tribunals were to be improved. Lastly, the collection of the revenue was to be placed on a sound footing. While the present Foreign Secretary very properly indented on his knowledge acquired at the India Office, we wonder that he did not propound remedies for the evils of Turkish rule in the exact order in which they would have been enumerated by several of the able administrators who compose the Indian Council. No student of recent Oriental history, no district officer from the Punjab, Oudh, or the Central Provinces, need be reminded that, after annexation or conquest, the very first thing to be done was to make a "land settlement" of the province. The maxim dates from our occupation of Bengal. It was the measure to which attention was given by Verelst, Hastings, and Shore before they thought of other improvements. As our Empire increased, revenue always took precedence of police-stations and judicial courts. We may affirm without exaggeration that revenue reform is a condition indispensable to every improvement, as well as to the very constitution and well-being of Oriental society. It may almost be said that everything is at a deadlock and that nothing will go on, well or ill, till the revenue has been assessed. Unless the cultivator knows how much he will have to pay, how often the tax-collector is coming, and what is the security for the possession of his fields and the quiet enjoyment of the fruits of his labour, it is perfectly useless to talk to him about sending his children to school, or having the benefit of just laws and equitable tribunals for the vindication of his rights. A proper settlement is the first condition of good agriculture. In Egypt and in Turkey, just the same as in India, without a definition of the amount claimable by the State, of the mode in which that amount is to be levied, and of the period within which no additional increase will be demanded, it is a mockery to fill pages with budgets and allotments, with apportionments of revenue and payments of loans.

The process of collecting the land-tax hitherto customary in Turkey may be gathered from the accounts of travellers, the reports of consuls, and the revelations of Blue-books. A tithe-collector, with a small army of familiars, swoops down on the villages at harvest time, and, with delay and inquisition calculated to drive a less enduring population to revolt or madness, collects the proportion due to the State, and as much more as will make the operation profitable to himself. Into this system is yearly crowded the utmost possible annoyance to the cultivator with the least proportion of profit to the State. When Sir H. Layard, acting on Lord Salisbury's instructions, pressed Safvet Pasha to abolish such an odious system, he was met by plausible objections to the effect that tithe collecting in kind had been in vogue with the inhabitants from time immemorial; that there had been no regular survey of the land, and consequently that there existed no basis for substituting a money payment; that the feeling of the villagers was against the change; and that the Greek Government had in vain attempted it. To make a Turk adopt a beneficial reform may be harder than to convert a Pindaree into a cultivator or to staunch a blood-feud amongst Pathans. But the objections could have been, at least, met by illustration and example. When the Punjab was annexed, just thirty years ago, it was found that the Sikh Government had been similarly in the habit of collecting its dues in kind from a large area. The State demand never exceeded one-third of the crops, averaged one-fourth or fifth, and sometimes fell as low as one-eighth. For the better kinds of produce, such as sugar cane, tobacco, and vegetables, and in rich localities secured against climatic vicissitudes by irrigation, the revenue was taken in money. Practically the Sikh authorities were considerably ahead of Turkish

Pashas, inasmuch as out of a land revenue of 1,330,000*l.*, about 900,000*l.* was received in kind, about 180,000*l.* was paid in money direct by the cultivators or communities, and the rest was farmed out. The first step taken by the Board of Administration was to commute the payment in kind for payments in money, and to consolidate every separate item of collection into one aggregate sum. The immense quantities of produce, be it remarked, which under the Sikh system came into the possession of the Government, of course found their way to the market. The Sikh Durbar retained what it required, and sold the rest through its officials to grain-dealers and shopkeepers in the bazaars. But the Board of Administration had no need whatever, with a view to the introduction of money payments, of a *cadastre* or a regular survey, and it is clear to us that Sir H. Layard, with the most honest intentions, was ignorant of the marked distinction drawn by Anglo-Indian Commissioners between a Regular and a Summary settlement. The latter can be carried out in the first year of occupation, from such rough and ready data as active officials going about the country can collect from headmen, tenant-proprietors, and village accountants. They take circles of ten or twenty villages in a lump, call the elders together, compare their stories with such records as are available, test both by ocular inspection of the state of agriculture, take into account the rainfall and the facilities for irrigation from rivers or wells, and then strike an equitable balance. Nothing like a survey or a measurement is attempted. No record of rights is even commenced. Possibly a boundary squabble or two may be adjusted. But the great thing is to let the agricultural community know that for a certain period, say three or five years, no enhancement will take place. The vexatious process of appraising the growing crop or dividing it just after harvest is at an end. Arrangements are made for the payment of the whole tax due from one or more villages, through certain responsible persons; and the yearly visitation of official locusts is forbidden. Such are the main features of an Indian summary settlement; and with honest hard work by the local officers and judicious supervision by Commissioners and Boards, it has generally succeeded, though grey-bearded Sikhs and sturdy Jats may at first be loud in their protestations that the heavens are of brass and the soil of iron, and that they and their posterity will be irretrievably ruined. But another notable feature of the Indian commutation of tithe and settlement for a short term is that this reform invariably leads to a reduction of the Government demand. In some instances it is as much as fifteen, twenty, and even twenty-five per cent. Orientals have tolerated, and even liked, an annual appraisement, because, whatever the harvest may be, the State can only take its share—one-fifth or one-sixth—of the crop. When payments are fixed for a term of years, and the produce has to be converted into money for such payment, it becomes indispensable to lighten the incidence of taxation. Besides, as security increases and cultivation extends, prices naturally fall, and, unless trade revives and exportation follows, a community might produce more than it could consume or sell. But there is no doubt that a fair summary settlement is the foundation of all progress and contentment; and when Safvet Pasha talked about surveys and registers, he ought simply to have been told that the rough assessments must come first, and that the record of rights would eventually follow.

Now, in applying this process to Turkey, it must not be forgotten that it has to be introduced by more imperfect instruments than Anglo-Indian collectors, and in the teeth of more powerful obstacles than Sikh despotism or Mahratta misrule ever bequeathed to a vigorous and benevolent Viceroy. For a new or neglected province Lord Dalhousie or Lord Canning had the pick of the service; men with the rights of communities at their fingers' ends, tried in various emergencies and found equal to all. There was an overwhelming military force ready to back the civil power. The best intentions were supported by the most irresistible arguments. Money was never wanting for improvements or advances, and if a new province disappointed the calculations of sanguine financiers, the deficit was easily made good from the older parts of the Empire. In short, the Anglo-Indian administrator brought to his task every element of success; personal integrity; the triumphs and the mistakes of his forerunners in other provinces; knowledge of languages and customs; judicious correction whenever he erred, as well as hearty encouragement whenever he succeeded; and, above all, that obvious reliance on a mysterious, inscrutable, and resistless Government to which Oriental apathy and indifference must at last yield. Still there is not the slightest reason for desisting from the attempt. The Turkish peasant is described by those who know him best as simple in tastes, hardworking, obedient, and occasionally not disinclined to speak the truth. It seems absurd to say that such men should be eternally doomed to see their lands impoverished, trade paralysed, and everything around them torpid and inactive except the extortions of the tax-gatherer. We have more than once said that Egyptian finance would never be improved till the Delta of the Nile was "resettled"; and we now learn that a competent Indian civilian has at last been selected for this obvious duty. In Egypt there exists a personage known as the *Sheikh-al-Bilád*, or Head of Villages, whose knowledge and experience must obviously be enlisted on the side of order and reform. If such a functionary, or anything approaching to him, is not to be found in the Turkish provinces, he had better be created or invented. At any rate an attempt must be made to select some man from the village less downtrodden than his neighbours, to explain to him the cardinal points of a Summary Settlement, and to give him, if necessary, a council of elders to carry out the terms agreed upon. The period of ten years suggested by Lord Salisbury appears to us just twice too long, and even a settlement for three years would be more in accordance with precedent. Difficulties and obstructions of course there will be, but mediocrity succumbs to difficulties, while ability triumphs over them. One of the most serious obstacles may be the actual deficiency of current coin to meet a recurring yearly demand. But plausible objections and vague phrases should be met by showing practically that villages can be included in circles; that an average of two or three years can be struck; that what is deducted at first will be eventually recovered, while everybody except the tithe-collector will be the immediate gainer by the adoption of the first rudiments of social order and progress. A special province or Vilayat might be selected for an experiment.

To explain the details of a Regular Settlement would at present be to offer the Turk strong meat instead of milk. When the summary process has been once introduced, materials for the more elaborate scheme are gradually collected. Sometimes in India only three or four years elapse before this is done. Sometimes the first settlement is renewed again and again, and outlasts a generation. Meanwhile one set of officials is making a scientific survey of every village and of all the geographical features of the province, while another set measures every separate field and forms a correct estimate of its productive powers. The result of this seemingly inquisitorial process is that boundaries are demarcated, proprietary rights are recorded, exemptions in favour of individuals or religious endowments are recognized, registers of the status, privileges, and duties of every class are completed, quaint customs are noted down, and this huge amount of toil assumes the triple shape of a landowner's rent-roll, a county history, and a Domesday book. No one of course need dream of this for Turkey for the next generation.

After the revenue may come the police; and we should anticipate more difficulty in raising, in properly paying, and in controlling an agency for the detection and repression of crime, than in coaxing the population into a reform of the land-tax. A policeman badly remunerated, and left to act at times for himself, may be only the tithe-collector in another shape. It has been found easier in India to sweep away vexatious cesses, to record agricultural rights, and even to fill the bench with native judges of capacity and integrity, than to select policemen who will not abuse their powers. In some of our provinces the police force has only been reformed during the last fifteen years, and every Anglo-Indian administrator can quote instances that have come under his own notice where a policeman has taken a bribe to conceal a crime, or has had recourse to something like torture to detect it. But as the Porte undertakes to organize a corps of gendarmerie and to appoint foreigners—which, we hope, means Englishmen—to exercise supervision over it, we have nothing more to say at present about this particular subject.

The judicial reforms proposed by the English Government at first took the following shape. It was suggested that central tribunals should be established in important Asiatic towns, in each of which there should be a European officer, "whose consent should be necessary for every judgment." In answer to this Safvet Pasha used the kind of argument which has been repeatedly used by Indian administrators against the employment of English "barristers of five years' standing" as district or zillah judges in India—"They would know nothing of the native laws, languages, and customs"; and, though we have read the Blue-book carefully, we fail to obtain the slightest hint as to what was to happen when a righteous English judge "refused his consent" to some outrageous decision of an obstinate Kazi or Moulavi, trained to look on the evidence of Káfirs in the strictest spirit of the Koran. Are the minutes of dissent to be published? or is the necessary decree to be postponed indefinitely? or is a superior court at Constantinople to teach the erring members of the subordinate Bench the first rules of evidence and law? Instead of judges of co-ordinate or superior power, Sir H. Layard proposes the appointment of peripatetic inspectors, who should visit the provinces, receive complaints, and generally keep an eye on judicial proceedings. Supervision, though it may horrify a barrister accustomed to talk of the independence of judges, must be exercised in some shape or other; and, if this cannot be done by an appellate judge, it must be left to the executive power. Even in India, as was argued in the celebrated Fuller case, similar executive interposition may become imperative. Another version of this reform is, however, suggested in these papers. The Porte has, in principle, accepted the Foreign Jurisdiction Act, which admits of the establishment of a court of commercial appeal in which English and French judges should have seats. But, while such a tribunal has been created by the Khedive at Alexandria and works well, the Sultan has hitherto refused to put the Act in force. It seems to us that, whatever may be the views of the obstructive party at Constantinople, this is precisely one of the reforms on which we ought to insist. Very likely the only way in which the administration of justice can be improved in such a country is to begin at the top. For years in India it has been a common complaint that the judicial element is strong in the highest and weak in the lowest courts. But this was unavoidable, though it is now being remedied.

It appears to us that we have ourselves a good opportunity of showing the Turk how the police can be reformed, the revenue equitably collected, and the judgment-seat purified. Let us begin all this work in Cyprus. To judge from some speeches and leading articles on this point, the public does not quite understand our position in that island. As there has been no permanent or formal cession of his sovereign rights by the Sultan, every executive act

of ours must legally be done under powers held directly from him. We are simply the delegates of Turkish authority. We may of course refrain from barbarous punishments, suspend oppressive laws, remove gross abuses, and carry out practical reforms, but we are, after all, only the Turkish rule in a better shape. Unless we are that, we are nothing, and can have no authority whatever in the island. We even go so far as to say that, constitutionally, the Lord High Commissioner might, as the representative of Turkish power, choose between the retention of the bow-string, the sack, and impalement, and the introduction of trial by jury. The case is simplified as regards reforms in Cyprus by the fact that we have not a Turkish Pasha but a high English official at the head of the administration, and that while he will not defer to absurd Turkish prejudices on the one hand, he need be in no hurry, on the other, to give the islanders some ridiculous caricature of representative government. But, under the Foreign Jurisdiction Act, he may create two or three model tribunals; he can discipline, pay, and organize a police force; and he can certainly order the revenue to be collected on a system that commends itself to experience and sound sense. To restrain the reckless system of tree-felling and to drain marshes and construct roads may be equally feasible. And when the time again comes for an English Minister to urge these measures on the Porte through his representative, his arguments may derive additional force if he can refer to Cyprus as a positive success, instead of to India as a distant analogy.

A QUIET DAY AT HOME.

It is possible that much of what is said about the restlessness and bustle of modern life may be exaggerated; but nevertheless there can be little doubt that most people, be their occupations connected with business or pleasure, have an occasional longing for a quiet day at home. It does not necessarily follow that the wished-for quiet day would, when obtained, be devoted to absolute rest; indeed it is likely enough that it might be destined for study, or the arrangement of private affairs; but, whatever the way in which the person might desire to spend it, he would wish to have the time to do exactly as he likes with, just as a boy likes to have a sixpence which he can call entirely his own. Men with large incomes often complain that, after estate improvements, servants' wages, and tradesmen's bills have been paid for, they have very little money left to spend, as they call it, upon themselves; and, on much the same principle, men who are in no profession, and whose time is apparently at their own disposal, have often reason to lament the want of a quiet day at home. The so-called idle man in the country, for instance, not unfrequently longs for a day to himself, with no special business or pleasure previously allotted to it—a day on which he will not be expected either to amuse or to be amused, to attend a county meeting, pay a visit to his lawyer, stay at a friend's house, or entertain guests at home. When there is a prospect of such a day, he thinks that he will thoroughly enjoy himself; he will read the best articles in the magazines—possibly he may write one; he will glance over the novels which are most talked about in society; he will refresh his too practical mind with a little good old poetry; he will go on with the picture which he has not touched for a couple of months; he will have an hour or two's practice on the piano or harmonium, do a little carving, and balance his accounts. The plan for the new buildings shall be sketched out, the boys shall be given a riding lesson, and a quiet walk shall be taken with his wife. The only likely drawback to the day will be its length, as there may be a part of it in which there will be nothing to do, and boredom may have a battle with the much wished-for *dolce far niente*.

Such is the picture of the quiet day at home, as drawn in anticipation. When it arrives, it brings with it a delightful sense of spare time, accompanied with a disinclination for early rising. An extra hour in bed helps to get rid of some of the superfluous time; and even if a man gets up early, he is apt to find that the stern regularity of his household arrangements—post-bag, prayers, breakfast, and the intervals between them—dispose of a good deal. On ordinary days the necessity of an early start to catch a train, to attend magistrates' or other county meetings, or to reach some rendezvous of sport, usually procures him exemption from the formal morning routine of his well-conducted family; and to a man accustomed to sit down to a free and easy breakfast, followed by an early start, with a cigar in his mouth, in search of pleasure or business, the protracted ceremonies of a regulation family morning are likely to be slightly depressing. After an unusual interval between his last mouthful of breakfast and his tobacco, he at last emerges from the hall door, in the full enjoyment of a cigar; but a servant follows him with the announcement that "a young person" wishes to see him. He kicks his heels for a few minutes while inquiries are being made as to the business of this young person, after which he is obliged to return to the house, as his visitor wants a recommendation for a charity or some other document which necessitates a journey to a room where tobacco is tabooed. For this purpose the cigar has to be left upon a window ledge; and, when taken up again, it has gone out, while on being relighted it is found to be half-spoiled. Moodily strolling towards the stable, smoking his much deteriorated cigar, the spender of the quiet day finds himself waylaid by another "person" or two, eager to relieve him both of his time and his money. Arrived at the stables, he finds that his groom has taken advantage of a day when he is not particularly engaged to ask him to look over his book and to point out a few things which he describes as "wanting doing to"—*i.e.* demanding the attentions of the bricklayer, the carpenter, the plumber, the glazier, the saddler, or the coachbuilder. A crisis has taken place in the malady of a horse which is a little lame, and the groom hopes his master will "see him out." Much time has thus been got rid of before the groom enters into a long conversation about "that young 'oss"—an animal that has been a source of annoyance and disappointment since the day he was foaled. Escaped at last from the groom, the master finds himself in the hands of his gardener, who avers that he has not seen him "this long time." He has much to talk about. Would his master mind "going as far as" this place and "stepping into" that? He has something to show him here and to point out there, and he has the plans for the new garden all ready in his house. He has evidently arranged a grand field day for his master's edification, and looks much disappointed when his victim leaves him in an hour on the plea of business of importance indoors. As his employer returns to the house he finds a policeman lying in wait for him with some summonses to be signed, or possibly a request to come to the county town to "hear a case." When the latter dire calamity happens he may as well bid farewell to his quiet day at once; for although he is requested to fix any hour which may best suit his convenience, and although the case itself may possibly last but a few minutes, much time is often lost in finding the witnesses, and, once in the county town, he is sure to be called upon to sign some papers or do some business or other.

But we will not imagine anything so unfortunate as one of these requests to "hear a case." Let us rather consider the policeman as disposed of in a few minutes, and the subject of our sketch safely arrived in the seclusion of his study. He looks at his watch and is surprised to find that it is twelve o'clock. Before beginning to amuse himself he thinks he will knock off his letters and balance his accounts. The correspondence turns out a more serious matter than had been anticipated. Several forgotten letters require answering, and by the way too there are those little matters to which the groom and gardener called attention, which entail letters to several tradesmen. He finds it very difficult to fill one sheet of paper with MS. for a ready-penned friend who lately sent him two, and a question which must be replied to seems hard to answer. Reference has to be made to a book in the library, where the volume is not in its usual place, and a temper-trying hunt of a quarter-of-an-hour's duration is the consequence. When the missing book is at last discovered, and the letter requiring its use half-finished, an acquaintance is announced who has "called early in order to find him at home," on some business more or less trivial. Letters have now to be deferred until after luncheon, which is ready before anything satisfactory seems to have been accomplished. When the meal is over and he resumes his correspondence he feels unusually dull and sleepy. His letters, therefore, last him for another half-hour or so, after which he thinks he may as well just settle his accounts. It is seldom the nature of amateur account-books to balance very readily; but on this occasion they seem abnormally perverse. Just as our friend, after much labour, thinks he has caught a clue to the causes of divergence between the debtor and creditor pages, his wife comes in to inform him that his son and heir has "been naughty," and that a paternal lecture is indispensable. Having performed this unpleasant duty, he has re-established himself at his accounts, and almost added up a long column, when he is disturbed by some of those privileged callers whom he always professes himself so delighted to see, and who enter his sanctum without fuss or ceremony. Those intimates have a habit of paying long visits; they want to see what has lately been done in the garden, and would like to have a look at the new horse. He thus gets no peace till within an hour of dressing time, when he determines that he will at any rate have a short period of enjoyment, and, casting all cares on one side, he takes up a favourite magazine, and throws himself into a luxurious arm-chair by his study fire. But the worries of his accounts, the boredom of his callers, and the liberality of his luncheon and afternoon tea, have told upon him, and he has scarcely read a page of a philosophical article upon the immortality of the soul, before he relapses into a heavy but uncomfortable sleep, in which he remains until the dressing gong awakens him to consciousness, and to the fact that his quiet day has come to an end, with little apparent result, and still less enjoyment to himself. As he dresses for dinner, he probably reflects that had he been to his county town on business, he would have had two quiet half-hours with a book or newspaper in a railway carriage; that if he had been hunting or shooting, he would have had an undisturbed couple of hours on his return home; and that even when staying at friends' houses it is possible to obtain a little time to oneself, if one is judicious; but as to a quiet day at home—let it not be mentioned in his presence again—the thing is simply a delusion and a snare.

Being fond of occasional quiet, we have given some attention to the various means of obtaining it; and, after considerable study of the subject, we have come to the conclusion that the only real method of securing quiet enjoyment is to be ill. We have tried many other plans, but they have almost always resulted in failure. When, therefore, a convenient day can be found, a temporary indulgence in this luxury is highly desirable, and is a matter worthy of agreeable anticipation. When the happy day arrives we shall be able to lie in bed as long as we like, to get up

when we like, and to breakfast when we like, without keeping others waiting, or, still worse, being kept waiting ourselves. We shall be able to have exactly what we like for dinner, without being tormented with dishes we do not want and with servants who watch every mouthful we eat. The privacy of our study will not be invaded; we shall be able to wear any luxurious attire that may suit our fancy; and we shall not be interrupted by callers. We shall be allowed to study theology, the arts and sciences, or the *Racing Calendar*, as our tastes may lead us, without distraction. If our house is filled with guests they will not be permitted to molest us, and of course we shall be privileged to plead exemption from any visits for which we may be engaged. In looking forward to such a time can our feelings be otherwise than pleasant? When our self-enforced imprisonment begins to interfere with our health we shall be able to go out without being bothered by every person we meet. It will be an understood thing that none of our servants, either indoor or outdoor, are to trouble us; we shall not be expected to hunt or shoot unless so inclined; and the very policeman will be warned off the premises until we completely regain our health. "Persons who wish to see" us will be sternly denied that gratification, and our relations with the parson will be voluntary rather than compulsory. If we choose to go out hunting in our delicate state of health, we shall not be expected to ride in such a manner as to endanger our limbs, and we shall be entitled to canter about on a quiet hack, watching other fools tumbling on their heads or tails. Even when our enjoyable indisposition is almost worn out, we shall yet be able to claim a few privileges. We shall not be expected to remain in smoking-rooms until the small hours of the morning, or to stay at balls until the last dance; we shall not be pressed to attend meetings, or be worried with county business; at country houses we shall be exempt from playing games which would make us unduly hot, and we shall have an excuse for staying quietly in or about the house when the rest of the party go to a ball, a lawn-tennis party, or a village concert. On the whole, we do not think it would be a great exaggeration to say that, in good society, it is only when people are supposed to be out of health that they are considered at liberty to lead a rational and moderate life.

SQUATTERS IN SOUTH AFRICA.

THERE must be intense anxiety at present in many an outlying station and settlement in South Africa, even where these are far distant from the perilous confines of the Zulu country. No one in the circumstances can feel absolute confidence in the natives who have apparently been hitherto the most peaceably disposed; and almost everywhere scattered handfuls of whites are surrounded by hordes of excitable coloured people. It is certain that if the Zulus venture to take the initiative and run the risk of having their warriors cut off in the retreat, the *cordon* of our widely detached posts may be passed at many a point by their raiding parties. Settlers may have to decide between the sacrifice of their property and the prospect of being awakened in the night by the war yells of a body of savages. This is one of the hazards which those colonists chose to face when they pitched on South Africa as their adopted country, though the danger may have now assumed more formidable proportions than seemed conceivable to the most cautious and far-seeing man. But it is noteworthy that, in the emigrant's choice of a settlement, he seems often to be guided by caprices or fancies which it is not at all easy to account for. His expectation must be either to make his fortune, or to live in the comfort and freedom from care which he finds unattainable in over-crowded England. And of course this implies that he must have a certain security for life and goods under the protection of a law-abiding community. All this is to be found in the most flourishing of our colonies, although even the most advanced and the most tempting of them have their drawbacks; and, if emigrants were in the habit of hesitating overmuch, emigration would infallibly come to a standstill. In the Canadian Dominion one must count with the severity of the long winter, and though the industrious settler may be sure of a competence there, he is as little likely to grow rich as in the wilds and wastes of South Africa. In Australia you suffer from prolonged droughts, while the most prosperous days of the wool trade and the cattle runs would seem for the present to have gone by. There is always the risk of a murrain spreading among the flocks, which may leave the squatter far poorer than when he began, after years of satisfactory increase. But some element of risk is inseparable from enterprise, and in Australasia there is still money to be made, and an abundance of handsome prizes in the lottery. When the Governments of the different colonies can issue such satisfactory revenue reports as we see even in these hard times, a good many private persons must be steadily accumulating wealth. So it is in New Zealand, though perhaps in a less degree, in spite of the droughts and diseases, and flocks swallowed up in the snow-storms, and the universal complaint of commercial depression. Yet, with such fairly inviting outlets lying open to them, there are always people who will try their luck where the chances of success are infinitely more problematical; and perhaps it is well that it is so, if the world is to be peopled and civilized. Now we have a knot of sanguine adventurers banding themselves together to turn cattle-breeders on the pampas of the La Plata, although they might have learned by this time from the experience of others that they will have to beat a retreat in the end, leaving their capital and some of their company behind them. Others turn aside from the coffee grounds of Ceylon and Mysore, where law is strong and labour plentiful, to try their fortunes with equally unfortunate results in the uncleared and unpeopled highlands of Brazil. At the same time we can in some measure understand this sort of bold and reckless speculation. South America seems still the El Dorado of adventure to many who go for hides and coffee where others have been lured to their ruin in the search for gold and diamonds; while speculators with the silvery speech of a Raleigh will always find dupes who are willing to listen to them. But South Africa has always appeared to us to be a country where the emigrant who is carefully balancing contingencies might see that he is likely to slip between two stools. He ought to know that he can never become a millionaire, since the most trustworthy authorities have invariably warned him of that. He must be aware that he will have to face no ordinary hardships if he determines to push his fortunes in the bush, while in the background there has always loomed that danger from the natives which has assumed for the moment such alarming proportions.

The typical African adventurer is the *boer*, and a rougher or more perilous life than his it is very difficult to conceive. In South Africa the Dutchman seems to have changed his character, although, happily for him, he has preserved the stolidity and phlegmatic coolness of the national temperament. The home-bred Hollander is slow to bestir himself. He is seldom much given to travel, and though he is calmly indefatigable in his application to business, his idea of the *summum bonum* is embodied in a snug *lust-haus* among tulip beds on a stagnant canal. While the African boer is as restless and as impatient of being "crowded up" as any Yankee pioneer in the American Far West, he has a mania for running up houses in the wilderness and then abandoning them on the slightest provocation. On the vaguest report of richer grazing further inland, or even on the bare possibility of bettering himself, he is ever ready to trek up and move on. We believe that those encroachments of British authority at which he has grumbled often brought ample compensation by giving him excuses for the moves in which he delighted. And so thoroughly nomadic in their instincts have these boers become, that, as Mr. Aylward tells us in his excellent book on the Transvaal, even when they are permanently settled in villages they still sleep in their clothes; while they never dream of indulging in the luxury of candles, but turn in with the setting sun, as they were in the habit of doing in their waggons. As to their courage in the field there are very opposite opinions; though Mr. Aylward, who ought to know, speaks of it very highly. At least there can be no question as to the stoical indifference to danger with which they confront the ordinary perils of the wilderness. But though a life of excitement and anxiety may become very much matter of habit, no amount of familiarity with it can make it more than endurable. Even in normal seasons the wells and waterpools lie far apart, and are apt to give out; while in the droughts that are sure to be of periodical recurrence whole districts are dried up and the pasturage is scorched into tinder. The cattle have to be guarded through the day and driven in and stockaded at night; and the farmer who has fallen asleep to a serenade of lions must be ready to jump up at a moment's notice, snatching at the weapons that lie ready to his hand. Naturally he takes an intense interest in native politics, although the first intimation he has of hostilities may come in the shape of a sudden attack. But he may be sure that every chief in his neighbourhood fears and detests him as a formidable intruder; each prowling savage regards his flocks as fair game, and each bush he passes in his walk may mask a gun or an assegai. Yet the nomad in his waggons has one advantage. Should he have timely notice of danger he may trek back, taking the bulk of his worldly goods along with him; while the occupant of an outlying homestead must either stand his ground, making what arrangements he can with the squatters about him for mutual protection, or abandon his buildings and his crops to the chances of fire and rapine.

The English settlers on the frontiers of Natal, who till lately fancied themselves comparatively safe, must now be in a very similar position. Brave they may be; but it takes what we may call "Dutch courage" to bear the prolonged excitement of continual alarms; and the strain on the nerves of women who have been brought up in peaceful English parishes must be trying almost beyond endurance. Independently of the general risk of a rising of the black population, they can never be sure that the very people they have employed on the farm are not plotting with the enemy for love or fear. When the present war is brought to an end, and the Zulus are crushed and disarmed, it may be hoped that this harassing state of affairs may be changed once and for ever. But in any case the life of the educated settler in South Africa, specially if he have ladies in his family, can never be very enviable. We happen to have been reading some letters from the wife of a police magistrate whose husband had been appointed to one of the districts on the Kei river and the borders of British Caffraria, which give a very fair notion of what one may expect in the beginning. The writer and her husband had no lack of money, they had the advantage of introductions to resident officials, they had the help of an escort of native police, and they were unencumbered by herds of sheep and cattle. But if they had not been blessed as well with excellent tempers and constitutions, they must have been inclined to throw up the appointment in disgust. Not that they met with extraordinary adventures or went through any unusual sufferings. There were no fierce beasts of prey in the scrub, and the natives,

as yet at all events, were friendly, though ready enough to take them in. But the letters give a naïvely picturesque account of unprotected loneliness and excessive discomfort. No preparations had been made to put up some huts which the party had ordered in advance, pending the building of a more substantial residence. As luck would have it, they found a dilapidated Caffre hovel of mud, wattles, and ragged thatch, and in that they sought temporary shelter. Unpacking the stores that had been made up for them in King William's Town, they found that half the camp bedsteads had been left behind, with the mattresses and all the linen, likewise the crockery and most of the cooking utensils. It rained incessantly, and the rain filtered through the filthy roof; firewood was difficult to come by, and what they managed to gather was dripping wet; so they had to bake unleavened bread as best they could, and live on fresh-slaughtered mutton, done in the damp wood-smoke in a frying-pan. For the boasted African climate in those parts is generally in extremes; when the sun is not scorching everything and turning the very grass and leaves into dust which drives about with the slightest breath of wind, the rain is coming down remorselessly and surrounding you with a slough of despond. We have said that firewood is scarce, and for that there is a good reason. There is noble woodland scenery in South Africa, there are many pleasant spots in the Cape Settlements, and doubtless Harris and Cumming and more recent sportsmen have not exaggerated the beauty of those park-like forests in the interior where they hunted the elephant and cameleopard. But, as a rule, where one has merely occasional torrents of rain, the aspect of the landscape must be barren and forbidding. Where the magistrate and his wife had chosen their squatting-place, even the thickets of dwarf mimosa had been left behind; and with the exception of some thorn bushes the only green thing was a clump of willows by the swollen watercourse. There they had to live as best they could, with no white man within thirty miles of them, till they could run up a more solid habitation and begin regular housekeeping. These experiences were in no way singular; they were very much what the ordinary settler must expect, under circumstances that must usually be far less favourable. And the African settler must have considerable capital in a small way, since he has to purchase ponderous waggons and costly teams of seasoned oxen to begin with, before he lays in his stores or makes his purchases of stock. By hard work and constant thought he may no doubt earn a competence when once he has got over the preliminary difficulties. But then we should say that the question is whether he might not have done very much better had he betaken himself somewhere else with his money. If a man is content to aim merely at living cheap, or at modestly increasing his capital by severe economy, there are comparatively old-settled countries to which he can repair with the certainty of satisfying his modest ambition. On the other hand, if he is seeking short cuts to fortune, we can conceive his putting up with any amount of hardship and facing tangible dangers to boot. But we must say that he seems to us to make a mistake when he decides to court both dangers and hardships without a reasonable chance of being proportionately rewarded; and while South Africa has ceased to be the paradise of hunters, we fear there are too many instances where it proves the purgatory of colonists.

LEO XIII. AND DR. NEWMAN.

IN spite of the sinister comments of critics with whom Gibbon's famous saying that "the virtues of the clergy are more dangerous than their vices" is a fixed principle of judgment, Leo XIII. has already during the first twelvemonth of his pontificate done much to justify the favourable estimate formed at the time of his election, the justice of which we have ourselves never seen any occasion to dispute. That he is himself anxious to come to terms with the Italian and other European Governments there is abundant evidence, even without referring to the very marked indication of opinion conveyed in the practical rebuke he has just administered to the Cardinal Archbishop of Bologna, who in consequence of his failure to follow the instructions of the Pontiff by placing himself in regular relations with the Italian Government, has been transferred by his Holiness to the inferior see of Ancona. The intimation published by Cardinal Nina that Italian Archbishops and Bishops without the royal *exequatur* can no longer receive the subsidies provided for some years past by the Holy See is no doubt part of an economical reform rendered necessary or desirable by the reduced condition of the Papal treasury, but it is at the same time presumably intended to carry with it a warning against the obstinacy of the irreconcileables, and perhaps also to pave the way for the acceptance of the civil list provided by the Guarantee Laws. It is no objection to such a view that the rumour of the Pope having decided on taking such a step is declared to be "premature," especially when we remember that the *Osservatore* and *Eco* no longer have authority to speak officially for the Holy See. And meanwhile it has to be borne in mind that the present reduction of Papal finances is itself due to the irritation caused among the Ultramontanes by the new policy of the successor of Pius IX., who has virtually abandoned the farcical *rôle* of "the august prisoner," though he still suffers himself to be saddled by his foes who are of his own household with the practical inconvenience of perpetual confinement to the Vatican. The proclamation of a Jubilee is under the circumstances natural enough, though there is no reason to doubt that Leo XIII. is sincerely anxious to secure the prayers as well as the alms of the faithful. Since the proclamation of the first Jubilee of Boniface VIII. in 1300, this has been a constant resource of the Papacy. It was originally designed, as the name indicates, to be a periodical institution every fifty years, but before the close of the century Urban VI. fixed thirty-three years as the period for its recurrence, and it was not long before the interval was further reduced to twenty-five years. In accordance with this arrangement Pius IX. proclaimed a Jubilee in 1875. But it has also been not unusual for Popes to superadd a special celebration of the kind in any great emergency, as on the occasion of their accession, and the procedure of Leo XIII. may be justified on both grounds. He can hardly expect in the present age a repetition of the history of the first Jubilee, when two priests are said to have been employed all day long in St. Peter's shovelling up the gold pieces poured out by the faithful in an unbroken stream before the Tomb of the Apostles. But he may fairly expect a generous response to a demand which is not unreasonable, and the fruits of which are not likely to be any longer squandered in idle ostentation or still idler plots for the reversal of accomplished facts. Those who very naturally hesitated to contribute Peter's pence for the sustentation of a military display at once mischievous and unprofitable, or to help in meeting the heavy domestic calls on Cardinal Antonelli's private purse, may be not unwilling to assist the real needs of a pontiff, who has shown himself throughout his life actuated by a single-minded desire of promoting above all things the spiritual interests of the Church over which he presides.

But the announcement made the other day, and which Englishmen of all creeds may receive with satisfaction, affords the most decisive evidence hitherto given of the very different temper now prevalent at the Vatican. It is strange indeed that not only the greatest convert but the greatest mind the Roman Catholic Church can boast for many generations should have been so persistently and conspicuously ignored. Again and again for years past has the question been asked, both by Roman Catholics and Protestants, "Why is not Dr. Newman made a Cardinal?" Why indeed? To those who were at all behind the scenes the answer was familiar enough, but it was not one the adherents of the Curia could conveniently put into words. The illustrious Oxford convert was far too valuable as a decoy duck to be openly decried. When it was important to gain the ear of the British public for some Roman Catholic interest or grievance everybody felt instinctively where, and where alone, the requisite influence could be found. And every one knew also that no sense of personal neglect or worse than neglect, nothing of the *spretæ injuria formæ* which might have led a smaller mind to shrink into itself, would stay his arm when the Church he loved so much better than it loved him required his services. When it was desired that the triumphant insolence of Dr. Achilli's aggressive rhetoric should be arrested, Dr. Newman was called upon by the authorities who had been so little kind to him to speak the word his countrymen were sure to listen to when it came from his lips; but they left him, when the trial came, to bear as best he might the consequences of his loyal compliance with their wishes. When University tests were relaxed a large body of English Roman Catholics were desirous of seeing him restored to Oxford to superintend the religious training of their sons at the University. The necessary funds were readily contributed, and all arrangements were made for the opening of an Oratory at Oxford where he would have resided during term; on two successive occasions the ground was actually secured for the purpose. On the part of the University authorities there was neither power nor desire to hinder the carrying out of the design. But once and again the authority of Rome, always then at the command of a well known clique in England—it would not be difficult to enter still further into particulars—was invoked, and at the last moment the design was wrecked. As though to make the insult still more galling, it was blandly intimated that the Oratory might be opened at Oxford, as long as Dr. Newman's presence there was dispensed with. The drama of *Hamlet* should at once be licensed, if only the Prince of Denmark was withdrawn. And, as though to cap the insult, after the endeavours and plans of years had been scattered to the winds, and the hopes of those most deeply interested in the advancement, or rather the creation, of "Liberal Catholic education" in England deliberately destroyed, the Jesuits were immediately permitted to establish themselves where the great Oratorian had been forbidden to set his foot. "No advantage," said a leading Ultramontane of the day, himself an Oxford convert, "could make up for the fatal misfortune of having a false system of Catholic philosophy (viz. Dr. Newman's) enthroned at Oxford." Yet when not long afterwards Mr. Gladstone published his challenge to the infallibilists of the Vatican, the professor of "a false philosophy," who had left no stone unturned to avert the madness of an enterprise which he knew to be fraught with grievous peril to the highest interests of his Church, was called upon to propound an apology which it tasked even his genius to render plausible to English ears. But, while he loyally responded to the demands made upon him, he has never sought to push the immediate interests of his Church, or snatch at a controversial triumph; still less would he condescend for a moment to the ignoble arts of the vulgar proselytizer. No one ever ventured to designate him "the Apostle of the Genteels." Had he, like Montalembert, been called away during the last pontificate, it is more than probable that the spiritual chief to

whom both of them had made sacrifices more costly than life itself would have graced his memory with an equally complimentary epitaph. It was notorious that those who were most entirely in the confidence of the Curia habitually whispered, though they dared not openly proclaim, that Dr. Newman was "only half a Catholic."

It has been left for the successor of Pius IX. to show at once his juster appreciation of merit, and his superiority to the narrow prejudices and the backstairs tyranny of cliquism so long dominant at the Vatican, by making tardy reparation for this long neglect and offering Dr. Newman the purple. That at his age, and with his retiring disposition, he should have declined it is matter rather for regret than for surprise; but it is distinctly matter for regret. It is a pity that the greatest Englishman since the Reformation who has shared the faith of Wolsey, Fisher, and Pole should not inherit their mantle. No doubt the Sacred College would have gained far more honour than it could give by receiving him among its members; and this circumstance of course must make his decision doubly regrettable to those who are jealous for the credit of a body which found room for the intellect of a Cullen and the piety of an Antonelli, while Rosmini, Dupanloup, and Darboy were studiously excluded from the charmed circle. There would have been something congruous in seeing the man, whose old College at Oxford has unanimously enrolled his name, though an alien from his former creed, among her honorary fellows, also enrolled in that Sacred College which for many centuries has held the highest rank in the communion to which he has transferred his brilliant services. And when we think of other names inscribed where his is omitted, it is difficult to reflect without a smile or a sigh on the capricious distribution of human titles and dignities. Dr. Newman's fame indeed needs no tinsel gilding, and to himself personally such external adjuncts will be matter of less than indifference. But it is well at least that he should not have been suffered to pass away without an offer of the highest distinction his Church had to bestow, and well that Leo XIII. should have had the wisdom and the courage to offer it.

THE VOLUNTEERS AND THE WAR OFFICE.

THE Committee appointed by the Secretary of State to inquire into the finances and organization of the Volunteer force did wisely to get the scheme for raising an Active Service Legion out of the way before addressing themselves to serious business. In the preparation of the short separate Report in which they examine this singular proposal, the gravity of the members of the Committee must have been sorely tried. The plan was certainly one of the wildest ever submitted to a department of the Government. Its authors proposed to raise 150,000 men, consisting of artillery, cavalry, and infantry, with a complete organization and commissariat, and ready to take the field at short notice. Each of these men would draw a capitation grant of 2*l.* from the Government, which was also to supply arms, clothing, equipment, horses, and material, together with transport waggons and appliances. This imposing scheme, which really involved the creation of a separate army unconnected with the regular forces on one side or with the Volunteers on the other, rested on a practical foundation of 380 men. This, at least, was the number from whom direct promises of support had been received. Of these 380 some 125 are already Volunteers, and would therefore have to leave one branch of the service in order to enter another, while 145 more were candidates for commissions in the regular army, and only cared to have something to employ them until such time as they got, or failed to get, the appointments they wanted. No evidence whatever was offered to show why the remaining 110 should be likely to develop into a complete army of 150,000 men; and, even if this huge number—three-fourths of the existing Volunteer force—were to be enrolled, the authors of the scheme could suggest no guarantee that the men would be forthcoming when they were wanted. General Raines, the President of the Committee which had the charge of the scheme, admits that this part of the question has "not been sufficiently considered." Inasmuch as the object of raising a separate army, enlisted and officered on a basis special to itself, would be greatly interfered with if the men either did not come forward to enlist, or, having enlisted, could not be found when their services were required, it is a pity that General Raines and his colleagues did not give a little more thought to the subject before taking up the time of the War Office authorities. The witnesses examined by the Committee acknowledged that the class from which they expected their men to come would not materially differ from that which supplies recruits to the regular army and the militia; but they failed to show any particulars in which the prospect which they proposed to hold out would be so superior to that held out by ordinary enlistment as to attract men whom neither the army nor the militia have been able to attract. The idea in their minds seems to be that "2½ per cent. of the able-bodied males in England" will find attraction in the thought of a contingent military service, which is only to become actual in the event of the country being engaged in a foreign war. But, as the Committee point out, men who do not want to join the army in time of peace have nothing to do but to postpone enlistment until war is declared. As the scheme contemplates their continuance in their civil occupations until such time as their services are needed, the training they are to receive during peace could not be very different from that which is open to them in the existing Volunteer force. All that they have to do, therefore, is to become Volunteers now, and to enlist in the regular army whenever a war comes. As a large number of recruits will then be invited to join who will be disbanded as soon as the war is over, this will come to very much the same thing as enlisting now in an Active Service Legion.

The Committee had got through this part of their work by the 8th of July, and the next six months were devoted to the consideration of the existing Volunteer organization. They do not propose to make any change in the terms under which Volunteers are enlisted. They see no reason why Volunteers should not, as at present, be allowed to withdraw on giving fourteen days' notice, but they suggest that a plan which is now followed in a large number of regiments should be made universal, and that each Volunteer should enter into a civil engagement with his commanding officer to serve for four years or to pay a fixed sum. In this way there would be an assurance that the money spent on the recruit's uniform would be repaid either out of the capitation grant or out of the forfeit-money. The Committee further propose that an additional inducement be given to remain in the force by allowing service for eight years to exempt a Volunteer from liability to serve in the Militia—a liability which, under the present law, revives as soon as a man ceases to be a Volunteer, no matter how long he may have been one. The recommendations relating to the consolidation and amalgamation of administrative regiments and small battalions are too technical to have much interest for unprofessional readers. There can be no need indeed to set forth the advantages derived from any change which helps to make the Volunteers an integral part of the infantry brigade in each district, and so admits of the force being "more effectively utilized for the purposes detailed in the mobilization scheme." The Committee wisely abstain from recommending increased powers of enforcing attendance at drill. "Such powers," they say, "if carried out strictly, would operate unequally . . . thereby endangering the popularity of the force"; while, if not carried out strictly, they would be a dead letter. If, indeed, the capitation grant were paid for all Volunteers, it would be necessary to take stringent precautions against the waste of public money. Inasmuch, however, as it is only paid for efficient Volunteers, the Government has only to take care that the standard of efficiency is raised sufficiently high. Upon this point the Committee propose a change of some importance. At present a recruit, in order to earn the capitation grant, has to attend thirty drills in his first year and nine drills in every succeeding year. The recommendation of the Committee is that sixty drills shall be required in the first two years, of which thirty must be, and fifty-one may be, made in the first year, while thirty may be, and nine must be, made in the second. They also suggest that a physical standard and a maximum limit of age should be adopted for recruits. At present so long as the regulations about drill are complied with, the capitation grant cannot be refused, though the Volunteer may be four feet high or be well on in his second childhood.

There is one point connected with the efficiency of the force to which it is strange that the Committee should have made no reference. It is generally admitted that field-days in which the Volunteers can be brigaded with the regular army are as valuable as the caricatures of them of which the Brighton downs used to be the scene were worthless. In London, at all events, and probably in other great towns, the only days on which manœuvres on a large scale can be held are the summer Bank-holidays. These days, however, are given up by the Railway Companies to excursion traffic; and, as this is too profitable to be foregone for the Volunteers, the two or three opportunities in the year which are all that many Volunteers can ever hope to have of joining in military movements on a large scale are lost. There seems to be no reason why the military authorities should not have the power of fixing the place for a field-day on two at least of the four Bank holidays, and of compelling the railways to make the same provision for carrying the Volunteers as they have to make for the conveyance of regular troops. Of course this power would have to be used with discrimination. It would be important not to interfere unnecessarily with the ordinary holiday-makers, and to distribute the burden evenly over the various railways. But, subject to these and similar considerations, there is no reason why the railways, enjoying as they do so many valuable and exclusive privileges, should not be compelled to place their machinery at the service of the State on a few exceptional days in return for fair payment.

The Franco-German war virtually decided the dress of the English Volunteers. The original idea was that the simplest possible dress, one which should approach as nearly as possible to an ordinary useful shooting suit, would be most convenient and appropriate for men who it was vaguely supposed would be chiefly useful in picking off the enemy at long distances and from behind hedges. This, in fact, was very much the theory on which the Francs-tireurs were embodied, but the German commanders very soon put an end to it by giving notice that no soldiers who were not clothed in some permanent and recognizable uniform would be allowed the immunities of combatants. It was then discovered that the kind of uniform which had occasionally been recommended to the Volunteers would in all probability have led its wearers to certain and speedy execution, and when once the

sharpshooter theory was upset, the advantages attending the adoption of a uniform bearing as close a likeness as possible to the uniform of the regular army were seen to be very great. Even already scarlet has been adopted by a large number of corps, and newly raised corps and corps which desire to change their uniform are compelled to take the national colour. The Committee recommend that what is now the exception should be made the rule. The financial advantages of the Volunteers wearing a common dress, and that dress the same as that of the regular army, would be great. It would enable each corps to be supplied at cost price, with the materials either cut out or in the piece, instead of, as now, being usually left to the mercies of local tradesmen. The real reason, however, for the change is the fact that the military authorities think it would be impossible, if the force were ever called out for service, that it should be clothed in the present haphazard fashion; and, as the Committee truly remark, "confusion would certainly arise in re-clothing the force at the very moment when matters of more importance required attention." The remedy for this is, gradually and with sufficient notice to each corps, to insist on the uniform being modelled, as regards colour and pattern, upon that of the regular army. There is only one other point in this report which seems to call for notice; but this, if we could believe that the idea was likely to be carried out, would be the most important of all. The Committee recommend, with the approval of the Secretary of State, that a maximum number should be assigned to the Volunteer force, though there is a difference between them and Colonel Stanley as to whether the maximum should be 200,000 or 250,000 men. The Committee allege no argument in favour of this extraordinary recommendation, and, as they have not been equally chary of their reasons upon points which are at once less important and less open to question, it seems natural to suppose that they have none to bring forward. It is to be hoped that Parliament will not uphold the Government in refusing the services of competent Volunteers, merely to save the slight addition to the Army Estimates which an increase in the capitation grant entails.

THE RUSSIAN DEBT.

At a moment when a great Russian loan is daily expected to be launched, it would be desirable to ascertain exactly the indebtedness of the Empire of the Czar; but it is by no means easy to do so. Not that there is any lack of official literature on the subject. Quite the contrary; we have abundance of statistics; only, unfortunately, they do not always agree, and, for other reasons besides, do not inspire the confidence in their trustworthiness which Government information ought to command. For example, we have had within the past couple of months two distinct statements of the amount of the debt at the end of 1877—one contained in the Report of the Controller of the Empire on the definitive regulation of the Budget for that year; the other consisting of a detailed account of the operation of the sinking fund in the same year, given by the Finance Minister at the annual meeting of the Council of the Credit Establishments of the Empire, under the presidency of the Grand Duke Constantine; and we find a discrepancy of several millions between the two. We shall not attempt to reconcile them; but we mention the fact to justify our warning that the figures we are about to give can be regarded as no better than approximations. They state the minimum of the debt; for we may be sure that the obligations acknowledged by the Russian Government all exist. But there may be other liabilities, which are concealed for the sake of maintaining public credit.

According to the Report of the Controller of the Empire, which professes to include all liabilities involving a charge upon the revenue, the debt at the beginning of 1877, exclusive of the inconvertible paper currency and of the obligations incurred on account of the railways, amounted to 1,941,590,224 paper roubles. During the year it was augmented by 200,700,000 roubles and 15,000,000*l.* sterling. The paper rouble was then worth about two shillings of our money, and, converting it at that rate, the debt was altogether at the end of the year but little under 230,000,000*l.* sterling. It is to be borne in mind, however, that these figures represent only its value in depreciated paper—the sum, that is, in gold which would redeem it, supposing anybody had the means of redemption. If the rouble ever rises towards its nominal value, 3*s.* 2*d.*, the amount of the debt will rise with it. And if it reaches par the total will be almost 350,000,000*l.* In addition to this debt there were, at the end of 1877, railway obligations amounting in round numbers to 68½ millions sterling; against which, however, is to be set the debt due by the railways to the State. There was also the debt on account of the emancipation of the peasants; against which, again, must be set the annuities paid by the peasants. And, lastly, there is the debt of Finland, which is separate from that of Russia. Possibly, also, there were debts by other provinces of which we have no account. The amount of the debt is, however, of very much less importance than the charge it imposes upon the taxpayers. Nobody is so simple as to expect that the Russian debt will ever be cleared off. New wars, new railways, new enterprises of every kind will increase it; but its redemption is out of the question, at least within any time which we of the present generation can contemplate in our speculations. The charge has, however, to be provided for every year under pain of bankruptcy, and the burden which it imposes is what is of real concern to the population and to investors inquiring whether Russian stock offers them reasonable security. Now, according to the Controller of the Empire, the charge of the debt amounted in 1877 to 11,509,000*l.*, still reckoning ten roubles to the pound. The total revenue amounted to 54,884,000*l.*, so that the debt charge constituted almost twenty-one per cent. of the revenue. But we have already seen that during the year the increase of debt amounted to about 35,000,000*l.* sterling, upon most of which interest would first become chargeable only in the following year. The real burden of the debt is consequently not expressed by those figures, and, in fact, can really not be determined until the cost of the war is funded.

The figures we have been dealing with so far bring us down to the end of 1877, but in the course of last year there was issued a further loan of 300 million roubles, or 30,000,000*l.* sterling, which has to be added to the debt above stated. In addition, the Bank of Russia, which in this case is but another name for the Russian Government, emitted 150 millions of roubles in the form of bonds. And, lastly, we have to take note of the paper currency with which the Empire has been flooded since the war with Turkey began. Our readers are aware that Russia was previously under the *régime* of inconvertible paper. Before the war the paper circulation was about 720 million roubles, and with that amount the rouble was worth about 2*s.* 8*d.*, its nominal value being 3*s.* 2*d.* The depreciation was, therefore, sixpence in the rouble, or almost 16 per cent., showing that even then the currency was in excess. Since hostilities began there have been issued about 480 million roubles in "notes" and "notes to order." In consequence the depreciation of the rouble has gone so far that it is now worth only a fraction over 1*s.* 10*d.* Thus the depreciation since the beginning of the war is almost 30 per cent., and the total depreciation is almost 46 per cent. The evils resulting from this state of things have excited much attention in Russia, and a lively controversy is going on as to the best means of removing them. The general feeling is that a loan must be negotiated for the purpose of withdrawing the war issues. Whether this is done or not, these issues are debt, though they do not bear interest. By their help the Government was able, when its credit abroad failed and its own subjects had not the means of lending to it, to defray the enormous expenses which its invasion of Turkey involved. Sooner or later, of course, the notes must be withdrawn. Adding them, then, to the loan of last year and the bank bonds, we get, over and above the debt stated by the Controller of the Empire as existing at the end of 1877, further liabilities amounting to 930 million roubles, or, still converting at two shillings, 93,000,000*l.* sterling. Without reckoning the railway obligations we thus get a total of 320,394,647*l.* sterling as the debt of Russia at the present time. In this sum, it will be understood, there is included neither the inconvertible paper circulating before the war, nor any liability on account of emancipation, or the like. It is the debt pure and simple of the Empire, against which there is no set-off. About 120,000,000*l.* sterling of it is due to the war.

It took four or five years to ascertain the total cost to France of her contest with Germany, and it is probable that Russia will not make up her accounts more quickly. The military authorities at the seat of war were of course obliged to incur debt on many accounts. There are railway claims still to be determined. And possibly munitions and arms were purchased in Germany upon credit. It is almost certain, therefore, that the cost of the war, which we have just estimated at 120,000,000*l.* sterling, will yet be considerably swollen. Moreover all the expenses of evacuation have to be incurred. And, lastly, the funding of the floating debt will be very costly. Loans can be placed only at a great discount. The existing stock, for instance, is not much above 80, and it is certain that a new loan of large amount could not be floated at that figure. We shall be under the mark, therefore, if we assume that, when the floating debt is funded, and the new issues of paper withdrawn, the increase to the permanent debt will be not less than 150,000,000*l.* sterling. At 5 per cent. the interest upon this sum would be 7,500,000*l.* This consequently represents the cost to Russia of the invasion of Turkey. Future generations of Russians will through all time have to pay 7½ millions sterling, or else to redeem the capital represented by it, in consequence of the war. The total charge of the debt, as it will include sinking fund, will exceed 18,000,000*l.*, which is one-third of the total revenue raised in 1877. Our own debt charge constitutes about the same proportion; but there is a vast difference in the condition of the two countries. In England we could, if there was urgent need, double our existing revenue. In Russia, on the contrary, the limits of taxation are reached, or very nearly so. The Government hopes, indeed, that the new imposts it has laid on will put an end to the recurring deficits, but it is very doubtful whether they will do so. At any rate, nobody disputes that the new taxation is oppressive, or that it is extremely difficult to find a better system. The charge on account of debt will amount, therefore, when the funding is completed, to very nearly one-third of the total revenue which it is possible to raise in Russia. The fact would not imply so much, only that the cost of the army swallows up the bulk of what remains, leaving little for civil administration, education, and public improvements.

THE THEATRES.

A REMARKABLE epoch in the history of the British stage will, it seems, be soon arrived at. The "last weeks" of *Our Boys* at the Vaudeville Theatre have been advertised. The announcement may stimulate those people who have never gone to see the play, on the same principle which constantly prevents the inhabitants of great cities from becoming acquainted with the sights that serve as a constant attraction to strangers; and, as *Our Boys* has grown to be as much a constant institution as Madame Tussaud's or the Polytechnic, it is probable that there are a great many such people. It is possible also that some persons may have acquired a habit of going to see *Our Boys* as others get into the way of drinking a particular wine after dinner, and to them its withdrawal will assume the aspect of a personal grievance. The matter might prove a convenient subject for agitation, and perhaps an eminent statesman might be persuaded to write a post-card concerning it. Future historians of the theatre may either be puzzled to account for the unprecedented run which the play has had, or may conclude that what attracted audiences for so long must have been of the very highest merit, and regard the work with a reverence proportionate to its recorded success. In that case a fresh field will be opened to commentators, and the labours of "The New *Our Boys* Society" will no doubt be as useful, as learned, and as edifying as those of Messrs. Furnivall and Fleay. He will be fortunate who recognizes the causes of these things; for our own part we cannot attempt to discover them, and must be content with rejoicing that *Our Boys*, whatever its merits and faults may be, has at any rate owed nothing of its success to an unhealthy taste in either author, actors, or audience.

It would be difficult to say as much for some plays which have been highly popular, and it is an unpleasantly significant fact that, on the first production of *Truth* at the Criterion Theatre, many persons in the audience were buoyed with expectations which were happily disappointed, and attempted with indifferent success to affix a vicious meaning to sentences in themselves harmless enough. Some time ago (February 16, 1878) we called attention to an article in the *Revue des Deux Mondes* in which M. Delpit described the evil influence exerted by some of the Parisian *cafés-concerts*, and the danger of that influence being increased. The equally pernicious character of many London music-halls has now become so notorious that the Middlesex Magistrates, having suddenly discovered that their wisdom and strength are not superlative, have gone in a deputation to the Home Secretary to beg him to take some action in the matter. Mr. Cross not unnaturally wished to know if the Middlesex Magistrates really could not do their own work before assuming himself any new responsibility, but promised to have the matter carefully looked into by the police. This is all very well so far as it goes; but it is difficult to see how the functions of censorship are to be undertaken by policemen, even if they have passed competitive examinations. There is no doubt that some remedy ought to be found for an evil which is as insidious as it is corrupting, and which has threatened to creep from music-halls to theatres. The danger is the greater because what would seem perfectly harmless in the eyes of an Examiner of Plays, reading a manuscript, may very easily be made to bear an unpleasant meaning by means of emphasis, byplay, or merely by the wish of some of the audience, who have acquired a thoroughly vicious taste at music-halls or elsewhere, to attach such a meaning to it. In view of this undoubted danger, it is the more gratifying to find that the attempt to affix to *Truth* such a reputation as was attached rightly or wrongly to the *Pink Dominos* has not been successful. In saying this, we have no wish to indicate that *Truth* is in any sense a good play. On the contrary, it is a not very brilliant farce spun out into three acts, and becoming, by dint of such spinning out, disagreeable in motive. No reasonable person could be indignant or vexed at the lies told in, for instance, *Box and Cox*, and if *Truth* were played in one scene, it might be as amusing as any of Mr. Maddison Morton's farces, all of which it resembles in depending entirely upon situations and business. To put such a piece of work into three acts, and call it an original comedy, is a proceeding which shows a defiant scepticism as to the good taste of the London playgoing public. The leading intention of the piece which involves four men in a scrape out of which they have to lie themselves, and which compels them to brave as boldly as they can the wrath of a terrifying woman who is mother-in-law to one of them, is, if by no means new, at least ingenious; but three acts are but wearily drawn out to support it, and the boastful announcement in the playbill that "the interest of the Comedy is maintained up to the final Tableau," only serves to call attention to the poverty of the playwright's invention. The piece comes from America, but has plainly passed through the hands of an English adapter who has made it a stupidly motley affair. Various American phrases and American references are left untouched, but are supplemented by sayings which could only appeal to an English audience. Some good acting is thrown away upon a piece which might make excellent material for what is now called a "ballet-pantomime," but which it is absolutely ridiculous to call a comedy, whether original or not. Mr. Wyndham is very vivacious in the principal character, but his acting seems to have suffered from tolerably constant employment in pieces which are certainly not of a high order. His facial expression is clever, and his gestures are easy, and perhaps that is about all that one ought to demand from the player of the chief character in a bustling farce; but, when the farce is stretched out to three acts, certain frequently repeated expressions and actions become somewhat monotonous. Mr. Standing plays the part of a consummate hypocrite with great skill, but injures the effect of his acting by an unhappy accent. Mr. W. J. Hill brings a comic force, and Mr. Carton a quiet finish, to bear upon material which ill repays their trouble. Mrs. Stephens, as the dreaded mother-in-law, is, whenever she gets a chance, extremely funny. We have said nothing of the dialogue of this piece, which is, in truth, an elaborate pantomime; but it may be desirable to point out that it is not as yet customary for gentlemen to swear in conversation with a lady. *Truth* is preceded by a comedietta called *Orange Blossoms*, the whole weight of which hangs upon, and is well supported by, Mr. Carton. The part which he plays was apparently meant for a low comedian, but he approaches it with signal success from the point of view of light comedy. He is natural, apparently spontaneous, and without effort comic, and his performance makes one desirous to see him in something more worthy of his growing talent.

The revival of *Caste* at the Prince of Wales's Theatre derives a special interest from the announcement that Mrs. Bancroft is playing for the last time a part with which she is so identified that one cannot imagine its being taken by any one else, and from the appearance of Messrs. Clayton and Cecil in characters which were beforehand supposed not to be well suited to either of them. The event has proved that the manager was wise in his distribution of parts. Mr. Clayton's acting has been found fault with by some and apologized for by other critics. It seems to us to need no apology, and to have but little fault. Mr. Clayton is, or was, a trifle heavy in the first act, but he plays in the second and third with true understanding and feeling, and gives throughout a striking picture of a good-natured, good-hearted dragoon, with sure if slow perceptions. We can well understand that people who have only seen D'Alroy played as a mere *jeune premier* part might be disappointed with Mr. Clayton's rendering of the character; but his view of it is in the main the same as that taken by the late Mr. Young, who was its first representative; and in saying that at some points Mr. Clayton was more pathetic and more impressive than Mr. Young we are giving him very high praise. Mr. Cecil's performance of Sam Gerridge is another agreeable disappointment to those who feared that the part might not be suited to his powers. For our own part we believe that Mr. Cecil's powers have yet to find their utmost fulfilment, and that meanwhile there are few parts in the range of comedy or comedy-drama beyond his reach. Mr. Cecil, who is, as always, unconventional and finished, is in a different way quite as amusing in the comic passages of the part as was the accomplished actor who preceded him in it; and in the one opportunity afforded to him in the last act he displays that power of deep and true pathos which found fuller expression in his performance of Tourbillon in *To Parents and Guardians*. Mrs. Bancroft's charming performance of Polly Eccles, hovering between smiles and tears, is so well known that it is needless to say more than that we are sorry to learn that this is the last occasion on which it will be presented. Miss Roselle's rendering of Esther has considerable merit, especially in emotional passages, but is at times a little stagy. Of Mr. Bancroft's admirably foppish Hawtree it is not necessary to say anything in detail. Mr. Honey's Eccles is equally well known, and in a certain sense equally admirable. Considered by itself, the performance is one of singular truth and merit; but it is too pronounced for its studiously toned down surroundings, and therefore serves to draw attention to the false moral of the clever play to which it belongs. If Eccles were represented as a less offensive drunkard, in other words, less literally, one would be less struck by the monstrous folly of D'Alroy, and would think the position of his mother in utterly repudiating such a connexion less incontrovertible.

At the Olympic Mr. Clifford Harrison has appeared in the part of Pierre in *The Two Orphans*, which has been given up by Mr. Neville in view of his approaching appearance in *The Crimson Cross* at the Adelphi. Mr. Harrison has hitherto been known only as a reciter, and there is no reason in the nature of things why an excellent reciter should not be an indifferent actor. There is, indeed, if we remember right, a stage tradition to the effect that the two faculties are rarely allied. There is certainly an obvious and wide distinction between them. Recitation is as much injured by too great a display of gesture and facial expression as acting is by too little; and it might have been feared that a person accustomed for some time past to reciting might find himself somewhat lost on the stage, and might by force of habit produce effects which would seem spirited enough in a drawing-room, but would be tame in a theatre. Mr. Harrison may be congratulated on having successfully avoided the dangers which might have been feared for him, and having fulfilled extremely well his by no means easy task of succeeding an established and justly popular actor. It was not unnatural that Mr. Harrison should at first appear to suffer from nervousness; but, as the play went on, he steadily improved; and in the two situations which call for strong emotion he played with true feeling and fire. In the second of these, the well-managed fight in the garret, the actor gave a fine and delicate touch to Pierre's character by assuming a look of horror and remorse as soon as he realized that he had actually stabbed his infamous brother. Mr. Harrison's practice as a reciter has stood him in good stead in giving him an elocution which is clear and correct even in the expression of strong emotion. On the whole, his performance deserves much praise in itself, and is full of promise for the future.

REVIEWS.

WALPOLE'S HISTORY OF ENGLAND SINCE 1815.*

MR. WALPOLE'S elaborate History, which for the present extends to 1830, may probably become a standard work. In a short preface containing an apology for his purpose of bringing the narrative down to 1862, he answers, by reference to the authority of Macaulay, the supposed objection that the events to be recorded are too recent for judicial treatment. He might have added that a contemporary historian has some advantages which may counterbalance an unavoidable partiality. The latest part of Mr. Walpole's intended work will be within his own memory, and most of the characters and transactions of which it treats are probably familiar to him by oral tradition. In politics, although a contrary inference might have been drawn from his *Life of Perceval*, Mr. Walpole is a moderate and consistent Liberal, deeply imbued with the principles and with the commonplaces of his party. Macaulay, who is his literary model, was scarcely a more thoroughgoing Whig. After an interval of sixty years, Mr. Walpole, with laudable fidelity to tradition, finds it possible to feel indignant at the penal laws, the rotten boroughs, and the Six Acts passed by Lord Sidmouth. From his own candid account students may learn that some of the Six Acts were reasonable and just, that the remainder were not rigorously enforced, and that excessive precautions against a real and temporary danger soon became obsolete; but Mr. Walpole has studied the legislation of sixty years ago in the speeches of the Opposition and in the pages of the *Edinburgh Review*, and he reproduces the genuine or ostensible irritation and alarm of the day, without applying to an erroneous forecast the correction of later experience. It is the office of historical imagination first to represent to itself past scenes in their original form and then to reduce them to their true perspective. In using materials which he has collected with assiduity and judgment, Mr. Walpole sometimes is deficient in a sense of proportion. With longer practice he will probably learn to appreciate more fully the expediency of omission; and perhaps he may find it worth while at some future time to revise and abridge the introductory portion of his book. The superiority of the second volume to the first justifies the expectation of improvement in a style which is already copious, spirited, and full of matter. An imitation of Macaulay, which can scarcely be unconscious, may be excused in the composition of a young writer; but the brilliant mannerism which is sometimes tiresome as practised by the master cannot be recommended to copyists. Antithesis often involves one inaccurate statement, if not two, and paradox generally helps itself out by exaggeration. Mr. Walpole asserts, in the manner of Macaulay, that "Lord Brougham might have attained the eminence of Fox as a politician, of Erskine as an advocate, of Playfair as a mathematician, of Herschel as an astronomer, of Hallam as an historian. He tried to rival all these characters in their various stations; and, in consequence, though he ran a good second to them all, he did not win quite the first place in the race." There is not the smallest reason for believing that Brougham would have been eminent under any conditions as an astronomer, a mathematician, which is nearly the same thing, or an historian. In eloquence he may have been nearly equal to Fox or to Erskine, but he was remarkably deficient in the tact and prudence which are indispensable to a great advocate. The whole paragraph suggests a doubt not only whether Mr. Walpole's remarks are just, but whether they have any but a rhetorical purpose. His literary taste is less sound than his political judgment. It was not necessary to insert in a history a special chapter on literature, of which it is enough to say that Mr. Walpole holds Dryden to be a greater poet than Spenser, and Moore to be a greater poet than Wordsworth. Moore himself knew better when he spoke of Wordsworth as a poet in the highest sense, and not *quales ego vel Cluvienus*. The whole of Mr. Walpole's disquisition on the writers of the eighteenth and nineteenth centuries might be suppressed with advantage.

Mr. Walpole, on full consideration, has preferred the plan of "dealing with each subject in a separate episode" to the narration of events in chronological order. "The author who deliberately adopts the [episodic] method has, at any rate, the satisfaction of knowing that he has rejected the easier for the more laborious method, and that his choice has not therefore been dictated by any consideration for his own convenience." There is no moral merit in mere self-sacrifice. The rules of art generally coincide with the convenience both of authors and of readers. Adherence to chronological order involves the pleasant sense of having finally done with a period and with everything which it includes. Mr. Walpole, having completed his domestic or financial history down to 1827, has to return to 1815 to take up the thread of the Catholic question, and again to record the course of foreign policy. The effect resembles the impression produced by the ninth or tenth repetition of the ghastly story of the murder in *The Ring and the Book*. Mr. Walpole is similarly compelled to explain five or six times over the superiority in Liberal opinions of Canning to Castlereagh and of Huskisson to Vansittart; but he is fully justified in taking credit to himself for the indefatigable industry which is not the least quality of a historian. The authorities which he has consulted, if not recondite, are extraordinarily voluminous, and they have been judiciously selected. The labour of searching Hansard alone for debates and Reports of Committees must have been severe and irksome. The numerous memoirs of the time have supplied much valuable information; and Mr. Walpole rightly appreciates the utility of such journals as those of Lord Colchester and Mr. Greville. The amusement and instruction of the community, and the supply of materials for such historians as Mr. Walpole, may in some degree compensate for the shock inflicted on a few sensitive persons by the publication of scraps of gossip about the friends of their grandmothers. The book is a repository of knowledge, which is the more serviceable because the writer has had the good sense to prefix to each volume a table of contents, and to append a carefully compiled index. A certain immaturity in the art of composition is indicated by the practice of beginning every subject from its remotest origin. The Spanish Revolution of 1821 is introduced by an account of Isabella the Catholic, and the manufactures of 1815 are traced back to the institution of the traditional woolsack. If Mr. Walpole had written the Iliad he would have gone back, not only to the eggs of Leda, but to the legendary history of every hero who took part in the Trojan war. A full and lucid account of some of the principal inventions, on which the industrial prosperity of England was founded, is interesting in itself, but the details are out of place in a history. Accounts, which might almost serve as specifications for patents, of the fly-shuttle, the drop-box, the spinning-jenny, and the power-loom, only concern the historian as the different devices served their several purposes and as they contributed to the production of national wealth. In recording a cavalry action it would be a redundancy to describe the anatomy and physiology of the horse. It may be readily admitted that superfluity is both a smaller fault and a more promising symptom than deficiency of matter. Mr. Walpole has the energy and indiscriminate curiosity of youth; and he will have abundant opportunity of pruning down hereafter a possibly excessive luxuriance. Never displaying weariness himself, he stimulates the attention even of the cold-blooded critic who nevertheless grumbles at the crowding of incongruous topics. Nature has wisely provided the ordinary human memory with interstices through which many things which were once known pass into oblivion. A few minds, like Macaulay's, are constructed without apertures; but books ought to be written for the average intellect. The student of history scarcely cares to learn that in the spinning-jenny "the rovings, when extended to the spindles, passed between two horizontal bars of wood, forming a clasp, which opened and shut something like a parallel ruler." It is more to his purpose to consider whether it was wrong to give higher titles to great generals than to ingenious inventors. The moral and intellectual qualities which are required for the construction of a useful machine are not necessarily proportional to the material result; but some of the great mechanicians were remarkable for general ability; and it is satisfactory to know that, if Watt and Arkwright were not created dukes, they left large fortunes.

When Mr. Walpole has finished all his preliminary disquisitions, his narrative becomes more rapid and more interesting. His account of the Greek insurrection and of the contemporary intrigues and negotiations of Russia is full and instructive without being diffuse. The history of the political changes which preceded and followed Lord Liverpool's retirement requires some correction and addition. By a careful study of the authorities, and especially of the Wellington Despatches, Mr. Walpole may satisfy himself that Canning neither intended nor wished the Duke to accept his formal offer of a place in the Cabinet. He is apparently not aware that Canning had some time before acquired the personal favour of the King by means which the Duke of Wellington suspected and resented. Prince and Princess Lieven had for their own purposes persuaded George IV. to renounce his former prejudices against the Foreign Secretary, who on his part received the Royal overtures with simple-minded gratitude. The agents of Nicholas had no difficulty in distinguishing between "the friends and foes of Russia," and they well knew that, after his mission to St. Petersburg, the Duke of Wellington profoundly distrusted the Emperor. Their efforts were therefore successfully directed to the elevation of his rival; and during his subsequent tenure of office the Duke was well aware that the Lievens were constantly intriguing against him. In his account of the formation of Lord Goderich's short-lived Cabinet, Mr. Walpole does great injustice to an upright and meritorious public servant who afterwards involuntarily contributed to the overthrow of the Government. From Mr. Walpole's statement it appears that Mr. Herries was induced against his own wish to become Chancellor of the Exchequer; and that he afterwards refused, with proper self-respect, to acquiesce in Huskisson's encroachment on the rights and duties of his office. Mr. Herries was ready to resign, but not to assent to an appointment which ought not to have been made without his approval. By reference to his own accurate account of the transaction, Mr. Walpole will find that he is inconsistent as well as unjust in republishing some calumnies of the day which were directed against the character of Mr. Herries by political or personal spite. In general Mr. Walpole is remarkably fair to political opponents. If the tone of his History is too controversial, he may cite in his defence the example of many eminent writers. While Alison proved that Providence was on the side of the Tories, Macaulay incessantly contended that right and reason were on the side of the Whigs. Even historians of ancient Greece have, from Mitford to Grote, habitually and earnestly attacked or defended Republican insti-

* *A History of England from the Conclusion of the Great War in 1815.* By Spencer Walpole. 2 vols. London: Longmans, Green, & Co. 1878.

tutions. Hume's apparently colourless History was written with a Tory purpose; and Gibbon's impartiality was modified by the exceptions which were acutely denoted by Porson. The embers over which Mr. Walpole has to walk are covered by a thinner layer of ashes; yet, in treating of events which occurred fifty years ago, he would do well to forget that he is a partisan. None of the few survivors who recollect the reign of George IV. are still engaged in public life; and the political issues on which the followers of Grey, of Wellington, or of Canning were divided are for the most part obsolete. A perfect historian would efface himself as completely as Homer or Shakspeare. The memory of famous men and of great events may be preserved in history, as formerly in verse, without a didactic purpose. It may be impossible, and perhaps it would be undesirable, to exclude the occasional expression of moral judgment; but Mr. Walpole is mistaken in his aspiration for the judicial impartiality which he has certainly not attained. The historian, indeed, ought to be impartial; but his function as a judge is to estimate the value of evidence rather than to enunciate the law. If Mr. Walpole is too much bent on the inculcation of political doctrines, he may claim the credit of having laboriously accumulated facts by which the soundness of his theories may be tested. The lesson which he is principally anxious to teach is sound, and may be occasionally useful. Since the changes of the last sixty years have been generally for the better, it may be reasonably inferred that innovation is not in all cases objectionable. That the party of movement must be always and everywhere in the right is a more doubtful conclusion.

ABBOTT'S CORRESPONDENCE DURING THE AFGHAN WAR.*

THE gallant officer whose journals and correspondence during the first Afghan war have now been published under the superintendence of Mr. Low was the eldest of a family of five brothers, all of whom earned some distinction in the Indian service. One of them was the present Sir Frederic Abbott, a well-known officer of the old Bengal Engineers—a corps which has been singularly productive of able officers; and another, the late General James Abbott of the Bengal Artillery, whose chivalrous and daring journey to Khiva gained for him a deserved reputation, apart from his admirable services in after years as a political officer on the Punjab frontier. Augustus Abbott, the eldest brother, was born in 1804. After a short term of school-life at Winchester and passing through Addiscombe, he was appointed to the Bengal Artillery at the age of fifteen, and soon became known as an active intelligent young officer, excelling in field sports. His first share in active service was at the siege of Bhurtpoor in 1825, when the virgin fortress, which had held out successfully against the otherwise invincible Lake, finally succumbed to the more methodical and carefully planned attack of Lord Combermere. Here Abbott did good work in charge of a battery of 18-pounder guns, and gained what was for a subaltern a considerable reputation from his active spirit as well as from his outspoken manner of speech. After this exploit of capturing Bhurtpoor, the Indian army had nothing to do until the invasion of Afghanistan in 1838, when Abbott, now a captain of more than twenty years' service, was attached to Sir John Keane's force, in command of a 9-pounder field battery drawn by camels. Marching by way of the Bolan and Candahar, the route just now taken by Stewart's force, Abbott's battery was attached to the column which made the further advance by way of Ghuzni to Cabul, and later on to Jellalabad. From 1839 to the winter of 1841 Abbott and his battery—now horsed with the hardy cattle of the country, the camels having been found useless for draught purposes everywhere but on sandy soil—took an active and most useful part in the numerous expeditions to subdue risings and disturbances in various parts of the country which marked the term of our so-called tranquil occupation of Afghanistan. In the end of 1841, just before the final outbreak took place, Abbott's battery was stationed at Cabul, whither it had just returned from one of the numerous expeditions on which it was engaged, when it was sent out, with the 35th Native Infantry and detachments of other corps, to clear the Khoord-Cabul Pass, between Cabul and Jellalabad, which had been occupied by the insurgent Ghilzyes. The columns met with so much opposition that General Sale, who, with the 13th Foot and the 37th Native Infantry, was marching towards India—the infatuated Government having determined to withdraw one of the three European regiments stationed in Afghanistan—turned back to help it. The insurrection was now fully developed, and the brigade, entangled in the passes between Cabul and Jellalabad, was hotly engaged day after day, with considerable loss. Eventually, a sort of temporary accommodation with the insurgents having been arrived at, Sale sent back the 37th Native Infantry to await the Envoy, Sir W. Macnaghten, who was about to return to India to become Governor of Bombay, and to escort him through the passes, and remained with the rest of his command, which thus included Abbott's battery, on the further side. It was now the end of October; the insurrection had declared itself at all points; Macnaghten's prospect of getting away had vanished; and the authorities at Cabul—if such a name can be given to the feeble creatures who were ruining our affairs at that place—now ordered Sale to return thither to reinforce the garrison. But Sale, acting on the advice of his principal officers, decided against a return march through the passes, encumbered as the column was with sick and wounded, and moved instead on to Jellalabad, which place he determined to occupy for a time, awaiting events. One of the conditions of Elphinstone's disgraceful capitulation later on was that the garrison of Jellalabad should also evacuate its post and retire on the Punjab. This, as is well known, Sale refused to do, and in the celebrated defence of Jellalabad which followed Abbott and his battery took a brilliant share; indeed it is plain that the subject of this memoir must have been one of the most conspicuous among the band of leading spirits who inspirited the defence. Throughout Abbott seems to have been almost ubiquitous, and as ingenious in improvising artillery expedients for eking out the resources of his slender magazine as forward in whatever fighting took place. This was Augustus Abbott's last active employment. Made a Brevet-Major and C.B. for his services on this occasion, the more complete recognition of his deserts took the form of a civil appointment in the Ordnance Commissariat; and thus, as so often happens, or used to happen in India, a good soldier was rewarded for his soldiership by being turned into a civilian. Except for a brief term, when he rose by seniority to be Commandant of the Bengal Artillery, shortly before its amalgamation with the Royal Artillery, Abbott never returned to regimental duty. He died in 1867.

Augustus Abbott belonged to a good stock, and was a fine specimen of the officer of courage and resource of which the Indian army has produced so many. As Mr. Low observes in his introduction:—

> It is no uncommon circumstance in India for several members of one family to achieve distinction. Thus there are the three Lawrences, who each guided a province through the perilous times of the Mutiny; the three Conollys, and the three Broadfoots, who all showed talents of the highest order which a cruel fate nipped in the bud; also the Chamberlains, the Johnsons, the Boileaus, the Mackenzies, and many other families whose names were familiar in India, but whom the advent of the Competition Wallah may drive out of the field, as it would have excluded those of Wellington and Nelson from the services of which they were the brightest ornaments, had the present rage for competition animated our forefathers. Clive was a dunce at school who would have been ignominiously spun by the Civil Service Commissioners.

And Mr. Low goes on to express the hope that our rulers "may send out a race of statesmen as sagacious in council and bold in action as those sent out by John Company from his modest house of business in Leadenhall Street." Mr. Low and those whom he follows in these remarks make the mistake of assuming that the power so often developed by Indian officials was due to some secret virtue in their mode of appointment, as nominees of Directors of the Company, instead of tracing it to the real cause—the admirable practical education afforded by the responsible nature of the duties placed on them at an early age. No one has ever ventured to assert that the Court of Directors made any attempt to search out merit in the exercise of their patronage, or bestowed it in any other way than for the advancement of their own family, or in return for interest given in securing their own election. The whole enormous patronage of the Court was divided among the individual Directors and given away privately by them, no portion whatever being reserved as a recognition of the public services of distinguished English officials. One might just as well ascribe whatever ability was displayed in Parliament in the time of Walpole to his system of bribery, as credit the old system of nomination with the merit displayed by the nominees after they got to India. Every mode of selection excludes some class. Under the old nomination system every one was excluded, no matter how great his merits, who did not happen to be connected in some way with a Director of the Company; and many a potential Clive or Monro must have lost the chance of displaying his qualities from wanting this pass-key to the door of admission to the Indian service. Another common fallacy lies in the assumption that competitive examinations have had the effect of substituting a different class of candidates, intellectually and physically as well as socially, from those who formerly gained admission to the service by nomination. There is really no reason to suppose that competition has had this effect. What it has done is to raise the standard of education among the members of the public service, not the standard of ability. The men who might have been dunces under the old system, because they had no incentive to work, now take pains to prepare themselves for the test; and when people say that Clive or Lawrence would not have got into the service under the competition system because their school attainments were below the standard of the present day, they might as well say that Aristotle could not have taken a first class at Oxford because he was not acquainted with the works of the late Mr. John Stuart Mill. The men whom Mr. Low names, and almost all those who have distinguished themselves in India, are just the sort of men who would have done well at a competition if they had been trained for it. After all, competition does not raise the standard of natural ability; if all branches of employment are entered only through the medium of competition, it is obvious that the amount of talent available will be a constant quantity; and those who have most to do with the subsequent training of the selected candidates would probably ask, if competition gives them only the clever, what has become of the stupid ones?

The journals of Augustus Abbott would be found readable at any time, but they have of course a peculiar interest at the present moment, when our troops are marching over the same

* *The Afghan War, 1838–42. From the Journal and Correspondence of the late Major-General Augustus Abbott, C.B., Royal (Bengal) Artillery.* By Charles Rathbone Low, I.N. London: Richard Bentley & Son. 1879.

ground that Abbott's battery was so often engaged upon. One point brought out very strongly by a perusal of them is the extreme difficulty of conducting military operations in any part of Afghanistan from the want of roads. Although we occupied the country for nearly four years, we did nothing to remedy this deficiency. And it was to the wretched state of our communications throughout the country that our subsequent disasters were in a great measure due. That the Indian Government should have exercised no foresight in this matter was not surprising, considering that India itself was at that time almost roadless, and that the Government had not yet recognized the construction of means of communication to be a part of its duties. It is to be hoped that more foresight may be shown on the present occasion. But, if we are to judge from all that is to be heard, indecision and procrastination still govern the policy of the Indian authorities in carrying out the extension of communications on the North-West frontier. Yet two points may be postulated without hesitation as essential conditions of our holding any part of Afghanistan on a satisfactory tenure; the people of whatever tracts we occupy must be disarmed, and those tracts must be made practicable for wheel carriage. Happily mountain roads are usually less difficult to construct than roads in the plains.

The most interesting part of the book is that which deals with the defence of Jellalabad, and the reader will find in this case, as in so many other instances of a similar kind, that the truthful differs sensibly from the popular account. The battle of Plassey, as we know, was very near not being fought, and the defence of the Three Hundred under Leonidas reads differently when told in detail from the simple account received in our childhood. And so it turns out that the "illustrious" defence was very near having never taken place. When the demand was received at Jellalabad for its evacuation in compliance with the stipulations made by the panic-stricken authorities at Cabul, the majority of Sale's council of war were for acceding to the demand, and the resolution to do so was only postponed in the first instance on the motion of Captain Broadfoot, a man of great courage and determination. And when the letter was drafted consenting to the evacuation of the place, three officers only voted in the minority against the measure. Fortunately the Afghans, in their reply to the letter sent them, did not express agreement with all the stipulations made; further discussion followed, a change came over the opinions of some of those who had formed the majority, and eventually it was determined to hold the place. It appears, too, that the famous sortie made by the garrison in the beginning of April 1842, shortly before it was relieved by Pollock's advancing force, when the beleaguering army of Afghans was completely routed and the blockade of the place raised, was undertaken almost in defiance of the orders of the general commanding. The Afghans had fired a royal salute in honour of a reputed repulse of the relieving force under Pollock;

> and it seemed to some of the officers of the garrison that the only course to pursue in this desperate state of affairs was to sally forth and break the investment by a general attack on Akbar's position and camp. Sir R. Sale, however, was averse to this measure; but Abbott, Oldfield, and other fiery spirits in camp insisted upon it with so much urgency, that at length the gallant old chief, who, though he loved fighting for fighting's sake, was fearful of incurring responsibility, consented to make a sally in force, and gave the necessary orders.

Thus, in fact, it was by something very like a mutiny—Abbott going the length of proposing that they should act without him—that Sir R. Sale was induced to make the famous sortie which constituted the chief claim of the garrison to the historic title of "illustrious." Abbott's own account is as follows:—

> It was now necessary [the false rumour of Pollock's repulse having reached the garrison] to attack Akbar and beat him in order to obtain supplies for a further siege. Oldfield and I went round to all the heads of corps, and we determined to go in a body to the General and beg to be allowed to fight. We talked for an hour, using every argument in vain; but he dismissed us with a positive refusal. I proposed that we should quietly parade our men at 4 A.M. on the 7th, and go out before he was out of bed; but of all the party only three supported me, and the plan was abandoned. After two hours' consideration Sale sent for Oldfield and me, and agreed to go out.

If there had been a few mutinous officers of the same stamp at Cabul, to put the incompetent Elphinstone and his second in command under arrest and assume the management of affairs, the Cabul disaster would never have happened.

MEMOIR OF JOHN LOTHROP MOTLEY.*

DR. OLIVER WENDELL HOLMES has bestowed on his friend's memory what he himself describes as "but an outline, which may serve a present need, and perhaps be of some assistance to a future biographer." No complaint, at any rate, can be made that the sketch opens too late. Dr. Holmes mentions in the first page how Motley's "life was saved more than a hundred years before he was born." In 1708 the French with their Indian allies attacked the town of Haverhill in Massachusetts. A general massacre ensued; but Motley's great-great-grandmother was successfully concealed by a maidservant under a washtub. Proceeding to more historical incidents Dr. Holmes describes, from personal knowledge, a boyhood which was very promising, but somewhat perilous. Young Motley, with a singular charm of manner and, according to Lady Byron, a closer outward resemblance to her husband than any other person she had ever met, displayed a precocious intelligence. His excessive quickness of apprehension was an actual snare to him. At school, where by a strange coincidence he had Mr. Bancroft for a teacher, he studied according to inclination rather than to rule. But he made the useful acquisition of a knowledge of German. At Harvard, where he matriculated at the age of thirteen, he made no effort, because he needed to make none. For some cause or other which Dr. Holmes does not specify, he was rusticated. Even when, somewhat sobered by the rebuff, he returned to college, his attention was not monopolized by the recognized subjects of an academical course. A tutor once remonstrated upon the pile of novels which loaded his table. "Yes," said Motley, "I am reading historically, and have come to the novels of the nineteenth century. Taken in the lump, they are very hard reading." Some of his class-mates have told Dr. Holmes that he had "no care for dress"; others that he "seemed to have a passion for dress." Dr. Holmes thinks both views right —he had no care for dress, and he only "seemed" to have a passion for it. College magazines, and what Dr. Holmes describes as "a slim monthly," edited by N. P. Willis, received the first fruits of his authorship. Christopher North in *Blackwood* was the political and literary model for himself and his college comrades.

But an American University, with its mimicry of manhood and affected contempt for the prejudices of the outside world, was a bad school for such a lad as Motley. It was well that in 1832, when he left Harvard, he was sent for a couple of years to Göttingen and Berlin. At both Universities he had for his familiar friend Prince Bismarck. The Prince, through the medium of his secretary, Herr Bucher, has contributed to Dr. Holmes's memoir some interesting notes of an old acquaintance which was continued when both were diplomatists. Bismarck was a member of a *corps*, and therefore, he intimates, not so addicted to study as the American student. Nevertheless they lived "in the closest intimacy," and at Berlin shared the same lodgings. Motley's conversation, the Prince testifies through Herr Bucher, sparkled with wit, humour, and originality. His appearance, especially his large and beautiful eyes, impressed every one, and ladies in particular. Prince Bismarck remembers him as "a pertinacious arguer, so much so that sometimes he watched my awakening in order to continue a discussion on some topic of science, poetry, or practical life, cut short by the chime of the small hours." He never, however, adds the Prince, "lost his mild and amiable temper." We feel a little curiosity to know whether his interlocutor showed at this period of his life the latter quality. From Berlin Motley returned to Boston to study law; but his real occupation for several years seems to have consisted in marrying a wife and writing a novel. Of this work, entitled *Morton's Hope*, Dr. Holmes frankly says that it "cannot endure a searching or even a moderately careful criticism." It is "a mass of dissected incidents, which has been flung out of its box, and has arranged itself without the least regard to chronology or geography." But *Morton's Hope*, though an unreadable reflection of Byronic passion, is, like *Vivian Grey*, worth, according to Dr. Holmes, studying as "an autobiography, a prophecy." "None," he insists, "of Motley's subsequent writings give such an insight into his character and mental history." In proof Dr. Holmes cites from this literary failure little besides what he himself describes as "extraordinary anachronisms" and blunders in dates. It, in fact, illustrates Motley's future historical career about as much or as little as the poetical genius of *Childe Harold* is illustrated by *Hours of Idleness*.

In 1841 Mr. Motley made a short trial of the profession of diplomacy. He accepted a Secretaryship of Legation at St. Petersburg. But his wife and his two young children, it was supposed, would be unable to endure the climate, and moreover the cost of living exceeded his resources. Finding that "he had nothing to do and little to enjoy," he returned to Massachusetts after a residence in Russia of a few months. The following three years Dr. Holmes leaps over. In 1844 Motley took an active part in supporting Henry Clay's Presidential canvass. He regarded Polk's election as demonstrating that "a statesman can never again be called to administer the affairs of the country." The victory of Polk, "Mr. Quelconque," as Motley indignantly called the new President, convinced him that "a man better qualified by an extraordinary combination of advantages to administer the Government than any man now living, or any man we can ever produce again, can be beaten by anybody." His enthusiasm for Mr. Clay had even incited him to stump Massachusetts, with such success that he believed he might, if he continued in active political life, command in time the post of "vote-distributor, or fence-viewer, or selectman, or hog-reeve, or something of the kind." He prosecuted the practice of politics to a sufficient extent, at all events, to be elected in 1849 to a seat in the Massachusetts House of Representatives. His one achievement, by his own account, in the single year during which he sat was to draw up "a very elaborate and, as he supposed, unanswerable Report on education." What was his disgust when a member as yet absolutely unknown, George S. Boutwell, "rose and, as Motley always said, demolished the Report, so that he was unable to defend it against the attack." That, Motley told a friend, cured him of ambition for political promotion in Massachusetts. The fact was, Mr. Boutwell informed Dr. Holmes that a Daniel Webster himself could not have carried so unpopular a proposition as that contained in Motley's Report. The Report actually recommended an endowment of the colleges out of the

* *John Lothrop Motley: a Memoir.* By Oliver Wendell Holmes. London: Trübner & Co. 1878.

fund for the support of the common schools. Probably not so much a provoked defeat as the increasing fascinations of literature rendered Motley indifferent to local politics. In October 1845 he had made his mark for the first time as an historian by "a rapid, continuous, brilliant, almost dramatic, narrative" of the career of Peter the Great, which he contributed to the *North American Review* under the guise of a notice of two recent works on Russia. Other articles in the same Review confirmed the impression of those who had kept their faith, amid a good many discouragements, in the genius which blossomed early but ripened late, that in history lay his destined career. A second novel, *Merrymount*, more coherent and readable than *Morton's Hope*, was the last sacrifice he paid to his old delusion that he was born to be a romancist. In spite of some brilliant descriptive scenes, it, too, appears to have been a failure. If we may judge from Dr. Holmes's account, it lacked at once the autobiographical interest and the amusing blunders of the earlier tale. But it was an historical novel, and so far betrayed the present character of the writer's bias. Henceforward, in any case, Motley's literary career was that of an historian, and an historian only.

This was scarcely Mr. Motley's own belief. He was already preparing for his first great historical work. But, he wrote in 1859 to a friend, it was not that he "cared about writing a history," but that he "felt an irresistible impulse to write one particular history." One formidable obstacle suddenly intervened. Prescott, he was informed, was meditating a history of Philip II. Motley's work, though not similar in plan, would cover a portion of the same ground. He would be at the disadvantage of appearing to compete with one whose fame, says Dr. Holmes, was "now co-extensive with the realm of scholarship." He divulged his intention to Prescott himself, and Prescott insisted that he should proceed with his undertaking. "No two books," he said, "ever injured each other." When his own book was published the preface contained a reference to the coming *Rise of the Dutch Republic*, which acted as a powerful advertisement. Eight or nine years, however, were to pass before the history was published. The years 1851-1856 were spent in researches in European State libraries. In November 1853 he was in Brussels, where he "does not know a living soul." He corrects himself:—"I am, perhaps, wrong; the dead men of the place are my intimate friends; I am at home in any cemetery. Any ghost of the sixteenth century that ever flits by night across the moonlight square is at once hailed by me as a man and a brother." He had brought his work to Brussels, thinking it finished; "but I find so much original matter here, and so many emendations to make, that I am ready to despair. However, there is nothing for it but to penelopize, pull to pieces, and stitch away again. "His own relaxation in Brussels was the study of Rubens." The Brussels Gallery contains a few fine specimens of the master. "I go sometimes of a raw foggy morning merely to warm myself in the blaze of their beauty." Dr. Holmes remarks on the natural sympathy between the great colourist on canvas and a great "colourist in language." At last, in 1856, when Motley was now past forty, the labour of ten years was completed; and "Mr. Murray civilly declined the manuscript." The publisher subsequently avowed his mistake, and asked to be allowed to undertake Motley's second History. But the author had to publish the *Rise of the Dutch Republic* at his own risk. No sooner, however, was it given to the world than it found "an approving, an admiring, an enthusiastic world of readers, and a nobler welcome at the colder hands of the critics." Fifteen thousand copies were sold in London in 1857. Mr. Froude eulogized it in the *Westminster Review*, Guizot himself in the *Edinburgh*. At home Everett, Washington Irving, Prescott, Bancroft, Sumner, gloried in such a compatriot. On both sides of the Atlantic "the lonely student, who had almost forgotten the look of living men in the solitude of archives haunted by dead memories, found himself suddenly in the full blaze of a great reputation."

Mr. Motley did not repulse the courtesies offered him. By no means self-indulgent, he loved the habitual elegances of life. Dr. Holmes attributes to him "one of the three wittiest things that have been said in Boston in our time." What were the other two he tantalizingly omits to mention; but Motley's *bon mot* was, "Give me the luxuries, and I will dispense with the necessaries, of life." He was a willing as he was a welcome guest at Cambridge and Holland and Lansdowne Houses in London. He was grateful for the friendly admiration of Boston friends, who found him "in every way greatly improved; the interesting impulsive youth ripened into a noble manhood." But he had accomplished only the opening instalment of his work. "Without stopping to take breath, as it were, for his was a task *de longue haleine*, he proceeded to his second great undertaking, the *History of the United Netherlands*." The first two volumes, which were published in 1860, "maintained and increased the reputation he had already gained." Then an enforced break intervened. The War of Secession absorbed his thoughts. "Love of country, which had grown upon him so remarkably of late years, would not suffer him to be silent at such a moment." He engaged vehemently in the controversies which the disruption had aroused. The part he took up, though he had anticipated no such result, probably suggested to President Lincoln his appointment to the Vienna Legation. Thus, after a lapse of twenty years, he resumed the diplomatic experience he had essayed in 1841. The very reserved and exclusive society of Vienna welcomed the distinguished historian; but all the personal weight he possessed he employed in the advocacy of the Federal cause. From the first he held that no compromise with slavery was possible, and lamented that his own side did not always appear to appreciate that what it was engaged in was not "a war," but a "revolution." He denounces "Jeff and Stonewall, and the other Devil-worshippers"; but he envies their superior "earnestness" to many Federals who would have been content to leave the negro question an open question as it was before hostilities began. Letters of ten and fifteen "closely written" pages conveyed these sentiments to long-suffering friends like Dr. Holmes and Mr. Lowell. His intimacies in London society were used for the same end. The United States Minister at Vienna had not much direct diplomatic business to transact. On one occasion the two countries were nearly coming into collision, and Motley intervened with effect. A large body of Austrian volunteers was about to embark at Trieste for Mexico, to aid Maximilian. Mr. Secretary Seward bade Motley threaten that, if these auxiliaries started, he should quit Vienna. The expedition was forthwith countermanded. Mr. Motley showed himself on this as on other less critical occasions a competent diplomatist. Yet diplomatic dignities and patriotic cares were alike, from the point of view of literature, vexatious interruptions to the true work of his life. Just when wars of secession and Mexican complications seemed about to yield him leisure for resuming his history, his official diplomatic functions were abruptly terminated. Some man of the real or assumed name of George W. M'Crackin wrote to President Andrew Johnson, alleging that several envoys of the United States, and particularly Motley, had "railed violently and shamefully" against the President and his policy. Mr. Seward sent extracts from the letter to the objects of Mr. M'Crackin's accusation, requesting them to deny or confirm the report that they had uttered the expressions put into their mouths by M'Crackin. Motley indignantly denounced the charges against him as gross calumnies. But he proceeded to explain his views on the "reconstruction" of the Southern States, which were by no means the views of the President. He ended his letter with a resignation of his appointment. Dr. Holmes is very wrathful with Mr. Seward for expecting trusted representatives of the United States to answer slanders by a man who was probably a "spotter hired to report on the foreign Ministers," and who doubtless wrote under a borrowed name. Mr. Seward ought, as Dr. Holmes argues, to have refused to accept a resignation thus provoked. That, Mr. Seward's friends declare, was his own original intention. The President, however, irritated doubtless by Motley's avowal of dissent from him, directed the Secretary to accept the resignation. It was a wretched termination of an honourable episode in Motley's career. The President emerges ill from it; but then no one could suppose that such a man as Andrew Johnson would emerge well from any complication. Mr. Seward betrayed a deplorable want of moral courage in lending himself to be Andrew Johnson's tool. But Motley himself also showed a foolish rashness and indiscretion. By his volunteered resignation he played the game of his detractors.

In 1868 the third and fourth volumes of the *History of the United Netherlands* were published, and he was already contemplating a history of the Thirty Years' War. But the next year a new distraction from historical investigation was caused by his appointment to the United States Legation in London. We have no space to follow Dr. Holmes in his rather controversial account of the causes which in 1870 resulted in a suggestion by Mr. Secretary Fish that Motley should resign that post, and in his recall when he rejected that suggestion. The assigned pretext for this severity to one of the most illustrious of American citizens was failure to obey Mr. Fish's instructions in his interview with Lord Clarendon on the *Alabama* claims. General Grant during his present tour has explained Mr. Motley's crime to have been that he had "deliberately fallen into line" with Mr. Sumner instead of with Mr. Fish. Dr. Holmes is of opinion that Motley's real offence was not so much any special act of disobedience, as General Grant's jealousy of the possible influence which Sumner, whose friend Motley was, might exercise through him. Mr. Motley was probably a scapegoat for his friend's sin in quarrelling with the President; but his refusal to resign was, we think, a mistake. At Vienna he resigned when there was no necessity for the step. In London he refused, and underwent the vexation of a formal recall. He seems to us to have reversed the proper course in each case.

After all, Dr. Holmes's readers will, we suspect, be scarcely grateful to him for the thirty-six pages he has spent, out of a poor couple of hundred or so, on a party squabble. They would rather have had Mr. Motley's conspicuous personality in the worlds of London, Vienna, and Boston recalled to them than his contributions to the State Paper Office of Washington. In spite of all his great intellectual gifts, or perhaps partly in consequence of them, Mr. Motley was thrown away in diplomacy. The very causes which made him an acceptable envoy at foreign Courts rendered him an inadequate Minister of the United States. It was not that European studies and associations had in the least denationalized him; but socially he represented the professorial society of the American Cambridge rather than New York and Illinois. We owe an additional grudge to diplomacy that the bitterness of the Vienna and London incidents reflected itself in his latest work, the *Life and Death of John of Barneveld*, in a certain autobiographical parallelism between United States politics and the feuds of military and civilian statesmanship in the

Dutch Republic. It may add to the charm, but it detracts from the dignity, of history to be able to detect, as does Dr. Holmes, General Grant in Maurice the Stadtholder, and Mr. Motley in the Dutch envoy Aerssens. We do not know if Dr. Holmes discovers Mr. Sumner concealed under Barneveld himself. Diplomacy has to answer not merely for having tinged Mr. Motley's studies and clouded his later years, but for having converted Dr. Oliver Wendell Holmes from a biographer into an apologist. Motley was his class-fellow, his habitual correspondent in Europe, his neighbour in Boston during the episodes of his returns home, and finally his patient, when, still stung by a sense of injury at his second recall and crushed by the loss of his wife, he entered on the long process of dying which closed finally in England in 1877. His was a sensitive, nervous, and social nature which a quaint humourist and subtle analyst of human nature like the author of the *Autocrat of the Breakfast Table* could have depicted to the life. The rekindling of the dead ashes of a quarrel in which Motley was only a Patroclus for a Sumner and a Grant to fight over has absorbed skill and sympathy which might have preserved for us the man as he was, a worthy representative of an American type, fastidiously intellectual and individual in exact proportion to the surrounding dead level of aggregate mediocrity.

THE HAWKINSES' VOYAGES.*

IN *The Voyages of the Hawkinses*, famous mariners of the times of Elizabeth, we have one of the most delightful and instructive books that the Hakluyt Society has published. In reading these simple records we are transported into a world of customs, ideas, and morality that has become very strange and almost incredible. Nothing gives one so strong a feeling of the vicissitudes of things, nothing makes the sense of the changes that three hundred years have wrought so vivid, as the story of these adventurous seamen. We can recognize a family likeness, indeed, between the Englishmen of to-day and their Elizabethan forefathers, but the likeness is greatly blurred. Their piety is that of men who practically lived the life of the children of Israel in the book of Judges. They owed obedience to the Queen's Majesty, but from the evidence of these uncourtly logs it is manifest that they really lived under a theocracy; under the government of God. The Hawkinses were as eager tradesmen as any of our time, and one of them, Sir John, was the founder of the slave-trade. There is not, in the account of his voyage, a word of pity for the blacks who were kidnapped by force of arms, and yet it is easy to see that Hawkins was not cruel. The barbarities of the Spaniards and of the Inquisition excite in him and his contemporaries an unaffected indignation. He and his son spoil the Spaniard in the spirit of biblical Israelites, though they are ready to allow all deserved honour to their enemies. As to the negroes, John Hawkins seems to have held in earnest, what Montesquieu maintained in irony, that it is impossible to believe creatures to be men who have such ill-shaped noses. He did not draw with Montesquieu the inference that "if they are men, we are not Christians."

The story of the Hawkinses is too crowded with events to allow much space for moralizing. The patriarch of this family of seamen was Mr. William Hawkins of Plymouth, a sailor of the reign of Henry VIII., who had thrice gone on the dangerous but lucrative voyage to the Brazils. John, afterwards Sir John, his son, was probably born about 1532. In 1562 John, who had frequently visited the Canaries, learned "that negroes were very good marchandise in Hispaniola, and that store of Negroes might easily be had upon the coast of Guinea." He communicated his ideas to some enterprising friends, and "for his purpose 3 good shippes were immediately provided." Here it may be said that John's unconsciousness of wrongdoing is a better excuse for this beginning of a miserable business than Mr. Clements Markham finds, half in irony, for Charles V. "It was in 1517," says the editor, "that Charles V. issued royal licences for the importation of negroes into the West Indies, and in 1551 a licence for importing 17,000 negroes was offered for sale. The measure was adopted from philanthropic motives, and was intended to preserve the Indians." Hawkins, at worst, was no philanthropist. In his first voyage the God-fearing, respectable Hawkins "got into his possession, partly by the sword, and partly by other means, 300 negroes at the least," and he traded them away in St. Domingo for hides, ginger, sugar, and some quantity of pearls.

In 1564 Master John Hawkins went off again, with a vessel called the *Jesus*, and three others, to plunder, murder, and kidnap. His orders to his crews ran thus:—"Serve God dayly, love one another, preserve your victuals, beware of fire, and keepe good companie." Near "Ginney" (Guinea) he missed the "flitting island"—"and therefore it should seeme he is not yet borne to whom God hath appointed the finding of them." In the story of the second voyage are many notes of the manners and customs of the unlucky races which "proved good marchandise in Hispaniola." At Sambula, for example, the Samboses and their tattooing were observed; "they jag their flesh, both legs, arms, and bodies, as workmanlike as a jerkin-maker with us pinketh a jerkin." In Florida the natives "do not omit to paint their bodies with curious knots or antique work." The towns of the Samboses are "prettily divided," and the houses "made round like a dove-cote," probably like the houses of the Kanekas. Over the roof "there is a round bundle of reed prettily contrived like a louer." Mr. Markham, in a footnote, asks if *louer* means *bower*, but surely *louvre* is a more probable explanation. Snakes ran in and out of the houses unmolested, as among the Zulus, and probably for the same reason—that they were believed to be ancestral spirits. In war the Samboses used reed arrows, and they were so far advanced in civilization that the arrows were iron-tipped and poisoned, like those of Pandarus and Odysseus. In Hawkins's third voyage (1567) he and his men in one of their negro-stealing raids tasted of these missiles. "Although in the beginning they seemed to be but small hurtes, yet there hardely escaped any that had blood drawen of them, but died in strange sorte, *with their mouths shutte*, some ten days before he died, and after their woundes were whole." It is difficult to say whether this lockjaw was the result of the poison or of nervous apprehension. The latter theory is favoured by the experience of Hawkins himself, a man of indomitable courage:—"I myself had one of the greatest wounds, yet, thanks be to God, escaped." As to the religion of the Samboses, "I can heare of none that they have, but in such as they themselves imagine to see in dreames"—a very probable account of one of the elements in the religion of savages. Another tribe, the Cannyballs, he found "exceeding fierce, and to be avoided." Cannibals might prove "good marchandise," but it was not easy to procure and transport them to Hispaniola. In Florida Hawkins seems to have first become acquainted with an Indian weed, "tabacco, and the great virtue thereof." "The Floridians, when they travel, have a kind of herbe dryed, which with a cane, and an earthen cup at the end, with fire, and the dried herbes put together, do suck thoro the cane the smoke thereof." He returned on the 20th of September, "bringing home both gold, silver, pearles, and other jewels great store. His name therefore be praised for evermore."

One John Sparke wrote the log of the second voyage, but John Hawkins himself compiled that of the third luckless adventure. We have already noted the loss of his company from the poisoned arrows of the blacks whom he tried to kidnap. With the help of a negro king he took a town containing 8,000 people, but "no truth in Negroes"; his black accomplice in this robbery refused to share equally with the pious English thief. This was but the beginning of "many miseries," for the Spaniards attacked him at San Juan de Ulloa, and after many misadventures, he had to land a hundred men on the Mexican coast, and make for home with the remnant of the crew. The castaways fell into the hands of the Inquisition, who treated them as they had treated the negroes, or even worse. "Several were tortured," says Mr. Markham, "and most inhumanly mutilated. Some were burnt, and a few were sent to Spain, and left to die of hunger in the Archbishop of Seville's dungeons." Those were times in which men, as a rule, were pitiless, except to persons of their own tribe and faith. The dealings of the Spanish and English with each other, with negroes, and with Indians, almost tempt one to think that there is something in cosmopolitanism.

John Hawkins, on his return home, tried vainly to betray the Spaniards into a trap. He offered to hand over the Queen's ships under his command, but the "treacherous Spaniard" was not to be beguiled. Once in England, the slave-dealer showed the other side of his character. To his own people, among Englishmen and Protestants, he was as honest, thorough, and active an official, as daring yet discreet an officer, as he had already proved himself an unscrupulous adventurer. He became Treasurer of the Navy, and put down jobs and peculations with a high hand. He invented chain-pumps for ships. When the Armada threatened the country he was vice-admiral, and hoisted his flag on board the *Victory*, a ship of illustrious name, and destined to have a glorious future. When he missed the Plate fleet in 1590, he told Elizabeth that "Paul planteth, and Apollos watereth, but God giveth the increase." "God's death!" exclaimed the Queen, "this fool went out a soldier and is come home a divine." Her Majesty was no Puritan. Hawkins died at sea, November 21, 1595. His last voyage was made in the hope of rescuing his gallant son Richard, whom the Spaniards had taken prisoner with his ship the *Dainty*.

Richard Hawkins was a man of milder mood than his father; he was resolute, courageous, the enemy of Spain, but tolerant, thoughtful, and courteous. His earliest memory was of the correction inflicted by John Hawkins on the Spaniards who were carrying Ann of Austria to be fourth wife of Philip of Spain. They entered Plymouth "without vayling their top-sails, or taking in of their flags," whereon John Hawkins fired a gun and "lacked the admiral through and through." The affair was ended amicably by an apology from the Spaniards. In 1588, after the ruin of the Armada, Richard Hawkins caused a ship of three or four hundred tons to be built on the Thames. His intention was to make a voyage of discovery "for the islands of Japan, of the Phillippinas, and Molucas, the Kingdom of China, and East Indies, by way of the straites of Magellan and the South Seas." The Spaniards, oddly enough, refused to believe in Richard's scientific purpose, and called him a "pirate." His ship was named by his stepmother, who called her the *Repentance*, but the Queen renamed her the *Dainty*. She never had any luck. Therefore, writes Hawkins, "I advise all persons ever (as neere as

* *The Hawkinses' Voyages, during the Reigns of Henry VIII., Queen Elizabeth, and James I.* Edited, with an Introduction, by Clements R. Markham, C.B., F.R.S. Hakluyt Society. London: 1878.

they can), by all meanes, and on all occasions, to presage unto themselves the good they can, and in giving names to terrestrial works (especially to ships) not to give such as merely represent the celestial character, for few have I known, or seene come to a good end, which have had such attributes." As an example, Hawkins cites the immortal *Revenge*, "which gave England and Spain just cause to remember her," and which Mr. Tennyson has taken care shall not be forgotten. There are defeats more glorious than victories, and we shall remember Isandula longer than Ali Masjid.

The *Dainty's* own end was to perish in a splendid disaster. This ill-omened ship, which bore for figurehead Hawkins's crest—"a demi-Moor proper, bound and captive"—left England on the 13th of June, 1593, accompanied by the pinnace *Fancy* and the *Hawk*. Tharlton, the captain of the pinnace, basely deserted Hawkins off the Plate river; to which treachery, and to the incapacity or treachery of his gunner, he attributed his defeat. On the 16th June, 1594, Hawkins was in the bay of San Mateo, on the coast of the province of Quito. Here he met the Spanish fleet, with double his ordnance and ten times his men. His crews insisted on fighting. The English sailor of that age was less amenable to discipline, Hawkins says, than were the Spaniards:—

> Yea, I cannot attribute the good successe the Spaniard hath had in his voyages and peoplings, to any extraordinary vertue more in him then in any other man, were not discipline, patience, and justice far superior. For in valour, experience, and travell, he surpasseth us not; in shipping, preparation, and plentie of vitualls, hee commeth not neere us; in paying and rewarding our people, no nation did goe beyond us: but God, who is a just and bountifull rewarder, regarding obedience farre above sacrifice, doubtlesse, in recompence of their indurance, resolution, and subjection to commandment, bestoweth upon them the blessing due unto it. And this, not for that the Spaniard is of a more tractable disposition, or more docible nature than wee, but that justice halteth with us, and so the old proverbe is verified, *Pittie marreth the whole citie*.

His men would not wear defensive armour like the Spaniards. "Though I had great preparations of armours, as well as of proofe, as of light corseletts, yet not a man would use them; but esteemed a pott of wine a better defence than an armour of proofe." Alas, "the pott was continually walking" during the fight, and Hawkins's men exposed themselves with a recklessness of which the Spanish sharpshooters took advantage. We wish we could quote the whole story of the sea-fight. The *Dainty* drove off her foes again and again, "sustaining the fight, all this night, with the day and night following, and the day after." In an attempt to board, Hawkins tells us, "myselfe received six wounds; one of them in the neck, very perilous, another through the arm, perishing the bone, and cutting the sinewes close to the arme-pitte; the rest not so dangerous." What Hawkins does not say—we gather it from the Spanish account—is that "the gallant Hawkins himself seized the royal standard, by means of a bowline which he threw over it." It was in this chivalrous attempt that Hawkins was so sorely wounded that he could only encourage his men to refuse to surrender. Thus he fought his ship from the place where he lay, "nearly giving up the ghost," but still rousing himself to harangue the crew:—

> "Came we into the South sea to put out flags of truce? And left we our pleasant England, with all her contentments, with intention or purpose to avayle our selves of white ragges, and by banners of peace to deliver ourselves for slaves into our enemies hands; or to range the world with the English, to take the law from them, whom by our swords, prowesse, and valour, we have alwaies heretofore bin accustomed to purchase honour, riches, and reputation? If these motives be not sufficient to perswade you, then I present before your eyes your wives and children, your parents and friends, your noble and sweete countrey, your gracious soveraigne; all of which accompt yourselves for ever deprived, if this proposition should be put in execution."

When once surrender is spoken of, men rarely fail, says Hawkins, to give in. If Hawkins yielded, it was to a noble foe, Don Beltran de Castro:—

> For prevention, hee sent a principall captaine, brought up long time in Flanders, called Pedro Alveres de Pulgar, to take care of me, and whilest the shippes were one aboard the other, to bring me into his ship; which he accomplished with great humanitie and courtesie; despising the barres of gold which were shared before his face, which hee might alone have enjoyed if he would. And truely hee was, as after I found by tryall, a true captaine, a man worthy of any charge, and of the noblest condition that I have knowne any Spaniard.
>
> The generall received me with great courtesie and compassion, even with teares in his eyes, and words of great consolation, and commaunded mee to bee accommodated in his owne cabbine, where hee sought to cure and comfort mee the best he could: the like hee used with all our hurt men, six and thirtie at least. And doubtlesse, as true courage, valour, and resolution, is requisit in a generall in the time of battle, so humanitie, mildnes, and courtesie, after victorie.

The story of the later adventures of Richard in the Spanish prisons (for the Inquisition or the Government kept him captive for eight years) was unfortunately not written when the gallant sailor died. His last years found a peaceful home at Slapton, in Devonshire. His account of his cruise is full of digressions on technical points of seamanship and war, which are very curious and interesting. We have no space for the tale of the voyage of William Hawkins, Richard's cousin, who visited the Great Mogul at Agra. No one should overlook, however, the curious story of the Mogul's china plate (pp. 429, 430).

Mr. Clements Markham has edited the volume with his usual care, and has provided it with most useful introductions, notes, and an index. We wish he had kept the scurvy controversy out of his foot-note to p. 142, especially as, in p. 163, Richard Hawkins seems by no means so very much of Mr. Markham's opinion. It would be interesting to know the exact data of the ivory bust of Sir John Hawkins, of which a photograph adorns this delightful volume.

TURNER'S LIBER STUDIORUM.*

MR. RAWLINSON'S descriptive catalogue of the *Liber Studiorum* will be warmly welcomed by the circle of collectors and amateurs to which it properly appeals. If the success of a work could be measured by the amount of devotion and labour required for its performance, Mr. Rawlinson might also count upon the reward of popular appreciation. Such a reward, however, is in the present instance not to be expected, and our author, who is so obviously inspired by the feelings of the particular class to which he addresses himself, will scarcely suffer any disappointment if his readers, like the works that he describes, should be rare and select. For it is not in the nature of a collector to be troubled by the consciousness that his enthusiasms are not widely shared. He loves to possess what others cannot obtain, and in like manner he feels a certain pride in the knowledge that he lovingly admires what others are apt to neglect. We do not wish to be so ungracious as to hint that his tastes are directed solely by this sentiment, but it is undoubtedly true that, even with the most enlightened collectors, the pure enjoyment of artistic beauty is sometimes complicated by a sense of triumph in the possession of that which is denied to others. Mr. Rawlinson himself refers to this very human frailty in the introduction to the volume before us. With perfect candour he confesses that he can discover no good reason for the very high prices constantly paid for what are known as the engravers' proofs of the *Liber Studiorum*. These proofs are, in fact, trials of the plates drawn before the engraving was complete, and intended as a guide to the engraver, to show what was yet wanting to perfect the work. "Often," as Mr. Rawlinson observes, "they are so manifestly incomplete that, although interesting as marking the progress of the work, they wholly lack the beauty of the finished picture, and are therefore, I hold, inherently of less, instead of more, value than the impressions which Turner thought the fittest to give to the world." But the collector, as we have already hinted, is not always guided by intrinsic value, and the fact that these engravers' proofs are of greater rarity makes them in his eyes more precious.

The sentence we have just quoted shows, however, that Mr. Rawlinson is not a slave to these caprices of his class. He is able, upon this as upon other questions connected with the *Liber Studiorum*, to take an independent view of Turner's art, and even to those who do not possess any of the plates that are here so carefully described, the introductory chapter, which deals generally with the artistic value of the work, will be found full of interest and instruction. In common with nearly all lovers of Turner, Mr. Rawlinson is very ready to acknowledge his indebtedness to the writings of Mr. Ruskin; but at the same time he does not hesitate to call in question the general accuracy of Mr. Ruskin's criticism upon the *Liber Studiorum*. In a recently published biography of the artist Mr. Hamerton has very clearly shown that Turner's most eloquent advocate has been betrayed into extraordinary exaggeration of the neglect which the painter suffered in his lifetime. Mr. Rawlinson here detects and exposes a similar instance of what Mr. Ruskin himself would call "the pathetic fallacy." In the fifth volume of *Modern Painters* the reader is encouraged to look to these engraved plates for the evidence of the prevailing sadness of Turner's mind. "Take up the *Liber Studiorum*," says Mr. Ruskin, "and observe how this feeling of decay and humiliation gives solemnity to all its simplest subjects," and further, he adds, "There is no exultation in thriving city or mart, or in happy rural toil, or in harvest gathering. Only the grinding at the mill and patient striving with hard conditions of life." To any one who is familiar with the *Liber Studiorum* this forced and sentimental characterization of its purpose will scarcely need refutation. That Turner was affected by the modern romantic feeling for outward nature which loves to seek the beauty that lies in the wilder and more desolate aspects of scenery is no doubt true; but the presence of this sadder sentiment in his work is rather to be ascribed to an unconscious sympathy with the movement of his time than to the special bent of his own individuality. Indeed, as compared with his contemporaries, Turner imports a more constant suggestion of almost Southern luxuriance into his painting which is not always in accord with the homely character of English scenery. He does not record the shifting changes of English weather with the sympathy or power that Constable displays, nor does the general effect of his colouring suggest the presence of so grave a spirit as is revealed in the simple and severe beauty of Girtin's work in water-colour. But, even if the prevailing sadness of Turner's mind could be proved to have been expressed in his art at all, the *Liber Studiorum* would still remain a most unfortunate example for the purpose. As Mr. Rawlinson very justly points out, the distinguishing characteristic of the work lies in the extraordinary variety of the subjects represented and the many changes of mood displayed in their treatment. There is little doubt that Turner here intended to show the whole scope of his art and to put in exercise all his

* *Turner's Liber Studiorum.* A Description and a Catalogue by W. G. Rawlinson. London: Macmillan & Co. 1878.

powers of design. He seems to have been partly urged to undertake the publication of these plates by a desire to invite a comparison between himself and Claude. Boydell had published with success a series of engravings after Claude's *Liber Veritatis*, and this seems to have suggested to Turner the title as well as the scheme of his own work. Competition, however, is an unhappy element to introduce into the practice of art; and in this particular instance it was specially inappropriate, for Claude had never intended his drawings to be given to the world at all, nor had they been executed under any idea of displaying the extent of his artistic resources. It would therefore be altogether misleading to institute any comparison between the two schemes; and the only significant point in connexion with this so-called rivalry lies in the fact that the spirit in which the *Liber Studiorum* was undertaken justifies us in accepting the result as a representative expression of Turner's genius.

Mr. Rawlinson reminds us of other considerations which give to these plates a peculiar importance and value. They were executed in the fulness of the artist's powers and before his imagination had fallen into the license of a later time. They were contemporary with pictures like the "Crossing the Brook" and the "Frosty Morning," in the National Gallery, pictures which appeal strongly even to those who cannot profess any sympathy with the vague sublimity of style that was adopted at a subsequent period of his career. It is true that they afford no opportunity of judging of Turner's gifts as a colourist; but it may be questioned, we think, whether this is altogether to the artist's disadvantage. Turner's genius has been so lavishly extolled, and the extravagant eulogy of which he has been the subject is so likely to produce an undue reaction of feeling, that the present is perhaps scarcely a favourable moment for attempting anything like an impartial estimate of the position he is destined to hold in the history of painting. We may be permitted, however, to hazard the opinion that his powers of design and his knowledge of the truths of light and shade afford a surer foundation of lasting fame than can be found in his more vaunted gifts as a colourist. The peculiar and strongly marked conventions of his system of colour must, we believe, ultimately prove a serious obstacle to the appreciation of his painting; and the time must surely come when much of what now passes for extraordinary imaginative resource will be curtly dismissed as artifice and extravagance. But, even if Turner's painting should fail to keep its present place in general esteem, such a work as the *Liber Studiorum* would alone be sufficient to vindicate his genius. Here his exquisite sense of the refinements of aërial truth and his incomparable power of displaying the contrasted beauties of sunshine and shadow are not perplexed in their exercise by the need of solving complicated problems of colour. We are allowed to appreciate the wide range of his sympathies and to note the unfailing facility of his invention at a time when that invention had not yet lost its hold upon the simplicity of nature. And, to our thinking, landscape is of all branches of art that which most imperatively demands this close contact with reality. Even the richest imagination is here sufficiently employed in simplifying what it sees and in selecting those finer truths which give to a scene its essential character. To attempt more than this, and to strive to impose upon nature invented fairy visions—such as Turner produced in his later time—is, in fact, to admit the control of a lower kind of fancy. We cannot, therefore, quite agree with Mr. Rawlinson in his admission that Turner's most imaginative work was done after the production of the *Liber Studiorum*. In our judgment these plates mark the highest point in the development of Turner's genius. In these he has given to the world the best that he had to offer, expressed in a material that was the best fitted to display the strength and, at the same time, to suppress the inherent weaknesses of his style.

We have not attempted to discuss in detail the exhaustive catalogue which forms the body of Mr. Rawlinson's work, nor indeed have we by any means exhausted the many interesting points in connexion with Turner's art that are handled in the introduction. The merits of that particular combination of etching and mezzotint which Turner employed are perhaps more open to question than Mr. Rawlinson would seem to allow. It is true that by this means the artist was enabled to approach the effect of the washed drawings of Claude, but the deeply-bitten line of Turner's etching does not so readily fuse with the work in mezzotint as the line of the reed pen with the wash of the brush. The result, from an artistic point of view, would possibly have been more entirely satisfactory if these plates had been executed either entirely in etching or entirely in mezzotint; and, in our judgment, it is not altogether an advantage that they should appear to suggest the process of a drawing. Of the catalogue itself it is only necessary to say that Mr. Rawlinson has spared no pains to make it as complete as possible. He has examined all the collections of the plates that are known to exist, and he has thus been enabled to classify the different "states" of each plate with confidence and accuracy. Further, he adds, in every case where it is known to exist, a description of the original drawing made in preparation for the plate.

IN THIS WORLD.*

It will soon take two writers to review one story, for one man can no longer pretend to follow lady novelists in the variety of learning which they display. The difficulties of the case are not a little increased by the fact that they so commonly write in what is, if not a learned, at all events an unknown tongue. We are not sure, therefore, whether two reviewers are sufficient. A third would often be required, who should first master the peculiar form of English in which female writers so commonly delight, and who should then translate it—as much of it, that is to say, as is found to have any meaning—into the English which any ordinary person can understand. We ought not to take it ill that we so often find in these stories such displays of learning. By the time that women have been as much worried with examinations as men are, they will be less anxious, as soon as they have learnt anything, to put it into print. In the book before us there is a great show made of medical learning. The heroine, a most charming young lady we admit, had taken her degree of Doctor of Medicine at Paris. She does not, happily, confine herself strictly to the practice of medicine, but, like all other sensible heroines, soon falls in love. The author, however, never lets us forget that if she is in love she is still a doctor in love. Her hair was soft, fair, and curly. Her eyes at times "became positively cavernous," whatever that may mean, "in the revelation of depths beyond depths, and the flashes of sudden fire which illumined those depths." But her talk was uncommonly scientific. She was learned in typhoid fever and diseases of the eye. Her husband—for she marries a fashionable physician—was one day prescribing for a distinguished artist. The medical heroine was in an adjoining room, and through the partly opened door heard the symptoms described. She at once saw that her husband, who was, we must in pity remember, of the old school of physicians, and merely a man, did not understand the case. When the artist had left, she maintained that the patient was suffering from glaucoma. Her husband was equally confident that the haze over the patient's eyes was due to biliousness:—

> "No," said Ernestine; "I saw that the pupil is dilated to a degree that shows only a mere ring of iris; and the iris is discoloured."
>
> Dr. Doldy laughed aloud. "That is all very well," said he; "but the man has constant nausea."
>
> "So I heard him say," said Ernestine composedly. "You forget that I heard him detail his sufferings; and, perhaps, you don't remember either that recurrent vomiting is now ascertained to be one of the symptoms in an acute case of glaucoma."

The Doctor—the male doctor, we mean, for we forget that there were two of them—would not be convinced. His wife insisted that "iridectomy must be performed at once." She gracefully admitted that she was not afflicted with the passion for operations. "Iridectomy does not," she said, "fascinate me because it is asserted that the larger the piece of the iris cut out, the more complete its cure." Good heavens! we found ourselves exclaiming. How can we pretend to understand, much more to criticize, such a heroine as this? What has our course of novel-reading, beginning with Pamela and Clarissa, and coming down through Amelia and Evelina and Helen and Emma to the charming young ladies who still survived not so many years ago—what has it done in the way of preparing us to comprehend a heroine who is not fascinated by the size of the cut that is made into an unfortunate man's iris?—

> Bring forth men-children only,
> For thy undaunted mettle should compose
> Nothing but males—

is the only appropriate reply that her husband could have made. Unhappily, though he was a good Shakspearian scholar, yet he took his wife's interference very ill. He may have held with the wise men of Ahasuerus's court, who maintained that, if a wife is allowed openly to despise her husband, there will arise in the world too much contempt and wrath. At all events he quarrelled with her, and they separated. He was obliged, indeed, in the present case to own at last that she was right and he was wrong. That was proved by "the ophthalmoscope—that simple, subtle little instrument which Charles Babbage evolved out of his wonderful mind." "To evolve out of the mind" is, as we note in passing, what we may perhaps call the female English of "to invent." The ophthalmoscope showed that the artist's was a case of sub-acute glaucoma, and that iridectomy must be at once performed. Now, as critics, we always like to bear our part in the judgment that is pronounced in a novel. We are not willing to accept the author's mere word. Nor do we like in the present case, without understanding anything of it, to be called upon to allow, quite contrary to what *à priori* is probable, that the husband is in the wrong and the wife in the right. If it was not a case of sub-acute glaucoma, if iridectomy was not needed, then Mrs. Dr. Doldy ought to have been ashamed of herself, and to have asked pardon of Mr. Dr. Doldy. That we can understand. But what do we know of glaucoma in any form of acuteness, or of iridectomy, however large or however small a piece may be cut out? We might just as reasonably be expected to follow the disputes of a chandler and his wife as to the best method of melting tallow.

When the author leaves medicine and goes into law, then the little knowledge that we have managed to pick up on the subject shows us that she is hopelessly wrong. We are ready to own that

---

* *In This World.* A Novel. By Mabel Collins, Author of "An Innocent Sinner." 2 vols. London: Chapman & Hall. 1879.

our own views as to the way in which a criminal trial is conducted are not so clear as they should be. We must plead as our excuse the vast, the overwhelming amount of bad law that has been presented to us in a long course of novels. Nothing, next to love-making, is so frequent in our stories as a criminal trial, and nothing is so varied as the mode of procedure. Crowner's quest law is nothing to novelists' criminal law. Should Sir James Stephen's great Act be carried through Parliament, we earnestly hope that it will at once be made a subject in all the examinations for girls and women. And yet perhaps the result would only be that our writers would blunder more elaborately, and would flounder more hopelessly. This consideration, however, is foreign to our present purpose, and we must not be led away by it. In the story before us there is of course an abandoned villain. In abandoned villains ladies greatly delight. He is a most hateful and forbidding wretch. He is a dark-skinned, miserable, unhealthy-looking man. He has two rows of projecting white teeth in a hideous grin, and his teeth flash ominously when he laughs. Can any dentist—male or female, we care not which—explain to us what is meant by teeth flashing ominously? He had been engaged to a remarkably disagreeable young lady, whose skin was like cream-coloured satin. Cream-coloured women, we are told, seldom eat much, nor was this young lady an exception to the rule. Not that her eating has anything to do with the story, but this is in part a scientific novel, and so scientific facts are recorded. She had written to him during the engagement some foolish letters, and he took advantage of them when they had quarrelled to extort money from her by a threat of publication. She consulted a solicitor, who had his reasons for wishing to punish the villain. After she had stated her case the lawyer "looked up in a cool business-like way into her face, and said, 'Will five years' penal servitude do?' 'Oh, glorious!' she ejaculated. 'Oh, glorious,' she repeated musingly to herself." The villain was arrested and brought before the magistrate. The cream-coloured woman attended to give evidence, and "drew auguries of triumph from the rich-hearted rose in the button-hole" of her solicitor. As soon as this gentleman had given an outline of the case, before the prisoner had a chance of saying a word, "the magistrate with dignity and contempt" exclaimed, "And his accomplice in this disgraceful case, who and what is he?" The magistrate later on asked about the letters that had been sent. "Have they been inspected"? The solicitor "turned a perfectly blank and expressionless countenance upon him and said, 'I have looked at them and they are such as any engaged lady might write.' 'That makes it a very serious case,' said the magistrate." Neither he nor anybody else troubled himself anything more about the letters. It is true that it had been agreed on with the villain that "if he would bring a defence which would be likely to lighten his sentence, it should be accepted by the prosecution on condition that he kept his tongue from slander with regard to Laura," the cream-coloured woman.

The prisoner and his accomplice were committed for trial. When the great day came on, and the prisoner's counsel was pursuing a certain line of defence with some ardour, at the very moment when "he was plainly producing some effect upon the jury, he was suddenly arrested by an indescribable look from Lingon," the solicitor of the rich-hearted auguries-of-triumph-giving rose, "which puzzled him so much that he sat down precipitately." No wonder that the author found it impossible to describe a look which, coming from the solicitor of the prosecutor, in a moment made the prisoner's counsel give up his defence just when it was beginning to tell with the jury. The result was that the villain was sentenced to penal servitude for life. Happily for him, "a beautiful, elegant, and accomplished woman" was in love with him. She used every influence she possessed, and backed up every effort his connections made, to effect his release. In a few weeks he is set free. How this is accomplished we do not quite understand; but, from what our author tells us, the Home Office must be in a most corrupt state. "Where there are ladies concerned a social bramble," we are told, "creeps a long way," and in this case there were not a few social brambles.

The villain then escapes, the cream-coloured woman marries a baronet, and the two doctors—male and female—become reconciled. But in spite of reconciliation Mrs. Dr. Doldy keeps up her scientific talk to the last. In the closing chapter she says, "It is a mistake to think too much from a hygienic point of view." It is admirable to see how easily our women doctors catch those hard words which once were thought to belong, as of sole right, to the male. We are reminded by the lady's learned talk of a story we have heard of a poor woman, who, quite seventy years ago, came back full of admiration of the learning of a physician. "He only asked me one question," she said, "and then he told me all that was the matter with me." "And what did he ask you?" "How I felt, and I said hot and cold all over." "Ah!" said he, "you are suffering from the unequal distribution of the vital heat." But the mystery of healing has been broken in upon by the fair sex. What would "an unequal distribution of the vital heat" avail against a rival female practitioner who could talk of sub-acute glaucoma, iridectomy, and a hygienic point of view?

THE COMMERCIAL PRODUCTS OF THE SEA.*

THE various spoils of that incalculable amount of animal life which teems in the ocean and its sequestered inlets, under different conditions of atmospheric climate and of aqueous temperature, supply mankind with vast quantities of useful raw materials, at the mere cost of searching for them. This bountiful provision of nature presents an interesting study, which is here sketched out by Mr. P. L. Simmonds, the compiler of two preceding treatises respectively setting forth the industrial uses of vegetable products and those of animals reared upon dry land. His work is descriptive and statistical, but not specially scientific; the facts stated belong to that common stock of ordinary information which has, since the time of Pinnock's and Blair's Catechisms, been frequently commended to the attention of young persons. The more recent era of Great Exhibitions, with their diversity of manufactured substances from every region of the earth, has demanded a share of this kind of knowledge for the intelligent enjoyment of the popular spectacle. It was a phase of the general mind which may now, after a quarter of a century, seem likely to be passing away, as there are few signs of any immediate further development of our artificial sources of wealth. But the sea and the land, and all that is therein, constitute a wonderful perpetual exhibition of myriad forms of organic life, beneficently serving the needs of the human race. It must ever be delightful and profitable to review this marvellous arrangement; to regard its continuance, through all the shifting scenes of national or social prosperity, as an abiding pledge for the larger, we trust for the happier, future of our terrestrial world.

Mr. Simmonds has attempted a threefold division of his subject, to which one exception may be taken, according to the true definition of "Art." He seems to mean, by his third category of uses for marine products, something analogous to what is called Fine Art; and, if that be his intention, we fear he does not rightly understand the term. The mere decorative employment of beautiful substances—tortoise-shell, pearls, mother-of-pearl, coral, and amber—cannot properly be so ranked, any more than the work of the mere lapidary in polishing and setting his precious stones. Art, in the high and worthy sense, is not the presentation of exquisite materials; it is the poetic creation of noble original forms. We should prefer, therefore, to let all this jewelry, which is furnished by such articles of ornamental value found in the sea, take its place with the sponges, the whalebone, the oils, isinglass, kelp, sepia, and other matters serviceable to manufacturing industry. The remaining twofold division will be, on the one hand, all those products of the sea which are good for human consumption as food; on the other hand, those of which something desirable is made by human skill and contrivance.

Fisheries, in general, are practised with a view to obtaining the first class of marine commodities. The cod, herring, pilchard, and mackerel of the British narrow seas, and of the neighbouring Atlantic and German Oceans, with the turbot and the sole of our coasts, the sardine and tunny of the Mediterranean, the familiar crustaceans, bivalves, and other edible molluscs, will here occur to every reader in grateful remembrance. The salmon fishery of these islands is worth half a million sterling annually, the sales in London alone being to the value of a quarter of a million; but salmon are caught in rivers, though living partly in the sea. Many competent writers have enjoined upon us greater attention to the unequalled natural advantages of England in regard to sea fisheries. It is justly remarked that our labouring classes have not been taught sufficiently to appreciate fish as a nutritious article of diet. Except in the shape of a "red herring" for breakfast, they do not care to use it, though much cheaper than butcher's meat. Charitable visitors of the homes of the London poor find it difficult to overcome this singular prejudice. For sanitary and physiological as well as economical reasons, it is to be seriously regretted at the present day, when so large a portion of our townsfolk are engaged in sedentary indoor work. The waste of nerve-substance going on so rapidly in modern city life could probably be remedied in some degree by a more liberal use of fish for its phosphates. A poor man's wife, though she might buy a fine fresh herring for a penny, has no idea of giving her husband such a dinner; she haggles for an indescribable remnant called beefsteak, or more indigestible veal. Yet the curious rambler in Drury Lane may find a humble cookshop that offers a plentiful dish of fried plaice for the sum of fourpence; while stewed eels, the favourite repast of our Saxon forefathers, may be had round any corner. Plaice, as well as haddock and whiting, though contemptuously denominated "offal" by the fashionable fishmonger, makes a tolerably good occasional meal; herring is first-rate nourishment when the fish is in season, about Midsummer, and again in the autumn. It is estimated, says Mr. Simmonds, that the quantity of herrings yearly taken in the Yarmouth and Lowestoft fisheries would give fourteen meals, of one herring for each, to every man, woman, and child in the United Kingdom. The Scotch fisheries, of which the chief is at Wick, and those of St. George's Channel and the Irish Sea, are not less important. But a very large proportion of the herrings taken are salted or smoked and devoted to exportation. Holland and England, successively enjoying maritime supremacy and assuming the championship of the Protestant cause in Europe, partly owed

* *The Commercial Products of the Sea; or, Marine Contributions to Food, Industry, and Art.* By P. L. Simmonds. London: Griffith & Farran.

their naval strength to their supplying the Roman Catholic nations with preserved fish for fast-days. This was also the destination of the Cornish pilchard fishery, which throve by the religious custom of Spain and Portugal, and which trained the crews of Elizabethan ships to defeat the Spanish Armada. There is no better school for the manhood of a nation; and some gentlemen who like sea sports, when tired of aimless yachting, might perhaps try now and then the command of a trawling smack. The work is carried on upon so vast a scale that in the North Sea, on a fine night of September or October, there will be five or six thousand miles of netting stretched between the boats to catch the mighty shoals of herring. It is roughly estimated that a hundred thousand of our countrymen, with about three thousand vessels, not reckoning small boats, are employed in this kind of fishery. Dutchmen and Frenchmen also take a moderate share in its pursuit. The decline of all the Irish coast fisheries is still to be deplored; the number of vessels and boats had diminished, between 1870 and 1876, from nine thousand to under six thousand, and the number of men and boys employed from thirty-eight thousand to twenty-three thousand seven hundred. British America, or the Canadian Dominion, exports fish to the value of above three millions sterling yearly, more than half of which is supplied by Newfoundland. An equal quantity of cod is taken by the United States' fishermen on the banks and shores of Newfoundland and on the coast of Labrador. The French, too, are not far behindhand in those waters, but on the shores of Iceland they practise the cod-fishery more largely than all other nations. As an article of diet, the dried and salted cod finds ready sale in every country of Southern Europe and in the West Indies. The Norwegian fisheries, both of cod and herring, constitute the main industry of Norway, valued at 1,000,000*l.* year by year.

These are the greatest examples of the commercial importance of sea-fishing, to which are here added some particulars, not very complete, of the mackerel fishery, the lobster and crab fishery, and other departments of marine pursuit. Such a statement as that "one hundred millions, or about twelve thousand tons' weight, of soles are said to be sold annually in Billingsgate," may not improbably be well founded, but has not the air of statistical precision. The chapter on oysters tells us what we unhappily know too well of their increasing price in England, which pays, if Mr. Simmonds is correctly informed, between 4,000,000*l.* and 5,000,000*l.* a year for this article. Three-and-sixpence a dozen for the genuine sort of Whitstable or Colchester is a prohibitory rate to middle-class people in these times. We are not here told of the recently introduced "Anglo-Portuguese," now offered in London at tenpence. The systematic French oyster culture at Granville, Cancale, Arcachon, Auray, and L'Orient is briefly described. A scanty notice of the American oyster trade is also given; but we could have wished for a better account of the oyster world, and of the oyster himself, the "native," our old familiar friend. The pearl oyster of Ceylon and the mother-of-pearl oyster of the Malay archipelago—for which we care little—are treated by Mr. Simmonds with great respect in a subsequent chapter.

Passing from things eatable to materials or ingredients of manufacture, the author finds much to record that is worthy our notice. His account of sponges is more satisfactory than some other parts of the book, which appear to have been hastily raked together from whatever documents lay nearest at hand. This remark, however, applies only to the earlier division, relating to ordinary fisheries. He has bestowed more thorough study upon the marine products which enter into our industrial economy. The sponge, indeed, is rather an article of domestic convenience. We learn that the coarse, soft, flat sponges, with large pores and great orifices in them, come from the Bahamas and Florida. A small schooner, towing several little boats, with two men in each, passes slowly over the sponge-ground. One man sculls, the other squats hanging over the boat's side, with his head in a bucket, the bottom of which is of glass. Through this he looks down into the deep still water, and sees the sponges lying twenty or thirty feet below. Then, assisted by the other man, he aims a stroke with a three-pronged hooking-fork at the end of a long pole. The sponge is grappled and lifted into the boat. When the boats have loaded the vessel, the sponges lying on board, covered with a gelatinous mass from which oozes a slime of disgusting odour, are anything but pleasant. The animal soon dies; the sponges are laid out in the sand that this putrefying outer substance may rot off, after which they are roughly cleaned and scraped, pressed and packed in bales. Much further washing is required, and a chemical process of bleaching. American sponges being so inferior to those of the Mediterranean, it has been sought to utilize them for the stuffing of cushions and mattresses, or the felting of hats and winter coats, but with poor success. The finer kind, suitable for toilet use, is found in the Levant; the best on the coast of Northern Syria, near Tripoli, and secondary qualities among the Greek isles. These, as everybody has noticed, are not flattish lumps of loose texture, like the others, but either globular or of a cup-like form, with fine pores, and are not easily torn. They are got by divers plunging from a boat, many fathoms down, with a heavy stone tied to a rope for sinking the man, who snatches the sponges, puts them into a net fastened to his waist, and is then hauled up. Some of the Greeks, instead of diving, throw short harpoons attached to a cord, having first spied their prey at the bottom through a tin tube with a glass bottom immersed below the surface waves. Mr. Simmonds refers to a German treatise by Von Eckhel, on the "Badeschwämme," from which he borrows most of his knowledge upon this subject. The existing sources of supply may possibly be exhausted. It is only within certain limits of temperature and other physical conditions of the sea-water, and upon ground of suitable quality, that fine sponges will grow. The Austrian Government is trying to promote their artificial culture on the Dalmatian coast; and M. Lamiral, for the French Société d'Acclimatation, has made experiments at the isles of Hyères, near Toulon. We should think our colonial Governments of Queensland and other Australian provinces might find it worth while to do the same. The northern shores of New Zealand and the Fiji Islands would probably afford the requisite conditions. The sponge-making animal, like some other zoophytes, can be multiplied by cutting him in pieces, leaving each piece to live and grow by itself. It is stated by Dr. Oscar Schmidt, of the University of Grätz, that in three years, at a cost of 8*l.* 8*s.*, four thousand sponges can be raised, worth 16*l.*, which would seem to be a profitable enterprise.

Whaling and sealing operations are of course included by Mr. Simmonds in his description of the means by which the sea is compelled to yield its wealth for human service. It is rather annoying that he will call these "fisheries" when he is speaking of marine mammals; and he has so little to say about them as hardly to justify their ostensible place in his book. Here is a sentence, for example, which does not tell the reader much about whalebone, yet it is all we get upon the subject:—"Whalebone, as it is erroneously termed, is another valuable product of this fishery." But what is whalebone? might still be asked in vain by an ignorant reader; and Mr. Simmonds expects to have such readers, for he says that some do not know whether a sponge is a plant or an animal. He is, for his own part, a well-informed man, a statistician, and perhaps a second-hand naturalist; but he does not take the pains to adapt his explanations to a fair standard of general knowledge. His work is, therefore, not a sufficient textbook of its professed subject, though certain parts of it bear witness to special research, and present many interesting details of information. Nearly twenty pages are devoted to isinglass, more than forty to shells, and an equal space to sea-weed; nor does it seem too much for these matters separately regarded. It may prove worth while, in discussing a question of commercial or fiscal policy, to know even small facts of this description—that other fishes beside the Russian sturgeon have swim-bladders yielding a pure gelatine; and that the extraction of iodine from kelp is almost confined to Great Britain and France. Mother-of-pearl has had something to do with Birmingham manufactures, at one time giving employment to four or five thousand hands. To despise this kind of knowledge as trivial and sordid is no part of wisdom. A great variety of minute circumstances may, from time to time, affect the industrial economy of a nation. The possible effect of very little things upon large social interests ought not to be disregarded. In this point of view, an account of the commercial products of the sea appears to be worth having, so far as it is correct; but the work here before us is far from complete.

MORICE'S PINDAR.*

As the supplementary series of "Ancient Classics for English Readers" must some day come to an end, and as Pindar had not been taken in his proper place before the dramatists, it would be hard to name a Greek author so fit for an impressive conclusion. One could have wished, indeed, to see a volume devoted to the pastoral or bucolic poets of a far later age, the sweet and versatile idyllist Theocritus and his co-mates Bion and Moschus; but, if this was not to be, there is obvious appropriateness in placing in the hands of a scholar who has already published a happy version of the Olympian and Pythian Odes the task of presenting Pindar and his works to English readers. Such an undertaking is particularly seasonable just now, when the explorations at and near Olympia under the sanction of the German Government have been unearthing columns and cornices, statues and pediments, temples and sacred precincts, which tell the story of the foremost of the Greek Panhellenic games at the zenith of their fame, upon which so many allusions and myths in Pindar will be found to bear. In reading a very interesting article on the discoveries at Olympia in the current number of the *Edinburgh Review*, one might almost conceive the writer to have used Mr. Morice's pen when he pictures the growth of the Olympic festival, and traces its stages from a local to a Panhellenic, and from a Panhellenic to an œcumenical gathering. Mr. Morice himself, in his chapter on "The Four Great Games," after describing the topographical details of Olympia before its glories of architecture and sculpture had enhanced the charm of its natural features, thus describes the surroundings of the pageant as it seemed to the eye of the looker-on:—

> Among these groves and streams, for the five days and nights which the festival occupied, lay encamped a multitude from every tribe and colony of Greece, imposing in its mere numbers, and rendered yet more brilliant by the presence of official deputations (called "Theoris") from the various States, vying with each other in the magnificence of their

---

* *Pindar.* By the Rev. F. D. Morice, M.A., Fellow of Queen's College, Oxford. Ancient Classics for English Readers Series. London and Edinburgh: W. Blackwood & Sons. 1879.

dress and equipment. The numerous well-appointed cars, each drawn by four spirited horses, which started together for the chariot race, must in themselves have been an exciting spectacle. And the athletes, in their manly beauty and splendid muscular development, provoked enthusiastic demonstrations from the spectators. A midsummer sun beat with only too fierce a radiance upon the scene by day, and at night, from a hundred banquets, songs of triumph and festivity rose into the clear sky, illumined by the full orb of the harvest moon.

It was mainly the widespread repute of these festivals that gave Pindar the special field for his song; and the English reader will find no better help towards unlearning the misconceptions of Greek choral poetry derived from misty ideas of English Pindarics than the two chapters of the volume before us on its form and matter as seen in Pindar's Odes. Mr. Morice likens the combination of voice, instruments, and dancing to the performance of a cantata sung in solemn or joyous procession to the accompaniment of a moving orchestra of flutes and harps, and shows the exact subordination of each to each. He defines the structure of the choral ode as it was arranged by Stesichorus, the order of strophe, antistrophe, and epode, and the occasions when the epode could be with propriety omitted. As to matter, the choral ode is shown to have been chiefly devoted to religious services, procession chants, pæans, and enthronements of the statues of gods in their temples; to encomia and epinicia, or victory odes, among which the blunder of a grammarian has left a sample in the eleventh Nemean Ode, as well as *threni* or dirges—a class almost extinct; and to the scolia, or cross-songs, confined to the social gatherings of the noble. It was to the encomia and epinicia especially that mythology lent its choicest stores, when the poet sought to praise a patron or point a moral, and, as in the case of the maturer works of Pindar, to vary compliments and moral sentiments that might else have seemed trite and tedious. If Corinna's rebuke was not dictated by the spite of a rival, Pindar's earliest works showed an indiscriminate use of the myth; and we may infer from his extant odes from the twentieth year of his age until his death at eighty, that, however it may have been given, he laid to heart the advice, "One should sow with the hand and not with the full sack." Certain it is that he wrought with a tact and a knowledge of the road to popularity with his contemporaries and countrymen which won him the epithet of "divine," as well as the solid rewards of a regular and profitable profession, which is more than could be said of the great Attic tragedians and historians.

The poet was born at or near Thebes during the Pythian Festival of the Delphic Apollo in 522 B.C., but his family traced their lineage up to the hero Ægeus of Sparta, whose descendants had branched off into two lines, in Sparta and its colonies and at Thebes; and he delighted to claim as his ancestress the Arcadian nymph Metope, the mother of Thebe, mythic foundress of Thebes. It was no marvel that his family were hereditary flute-players, since that was the national instrument of Bœotia. Tradition ascribes his early training to his stepfather Scopelinus, and his bringing out to Lasus of Hermione, the dithyrambist and lyric poet at Athens. At twenty he returned to Thebes, and began the career which soon became so splendid. His first prize was won by the response to an invitation from a young Thessalian of the half-royal House of the Aleuadæ to celebrate his victory in the Pythian games. The victor's name was Hippocleas, and a certain Thorax, whom Pindar mentions in his ode (Pyth. x. 64), appears to have introduced the poet to him:—

> In friendly Thorax rests my trust, who, toiling for my grace,
> Hath yoked this car of song with steeds in fourfold trace,
> And gives me guidance back for guidance, love for love;

where the metaphor from the charioteer's art refers to the commission to execute the ode in question, with its ternaries of strophe, antistrophe, and epode. From this start his progress was rapid, culminating in the honour of his house being spared by the "great Emathian conqueror" nearly three centuries after his death. We read of his writing an ode for an Athenian festival which was so complimentary that the Theban authorities fined him—a fine which Athens paid. His popularity in that city was such that the Athenians appointed him their Proxenus or "consul;" and so much were his services sought that Hiero offered him a home at Syracuse, where Simonides and Bacchylides were installed already. The poet, however, refused the invitation, and there is no evidence that he ever lived in Syracuse, though he may have visited it. Some traditions speak of the musical tastes of his two daughters, and one records that he had descendants at Thebes when Alexander destroyed it. The legends attaching to his memory are unusually poetical—*e.g.* Pan overheard by a belated wayfarer singing a pæan of Pindar's; and the myth of the tired poet being overtaken with sleep on the slopes of Helicon and a swarm of bees settling on his lips and filling his mouth with honey—a myth, however, the honour of which he shares with Homer before him and in later days with Plato and St. Ambrose. From Pindar's biographers little of importance is to be gleaned. And, as Mr. Morice observes, to frame a life of Pindar from his Odes would lead to strange results if a Euhemeristic interpretation is to be put on the poet's allusions. Not every modern bard who tells us of his "slumbers on Parnassus' brow" can be inferred to have trod in fact the soil of Greece.

The chapter of Mr. Morice's little volume which discusses the four great games of Greece is full, not only of curious and picturesque details, but of reasons why these festivals, especially those of Olympia, exercised so wide and lasting an influence. Personal prowess was in those days, infinitely more than in modern times, the measure of a citizen's power to serve his State, especially in the battle-field; and, as regards victory in the chariot race, the author is no doubt right in attributing its prominence to the prestige attaching in Greece to horse-breeding as a token of wealth and of a desire to use it liberally. As one sees in the dialogue between Strepsiades and Pheidippides in the first scene of Aristophanes's *Clouds*, this taste was regarded as the antithesis to miserly hoarding of wealth; and Aristotle is the authority for the doctrine "that, where a State is strong in horses, the chief power will be found to reside with the nobles." The sentiment also of Panhellenic unity must have tended to the continuance for so many ages of these famous Greek contests, of which the three comparatively minor ones were respectively held under Delphi's height on the plain of Crissa, in the Glen of the Lion amidst the mountains of Argolis, or on the sea-severing ridge of the Corinthian Isthmus. The Nemean and Isthmian games were in alternate years, the prizes being, at the one, a wreath of parsley; at the other of pine; while the prize of the Pythian winners was a wreath of laurel, recalling Wordsworth's beautiful legend of Apollo's late atonement to Daphne. (See p. 62.)

It is impossible here to do more than point the attention of readers to our author's minute examination of Pindar's "modus operandi" in composing his odes. One point is clearly set forth, that the poet's surprises, the sudden leaps into Mythland in which he revels, when

> From theme to theme the bright applausive lay,
> As bees from flower to flower, speeds on its changeful way,

are no sign of obscurity, but are made of set purpose, and the digressions with which he introduces them are in reality carefully planned episodes. If he does not work out a myth, the modern reader must bear in mind that his audience possessed the key to it. By a subtle and searching examination the author refutes the charge of unorthodoxy in religion as regards Pindar, and shows that his attitude towards popular beliefs was that of a general reverence, with the often implied reservation of judicious silence.

The average English reader will find in the pages of this Ancient Classic abundant insight into Pindar's skilful treatment of his panegyric tasks, and may note the tact with which, without abatement to his dignity, he could "speak the truth in love" to his patrons. Thus in Ol. v. he contrived to sooth the wounded pride of his patron Psaumis under the irreverent jests on his age and grey hairs, by calling up another grey-haired champion from Mythland. In the second Pythian Ode to Hiero, his chief patron, Pindar uses Ixion's double sin to point the moral that "still should gratitude good deeds repay," and covertly dissuades the monarch from a twofold crime against his brother Polyzelus, akin to that of David against Uriah, with such tact that "the censor is at the same time the panegyrist." With equal adroitness does he handle the same patron's foibles when in one place he glorifies liberality, and in another dissuades him from aggressive measures against Thero by picturing the charms of the counter-blessing of peace:—

> Deinomenes' son, of thee
> Sings at her door each Locrian maid, and looks abroad no more afraid
> From horrors of war by thy power set free."

In truth Pindar was no mere courtier; and his extant odes, carefully studied, breathe a happy medium between independence and avoidance of offence. No poet ever excelled him in felicitous compliments to real merit, as when, in the Sixth Pythian Ode, he addresses the ode, not to the chariot-victor, Thero's brother Xenocrates, but to his son Thrasibulus, who had acted as charioteer. Father and son being linked together by loyal affection and kindred generosity of spirit, what subtler compliment could be conceived than a reference to Antilochus's service to his sire, the aged Nestor, when he received Memnon's spear-point in his stead in the skirmish under the walls of Troy? Amongst Mr. Morice's most interesting chapters is that which prefaces the Sixth Olympian Ode to Agesias, a member of the Syracusan branch of the sacerdotal guild of the Iamids, "a sort of honorary canons in the temple chapter," a race of soothsayers as well as custodians of Jove's oracle among the Dorian Greeks. Pindar doubtless meant this ode for a masterpiece; and any one who reads the story of Apollo's secret wooing of the nymph Pitane, and the infancy of the offspring of it, Iamus—a story which in one part reminds Mr. Morice of Hagar and Ishmael, in another recalls Creusa and her child Ion—must acknowledge it to be one of the most beautiful and touching flights in Pindar's poetry. Collaterally with his account of Pindar's seventh Olympic ode, and the family of Diagoras of Rhodes, in whose honour it was composed, Mr. Morice mentions a curious tale, told by many ancient authors, of a female member of that family, by name Pherenicè, who transgressed the law which forbade the presence of women at Olympia, through her anxiety to witness her son's prowess in the lists. He won the race; her presence was detected, and she was condemned to death by being hurled from a rock. But on her pleading the exceptional position of her family as athletes, not only was her sentence remitted, but (as in the story of the female witness of the mystic rites of the Freemasons) the breach of the law secured her admission for the rest of her days to the coveted assemblage. The later pages of this pleasant book are full of well-chosen anecdotes of Pindar's creditable and generous use of his inimitable art; as, for instance, where, to aid the cause of an

exiled noble of Cyrene, he brings round his complimentary ode to the monarch Arcesilas to the glorification of mercy as the true secret of greatness. We close the volume with the feeling that the illustrious Theban is fortunate in the appreciative sympathy of his latest exponent.

AMERICAN LITERATURE.

PROFESSOR TYLER'S *History of American Literature* (1) reaches only the conclusion of the Colonial period, bringing down the work to that point at which modern American literature may be said to have begun. The first books written, if not printed, in the English possessions beyond the Atlantic were, as was natural, almost exclusively devoted to explanations of the resources of the country and the needs of the colonists, or to descriptions, necessarily very imperfect and often very fanciful, of the aboriginal inhabitants, human and other, of the newly discovered continent. Captain John Smith's accounts of his achievements, exploring expeditions, and adventures in Virginia are among the most interesting and typical works of this earliest period, highly amusing, often deeply interesting, but certainly by no means always worthy of reliance. They illustrate forcibly the hardships and difficulties of the first colonists, the dangers to which they were exposed, less from Indian hostility than from their own ignorance, and from the embarrassments inseparable from the position of settlers in an utterly wild land of whose character they were necessarily ignorant, and the cultivation of which seems to have been in every case at first precarious, and often unprofitable. The want of legal organization and authority was another great cause of peril, and almost of ruin, to the more southern settlements; while those of New England, though less favoured by the mother-country, possessed from the first a stringent and effective organization of their own, and suffered rather from popular bigotry and from the tyranny of ministers and leaders than from any deficiency of law or recognized authority. On the other hand it would seem from all contemporary records that, probably owing to their fanaticism and fierce and gloomy temper, the Puritans of the North incurred much earlier and more systematic hostility from the natives than did the first settlers in Virginia—a name which, it must be remembered, included at first the whole country south of the Pennsylvanian border, Maryland and Delaware being founded by independent bodies of colonists upon lands confessedly at first within the old Dominion, and with which her citizens were for a long time reluctant to part. The next class of American writers were the natural offspring of Puritanism, being mostly preachers, men happily in these days much more admired than imitated, and, fortunately for their own fame, much more generally praised than read. The Pilgrim Fathers are somewhat like the eponymic heroes of Hellenic settlements—idealized figures, types of a character strong, stern, and suited to the purpose in hand, rather than real personages. Unlike the Argonauts and the waifs of the Trojan war, from whom so many cities a thousand years afterwards traced the descent of their people, the founders of the New England colonies are, indeed, all historical; but as historical personages they bear but an imperfect resemblance to the ideal pictures preserved by tradition or formed by the reverent imagination of their descendants. Fortunately their Quaker victims have preserved a counter tradition which to some extent corrects those absurd poetic and oratorical estimates of the persecuting and fanatical Fathers of Massachusetts and Connecticut which their own revered but unread writings are hardly likely to modify. The tradition which represents the Winthrops, Cotton Mathers, and the rest, as departing from England to establish freedom of conscience in America, is as exactly opposite to the truth as any myth that has grown up in the course of two thousand instead of two hundred years. But it is scarcely less accurate than most of the received notions respecting a people to whom freedom of conscience was a thing more hateful than atheism, and almost as detestable as prelacy, popery, or quakerism itself.

Dr. Weisse's account of the Origin and Progress of the English Language (2) is an eminently laborious, and on the whole we may say meritorious work, though the writer's views upon many philological questions are hardly accordant with the most generally accepted doctrines of the highest authorities in this youngest-born of sciences. For example, the author places the Semitic tongues, not indeed on a par, but side by side with Sanscrit and other Aryan languages as sources from which the early English or Anglo-Saxon tongue has been derived, and inserts in the same table, and as if of equal value, dialects and distinct languages, original tongues like the Latin and purely derivative ones like French and the other Romance tongues of modern Europe. However, in this very table he honestly provides the reader with the means of judging for himself of the value of his suggestions and the real relations of the English language; tabulating the words in the Lord's Prayer for which he finds cognate words in the several languages compared, and allowing any observant student to see how exceedingly distant, if not purely imaginary, is the connexion between the Aryan and Semitic forms, how close is the resemblance of the Old-English to the Low Dutch and Gothic, and how wide the distinction between this family and the High Dutch. He does not mark with equal clearness the distinction between aboriginal English words common to rather than derived from those of the family to which English belongs, and the directly imported terms which it owes to Latin, ecclesiastical, classical, or scientific. Probably the most interesting and most useful part of the work is not the philological, but the historical portion, the sketches and specimens given of English literature from the earliest to the latest period. The first works wherein English was employed as a written language, and by which its form was gradually fixed, are little known to any but professed students of English antiquities and philology; and a book which gives the ordinary reader a general account of them is a valuable contribution to the education of a people of whose higher classes Lord Beaconsfield has said that they know no tongue but their own, though they really know less of the history and origin of their own language and the method of its structure than of those of half-a-dozen dead and living foreign tongues. The writer's remarks on orthography are somewhat feeble and illogical. For example, he considers the ancient terminal *ie* as a defect, almost as a blunder, and the substitution of the *y*—a vowel which, except as the representative of the Greek *u*, has scarcely a place or meaning in English—as a modern improvement. Again, he notes with great satisfaction the dropping of the final *e* mute from a number of words, and infers that it might with equal advantage be altogether abandoned, failing to observe that the examples of its abandonment which he selects are, with scarcely an exception, evidences of the reasonableness of its retention in other cases, since the words from which it has been dropped are those in which its retention could not affect the pronunciation, while, where retained, it serves to mark the sound given to the effective vowel preceding. Nor does he attach, as might have been expected from a German, sufficient importance to the possibility that in many cases the final *e* now mute might have been originally sounded.

The *Life and Letters of George Cabot* (3), as arranged by a descendant who justly honours the memory of an ancestor very little known even among his countrymen, have a considerable historical interest. The writer played a part not altogether unimportant among the politicians of his time; but the special value attaching to these relics of the man is due, not to his personal importance, but rather to his representative position. We see in him what practical men of calm judgment and independent tone naturally thought of the circumstances of the time to which he belonged. The dominant opinion of his generation was passionately French, and bitterly hostile to England, though a very few—and those the very best of the Federalist statesmen by whose efforts the Union was chiefly founded and sustained—recognized that France was the representative, first of savage anarchical passion, and afterwards of selfish aggression; while England, notwithstanding the peculiar relation in which she stood to her American colonies, was throughout the long contest with the Republic and the Empire the defender of national liberties and constitutional order. This view Cabot took from the first and maintained throughout his career as senator and diplomatist; and the chief interest of his letters lies in the evidence they afford that, however overpowered by popular passion and overruled by the interest or the temper of the most powerful statesmen of the day, this view was that of a very considerable number of the classes qualified by education and experience to understand the nature of the interests at stake, and to judge impartially the circumstances of a conflict in which America was but secondarily concerned. As too many Liberal writers in this country have adopted without sufficient examination the American view of that great struggle, and especially of the side issues in which America was entangled, it is well worth while to observe how the passing events of the time were regarded by a cool and unbiassed American, capable of taking something more than a merely national view of the struggle between the French Revolution and Empire on the one hand, and England as the defender of European freedom on the other.

Mr. Robert Winthrop belongs to that hereditary aristocracy, not of fortune, but of mental culture and character which Massachusetts almost alone among the Northern States still possesses, and to the members of which she owes the greater part of her intellectual and moral reputation. Like Cabot, not being himself a man of special eminence, he is the more truly a representative character; and it is in this aspect that his addresses and speeches at meetings of the Historical Society of Massachusetts, on College anniversaries, and similar occasions (4), possess a certain interest for English readers. The author belongs to one of the very oldest and most esteemed families in the Bay State, second only in traditional importance and present credit to the Adamses, but is himself very little known outside his own State.

The Chronicles of the St. Lawrence (5) are neither a history of the Canadas nor an account of the river from which they take their name, but rather a congeries of stories and traditions relating

(1) *A History of American Literature.* Vol. I. 1607-1676, Vol. II. 1676-1765. By Moses Coit Tyler, Professor of English Literature in the University of Michigan. London: Sampson Low & Co. 1879.

to the British possessions in general, and especially to those settlements which lie along the banks of the great northern stream. Stories of adventure and facts of history are curiously intermingled, and in both cases somewhat greater authenticity and clearer authority might at times be desired. On the whole, however, the work is both readable and to some extent valuable, preserving much that might otherwise be lost in more regular works, historical, local, or scientific.

Art in the House (6) is a translation from the German, and we therefore need not here attempt to discuss its antiquarian and archæological value. But the translation may take a place which the original could hardly do as a drawing-room book of the higher type, rendered attractive by its admirably executed illustrations and lucid explanation of domestic architecture and decoration in Egypt and Assyria, in classical Greece and Imperial Rome, and during the middle ages. From few works on this subject would it be easy to pick up so much superficial but useful and interesting information with so little labour.

A report such as those annually made by the Comptroller of the Currency (7) to Congress belongs to that class of blue-books which, unlike many American State papers, falls distinctly outside of the province of literature proper. At the present moment, however, for more than one reason, the annual statement of this officer possesses an interest of a peculiar kind for a much wider public than would generally care to know the facts therein recorded. The resumption of cash payments, placing the national and bank paper of the United States on a par with gold and restoring the basis of all mercantile transactions to the only possible condition of permanent security, gives especial significance to the last report issued under the old system. Also the excitement and alarm caused by several bank failures in Great Britain give value to an account of the position of banks in that country whose banking system most nearly resembles our own. The law requires from the Comptroller an account of the situation of every banking association from which he has received returns during the preceding year. These returns must specify the whole amount of banking capital possessed by each, their debts and liabilities, their circulation, their assets and resources, and the amount held by them in cash, whether under requirement of law or otherwise. The Comptroller is to furnish Congress with a full abstract of these statements for the whole body of banks throughout the Union, and any other information which in his judgment may be useful. He is also required to show what associations have failed or given up business during the year, how much of their circulation has been redeemed, and how much may be still outstanding; and, finally, to recommend any amendment of the laws by which in his opinion the banking system may be improved, and the security of note-holders and other creditors increased. The Comptroller complains of the difficulty found in obtaining statistics from all the banks organized under State, as distinguished from Federal, law; but the latter requires such returns, and, as a rule, they seem to be pretty fully made. The total number of banks in the Union is, according to the last report, 6,456, with a capital of nearly 676 millions of dollars, and deposits exceeding 1,900 millions. Of these, 2,056 are national banks, organized under the Federal law, and 4,400 are State, private, or Savings Banks. Of these banks nearly 1,100, with a capital of 177 millions, and deposits of 551 millions, belong to New England; nearly 2,000 to the middle States, with a capital of over 250 millions, and deposits of nearly 920 millions. The Southern States have not 700 banks, with a capital somewhat smaller in proportion to their numbers, and deposits exceeding the capital by less than one-fourth; while the Western States and Territories have no fewer than 2,700 banks, but with a capital of no more than 177 millions, and deposits of 365 millions. It is noteworthy that the small shareholders of Massachusetts alone are as numerous apparently as those of all the rest of the Union, while of the larger the New England States contain nearly half. Evidently bank stock is a favourite investment for the small savings of families belonging to the less wealthy section of the middle class, and even, we believe, for trust property. The confidence thus shown is in some measure justified by the fact that, since the organization of the national bank system, the entire losses sustained by their creditors through failures have not reached six and a half millions of dollars, less than one-fourth of the deficiency shown in the assets of the Glasgow Bank alone. The regulations by which the solvency, and especially the circulation, of the national banks is protected are imposed by Federal law, which requires that one-half of the capital stock must be paid in before a bank can begin business, and the remainder within six months afterwards, while the circulation is limited to a fixed proportion of the paid-up capital; and to secure the redemption of the notes at a distance from the bank of issue the latter is required to keep on deposit in the United States treasury cash equal to 5 per cent. upon its entire circulation. Against its notes generally each is required to hold a considerable proportion of United States securities. On the whole, it is evident that the system now prevailing has done very much to redeem the character of banking in the United States, which before the passing of the present law was anything but satisfactory.

A Century of American Literature (8) is merely a collection of extracts from popular authors in prose and verse, the former decidedly better chosen than the latter, but none calling for much remark. It hardly rises above the level of ordinary railway literature.

We have several volumes of verse; but none of signal merit. The *Bride of Gettysburg* (9) is an intolerably long novel in verse, and not very good verse either. The *Tour of Prince Eblis* (10), a sketch of society and politics from what is meant to be a Satanic standpoint, is also unduly long, and wanting at once in vigour of versification and in the terseness and force indispensable to effect in satire. *Drift From York Harbour* (11) has fewer faults, and has at least the negative merits of brevity and of bounded ambition; and the same may be said of the collection to which the first poem *Meg* (12) gives its unpoetic title. In carrying his *Poems of Places* (13) round the world, Mr. Longfellow has at last come back to his own immediate home—New England. The descendants of the Puritans have produced an amount of poetry hardly to have been expected from such an ancestry—poetry whose quantity and quality alike would have scandalized not a little the founders of the North-Eastern colonies, but which is not on that account the less suited to the taste of the present age, or the less successful in taking its place among the common treasures of the English tongue. *Play-Days* (14) is a child's story-book likely to suit the readers for whom it is intended.

(6) *Art in the House: Historical, Critical, and Æsthetical Studies on the Decoration and Furnishing of the Dwelling.* By Jacob von Falke, Vice-Director of the Austrian Museum of Art and Industry at Vienna. Authorized American Edition. Translated from Third German Edition. Edited, with Notes, by Charles C. Perkins, M.A. Illustrated. Boston: Prang & Co. London: Trübner & Co. 1879.

(7) *Annual Report of the Comptroller of the Currency of the United States, December 2, 1878.* Washington: Government Printing Office.

(8) *A Century of American Literature, 1776–1876.* Edited by Henry E. Beers, Assistant Professor of English Literature in Yale College. New York: Holt & Co. "Leisure Hour Series."

(9) *The Bride of Gettysburg: an Episode of 1863.* In Three Parts. By J. D. Heylton, Author of "Voices from the Rocky Mountains," &c. Palmyra, New Jersey. 1878.

THE DEBATES ON THE ZULU WAR.

THE debates in both Houses on the Zulu question have been not unworthy of the occasion. Lord LANSDOWNE, Lord KIMBERLEY, Lord BEACONSFIELD, and other speakers in the House of Lords dealt with the facts and principles of the case with vigour and ability, and Lord CARNARVON brought to the discussion a personal knowledge of South African affairs more extensive than that of any other member of either House; yet the interest of the debate which is now proceeding in the House of Commons has not been impaired. Sir C. DILKE and Sir M. H. BEACH have in their elaborate speeches nearly exhausted the question; and perhaps the defence has some advantage over the attack. Sir C. DILKE was scarcely just to Sir BARTLE FRERE in contending that he had long since determined on the war. It would be more strictly accurate to say that he had thought the war to be inevitable unless his demands were conceded by the Zulu KING. When the ultimatum was published in this country, it certainly produced the impression that it was almost equivalent to a declaration of war; but, as Sir M. H. BEACH showed, those who were best acquainted with the circumstances and with the native character allowed that some of Sir BARTLE FRERE's most startling requisitions were just and necessary, and even thought it probable that the disbandment of the army and the admission of a Resident might be promised by CETEWAYO. The result shows that the more obvious judgment was well founded; and it appears that Sir BARTLE FRERE himself was never sanguine in his hope of a peaceable solution. He had determined that, if war was unavoidable, it should not be delayed until the harvest had been gathered, and his last despatch, if it had been received two or three months earlier, might perhaps have induced the Government to leave him a wider discretion. If the Government had anticipated by his dismissal the present opinion of the Opposition, they would have had no difficulty in vindicating their conduct. Yet their actual decision is not therefore necessarily wrong. Lord BEACONSFIELD perhaps laid too much stress on reasons of feeling and generosity; but he at the same time asserted that it was for the public interest to retain Sir BARTLE FRERE's services; and on such questions the judgment of the responsible Ministers is entitled to grave consideration. Sir C. DILKE naturally expressed a fear that the precedent might encourage ambitious Governors and Viceroys to engage in warlike enterprises without the sanction of their superiors. The VICEROY to whom he probably referred, whatever may be thought of his policy, has undoubtedly acted in strict subordination to the Government by which he was appointed. No part of Sir M. H. BEACH's speech was better than his recapitulation of the great services which Sir BARTLE FRERE has rendered in South Africa by inducing the Government of the Cape to establish a system of self-defence, and by restoring harmony between the colony and the Imperial Government.

There can be no doubt that Sir BARTLE FRERE committed a breach of official discipline. He received plain instructions to remain on the defensive; and he nevertheless issued an ultimatum which was equivalent to a declaration of war. It is also clear that his disregard of the spirit and letter of his orders was conscious and deliberate; and that he believed himself to be acting under a paramount sense of duty. It is of high importance that a Governor or Commissioner should obey the Secretary of State; but it is still more necessary that he should provide for the safety of the colony committed to his charge. When NELSON applied his blind eye to the telescope which would have shown him the signal for retreat, he knew that failure, following on defiance of his superior, would be fatal to his professional career. Sir BARTLE FRERE was profoundly convinced that the only security against a Zulu invasion was to anticipate the blow. He had with great difficulty overcome the reluctance of the Home Government to reinforce him with two regiments; and he may have anticipated that the troops would be withdrawn if the commencement of the war were postponed for a few months. He has not shown forensic skill in the mode of presenting his defence. His ultimatum and his declaration of war, though they were intelligible to the colonists and the Zulus, were not calculated to convince the Government or the nation of the necessity of the war. His latest despatch which was published in England is the first plausible apology for his conduct. If he had furnished the same explanation of his policy when he began the war, he would perhaps have disarmed some of his opponents, and he would at least have furnished his advocates with the means of defence. Sir BARTLE FRERE explains at length the grounds of his conviction that CETEWAYO was only waiting for an opportunity of making an attack. To the question why he did not allow the Zulu KING to begin the war, he answers that, in his judgment which has not been altered by late events, "the only real defence "was to take up such positions in Zululand as should "make it more improbable that the Zulus should cross "the border."

It is impossible to conjecture whether Sir BARTLE FRERE will resign his office on the receipt of Sir M. HICKS BEACH's despatch. If he resolves on remaining without regard to personal feelings, he may quote respectable precedents for his decision. A much severer reproof was addressed by Lord STANLEY to Lord CANNING, and there was reason to believe that one of the objects of Lord STANLEY's despatch was to force the Viceroy to resign. Lord CANNING, taking a different view of his duty, immediately reversed his policy towards the landed nobles of Oude; and it was never thought that he had compromised his character by his prudence and moderation. Sir M. H. BEACH referred to similar precedents in the Colonial Office. Sir BARTLE FRERE will perhaps be less affected by the shock to his private feelings than by the direct prohibition of any measure of annexation. In his last despatch he dwells with complacency on the probability of civilizing the Zulus by converting them into peaceable subjects of the English Crown, and he even calculates that it will be easy to raise a revenue sufficient to provide for their good government in the future. In these respects his hopes are already disappointed. Sir M. H. BEACH directly condemns the proposition that "it is impossible to improve our relations "with the Zulus by any process short of annexation." He nevertheless sanctions Sir BARTLE FRERE's favourite measure of destroying the military system of the Zulu KING. As the nation is indistinguishable from the army, forcible disbandment would require an occupation which would resemble annexation; but for the present the Govern-

ment will not approve of the acquisition of fresh territory. If Sir BARTLE FRERE retires, it would perhaps be judicious to appoint Sir H. BULWER as his successor.

Sir C. DILKE was fully justified in tracing the connexion between the annexation of the Transvaal and the present war; nor can it be said that his argument was confuted either by Lord CARNARVON or by Sir M. H. BEACH. It may be true that, but for the annexation, the Zulu war would have begun earlier; but it would have been a war, not with England, but with the Dutch Republic. It might probably have become necessary to afford aid and protection to the Boers; but any service would have been rendered on the terms which the protecting Power thought fit to impose. The inhabitants of the Transvaal would probably have offered a willing allegiance in return for voluntary service. They are now threatening secession at the moment when the English are hampered by a struggle with the deadly enemy of the Boers. The question fully deserves examination; but it is difficult to fix the attention of the House of Commons on separate issues. Colonel MURE's proposed censure of the Government for not sending out sufficient reinforcements involved a still wider divergence from the question in which the House is immediately interested. The ablest apology for Sir BARTLE FRERE delivered in either House was contained in the speech of Lord CARNARVON, who had been responsible for his appointment. He also took occasion to defend his own annexation of the Transvaal, which was certainly one of the causes of the present war. It may be remembered that the hand of the Government was then forced by Sir THEOPHILUS SHEPSTONE, as now by Sir BARTLE FRERE. Lord CARNARVON had laid down preliminary conditions for the annexation, with which his agent had not been able to comply. When the Republic was suppressed, Lord CARNARVON took the opposite course to that which has been followed by his successor. Deferring to the local knowledge and judgment of Sir THEOPHILUS SHEPSTONE, he made himself responsible for the annexation. It may be true that, as Lord CARNARVON said, the Boers offered no objection to the transfer of sovereignty; but the disaffected party has since grown rapidly in strength, and the good will of the Zulu KING was wholly alienated by the alliance of his English friends with his inveterate enemies the Boers.

Lord KIMBERLEY, whose policy had in almost all respects been afterwards continued by Lord CARNARVON, faintly censured both the annexation of the Transvaal and the war with CETEWAYO. If he had known less of African matters he would probably have been more positive. Statesmen who have governed the colonies as Secretaries of State know by experience how imperfectly they can venture to control distant subordinates who understand local necessities better than themselves. On the main issues of past and future policy the Government concurs in the general opinion of the country. Lord BEACONSFIELD's declaration that the Government was opposed to annexation was cordially approved, and yet it is by no means certain that Sir BARTLE FRERE may not judge rightly of the best modes of dealing with the Zulus when the war is over. Three hundred thousand natives of kindred race have become reasonably industrious and partially civilized in Natal; and the inhabitants of Zululand, if they were relieved from military service, might perhaps become peaceable subjects of the Crown. As long as they are independent, they will be despotically governed by their chiefs, who are likely to be ambitious and warlike. When peace is restored, possibly government by Residents on English principles may disguise virtual annexation.

EGYPT.

HARROWING pictures of the sufferings of the Egyptian peasantry have lately been placed before the public. They have been described as dying of famine, or at least on the brink of death from starvation. If there is some exaggeration in these pictures, there can be no doubt that in some parts of Egypt there has been in the last few months terrible distress. This distress is mainly due to extraordinary physical calamities. Egypt has suffered in the same way, only happily to a far less extent, as that in which Madras suffered. First came a year when there was too little water in the Nile, and the country suffered from drought. Then came a year when there was too much water. The Nile, in some places, burst its barriers and the land was inundated. The Egyptian Government could no more help these things than the Indian Government could help the rain not falling in Madras. In spite of the exertions of the Indian Government, the natives died by thousands in Madras; and if the Egyptian Government has not made as great exertions to relieve the distress as were made in India, the general result has been much less disastrous. Possibly the misery of the starving peasantry may have been aggravated by the exaction of taxes at a time when they had very scanty means of payment. But it may be remembered that the Indian Government itself thought it just to subject a population just decimated by famine to the burden of a new duty on salt—one of the chief necessaries of life. The Egyptian peasantry, too, are often flogged, and are made to labour by the State. Here, again, it may be observed that, according to a statement just published, four thousand natives were flogged last year in Mysore—a State subjected to our supreme control—and we have lately introduced forced labour into Cyprus, after it had been abolished by the unspeakable Turks. Englishmen permit or sanction such things in a different fashion from that in which Oriental governors permit or sanction them. The Mysore floggings were for recognized offences; the forced labour in Cyprus has been introduced only for the making of roads, and to a very limited extent. Precautions, too, have been taken against the system bearing too hardly on individuals; but these precautions were devised, not by the local authorities in Cyprus, but by Lord SALISBURY. Sir GARNET WOLSELEY seems to have been quite content with the simple theory that, if the Cypriotes would not make roads, they must be made to make them. Oriental governors reason in the same way. The KHEDIVE has, during his reign, honestly believed that he was carrying out public works of different kinds which would greatly benefit his country. But, as his subjects did not see things in the same light, he forced his views upon them. The Egyptian peasants have been flogged not only to make them work, but to make them pay taxes. This is a gross abuse; and it may be hoped that, under European influence, a stop will soon be put to it. But it is only a perversion of the notion that systematic flogging is the best way of dealing with minor recognized offences. In Egypt not to pay taxes is a minor recognized offence, and the culprit is denounced, convicted, and punished on the spot. Then, again, the Egyptian peasantry are very much pitied, because they are, as it is said, fleeced to pay foreign bondholders and to provide foreigners with lucrative posts. At any rate, they may have the comfort of feeling that the vast population of India is in very much the same position. It has to send a tribute of sixteen millions a year to England, and it sees the major part of the remaining products of its onerous taxation expended on the army of its conquerors. The real difference between the two countries is that the Indian Government is, on the whole, a good Oriental government, and the Egyptian Government is, on the whole, a bad Oriental government. It is the very difficult task of the Europeans who are working under the protection of the controlling Powers to make the bad Oriental government of Egypt a tolerably good one. How difficult this task is may be estimated if we take into account how slowly we have got on in India, and how little the condition of great masses of the Indian population has as yet risen above the level of endurable misery.

How these Europeans are hampered in the work of reform by the natural reluctance of the KHEDIVE to reign without governing, and still more by the international character of the superior tribunals, is now an old and familiar story. But, even if the KHEDIVE were all that could be wished, and Powers that have an interest in reform had the opportunity of perpetual interference through the treaties under which the tribunals were constituted, the inherent difficulties of the work of reform would still remain very great, although not insuperable. It is not that the taxes—that is, the recognized taxes—are too heavy. Much the greater part of the revenue is derived from the land-tax, which is simply another name for rent. The soil is fertile and the rent is high. To the remainder of the taxation it is highly unjust that foreigners should not contribute; but, although their contributions would be a proper addition to the funds of the State, there is nothing in this which presses

too hardly on the masses. What they suffer from is that taxes are imposed on them that are not recognized, and that all taxes are so collected that much more is paid than the State receives. These are evils of very different characters. The first is much the more easy to remove. There may have been at times taxes collected which were never allowed to figure in the budget. In past days it is almost certain that such taxes were collected, and that the real largely exceeded the nominal revenue. But the day when such things were possible has gone by, and the control already at work is sufficiently effectual to prevent any opening for the secret imposition of taxation. But for some time, at least, another mode of augmenting the taxes beyond their legitimate amount has been adopted, and its evils have been much more formidable. The taxes have been anticipated in order to meet the foreign engagements of the KHEDIVE. The peasants have been made to pay, not what was due, but what would some day become due. Thus in any year the real incidence of taxation may have been half as much again as it ought to have been. This is an evil which the European officials can stop, and have decided to stop. But they can only do this by not paying in full the engagements of the State. They are willing to face this, and the creditors are prepared for only part of what is due on the next coupon of the unified debt being paid. It is said that the KHEDIVE much regrets this, and protests that, if he were left to himself, he would pay the coupon in full. Perhaps he would. If all the world would shut its eyes as to the mode in which the money was got, it might be forthcoming. He might forestal the taxes, and devise some ingenious arrangement for borrowing against the forestalment. But his European advisers treat this as a foolish expedient for concealing temporarily the poverty of the nation. They think that, if there is not the money for the creditors just now, it is in the interest of the creditors themselves to take what they can get and to wait for better times. There can be no doubt that this is the best policy for all parties. When, however, this policy has been decided on, it is not easy to determine what shape a new arrangement should take. The best plan that could be adopted for Egypt itself, and perhaps in the long run for the creditors themselves, would be to reduce the interest to a low rate, such as Egypt could pay in a bad year, and to use the surplus which a good year would yield in purchasing bonds in the market. But, unfortunately, such an arrangement would require the consent of the Treaty Powers, and this would be hard to obtain. If this cannot be obtained, the only thing to do is to pay what is possible, and to let what is not paid accumulate.

Let us suppose that the European creditors have got so far that none but recognized taxes are collected, that they are collected only when due, and that the creditors have been induced or made to acquiesce in some arrangement by which they only get what they can. The work of reforming the bad Oriental government with which they have to deal so that it may be made a tolerably good Oriental government will hardly have been begun. They will still have to strike at the main root of mischief, the mode in which the taxes are collected. Taxes are collected in Egypt very much as they are collected in Turkey. The collectors exact taxes partly on account of the State and partly on account of themselves. This surplus of taxation is the taxation which the Europeans desire above all things to have remitted; but it is one thing to desire it and another thing to get it done. Who is to check the native administration? How can English or French gentlemen living in Cairo prevent a paltry sheikh a thousand miles off putting in his pocket ten per cent. of the taxes which he is authorized to exact? If Egypt were occupied, the mischief would be averted, or at least combated, by the appointment of English or French collectors of the revenues of the different districts. It would be years before they could really purify the administration; but still, in the long run, they would get as far perhaps as we have got in India, where even now constant vigilance has to be exercised to prevent natives from harassing natives. But Egypt is not occupied, nor is it intended to occupy it. The European officials can therefore only work through native officials. But they can neither superintend nor influence native officials who are at a distance from them. They can only deal with those who are at head-quarters. Practically they can do little more than secure as much power as possible for some native whom they can trust. They are obliged to limit their exactions to getting the right man at the head of the native administration, and there are very few right men in Egypt. They thought they had got the right man in NUBAR PASHA. But the KHEDIVE quarrelled with NUBAR PASHA, and dismissed him. NUBAR PASHA is really as much a foreigner in Egypt as Mr. RIVERS WILSON is, although he knows the country far better, and is himself a considerable landowner, so that he understands practically what happens in the country districts. The European Ministry were not therefore prepared to insist that NUBAR PASHA must be restored to office. They fought their battle with the KHEDIVE on another issue. They had got as Minister of the Interior a native official in whom they had confidence, and they resolved to test their strength on his retention in office. The KHEDIVE wished to dismiss RIAZ PASHA, and they insisted that he should not be dismissed. They also insisted that, however the Ministry might be composed, they should have an absolute veto on any proposal of which they disapproved. They have won, because they were energetically backed up by the English and French Governments. The joint-note sent to the KHEDIVE by the two Powers was sufficiently dictatorial and sufficiently explicit to make the KHEDIVE understand that either he must yield or he would be dethroned. The controlling Powers intervene to give general directions to the KHEDIVE. He is ordered to let his Government be so composed that a reform in administration may be possible. With the details of the work done by the reformers the Powers profess to have nothing to do. When Sir STAFFORD NORTHCOTE is asked as to the payments which Egypt may be going to make, or as to the prospects of the Egyptian revenue, he always replies that Mr. WILSON is not his Minister, and does not report to him. Mr. WILSON is the Minister of the KHEDIVE, and in large matters can see that the KHEDIVE does not go very far wrong. But in the details of daily administration he can only get what he wishes by trusting to the influence of a native colleague in whom he has confidence, and who is kept in office against the will of the KHEDIVE. This is a very peculiar form of intervention, and a very peculiar form of government; and it is evident that, although it is probably the best that circumstances will now permit, it is too exceptional to be permanent.

EAST ROUMELIA.

THE Russian proposal of a joint occupation of East Roumelia will undoubtedly be adopted, if it is true that it was originally suggested by the English Government. Prince GORTCHAKOFF, through M. DE GIERS, has judiciously avoided the use of language which might have seemed to make the performance by Russia of the stipulations of Berlin in any way dependent on the acceptance of his new project. He expressly acknowledges the binding force of the Treaty, while he offers a remedy for an alleged evil which the Berlin Congress is supposed not to have foreseen. The Russian armies will evacuate East Roumelia at the date fixed by the Treaty; but their Government professes to apprehend danger if the population is at once left without restraint or protection. If it were expedient to be critical rather than conciliatory, it would be easy to show that the Russians themselves are chiefly responsible for the anarchy which they now propose to suppress; but, whatever may have been the causes of the disaffection which exists in the province, it is necessary to maintain order, if only that there may be no opportunity for the interference of the Turkish army. The scheme includes a prolongation and enlargement of the powers of the Mixed Commission which is to form the government of the province for a year after the close of the Russian occupation. The work might have been accomplished sooner if Russian officers had either facilitated the labours of the Commission, or even abstained from thwarting its efforts and annoying its members. It would also have been easy to instruct the Russian Commissioners to act in loyal concert with their colleagues; but it is better to obtain security for the future than to indulge in even merited recrimination. It is a great advantage that the Emperor of RUSSIA has, however tardily, resolved to fulfil his engagements under the Treaty of Berlin. Count SCHOUVALOFF, if it is true that he has per-

suaded the EMPEROR to withdraw further opposition to a settlement of the Eastern question, has done good service to his country and to Europe.

It would not have been prudent to rely too implicitly on the report until it was officially confirmed. A Berlin paper in the interest of the Russian Government published only a few days ago an evidently fictitious account of a pretended reversal of the settled policy of England. Lord SALISBURY was supposed to have himself suggested that the future Prince of Bulgaria should be appointed Governor of East Roumelia. In other words, the main contention of the English plenipotentiaries at Berlin was to be deliberately abandoned, and the provisions of the Treaty of San Stefano would be practically revived. The project was framed on the precedent furnished by the Danubian Principalities, which were by the Treaty of Paris made separate dependencies of Turkey. The Emperor of the FRENCH soon afterwards promoted the union of Moldavia and Wallachia, which was practically established by the election of Prince COUZA as ruler of both Principalities. The annexation of East Roumelia to Bulgaria would have been a more remarkable departure from an international arrangement. The relations of the Danubian Principalities to the paramount Power were identical; whereas Bulgaria is virtually independent, and East Roumelia, though endowed with autonomy, is still a Turkish province. The nomination by the Porte of a Governor-General of East Roumelia is subject to the approval of the Powers; but the Prince of Bulgaria will be practically a nominee of Russia. The English Government was therefore supposed to have approved by anticipation of the possible appointment of General IGNATIEFF or Prince DONDOUKOFF KORSAKOFF as Governor of East Roumelia. It was hardly necessary to add the assumption that the right of the SULTAN to occupy the line of the Balkans with his troops would be modified or abolished. The report must have been circulated by Russian agents with or without the authority of the Government. Count SCHOUVALOFF may perhaps since have convinced the EMPEROR that the English Government will not assent to a departure from the conditions of the treaty which provide for the military defence of Turkey.

In the discussions which have extended over several months the English Government has wisely refused to reopen any question which had been settled at Berlin. At different times it seemed that Russia had determined to stultify the Congress by an entire disregard of its decisions. Prince DONDOUKOFF insolently informed Lord DONOUGHMORE that he would oppose any measure which might be proposed by England; and he more than once stigmatized the Treaty of Berlin as a farce, while the Russian AMBASSADOR at Constantinople was urging on the Porte literal compliance with all its provisions. In public speeches and official documents Prince DONDOUKOFF encouraged the Bulgarians and East Roumelians to rely on the eventual attainment of union; and it is not surprising that, in furtherance of the policy which he recommended, delegates were elected in the Turkish provinces as pretended members of the Constituent Assembly of Bulgaria. It was not until the Assembly had met at Tirnova that the representative of the Russian Government was compelled, under superior orders, to prohibit purposeless discussions of territorial arrangements which were beyond the competence of the delegates. They had not unnaturally inferred from the first article of their draft Constitution that the enlargement of their territory was their primary duty. In East Roumelia the Russian Commissioners habitually voted against their colleagues, and in some places the populace was allowed or encouraged to offer affronts to the delegates of Governments supposed to be unfriendly. If the English Government had allowed itself to be diverted from its strict adherence to the Treaty, the intrigues of Russia might have prevailed. The Powers which had taken part in the Congress might have held various opinions as to the interests of Bulgaria or the claims of Turkey, but they were unanimous in maintaining the compromise which they had originally approved. Of late it has been understood that Austria and England were acting in concert; and it was not unreasonably inferred that the policy of Count ANDRASSY coincided as usual with the intentions of Prince BISMARCK. The comparatively pacific demeanour of Russia may probably be explained by the union of the Powers. The Government of Italy has the credit of having originally devised the scheme of joint occupation, which may perhaps prove to be the best solution of the questions which concern East Roumelia.

If Russia and England are agreed, and if the other Powers assent, there will be still a serious, but not insuperable, difficulty to overcome. The Turkish Government will undoubtedly be disinclined to allow an interference with its dependency which is not authorized by the Treaty of Berlin. If the proposed arrangement referred to a province under the direct administration of the Porte, it might be comparatively difficult to justify a postponement of the restoration of the SULTAN's authority. East Roumelia is to enjoy the form of local independence which has lately acquired the name of autonomy, and in ordinary circumstances the Turkish Government will have as little right as a foreign Power to meddle with its domestic affairs. A tribute is to be paid to the SULTAN; the northern frontier is to be garrisoned by his troops; and, lastly, he is entitled, at the request of the local authorities, to suppress disorder or insurrection. The militia, though nominally under the orders of the Turkish Government, is in ordinary cases exempt from its practical control. It is only when disturbance occurs that Turkish troops can march into the interior of the province; and the barren right of engaging in civil war is not especially valuable. When the administration is in working order, there may perhaps be no occasion for the employment of Turkish or foreign troops. A joint occupation will be neither an execution nor a breach of the provisions of Berlin. Against the probable remonstrances of the Porte it must be vindicated as a separate act of policy, tending to the advantage of the Porte itself, while it is necessary for the security of the people of East Roumelia, and expedient as a mode of preserving or restoring the European concert. The danger of disturbance in the province is not so much that it might effect its object, as that it would, in the absence of due precaution, involve collision with Turkish troops. The chances of success would not be on the side of the insurgents. The SULTAN has a large and disciplined army at his disposal, and some of his officers have perhaps profited by experience in active service. The revival of war in any form would cause just anxiety, and, in the probable contingency of a Turkish victory, atrocities either real or fictitious would provoke agitation in England, and perhaps serve as a pretext for interference on the part of Russia. The Turkish Government has nothing to gain by proving its superiority in force to its semi-detached province. Among the many drawbacks of Mahometanism, not the least is the practical impossibility of extending its dominion in Europe. The most crushing defeat of a Roumelian insurrection would leave the Treaty of Berlin untouched, and the right of the province to local autonomy unimpaired. The Turkish Government will probably insist on the barren right of coercing unruly dependents; but it must necessarily yield to combined pressure, exercised for the purpose of maintaining peace. The delay imposed on the restoration of Turkish sovereignty is only for a year. At the end of that time East Roumelia will probably have found it useless to continue its clamour for union with Bulgaria.

THE FRENCH SEAT OF GOVERNMENT.

THERE can be no question that the removal of the seat of government from Paris to Versailles has been a real advantage to France. A bad tradition had grown up with regard to the relations of Paris to the country at large. Three revolutions in succession had been purely Parisian revolutions. In 1830, in 1848, and in 1870 Paris had pulled down one Government and set up another, and France had patiently accepted the new rulers which Paris had given her. The fact that the Legislature was no longer sitting in Paris, that Paris had to take its orders from Versailles just as though it were Lille or Havre, has done more probably than anything else could have done to bring home to Frenchmen that this was only a bad tradition. It has been broken through, and, in ceasing to be customary and immemorial, it has lost the indispensable characteristics of tradition. The defeat of the Commune made the change which the position of Paris had undergone especially conspicuous. No doubt, if the Government had been in earnest—and where insurrection against his own rule was concerned want of earnestness was not one of M. THIERS's weaknesses—the result would have been the same whether Paris had had to be controlled from within or from without. But, if the control had come from within, it might have been

said that the better part of Paris had conquered the worse part, and the corporate dignity of the city would not have suffered. When Paris was besieged and taken by a French army at the bidding of a French Government, it was no longer possible to put things in this pleasant way. Paris had for the first time openly measured itself against France, and had been beaten. The emancipation of the country from the dominion of a single city was complete and unmistakable. Had it not been for the absence of the Executive and the Legislature from Paris, it would have been less complete, because it might have admitted of a softening explanation.

Yet, though the sojourn of the Government at Versailles has been a real advantage to France, it was scarcely possible that it should go on for ever. At all events it was scarcely possible that it should survive the establishment of a Government genuinely Republican in all its parts. So long as the Government was in any degree reactionary, it could admit that Paris was hostile to it. Paris has so long been Republican in the most pronounced sense that no Government suspected of ever having contemplated a return to monarchy could pretend to command its confidence. It is different now that a Government is in power which on this point is as decided and has as little thought of going back as the Paris Municipal Council itself. There may be causes of quarrel between the French Government and the advanced Republicans stored up in the future; but, supposing it to be really agreed that they shall be put aside for the time, there is no longer any presentable motive for keeping the Chambers away from Paris. Indeed, their absence has always implied that the Government was, to a certain extent, still provisional. Even if the Count of CHAMBORD or Prince LOUIS NAPOLEON had been set on the throne, Paris must in the end have regained her place as the seat of authority. As a France from which Paris was excluded would not be the true France, so a Government which proclaimed that it could not trust itself in Paris would hardly have been regarded as a true French Government. So long as Marshal MACMAHON remained President the last link with the provisional order of things which he represented was not broken. The Republic was still rather a Government to be certainly established in the future than a Government definitively established in the present. It was only natural, therefore, that the question of the seat of Government should stand adjourned, with many other questions, until all the several parts of the Government had been brought into harmony by the election of a genuinely Republican President.

It cannot be denied that the return of the Chambers to Paris will cause some uneasiness to moderate politicians, and that the Government in particular may well look forward to it with real though concealed annoyance. It may be incumbent on them to run the risk of being confronted with a Paris mob, but, though it may be inevitable and right, it is not for that reason pleasant. Though the tradition that Paris can overturn a Government has been broken through, the Parisians may still be disposed to try whether it cannot be re-established; and however hopeless the experiment might prove to be, it would equally entail upon the Government the disastrous necessity of dealing with it. It is fortunate in some respects that Paris is the great military centre that the new system of French defence has made it. The garrison of Paris must always be more than sufficient to put down any attempt at insurrection, and probably more than sufficient to deter the revolutionary element among the Parisians from seriously contemplating such an attempt. There is little fear, as the army is now constituted, of the soldiers fraternizing with the mob. France equally with Germany is a nation in arms, and so long as the Government represents the nation, it may count with fair certainty on the support of the army in any conflict which it may have to sustain against a particular section of the nation. Still, in spite of these reassuring considerations, the revolutionary associations of Paris must for some time to come remain alarming; and it would have been well if the return of the Chambers had not been voted by the Chamber of Deputies until the Republic had had a longer past of tranquil government to look back to. But when once the proposal was made it was impossible for the Government to oppose it. To have done so would have been to own themselves frightened, and a French Government which makes such a confession is not likely to be long left without solid justification for its fears. It must be the master of its own capital, if its capital is ever to be anything more than a centre of discontent and irritation. Among the duties which no French Administration can in the end evade is the duty of living in Paris without being overawed by Paris.

After all, the difficulty of discharging this duty may be exaggerated. The danger which is supposed to attend the presence of the Chambers in Paris has sprung from a cause which might conceivably be equally operative if the Chambers remained at Versailles—the political apathy of the rest of France. The capital was omnipotent, not because the Government was at the mercy of the Parisians, but because the country was indifferent. If in 1830, or 1848, or 1870, there had existed in the provinces a determination to maintain the Government which Paris had upset at all comparable to the determination to maintain the Republic which was manifested in the summer and autumn of 1877, Paris would not have been suffered to have her way without opposition. But no such determination did exist, and men who do not care under what form of government they live are no more likely to resist revolutions than to make them. The power that claims their obedience is the power that receives it. If Frenchmen outside Paris were still, politically speaking, the same apathetic beings that they were under the Second Empire, there would be every probability of their submitting to any kind of government which it might please Paris to impose upon them. But this description is no longer applicable to Frenchmen outside Paris. The secret of M. GAMBETTA'S power has been his recognition of this change. When the Republican leaders thought only of Paris and appealed only to Paris, the rest of France was careless about politics. Now the rest of France is eager about them. Whether M. GAMBETTA'S assumption of a completely new attitude in this respect was most a cause or an effect of the change—whether he has educated the country or been educated by it—does not much matter. The fact that France at large takes a more active interest in politics is an important thing to remember in estimating the dangers of the return of the Chambers to the capital. How soon the change will be effected now depends upon the Senate. The vote will probably be a close one, and if the proposal is rejected nothing more can be done for a year. There must be unexpected strength in the second Chamber if it long resists both the Government and the Deputies upon a question of this kind.

AGRICULTURAL DISTRESS.

If a general election had not been impending, perhaps Mr. SAMUELSON might not have thought it necessary to move for an inquiry into the operation of the Agricultural Holdings Act. The facts of the case are well known to those whom they concern, and there is no reason to suppose that the farmers are especially dissatisfied with the state of the law. The Act which was passed four years ago by the present Government established in certain cases a presumption in favour of the tenant; but many landlords have taken advantage of the provision which allows the owner to contract himself out of the Act. The North Norfolk election seems to show that the farmers are not yet won over by Liberal blandishments; but, if they are open to conversion, it is perhaps judicious to try to persuade them that they have a grievance. At present they would gladly concur with their landlords in supporting Mr. HARCOURT'S amendment, if only there were the least hope that a Parliamentary inquiry would tend to diminish agricultural distress. In Lord LIVERPOOL'S time, and again after the repeal of the Corn Laws, similar motions were frequently made, and Committees from time to time endeavoured to devise artificial remedies for the results of natural causes. The search sometimes lasted until it was superseded by the revival of prosperity; but it never served any useful purpose, and inquiry is now, if possible, more hopeless than similar investigations thirty or sixty years ago. The causes of agricultural distress are few and simple; and they are the less removable because they are not always evils in themselves. Low prices and high wages, though they may tend to annihilate farmers' profits and to reduce rents, ought not to be, and could not be suppressed by legislation. The constant improvement of communication by land and sea confers enormous benefits on consumers of

food at the cost of domestic producers. The consequences which the supporters of the Corn-laws apprehended from the removal of protection are now for the first time fully felt. The price of wheat is lower than at almost any former time, and there is little prospect of permanent recovery. The importation of live stock and dead meat begins for the first time to disturb a monopoly which seemed to be natural and secure. Parliament can neither remedy nor even lament a cheapness which may be ruinous to those who are interested in the land. As Lord MELBOURNE said of Catholic Emancipation, all the wise men were for it, and all the fools were against it; and he added that the fools had proved to be in the right. The wise men in that case, as in dealing with the Corn-laws, had given fallacious reasons for a sound conclusion. It was right to repeal the Corn-laws; but it was not true that the landed interest would benefit by the withdrawal of protection.

Mr. BARCLAY's notice of amendment on Mr. HARCOURT's amendment ingeniously raised, by the insertion of one or two words, a larger issue than that which was proposed by Mr. SAMUELSON. The suggestion that the law of tenure is one of the causes of agricultural distress is not unlikely to attract the attention of farmers. The question has been frequently and sometimes acrimoniously discussed; and it is not disposed of by the Agricultural Holdings Bill, especially as the enactments are not compulsory; but the present agricultural distress has little or nothing to do with tenure. It is well known that an unprecedented number of farms have been thrown up by the tenants, to the great embarrassment of the owners; but the alleged effect of the existing tenure of land is to discourage the outlay of capital on the land; and it happens that the distress is most severe in the districts which have hitherto been most highly farmed. Strong wheat lands, and in some places light arable lands, no longer pay the heavy expense of cultivation. The labourers do less work than in former times, and demand higher wages; and wheat is quoted in the market at forty shillings. If the occupiers had possessed the freehold, they would have felt the pressure of the times; and probably tenants under long leases are the greatest sufferers by the depression of agriculture. The usual tenure of land in estates for life may, in many instances, account for the undue parsimony of a landlord when improvements are required; but it can scarcely be connected with the present distress. Mr. BARCLAY, representing the skilled and wealthy farmers of Scotland, has probably no desire to split up the land into petty holdings. It may be doubted whether, in present circumstances, many tenants would, if they had the opportunity, be willing to buy the freehold of their farms.

Mr. O'DONNELL, no longer confining himself to the advocacy of the right of Irish occupiers to the property of their landlords, kindly extends his solicitude to English and Scotch tenants, or rather to the general community. As he mildly remarks, an insignificant fraction of the population has usurped the ownership which properly belongs to the whole, with the result, as he asserts, of stinting the natural production of food. In other words, property in land ought to be abolished, except perhaps where it belongs to a small occupier. Other philanthropists might prove that all other kinds of property are the subjects of equally unjust monopoly. The ownership of land has been recognized by law for time immemorial, and only a few years ago it was thought that investments in land were exceptionally secure. Mr. O'DONNELL goes through the form of allowing a fair rent, which is to be fixed by the State; but the claims of former proprietors who had become mere annuitants or incumbrancers would soon be abolished by a Legislature which might have previously expropriated the owners. It is not, for the present at least, worth while to discuss revolutionary or communistic measures; and it is scarcely to be regretted that a professed agitator should propose schemes which would be almost as distasteful to English farmers as to landowners. Mr. O'DONNELL would certainly not be satisfied by the concession to large agricultural capitalists of fixity of tenure, while the mass of the rural population continued to depend on wages. The subdivision of the land into petty freeholds would among other results put an end to scientific agriculture. The CHANCELLOR of the EXCHEQUER had perhaps no choice when he assented to the adjournment of a useless debate on Mr. O'DONNELL's motion. The previous discussion had exhausted the subject; and the division once more illustrated the admirable fidelity of the Conservative members to the Government. Mr. READ, indeed, supported Mr. SAMUELSON's motion for inquiry, though he would have preferred a Royal Commission to a Committee; but Conservative county members in general preferred the risk of offending their constituents to the encouragement of legislative interference with freedom of contract.

The CHANCELLOR of the EXCHEQUER had perhaps ascertained the feelings of the party when he determined to resist the motion; but he was justified in refusing the inquiry as premature, and at the present time unreasonable. It is undoubtedly true that many landlords have contracted themselves out of the Act; and that no sweeping change has been made in the practice of compensation for unexhausted improvements. Nevertheless, the transfer of the burden of negative proof from the occupier to the owner is likely to exercise considerable influence on their reciprocal relations; and even on estates where the Act is not in force the twelve months' notice is likely to become general. A time of unprecedented depression, while it is otherwise injurious to farmers, affords them a certain compensation in the pressure which it enables them to place upon landlords. Only five or six years ago the owner of a farm had the opportunity of imposing stringent conditions on the new tenant whom he selected among many eager candidates. The demand has since been reversed; and a tenant in want of a farm may, if he thinks fit, choose the most pliable of many competing landlords. If among other conditions an applicant stipulates that the lessor shall not contract himself out of the Agricultural Holdings Act, the demand will in many instances be conceded. As might have been anticipated, the debate was not confined within the terms of Mr. SAMUELSON's motion. Mr. BARCLAY and other speakers repeated the complaints which have been often made of the injurious effect of limited estates on the cultivation of the land. The powers of limited owners were enlarged by the Act of 1875; but perhaps Parliament was even then unduly solicitous to protect the vested interests of reversioners. The most remarkable declaration in the debate, not in itself, but in the position of the speaker, was Lord HARTINGTON's expression of opinion against limited tenures. The future head of one of the greatest landed families in the kingdom seems disposed to dispense in whole or in part with laws and customs which have been thought the main supports of aristocratic wealth and privilege. A departure from the traditions of the class to which Lord HARTINGTON belongs can only be explained by sincere and unselfish conviction. The pernicious effect of settlements on the cultivation of the land has been frequently exaggerated. The tenants of great estates, which are almost without exception under settlement, have been hitherto among the most enterprising and prosperous farmers; but it is true that a life-tenant of small means, like other poor men, cannot afford to be liberal. It is possible that Lord HARTINGTON may have preferred the interests of his party to his own natural prejudices, but for the purposes of the next election there is little use in courting the farmers. The majority of them would perhaps have wished their representatives to vote for an inquiry into the working of the Agricultural Holdings Act, but at present they care little for questions of settlement and entail.

THE ADMINISTRATION OF JUSTICE.

At the end of last week Sir HENRY JAMES called the attention of the House of Commons to the many imperfections which at present attend the administration of justice by the Superior Courts. The drift of his speech was that the Judicature Acts had done much good, but that their operation was greatly marred by some very bad arrangements which had been adopted in consequence or in spite of them, and also by some good arrangements not having been adopted which might easily be made in harmony with them. One mercantile member and one solicitor spoke, but otherwise the barristers had the debate all to themselves. Sir HENRY JAMES complained that, although the whole community was greatly interested in the administration of justice being made speedy and effectual, none but legal members ever took any part in the debates on the subject which from time to time occupy the House. It is hard to see how any but lawyers should take interest in a subject of which

none but lawyers can practically know anything, and as to which lawyers show an astonishing amount of disagreement. More than one lawyer hazarded the opinion that the Judicature Acts were altogether a mistake. But it is satisfactory to find that, the greater the eminence of the speaker, the more pronounced was the conviction entertained by him that the new system had done much good, and might be made to do much more good. The ATTORNEY-GENERAL vied with Sir HENRY JAMES in expressing his sense of the improvements that have been effected, and his determination to see further improvements made as soon as possible. It is only because those who are annoyed, and very naturally annoyed, with some of the bad arrangements that now prevail shut their eyes to the good that has been secured, that imperfect justice is often done to the merits of the great changes that have been made. As the ATTORNEY-GENERAL pointed out, we have now got two admirable tribunals of appeal. There is the reformed tribunal of the House of Lords, and the series of important cases deriving their origin from the liquidation of the Glasgow Bank affords at present an excellent opportunity of recognizing the great strength of this tribunal and the promptitude with which it discharges its duties. The intermediate Courts of Appeal are always, or almost always, at work, give judgments which satisfy the profession, and have scarcely any arrears. Pleading has been remodelled; there is no longer any conflict of jurisdiction between the Courts of Common Law and Equity, and each judge can hear in full the cases brought before him. It may be added that there are now four gaol deliveries in the year; and although judges and magistrates think this gives them much trouble for very little good, the HOME SECRETARY and the House of Commons are unshaken in their resolution not to let persons who may possibly be innocent remain in prison for months without trial. Some complaints, too, that are urged against the system deserve very little consideration. If assizes are held in January instead of March, London suitors lose in one month and gain in another. As, again, the High Court of Justice is now one court, any of its members may be called on to try criminals; and it inevitably causes disappointment when a case that was expected to come on before an Equity judge has to be put off because he is away in Wales trying a tiny handful of prisoners. The real question is not whether the judges are always to be found where some suitors would like to find them, but whether they on the whole get through the work with which litigants provide them. The CHANCELLOR is very strong in his declaration that they do, and that, according to all reasonable expectations, the cause lists will be cleared before the Long Vacation commences.

But the CHANCELLOR and the ATTORNEY-GENERAL fully concur with Sir HENRY JAMES in thinking that there are points in the new system, or in the mode in which it is worked, which are very defective. The most salient of these points is the utter want of method in taking and hearing Common Law cases. The suitors find it entirely impossible to learn when a case will come on; and, when a judge has begun it, he will hurry off to some other business and leave it unfinished. This makes litigation very expensive and very wearisome. Some who watch this state of legal chaos with regret and indignation think that the judges permit suitors to be thus inconvenienced simply because they cannot help it. There are too few judges for the multifarious duties cast on them, and the proper remedy is to make more judges. This is not the view of the heads of the profession, who are of opinion that there are quite judges enough. They say that, if the judges arranged their work properly, they might get through it easily enough. Those who like to see in the best possible light everything that judges do or do not do, urge that the judges do not arrange their work well because the whole system is so new that they do not as yet see how their work can be arranged well. But this, again, is not the opinion of the CHANCELLOR and the ATTORNEY-GENERAL. They do not hesitate to say that the judges will not do what they might do. Rules might be passed by which it should be clearly determined when and by whom causes should be tried. Probably the truth is that the business of the courts is not arranged because there is no one to arrange it. There is no central authority to draw up a general prospectus of the coming business of the Common Law Division. The chiefs of the courts still retain their titles; but they can no longer direct the business of their separate courts, for their subordinates do not any longer belong exclusively to these courts, and they have no duty cast on them, nor perhaps any power given them, to combine and settle the general course of business. The Chancellor, again, can only suggest. He makes the judges, but has no control over them when once they are appointed; and, although there are many advantages in this, the main reason for the confusion in the courts is that there is no head of the law. One speaker in the debate suggested, to meet this want, that there should be created a Minister of Justice; but a Minister of Justice would not be likely to know enough of the practical working of the administration of justice to be able to tell judges what to do; and, if traditional jealousies did not stand in the way, it seems much simpler to provide that all the necessary arrangements should be made at the beginning of each term by the three Chiefs and the Chancellor. Lord CAIRNS lately said that he hoped that, without recourse being had to new legislation on the subject, some satisfactory combination might be made by arrangement.

Theoretically it is one of the prominent features of the present system that a single judge should be able to hear and decide every case, and that, if either litigant is not satisfied, he should go to the Court of Appeal. But practically there is introduced for many purposes an intermediate tribunal between the single judge and the Court of Appeal, this tribunal being formed by two or more of the judges belonging to the division to which the single judge belongs. The new system of pleading has also given rise to many questions as to the shape the suit should assume before it is ready for trial, and the Master of the court in the first instance decides such questions. From him there is an appeal to a judge in Chambers. From that judge there is an appeal to the Divisional Court, and from the Divisional Court there is an appeal to the Court of Appeal. This is a greater amount of appealing than was contemplated by the framers of the new system, and the ATTORNEY-GENERAL, although he pointed out that in some cases appeals to the Divisional Court saved any further appeals, yet expressed his earnest desire to abridge the stages of litigation, if only he could see his way to do it. The reasons why appeals to the Divisional Court must be allowed in some cases are of a highly technical character, and do not afford material for any but a professional discussion. But Sir HENRY JAMES made a suggestion the character and purport of which every one can understand. He began by showing that at many places where civil assizes are held there is really no business. There is not, on an average, much more than a single case. It was, he thought, ridiculous to waste the time of the judges by sending them solemnly round to do so very little. On the other hand, there are some counties where there is more business than the judges can possibly get through. The consequence is that business has to stand over, and thus justice is denied or is very imperfectly accorded to such places as Liverpool, Manchester, and Leeds. Sir HENRY JAMES thought that one of the judges of the High Court ought to go on sitting in such places until he had got through all the business, even though this might involve his remaining for months in one place. Succeeding speakers pointed out obvious objections to this proposal, as that it would break up the Bar, and that it would tend to throw judges too much into the society or cliques of a provincial town. Part, no doubt, of the great respect paid to the superior judges arises from persons in the country not being too familiar with them, and the majesty of the law would be somewhat dimmed if a superior judge was seen as constantly in a county town as a bailiff or a mayor. But the strongest argument against the proposal was furnished by the speaker himself. Sir HENRY JAMES stated that, out of nine hundred cases, on an average, tried on circuit in a year, less than two hundred involve sums of more than 500*l.* Thus, if the CHANCELLOR's new Bill becomes law, three-fourths, perhaps—or, at least, two-thirds—of the cases now tried by judges on circuit will be handed over to another jurisdiction. There are, no doubt, cases where, although the amount at stake may not be large, great interests are involved; such as are properly submitted to the cognizance of a superior, and not to that of an inferior, judge. The cases submitted to the superior judges on circuit will probably much exceed a hundred and seventy, although the jurisdiction of the County Court judges may be extended to the limit now proposed by the

CHANCELLOR. Still there can be no doubt that a great part of their present work will be cut away from the superior judges when on circuit; and it will only remain to remodel the system, so far as possible, with the object of saving the judges the waste of time occasioned by their having to go where there is really no business that calls for their presence. It is tolerably safe to conjecture that, as time goes on, the superior judges will remain more and more in London, and that the sphere of local subordinate judges will be increased. Meanwhile it is sufficiently clear that the shortcomings which are acknowledged to exist in the present system lie not so much in the system itself as in the arrangements for working it, and it is rather for the Government to induce improvements than for the Legislature to make radical changes.

THE CANADIAN TARIFF.

THE questions which Mr. BRIGHT lately addressed to the Government on the proposed Canadian tariff expressed legitimate uneasiness and disappointment. The vicious doctrines of political economy which the English colonies share with almost all foreign States are the same which Mr. BRIGHT eloquently denounced at the outset of his political career; and he probably finds it more painful to question the wisdom of a popular Government based on a wide suffrage than to expose the selfishness of an oligarchy of landowners. It is indeed to the inherent weakness of an aristocratic minority that England owes a singular exemption from the economic fallacies which delude the rest of the world. It happened that at the time of the agitation against the Corn-laws almost all English manufacturers were sufficiently flourishing to defy foreign competition. Some classes of goods enjoyed protection for a few years after the abolition of the Corn-laws; but manufacturers made no serious effort to maintain for their own wares the protection which had at their instance been withdrawn from agricultural produce. Imported corn and cattle now form so large a part of the food of the community that it would be impossible to revive the smallest fragment of the Corn-laws; and the flagrant anomaly of taxing unprotected landowners and farmers for the benefit of manufacturers is not suggested, except under the thin disguise of reciprocity. No other civilized country, except perhaps Holland, habitually imports a large part of the food which it consumes; and industrial capitalists, with the aid of their workmen, generally contrive to enlist a blundering patriotism on the side of their profitable monopolies. Advocates of Free-trade in the United States are popularly supposed to be bribed with British gold; and both producers and Governments on the Continent of Europe frequently make similar appeals to national jealousy. Interested manufacturers in the English colonies persuade ignorant and credulous multitudes that the exclusive consumption of local products indicates a noble independence of the mother-country. The Government of Victoria could probably count on the approval of the Assembly and the constituencies when it lately accepted a higher tender for rails made in the colony in preference to the lower rate of English iron.

The Canadian Parliament, under the guidance of the present Ministry, is at present framing a tariff in which differential rates of duty are to be imposed on the produce of the United States. It was with ostensible reference to this scheme of legislation that Mr. BRIGHT inquired whether the instructions to the GOVERNOR-GENERAL had been recently modified by the removal of a formal check on the imposition of protective duties. Until lately the Governor-General was directed to reserve all measures of the kind for the consideration of the home Government; but the restriction was removed on the late appointment of Lord LORNE. As the Canadian Ministry commands a large majority, the new tariff may in the ordinary course of business be expected to pass; and the GOVERNOR-GENERAL will, on the advice of his responsible Ministers, give his approval in the usual form. Mr. BRIGHT seemed to imply that the English Government or the COLONIAL SECRETARY was to blame for providing new facilities of protective legislation; but, unless a veto is to be imposed on a differential tariff, it is more convenient that the unwelcome duty of assenting to a bad law should devolve on the Governor-General than on the Crown. Mr. BRIGHT would probably, on consideration, not desire that the Imperial Government should risk a collision with the Canadian Parliament. The original concession of responsible government involved the constitutional right of doing wrong within extremely wide limits. In every body politic discretion must rest somewhere, and for Canadian purposes it belongs to the Ministers who possess the confidence of the Parliament of the Dominion. The retrospective conjecture that better terms might have been made with the colonies by a reservation of perpetual Free-trade with England has no practical value. No such stipulation was in fact made, and the omission is scarcely a subject of regret. The bargain, if it can be called a bargain, between England and the great colonies is intrinsically and necessarily one-sided. There are no means of enforcing any real or imaginary obligations which may be supposed to have been incurred in return for an almost entire abandonment of effective sovereignty. If a vexatious tariff were enacted in defiance of a fundamental compact, the colonists would probably correct the anomaly rather by demanding a change in the Constitution than by repealing protective duties. The patriots of Victoria have frequently in their speeches threatened secession on much smaller provocation.

It might be supposed that a project for discouraging trade with the United States ought to create little alarm in England. Differential duties will favour the importation of English goods; and the Imperial Government might regard with complacency measures advantageous to its own subjects, for which it was not responsible. Unfortunately, it is well known that hostile legislation against the United States is merely intended to serve diplomatic purposes. The American Government has for some time past wished to effect a Customs Union with Canada; and its overtures have not been absolutely rejected, though it has not hitherto been found possible to overcome objections of detail. Sir JOHN MACDONALD and his followers are now applying pressure to the American Government in the form of an adverse tariff; but, if they attain their object, the weapon of differential legislation will turn its edge to England. By a curious inconsistency, communities which cling to protection are almost always willing to enlarge the frontiers within which there is absolute freedom of trade. The Americans would gladly abolish the Customs frontier which separates them from Canada for the purpose of securing and extending their monopoly against English competition. The tariff which is now proposed is chiefly objectionable because it will form a precedent for legislation similar in principle, but pointed in the opposite direction. A Customs union between Canada and the United States would be the severest test to which the modern colonial system has been exposed. It might have been thought that the smallest demand which England could make on the colonies would be the treatment which is accorded to the most favoured nation. The supporters of a Customs Union propose to admit all the produce of a foreign country free of duty, and at the same time to impose protective or prohibitive duties on English goods. In Germany a Customs Union has been followed by political amalgamation, and it is well known that the American promoters of the scheme hope to attain the same object. Some of the colonists may perhaps see that union with a greater community would imply absolute fiscal dependence. The Canadians would of course be allowed a voice in the adjustment of duties; but on all disputed points they would find themselves in a small minority. The Canadians will be guided by their own interest as they may understand it, and they will pay little regard to English wishes or opinions. It is true that they might violate the spirit and perhaps the letter of their constitutional arrangements with England; but at the present time colonial relations are even more entirely devoid than international law of an operative sanction. The Government of the United States has no technical right to negotiate with Canada on any subject, except on the invitation of the Imperial Government; but, if the Republic and the Dominion thought fit to disregard propriety and loyalty, there would be no remedy except in war, which would certainly not be undertaken.

If a Customs Union is formed, it may become necessary to reconsider the expediency or possibility of continuing the colonial connexion; but on the whole it will, even in an extreme case, not be desirable to precipitate separation. There is always a hope that economic blunders may sooner or later be discerned and corrected; nor is it wholly impossible that the tie of allegiance which has almost

dwindled to a thread may hereafter become more binding. As long as the Dominion nominally forms a part of the Empire, Canadian ports will be open to English men-of-war, and enemies of the Crown will not enjoy the privileges of neutrals in the colonies. The population of Canada will not swell the ranks of the enemy; and in conceivable contingencies it might even aid the Imperial arms. According to some authorities, there is already a feeling of patriotic pride in the colony, which would not be equally gratified by subdivision into two or three States of the Union. Should the annexation be effected, the next generation will be trained up in the political traditions and prejudices of the Republic. If patience fails to avert ultimate secession, no better result would follow a more self-asserting policy. The change in the instructions of the GOVERNOR-GENERAL probably represents the determination of the Government not to interfere with the fiscal measures or with the other legislation of the Canadian Parliament. Submission to inevitable inconvenience may not be glorious, but it is always prudent. Lord LORNE's Ministers may perhaps sometimes listen to his advice when they are well assured that he has neither the will nor the power to oppose their conclusions. The characteristic dislike of modern democracies to commercial freedom is well known to statesmen, and they have every opportunity of understanding that the powers bestowed on colonies are likely to be used for the discouragement of trade and industry. It is useless to reserve for the consideration of the Crown every new measure which may be adopted for the purpose.

THE LONDON SCHOOL BOARD.

THE London School Board have just escaped from a very embarrassing position. Until lately the Board have been accustomed to borrow money at interest to meet their ordinary weekly expenses. In the long run, of course, they have ample funds for this purpose at their command; but teachers and workmen want to be paid at short intervals, and the money has to be forthcoming, whether or not the Vestries have paid in the proceeds of the School-rate or the Public Works Loan Commissioners have lent the sums required for building schools. The difficulty has been got over by a system of short loans; but the auditor has lately held himself precluded from recognizing this convenient transaction, and has consequently surcharged the Chairman of the Board and the Chairman of the Financial Committee with the amounts paid as interest. The Local Government Board thereupon referred the question to the Law Officers, and the Law Officers could not agree what answer to give. The ATTORNEY-GENERAL thought the School Board had a right to borrow as they had been accustomed to do. The SOLICITOR-GENERAL took a severer view, and held that they had no such power. In face of this conflict of experts the Local Government Board thought it well to be on the safe side. They remitted the particular disallowance on which the question had been raised, but warned the School Board that no similar consideration would be shown them in future. The result was that the Board, instead of borrowing as before, went on eating up their scanty reserve; and at their meeting on Wednesday week it was announced that there was less than 5,000*l.* in the hands of the Treasurer to meet a weekly expenditure of 20,000*l.* Under these circumstances the Board unanimously determined to throw themselves on the mercy of Mr. SCLATER-BOOTH. They represented to him that, if he would not help them, the salaries of the teachers could not be paid, and the building of new schools must be interrupted. Would he not, therefore, go on remitting these surcharges till Michaelmas next, and so enable the Board either to state a case for the opinion of the courts on the existing law, or to move the Education Department for the amendment of the law? The answer of the Local Government Board was, on the whole, favourable. No fixed time has been assigned down to which the remission of the auditor's disallowances will be continued; but, provided that the appeal to the High Court of Justice is prosecuted with all despatch, and the case argued exclusively on its merits, the Local Government Board will exercise the equitable jurisdiction vested in it until the result of the legal proceedings is known. Mr. SCLATER-BOOTH considers that he has no power to pledge his Board to remit the costs of prosecuting this appeal in the event of their being disallowed by the auditor; but he is so convinced of the importance of the controversy, and of the necessity of having it settled by a court of law, that he has undertaken that the request of the Board to be allowed to pay these costs out of the School Fund shall receive the fullest consideration.

The Local Government Board is not the only department of the Government with which the London School Board have been in correspondence, and they will apparently have some difficulty in making a good defence to the charge which the Education Department has brought against them. The School Board had, in part, attributed their poverty-stricken condition to the neglect of the Education Department to forward to the Public Works Loan Commissioners certain recommendations for loans which the department had already sanctioned, and in connexion with which much of the expenditure had been already incurred. The inference was that, if the Education Department had not been guilty of this delay, the School Board would have been richer by 91,000*l.*, and the necessity for appealing to the Local Government Board would, at all events, have been postponed. The letter from Mr. CUMIN, which was published on Thursday puts the facts in a very different light. According to Mr. CUMIN, the proposals in question were not sanctioned. They were only referred back to the School Board for further information. Mr. CUMIN implies that the Education Department suspected the School Board of a tendency to run into expense. The amount of an estimate is quite as important, he says, when a proposal for a loan is under consideration as the arrangement of the plans, and the Education Department accordingly returned the plans to the School Board, with a request to be furnished with an estimate of the cost of carrying them out. When the required estimate was laid before the department it was held to be too large, and the issue of the recommendation to the Public Works Loan Commissioners was "purposely delayed," until the School Board "had "come to some arrangement by which the cost of building "schools in London should be materially reduced." If Mr. CUMIN's narrative is correct the School Board treated this delay as a merely formal matter which need not influence their action in any way. They assumed that the consent of the Education Department would ultimately be given to the loans, whether the estimates were reduced or not, and they proceeded apparently to sign the contracts, and to lay out the money which they felt sure of getting in the end. Mr. CUMIN says that the School Board was speedily warned in each case that no contract for the buildings should be signed until the plans, specifications, and estimates were finally approved. Consequently, the scrape in which they have lately been involved, and from which they have only been extricated by the joint action of the Local Government Board and the Education Department, was a scrape entirely of their own making. They chose to sign contracts when it was still doubtful whether the consent of the Education Department would be given to the loans by which the money was to be raised, and then they very naturally found it impossible to find the money without a loan. Fortunately for the School Board the magnitude of their distress compelled the Education Department to be merciful. "In order," says Mr. CUMIN, "to meet the difficulties in which the School Board have "involved themselves, my Lords have consented to make "the recommendation asked for," and the 91,000*l.* which the School Board have pledged themselves to spend without seemingly having any certain ground for thinking that it would be forthcoming when wanted is or soon will be in their hands.

Mr. CUMIN's letter raises a much more important question than any touched upon in the correspondence with the Local Government Board. It is plainly expedient that the School Board should have the power to raise short loans when that mode of obtaining money happens to be convenient, and if the existing law does not allow this, it ought to be at once made to allow it. It is essential, however, to the proper management of the School Board finances that they should not be allowed to borrow money entirely at their own discretion; and if Mr. CUMIN's account of their customary practice is correct, they have in at least one remarkable instance, not indeed borrowed money, but so committed themselves to the expenditure to meet which they had asked leave to borrow it, that the department with which it rests to give or withhold the necessary sanction felt that its hand had been forced, and that there was no option left but to

authorize a loan without insisting on the conditions which it had originally meant to exact. This is a very serious accusation to bring against the School Board. If it did not seem impossible that the Education Department should have made such a charge without being certain of its facts, we should say that it was impossible that a public body such as the London School Board should have laid itself open to it. The Government, through the Public Works Loan Commissioners, are willing to lend money to School Boards for the purpose of building schools; but they very properly require, as a protection against unnecessary expenditure of the ratepayers' money, that the Education Department shall have recommended the loan as one proper to be raised. The Education Department, with equal propriety, require that, before they issue their recommendation, the estimates and plans of the proposed school buildings shall be laid before them. It is plain that, in order to determine whether a particular outlay deserves their sanction, they must know what kind of school it is intended to build, and how much money it is intended to spend on it. The building may be greatly in excess of the wants of the district, or the estimate of the cost may be greatly in excess of the really necessary outlay. It seems incredible that the School Board should have assumed that the Education Department would consent to a loan of 91,000*l.* after they had been expressly told that the department would not consent to it until the Board "had come to some arrange-"ment by which the cost of building schools in London "should be materially reduced." If they have assumed this, they ought not to escape without a very much severer censure than is conveyed in Mr. CUMIN's letter. If a public body finds that it has only to spend money without the consents demanded by law, and the consents, which would otherwise have been withheld, are at once given, it will be under no restraint whatever as regards expenditure. In this case, as has been said, it seems simply incredible that this should have been done; and Sir CHARLES REED says distinctly that it has not been done. In presence of two conflicting impossibilities, we can only wait for the further evidence which is promised. This much, however, is certain. Either the London School Board has committed a gross breach of duty to its constituents, or the Education Department is entirely mistaken in its view of facts about which it is peculiarly bound to have accurate knowledge. Whichever of these alternatives is true, the matter is not one which ought to be left where it is.

UPHILL WORK.

SO deep lies the love of variety in our nature that few people do not, in the long run, find it more fatiguing to keep entirely upon level ground than to take hill and dale, rough and smooth, as they come. If the actual force spent in occasional climbing is greater than is required for level walking, it is more healthily distributed among the different muscles, and the exhilaration of perpetual change more than compensates for the mere physical effort. There is a somewhat similar advantage in the fact that the figurative journey of life seldom remains long at one level. All work has its times of toiling ascent and of easy downward sliding. Life itself generally begins with a stiff climb, and ends with loss of active effort and more rapid progress. Or, from another point of view, we may compare youth to a rush down towards the plains, from which, later in life, we hope gradually to rise to the serene heights of experience. There is a delightful adaptability about the up and down hill metaphor; it runs equally well backwards and forwards. But, on the whole, the most natural use of it is that which treats the morning's journey as uphill work; and typifies the absence of conscious effort, the quick flight of time, and the sense of gradual closing in and loss of vantage ground which creeps over us with advancing years, by the one word "downwards." Down from the level table-land upon which middle age takes its stand and does its work, down into the gathering shades of evening, down towards the valley through which all must pass—such is the course which to the imagination most lives seem to pursue. At any rate, the sort of effort required at one stage of life is quite unlike that which we have to make at another; and these changes would alone suffice to secure us against stagnation.

There is in most people's minds such a prejudice in favour of youth that they scarcely recognize the amount of toil which is imposed upon the young at every step by want of familiarity with their tools and their materials. We refer of course to the considerable majority who do bear the yoke in their youth; not to those whose only business up to the beginning of middle age is to give free play to the instinctive arts of pleasing themselves and others; in which some young people display a proficiency as surprising as that of the half-hatched chick in picking up corn. Less spontaneous natures may be only beginning to master the same arts as the occasion for practising them passes finally away. All those who are called to the more truly human tasks which involve thought and struggle must have the opportunity of observing, as life goes on, how strangely the burden of toil seems to shift its place. What strange, blundering struggles it used to cost us to accomplish things which now we do almost unconsciously; how much more exhausting often was the bewilderment of groping our way and beating the air than the effort by which, later in life, we produce much more tangible results! It would often be an encouragement to the young if it were but possible to explain to them how necessary a foundation for future usefulness they may be laying while they seem to themselves to be merely finding themselves out in one mistake after another. If we reckoned the value of our work by its immediate results, most of the labour spent in youth would go for very little. Its chief effect is to pile up mounds of failures, over which we may climb to a vantage ground for future activity. Happily this upward struggle has its own exhilarating sense of infinite possibilities ahead which enables us to make light of toil and of failure. In a later phase we become chary of uncertain effort, and, while every stroke begins to tell, we also begin to think twice before striking. On the level table-lands of middle life we can calculate precisely how much effect we shall produce; we are no longer liable to lose our footing and roll down the slope after the ludicrous and exasperating fashion of our youth; but neither have we any sort of expectation of reaching the clouds; and, if what we do looms larger in other people's eyes, we often know quite well that we are not really putting half as much labour into it as we spent upon the scrambling attempts of earlier years.

On a smaller scale, every one who has produced any kind of work of art knows what different kinds of effort are required for beginning, carrying on, and finishing any design. Most people probably feel that in the first sketch there is a nameless charm which is almost inevitably obscured as the work advances, to reappear, if all goes well, in a different form as it draws towards its completion. Here the uphill part of the work comes in the middle, while the beginning and the end seem almost to do themselves. Probably few experienced artists would attach much importance to their own judgment of the value of their work during the familiar uphill stage. Not only in painting, but in all sustained effort, there is sure to be a time when the general plan or effect, clear enough at the outset, is lost sight of in the labour of working out details before it can be restored in its fulness. But in painting this is actually visible to the eye, because, as long as any one part is less complete than the rest, there is a real discord of colour which the painter must disregard while he steadily pursues the processes required for bringing out the ultimate harmony, until, as the long labour draws to its close, every separate touch acquires an almost magical power and value as it falls into the place prepared for it by previous toil and sacrifice. Something of the same kind happens in most lives. Youth is full of interest and picturesqueness, like a sketch freshly dashed off by the hand of a master, and age may have all the stately harmony of a finished picture; but the intermediate stage is apt to be blurred and confused with a multitude of details. Happily the pressure of business generally distracts the attention of the artist in life from the inevitable flatness (if we may be permitted suddenly to reverse our metaphor) which attends its middle period. The most romantic of us have scarcely time to miss from their own lives at their fullest that picturesque effect which is often so marked in youth and in old age, and which is to the flatness of middle age what the hills are to the plains.

The slowness with which time passes in youth is another point which almost forces us to think of it as of an uphill road. Rejoice as we may to run the race, we cannot climb as fast as we shall descend. We have to put forth all our will to advance not only forwards, but upwards. Every step on an uphill road not only brings us nearer to the goal, but also requires a victory over the force of gravitation; so that it is no wonder if our steps are slow. But when we have passed the watershed, and begin to tend downwards, we have only to yield ourselves passively to the same force, and we are carried forward with but little effort of our own—quickly and more quickly as the path grows steeper. The involuntariness of much of our action as life advances is a startling change to those who care to notice it. Once perhaps it was a daily act of self-denial to set to work at all. Later in life not to work would be the severest of penances.

The act of engaging in labour may be uphill work only at the outset of life; but the work itself which we do may become ever more and more arduous, if we are not content with quantity of effect, but aspire to perfection in quality. Those who are possessed by this ambition will find the whole of their life's journey lying uphill. There are for them no level plains on which to settle down to reap the reward of former toil. For them the shades of evening bring no relaxation of effort. Their expectations may be less unlimited as time goes on, and less of their strength will be wasted in vain endeavours to grasp at what is beyond their reach; but the upward strain will not be relaxed; it will only be economized, as experience takes the guidance of their steps. And with the life-long toil of ascent comes the life-long expansion of horizon; the journey which is all uphill must needs conduct the wayfarer to fresher air and serener solitudes; away from the crowd and the smoke, up to the heights from which what is mean and trivial falls out of sight, and the sounds of strife are hushed. A

freshness more exquisite than the freshness of youth is reserved for some of the aged; but it can be attained only by a path which lies from first to last uphill.

Uphill work, both literally and figuratively, means work in two directions at once; literally, it is going forwards while we raise our own weight; figuratively, it is doing things and learning how to do them at the same time; thus lifting ourselves on to a higher platform of moral or intellectual being. There is always in some senses an ascending slope before us, which we may scale if we will. But happily it does not rest with ourselves to decide whether the general tenor of our lives shall be that of laborious ascent or of gentle downward gliding. The force of gravitation need not be always regarded as a type of the depraved tendencies of the human heart. There is a time for all things, says the wise man, and if there is a time for learning, so is there, happily, a time for forgetting; and also a time for idly applying and enjoying what we have learnt. There is a time for scrambling upwards, and a time for lying on the grass in the valley; a time for climbing fruit-trees, and a time for letting the ripe fruit drop into our mouths. Even Christian, who was not the man to flinch from his share of climbing, found rest and refreshment in the Valley of Humiliation, and it would be a poor view of life which valued nothing that was not gained by the sweat of our brow. Let life tend ever so steadily upwards in its moral and spiritual aspects, and intellectual labour be ever so strenuously directed towards higher and higher levels of attainment, still there will be in the outward life pauses from all activity, and welcome and gentle relaxations of effort, when our wisdom is to sit still and receive the riches which flow into our souls from above. Hard work is no doubt a cure for many evils, and the taste for it a most excellent one to acquire if we can; but not to be able to abstain from it for a time, not to have any idea of enjoyment without it, is a miserable slavery and blindness.

The most exquisite pleasure which we ever take in the work of our own hands or brains is probably derived from some rapid achievement wrought without conscious effort in some direction in which we have lately been working hard. After making a series of laborious studies, with perhaps little apparent result, we suddenly find ourselves rendering an impression, either in words or in colour, with an unstudied felicity which has gone far beyond the result of all our former labour, and perhaps by means of which we can give no complete account. Such moments are like those in which, after a long steep climb in the shadow up the jutting shoulder of a mountain, we suddenly turn a corner, and find ourselves face to face with the whole expanse of the western heavens.

GHOSTS AT SOUTH KENSINGTON.

ALMOST more depressing than to perambulate the Inferno between Virgil and Dante would be the occupation of wandering through large and silent halls haunted by the pale forms of those whom we have known and loved—ghastly unrealities, visible but intangible, bearing the semblance but not the substance of old and valued friends. Nor would our spirits rise if, as we hurried away from one apparition, another immediately presented itself; if the figures were sometimes a ghostly white, and sometimes wore the colour of the familiar forms themselves, though not of their substance. The pale and lifeless image of an old Italian friend might make us shrink in horror, and on turning we might be confronted by the shade of one whom we knew familiarly in Spain some thirty years ago, while old acquaintances made in India and Central Asia might appear, standing motionless and ghastly. The sight of a few men, women, and children sauntering sleepily through these halls, or lounging on benches, apparently unconscious of the presence of the dread forms which haunted the building, though somewhat reassuring, would scarcely cheer the visitor, especially if these human beings seemed affected by the depression of the scene, although they looked not at the grim apparitions. The gloom of such a place would be increased by the sudden chiming of a deep-toned clock, which, on being examined, proved to be but the vain resemblance of a clock which once stood in an old cathedral tower far away in Eastern Germany; nor would the scene be rendered less sombre by the presence of many monuments to the dead. It may easily be imagined that such surroundings as those which we have been describing would be the reverse of hilarious; and yet the British nation has provided for itself a place of entertainment of very much this nature.

The lover of statuary and architecture who has travelled much in Europe may experience some such sensations as those above described by paying a visit to the South Kensington Museum, for, as he wanders through its halls and corridors, he will be confronted by the apparitions—in plaster of Paris—of many of his old friends. We are far from undervaluing that wonderful exhibition, being fully alive to the merits of many of the works of art which it contains, and being ready to admit the usefulness of plaster casts. The latter are invaluable to students of drawing, and serve as useful works of reference to artists and amateurs; they afford opportunities of completing their studies to travellers who have only had time to inspect the objects which they represent in a hurried manner, and they help to refresh the memories of the most learned. To the untravelled they are naturally instructive; but it is obvious that they can convey but a very imperfect idea of their originals to those whose artistic travels have been limited to London museums. A work of art which, while to a certain extent complete in itself, forms but a small part of a magnificent whole, loses much of its virtue when taken from its proper place and exhibited alone; much more, therefore, does the plaster representation of a part of a great work, when shown alone, fail to give much idea of the beauties of the original as it stands in its proper position. When a fine work of art is seen in its own place many questions of interest at once occur to the mind of the traveller—such as how it came there, what it is made of, and when it was made; but we do not trouble our heads much about an object which is plainly labelled as made of plaster, and having cost thirty shillings. Then again, in a museum it is next to impossible to avoid crowding things too much together to allow any opportunity for their beauties being fairly appreciated. Let us suppose the case of a cast of some bronze doors. Instead of approaching them from an open piazza, admiring their breadth of treatment in the distance, their general richness at a nearer view, and their marvellous detail on a close inspection, we have to thread our way through a labyrinth of huge casts and stands, and then look at them in an awkward position. We thus can only enjoy a small portion of their beauties. Then the doors themselves, instead of closing the portals of some cathedral or baptistry, lie flat against a wall, and convey no meaning. In a line with them are other plaster doors; this is the door department, and they stand in a row like crows upon a rail. We have more room to look at the cast of the gallery in Santa Maria Novella at Florence. This cast is at the end of an upstairs corridor, and can be seen to advantage from below. The colour of the plaster too is not very strikingly dissimilar from that of the marble of the original, and as we look up we try to fancy that we hear the choir singing High Mass, and see the monks in their white habits. Suddenly the illusion is dispelled. A policeman appears at one corner of the gallery and a nurse with a baby at the other, and we speedily realize the fact that, after all, we are at South Kensington and not at Florence. Models of the splendid pulpits of the cathedral and baptistry at Pisa are placed opposite each other, as if it were intended that rival orators should thoroughly "ventilate" some theological question from their heights. Michael Angelo's David towers above, ready to drop a stone upon the head of the worsted disputant. Shakspeare and Cupid, side by side, help to form the audience, and several human beings are already asleep upon some benches beneath the pulpits, thus helping to give reality to the scene. The shrine of Saint Sebaldus, coloured and gilded in imitation of its original at Nuremberg, is overshadowed by the tomb of a Mogul; and German, Hindoo, and Italian monuments hob-nob in the most friendly manner. It is sweet to recall memories of our childhood, and these models remind us of the days when temples and pagodas used to be represented on the dinner-table in barley sugar. We do not, however, remember any effort of the cook or confectioner—not even a wedding cake—which equalled in originality the arrangement of the cast exhibited at South Kensington of the splendid Puerta de la Gloria belonging to the cathedral of Santiago. Frederick the Great is complacently riding on his charger through one archway, and Mercury is bounding with a hop, skip, and a jump through the other. These immense doorways are quite dwarfed by the cast of Trajan's Column, which rises immediately in front of them. This column has been broken in two to suit the exigencies of limited space, and the result is about as graceful as would be that of a broken statue of a man, one half consisting of his legs standing upright, and the other of his upper half resting on a cross section of his middle, his thighs and head being level with each other. The Science and Art Department might with as much reason urge that this arrangement would give a correct idea of the man as that their divided cast of Trajan's Column could give a correct idea of its original. Even a bronze-coloured lion, which stands between the two broken halves, looks astonished at this piece of eccentricity; but, in order to palliate any defects in the arrangement of the Column, the thoughtful authorities have furnished a sketch of Trajan's Column as it looked at home, which, with a book telling everything that an ordinary visitor is likely to want to know on the subject, is placed on a desk at the foot of the great cast. When last at the Museum, we noticed two plaster horses in a Biga, galloping eagerly in the direction indicated by a placard which was placed immediately in front of them. On this placard a finger pointed to the mystic words "To the Refreshment Room." If a visitor liked to follow the proposed course of these horses, and established himself at a table in the grill-room about luncheon-time, he might hear the students recounting their impressions of their studies and the lectures which they had heard during the morning; and, he might form his own conclusions as to the edification likely to result from an atmosphere of plaster of Paris, sham antiquities, and museum lectures.

We doubt if the devotion (whether artistic or otherwise) aroused by a gilded plaster model of a magnificent gold reliquary could be very wholesome. There is a fine example of such a model at Kensington. We wonder that coloured casts of the relics which it contained are not placed in an adjoining case. Surely this would be the very acme of modelling—or apedom. Many yards of superficial wall-surface are covered by a ghastly and gigantic diagram, showing the relative proportions of some of the most remarkable buildings of various countries and dates on a scale of about one-sixteenth of their actual heights. The dome of St. Peter's is relieved against the great pyramid of Cheops, above which again peeps the top of the spire of Strasburg Cathedral. Beneath rise the slender proportions of the Albert Hall, which are partly concealed by the Temple of the Giants and the

Parthenon of Athens. After gazing at this extraordinary diagram, one is almost disposed to make a vow upon the nearest plaster altar never to look at a cathedral again and to forswear architecture for the future. Surely the erection of the Tower of Babel was not such a sin as a work like this. The large hall in which it hangs is a kind of architectural dissecting-room. Here are parts of some rood-screen, there some choir-stalls, and there again a piece of a cathedral façade. The place is full of pieces and sections, as if the principal buildings in the world had been operated upon by some giant's scalpel. A skinned human arm lying upon a surgeon's table, although interesting in its way, does not give us any very direct enjoyment, neither do casts of bits and scraps of the great works of architects and sculptors. On returning to England from a long tour on the Continent, where we have given special study to architecture, statuary, and woodwork, after suffering Roman fever and the loss of much of our luggage, after being wearied, robbed, and bug-bitten, it is disheartening to find that the model working-man can come from the City by the Underground Railway and see in one morning exact models of many of the works of art which we saw at the cost of so much labour, time, and money. When we look with ungracious eyes at the unsophisticated arrival by the Underground comfortably glancing over in a few hours exact imitations of objects which it took us many months to see, we are reminded of the late Major Whyte-Melville's story of a hard rider who complained at the end of a severe run with the hounds that, after spoiling his hat, tearing his coat, laming his horse, having two falls, and riding first from end to end, he found that a fellow on a coffee-coloured pony arrived at the finish before him after all. The underground tourist is not to be beaten by the Continental traveller, even in the matter of photographs. As he leaves the Museum, he can buy "cartes" or "cabinets" of the various objects of interest which he has been inspecting. He may fill his pockets with photographs "taken direct from the plaster cast," and carry away armfuls of "descriptive catalogues." He may even increase his spoils at the depôt of the Arundel Society within the building, and pocket a small copy of the diagram showing the comparative altitudes of the principal buildings in the world. He has one great advantage over the Continental traveller, which consists in his freedom from the nuisance of cicerones, and he can wander where he will in the Museum, without being disarmed of his umbrella. He may breakfast, lunch, and dine in a mediæval chamber, at a reasonable rate, hear a lecture, wash his hands, and spend an hour or two in an excellent library, "within the precincts of the building." It may be true that at the South Kensington Museum we see little but the ghosts of the statuary and architecture which we admire abroad, but where, let us ask, out of England, can we find a South Kensington Museum?

THE COMÉDIE FRANÇAISE.

THE programme of the performances of the company of the Comédie Française during their coming stay in London has been published, and it may be presumed that those who drew it up have taken some trouble to select the pieces best fitted to show the powers of this unrivalled body of artists, and most likely to please such audiences as will probably be attracted to the Gaiety Theatre. It would scarcely seem, however, that all the care which might have been expected has been given to the selection of the dramas which are to be acted, as, though many of them are sure to be successful and to produce a great impression on those who witness them, there are others on the list which are little likely to please; while the names of some plays which ought certainly to be given in any representative performances of the Comédie Française are, to use a hackneyed expression, conspicuous by their absence. To these deficiencies we shall presently refer, in the hope that changes may yet be made; but it is only fair to speak in the first place of what is good in the programme which has been issued on behalf of the great comedians. That in arranging it there has been due regard for the claims of the classical as well as of modern drama, and a desire to offer both the old masterpieces and the best plays of the present day, is evident; and, so far as regards the classical drama, the effort has been fairly successful.

The first place, as was to be expected, is given to Molière, and it need hardly be said that this was obviously the right course. Despite the almost superstitious veneration which Frenchmen have for Racine and Corneille, the attractions of tragedy, even at the theatre in the Rue Richelieu, are not great compared to those of comedy; and in London people would probably take but very little pleasure in the stately declamation of solemn rhymed verse. Of Molière's plays, nine are to be acted—namely, *Tartufe*, *Le Misanthrope*, *L'Avare*, *Les Précieuses Ridicules*, *Le Médecin malgré Lui*, *Les Femmes Savantes*, *L'Etourdi*, *Les Fourberies de Scapin*, and *Le Dépit Amoureux*. The selection, on the whole, is a good one. *Tartufe*, of course, must be given in any series of representative performances. *Le Misanthrope* and *L'Avare* were extremely successful when they were acted during the previous visit of the actors of the Français, and will doubtless be so again. No one with the smallest appreciation of wit and happy jesting can fail to be greatly amused at the inimitable scene in *Les Précieuses Ridicules* where Madelon and Cathos exchange phrases with the disguised lackeys, or to enjoy the brilliancy of *Les Femmes Savantes*. *Le Médecin malgré Lui* has, as need hardly be said, always been one of the most popular of the great writer's pieces in France, and, like *Tartufe*, could not possibly be omitted. *L'Etourdi*, Molière's first comedy, and *Le Dépit Amoureux*, in which, like Shakspeare, he took an Italian story for the base of his plot and enriched it with his own inimitable genius, will probably please; but *Les Fourberies de Scapin* might well have been left out. Respect for Molière and for the traditions of the Théâtre Français prevent Frenchmen from objecting to the buffoonery of the play; but probably to an English audience the sight of an old man standing upon the stage covered with an enormous sack and beaten by a lackey, who afterwards declares that he was really flogged, and persuades the victim that he only received accidental blows from the end of the stick, will suggest a particularly bad pantomime. Eight of Molière's plays will be enough, without this one, which will give English audiences the idea that Frenchmen are sometimes amused by fooling best suited for children. If this piece were struck out of the list, it would be possible to give Corneille's *Menteur* twice, instead of once, as is proposed. It should be remembered that in 1871 no play was more successful than this one; and happily the two admirable actors who then performed Dorante and Cliton to an enthusiastic audience still fill the same parts, and their powers are in every respect undiminished. *Les Plaideurs*, which was also performed in 1871, is of course to be acted, and three other comedies of inferior order, but belonging to the classical repertory, are to be given. These are *Le Joueur* of Régnard, deemed the successor of Molière, *Le Mariage de Figaro* and *Le Barbier de Séville* of Beaumarchais. It cannot be said that the two latter have been wisely chosen, as both are—so far as regards English audiences—too much associated with recollections of operatic music. This was especially shown to be the case with the last-named during the performances in 1871. It was admirably acted, but the familiar music of Rossini was missed by everybody, and the play was perhaps less successful than any other given during the sojourn of the Français actors in London. If this circumstance is remembered in time, these pieces will probably be withdrawn; but, whether they are withdrawn or not, the number of comedies which will be acted during the coming season will certainly be large.

With tragedies this will not be the case, as only three are to be given; and there can be no doubt that, in determining to produce so few, a wise discretion has been exercised by those who settled the programme, as, if many tragedies were represented, English audiences would be very greatly bored. The pieces selected are *Phèdre*, *Andromaque*, and *Zaïre*. In the first of these the chief attraction will be Mlle. Sarah Bernhardt's performance of the part of the hapless queen, of which we have spoken more than once. It is by no means improbable that the scene in which Phèdre avows her guilty love will produce a deeper impression than anything else which will be witnessed during the stay of the great French actresses and actors in England. Mlle. Bernhardt will have the advantage of being aided by M. Mounet Sully, whose impersonation of Hippolyte has been much admired in Paris. In the part of Orosmane in *Zaïre* this strange actor, sometimes so extravagant and sometimes so powerful, will be seen at his best; but it is to be hoped that he has learnt to avoid the eccentricities which marked his first appearance in this character, when, to the great discomfort of his comrades, he took totally different positions on the stage from those which had been settled at rehearsal, and finally placed Zaïre under the disagreeable necessity of coming up to him to be stabbed. M. Maubant's performance of Lusignan in this play should be watched with interest, as the character was a favourite one with the greatest of English actors. Garrick is said to have rendered Lusignan with even more than his usual skill. Mlle. Sarah Bernhardt is of course to appear as Zaïre, and as Andromaque in Racine's tragedy. In neither part, however, is she likely to produce so great an effect as in Phèdre.

This and the other two tragedies, with the comedies which have been mentioned, will give English audiences a very fair idea of the French classic drama; and, as already stated, the selection seems on the whole to have been judiciously made, though some pieces have been chosen which might well have been left out. Of the selection of modern plays, it is unfortunately impossible to speak in the same terms, as the errors which have been made are not inconsiderable.

Before pointing these out, however, we will mention the principal pieces, which appear to have been rightly chosen and to be such as ought to be given in representative performances before English audiences. These are:—*Les Caprices de Marianne*, *On ne badine pas avec l'Amour*, and *Il ne faut jurer de Rien*, by Alfred de Musset; *Hernani*, by Victor Hugo; *Mlle. de Belle-Isle*, by A. Dumas; *Le Gendre de M. Poirier* and *Les Fourchambault*, by M. Emile Augier; *Le Fils Naturel*, by M. Dumas fils; *Mercadet*, by Balzac; *Le Marquis de Villemer*, by George Sand; *Gringoire*, by M. de Banville; and *La Joie fait Peur*, by Delphine de Girardin. There is little risk in asserting that these pieces will be altogether successful. Some of them, indeed, have already been successful in London. Besides Musset's three beautiful plays, *Mlle. de Belle-Isle*, *Le Gendre de M. Poirier*, and *Mercadet* were acted in 1871, and all were very greatly admired. It is impossible to doubt that they will be equally appreciated when produced for the second time. The other pieces mentioned are scarcely less certain to be received with favour. Victor Hugo's Spanish drama cannot fail, despite its occasional extravagance, to impress those who witness it; and the two plays representing modern life in which M. Emile

Augier and M. Dumas fils have recently achieved so much success will probably be as popular at the Gaiety as they have been at the theatre in the Rue Richelieu. The *Marquis de Villemer*, a piece of a totally different order, is always made interesting by the wonderful acting of MM. Delaunay and Worms. *Gringoire*, with its quaint story of the obscure genius who awakened some feelings of pity in Louis XI., and *La Joie fait Peur*, with that dialogue which Delphine de Girardin alone knew how to write, are amongst the most charming of the minor plays in the repertory of the Comédie Française.

Well chosen, therefore, are some of the dramas to be acted; but it is difficult to understand what reasons can have caused the selection of others. One of the first names which appear in the programme is *L'Etrangère*, the worst of M. Dumas's compositions, and in some respects as bad a play as ever was written. The story is clearly made out of two different plots which the author has shown none of his accustomed skill in welding together, and it is impossible to sympathize with any one of the characters. To an English audience the Duchesse de Septmonts, whom M. Dumas intends to be pitied, will appear a worthless and shameless woman; Mrs. Clarkson, the adventuress, a vicious lunatic, given to unintelligible rhapsody; and Clarkson a very singular specimen of an American husband. The play, however, may have one use, as showing how naturally extreme dulness seems to accompany extreme immorality. *Le Sphinx*, which, strange to say, is to be acted three times, is, though not so offensive as *L'Etrangère*, an excessively disagreeable play, and possesses but small literary merit. Its success was originally due in great part to Mlle. Croizette's very realistic representation of a death by poison. This has now been rendered somewhat less excruciating, in accordance, no doubt, with the principles of dramatic art, but with considerable injury to the piece, which sorely needs a great effort on the part of actress or actor to give it interest. Here, then, are two plays—one of which is to be acted on three nights—that might certainly have been left out with advantage. To these must be added *Le Supplice d'une Femme*, *Mlle. de la Seiglière*, and *L'Ami Fritz*. It has generally been supposed that in the first of these M. Emile Augier meant to show how terribly a woman may be punished for illicit love. To English people it will most likely seem that Mme. Dumont does not receive a whit more punishment than she deserves for long-continued infidelity to her husband; and they will probably not appreciate the kindness of the author, who has left his play without any definite conclusion, intending doubtless to give all who might witness it the pleasure of devising such conclusions for themselves as might best meet their ideas of poetic justice. Unlike this piece and the others mentioned, *Mlle. de la Seiglière* and *L'Ami Fritz* are not in the smallest degree disagreeable; but, alas! not even the admirable acting of Mesdames P. Ponsin, Reichemberg, Broisat, and Jouassain, and of MM. Got, Coquelin, Febvre, and Barré can make these respectable works interesting.

It is hard, indeed, to understand why these plays should have been chosen, and still more extraordinary does their selection seem when it is remembered that there are others in the present repertory of the Comédie Française far superior to them which for some inscrutable reason are not to be performed. *Adrienne Lecouvreur*, for instance, which was mentioned in the list first issued, has been withdrawn. *Marion Delorme*, revived a few years ago with such marked success, is not to be acted, although *Hernani* is to be played four times. *Le duc Job*, so perfectly suited for representation in England, and rendered so interesting by M. Got's admirable acting, has no place in the programme, and *Ruy Blas*, which has been for some time in rehearsal, and is just about to be produced in Paris, is not to be given in London. Then surely *La Nuit d'Octobre*, of Musset, which was so greatly admired when the Français actors were here before, might be given on their second visit, instead of one of the minor pieces announced. Let it be hoped that this and the other omissions mentioned may be remedied, and that before June comes a revised list may be issued from which *L'Etrangère*, *Le Sphinx*, *Le Supplice d'une Femme*, *Mlle. de la Seiglière*, and *L'Ami Fritz* will have disappeared. It is much to be desired that during their stay in England the actresses and actors of the Comédie Française should appear in no plays which are unworthy of them, and that, so far as possible, all those pieces in which their great and varied powers are best exhibited should be performed.

THE PONTIFF OF POSITIVISM.

The Trustees of the Hibbert Fund, who have induced Mr. Max Müller to lecture on the Religion of the Rig-Veda, and Mr. Page Renouf on the Religion of Egypt, will probably some day appoint a lecturer on Patent Religions. To the great working creeds of the world, patent religions stand in the same relation as do patent medicines to the art of healing. The drugs and the doctrines are often discovered by very ingenious people; they are widely advertised, they have some ardent believers, and they give a large notoriety to the names of Cockle and of Comte. The pills and the platitudes have their confessors too, the gentlemen and ladies who send grateful testimonials to the patentees of *Revalenta Arabica*, and the London Positivists "who manifest consistent opposition" to things in general, in "a protest signed by Mr. Beesly."

Of all patent religions, the most instructive and the most diverting is no doubt that which styles itself the "Religion of Humanity," and which is at present mined by dissent. The late Mr. Sydney Dobell, the poet, was a member of a Church which consisted of a certain Mr. Thompson and his sons-in-law, with their families. The Thompson Church was torn by social and theological schisms; and so, as we gather from a sermon of Mr. Richard Congreve's (*The Religion of Humanity*. C. Kegan Paul and Co.), is the Church of M. Comte. The fault of the Religion of Humanity is one which, as Mr. Matthew Arnold might say, "it shares with the British College of Health in the New Road. . . . That building does credit, perhaps, to the resources of Dr. Morison and his disciples, but it falls a good deal short of one's idea of what a British College of Health ought to be." In the same way does the Religion of Humanity fall short of one's idea of what a Religion of Humanity ought to be. It is not only that the number of the believers is inadequate; for few religions have begun their career with a large body of subscribing disciples. The petty squabbles, rather than the insignificant numbers, of the Church excite the admiration of the honest inquirer. There is one term of praise, however, which may be sincerely applied to the Religion of Humanity—it is thoroughly *English*.

Mr. Congreve, the *pontifex minimus* of the Universal Religion, often finds himself at variance with his fellow-countrymen. He has to admit, in his interesting Encyclical, that England is darkening the prospects of humanity all round. She is draining Cyprus, and has intentions on those fifteen feet of Oriental sewage in Famagosta harbour which, according to Comte, the Western Powers should leave alone. She is busy in South Africa; she is stirring in Central Asia; she is thought to be meditating interference with the Oriental evolution in Burmah; and Mr. Congreve, like many persons who do not believe in Humanity, is deeply pained by her conduct. Some may call him unpatriotic. Let them look at the agonies of the Universal Church, and they will see that Positivists are Englishmen, in spite of themselves. Though there are only about fifty of them altogether, they are fighting about liturgies and asserting the right of private judgment in the matter of hymns, and wanting to confine religious worship to sermons, just like the members of any Particular Baptist congregation. There has been a demand—a partial demand, we fear—"for something which might give a definitely religious character to our ordinary Sunday meetings, and take from them their predominantly intellectual aspect, which could in no wise adequately awaken our feelings." The "predominantly intellectual aspect" is Comtese, we presume, for Positivist sermons. So far from "adequately awakening" anything, these sermons, if we may judge from the specimen before us, would adequately send all the world to sleep. A new sort of service, of an adequately awakening character, was therefore attempted, on the first day of Moses, 91, the Festival of Humanity, or, in ordinary parlance, on the first of January, 1879. This service (which does not seem to us to add much to the festivity of Humanity) is "due to the thoughtful co-operation of two members." The particular additions to the ordinary services consisted partly of the utterance of some short sentences before the sermon, and partly, it seems, of the exhibition of a portrait. Mr. Congreve said that, "with allowance for the accidental failure of the portrait, it was, I think, very successful." It is certainly a pity that the portrait failed. The effigy of M. Auguste Comte was presented, we presume, to the faithful by the humble agency of a magic lantern. Now, if anything goes wrong with the slides of a magic lantern—if a comic slide, for example, is accidentally introduced in the wrong place, or if the right slide is upside down—the effect is disappointing in the extreme. We may be wrong, of course, in our conjecture about "the accidental failure of the portrait." Something may have been attempted with photographs and the electric light. The Polytechnic is full of resources of this kind, which ought to be at the service of Humanity, especially on the first day of Moses, when no one would grudge a little extra outlay. In consequence of the failure of the portrait the short sentences may have been less effective than was expected. They do not appear to be printed with the Encyclical, for the address to "Holy and Glorious Humanity" we take to be part of the ordinary liturgy. In this effusion the remarks about "thy beautiful planet, the Earth," suggest that the two members of the congregation who intelligently co-operated borrowed something in style from the "prayer" of a Scotch minister:—"Thou hast made the Sun, and thou hast made the Moon, and the Comets also, which in their eccentric movements round the centre of our system sometimes approach so near that boddy that they are in eeminent danger o' being veetrified." Such and so great are the dangers which beset the amateur composers of liturgies.

It is scarcely fair, of course, to judge of the Festival of Humanity when we have neither the portrait nor the short sentences before us, and are limited to the merely intellectual entertainment provided, at great length, by Mr. Congreve. The Universal Church is awakening, or at least several of its members are awakening, to the need of art in its services. Others of the members seem to hold with the Presbyterian who objected to the "Kist of Whistles" and to "scandalous images." Possibly some of these iconoclasts "got at" the portrait, so that perhaps the failure was not accidental. It is painful to have to suspect Holy and Glorious Humanity of anything not quite straightforward, but the religion is, we fear, in danger of controversies like those which rent the Eastern Church. Mr. Congreve himself is entirely in favour of the introduction of "some hymns, if possible with accompaniment, but without, if that is not to be had." Could not the Universal

Church agree to a compromise? Could she not hire a harmonium for three months, which would bind her to nothing in future? When the Church includes the whole of Humanity, when we have all to go to it on Sunday, it will be rather dreary if music and art are absolutely prohibited—in fact, we doubt whether Humanity will stand it. Even in the present bleakly intellectual condition of the Church, the priest reads "a passage from some poet, most frequently from one of those in the Positivist Library." Who are the poets in the Positivist Library? Does it include the unpublished *Ballades and Villanelles* of Jeremy Bentham? Is the *Epic of Hades* on the shelves, and are the works of Mr. Austin Dobson to be found there? Miss Martineau's *Lyrics and Love Songs*, and that early and rare work of Comte's, *Les Abîmes Lyriques*, are doubtless to be found; and we know, from a quotation by Mr. Congreve, that the Positivist Library includes Cary's *Dante*. It ought to have a place for M. Littré's new rendering of the *Inferno* into old French, and if Mr. Mill left any poetical remains, it is in the Positivist Library that the curious must look for them. There should be little difficulty about hymns, or at least about a hymn, if once the congregation will subscribe for the harmonium. Mr. Swinburne, in *Songs before Sunrise*, has written a "Hymn to Man," to "Holy and Glorious Humanity." It covers fourteen pages, contains about three hundred lines, and we are bound to say that it would be quite a relief after any purely intellectual entertainment. Perhaps humanity could not sing all through it on any one first of Moses, but it might be divided into parts, like the Hundred and Nineteenth Psalm:—

> Things are cruel and blind; their strength detains and deforms,
> And the wearying wings of the mind still beat up the streams of their storms.

So the hymn runs on, and ends:—

> And the love-song of earth as thou diest resounds through the wind of her wings,
> Glory to man in the highest, for man is the master of things.

Nothing can be more suited to the spirit of the Universal Church than this scorn of "things" in general, and this assured belief that man will prove too many for "things" in the long run.

While speaking of the æsthetic side of religion, we do not observe that Mr. Congreve said anything about Positive architecture. There is a slight *lacuna* in the system, just where definiteness is most desirable. If the old faiths are outworn, as Mr. Congreve holds, the old styles are much more decrepit, and it is with real curiosity that we desire to see Mr. Congreve's idea of a cathedral. Difficulties will be felt in connexion with the glass, if the Church absolutely objects to representations of anything on this beautiful planet, the earth, or in the waters under the earth. Perhaps a style of architecture may be among "the other additions which will come with time."

Passing from details of organization, Mr. Congreve reviewed the position and prospects of the Universal Church. He admits that conversions are very few; but then, says he, "all forms of religious revival are doing some portion of our work." He believes that the foundations of theological belief are being sapped, and that all the birds which religious revivals have wounded will ultimately flutter into the net of a non-theological religion. Mr. Congreve thinks theological believers credulous. He himself apparently acquiesces without difficulty in a faith which makes the most amazing demands on credulity. He and his disciples believe that Humanity is Holy and Glorious, and they even seem to expect that in some far-off future it will be happy. If ever people come to strain at doctrines that we scarcely care to introduce in this place, is it probable that they will swallow the gigantic camel of the holiness and ultimate happiness of Humanity? Man is *un méchant animal*, said the sanest of poets, whose comedies, whether they be in the Positivist Library or not, might almost convert a pupil of M. Comte. If there is an antidote for the dreams of the first pontiff of Humanity, surely it is to be found in the poems of Shakspeare and Molière. They knew precisely how much the holiness of humanity is worth; and, after reading a sermon of Mr. Congreve's, it is almost a duty to turn to the pages of these sincere and sensible observers who "knew what is in man."

When Mr. Congreve talks of Comte's patent religion as "a new Catholicism, succeeding and superseding the older or Roman Catholicism," it is too plain that he knows not what spirit he is of. The Church of Humanity exhibits, in their most thoroughly British forms, all the marks of self-willed and, to tell the truth, of half-educated dissent. Long ago science passed by the clever generalizations of Comte; they now appear like queer fossils of extinct and unsuccessful creations in Mr. Congreve's discourse. The fantastic and incredible religion that rests on their shifting foundation is rather less likely than Mormonism or Sandemanianism to supersede any of the ancient creeds of mankind.

THE THREE ARMS.

THE past thirty years of military history have been prolific of change and improvement in all that appertains to the art of war. Military weapons in general have undergone, and are still undergoing, changes; but these changes have not always been equally apportioned among the three arms, and thus it has frequently happened that one of them has, by means of some recent invention, been invested with a temporary importance until some fresh improvement affecting another again alters the situation. Beginning our retrospect immediately before the Crimean war, we find the weapons in general use to have been much the same as they were in the days of the Peninsula—namely, the musket, the extreme range of which may be said to have been two hundred yards, for the infantry; artillery, which was seldom effective beyond six hundred yards; and sword and carbine for the cavalry, the latter weapon having been, from its bad shooting, an almost useless superfluity. The close of the Crimean war was followed by a series of improvements, the first of which affected the infantry only—namely, the Enfield rifle, a weapon which in the hands of properly trained men was found to be perfectly effective at eight and nine hundred yards. Its appearance was hailed by an outburst of exultation on the part of the infantry. Here, it was said, is a weapon which, as regards both range and accuracy, actually excels the field-gun. Of what further use could artillery now be, for would not both men and horses be demolished by infantry fire before the guns could return a shot? This impression was confirmed by a diagram which appeared in the Musketry Instruction book of the period. It represented a gun and waggon coming into action, the figures of men and horses alike copiously spotted with bullet-marks, the whole being intended to represent the effect of musketry fire at eight hundred yards from a squad of men during a period of about two minutes. It mattered little that the squad was composed of picked shots, that the range was accurately measured and known, that the marksmen had enjoyed perfect freedom from hurry or excitement; in a word, that the practice had been carried on under circumstances which could never have existed in actual war. There was the diagram, and it sufficed to point the moral that the days of field artillery were over.

As for cavalry, they never had been formidable to foot-soldiers, and now would be simply contemptible. Henceforth infantry would be the sole arm, and the sooner the other two were disestablished the better. Time, however, brought the artillery their revenge. Before long it was discovered that guns could be rifled as well as small-arms. An increase in the range of field artillery more than commensurate with that which had taken place in the musket was at once established, and, more than this, the steadiness of flight which characterized the new elongated projectiles rendered the use of the percussion shell feasible. Artillery did not, however, for some time regain its proper position with regard to infantry. The first appearance of rifled cannon in European war was in the French army of Italy in 1859. But the country was unfavourable to the movements and action of artillery; and, although the power of the new weapon was fully demonstrated at Solferino, the part played by the arm during the whole campaign was subordinate, if not insignificant. The campaign of 1866 in Bohemia found both combatants provided with a numerous and powerful rifled artillery; but its proper use was little understood by either, and again the part played by the arm was unimportant throughout. To a Prussian infantry officer, the late Captain May, belongs the honour of having first pointed out the causes of this. In his celebrated *Tactical Retrospect* of the campaign he animadverted severely on the loose disconnected way in which the Prussian artillery drifted into action—frequently too late to be of any service, often without any specified object, always without unity of action in itself or concert with the other arms. He showed that both in attack and defence the arm had distinct and legitimate functions which had hitherto been sacrificed to individual caprice. In a word, he proved conclusively that the shortcomings of the improved artillery were due, not, as was generally supposed, to technical, but to tactical, defects; and he boldly prophesied that, in the next war, that side would win which knew best how to make use of its artillery—in other words, that side whose artillery had had the best tactical training. His suggestions were adopted, and he lived to see his prophecy fulfilled to the letter. The part played by the German artillery during the war of 1870-1 not merely restored the arm to its proper place, but raised its prestige to a height it had never before reached.

Let us now turn to the cavalry. We have already remarked that, on the first appearance of the rifled musket, this arm also was doomed to extinction by theorists of the musketry school, on the ground that, if it had been unavailing against infantry armed with the old smooth-bore, it was simply useless now. It never occurred to these prophets that cavalry might possibly find other duties in war than that of incessantly charging infantry duly drawn up to receive them; and the delusion was confirmed by the fact that, when the artillery did at length make a forward move by the adoption of rifled guns, it was obvious that the cavalry weapon proper, the sword, was incapable of further improvement. Nor did the campaigns of 1859 and 1866 tend to dispel it. In the former, the nature of the country, as already remarked, was unfavourable to the action of the mounted branches, and the whole war was from beginning to end literally devoid of cavalry incident. An idea of the part played by the arm in 1866 may be gathered from the following facts. On the eve of the battle of Königgratz, two immense hostile armies were in close proximity, and neither of them had the slightest knowledge of the fact. Out of one hundred and thirteen Austrian guns captured at the battle, one hundred and eight were taken by the infantry and five by the cavalry, while after the victory there was absolutely no pursuit of the beaten army. These shortcomings were sharply criticized in several quarters, and especially by the writer already quoted, who, while condemning the general inefficiency of the Prussian cavalry throughout the campaign, pointed out that in more than one instance the arm had, in several

partial or isolated actions, brilliantly distinguished itself, and that nothing but good tactical training for officers and men was needed to make it thoroughly effective. As in the case of the artillery, the subject was taken up by the German authorities, and the result again proved the justice of Captain May's strictures. So far from the use of cavalry having departed, it was found that the extraordinary pace which has become a leading feature in modern war afforded the arm incessant occupation in reconnoitring the enemy, screening its own army, and in seizing important points. So admirably did the German cavalry cover the advance of their immense host in 1870 that the Emperor Napoleon admitted, in his pamphlet on the war, that, "in spite of the most persevering researches, it never was known where the enemy's main body really was." Another German writer on tactics, indeed, described cavalry as "useless on the battlefield, invaluable off it," but even this cannot be admitted. The well-known charge of Von Bredow's brigade at Vionville gained the precious moments which enabled the Germans to bring up reinforcements to their exhausted advanced troops, and was largely instrumental in the subsequent success of the great turning movement which placed the whole German army between Paris and their enemy. There can be little doubt that, under a good system and good leaders, cavalry will always do good service on or off the battlefield, and that it has fully regained its proper position with regard to the other two arms.

Thus we see that each arm has made a step in advance which has left their relative positions nearly unaltered. Unless we are mistaken, the infantry has just made another move forward. During the last Russo-Turkish war it was remarked that the Turkish rifle, which is nearly the same as ours, could be used at distances far in excess of that for which it was sighted. Again, immediately before the Afghan war our authorities in India caused the Martini-Henry to be tested for range; when it was found that, although the rifle was only sighted up to 1,400 yards, its fire was perfectly effective at 2,100. It may be urged that, although the weapon may shoot well at such distances, the soldier cannot; and that, to all practical intents, such a range is a delusion. In reply, we would ask any one who remembers what the shooting of the army was when the Enfield rifle first appeared to compare it with what it is now. The improvement has been so immense, and the practice at what are now considered the long ranges is so good, that we have no hesitation in believing that, if sights are provided and practice allowed, the soldier can be brought up to the level of his rifle. Supposing this to be done, the infantry will have effected a distinct improvement, and one which especially threatens the artillery; for, while cavalry can, and generally do, keep under cover until the moment for action arrives, artillery must remain stationary on elevated ground, where they can both see and be seen. At first sight it would appear that the best course for the artillery to pursue would be to engage at longer ranges; but there is a serious obstacle to this. It is well known that, as far as the power of the present field-gun and the effect of its projectiles are concerned, it is effective at five thousand yards, and in the case of our sixteen-pounder field gun at seven and eight thousand yards. But, on the other hand, the best authorities have declared that all practice carried on at ranges so great that the effect cannot be distinguished is wasted; in other words, that the range of field artillery is limited by the power of human vision. Opinions may vary as to what this range may be, but we think that for all ordinary practical purposes it may be taken as two thousand yards, or about a mile and a quarter. The late Major Home, R.E., in his work on Tactics, says:—"Beyond two thousand five hundred paces"—that is to say, two thousand yards—"unless under peculiar circumstances, the effects of the shot cannot be detected, and it becomes consequently impossible to correct the gun." We may therefore consider that against troops crouching behind trenches or any slight natural cover, or even in loose formation in the open, the range of field artillery is limited to that distance. But, if infantry fire is developed in the manner we have suggested, the rifle will be on an equality with the gun. The advantage which the artillery possess in the fact that their projectiles can demolish both men and solid material will be counterbalanced by the conspicuous and stationary target which the gun and its detachment must present to the infantry. Nor should it be forgotten that while a gun, properly laid, can only fire two rounds per minute, it might be opposed by a dozen riflemen, each of whom, even with careful aiming, could discharge at the rate of ten shots per minute. It is evident that this question has already attracted attention. A distinguished artillery officer in our service has suggested that field artillery should be provided with portable iron bullet-proof shields as a cover from infantry fire; and at a recent meeting at the United Service Institution the question of combining infantry fire with artillery in the preparatory stage of an attack on a position was brought forward. The subject is one of great interest, and we fully expect to see it soon take its place among the tactical questions of the day.

PROTESTANT DISSENSIONS IN GERMANY.

An interesting paper has lately appeared in the *Allgemeine Zeitung* under the somewhat enigmatical title, "A Protestant Old Catholic Law." What this means is that it has been proposed to introduce a law to relieve the existing state of tension between the "Orthodox" and "Liberal" parties in the Established Protestant or "Evangelical" Church of Germany, analogous to that passed some years ago for the relief of the Old Catholics. Our readers may recollect that early in the present century (1817) the Lutheran and Reformed (or Calvinistic) Churches were fused together by Frederick William III., King of Prussia, into one, under the name of the *Evangelische Kirche*, which has accordingly continued to exist ever since as a single organized body, the only Protestant Church recognized by the State. But this drastic method of effecting a religious union, which would have been impossible in a country less habituated to minute governmental control in all the affairs of life great or small, has not, as is natural, proved a complete success. What are called in England the High Church and Low Church parties may be said to be roughly represented by the Lutheran and Calvinistic sections of the German Evangelical Church, while to them is superadded, as with us, a third party, Broad Church or Rationalistic, or by whatever name it may be designated. Krummacher, who was himself what we should call an Evangelical, used to stigmatize the rival schools to which he was opposed as "Atheistic Liberalism" and "anti-Christian Puseyism," consigning Strauss, Baur, *et id genus omne*, to the "devil's kitchen" of the Liberals. The strife appears of late years to have grown bitterer, and when we remember that it was only by the personal intervention of the German Emperor that the Apostles' Creed was saved two years ago from being tabooed by one of the Consistories where the Rationalists predominated, it is not wonderful that the discordant elements should threaten to part company altogether. This is the danger which has suggested the curious proposal already referred to, reported to originate with a well-known Liberal clergyman, but which has given rise to great divisions of opinion in the Liberal camp. Some recent conflicts between the congregations which adhere to their Liberal pastors and the ecclesiastical tribunals which have condemned them seem to have brought matters to a crisis. And it is therefore proposed that the dissentients should be allowed, like the Old Catholics, to retain their status and share of Church property, while holding an independent position. They themselves feel no objection to remaining in the same communion with their rivals if only they are left free to take their own line; but the orthodox on the contrary consider their fundamental principles to be so violently opposed to the teaching of the Bible and the Church that it is by a mere inconsistency "they are preserved from falling helplessly into the gulf of an atheistic materialism." What to the one party appears a fanatical persecution and oppression of a phase of thought essentially Protestant is regarded by the orthodox majority as a duty incumbent on all who would guard Evangelical Christianity from destruction. Under these circumstances no one can be surprised that the idea of separation into two independent communities should be entertained. It is rather matter of surprise that the proposal has been deferred so long.

The writer in the *Allgemeine Zeitung*, who does not sign his name but whose sympathies are evidently on the Liberal side, does not favour this solution of the difficulty, but he proceeds to discuss the pros and cons from his own point of view. He fully admits that at first sight the policy of separation is a plausible one. The orthodox, he complains, take no account of the truly religious and moral attitude of the Liberals in their resistance to materialism and pessimism, which they regard with contemptuous pity as a mere desperate clutching at the last relics of a forsaken faith. The orthodox may indeed themselves be divided into two classes, of whom the first combine "true Christianity" with their orthodox dogmas, and are deserving of high respect, while the second are simply bald and inflexible dogmatists, of whose "slavish belief in the letter" their critic has many hard things to say. But he argues against the proposed plan of cutting the Gordian knot on grounds which seem practically to amount very much to this—that his own party are in a decided minority, and moreover depend for their influence more on the press than the pulpit, and would consequently be likely to lose by separation from the dominant Church. Many of the questions in dispute are declared to be of a subtle kind which ordinary congregations are not able to appreciate, while even Liberal preachers shrink from making open attacks on the received dogmas from the pulpit. And hence it may be argued that there is at present no adequate ground for secession. That however is not at all admitted by the orthodox, who put forward three points especially as essential, which can with no consistency or justice be characterized as arbitrarily chosen. These are belief in miracles, in the divinity of Christ, and in the authority of the Bible. We may observe in passing that Strauss, in the preface to the new popular edition of his *Leben Jesu* laid special stress on the first point (*das Wunder*) insisting that, till that was decided—of course in a negative sense—no foundation could be laid for the true, as opposed to the orthodox and exploded estimate of religious truth. Mr. Lecky in like manner challenges attention to the very noticeable fact that the first direction which rationalistic speculations invariably take is an attempt to explain away the miracles of Scripture, so much so indeed that to most persons this is the only conception the word Rationalism conveys. And he adds—what is of course notorious—that a large section of German theologians even regard the impossibility, or at all events the unreality, of miraculous accounts as axiomatic. The writer in the *Allgemeine Zeitung* no less entirely admits the crucial importance of the question. He not only points out that the notion of a fatal and invariable reign of natural law, which the Deity is unable to supersede, contradicts the fundamental idea of orthodoxy, but that to deny the miracles of Christ, and especially the Resurrection, is "to introduce a new God, re-

quiring therefore a new cult and a new Church." And so with the other points specified. The Bible has always been acknowledged as the sole and supreme court of appeal for orthodox Protestantism. And moreover many Protestant doctrines are based not so much on the general tenor of Scripture as on particular books or passages in the New Testament, and if these are allowed to be called in question, what test of religious truth, or foundation for a religious community, is left but individual opinion? And as to the third point, "the difference between those who look on the Founder of Christianity as 'a great religious hero' and as an incarnation of Deity is so immense that an outward unity between them seems to bear the mark of an inward untruth."

In spite however of these serious differences, the writer is opposed to secession on practical grounds, and has much to say in rather misty language about the relations of the practical and ideal elements in religion. The sum and substance of his plea is summed up in the statement that "only false idealists can favour such a secession if they reckon, in spite of the evident warnings from the case of the German Catholics, Friends of Light, Free Communities, and even the English and North American Unitarians, on the success of the separate liberal communities." He adds that Liberalism acts better as a leaven working in the general mass and promoting culture than as the moulding and constructive principle of a religious society. Such doctrinal differences as those noticed above may be left, he thinks, to find their level among a Protestant people, and it is the fault of the leaders of the Church if they are erected into essentials; they have, or ought to have, little bearing on the practical belief of the laity. And he proceeds to exemplify this view with more ingenuity than ingenuousness in the case of a belief in miracles. But while deprecating on this ground any ecclesiastical division of the discordant parties in the Evangelical Church, he cannot forget that his rose-coloured, not to say superficial, view of the really grave perplexities of the actual situation is not by any means shared by all his own party, and is strenuously repudiated by their opponents. It behoves us therefore to inquire how the legislation adopted for the relief of the Old Catholics could be applied, as proposed, to the "New Protestants." The question of permitting the seceders the use or joint use of the parish church would in each given case have to be decided by the civil authority, according to their relative numbers. The difficulties in adjusting the salaries of the two classes of clergy would be greater, and the difficulty about the government of the newly-formed body would be the greatest of all, because "they could not, like the Old Catholics, have a bishop of their own," and it is questionable—why, is not explained—whether they could organize a separate Consistory for themselves. The example of the strict Lutherans, who have only in extreme cases separated from the Established Church, though they have little in common with their Calvinistic coreligionists, is cited to show that the Liberals would not generally avail themselves of the opportunity of secession if it was offered them, to which it might be replied that the differences in the latter case are confessedly deeper. On the other hand the writer himself observes that the same legal facilities for separation would have to be accorded to the Lutherans, who would be likely to take advantage of them in many country districts. There would in short be great danger of a general splitting up of the Establishment through "comprehensive secessions, not only of New but Old Protestants." The true policy, if we rightly understand him, is to relax the bonds of the existing ecclesiastical administration, even at the risk of thereby driving into secession some "ultras," who are regarded as "the best and most loyal members of the Church," and thus preserving a united national Church, which is of supreme importance as a bulwark against Rome, but can only be preserved by conceding a larger measure of individual liberty within its own borders. In this way he trusts that all necessity for the proposed legislation in favour of a Liberal Secession may be avoided, though it is certainly possible that the existing conflict may attain dimensions which would make such a remedy indispensable.

Our object thus far has been to record the existing state of religious complications in the Evangelical Church rather than to comment on it. It is not indeed easy for an outsider, without exceptional opportunities of observation, to form any trustworthy judgment on the internal conditions of the problem. The author of *German Home Life*, who speaks evidently from considerable personal experience, does not take a favourable view of it. One or two reflections, however, are naturally suggested by the remarkable paper of which a summary has been given. It is obvious in the first place that there is a certain analogy in some respects between the character and mutual relations of the three contending parties in the German Protestant Church and in the Church of England; but whereas the menace of disruption in the latter case derives much of its force from an external assault, in the former case it comes exclusively from within. On the other hand, the process of internal dissolution, in spite of the optimistic reservations and hopes of the writer in the *Allgemeine*, appears to have advanced much further in Germany than any impartial observer of whatever views would venture to affirm of our own national Church. And it is hard to see how a theological school which questions not only the most elementary tenets of Biblical Christianity but even the very principle of theism can maintain a recognized place and pursue an aggressive policy within the borders of a nominally Christian Church. That its leaders would be unequal to the task of forming an independent religious community is credible enough, but it does not follow that their uncongenial companionship will be permanently endured—it is not very patiently endured even now—by their rivals whether of the pietistic or the severely dogmatic school. Meanwhile the less fundamental but by no means superficial antagonism between the opposite types of Lutheran and Calvinistic orthodoxy is embittered by the fact that they have not, like similar parties among ourselves, grown up side by side by a spontaneous process, but were forcibly welded into an organic unity unwelcome to both alike by the iron hand of the State. That so strangely assorted a combination of jarring elements bears within it, if not the seeds, at least the imminent possibilities of dissolution seems almost self-evident, from whichever quarter the immediate danger may be apprehended. Every fresh advance of the Liberal or Rationalistic movement tends to quicken the alarm and hostility of the champions of orthodoxy, while the extent of their own power is the measure of their intolerance of pretensions which they resent as a scandal and an outrage on their faith. Without then attempting to pronounce on the particular controversy raised in the *Allgemeine Zeitung* as to the best means of adjusting the rival claims of the old and new parties in the German Protestant Church, we can hardly be wrong in pointing out that the very form the controversy has now assumed marks the increasing gravity of the crisis. The Old Catholic exodus was a perceptible strain on the rigour of a far more powerful and compact organization than the *Evangelische Kirche*. And it may be doubted whether the stability of the latter would be most effectually shaken by the retention or the extrusion of the foes whose special offence it is that they claim to be of its own household.

THE CREMATION CRAZE.

THE wish to be burned seems to be with many persons almost as strong a passion as the desire of fame. To judge from a short Parliamentary paper that has just been issued, it is now the last infirmity of a considerable number of noble minds; and we may observe with interest and curiosity that men and women who have nothing else in common have found a bond of sympathy in their agreement as to the proper mode of disposing of their bodies after death. In the list of the Provisional Council of the Cremation Society we do not, it is true, find the name of an undertaker; but, with this single exception, nearly every profession is fitly represented. There is, indeed, such an array of genius and intellect that the association of the idea of fire afflicts the mind with the sense of a great literary calamity. It recalls the irreparable loss of the library at Alexandria; and it is only by a determined effort of reason that we are able to realize the consoling fact that these ladies and gentlemen only wish to burn themselves, and have no intention of destroying their works. This is, no doubt, an important distinction. If society is bent upon burning something, it is no doubt better to burn a distinguished author himself than to burn his books; and the same reasoning will hold good in regard to other kinds of intellectual effort. It would, for instance, have been obviously to the advantage of the world if Titian could have been burned in place of his great picture of the Peter Martyr; and if there is any danger of artists like Mr. Millais and Mr. Tenniel, both of whom figure in the list of the Council, making a bonfire of their pictures and drawings, by all means let us not refuse to them the privilege of burning one another. We do not of course intend to hint that, in agitating for the acceptance of their ideas, the members of the Cremation Society will be disposed to adopt any such extreme course of action. At present they display a commendable moderation in the advancement of their claims. But at the same time the mere suggestion of what they might do ought to be sufficient to cause the Government to act with caution and forbearance. What is beyond dispute is that we have here a number of eminent persons filled with the idea of fire; and, although so far they only propose to set light to themselves, we have no guarantee that, if they are thwarted in their intention, they will not cast about for other combustible material. It is a noteworthy fact which should not be lightly ignored that these ideas about cremation have only come into prominence since the decay of a great historical institution. So long as the rites connected with the Fifth of November were religiously observed, nothing was heard of the new convictions. The annual burning of Guy Fawkes, we may assume, was found to provide an adequate expression for sentiments that have now drifted into another channel, and it becomes important to consider whether some means ought not to be taken to revive a custom which obviously had a greater practical value than has sometimes been ascribed to it.

For the moment, however, the whole question is in abeyance. Mr. Cross has not been convinced by the persuasive eloquence of the Society; and on the other hand the Society have agreed not to extend the privileges of cremation to any of their members until Parliament has had an opportunity of discussing the subject. Considering that the arrangements for giving a practical trial to their ideas were nearly complete, it must be acknowledged that the Society have acted with becoming moderation. Encouraged by the accounts of success in other countries, the Council had gone so far as to look about for a suitable habitation. "After much seeking for a secluded yet accessible spot, a piece of ground, not far from the cemetery at Woking, was obtained," and this, we are told, was finally selected as a fitting site for "a crematory pyre." Further the Society had obtained the opinion of eminent counsel as to

their legal right to burn themselves and their friends, and, thus aptly equipped, they were prepared to enter upon their useful career when their operations were interrupted by the tiresome scruples of the Home Secretary. Neither the precedents at Milan, Dresden, and Gotha, quoted in the statement of the Society, nor "the opinion of eminent counsel," seem to have had any effect upon the mind of Mr. Cross. He has apparently no consuming desire to be burned, and he therefore approaches the question in a less enthusiastic temper than the members of the Society may be expected to display. He refuses, indeed, to be tempted to any discussion as to the beauty or usefulness of cremation. Without revealing any warmth of partisanship in favour of the undertaker, he is nevertheless strongly impressed with the fact that this gloomy personage has created a tradition which cannot be rudely disturbed. The sombre circumstances of his trade have become interwoven with the machinery of our law, and Mr. Cross is naturally dismayed at the threatened intrusion of a system which has no such thing as a "burial certificate" to offer. In the face of these difficulties and others of a like character, the Society have obligingly given their word not to burn any one at present. They frankly recognize the melancholy fact that the course of cremation, like that of true love, is not destined to run smooth, and they have sadly but prudently decided not to put Mr. Cross to the trouble of testing the legality of their acts by an appeal to a court of law. What in the meantime is to become of "the secluded but accessible spot at Woking" we do not pretend to conjecture; but there can be no doubt that the little "crematory pyre" could be put to many admirable uses if the members of the Society would only give their minds to the task. There are a number of things in the world which ought to be burned, and there is no reason why there should not be a Society for burning them. The name of a popular novelist appears upon the Council, and we therefore hesitate to offer a suggestion which has nevertheless much to recommend it. A cremation establishment in connexion with Mudie's Library could be made the means of disposing of a quantity of light literature that is scarcely susceptible of any other kind of treatment. Here, indeed, is an obvious duty which the undertaker has never been taught to discharge. Even Mr. Seymour Haden, with his pet device of wicker coffins, has made no suggestion for the burial of three-volume novels; and, in fact, cremation is the only means by which we could feel certain that this kind of defunct literary production was actually "resolved," to quote the statement of the Society, "into its component elements." But this is only one of many opportunities of usefulness which still remain open to the Society. Another "crematory pyre" might be opened in connexion with St. Stephen's, to which, we have no doubt, a great many members of Parliament would gladly consign all traces of the pledges extracted by their constituents, and of the convictions they have been forced to abandon. It may of course be objected that ladies and gentlemen who have started with the higher ideal of burning one another will not be content with simple and unambitious duties such as these. Pining for the empire so long enjoyed by the undertaker, they will not readily settle down to the practical work of everyday life, and we therefore resign ourselves to the reflection that for years to come we shall have the annual infliction of a Cremation Bill, which will take its place in Parliamentary history by the side of the pet measure advocated by Sir Wilfrid Lawson, or the Bill for giving the franchise to women.

Seriously speaking, however, the members of the Cremation Society must be of strangely hopeful temperament. We have hinted that the only obvious bond of sympathy between them lay in their common desire to be burned; but it may be questioned whether they are not more firmly knit together by an astounding ignorance of the English character. There is something almost touching in the trusting simplicity of their proceedings. If we are to accept the evidence of Lord Onslow, given in his speech in the House of Lords, the secluded spot had not only been purchased, but the "crematory pyre" was actually in course of construction. We may therefore assume that the advocates of cremation anticipated no kind of opposition to their views. They apparently laboured under the singular delusion that the public would feel no more interest in the movement than would be excited by the establishment of a co-operative store, and they accordingly pushed forward their building operations "with all possible speed." It is difficult to understand how they can have so entirely ignored the dominant characteristics of the national temper. Undertakers are not perhaps, as a class, specially popular, and we may indeed assume that the great majority of thinking persons have a natural distaste for the manner in which the undertaker's trade is conducted. If the annual menace of a Cremation Bill were to lead to any real reform in the management of funerals, the public would probably not grumble at the infliction. But, although the undertaker inspires no warmth of affection, the system of burial with which he is associated is far too long established to be easily attacked. A conservative people is apt to show its conservatism most obstinately upon such a question. The traditional mode of disposing of the dead is likely to be the more rigidly maintained for the very reason that it is rarely submitted to any individual criticism. Those who are most nearly interested are too seriously occupied at such a time to concern themselves with the details of a ceremony from which they expect no gratification, and thus the arrangements are left to others who are content to follow a prescribed rule. It is for this reason that the abuses of the present system are patiently tolerated, and that any attempt even to substitute another mode of burial is likely to lack support. The Cremation Society have apparently fancied that these obvious defects in existing arrangements would lead the public to welcome any innovation. They have not considered the influence of the associations which have grown up around an ancient practice, and they have forgotten that these associations go far beyond the somewhat hollow solemnity of the undertaker's business. They probably did not expect that the custom of cremation would at once be universally accepted; but they had at least the rashness to assume that they would be allowed to apply the process to themselves. If they had studied the force of public sentiment with more attention, they might have been spared a certain amount of disappointment. It was, to say the least, inexcusably imprudent to go so far as the selection of "a secluded spot," and it was the very height of rashness to proceed to erect upon it a "crematory pyre" without better authority than "the opinion of eminent counsel."

ST. HILDA AND THE ABBEY OF WHITBY.

THE distinctive character which some time ago we assigned to Whitby as a watering-place belongs in a still higher degree to the Abbey by which the town was called into being. Equalled by few and surpassed by none of our monastic remains in architectural beauty; conspicuous for its stately gables, with their delicately carved lancet windows, row above row, displaying the Early English style in its greatest purity and beauty, as well as for the remains of its west front, once the rival of York and Guisborough as an example of the purest Decorated; almost unique in position on its proud seaward height; in historic interest Whitby Abbey may be safely said to stand absolutely without a rival. Glastonbury may claim an earlier foundation, even if we discard the mediæval fiction, never heard of till Norman times, which brings Joseph of Arimathea and his twelve companions to

> The island valley of Avilion,

where his pilgrim's staff, planted in the soil, grew up into the famous Holy Thorn, even as St. Etheldreda's wand did in after years into the huge ash-tree at Stow in Lindsey; and Lindisfarne, "locus cunctis in Britannia venerabilior," demands higher reverence as the home of St. Aidan, the spiritual father of St. Hilda, the foundress of Whitby. Tynemouth recalls the memory of the "humble King," the sainted Oswin, over whose murdered body, interred in the year 651 in the already existing chapel of St. Mary, the church arose whose exquisite eastern façade, almost rivalling Whitby in its grace, has for six centuries borne the brunt of the blasts of the Northern ocean. Lastingham tells of St. Cedd, the missionary bishop of the Mid-Angles and East Saxons, the stern but much-beloved ruler of his monks and presbyters, and his brother St. Chad, the founder of the fair cathedral of Lichfield. But not one of these historic sites stands out with such prominence in our early ecclesiastical and literary annals as Whitby.

As we stand amid the grey walls and shattered arches which look down in their pride of place over the once solitary "Lighthouse Bay," now thronged with fisher craft and noisy with the shipbuilders' hammers, we are carried back in thought to the memorable gathering on that stern sea-beaten headland in A.D. 664, which once for all broke the yoke of the Celtic ascendency, with its sincere but austere and narrow-minded piety, and brought the Church of our forefathers into living contact with the more cultivated and what was still the more catholic spirit of Latin Christianity. On the decision of that day it is not too much to say that the future of the Church of England depended. The questions in debate, it is true, seem to us very trivial—just the old controversy, reviving in so many different forms in the first six centuries, of the Paschal Cycle and the Catholic Easter, and the form of the tonsure. But on these trivialities the whole question of Roman or Celtic obedience hinged. Nor must we allow our just admiration of the single-hearted devotion and unworldly spirit of the Celtic Church to blind our eyes to the real controversy. This was nothing less than whether the English Church should be condemned to spiritual isolation or brought into living union with the Church of the civilized world, of which, for Western Europe, Rome was the centre in days when Infallibility was yet undreamed of. Had the adherents of the old rites carried the day, the Northumbrian Church would have long continued a stranger to the elevating and refining influences of the higher culture with which the Latin Church had invested the ordinances of religion. Nor would this have been the least evil. Intestine division, internecine feuds, Church warring against Church, and bishop against bishop, would too probably have been the result if the See of St. Peter had failed to bring these Northern Churches beneath its strong but beneficent authority. Mr. Green, in his *History of the English People*, has brought forward the miserable history of the early Irish Church, with its "tribal quarrels and ecclesiastical controversies," with a clergy "robbed of all really spiritual influence," contributing "no element save that of disorder to the State," as exhibiting the "chaos" from which the Church of England was "saved by the victory of Rome in the Synod of Whitby." But for this the general organization of the English Episcopate commenced a few years afterwards by Theodore of Tarsus, which has made the Church of England what it has been in its outer form

for twelve centuries and is in the main at the present day, would have been impossible. The efforts of that great man, who, not less than Augustine, deserves the title of the founder of the English Church, to reduce the whole island to a unity of faith and practice which prepared the way for the unity of the throne, would have failed of its object, or only reached it after long and bitter struggles. The discomfiture of the Celtic bishops left the way open to the recognition of the central authority of the see of Canterbury; and thus Theodore quickly became, in Bede's words, "the first Archbishop to whom every church of the Angles submitted." "In other words," writes Dean Hook, "this great man converted what had been a missionary station into an established Church"; a conversion which, if not rendered impossible, would have been seriously impeded, if, with the Synod of Whitby, the independence of the old Celtic Church of Northumbria had not passed away for ever.

The Abbey of Whitby was still in its first youth when King Oswy summoned the champions of the Latin and Celtic rites to meet within its walls. Only seven years before, 657 A.D., the Abbess Hilda—herself of royal blood, the grand-niece of the great Edwin, the sister of Queen Hereswid—had laid the first foundations of her new convent on this bleak, storm-swept cliff. The choice of such a position was characteristic. The members of the old Northumbrian Church clung with an instinctive fondness to the seaboard, and, passing by the green valleys and quiet riversides which were the favourite seats of later foundations, by preference planted their religious houses on lonely islands or wave-dashed headlands which recalled the parent-home of their Church in distant Iona. This feeling was powerful with Aidan when he selected the almost inaccessible Lindisfarne for the head-quarters of his mission; and we see its result in the foundation of the coast monasteries of Tynemouth and Coldingham, and the Cumbrian St. Begh's, as well as of St. Hilda's former house of Hartlepool. The site of the new monastery had not yet acquired its now familiar name of Whitby. In the pages of Bede it always retains the uncouth name of *Streanaeshalch* or *Streonesheal*, "Sinus Fari," or "the Bay of the Lighthouse," as he translates it, given it probably in Roman times, when the great road from "Eboracum" dropped down from the moors to the shore at "Dunum Sinus," and a pharos was erected on the headland overlooking the bay to guide the storm-tossed galleys to the harbour of refuge below. The name of "Whitby," as its termination shows, dates from the Danish invasion; and, like St. Ninian's episcopal seat of Whithern or *Candida Casa*, far away to the west on the shores of Galloway—the A.-S. *aern* or *ern* of the one corresponding to the Danish *by* of the other, each denoting a building or habitation—speaks of a time when, as Bede tells us, buildings of hewn stone were sufficiently remarkable to give a designation to the places where they stood. "Priestby," or "the priest's house," we learn from the conventual register, was another name for the place, once familiar, but very early becoming extinct. The convent founded by Hilda, like many of the earlier foundations, was a double house, containing nuns and monks together, both under the government of a lady abbess. This perilous association—for such after-experience proved it to be—passed away with the destruction of the monastery by the sons of Regnar Lodbrog, the Vikings Ingvar and Ubba, in the latter half of the ninth century. When the abbey was refounded after the Norman Conquest by William de Percy it was, after the Benedictine rule, for monks only. "St. Hilda's nuns" on the eve of the Battle of Flodden, in the second canto of *Marmion*, are as mythical as the "daughters of St. Cuthbert" and "the convent's eastern tower." Such a double blunder is remarkable in a writer usually so true to historical keeping as Sir Walter Scott.

The peaceful mission to which Hilda devoted her life was strangely at variance with her warlike name. "Hild" was the name of the Scandinavian goddess of war, who in some of the Sagas is introduced, with her weird sisters the Valkyries, gazing in fierce delight on the slaughter-strewn plain. "The Lady Hilda," as in after times she was called, was no common woman. "Hers," writes Canon Bright, "was a career signally conspicuous and widely effective." One of the first fruits of Northumbria to Christ, baptized at the age of thirteen with her grand-uncle King Edwin and the chief of his nobles and a large number of his people, on what has been truly called "the birthday of the Northumbrian Church," by Paulinus the Apostle of the North, in a little wooden chapel hastily reared on the ground now covered by the stateliest of our English minsters, on Easter Eve, 627 A.D., she was from the first devoted to a religious life. For one year she lived as a nun with a few sisters in a small cell to the north of the Wear; in 649 she succeeded Heiu—the first of all the women of Northumbria, Bede tells us (iv. 23), to take the vows and receive the religious habit from the hands of Aidan—after her removal to Tadcaster, as Abbess of Heort-ee, "the Hart's Island," now Hartlepool. Hilda managed her convent "according to the best lessons she could gain from learned men," while it was one of the chief gratifications of Aidan and the heads of the neighbouring religious houses to visit her, and to manifest the sincerity of their affection by giving her instructions, which her innate wisdom and love of the monastic brotherhood fitted her to profit by. Nine years later, 658 A.D., she left Hartlepool, taking with her her young cousin Elfled, afterwards her successor as abbess, then a child of three or four years old; who, while still an infant, had been devoted to a religious life by her father Oswy, on the eve of the battle of Winwidfield, where with the fierce old Pagan Penda, in whom it had so long triumphed, Paganism fell, and "the cause of the old gods was lost for ever." Moving a little to the south she laid the foundation of her new monastery, on an estate of ten families which she had purchased, overhanging "the Lighthouse Bay." Here for two-and-twenty years she governed her double community with a loving wisdom that made it the admiration and envy of all around, impressing on it her own noble unselfishness, and teaching the inmates, in the words of Bede, "to practise thoroughly all virtues, but especially peace and love; so that after the pattern of the primitive church no one there was rich, and no one was poor, but all things were in common, for nothing seemed to be the property of any individual." Professor Bright has sketched her character so well that we are tempted to borrow his words:—"In her we see the old Teutonic type of a woman of wise 'rede' and mighty influence, a Veleda or an Alioruna softened and transfigured into 'the mother,' whose advice was sought by princes, and who, again to quote Bede, 'held out to many at a distance an example of the words of life.' A noble woman, we may well say, strong and wise, true-hearted and firm of purpose, with warm affections and clear discernment, using her great capacities for rule and prudence in the true spirit of a mother in Israel." We can well understand that when the Conference was resolved upon no place seemed more suitable than the monastery of Hilda, so readily accessible by sea.

The tale of this Synod is too familiar to need repetition. Thither came the Bishops Cedd from Lastingham and Tuda from South Ireland, and Colman, St. Finan's successor in the Northumbrian See, and heads of convents, prepared with St. Hilda to do battle for the customs of St. Columba and Lindisfarne. Here, too, were gathered to support the usages of Rome, Paulinus's deacon, James, Bishop Agilbert of Wessex, and his priest Agatho, headed by that most interesting and perplexing character in our early Church history, the clever, versatile, but somewhat unscrupulous Wilfrid. The contending parties were unequal. The narrow and obstinate conservatism of Colman, the type of the *non possumus* of later days, was no match for the special pleading of the ready-witted and singularly attractive Wilfrid. The issue could not be doubtful. To fight against Rome was, as Wilfrid said, "to fight against the world." Oswy, with the instinct of a statesman, discerned the point really at stake, and, under the veil of grave humour, expressed his conviction, overriding all prejudices in favour of his national customs, that to refuse to obey the guidance of the See of St. Peter was to close the door against himself and his people to higher blessings than they yet enjoyed. And, as we have said, the decision was a wholesome one. Little as we can commend Wilfrid's supercilious treatment of his antagonists, and unconvincing as his arguments appear, the Synod of Whitby was productive of benefits then little dreamed-of, by which we are still profiting.

But it is not only as the scene of this "epoch-making" conference that Whitby appeals to our memory. We must think of it also as the home of the father of English poetry, Caedmon. Few tales are more simply beautiful than that of this rustic herdsman, long denied the power of song, dumb when called on by his fellows to play the "gleeman" at their rural feasts, "starting up from the unfinished meal when the harp came towards him, and going home shamefast," receiving sudden inspiration in the dreams of the night, and, having turned monk at "the Mother" Hilda's persuasion, devoting his God-given power to the versification of Scripture history and the great facts of revelation—"the terror of future judgment, the horror of hell pangs, and the joys of heaven," and closing a life of quiet happiness with a blessed and painless death, described with simple pathos in Bede's exquisite narrative:—"Thus it came to pass that, as he had served God with simple and pure mind and tranquil devotion, so quitting the world he passed to His presence by a tranquil death, and closed his life signing himself with the cross, and commending his spirit into His hands with that tongue which had uttered so many wholesome words in His praise." And Caedmon is only one example out of many of the educational power of Hilda's foundation. The monastery under her wise rule became a seminary of bishops and priests. No fewer than five of the brethren named by Bede, "all of them persons of signal worth and holiness," became bishops. The chief of these was the scholar of Theodore of Tarsus, John Bishop of Hexham, and afterwards Archbishop of York, the beloved spiritual father of Bede, who received deacon's and priest's orders from his hands. He is better known as "St. John of Beverley," from the monastery founded by him "in silva Deirorum postea Beverlac," where he ended his days in holy retirement, A.D. 721.

Hilda's great career came to a close Nov. 17, A.D. 680. She had been long suffering from intermittent fever, when at last, to use Bede's words, "the pain struck inward, and foreseeing that her end was near, she 'received the viaticum of the Holy Communion,' and having summoned her nuns about her bed, entreated them to maintain evangelical peace with one another, and indeed with all, and about cockcrowing, with the words of exhortation on her lips, she gladly saw death, or rather, in the words of Christ, 'passed from death unto life.'" Her successor in the government of the Abbey was Oswy's daughter, Elfled, then only in her twenty-seventh year. Her rule was worthy of the great example she had had before her from her infant years, and she proved herself, in the words of Eddius, "ever the comforter and best counsellor of the whole province." True to her Celtic education, Elfled's chosen friend was St. Cuthbert. They often

met for spiritual refreshment and mutual counsel. It was on his farewell circuit of his diocese, before his final retirement to the Farne Islands to prepare for the end which he foresaw could not be far off, when sitting at table with Elfled after the consecration of a newly built church, adjacent to an outlying cell of Whitby, which, though out of his diocese, he had undertaken to testify his spiritual affection to her, that St. Cuthbert had the premonitory symptoms of the fatal attack which carried him off in the following March, A.D. 687. While taking his meal, wearied with his journey and the functions just performed, he suddenly changed colour, and his knife dropped from his hand. Elfled asked him what he had seen. With his usual playful humour he tried to turn off the question. "Did you think," he said, "I could go on eating all day?" In Bede's Life of St. Cuthbert this physical seizure becomes a supernatural vision coincident with the sudden death of a lay brother of the convent, a swineherd, who had fallen from a tree while shaking down acorns for his pigs. Elfled naturally shared in Hilda's prejudice against Wilfrid, and the novel foreign customs of which he was the advocate; and one of the letters written by Archbishop Theodore, after their reconciliation, pleading Wilfrid's cause, was addressed to her. Subsequently, when in 736 the Council of the Nidd met to decide as to Wilfrid's restoration, the Abbess Elfled was one of its leading members, and, by her testimony that when near his end Wilfrid's obstinate foe King Aldfrid "the Wise" had repented of his harsh conduct towards him, and enjoined his heir to reinstate him in his bishopric, was instrumental in effecting the compromise by which he exchanged the proud pre-eminence of the throne of York for the see of Hexham and the Minster of Ripon. Elfled did not attain old age. She died in 713 at the age of 59, and was buried in the convent, hard by the bodies of Hilda, and her own royal parents, Oswy and Eanfled. After her death a dark cloud settles over Whitby. We hear no more of it till the middle of the next century, when, in fear of the Danish sea-robbers who were devastating the Yorkshire coast with fire and sword, Titus, or Tictan, the Abbot—the government of the convent having passed into male hands—fled to Glastonbury, carrying with him the wonder-working remains of Hilda and Elfled and the peasant poet Caedmon. It was none too soon. In 867 the abbey was plundered and burnt, and its white stone walls, blackened with fire, remained roofless and desolate for two centuries and more. One of the first results of what has been truly called the "missionary enterprise" of Prior Ealdwine of Winchcombe, and his two companions from Evesham, to the "benighted land" of Northumbria, seven years after the Conquest, was the revival of the holy house of St. Hilda. Regenfrith, one of the three evangelists, became the first prior after its re-endowment by Hugh Lupus, and his feudatory William of Percy. From this point Whitby enters on the ordinary career of a great Benedictine abbey, and its annals become comparatively uninteresting.

THE POLICE AT PUBLIC MEETINGS.

THE decision of Mr. Kynnersley, the stipendiary magistrate at Birmingham, upon the legal rights of the chairman of a public meeting will probably excite some surprise. Englishmen are for the most part very willing to submit themselves to authority without inquiring too curiously into its nature or origin. The chairman of a public meeting has sometimes been treated as though he possessed in his own specific domain rights scarcely inferior to those of the Speaker of the House of Commons. He decides who is to speak; he settles the order in which motions and amendments are put to the vote; he sometimes has an influential voice in determining the form which a motion shall take; he recalls to the question speakers who are accused of wandering from it. All these functions taken together go a long way towards constituting a right to maintain order; and most people probably have assumed that they do actually constitute it. The Mayor of Birmingham was so clear upon this point that, when a meeting was held in the autumn to consider the policy of the Afghan war, he instructed the chief of the police to station his men in the hall with the view of removing any person who should persistently obstruct the proceedings. This instruction was based on the right which the Mayor assumed to belong to a chairman of a public meeting of maintaining order, and of doing all such things as are necessary for the maintenance of order. In this case there were some seventy or eighty persons whose presence, in the opinion of the Mayor, made the maintenance of order impossible. They had come there, in fact, not to take part in the meeting, but to prevent the meeting from being held; and as soon as this became apparent, the Mayor directed them to be taken out of the hall. Probably, as has been said, most people were under the impression that the Mayor was doing nothing more than he had a right to do. But it occurred to the persons removed in the present instance to challenge this assumed right; and, up to this point at all events, the result has justified their challenge. Mr. Kynnersley took time to look into the text-books, and has been "utterly unable to find any authority, precisely or approximately, in point." If a chairman of a public meeting possesses the right claimed for him by the Mayor of Birmingham, it is a mystery how he came by it. It can be traced to no words of a statute, no dictum of a judge, no maxim of the common law. It may be that, when a case is stated for the opinion of a superior court, the judges may find some evidence of custom which may support the Mayor's claim; but, if so, it is strange that the custom should never have got itself recorded on paper. Indeed, as Mr. Kynnersley pertinently observes, the evidence of custom seems to point the other way. It is notorious, he says, that noisy, turbulent, and almost riotous meetings have been of frequent occurrence, especially at nomination meetings under the old system. Yet he can find no instance in which the chairman of such a meeting has exercised the right of turning out by wholesale persons who were disturbing the meeting. Unless Mr. Kynnersley has been strangely careless or strangely unfortunate in his search after precedents, it may be expected that the law will be ultimately found to be what he has declared it to be.

Supposing that it is so found, ought it to remain unaltered? That is a question which can hardly be answered offhand. Perhaps many people will be inclined to ask how, if the chairman does not possess the right claimed for him by the Mayor of Birmingham, public meetings are to go on. It is plain, however, that, if the right be conceded, some highly inconvenient consequences may follow from it. In the Birmingham case the chairman of the meeting was also the Mayor of the town. In the latter capacity he had the police stationed in the hall; in the former capacity he called upon them to do their duty. Happily, however, this confusion of municipal and political functions is not universal. Even in Birmingham itself, had the meeting been of a different complexion, the Mayor would not have acted as chairman. Yet, on his own showing, he would equally have been bound to send a strong body of police to preserve order. The fact that Alderman Collings was accidentally Mayor of the town as well as chairman of the meeting could not give him any additional powers in either capacity. He had no right as chairman of the meeting to order the police to be in attendance. He had no right as Mayor of Birmingham to order the police to be in attendance at a public meeting merely because he happened to approve of the object with which it had been called. Consequently, as Mayor, he could only have sent the police to the hall on the requisition of the chairman of the meeting; and the Mayor of Birmingham has plainly no business to take any unusual precautions against disorder merely because Alderman Collings happens to be in the chair. He would have been bound to give precisely the same order to Major Bond if a Conservative had been in the chair as he gave when he himself was going to occupy it. It follows from this that, if the law were what the Mayor of Birmingham contends, the police would at times have nothing else to do than to go about the country removing obstructives from public meetings. The right of a chairman of such a meeting is to have any one removed who, in his opinion, is obstructing the meeting; and this plainly involves a right to call upon the proper authorities to give him the means of vindicating his right. If his powers do not go this length, the Mayor of Birmingham was clearly wrong in stationing police in the hall. He could only do this on the requisition of the chairman of the meeting; and, if he has the right to do it for one chairman, it is his duty to do it for all chairmen.

A law of this kind would weigh very heavily on local finances without, so far as we can see, yielding any counterbalancing gain to politics. Public meetings are, at best, but a rough method of getting at public opinion, and if they were artificially protected by the police, they might easily come to be taken at very much more than their real value. It is probable, for example, that upon the Afghan question opinion in Birmingham as elsewhere was very much divided. The Liberal party, having the command of the municipal organization, chose to use it in support of a meeting claiming to be a meeting of the townspeople, but really representing only that moiety of the townspeople who were opposed to the war. No doubt it would have been better if the Conservative minority had attended the meeting and moved amendments to the various resolutions, without giving any occasion for the intervention of Major Bond and his constables. If they had been able to carry the meeting with them, they would have had a just cause for triumph; and, even if they had failed to carry the meeting with them, they would at least have shown how far Birmingham was from being united in the opposition to the war. Unfortunately, either from a conscious deficiency in argumentative power, or from a belief that they would not get a hearing, or from a natural preference for inarticulate over articulate opposition, they preferred to reduce the meeting to impotence by keeping up a constant accompaniment of whistling, singing, and screeching, which entirely prevented the speeches being heard. Yet, after all, this kind of conduct proved something. It showed that there was a large amount of excited feeling enlisted on the side of the Government. Seventy or eighty men seldom come for the express purpose of disturbing a public meeting unless they are the representatives of a much larger body. They are the froth at the top of the tankard, which is sustained there by the liquor underneath. If their demeanour showed that their opposition was of the most unintelligent kind possible, that detracted from the value of their convictions, but it did not throw any doubt on their existence. The feeling was there, though it had chosen an unfortunate method by which to make its presence known, and being there, it was, on the whole, well that its presence should be known. If the chairmen of public meetings were universally empowered to put down obstruction by force, the best organized party would have an immense advantage.

Given a sufficient number of resolute chairmen and a sufficient police force, and the country might be made to appear animated by an extraordinary but quite unreal unanimity. The main use of public meetings is to show when there exists a really overpowering feeling in the country upon some point on which from some accident Parliament does not properly represent the electorate. When such a feeling exists, chairmen will have no need to call in policemen to remove obstructives.

THE NEW DISPUTE IN THE COTTON TRADE.

THE great strike of last year in North and North-East Lancashire will be fresh in the recollection of our readers. It will be remembered that so great was the depression in the cotton trade that it was admitted by the operatives that the manufacturers were running their mills at a heavy loss; and it was further conceded that some remedy must be applied. It was as to what the remedy should be that the dispute arose. The millowners proposed a reduction of wages of ten per cent.; the operatives objected that the reduction would not mend matters. It would not, they contended, end the manufacturers' losses, while it would injure the workpeople to no purpose; and it would infallibly be followed by another and yet another reduction, until wages in Lancashire would be cut down to the pauper level. They proposed, therefore, instead of the masters' remedy, a restriction of production, to be continued until the existing stocks were exhausted and demand should thus become compulsory. Both sides were obstinate; a strike occurred, was stubbornly maintained, and begat such ill-feeling that disgraceful riots broke out in Blackburn and elsewhere. Finally the operatives had to yield. It is important to bear all this in mind if we would fairly judge the attitude of both parties at present. On a first view of the matter it seems indisputable that the operatives, though starved into submission, have logically been justified by the event. The reduction of wages has proved to be no remedy; it has not saved the millowners from further heavy losses, has not stimulated the demand, and already, as predicted, is being followed up by a notice of another reduction. The leaders of the workpeople are pointing to all this as proof, not only that they were right last year, but that the employers know they were right, and are more intent on breaking down Trade-Unionism than on reviving trade. The bitter class feeling that previously existed is thus being exacerbated; and, we are bound to add, the millowners on their part are showing themselves equally resentful. Just as the operatives believed last year that their employers wilfully adopted a course which could not possibly put an end to the depression, and consequently that they must have been actuated by class enmity, so the millowners were convinced that the two leaders and spokesmen of the weavers deliberately acted in bad faith, and on that ground they have refused to meet them. We have no intention to enter into this dispute; but even if we accepted the masters' view of the case, we still should think their decision impolitic. We must assume that, in agreeing to a conference with delegates of their workpeople, they desired to avoid another strike and lock-out. But when they refused to hold converse with the secretaries of the two great weavers' Unions, they made a quarrel on a point of honour almost inevitable. The Societies were sure to send as delegates men who were not only their most trusted leaders, but were also specially distinguished by the hatred of the employers. This, in fact, is what has happened; and the weavers' delegates, in consequence, were excluded from the discussion. We have dwelt upon this point because it illustrates the spirit which at this time of trial and suffering unfortunately animates both parties in one of our greatest industries.

But is it true that the operatives were right in their contention last year? In our opinion, they clearly were not. Their argument was that over-production was the cause of the depression, and consequently that it must be made to cease if we want to put an end to the effect. But the premisses here are correct only in a certain sense. It is perfectly true that the markets are glutted. They are so, however, not because the world has no use for all the cotton goods that are manufactured, but because those who would willingly be our customers have not the means of buying them. It is the consumption which has failed, not the production which has suddenly become excessive. We do not deny, indeed, that the growth of producing power has been too rapid. Protection abroad, also, has factitiously stimulated this branch of industry, and turned consumers into rival producers. Still the main cause of the collapse which we witness in Lancashire is the falling off of consumption, which is traceable to the depression that has prevailed universally since 1873, to the closing of markets by prohibitive tariffs, and to the impoverishment of the populations of the East by famine and war. Speaking generally, we may say that we have to look for the increase of our cotton trade to the backward countries outside Europe and North America, and more particularly to those of the East. Now India, which is the most important of our customers, has of late suffered exceptionally from famine. We have had, in quick succession, famines in Orissa, in the North-West, in Bengal, and in Madras and Bombay; at the present moment there are fears entertained of a scarcity, though happily nothing more, in the Punjaub, Oude, and the North-West. These terrible visitations have impoverished the population. Over and above severe losses through drought, in blighted crops and starved cattle, the price of food has been at a famine level for a long succession of years. When we call to mind how seriously dear bread with depressed trade diminishes the purchasing power of the mass of the population even in the wealthiest country in the world, we shall be able to form some imperfect notion of the effect of the frightful calamities which India has undergone. Throughout the districts where the crops have failed—some of them containing as many inhabitants as a great European kingdom—the people have a struggle for life itself. They see their cattle perishing without being able to save them, and they are fortunate if they can preserve even their children. They have clearly no means of purchasing clothes. Outside those districts, too, the prices of the necessaries of life rise excessively. So great is the demand for the needs of the famine-stricken population that famine prices rule from one end of the Empire to the other; and this dearness of food leaves to the working classes little margin for expenditure on anything else. This is the explanation of the badness of the Eastern trade. Other causes, no doubt, have co-operated—the depreciation of silver, for example, and the reckless speculation that has prevailed; but most potent of all has been the impoverishment of the population. Manchester has argued that competition also is to blame, the Bombay mills being favoured by the import duties upon cotton. But, as a matter of fact, the Bombay mill-owners are not more prosperous than those of Lancashire. On this point the facts collected by the *Times of India* are decisive. There are in all twenty-eight mills in Bombay, and of these six, or more than one-fifth, are in liquidation, while the remaining twenty-two have ceased running two days a week, which, according to the same authority, is tantamount to the stoppage of six other mills; so that the total restriction of production amounts to about forty-three per cent. China also has been desolated by famine; and Brazil likewise has suffered. Egypt has been visited by a severe drought in consequence of a low Nile, and by destructive floods; while Turkey has passed through the ordeal of a ruinous war. Thus we see widespread impoverishment affecting vast populations which usually purchase immense quantities of English cotton goods; and, as a necessary result, there has been a great shrinkage of trade. It needs no elaborate argument to prove that poverty-stricken customers cannot be induced to do more business by artificially limiting the supply, and so making it dear. It is conceivable that by lowering the price we may tempt them, but certainly not by raising it. Whether the price can be reduced sufficiently and yet afford English operatives wages upon which they can live, is another question, which can be solved only by experiment. Whether, again, it would not be wise for some of the manufacturers and operatives to give up the struggle and divert their capital and labour to other businesses is a point on which we offer no opinion. What we consider to be proved, and would therefore urge on the attention of both employers and work-people in Lancashire is that the collapse of their industry is attributable to causes beyond their reach, that its revival depends chiefly upon the course of the seasons in far distant lands, and that the only way in which they can themselves contribute to its resuscitation is by cutting down the cost of production rigorously and in every item.

Last year the reduction of wages was to the extent of ten per cent. The district associations of manufacturers wished that now again it should be at the same rate, but the central Committee decided to ask for no more than five per cent. It is yet uncertain whether the operatives will accept these terms. There is amongst them evidently a considerable diversity of opinion. At an inconclusive meeting in Blackburn this day week some of the speakers strongly urged submission. They pointed out, what ought to need no reminder, that so soon after a hard-fought contest they could not maintain a strike, and they argued that it would be much wiser to yield when success is impossible, to husband their resources, and to seize the first opportunity to recover lost ground. The advice is so sensible that one wonders there could be any hesitation in acting upon it. Yet the majority of the meeting appears to have been in favour of resistance. The spokesmen of this section appealed to passion rather than to reason, but they had one argument which evidently carried great weight; it was the assertion that several of the employers—the small employers especially—and of the managers also, are convinced that a reduction of wages can do no good, and in consequence are half-hearted in the dispute. How far this assertion is well founded we cannot say, but we are inclined to accept it as true. Those whose view is confined to their own country see that last year's reduction has been in vain, and, knowing their losses at present, they probably do not expect their position to be much improved by cutting down the wages expenditure a shilling in the pound. On the other hand, they would hardly accept the extensive stoppages and adoption of short time as decisive against the men. In short, they perceive only half the problem, and consequently are not unlikely to draw an erroneous conclusion. If, however, what we have stated above is correct, it is quite clear that restriction of production will not improve the situation. In saying this we do not of course mean that the reduction of wages ought to be insisted upon. We have no data for forming an opinion on the subject. All we assert is that it is to the reduction of the cost of production that the efforts of all concerned ought to be applied; but whether that might not best be done by improved machinery, better methods of working, and higher skill, is a question which we do not pretend to determine.

REVIEWS.

OLD ENGLISH TEXTS.*

WE should have noticed earlier some volumes which, although they may have little interest for those who are not special students, have for the latter a permanent value. For the Early English Text Society we have from Mr. Furnivall the fourth part of Lonelich's English version of the history of the Holy Grail, which is here brought down to the point at which it runs into or is dovetailed with the story of Merlin. The chapters here edited are concerned chiefly with the lifetime of Joseph of Arimathea and his son, together with that of their cousin Peers, whose question respecting the vacant seat at the table of the Sangreal first calls forth the prophecy that only the pure and guileless Knight shall, without scathe to himself, fill the place where the Saviour sat at the Last Supper with his disciples. The unbelief of some of his hearers leads Moys, who is also cousin to Joseph, to say that, with Joseph's leave, he is ready to take the empty seat, although, when Joseph crossed the channel, he, with others, had been left behind because of their misdoings. The leave is given with the warning that he had best refrain if he feels himself unworthy to sit in the place of God's Son; and no sooner is he there seated than seven hands, burning each like flaming torches, seize Moys, who burns "as a dry bush when it is on fire," and bear him away. On this act of divine judgment hang a series of adventures and incidents, some having a bearing on the story of the Grail, others seemingly having little or nothing to link them with it, but all connected, wherever it is possible to do so, by means of genealogies, with the time of Arthur's reign. It is strange that in these lists the good knight Peers, who is only not so worthy as to achieve the adventure of the Grail, should be the ancestor of the destroyer Mordred, while from the sinful loves of Lancelot of the Lake springs Galahad, the hero without spot or taint of lust, who for his purity was suffered to see the holy vessel on which mortal eyes have never rested since that day. In this long and almost endless series of incidents and exploits the tracing out of each to its earliest source or form would be a curious task; and for those who may wish to use it for this purpose Lonelich's translation from the French of Robert of Borron will be of great service. Even on a first or a second reading we cannot shut our eyes to the large amount of repetition, sometimes with so slight changes of form as to be altogether wearisome, which swells the vast mass of tradition gathered round the name of Arthur. Lonelich's story will also be useful as enabling us to form a clearer notion of the characters of the several heroes as conceived by the romance-makers of the middle ages. It is scarcely too much to say that for the analysis of these old stories much mischief has been done by modern poets, who have seized on features to their own mind, and have shed on them an unearthly light which we cannot find in the traditional chronicle. Thus Lonelich in his fifty-second chapter speaks of one Mordred—

> thatte men supposen hadde ben begot
> Betwene Kyng Loot and his wif;
> but it was to-foren with-owten stryf,
> King Arthewr on his soster engendrid hym,
> For he wende the maiden of Yrland it hadde be.

Mr. Furnivall here remarks, "As the holders of Arthur's perfectness choose to ignore this traditional sin of their hero's, while they are willing enough to accept as true Guinevere's traditional offence, I have added Lonelich's version of De Borron's account of the matter in an appendix; though, of course, 'Sire Robert' may not be the author of Merlin." In this passage from the lay of Merlin the story is given much as it is told by Malory in the prose version; but not much weight can be given to the plea that Lonelich may not have obtained the two stories from the same source. It was his belief that he had. Like the history of Seynt Graal (which in some odd way he seems to distinguish from the Storye of Sank Ryal, p. 306), his Merlin lay, he tells us, was got from Maister Robart of Borrown, who "out of Latyn it translated hol and Onlich Into the language of Frawnce." But seemingly he is unaware that the two versions are not altogether consistent. In the Grail story the misdeed of Arthur and Lot's wife is followed at once by a repentance "wondir sore"; in the Merlin tale neither is spoken of as feeling any regret, while of the latter we are told that

> Whanne that the tydynges gonnen for to springe
> that this yonge Arthur scholde be kynge,
> and this Mordret was tho ibore,
> thanne in herte louede scho him wel more
> thanne ony man cowde tellen that day.

But in truth we misconceive the tale if we forget that the episode of the Queen of Orkney does not stand alone in the history of Arthur, which imputes to Lancelot as well as to him many failings to which some of our modern poets find it convenient to shut their eyes. These incidents are indeed cardinal features in the ancient tradition, which recounted them for reasons plain enough to those who will compare the tale with the multitude of cognate stories.

It can scarcely be said that Lonelich's versions of Borron show many charms of style. Of the great mass of rhymes a large proportion are mere tags, used for the sake of avoiding the task of finding new rhymes; and the narrative jogs on with a slowness and feebleness almost intolerable. Of vastly more merit as a poem is the "Life of St. Alexius" in the Laud version, which Mr. Furnivall gives in another volume, along with three other weaker versions of the legend. This pathetic tale is a fit pendant to the story of Euphrosyne which Montalembert relates with a keen sense of its pathos in his *Monks of the West*. As there a maiden to avoid marriage puts on male attire and takes the vows in a convent of monks, and at the hour of her death makes herself known to her father, who, worn out with grief, has taken refuge in the same monastery, so here the high-born Alexius forsakes his wife on her wedding-day and joins a troop of beggars. The story of his life he writes on a paper which after his death was found in his right hand, and which his fingers yield up only to the Pope. The idea which underlies it is not congenial to Englishmen generally; but the beauty of the poem is beyond question, and it is as well to know how our forefathers thought and spoke of such things. This touching story is found with four other poems in the Laud MS. 622, in the Bodleian Library. Few probably will read them without feeling assured that they cannot all have come from the same hand, although Warton and Ritson thought that they did; and still more that the Life of Alexius can never have been written by the driveller who puts into verse his five dreams about Edward II., and after the recital informs us that he is Adam the Marshal, known at Stratford at Bow, and everywhere else. On closer examination Mr. Furnivall found that there was no reason for supposing Davy to be the author of the other poems in the same volume, apart from the fact that the seventy-two leaves of it are all in one scribe's handwriting. These visions are notable only for their silliness; but whether the doom of imprisonment which he imprecates on himself in the event of their not being fulfilled was passed on him by Edward II. (if, as seems likely, he be the Prince of whom he speaks) there is no note to tell us. The other poems:—(1) "King Solomon's Book of Wisdom," (2) the "Tokens of St. Jeromie before Doomsday," (3) the "Song of Joy for Christ's Coming"—call for no other remark than that the last is the only one which has any merit as a poem.

In another volume Mr. Skeat edits for the same Society from the unique MS. in the Bodleian a second fragment of the alliterative Romance of Alexander the Great. This portion, Mr. Skeat thinks, comes from the author of the first fragment preserved in MS. Greaves 60, in the Bodleian, and edited by himself in 1867 for the Early English Text Society. It would seem to follow, therefore, that the two fragments belong to one poem, which must have been of very great length. In his very full and instructive introduction, Mr. Skeat gives us the history of this second fragment, which was edited by Mr. Stevenson for the Roxburghe Club in 1849; and the history is a strange one. The MS. in which it is found is a copy of the French *Romans d'Alexandre*, in which the second column of fol. 67, left blank by the original scribe, contains a note telling the reader that at this point a process has failed, and giving him directions for finding the missing matter elsewhere. But there is no such failure. As Mr. Skeat clearly shows, the English scribe set much store on the correspondence between Dindimus and Alexander; but the French romance followed a version in which these letters were not included, and, the attempt to find them being necessarily futile, he came to the conclusion that the French scribe had omitted them at the column which he had left blank, although they cannot be fitted in either here or at any other point of the French story. The text of the English fragments of the romance is founded on the same Latin version; this, again, being based on the Greek text known as the "Pseudo-Callisthenes," from which three Latin versions were made. The third of these, known as the *Historia de Preliis*, by the Archpresbyter Leo, was the one followed by the English writer, and it is therefore here printed by Mr. Skeat at the foot of every page of the English text. But, not content with tracing it thus far, Mr. Skeat has examined the supplementary sources of information resorted to by the English author, the result being that he has thus been able to find the original of almost every sentence of the poem, and to guide the reader to them in his notes.

---

* *The History of the Holy Grail.* Englisht, ab. 1450 A.D., by Herry Lonelich, from the French prose of Sires Robiers de Borron. Part IV. Re-edited from the unique paper MS. in Corpus Christi College, Cambridge, by F. J. Furnivall, M.A. Early English Text Society. Extra Series XXX. London: Trübner & Co. 1878.

Adam Davy's 5 Dreams about Edward II.—The Life of St. Alexius—Solomon's Book of Wisdom—St. Jerome's 15 Tokens before Doomsday—The Lamentation of Souls. Edited, from the Laud MS. 622 in the Bodleian Library, by F. J. Furnivall, M.A. Early English Text Society. London: Trübner & Co. 1878.

Alexander and Dindimus: or, the Letters of Alexander to Dindimus, King of the Brahmans, with the Replies of Dindimus; being a Second Fragment of the Alliterative Romance of Alisaunder. Translated from the Latin, about A.D. 1340-50. Re-edited from the unique MS. in the Bodleian Library, Oxford, by the Rev. Walter W. Skeat, M.A. Early English Text Society. London: Trübner & Co. 1878.

Cursor Mundi (The Cursus of the World)—A Northumbrian Poem (of the XIVth Century). In Four Versions, two of them Midland, with 7 Additions, including the Book of Penance and Cato's Morals (incomplete). Part V. Edited by the Rev. Richard Morris, M.A., LL.D. Early English Text Society. London: Trübner & Co. 1878.

Five Hundred Pointes of Good Husbandrie. By Thomas Tusser. Edited by W. Payne, Esq., and Sidney J. Herrtage, Esq., B.A. Series D. Miscellaneous. English Dialect Society. London: Trübner & Co. 1878.

A Glossary of Words and Phrases pertaining to the Dialect of Cumberland. By William Dickinson, F.L.S. Series C. No. VIII. English Dialect Society. London: Trübner & Co. 1878.

The Gospel according to St. John in Anglo-Saxon and Northumbrian Versions, Synoptically Arranged, with Collations exhibiting all the Readings of all the MSS. Edited for the Syndics of the University Press by the Rev. Walter W. Skeat. Cambridge: at the University Press. 1878.

The matter of this fragment need not detain us long. It is not without value as giving the notions of an ecclesiastic on the several merits and drawbacks of the active and the contemplative life; but for any deliberate decision on the subject we shall look in vain. Mr. Skeat rightly says:—

> The arguments are so managed that the bias of the one counteracts that of the other. We are led, on the one hand, to favour the active life as being more useful than the contemplative; but, lest the scale should preponderate in its favour, it is linked with heathenism as opposed to Christianity. The life of Dindimus, in as far as it is assimilated to that of a Christian, is preferable to that of Alexander. The life of Alexander in its active aspect enlists our sympathies rather than that of Dindimus. The author of this ingenious arrangement strove rather for oratorical effect than sought to inculcate a lesson. To regard the various arguments in this light is to regard them rightly. It is merely a question of seeing what can be said on both sides. There is nothing else to be learnt from the story of it.

For its alliteration the poem is much more noteworthy. In this, as was generally the case, the prefixes are commonly neglected, the purpose being to bring the accented syllable into play; but here we have not a few instances in which the rhyme-letter belongs to an unaccented syllable, in such lines as the following:—

> that we *dis*córden of *d*ede · in many *d*one þinguns.—
> bigat on *o*límpias · þe *o*nurable quene.—
> that us derye no *de*þ · *de*síre we nouþe.—
> and saide, *s*eg, to us silf · *s*ofísen þis canna.

We must surely allow with Mr. Skeat that, however much English pronunciation may have changed since the fourteenth century, we cannot regard such accentuations as *discórden, désire, sófisen, ólimpias* as having been possible at any time; nor can we deny that the alliterative letter often belonged to wholly unaccented and unimportant syllables, such as *schal* and *sire*. The poetry may not be the better for this; but, as Mr. Skeat reminds us:—

> It is easy to see why these unimportant syllables sometimes received the rime-letter. What the poet really wanted was a help to the memory, and this was attained quite as easily (now and then) by help of an unimportant syllable as by close attention to rule. The use of the word *schal* in l. 330 (as of *sire* in l. 967) was to give the reciter a start for his second half line. The cue was quite sufficient for this purpose, and thus the line, although slipshod, was allowed to pass. This is the simple explanation of the whole matter.

We need only add that the editor appends to the text a glossarial index of about 1,700 words which is almost a complete concordance. That of Mr. Stevenson's edition explained only 63 words, and of these not all correctly.

The Fifth Part of the *Cursor Mundi*, edited by Dr. Morris, may be described mainly as a primer of faith and devotion. It is written by a priest who complains that men are not eager to hear sermons, and who wishes to warn them against their errors before it is too late. The poem on the "Dolours of Mary," which follows these warnings, is written with singular fluency and exactness of rhyme and with no little gracefulness of language. After it we have a narrative of the way in which the feast of the Conception of the Virgin was introduced into the use of the English Church, the cause being a storm at sea from which Elsig, Abbot of Ramsay, the envoy of William the Conqueror to the Danish King, escaped only by promising to convey to his countrymen the charge of the Blessed Virgin that the feast of her conception should henceforth be solemnly observed. The question as to the service to be used on the day was easily answered. They were to take the service of her birth, and in each case where the word *nativity* occurred they were to substitute *conception*. The seven additions to the *Cursor* consist of rhymed expositions of the Creed and the Lord's Prayer, a prayer to the Trinity, prayers for the Hours of the Passion, a song of the Five Joys of Our Lady, and the Boke of Penance. Of these the last is a sufficiently minute and exact treatise on Confession, giving, with much seemliness and discreetness, the matter usually found in penitentials. The commentary on the Creed explains the name of Pontius Pilate after a fashion which would do credit to the philology of Durandus. The procurator of Tiberius was, we are told, a man of great office, being Justice over the Jews:—

> His mother hight Pila, his father Atus,
> And þat of was he cald pilatus:
> And þonce he was cald efer an yle
> þat he was fostered in sum guile.

Dr Morris's appendices give us three specimens of other manuscripts of the *Cursor* than those given in the text, the first two relating to the Acts of the Apostles, the late life and assumption of Mary, the signs before Doomsday, the nine pains of hell, the fourteen gifts of the blessed, and other like topics. In the third appendix we have the prologue to the *Cursor*, taken from Laud MS. 416 (Bodleian), Arundel 57 in the College of Arms, and a manuscript belonging to the Public Library, Bedford. The title of the poem, as explained by the writer, gives him a sufficiently large range. It embraces all subjects suitable for the devout meditation of the faithful:—

> Som manes þing is goode to knaw
> þat don was in þe olde law
> Betwix þe olde law and þe new
> How crist began oure bete to brew
> I schall you schew be myn entente
> Trewly of her testament
> Alle þis world or þis boke blyn
> With crystys helpe I schall ouer rynne.

Nor can we say that his promise is not carefully kept.

The *Morals of Cato* Dr. Morris gives from the only copy known to him of a fragmentary version belonging to the later years of the fourteenth century or to the early part of the fifteenth. The original intention was to reserve this version for an edition of the English and foreign versions of the Distich, to be prepared jointly by Dr. Morris and Dr. Dahlmann. This edition cannot be ready for some time; and as Mr. Furnivall, for Chaucer purposes chiefly, wished the present version to appear at once, the editor has taken advantage of its looking in the Fairfax MS. like part of the *Cursor*, to insert the poem, although it will be repeated in the Society's full edition of the Cato.

In the year 1557 Thomas Tusser, a man whose strangely chequered life seemed to point the moral that a rolling stone gathers no moss, put forth his "Hundreth Good Pointes of Husbandrie," each point being given in the four-lined stanza of anapæstic verse, which he used as almost the only vehicle of his thoughts. The sound sense of his precepts and the kindliness manifested through the whole of the little work made it at once a favourite with the people, and in the edition of 1562 Tusser proceeded, as he said, to marry his hundred points of good farming with a hundred points of good huswifery; and eleven years later the two were amplified to five hundred points of good husbandry with as many of good housewifery. Of these works the volume edited for the English Dialect Society by Messrs. Payne and Herttage, reproduces the editions of 1557 and 1580. Since that time the book has passed through nearly twenty editions, but each edition subsequent to the issue of 1585 seems to have become less and less trustworthy. Of the work itself the editors rightly think that, apart from the interest which must attach to it as a picture of English life in the sixteenth century, it is for students of the language especially valuable for the large number of dialectic words and forms contained in it. They have therefore worked out the glossary with a fulness which some, they fear, may think excessive, but which will not be objected to by any who examine it carefully. The book is one which will well repay the student for the time expended on it.

In the Glossary of the Cumberland dialect, also published by the English Dialect Society, Mr. Dickinson has done his work excellently. The work is professedly a second edition of a glossary which he put forth nearly twenty years ago; but this has long been out of print, and the changes in the present edition make it virtually a new book. Mr. Dickinson tells us that he has not thought it necessary to retain words which were merely corruptions or peculiar pronunciations of ordinary current English. We certainly should not quarrel with the rule, or with its occasional non-observance, for which he pleads that "some Cumbrian forms of common English cannot without explanation be made intelligible to people living beyond the borders of the county." But we fail to see how the plea can be made to cover the insertion of such words or phrases as *black dog, black and white, smell a rat, burn his fingers, hansel, mess, mull, ill turn, fain, hoyden*, and many more, which are here given with the usual spelling, and seem to be used precisely in the sense attached to the words, so far as we are aware, in all other parts of England. Do these words and phrases belong to the Cumbrian dialect in a sense in which they do not belong to the English of other counties? If it be so, the fact should be stated and proved; but otherwise we fail to see why they should find a place in a Cumbrian glossary. All that we need say further is that our objection applies to a comparatively small number of words, while the rest of the glossary is kept strictly within its proper limits.

The Gospel according to St. John, edited by Mr. Skeat for the Cambridge University Press, forms the fourth and last portion of the exhaustive edition of the Anglo-Saxon Gospels as planned by Mr. Kemble. The first Gospel was published twenty years ago, and the title-page stated that the texts had been collated with the best manuscripts. The words, Mr. Skeat remarks, might convey a wrong impression, as the MSS. collated include, not only the best, but all the MSS. now known to exist. A great work has thus been happily completed, after the lapse of forty years from the time when it was first taken in hand. Mr. Skeat's preface contains, as the reader may well suppose, all the information that can be given respecting the dates of the manuscripts and their peculiarities of dialect, together with a list of the works forming the whole literature of the subject.

MRS. BURTON IN INDIA.*

EXCEPT that this volume, as Mrs. Burton reassures us in the first page by declaring, is "not weighted with a grievance," it has all the special characteristics of its author. There is the same sense that the writer has discovered the keystone of European, Asiatic, and African policy; there is the same burning desire to put everybody and everything right, from Lord Beaconsfield to the directors of Austrian Lloyd's; there is, finally, the same genuine belief that she and her husband are the objects of the whole world's suspicion, envy, or admiration. Fortunately there is also the same animation and instinct for seizing on the picturesque point in a landscape or an incident. So, on the whole, we are not disposed to quarrel with the amiable publisher whom Mrs. Burton, whether in a vision or in reality, pictures as first rejecting an offer of a book on India "because we all know everything about India," and finally relenting and giving her "another chance."

* *Arabia, Egypt, India.* By Isabel Burton. London and Belfast: Mullan & Son. 1879.

Mrs. Burton, [illegible], very prudently will not let him out [illegible] does not know if he might not give her the slip and never be reclaimed. Accordingly, when she has made up her mind that India is the proper place in which to spend a Consular holiday, he must travel by her side to Boulogne and to Paris. He must begin his Oriental experiences by seeing Rossi in *Hamlet* and *Macbeth*. He must be at hand to testify to her melancholy discovery that Paris coffee is since the war all chicory, and that "the famous bread and butter has lost caste." In "the most civilized and joyous town in Italy," after a visit to the Duomo and the Brera, he must with her regale himself on Risotto à la Milanese and Ravioli, and Flambe di Selvaggiume; he must feel damp in Venice in December, and discuss nationalities and the Eastern question at Trieste. At Trieste indeed Mrs. Burton not unnaturally feels so comfortable that she does not seem inclined to leave it. She knows her Consular town, and describes its idiosyncrasies so pleasantly that her readers would hardly have been discontented had she got no further eastwards. Trieste suffers from a mortality about double that of London, three particularly objectionable winds, and several extortionate landlords. But, to compensate, it has a blue sky "which makes one glad to live," and can furnish "twenty-six women friends" whom Mrs. Burton "would be glad to see again in any part of the world." They are "mostly pretty, have charming figures, are beautifully dressed, have delightful manners, are well educated and accomplished; all speak three or four languages, are good musicians, and swim like fish." Such a flower-garden suggests bees or wasps. But among two dozen Clarissas there is no Lovelace. The men, who are either married or boys, are always on the Bourse or in their offices. When the two sexes meet "a rigid decorum is observed; no one dares indulge in the most innocent flirtation." So Mrs. Burton "would strongly recommend any friend who has a wife *tant soit peu légère* to come and reside there." Outside the *salons* it would appear, from certain remarks of Mrs. Burton, the decorum of Triestine life is hardly so rigid.

However, at last the twenty-seventh woman friend of Trieste tears herself from her companions. Trieste is left behind, and Brindisi, "the very filthiest town of all Italy." There is, of course, a Mediterranean storm, of which the Austrian Lloyd's *Calypso* gives its passengers the full benefit. Mrs. Burton undergoes it sitting on a chair lashed to the deck, and studying a strange mixture of the *Light of the Harem* and *Roderick Random*. Off Crete she begins to "feel Egypt," and in due course the Suez Canal is entered. Mrs. Burton's Syrian experiences have taught her to describe sympathetically the solemn and tender beauty of the desert "with its tall waves and pyramids of sand catching the morning rays, with its shades of mauve, rose-pink, and lightest blue." At Jeddah she is at home, and we wish we had space to quote her vivid sketch of the great bazaar. A tantalizing hint is thrown out that this is "a grand time for the bric-a-brac hunter, especially porcelain with Arabic inscriptions." But, besides porcelain, Jeddah contains much explosive material. The inhabitants are violently jealous of the English and French, who have absorbed most of the trade; and their jealousy is inflamed by the foolish curiosity which leads here and there some European adventurer, with the hardihood of ignorance, to attempt a visit to Mecca. Captain Burton she considers justified by his capacity to profit by it; and the Jeddawis harbour no rancour against him for his success. Our Vice-Consul, Mr. Wylde, who understands and can manage the native temperament, is aware that he and other Europeans are lodging over a volcano. He told Mrs. Burton with a laugh that "it would be doubtless much more comfortable if the morning and evening shell, instead of guns, were fired into the town." A few hours at Aden call forth a certain amount of historical knowledge from Mrs. Burton, but not much in the way of personal experience. One very striking specimen of feminine reasoning we cannot pass over. Aden has a Parsee shop of the general order. It contains, we are told, everything from a needle to an anchor. "So," says Mrs. Burton, "I asked for skates, for fun, as I thought it was the only thing they would not have, and I was right." The reasoning is of the same order as the famous inference of fraternity from the absence of the strawberry mark. Mrs. Burton's descriptive skill is superior to her logic when she will give it fair play. There is a grisly picture of the consequences of embarking for India in a vessel which ships pilgrims. The *Calypso* took on board at Jeddah some seven hundred homeward-bound Mecca pilgrims. They died at the rate of several a day of general incapacity to keep a grasp on life. Mrs. Burton observes, as her husband did a quarter of a century ago, on "the excessive facility" an Oriental shows for dying:—"A few hours of cold wind kill off half a dozen like flies; they eat rice, they beg a few lumps of sugar, they lie down, and they give up the ghost." Much of the mortality might be avoided if ships which convey pilgrims were compelled to provide abundance of fresh water and fuel to cook, and were not allowed to embark men already sick and sinking with age. Mrs. Burton makes also some useful suggestions on the means of preventing pilgrims from disseminating Indian cholera. When cholera is abroad, she recommends the Long Desert route as the most likely *cordon sanitaire* to purge infected caravans. On the present occasion there was no epidemic disease, but there were weakness and hunger. Mrs. Burton endeavoured to relieve her fellow-voyagers. It was, however, uphill work. They would take rice or medicine, and even put it into their mouths; but when the donor's back was turned, they tossed it into the sea. A malicious Russian passenger informed her that, when the poor wretches expired, they were in the habit of saying that the Englishwoman had "poisoned them." That was scarcely compensation for accepting an invitation—"Come, O Bountiful One! and sit a little amongst us, and examine my wife who has the itch!"

The steamer on arriving at Bombay was rescued by Mrs. Burton from a near prospect of a long quarantine. The captain knew only the single English word "Yes." When the pilot inquired if there was any disease on board, the captain, not understanding the question, replied with his complaisant affirmative. Only Mrs. Burton's remonstrances procured the hauling down of the yellow flag. Her readers may be grateful for her promptness. With a week's quarantine she would have had time to get up the entire history of India, and she would not have churlishly kept it to herself. As it is, she apologizes for confining her survey to a few pages. India was passing through the fever of the Prince of Wales's visit. But Mrs. Burton does not dwell on that thrice-told tale. Under the head of Bombay we have the regular Hindoo wedding; what is less trodden ground is an account of the rural resorts of the Bombay citizens. Mátherán, with its bright green groves, black rock, and red-yellow laterite, its fresh breezes, and its glorious vistas of ravines and mountains, may be cockney, but appears to have everything which can recruit energies exhausted with the friction and heat of Anglo-Indian life. For persons who have more leisure and ambition there is Tungá. Tungá is bracing, and doubtless very agreeable to persons who do not care for drinking-water, and who like to know that "the man-eating tiger walks about without fear of man." Devoid of these attractions, but with the charm of being equally difficult to reach, there is Máhábáleshwar, seventy-five miles from Poonah, and so much more fashionable than Mátherán as it is less accessible. Mrs. Burton experienced one especial embarrassment at this watering-place with the much-accented name. The roads are steep, and the native ponies expect to be whipped up them. But Mrs. Burton is lady-patroness of the Trieste branch of the Humanity to Animals Society, and objects to the whip. So does her fox-terrier Nip. When the coachman beat the ponies Nip tried to bite the coachman. "Not being allowed she laid her head on my shoulder, and went into hysterics." The woods, too, at Máhábáleshwar are cut so as to give no shade; "there are none of the shady dingly walks which still linger at Mátherán," and society is always on duty in its "tall carriages instead of basket-chairs, and sables capped with black chimney-pots."

Much of Mrs. Burton's volume deals with well-worn topics and scenes. Her least trite excursions were to Hyderabad and Goa. She remarks immediately on passing the Nizam's frontier the superiority in apparent comfort and prosperity of the Nizam's subjects to our own. It is not a very pleasant phenomenon. Mrs. Burton's assurance that the poverty of our Indian population "certainly will be altered and remedied as soon as it is made known" fails to console us. Under the rule of Sir Salar Jung the Deccan appears to have grown both flourishing and orderly. Mrs. Burton, like other recent travellers, found Hyderabad as peaceful and secure a town as any in England. All the citizens are armed with guns or matchlocks; but that is only a fashion of dress. They greet Christian tourists with smiles and blessings. Possibly a mount on Court elephants may conduce to the general amiability. But the town itself is clean as well as tranquil. An absence of smells and an air of animation and wealth can scarcely be put on to deceive strangers. Being guests of the commandant of the Nizam's Contingent, Captain and Mrs. Burton were entertained magnificently by the chief nobles. Mrs. Burton was surprised by the sumptuousness of the native palaces, though vexed by finding them fitted up with "sundry European furniture, cheap glass and china, and pictures worth a couple of francs." All the luxuries of civilization are known in Hyderabad. A lady who at a native fête desires to wash her hands finds "powder for the face and puff as carefully provided as in Paris." The one especial curiosity of the neighbourhood, the historical city of Golconda, no Christian is permitted to visit. Mrs. Burton and her husband had to content themselves with inspecting the domed and tiled tombs of the Kings which are outside the Diamond city. She takes occasion, however, to quote from the *Morning Post* an account, of a peculiarly dithyrambic kind, of the Koh-i-noor, and to repeat her advice to avert the disaster supposed to attend the ownership of that grievously maltreated jewel by selling it a bargain to Russia. One, indeed, of her and Captain Burton's cures for the poverty of India is to revive the exploration of the Deccan diamond mines. So entirely obsolete has the industry become that "at Golconda no one, strange to say, can now recognize a rough diamond." Mrs. Burton and her husband think that, to make the workings profitable, the diamonds should not be sought, as formerly, in the alluvial grounds, but be traced up to the places where the material must have been formed. The Nizam diamond, which is only half its original size, the finder having split it with a stone, is vaguely estimated as about three hundred carats. This would represent a respectable value of 700,000*l*. A fancy which traces diamonds to their source may well revel in visions of jewels of infinitely greater dimensions and a value beyond the dreams of avarice. With the mines of Golconda reopened, European ladies taught to practise the rules of ordinary politeness towards their native hosts, and the bestowal of half a dozen peerages on the great feudatories, Mrs. Burton would not despair of India.

Mrs. Burton has time for so many moral and political reflections

at Hyderabad that it might have been supposed she had spent half a year there. It seems to have been about a week. At the end of that time she journeyed back to Bombay, in heat so great that the railway officials, "all most kind and civil," were "walking up and down periodically to wake the passengers, as they have been occasionally found dead." The next expedition was to Goa. That is clearly not amongst Cook's excursions. The steamer casts visitors adrift eight miles from shore; and, when the town is reached, it is conspicuous for "a total absence of anything but the barest necessaries of life." "Of all the God-forgotten, deserted holes," Mrs. Burton has "never seen anything to equal Goa." The depression is fearful, the thirst is agonizing, the natives are ugly, and there is no ice. But Mrs. Burton is a Roman Catholic, and came to visit the shrine of Xavier. Xavier is a saint such as there are few. He, she says, "has never failed me, so I can honestly recommend any one who has some case of distress, some great want, to ask St. Francis Xavier to pray to God for it, and see whether they will not get it." Perhaps it was St. Francis Xavier who bent the heart of Mr. William Mullan to publish Mrs. Burton's book on India. At any rate she does not charge the saint with having cheated her out of her reward for enduring the horrors of Goa old and new. She bore courageously a climate which, with the thermometer only at 87°, is "like a dirty Turkish bath." Captain Burton, who had gone through the experience thirty years before, seems to have been equally resigned, though a heretic, to the perpetual squabbling of women, which is "almost like pig-sticking." Old Goa, where is the saint's tomb, is made up of churches and monasteries, and is a veritable city of the dead. Its entire population does not exceed a hundred. There is no trade, no news, no amusement. As we read Mrs. Burton's description of the seething dulness, we can hear the pensioners of the Misericordia crying out to her, when turned from the gates for paying a visit after hours, "Come to-morrow before five; we want so to see you!" Mrs. Burton, however, accomplished her purpose of obtaining a pretext for writing a memoir of St. Francis Xavier, whom she kindly warns Protestants not to confound with the Franciscans. She is able also to show her freedom of will by a vehement repudiation of the Goa Inquisition, though she concludes her censure with the philosophical remark that "the lust of cruelty, like the volcano, must have its outlet." Its "safety valve" was the Inquisition at Catholic Goa; it is vivisection in Protestant England. In the period when the Inquisition reigned she further observes that laymen and Protestants were accustomed to torture their political adversaries. What she does not appear to understand is that laymen and Protestants denounce with horror the atrocities to which political feuds tempted their ancestors; but the Church of Rome has never frankly expressed its shame and disavowal of the barbarities she practised upon so-called heretics. Mrs. Burton amuses herself by reflecting that for marrying a Protestant she would in the palmy days of Goa have been burnt to death. In Protestant nineteenth-century England Cardinal Wiseman blessed the union, and would have celebrated it himself but for a severe illness. "How quickly," exclaims Mrs. Burton, with delightful *naïveté*, "civilization, progress, and education are marching!" She does not seem to have the remotest suspicion that the march of Catholic progress has brought it back to uncompromising condemnation of the mixed marriages on an assent to which she has been so warmly congratulating her Church.

Mrs. Burton is not merely a liberal theologian, but a political prophet. She is ready to reconstruct the map of the world at a moment's notice. She sees China wrestling with Russia for the dominion of Central Asia, France appropriating the coast of North Africa, Austria transformed by the European spoils of the Porte into a great Slav Power, Greece rewarded for her patience out of the same inexhaustible repository of unclaimed goods, Syria fallen to England, if only England has the courage to seize it, Egypt left to the race of Mehemet Ali on condition of guaranteeing Great Britain's free right of transit and transport, and Constantinople, with a territory stretching northwards to the Balkans and westwards to Rhodope, turned into a protected kingdom of Byzantium, under a cadet of some reigning House. We wonder if Mrs. Burton supposes that a single human being can care what are her views on the fate of the Ottoman Empire. But to speculate on the profundities of Mrs. Burton's faith in her readers' forbearance would lead us into metaphysics. Her readers may murmur that they are better pleased when she describes watering-places and picnics. She knows what is best for them, and chooses to spoil what might have been an amusing volume with a farrago of high politics and secondhand gossip about international complications.

GOSSE'S STUDIES IN NORTHERN LITERATURE.*

A CRITIC can hardly be better employed than in the task of bringing alien literature before the public. The history of poetry and of philosophy seems to prove that most great and fertile movements of national spirit have been preceded by contact with foreign thought and foreign manners. Mr. Gosse's volume of *Studies in Northern Literature* contains numerous illustrations of a truth which is almost a truism. He shows us how the genius of Denmark, of Holland, of England, was kindled by the touch of Italy, of Germany, of France, or of the heroic past. It must be admitted that our own literature of the present day sadly needs to be stimulated in this fashion. The poetry and the style of France greatly influence our style and poetry, while our drama chiefly lives by borrowing. Meanwhile no other foreign literature affects that of England. Setting aside the "sweet influences" of the classics, we are in contact with no alien genius. From Germany, Italy, and even modern Greece, we learn abundance of scientific and historical facts; yet most educated Englishmen would be puzzled if they were asked to criticize the modern imaginative work of Greece, Italy, or Germany. As to Sweden, Denmark, and Holland, little is known either of their past or present performances.

In this general ignorance, Mr. Gosse's book is particularly welcome and serviceable. He has travelled through all the literature of the Teutonic North, and his ten essays are, as it were, *Reise-bilder*, vivid sketches of travel, full of learning, of humour, and of personal emotion. "Round many *Northern* islands has he been," which bards hold in fealty to the Hyperborean Apollo. He has watched in the Lofoden Islands the strange effects of the midnight sun; he has seen in Grundtvig, the patriarchal poet, the shining, as it were, of the midnight sun of human genius, the immortal brightness of the spirit lighting up the frosts and darkness of extreme old age. In Denmark, too, Mr. Gosse had the good fortune to carry to Hans Andersen, "the youngest to the oldest singer," almost the latest English homage which the author of the Fairy Tales received. As this element of personality is one of the most noteworthy and enjoyable characteristics of Mr. Gosse's book, as he always makes a reader see with his eyes and feel what he has felt, we propose to quote the description of Grundtvig, the aged priest and poet of Scandinavia:—

> Suddenly, and when he had given up all hope, there entered from the vestry and walked rapidly to the altar a personage who seemed to me the oldest man I had ever seen. He prayed in a few words that sounded as if they came from underground, and then he turned and exhorted the communicants in the same slow, dull voice. He stood beside me for a moment as he laid his hands on a girl's head, and I saw his face to perfection. For a man of ninety, he could not be called infirm, but the attention was drawn less to his vitality, great as it was, than to his appearance of excessive age. He looked like a troll from some cave in Norway; he might have been centuries old.
>
> From the vast orb of his bald head, very long silky hair, perfectly white, fell over his shoulders, and mingled with a long and loose white beard. His eyes flamed under very beetling brows, and they were the only part of his face that seemed alive, even when he spoke. His features were still shapely, but colourless and dry, like parchment. I never saw so strange a head. When he rose into the pulpit, and began to preach, and in his dead voice warned us all to beware of false spirits, and to try every spirit, he looked very noble, but the nobility was scarcely Christian. In the body of the church he had reminded me of a troll; in the pulpit he looked more like some forgotten Druid, that had survived from Mona and could not die.

We must add the companion picture of Andersen:—

> The eyes, somewhat deeply set under arching eyebrows, were full of mysterious and changing expression, and a kind of exaltation which never left the face entirely, though fading at times into reverie, gave a singular charm to a countenance that had no pretension to outward beauty. The innocence and delicacy, like the pure frank look of a girl-child, that beamed from Andersen's face, gave it an unique character hardly to be expressed in words; notwithstanding his native shrewdness, he seemed to have gone through the world not only undefiled by, but actually ignorant of its shadow-side.

Mr. Gosse's book, though there is only one drawback to its charm—a drawback of which we shall speak in its place—is, to the ordinary critic, a puzzling book to review. It is not given to every one to know Frisian, Dutch, Danish, Swedish, and Icelandic, and to be intimately acquainted with the literatures that exist in these tongues. It is probably safe to rely on Mr. Gosse's own accuracy, and on that of Dr. Georg Brandes, to whom the volume is dedicated, and who has read through the proof-sheets. If Mr. Gosse gives us the wrong date for the birth of Anna Bijns, on his own head be it. The writings of this gifted woman "effected a great change" in the letters of her epoch; and yet we confess that we are unacquainted with the facts in the history of Anna Bijns.

Of Mr. Gosse's ten essays the first three are devoted to the literature and scenery of Norway. Modern Norwegian poetry is the child of Norwegian freedom, which dates from the declaration of independence in 1814. Freedom, as Barbour and Herodotus have remarked, "is a goodly thing," and "makes a man to have liking," and to express his emotions in poetry. The early poetry called "Syttendemai-Poesi," songs of the 17th May, 1814, the day of the declaration of independence, was foolish and frothy.. The Hyperborean Apollo, Pindar says, takes pleasure in the gambols of wild asses. If Pindar is right, the Hyperborean Apollo had a festive time when the Norwegian bards began to frisk about. Even Wergeland, who really was a man of genius, laid himself open to criticism as cutting as that which Macaulay administered to Robert Montgomery. Between the *feu et flamme* of Wergeland and the cold douches administered by his critic and rival, Welhaven, Norwegian poetry grew into something that combined spirit with form. Wergeland's greatest work is *Den Engelske Lods*, "The English Pilot," a rhapsody on English life and English freedom. Though Mr. Gosse does not say so, we cannot but fancy that Wergeland's idyl of "Johnny Johnson and Mary Anne," must have somewhat resembled Rouget de Lisle's poem on "Tom et Lucy," and their melancholy fate. By way of local colour, Wergeland brought in some verses of real English:—

> Such a passage as this, coming in the middle of an excited address to Liberty in England, breaks down one's gravity altogether:
>
> Ho! Johnny, ho! how do you do?
> Sing, Sailor, oh!
> Well! toddy is the sorrows' foe!
> Sing, Sailor, oh!

* *Studies in the Literature of Northern Europe.* By E. W. Gosse. London: C. Kegan Paul & Co. 1879.

It should be a solemn warning to those who travel and then write a book not to quote in the language of the country.

Among æsthetic critics Mr. Gosse is almost alone in his possession of the sense of humour. He sees, however, the pathetic as well as the comic side of Wergeland's history, and nothing could be prettier than the story of the early apple-blossom (p. 7), or more touching than the tale of Wergeland's misfortunes and of his death-bed poetry.

The essay on Norwegian poetry is followed by a criticism of Ibsen, which is very lucid and interesting. There is a strong Teutonic vein in the satire of Ibsen, as well as in his tragedies on the subject of Julian the Apostate, in which scenes singularly powerful alternate with passages in which taste is lost sight of, and with mystical interludes as meaningless almost as the ravings of Blake. It is thoroughly German thus to lose hold of the clue of the main interest. Mr. Gosse makes no attempt to conceal these faults—the faults of our race and our time; the vices which have affected France, as well as England, Norway, and Germany; which have injured Quinet and Hugo, and obliterated writers like the members of our spasmodic school. "In all the modern literatures with which I deal," says Mr. Gosse, in his preface, "no one can be more conscious than I how rarely perfection is approached, how cloudy and flickering is the light of imagination, and how great a part affectation and barbarism take even in the brightest periods of national vitality." Can there be a reply of weightier authority to the people who wish to substitute the study of modern languages and literature for the literature and the language of Greece? Here is the master and critic of a dozen tongues avowing, what any one may gather from his work, that not in the modern world is perfection to be found. No; the canon of literature is lost when Greek is neglected, though, no doubt, we may then make better terms with the landlords of German hotels. There seems, however, to be no reason in the nature of things to prevent men of letters from knowing both modern and ancient languages.

We have lingered too long over the poetry of Norway, being reluctant, perhaps, to find the blot in these earlier essays which must at last be mentioned. The language is too effusive, the metaphors too frequent, and (as in p. 4) the metaphors are even a little mixed. In p. 36, too, in the reference to Juvenal and Ezekiel, there is an example of facile eloquence which jars with the general tone of the essays. It is worth noting that these blemishes are peculiar to the earlier articles in the volume, and that the workmanship of the last seven or eight is everything that can be desired.

It is not easy to select any one of these seven essays for peculiar praise. Each has its own qualities, and the great variety and originality of topic will commend each to various tastes. To ourselves the paper on Runeberg seems one of the most admirable, both for the picture of a pure and manly life, of a nobly national genius, and for the translations with which it is enriched. Runeberg was a writer of idyls and comedies, full of humour, of delicate feeling, of qualities which certainly recall the work of Mr. Longfellow. Even in these fragments of his poems we catch the scent and hear the whisper of the pine-trees,

ἁδύ τι τὸ ψιθύρισμα,

we see the fiords shining like steel, and hear the revelry and listen to the stories of the elk-hunters. What can be prettier than this, in English hexameters though it be!—

Blushing she stood at the door, in the exquisite charm of her shyness,
Coy as a strip of the sea that is caught by the rush of the morning,
Slender and quivering in rosy dismay through the gloom of the woodlands.

Next to "Runeberg," we do not know whether to prefer "Walther von de Vogelweide" or "A Dutch Poetess of the Seventeenth Century." The charm of the latter essay lies less in the very clear abstract of Dutch literary history than in the account of the life and fortunes of Tesselschade. Mr. Alma Tadema has enriched Mr. Gosse's book with a characteristic etching of Tesselschade, "young, and fair, and learned," singing to her children among the quaintly trimmed box-trees of the garden at Alkmaar. Passionate as other great women-poets, as Sappho or Louise Labé, the Dutch lady's passion was domestic, and after enduring many sorrows, she died of grief at the loss of her one remaining daughter.

To most readers the article on Milton and his debt to Vondel will be a revelation, while literary forgeries, and especially the *Oera Linda* book, are treated in the last essay of all. We could wish that Mr. Gosse had compared the queer history of the "Bulgarian epics," which, though of less literary interest than the *Oera Linda* book, were more cleverly put together. A reviewer has so seldom the chance of saying anything which Mr. Gosse does not know already, that we seize the chances offered in p. 119. If Mr. Ralston has not published *builinas*, M. Rambaud has, in *La Russie Épique*, and Runeberg's imitation of a *builina* rather excels his model.

It is scarcely necessary to give a final word of commendation to a book which has almost every quality that deserves success. The geniality of the style is worthy of the topics, and worthy of the *psi vates* to whom Mr. Gosse introduces English readers. The translations, when compared with the originals in the appendix, seem accurate, as they are certainly fluent and melodious. The repetition of the word "muffled" (probably a misprint) rather spoils the fragment from Wergeland's "English Pilot" (p. 17). This error is atoned for by a passage from Walther von der Vogelweide:—

O how I suffered through the wintry hours
And grievous frosty weather!
I thought I nevermore should see red flowers
Among the dark green heather;
Yet, had I died, 'twere grief to friends of ours,
Good folk who when I sang
So gladly danced about for joy and sprang.

THE BACHELOR.*

THERE is a certain interest in the story of the *Bachelor*, since nearly to the last it left us in doubt as to its real intention. We were long inclined to take it as an extremely realistic *jeu d'esprit*, in which the author meant to parody the triviality and inconsecutive details of too much of our contemporary fiction; and the more so because, with what would have seemed otherwise an excess of affectation, he has suppressed almost to the end the name of the hero. It is only in the penultimate chapter and on the occasion of his wedding feast, that the Bachelor stands revealed to us as Edward Pigg. Even now our doubts have not been entirely dissipated; and yet, as we have failed to find any point in the parody theory, we presume we must take the novel to be seriously written. But, as it is possible that our dulness may do the author injustice, we shall help our readers to decide for themselves by giving them a slight sketch of the novel. We will only add, by way of preliminary explanation, that the characters are introduced and labelled with a naïve simplicity which reminds us agreeably of a child's story-book; while conversations are reported with a fidelity to the commonplace which shows more conscientious observation than either ingenuity or fancy.

The Bachelor is so very ordinary a character as to be almost extraordinary—that is to say, as the hero of a romance. Neither in mind nor in person does he show a single salient trait; and his idiosyncrasy, habits, and tastes can only be described by negatives. He is neither good-looking, nor agreeable, nor intelligent; though it is a point in his favour that he is so morbidly conscious of inferiority as to be the shyest and most retiring of men. He has a most unnatural mother, whom we meet casually abroad, where we are told exactly what she had for dinner; and who dies in a happy hour for her son, after having swindled him and treated him with consistent neglect. Mother and son have a common lawyer, who, apparently in the excess of his contempt for the Bachelor's understanding, connives most disinterestedly at her embezzling the property of their victim. At the opening of the story the unlucky Bachelor is almost friendless. Strange to say, he has but a single acquaintance in London, though he seems to have lived there all his life, on an income that is more than easy. He has neither occupation nor resources of any kind, and is too listless and modest to care to be dissipated. In the fear of making their readers participate in the Bachelor's overpowering sensations of *ennui*, most authors would have been content to indicate all this and pass on. But, in order to impress the facts upon our mind, and perhaps in the hope of exciting a sympathetic follow-feeling, Mr. Brookfield proceeds to paint most minutely the Bachelor at his breakfast-table and over his morning toilet. To do it justice, the picture has all the repulsive minuteness of some of Swift's satirical poems or Hogarth's sketches. The Bachelor lives in shabby lodgings in a dingy quarter of the town. It seems to us that, after the reader had been told so much, imagination might have supplied the particulars that follow, so far as we should care to fill them in. But Mr. Brookfield goes on to catalogue the apparatus of the breakfast-table, as if he were a broker's man charged with a distress warrant. We have the cracked cup on the dirty cloth, the battered tin-cover over the eggs and bacon, the ill-made coffee-pot, the worn knives, and, still more significant, the fireplace without fire-irons. In short, all the surroundings are so intensely depressing that, had he not apparently been habituated to them for years, we could understand the Bachelor being driven to despair and suicide. From the picturesque sensation of the breakfast scene we are carried back in point of time to the bedroom in which the hero has been reposing. Premising that "the toilet of a gentleman of this sort has perhaps never been accurately described," Mr. Brookfield proceeds to give an account of how his Bachelor got up and dressed himself. We are informed how he awoke and dozed off again; how he sat up in bed, felt for his slippers, and found one of them; how he yawned out of the window; how he filled his hand-bason and tooth-glass, and in what proportions he mixed the hot and cold water for his bath; how he shaved, and slowly dressed himself in a shabby suit of ill-fitting clothes. And by this time, from sheer sympathy, we are reduced to the Bachelor's normal state of dulness, and vapidly agree with him that things are getting desperate.

Nine readers out of ten would naturally seek a remedy in throwing the book aside and taking up another; but the Bachelor and the responsible critic cannot so easily escape from themselves. We had hoped besides that the dulness of the beginning was an expedient of the author's, although unquestionably a dangerous one, to heighten the sparkle of what was to follow. For the Bachelor has "for the thousandth time come to the conclusion that the cause of his mental disquiet was

* *The Bachelor.* By Arthur Montagu Brookfield. London: Tinsley Brothers

the fact that he had no real friends"; and we cannot doubt that at last he is going to search for friends in earnest. So he does, and of course the friends are, on the whole, more lively than he is; but they are quite as unnatural, and very nearly as uninteresting. The man he chooses to introduce him into the great world—though indeed he has no choice in the matter, having, as we said before, but a solitary acquaintance—is a certain Mr. Sparrow, whom he has met in a tavern where they were both in the habit of dining. Sparrow is "an entirely unnoticeable sort of person, with hardly any good qualities," who, having neither wits nor money, does his best to live by his friends. Sparrow promises to present the Bachelor to Mattock, "who was at Oxford with me; he's as mad as a hatter; you'll like him very much. They say he's an Atheist." By the way, the turn of that sentence strikes us as among the best things in the book. He is also to make the acquaintance of Huntly, who "was rather a remarkable man," but who has proved a social failure, owing to his inveterate want of sincerity. Huntly ridicules what he admires, and professes to admire what he despises. The Bachelor is very grateful for being made free of the brilliant company, whose members on a closer knowledge of them develop still more agreeable and engaging qualities. Thus Mattock goes to bed through the day and sits up at night; he makes himself very much at home upon his acquaintance's hearth-rug, where he lies and smokes tobacco indefinitely. He takes opiates in place of healthful exercise, and breakfasts on jam without bread, and on dry cocoa and moist sugar mixed in a bowl. In spite of the peculiar *régime* on which he nurses his brain, he is described as a man of talent and an original thinker; so we regret the more that Mr. Brookfield has neglected the opportunity of showing that, though the general scheme of his work might bind him down to be dull, he is capable notwithstanding of being brilliant on occasion. Such as Mattock is, the Bachelor strikes up an intimacy with him, and the pair start to walk to Broadstairs. The character of this portion of the story is even more episodical than usual; while each episode means next to nothing, and has no connexion whatever with the main plot. The pedestrians meet a bagman, who tells a long and pointless story, and a harmless lunatic, whom they help towards his home. They are bitten by bugs, these insects being indicated by asterisks. They buy a book that might apparently have been brought under Lord Campbell's Act, from a pedlar, who tells lies about his life and his licence; they inquire their way, and sometimes miss it, but at last they arrive at their place of destination. Mattock has been sent there by a philanthropical middle-aged spinster who has set her heart upon saving him, and, disreputable as she knows him to be, she has singled out for his saviour a charming girl who is likewise a *protégée* of hers. Mattock proves himself more of a villain than this Miss Hope had supposed him to be; and the charming girl, in her longing for adventures, consents to elope on foot with the rascally philosopher. It is to be presumed she made the arrangement in the expectation of being married, but Mattock has no matrimonial intentions. He means to abandon his victim to her fate in an obscure inn in London. Luckily Providence interposes; the villain is drowned in the nick of time, and the Bachelor is rid of a dangerous companion.

The other acquaintances he makes are no worse than eccentric and tiresome. There is a Mr. Tepping whom he has met at a public restaurant, who cross-questions him straightway on abstract political questions, compels him to deliver his name and address, and turns up subsequently at the hotel at Broadstairs. And there is a Mr. Wilton-Cummings, who has taken him by storm in a coffee-room at Maidstone, and who tells long-winded stories that have not the slightest foundation in fact. "He was so used to being patronized or insulted, so unaccustomed to being listened to or treated with ordinary respect, that his simple heart yearned towards the Bachelor. It is very seldom that anything is lost by civility, and this old man was destined to perform a most signal service for the young one." We had fancied that the signal service foreshadowed the salvation of life or honour, or of fortune at the least. But the author consistently preserves a due proportion in the various incidents of his exciting narrative; and the signal service is the producing a wedding-ring at the Bachelor's marriage ceremony—the Bachelor having quite forgotten to provide one. The lady who makes the Bachelor happy is a Miss Margaret Tomlin Ainslie. We may remark that the interpolated "Tomlin" is a touch of realism worthy of Defoe. So, too, is the footnote appended to the inventory of Miss Ainslie's charms and shortcomings. We are told that "though handsome, she had rather large ears." Then follows the qualifying note, "Her ears were not so ludicrously large as to amount to a deformity." Miss Ainslie does not shine in conversation much more than her lover, but she has a gift of bringing rambling talkers to the point by throwing in a When? How? or Why? and that implies, as we are given to understand, no ordinary acuteness of intellect. We should have rather liked to have been informed of the precise words in which the Bachelor made his proposal, but Mr. Brookfield leaves these to the imagination. Also, as we gratefully acknowledge, we are spared the conversations which passed between the lovers during the two months the engagement lasted; for Mr. Brookfield's specimen conversations are intensely realistic, as we have said. But, by way of compensation, we have all the preparations for the wedding, given with a minuteness unrivalled before or since. We are told, for instance, how Mr. Tepping, who merely figured as one of the guests, "bathed his old body, including his scanty iron-grey locks with cold water, until his whole skin glowed." We are told what he dressed in, from his underclothing outwards; how he buttoned his shirt and buckled his braces; and how he sat down to a breakfast of fried whitings, lamb chops, muffins and tea. The book, in short, ends as it began, with that vapid twaddle of unmeaning description which makes it somewhat tedious reading throughout. Fortunately, it is not very long; and we must add that there are several touches of humour, which every now and then revive the suspicion that the author is mocking us. If it be so, he must be content to take the consequences of having imitated dulness with such genuine sympathy that in his parody he actually surpasses his models.

BRUGSCH'S HISTORY OF EGYPT.*

(*Second Notice.*)

THE testimony of the monuments, to which alone Brugsch-Bey restricts his attention and consents to give his confidence, sets him in opposition not only to a great part of classical or of received tradition, but to much that has been put forth of late by authorities in Egyptology and has been accepted as incontrovertible fact. His calmness and caution as a scholar have been his safeguard against many a seductive theory which has cast its glamour over minds of a more imaginative or romantic bent. He thus dismisses as a dangerous error the idea, high in favour with a certain class of Egyptologists, of a Pelasgo-Italic confederacy of nations in the times of Minepthah I. and Rameses III. Resting upon readings of names in the long lists of tribes which make up the sum of those monarchs' victories upon the great tablets of Thebes and Abydus, this inviting theory brings into vivid prominence races the most familiar to students of the Homeric cycle. Opening up a vista of remote antiquity, in which Hellenic enterprise already crosses the settled orbit of Egyptian ascendency and civilisation, this error has already, our author complains, struck its roots into handbooks of the history of Greece and Italy. From a candid and unbiassed reading of the text of the monuments in question he is led to regard Ilium, Argos, and Achaia, with the Dardanians, Mysians, and Lydians, as powers altogether unknown to the Egyptians of the fourteenth century B.C. A more critical system of transliteration bids him place the peoples whose names correspond to the hieroglyphics in the highlands about the upper course of the Euphrates. The Dardani, or Dandani, introduced amongst the tribes confederate with the Khita at Kadesh in the great war with Rameses II., are placed by him in Kurdistan, being included in the Abydus tablet in the roll of "people from the extremest end of the sea to the land of Khita." The Dardani are met with again in the heroic song of Pentaur commemorating the same victory, as are also the people of Naharain, or Upper Syria, and Qarkemish (Karchemish, in Greek times Hierapolis, now Jerablûs). In the great battle of Prosopis, in which Minepthah II., in the fifth year of his reign, repelled the threatened invasion of the Libyans (Libu) and their allies, recorded in the great temple of Amon at Thebes (translated by Dr. Birch in *Records of the Past*, vol. iv. pp. 398-99), a list of names occurs which, by a little ingenuity, may be made strongly suggestive of Greek affinities. If the Qaiqasha invite identification with the Caucasians, so do the Aquaiashu with the Greeks of Achaia, the Shardana with the Sardinians, the Tursha with the Etruscans or Tyrrhenians, or perhaps the Teucrians. Now the Libyans, it appears, were held in contempt by the Egyptians as an uncircumcised race, whereas these tribes, mercenaries of the Caucaso-Colchian family, who had migrated into Libya, and who again took service for pay against Rameses III., are kept in high esteem as being circumcised. Our author annexes the list, as setting at rest the question of the origin of these people:—

1. Qaiqasha, the Caucasians.
2. Aqaiuasha, the Achæans of the Caucasus.
3. Shardana, the Sardones, Chartani.
4. Shalkalsha, the people of Zagylis.
5. Tursha, the Taurians.
6. Zakar, Zakkari, the Zyges, Zygritæ.
7. Leku, the Ligyes.
8. Uashash, the Ossetes.

To identify these *circumcised* tribes, as some have done, with the Achæans, Sardinians, Siculians, Etruscans, Teucrians, Lycians, and Oscans of classical antiquity, is in effect to introduce a serious error into the primitive history of the classic nations.

Another favourite notion of recent times has been that of recognizing the Egyptian name of the Hebrews in the so-called 'Aper, 'Apura, or 'Aperiu, the Erythræan people to the east of the nome of Heliopolis, known as the "red country" or "red mountain." The monumental readings enable Brugsch-Bey to dispose summarily of this hypothesis. It is chiefly in connexion with the breeding of horses and with horsemanship that the name of this people comes before us in the inscriptions. In an historical narrative of the time of Thutmes III., unfortunately much mutilated, the 'Apura are named horsemen or knights (*senen*) who mount their horses at the King's command. In a document of the reign of Ramses III., long after the date of the Exodus of the Hebrews, 2,083 'Aperiu are introduced, as settlers in Heliopolis, with the words, "Knights, sons of the kings and noble lords (Marina) of the 'Aper, settled people, who dwell in this place." Under Ramses IV. we again

* *A History of Egypt under the Pharaohs, derived entirely from the Monuments.* By Henry Brugsch-Bey. Translated from the German by the late Henry Danby Seymour, F.R.G.S. Completed and Edited by Philip Smith, B.A. To which is added a Memoir on the Exodus of the Israelites and the Egyptian Monuments. 2 vols., with Coloured Plates and Maps. London: John Murray. 1879.

meet with the 'Aper, eight hundred in number, as inhabitants of foreign origin in the district of 'Ani or 'Aini, on the western shore of the Red Sea, near the modern Suez. A more decisive series of equivalents to Hebrew nomenclature is made good out of the long list of conquered towns of districts paraded in the inscription of Shashanq I. (Shishak) on a wall of the temple of Amon in the Theban Api. Besides many Biblical names of familiar form—Ra-bi-tha (Rabbith), Ta-'an-kau (Taanach), She-n-mau (Shunem), Re-ha-bau (Rehob), A-dul-ma (Adullum), A-ju-lon (Ajalon), Qe-be-'a-na (Gibeon), Bi-le-ma (Bileam), Pi-Na-ga-bu (the Negeb or south)—the smitten peoples are called the "'Am of a distant land," answering to the Hebrew "'Am," which signifies people, but especially the Jewish people and their tribes. Together with these people are mentioned those of A-do-maa (Edom) and the Fenekh (Phoenicians). Amongst the tribes invaded and plundered by Ramses III. are included the Sahir, the Seirites of Scripture, who are clearly recognized as a branch of the Shasu. The same King did much to develop the natural treasures of the peninsula of Sinai, which from the time of King Senoferu had been held in high value by the Egyptians, especially for the much-prized greenish-blue copper-stone, the Mafka or turquoise. The most valuable key to the geography of the Pharaonic times is supplied by the long catalogue of nations or tribes which covers one side of the pylon of this monarch at Medinet Abu (translated by Dr. Birch in *Records of the Past*, vol. vi. p. 17, *sqq.*). Herein it is interesting to meet with numerous cities of Cyprus which had joined the league of the coast and islands of Asia Minor against Egypt, and provoked this retaliation. Amongst these are Salomaski (Salamis), Kathian (Kition or Citium), Aimar (Marion), Sali (Soli), Ithal (Idalion), Maquas (Akamas?), Kerena or Kelena (Cerynia), and Kir (Curium). Most of the places here enumerated were, as Brugsch-Bey claims the honour of having been the first to point out to the learned world, the seats of Carian people. But he fails to carry with him our confidence when, in the long list of tribute or spoil of war brought into the treasure-house of Thutmes III. (from a tablet in the Louvre), he identifies with Cyprus the land of Asebi, whence come, together with forty bricks of brass and one brick of lead, a pair of elephant's tusks, which we have never learnt to include among the native products of that island.

Amongst the numerous sources from which their boundless wealth flowed into the treasuries of the Pharaohs was the mysterious land of Punt, the abode, according to an old tradition, of the gods who migrated thence with Amon, Horus, and Hathor at their head, into the Nile valley. By the name of Punt the old inhabitants of Kemi meant a distant land washed by the great ocean, full of valleys and hills, rich in ebony and other rare woods, in incense, balsam, precious metals, and costly stones; also in beasts, such as giraffes, hunting leopards, panthers, dog-headed apes, and long-tailed monkeys. Birds with strange plumage rocked themselves on the branches of wonderful trees, such as the incense-tree and the cocoa-palm. This land of wealth, which may well have been the same as the Ophir of the Hebrews, is considered by Brugsch-Bey to have been beyond doubt the Somauli land facing the coast of Arabia. Peculiar to that land was the idol Bes, the oldest local form of the godhead, which wandered far from thence, and gained a footing not only in Egypt, but in Arabia and divers parts of Asia, as far even as the isles of the Greeks. The misshapen Bes, with apish countenance and bestial attributes, became identified with Set, and in the Greek mythology with Herakles, as also with Dionysus. Numerous representations of this god are given by Sir Gardiner Wilkinson, who thinks that by Bes is typified the power of death, as the dissolution of the animal part of man. He seems to us rather to embody the ideas of animal or corporeal vigour and enjoyment. It was under King Sankh-ka-ra, of the eleventh dynasty, that the first expedition took place to Punt for odoriferous gums, "the noble Human being the commander," as he has himself left on record in the inscription translated by M. Chabas. In this instance, as habitually throughout the book, we have to complain of no adequate reference being given to the whereabouts of the original inscription quoted, and but little aid to guide the student in his search for the translation. We have to thank the editor for having in numerous cases taken the pains to point out to us where documents cited by his author have been presented to the English public, especially in the pages of *Records of the Past*. In these, as in the *Transactions of the Society of Biblical Archæology*, the critical student has the means of viewing the Egyptian texts under the light of independent systems of philology, and of gaining by the comparison highly valuable knowledge as to the present state of hieroglyphic interpretation.

At the close of the work Brugsch-Bey has given, as a specimen text, an inscription of Usurtasen III., at once indicating the difference in language and tone between writings of the twenty-fourth century B.C. and those of later periods, illustrating the value of strict adherence to the literal method in assigning its equivalent to each word, and, by critically securing each step, arriving at the sense of the whole passage. He betrays some soreness at the criticisms passed upon sundry of his interpretations by a French writer whom it would not be difficult to name. The time indeed is not yet come for complete accord amongst scholars of all lands or tongues. In regard even to the values to be assigned to the characters of the old Egyptian alphabet variations will be found to exist, as may be seen from studying the scheme of transcription given in the Appendix. More than once in the course of the two volumes we have recollections of passages of arms due to discrepancies in the reading of original documents. Such is the case with the remarkable letter of the time of Ramses II. (about 1300 B.C.), in which a high professor of the literary style rebukes the inferior composition of a novice, both in respect to matter and form. Brugsch-Bey submits his new translation for comparison with that of M. Chabas, first issued in 1866, and given in *Records of the Past* under the strange title of "Travels of an Egyptian." One striking feature of this letter is the knowledge of Semitic roots which it shows on the part of the writer. *Ariel*, or *arel*, as in Hebrew, is used for a lion. The name of a hero "lord of Azel" is read "Qazailoni," suggestive of Qabzeel (A. V. Kabzeel), the birthplace of Benaiah (2 Sam. xxiii. 20), or perhaps connected with *Kislon*, strong (Chislon, Num. xxxiv. 21). The name of the city Zar'au-na, described as dangerous, may indicate a play upon the Hebrew *Zir'eah*, wasps or hornets. Well-known names like Birotha (Berytus, Beyrout), Ziduna (Sidon), Zor (Tyrus), Jopu (Joppa), occur throughout. We get from Brugsch-Bey an independent version of the heroic song of Pentaur, not only preserved upon papyrus, but inscribed at length upon the temple walls of Abydus, translated in the first instance by M. E. de Rougé, and given in English in *Records of the Past* (vol. ii. pp. 65 *sqq.*). In the abundance of original documents lies, indeed, it need hardly be said, the special value of his great work, enabling the student to travel with an authentic clue in hand through the labyrinth of Egyptian history, with little fear of being misled by the false or shifting lights of tradition or prejudice. The tables of regal dynasties are of important service to this end; nor are we less pleased to see rescued from oblivion the names of great architects to whom ancient Egypt owes so much of its imperishable monumental grandeur. The head artist of Amenhotep IV. was Bek, a son of "the overseer of the sculptors from life (in Egyptian s'ankh, *lit.* the vivifier, the giver of life), Men, and of the lady Ri-n-an." The gravestone of Bek was bought, our author tells us, not many years ago by a friend of his, Mr. L. Vassalli, in the market-place of Cairo. A description is given by him of the figures and the writing which it bears, indicating the artist's pedigree. A lesser master, by name Putha, overseer of the sculptors of Queen Bek-en-aten, depicts himself chisel in hand upon the wall of the splendid tomb of Tell-el-Amarna. Under Ramses IX. the high priest of Amon, Amenhotep, gives himself the further title of "the great architect in the city of Amon." Several monumental notices, including a pictured family group now in the Museum at Naples, furnish the genealogical tree of the line of Ameneman, the architect, as well as chief of police of public works under Ramses II.; this official being, in our author's opinion, no other than the immediate oppressor of the Hebrews before the Exodus. Under his official rule, it seems probable, were erected the two splendid obelisks in front of the temple of Amon at Luxor, begun in the reign of Amenhotep III., but not finished until the time of Ramses II., one of which pair of obelisks now adorns the Place de la Concorde, Paris. The designer of the great rock temple of Abu Simbel has not been brought to light; but in Amen-men-ant, the grandfather of the architect of Ramses II., it seems that we may recognize the artist who, under Thotmes III., was the first to chisel obelisks from the granite cliffs of Syene, among these being that of the Lateran at Rome and the monolith which has lately found its final site by the side of the Thames. Coming down to later dynasties (XX.-XXVI.), Brugsch-Bey has been able to supplement his full and authentic lists of sovereigns, queens, high priests, and priestesses, with more than a score of names of chief architects of the ruling Pharaoh.

COLONIAL AMERICAN LITERATURE.*

A RATHER insipid mass of bibliography, pleasantly flavoured with social history, and spiced with piquant anecdotes, would be a not unjust description of these two ably compiled volumes. Of literature, properly speaking, they contain nothing. Among the numerous writers of colonial America only two—Anne Bradstreet in poetry, and Jonathan Edwards in prose—attained any considerable distinction, or are intrinsically worthy of much notice. To students in this country who take up Professor Tyler's volumes the only familiar names in them, in all probability, will be these two. When we consider how large a proportion of the first settlers in New England were persons of liberal education, and even ambitious of literary honours, it is certainly singular that what was written in America before the War of Independence is so far from being satisfactory. However, if we know the figures to be small, they possess, like a theatre of marionnettes, all the tricks and graces of real authors, and their literary history is much the same, minus the genius. The Virginian writers are indeed a melancholy company, being either, like Captain John Smith and George Sandys, casual visitors from Europe, or puny settlers of fifth-rate talent expressing themselves in a manner exactly worthy of that lamentable settlement, Jamestown. In New England we find, of course, something better than this, or Professor Tyler would never have had the courage to write his book at all; but even the Northern authors are very harsh, very narrow, and very provincial. The reader learns in these pages, with a shudder, quite as much as he ever wishes to remember about Nathaniel Ward, who wrote in 1645 the *Simple Cobbler of Agawam*, and who drove "plain, honest, country hobnails" into the tender consciences of his fellow-citizens; of John Cotton, a very tedious prosaist, whose attacks of indisposition were marked by the appa-

* *A History of American Literature, 1607–1765.* By Moses Coit Tyler. 2 vols. London: Sampson Low & Co. 1879.

rition of comets; or of Michael Wigglesworth, who wrote the most hideous poem in existence to celebrate, with rubbing of hands and smacking of lips, the eternal tortures of the damned. The cruelty and bigotry of these New England writers baffle conception; here in England the gentler and urbaner tradition of the Established Church preserved our religious literature from the excesses of sectarianism, whereas in America this tradition was ignored. As all the books published were more or less religious till about 1720, this is a very serious fact. The books printed by these dreadful divines breathed out nothing but threatenings and slaughter against every dissentient; toleration was universally condemned as a vice; and if Sir Thomas Browne had talked his *Religio Medici* in Boston, he would have run great risk of slit ears and a whipping. "I cannot fall out with, or contemn, a man for an error, or conceive why a difference in opinion should divide an affection," would have been rank heresy across the Atlantic, where, at the very time of its publication in England, the fact that a Prayer-book belonging to John Winthrop was eaten by mice, while a New Testament and a Psalter on each side of it were untouched, was enough to persuade the whole colony of God's anger against that human and presumptuous compilation. The Restoration made things no better, and lightened the bondage of bigotry not a whit. Without the least flippancy, we must be allowed to remark that life in London with Sedley and Etherodge was a pleasanter and humaner thing than it was in Boston with Edward Hopkins denouncing sinners till he bled at the nose, or with that ghostly divine, Mr. Increase Mather, hunting witches to the death. The history of early colonial literature in America is very little else than a catalogue of unwieldy and grotesque works in defence of the most unlovely religion that was ever yet devised for man. Those who wish to have a taste of its quality will no doubt be amply satisfied with *The Bloody Tenet yet more Bloody, by Mr. Cotton's Endeavor to wash it White in the Blood of the Lamb*, in which the only large-minded and intelligent man in the colony, Roger Williams, attempted, at the peril of his life, to expose the cruel errors of the Puritan practice. Hawthorne and Longfellow may try to tinge the early New England life with picturesque colour, but the more closely we look into it, and especially the more we view it in its literature, the more hopelessly blank and hideous does it seem.

The only redeeming points of light in this dark picture are those well-meaning writers, excellent in aim though poor in execution, whom we find struggling to suggest to their contemporaries better themes for authorship than the fierce pleasures of Puritanism. Of these George Alsop, author of a rollicking description of the province of Maryland, is perhaps too scandalous for more than a passing mention; but certainly John Josselyn, lover of nature and hater of the Puritans, who wandered away botanizing into the White Mountains to escape the jarring of the creeds, is worthy of our kindliest regard. He was a sort of Thoreau in his humble way, and though he was wholly without scientific equipment, American science owed not a little to him. He was the friend of Quarles, if not of Drayton, and a person of gentle and refined demeanour, fond of good verse and a quiet life. We may consider him as a faint contemporary shadow of the illustrious John Ray. But by far the most important literary figure during the whole colonial period is that of the poetess Anne Bradstreet, one of the few whose works, moreover, can be consulted by an English reader, for they were reprinted in a very splendid form in 1867. Anne Dudley was born near Sempringham, in England, in 1612; she married one of the famous Puritan graduates of Emmanuel College, Cambridge, in 1628. This was Simon Bradstreet, with whom, in 1630, she emigrated to the newly founded colony of New England. They settled at Andover, among the woods, and close to those sounding waters of the Merrimac which she celebrates in her poems. The latter she did not venture to send to London to be printed until 1650, when they were brought out under the title of the *Tenth Muse lately Sprung up in America.* Twenty-five years afterwards, Phillips, the nephew of Milton, spoke of this volume as not yet quite forgotten—a phrase that but poorly represents the immense popularity it enjoyed in New England, especially when, six years after her death in 1672, it was reprinted, with large additions, in Boston. The poems of Mrs. Bradstreet were, indeed, calculated to make but small stir in England, though most remarkable as a native product in America. She reminds us now of Quarles, now of Cleveland, but always most of Margaret, Duchess of Newcastle; she has an absolutely unflinching infatuation for inversions and conceits, piling up her chilly imagery till the sense is baffled. By far her best poem is that in which she is plainly under the influence of Phineas Fletcher, and she is, we believe, the only writer who has ever adopted that poet's curious measure in the *Purple Island*. Here are two stanzas which show Anne Bradstreet at her best:—

> Under the shadow of a stately elm,
> Close sat I by a goodly river's side,
> Where gliding streams the rocks did overwhelm;
> A lonely place, with pleasures dignified.
> I once that loved the shady woods so well,
> Now thought the rivers did the trees excel,
> And if the sun would ever shine, there would I dwell.
>
> While musing thus, with contemplation fed,
> And thousand fancies buzzing in my brain,
> The sweet-tongued Philomel perched o'er my head,
> And chanted forth a most melodious strain,
> Which rapt me so with wonder and delight,
> I judged my hearing better than my sight,
> And wished me wings with her awhile to take my flight.

Anne Bradstreet was mourned in more or less trivial verse by John Norton and Urian Oakes, in whom the Jacobean tradition faded into mere frippery and was lost. Persons of taste should be warned against Nicholas Noyes, a veritable monster among poetasters. He was followed by a general amelioration in the tone of religious opinion; the stately indifference of the English Augustans began to temper the severity of the Puritans, and, in spite of the spiritual tyranny of the Mathers, the most ghastly period of New England society was passed. But a kind of literary madness seized the colonists; they had nothing to say, and no conception of the way in which anything ought to be said; but the demon of scribbling possessed them, and they wrote a multitude of books by the side of which the harsh accents of their predecessors of the seventeenth century seem musical and entertaining. The apotheosis of pompous dulness was witnessed in the ascent of Increase Mather, berobed and beperiwigged, into the literary heavens of Boston; and, when his mantle fell from that empyrean height on the still more crass and loquacious Cotton Mather, Nature smiled to think that a creature more insolently besotted could never, as long as time might last, wield the sceptre of *belles-lettres*. The only member of the group with whom we can feel the smallest sympathy at this distance of time is Mather Byles, a gorgeous and pontifical person of the reign of George I., who enjoyed the friendship of the great Mr. Pope, and who reigned in state for many long years as pastor of the church of Hollis Street, Boston. Dr. Byles was a staunch Tory; and when, in his old age, New England rose in rebellion against the mother country, his unshaken attachment to the King proved a great stumbling-block to his congregation. They had been trained, however, to abject submission, and how to state to him their objection to his politics they knew not. At last, with much trepidation, they mustered up courage to summon him before them in church:—

> In due time the doors opened slowly, and Dr. Byles entered the house with an imposing solemnity of manner. He was dressed in his ample, flowing robes and bands, under a full bush-wig, that had been recently powdered, surmounted by a large three-cornered hat. He walked from the door to the pulpit with a long and measured tread, ascended the stairs, hung his hat upon the peg, and seated himself. After a few moments he turned, with a portentous air, toward the gallery where his accusers sat, and said, "If you have ought to communicate, say on!" Upon this, one of the deacons, a very little man with a very little voice, stood up and began to read:—"The Church of Christ in Hollis Street ——" "Louder!" roared the frowning orator, with awful leonine voice. The puny deacon began again, and with still greater effort of articulate squeak. "The Church of Christ in Hollis Street——" "Louder!" once more shouted the preacher, with terrible emphasis. The miserable little man, now trembling with fright as well as with great stress of vocal impotence, began once more, and was permitted to proceed through three or four of the specifications, when the insulted pastor arose, indignation darkening all his face, and giving dreadful resonance to his voice, and thundered out, "'Tis false; 'tis false; 'tis false; and the Church of Christ in Hollis Street knows that 'tis false." Upon this he took down his hat, put it upon his head, and descending the pulpit as an angry monarch would his throne, he stalked proudly out of the church never to enter it again, leaving to the little deacon and his brethren the contemptible privilege of making the most of their specifications against him.

It is a relief to turn from these grim divines of Massachusetts to the more lively inhabitants of the Southern States. The chief literary ornament of Maryland was Ebenezer Cook, Gentleman, whose poems are as rare and almost as eccentric as those of Ebenezer Jones. He was the proud author of the *Sot-Weed Factor*, a Hudibrastic satire on the manners and customs of Maryland, of which this is a fair example:—

> While riding near a sandy bay,
> I met a Quaker, yea and nay;
> A pious, conscientious rogue
> As e'er wore bonnet or a brogue;
> Who neither swore nor kept his word,
> But cheated in the fear of God;
> And when his debts he would not pay,
> By Light Within he ran away.

The *Sot-Weed Factor* was published in 1708, and is by no means a contemptible poem, even when judged by an English standard. The only other production which deserves mention was the work of a young Pennsylvanian watchmaker, a son of Godfrey, the mathematical glazier, Franklin's friend. This young man, who died when he was twenty-seven, left behind him a drama, which was printed in 1765, entitled *The Prince of Parthia*. This was the earliest dramatic piece composed, or known to be composed, in the United States, and is therefore much sought after by American critics. It must be confessed that it is rather a poor performance, in the heroic manner of Southerne, and Thomas Godfrey was absolutely without a glimmering of poetic originality. The best we can say of *The Prince of Parthia* is that it was very creditable indeed to the author—as a Pennsylvanian. Godfrey fought for a year against the English, and afterwards became a factor; he died suddenly in 1763.

We are carried pleasantly through these long and learned volumes by the enthusiasm of the author, and by the amusing freshness of the anecdotes he tells; but we are scarcely convinced by them that so exhaustive a history of colonial American literature was a thing for which the human mind was absolutely craving.

MISS STOKES ON IRISH ARCHITECTURE.*

AUTHORS of poor books, who look upon reviewers as a cruel and heartless race, gloating over failure and rejoicing in the

* *Early Christian Architecture in Ireland.* By Margaret Stokes. London: George Bell. 1878.

exposure of disappointed ambition, can hardly conceive the feeling of pleasure with which work like this of Miss Stokes's is approached. It has long been looked for, and expectation is not balked. The true story of Irish architecture has been almost a secret; and it is but a few years since the secret came into the hands of a few investigators. The mystery which hung over the ruins of Glendalough or Clonmacnoise added to the romantic interest with which they were regarded. It was known that certain learned people had "views" on the subject, but what those views were, how far they solved the question of the antiquity and meaning of Round Towers, how far they could give a date to square-headed windows in lonely chapels, and round-headed doorways in stone-roofed cells, nobody knew. Lord Dunraven was understood to hold a key to the mystery; and when his great work—posthumous, unhappily, in part—saw the light, it was at once recognized as the final authority; but to the ordinary reader Lord Dunraven's opinions were inaccessible. The old, far-fetched stories, the traditions of modern growth, the legends which sprang from audacious guesses, continued to hold their ground, and a mere list of the wild theories which clung to the fabric of every ruin would alone have filled a volume. In the present work Miss Stokes has brought within the reach of the general reader the truth, and probably the whole truth so far as it can ever be known, about the ancient ecclesiastical architecture of Ireland. It is of course based on the larger work of Lord Dunraven; but as Miss Stokes is known to have had a considerable share in the labour by which Lord Dunraven's book was produced, the authority of the present book is only enhanced, not diminished, by the connexion. In a modest but perhaps somewhat affected dedication to a friend, the author quotes a passage from the *Vision of Piers Ploughman* as to the journey of a certain company who went on a pilgrimage to seek for Truth. A veiled lady is made to ask what should women "wercke the while." Truth "commaundeth that women should work their churches to honour"; and with this humble yet lofty aim Miss Stokes has produced her book. "Our church," she says, "in its past and present," referring of course to the Church in Ireland, "needs something more than manual labour, and there are forms of hunger and of thirst other than for mere material food." It is with a view of supplying to her "beloved Ireland" some of that clothing of honour which she so much needs that the author comes forward to "be the helper, not the hinderer, of such men as have striven, and still do strive, to work wisely in her cause."

A mere list of the chapters will demonstrate the completeness of the result of Miss Stokes's well-directed labours. After an introduction in which the difficulties of the case are stated and a summary offered of the whole history of Irish architecture, the first chapter gives an account of the Pagan forts on the islands of Aran and other places, adding extracts from the legends concerning them, which however are clearly distinguished from real history; "for untold centuries these primitive strongholds have been associated with the ancient heroes of the Irish people"; and Miss Stokes wisely observes that "we have no more right to discard such tales as in all senses worthless, and to destroy all memory of such connexion, than we have to accept them in any way as history." After these we have the "cashels," or ecclesiastical forts, which are traditionally coeval with the introduction of Christianity. The seven centuries that elapsed between the mission of St. Patrick, although traces of earlier missionaries exist, and the English invasion in the reign of Henry II. form the age to which the rest of Miss Stokes's book relates; an age in which ecclesiastical remains are so numerous that their succession may be traced, link by link, from the chapel of Cormac on the Rock of Cashel, back, without a break, to the primitive cell of the first preachers. When we come to the first Christian monasteries something almost romantic in its charm inspires Miss Stokes's pen; but, in the pardonable enthusiasm of her eloquent Irish spirit, she never forgets the sober judgment of an antiquary who was brought up in the strictest school of historical investigation that England has heretofore produced. The discipline of Guest and Willis is, as we have already had good proofs and many, not inconsistent with warmth and even poetry in description; and when Miss Stokes tells us of the lonely islet miles away in the "moving waters" of the Atlantic, which, like the spire of some great cathedral, "raises its graceful and majestic form"; when she shows us the rounded hill, tinged with delicate green and rose from the sea-plants which cover it, and takes us to the church of St. Michael on the northern summit, with its surrounding group of monastic cells; when she describes the approach to the Great Skellig, "veiled in summer mist and sunlight," and the changed character revealed by a nearer approach, when the "great black masses of slate rock grow terrible" as the landing-place is reached, in a narrow cove where the surrounding cliffs rise vertically to the full height of the island—we know that, graphic as are her words, the impression they convey is absolutely truthful, and, whatever we gain in the pleasure of reading, we lose nothing of strict archæological exactness. We cannot pause over this chapter longer than to select the following passage as a specimen of this phase of Miss Stokes's work:—

> This island has been the scene of annual pilgrimages for many centuries, and the service of the Way of the Cross is still celebrated here, though with some perfectly traditional forms of prayer and customs, such as are now only found to exist among the islanders along the west coast of Ireland. From the last place mentioned a long flight of steps reaches to Christ's Saddle, or the Garden of the Passion. Here the pilgrim rests before commencing his final ascent to the Oratory. This valley is a narrow saddle-shaped strip of land between the two extreme heights of the island, either side being perpendicular to the sea. It is covered with a soft green sod. Standing at that side which faces the western horizon, the whole of the great Spit, as the highest point of the island is called, may be seen rising from the sea—a sheer precipice from summit to base. It runs up like a Gothic tower, girt with buttresses and pinnacles, all in a glory of colours. The black rock at its foundation contrasts with the deep blue of the sea, and above it is variegated with tufts of lichen and sea pink, fern and moss, which, when lit up by the evening sun, shine out in every shade of green. Towards the summit the rock becomes lighter in tone and less thickly clothed with vegetation until it ends in a sharp point glittering in the sunlight.

The other island hermitages and oratories, including Scottish examples, are then noticed. The chapter relating to stone churches with cement begins with a few observations on the prevailing tendency of most writers on the history and architecture of Ireland to exaggerate the age of her monuments, and to antedate the period of her intellectual growth by attributing to the sixth century what really belongs to the ninth and tenth. At the Council of Drumkeat, in 590, where the great Columba was present, an alliance of the regal and ecclesiastical powers was first cemented, an alliance which may be said to have subsisted until the days of Mr. Gladstone, when the bishops who are Columba's successors were for the first time excluded from the councils of the nation. After Drumkeat the Church first attained a stable position, and to this period Miss Stokes assigns the introduction of the cemented walls and dressed stones which are wanting at the Skellig and in the Pagan forts. At this point there is a footnote which we must pause to commend as a singularly clear and succinct account of the early Christian literature of Ireland that has come down to us—a literature in which Miss Stokes, to judge by her Appendix, to be noticed presently, is very much at home. In the fourth chapter Ecclesiastical towers in general are considered. The "lofty pillar tower" forms, we are told, "a striking innovation in the hitherto humble character of Irish church architecture." In the Appendix is a complete list of the Round Towers, one hundred and eighteen in number, together with a transcription of the passages in Irish annals which relate to them, beginning with the entry, under 949, of the burning of the belfry of Slane, "with its full of people in it," and ending with the building of the tower of Annadown, County Galway, in 1238. The latest researches have led to the discovery that the type was not confined to Ireland, and a score of foreign examples are adduced. Miss Stokes divides them by the style of their masonry into four classes; and she concludes that they were all built after the Irish became acquainted with the use of cement and the hammer, that they belong to the period of transition between the entablature style and that of the round arch, and that the earliest towers date from the beginning of the tenth century. As to their use we have some interesting inquiries in the fifth chapter, ending with the important opinion, fully developed in the sixth, in which we have an account of the Northmen in Ireland, that they were erected both as campaniles or bell towers and as places for defence against the sudden forays of pirates. These conclusions are supported by letters from Mr. George T. Clark, and seem to admit of no doubt or discussion. Mr. Clark observes that the Round Towers are not ill calculated for defence. Though they could not hold many defenders, they would oppose a stout passive resistance to a short, sudden attack. Mr. Clark adds some notices of similar towers in England, but all of later date. At Bedale, in Yorkshire, the church tower is furnished with a portcullis. The circular form was the easiest to employ, and therefore, as witness the wigwam of America, or the domed hut of the Nubian peasant, is the simplest, and may be found among the most ancient remains.

Following the chapters on the incursions of the Danes, Miss Stokes gives an account of Romanesque architecture in Ireland, which began with the building of the little church of St. Caimin of Iniscaltra, by King Brian Boruma, fifty-eight years before Edward the Confessor built Westminster Abbey. It was at this time, then, that the Romanesque wave passed direct from Normandy to Ireland. Irish Romanesque is "somewhat pre-existent to Anglo-Norman architecture and entirely independent of it." The volume concludes with a series of appendices, containing notes on the form of the early Irish churches, and a chronological list of those examples of architecture, sculpture, and metal work of which the dates can be accurately determined. This is a paper of the utmost value to the Irish, indeed to any, archæologist. It is followed by a table, with remarks on the pre-historic monuments, or cromleacs, a map illustrative of the invasions of the Northmen, and a chapter on the intercourse between Ireland and France in the reign of Charlemagne. Finally the letterpress concludes with an excellent index.

The woodcuts—of which there is a careful list, naming both the artist and the engraver—are in themselves remarkable and attractive features of this most fascinating book. Some of them are new, some have already appeared in Lord Dunraven's great work, all are alike excellent. A large number are drawn by Miss Stokes herself, and prove her to be almost as capable of managing her pencil as her pen. Altogether, we may plainly confess that, finding nothing but what is good to say of this volume, we have sought in vain for a serious mistake, or other "fault escaped in the printing," and are compelled to acknowledge that there are none worth noticing. People who enjoy graphic descriptions, pretty pictures, and a subject as romantic as any of the travels into foreign lands so popular with subscribers to circulating libraries, will find this one of the best books of the season.

AN EYE FOR AN EYE.*

THE literary invention which has established a regular manufactory of its wares and devised an easy method of producing fiction congenial to the popular taste—fiction neatly turned, signalized by marks of the original achievement which got the author his name and fame, bearing the impress of a master's hand, and thus winning a certain amount of success—yet fails uniformly in one point, and for the obvious reason that the interest and feeling of the artificer is less apparent in machine-made work than in the model which it imitates. The work has been carried through without that intimate partnership between heart and soul and hand, which is apparent in the past efforts of genius, whether the thing be handicraft or headwork. Habit makes the brain even more obedient than before to the calls made upon it, and facility comes with practice; but enthusiasm flags. The emotions of the author are less equal than before to the demands upon them; they take matters easily, and will not wait upon invention with a zealous interest; and because the sympathy of the writer with his creations flags, the heart of the reader takes their trials and sorrows in quite a different spirit from that which first brought him into relation with their author. This is one supreme advantage which early efforts have over the later productions of a prolific fancy. The tiro is absorbed in the creatures of his fancy; their adventures, their griefs, are his own; he is full of them; and the reader, while believing himself to sympathize with ideal personages, is really sympathizing with the imagination that invents them. We do not suppose it possible to be keenly interested in any story which has not awakened an intensity of feeling in its narrator. Such intensity is certainly wanting in the tragical story before us; and therefore the reader takes the calamities of its leading characters not only dry-eyed, but with an easy composure which would in its turn be tragical to the writer were it his first novel—though this is an impossible supposition.

Wherever there is imagination, some new experience—a view of human nature under some new condition—will awaken this strong interest. Mr. Trollope can still draw a very vivid picture of a life new in all its features and details; but the situation in this story is not of a nature to quicken a dormant faculty. The cliffs of Moher may possibly have suggested the subject and the mode of treatment, but it could only be by a backward process and by starting with a consummation to be worked up to. There is, indeed, in this story a connexion between the beginning and the end; the first note of the tale does point to effective tragedy. The whole pathos of the book lies, to us, in its first pages, which introduce the reader to the inmate of an asylum—an unfortunate lady whose mind is ever at work repeating the same formula:—

> She has present to her, apparently, in every waking moment of her existence, an object of intense interest; and at that she works with a constancy which never wearies herself, however fatiguing it may be to those who are near her. She is ever justifying some past action of her life. "An eye for an eye," she says, "and a tooth for a tooth. Is it not the law?" And these words she will repeat daily, almost from morn till night. . . . . But, though she has no friends—none who love her—she has all the material comfort which friendship, or even love, could supply. All that money can do to lessen her misery is done. The house in which she lives is surrounded by soft lawns and secluded groves. It has been prepared altogether for the wealthy, and is furnished with every luxury which it may be in the power of a maniac to enjoy. This lady has her own woman to attend her; and the woman, though strict and masterful, is gentle in language and kind in treatment. "An eye for an eye, ma'am. Oh, certainly. That is the law, an eye for an eye, no doubt." This formula she will repeat a dozen times in a day—ay, a dozen dozen times, till the wonder is she also should not be mad.

There is a strong touch of reality in this terrible record. It can hardly be a fancy picture; but in adapting it to his story Mr. Trollope imparts a sense of the improbable by putting this over-repeated text, whether his own choice or not, into the mouth of a Roman Catholic educated in France, with whom the words can hardly have been so familiar as to have presented themselves at the moment of an unpremeditated, tremendous act. But in his handling of the religion of women—a favourite subject of speculation—our author always strikes us as describing it through his inner consciousness, apart from observation or experience. This same lady, when in her right senses, indulges, as he says, in a "sarcasm on life" by referring her daughter in her early days of solitude and inaction to the glories of eternity. It does not sound very natural in an ambitious mother, at the first expression of the girl's dulness and dissatisfaction with her solitary life, to promise her pretty daughter that it will be over "in a few days, a few hours," explaining that eternity is coming; but if she were to do so she could hardly be actuated by the cynical scepticism which Mr. Trollope assigns as her motive:—

> Yes, it will always be like this for you—for you, unfortunate one that you are, there is no further look out for you in this life. You are one of the wretched to whom this world offers nothing, and therefore, as being human, you must hope, build your hopes on eternity.

There are pious ladies in the story whose Protestantism recoils from this mother and daughter. His women are always stouter in their convictions than his men; if they hold a dogma which Mr. Trollope's liberality cannot stomach, they *do* hold it. He is never so far away from the talk of real life as in their case; they are walking catechisms and talk in syllogisms. All his characters indeed follow the rule with which Mrs. Poyser credits her husband—"What he says he stands to"—a system which simplifies an author's labours very considerably; but the religious woman beats them all in harping persistently on one key, appealing to solemn sanctities which, if they offend nothing else, not unfrequently offend the reader's taste.

When novel writers are no longer inspired by a moving story to tell, which is the first motive setting the pen to work, their next resource is a principle to advocate or an abuse to expose and illustrate. It is not very easy to divine what is the especial grievance against society in an *Eye for an Eye*, unless it be the deleterious effect of rank on the moral character. The hero starts as a very poor fellow, but pretty much on a par with other merely self-indulgent young men till he comes to the earldom, when the weight of a coronet and the sense of *noblesse oblige* makes him a stolid traitor to the more natural sense of honour which had previously had some influence with him. Every one of Mr. Trollope's heroes, or of the young men who fill the place of heroes, is a "god" to the heroine. His pen so naturally slips into this phrase that probably he is unaware of its action, and Fred is a god to Kate O'Hara when he comes in his boat and his sailor costume to relieve the tedium of her existence; but he has not a single manly quality. If it were not for a resolute irresolution he would have no stamina at all. He has a horror of dulness which is associated in his mind with the family mansion to which he is heir; and therefore, on first finding himself next in succession, he insists on taking a year of grace, and returns to his regiment in Ireland that he may shoot seals and sea-gulls and flirt with Kate O'Hara, whose home is perched on the top of the cliffs of Moher.

The character in the story to whom some individuality is given is Father Marty, the sole friend, as he is also the pastor, of the two desolate ladies. Whatever his religious principles, he is a man, and does not inflict them on friends or visitors with the feminine obtrusiveness on which we have remarked. He not only takes a great fancy to Fred himself, but encourages the mother to admit him to easy intimacy with her daughter; the fact of Fred's rank and prospects in no way deterring him from doing his best to bring a match about. "He regarded a stranger among them, as was Fred Neville, as fair spoil, as a Philistine to seize whom and capture him for life on behalf of any Irish girl would be a great triumph." So he makes friends with the young man, invites him to dinner, and does not tell him that the unfortunate women are living in hiding, away from the knowledge of the girl's father, Captain O'Hara, whose misdeeds in France have been rewarded by a long period at the galleys. He deliberately counts the dangers and the cost. Of a sore heart the girl must run her chance. "But how was a girl to have a lover at all if she was not allowed to see a man? He had never known what love was, but it was a pain to see a girl, good-looking and healthy, pine away unsought for. His philosophy was perhaps at fault, but he was human to the core, and, at any rate, unselfish." "That there might be another danger was a fact that he looked full in the face. But what victory can be won without danger?" The dinner which is given to further these ends goes off with spirit:—

> The dinner at the priest's was very jovial. There was a bottle of sherry and there was a bottle of port, procured, chiefly for the sake of appearances, from a grocer's shop at Ennistimon; but the whisky had come from Cork, and had been in the priest's keeping for the last dozen years. He good-humouredly acknowledged the wine was nothing, but expressed an opinion that Mr. Neville might find it difficult to beat the "sperrits."
>
> "It's thrue for you, Father Marty," said the rival priest from Milltown Malbay, "and it's you that should know good sperrits from bad, if any man in Ireland does."
>
> "'Deed thin," replied the priest of Lescannor; "barring the famine years I've mixed two tumblers of punch for meself every day these forty years, and if it was altogether it'd be about enough to give Mr. Neville a day's sale shooting in his canoe."

When he and the young man are alone he speaks of the ladies, whom Fred is now in the habit of visiting; gives him good advice, and adds a warning; "I shouldn't like to be the man to come in her (the mother's) way when he'd once deceaved her child." And, again; "If you can't spake her fair in the way of making her your wife, don't spake her fair at all; that's the long and the short of it, Mr. Neville. You see what they are. They're ladies, if there is a lady living in the Queen's dominions." All this Fred assents to. If he had acted upon it there would have been no tragedy. The time comes when Father Marty has to address him in another temper. The wretched Fred weeps under his contempt and his denunciations, but is fixed in one answer—"I will not make her Lady Scroope." Rank has given him this degree of strength. He is represented as entertaining the idea of a sort of morganatic marriage, turning over the title to his more worthy brother John; but how any man of ordinary capacity in the position of a cavalry officer could entertain such an idea is not explained. Rank, when it reaches him, refines his ideas so far that Kate is no longer the lady he thought her; all misery must be borne rather than that the Peerage should be insulted by a peeress not equal to that supreme position. Fred, doing what he does, and being what he is, would not have put himself in the way either of the priest's wrath or the mother's vengeance, but the story requires that the sense of honour which so signally fails him in great things should expose him to his fate, for which we do not suppose the youngest reader will feel a single twinge of pity or regret.

We may congratulate the author on the moral of his story. All ill-doing receives its punishment; while the brother John, who, as being out of the immediate perils of a peerage, has his principles uninfluenced by its imperious requirements, gives Fred

* *An Eye for an Eye.* By Anthony Trollope. 2 vols. London: Chapman & Hall.

good advice, and, because he does not take it but clings to the only resolve he was capable of sticking to—"She shall never be Countess of Scroope"—succeeds finally to the title and also to the lady originally designed for Fred.

MISS YONGE'S PRIMER OF FRENCH HISTORY.*

TAKING the difficulties of the task into account, Miss Yonge's Primer of French History may be considered to be a wonderfully successful piece of work. It is clear and interesting, and that is a great deal. Miss Yonge's especial merit as a teacher is that she really understands how to write for children. Now many of the "Primers," "Manuals," "Epochs," and such like, which keep coming forth in shoals, however excellent they may be in other respects, are not books for children. They may do good service in teaching the teachers of the children; they may make admirable text-books on which to found *vivâ voce* explanation; but we doubt their otherwise reaching the class of readers to which they are nominally addressed. A book may be written in childish language, and yet not be easily understanded of the childish mind. Miss Yonge knows how to give her brief narrative the life and colour which children crave for, and she does not overburden her work with unnecessary details or technicalities. We must praise the wisdom shown in starting the narrative from the accession of Hugh Capet, passing over the Gaulish and Frankish periods with a slight and general notice. Not that we would deny the importance of Gaulish history. It is far more needful for the student of the history of France than a knowledge of the history of the Britons can be for the student of English history. Vercingetorix is far more to a modern Frenchman than Caractacus is to a modern Englishman, because the Frenchman is in the main a Gaul, while the Englishman is not—except in a comparatively modern and purely technical sense—a Briton. So, too, the Roman conqueror has had a part in the life of France far greater than in that of Britain. The Frenchman's mother-tongue is a form of Latin; but neither Welshman, nor Scot, nor Englishman speaks the language of Rome. Nevertheless, the political history of France only begins with the accession of the House of Paris; and as the amount of space at the disposal of the writor of a shilling primer is necessarily small, it is well if room can be gained for the history of the French, even at the expense of the history of the Gauls. As for the Frankish period, we feel no regret for the earlier part at least of it. If it were permissible to consider the history of any section and period of humanity as useless, we should be tempted to apply that term to the history of the Merwing Kings—the time of "Chilperic and Hilperic," as we once heard a sorely-tried schoolgirl vaguely designate the period. It is hard indeed to trace the growth and progress of the national life in the maze of crime, intrigue, and revolution which go to make up the history of the Merwing dynasty; and to the child, who takes account only of external actions, it is almost impossible. M. Brachet, who complains of "nos livres d'histoire racontant longuement les combats obscurs des princes mérovingiens," and yet passing over in silence the birth and growth of the French language, may be gratified by seeing a history of France from which the very name of Merovingian is absent, and which distinctly states that the tongue of Hugh Capet's kingdom was "clipped Latin." Another good point in Miss Yonge's work is that from the first she makes it clear that France was not co-extensive with Gaul:—

> The country we now know as France is the tract of land shut in by the British Channel, the Bay of Biscay, the Pyrenees, the Mediterranean, and the Alps. But this country only gained the name of France by degrees. In the earliest days of which we have any account, it was peopled by the Celts, and it was known to the Romans as part of a larger country which bore the name of Gaul. After all of it, save the north-western moorlands, or what we now call Brittany, had been conquered and settled by the Romans, it was overrun by tribes of the great Teutonic race, the same family to which Englishmen belong. Of these tribes, the Goths settled in the provinces to the south; the Burgundians, in the east, around the Jura; while the Franks, coming over the rivers in its unprotected north-eastern corner, and making themselves masters of a far wider territory, broke up into two kingdoms—that of the Eastern Franks in what is now Germany, and that of the Western Franks reaching from the Rhine to the Atlantic. These Franks subdued all the other Teutonic conquerors of Gaul, while they adopted the religion, the language, and some of the civilization of the Romanized Gauls who became their subjects.

On this passage we have only one criticism to make—that it gives the impression that the whole "country we now know as France" was peopled by the Celts. The races of the south—the non-Aryan Iberians between the Pyrenees and the Garonne, and the probably non-Aryan Ligurians near the Alps—are thus left out of sight. The preliminary part of the narrative is in the main well managed, but it would not have been amiss if the author had inserted a few more of the important dates, such as that of the year of the partition of the Empire after the death of Louis the Pious, and that of the grant of territory to Rolf the Northman. How the city of Paris, and its defender Robert the Strong, rose into power by their gallant stand against the Northmen, and how the descendants of Robert became the royal line of the new French kingdom, is briefly and, on the whole, well told. We think, however, that it ought to have been mentioned that Hugh Capet was the son of Hugh the White, or Hugh the Great, whichever we choose to call him. As the passage stands, it gives the impression that a long interval of time elapsed between the lives of the two Hughs.

Miss Yonge has succeeded where the ordinary school histories generally fail—in impressing upon the pupil that France in its present dimensions has not existed from all eternity, but has grown up bit by bit by successive annexations. It is true that she does not invariably give the details with the precision of Mr. Freeman's *General Sketch*. By an unaccountable omission, Toul and Verdun are not named among the annexations of Henry II. The difficult subject of the semi-mythical "Salic Law" is made intelligible, and pains have been taken to explain the nature of the Parliament of Paris, and to distinguish it from the States-General, with which English people are so apt to confound it. The first account of the States-General might be improved. Instead of describing it as consisting "of *all* estates of the realm," it would have been better at once to have said of the *three* Estates of the realm, and to have specified them as clergy, nobles, and burghers. Later on, with reference to the States-General of 1614, the author enters into fuller explanations of the nature of the Three Estates; but we do not see why this should not have been done on the first occasion of their mention. Philip the Fair, too, should have received his due credit as the virtual founder of the national States-General. Miss Yonge has not even mentioned their convocation by him in 1302. Some of the later meetings, however, receive due prominence, the account of the Assembly of 1614 being especially good. That of the States-General of 1789 we do not like so well:—

> Nobles, clergy, and the deputies who represented the commonalty, all formed the Assembly at Versailles; and though the king would have kept apart these last, who were called the *Tiers État*, or third estate, they refused to withdraw from the great hall of Versailles. The Count of Mirabeau, the younger son of a noble family, who sat as a deputy, declared that nothing short of bayonets should drive out those who sat by the will of the people, and Louis yielded. Thenceforth the votes of a noble, a bishop, or a deputy all counted alike.

The fault of this passage is the use of the term "deputy" to signify a deputy of the Third Estate only, as if the noblesse and the clergy had not also been represented by deputies. Nor was it only the Third Estate whom the King tried to "keep apart." What he commanded and ostensibly desired was that all the Three Estates should be kept separate—"Le roi veut que l'ancienne distinction des trois ordres de l'État soit conservée en son entier." No doubt the real object aimed at was simply to keep down the Tiers; but it would not have done to avow this. In an earlier passage Miss Yonge says:—"Louis decided on calling together the Notables or higher nobility." Now the Notables were, theoretically, not taken from the nobility alone, but were, as the King expressed it, persons "de diverses conditions et des plus qualifiées de son État." In opening the Assembly of the Notables, Louis XVI. told his hearers, "Je vous ai choisis dans les différents ordres de l'État." Practically this meant very little, for there appear not to have been ten persons present who were not of the noble or ennobled classes; but it shows what it was supposed the Notables ought to be. As a matter of fact, too, they were not all of the "higher nobility," many of them being magistrates or municipal officers.

It seems to us that the Primer somewhat falls off in the later part, which is brought down to the end of the Franco-German war. Even haste can hardly excuse such an awkward and inconsequential sentence as the following:—

> Ambition for his [Louis Philippe's] family was a great offence to his subjects, and at the same time a nobleman, the Duke de Praslin, who had murdered his wife, committed suicide in prison to avoid public execution; and the republicans declared, whether justly or unjustly, that this had been allowed rather than let a noble die a felon's death.

The account of "France under Napoleon" is good, but although in the main it is true that "the system of government which Napoleon devised has remained practically unchanged from that time to this," yet when Miss Yonge goes on to say in the present tense that "the army . . . is raised by conscription—that is, by drawing lots among the young men liable to serve and who can only escape by paying a substitute to serve in their stead," we fear that she has not brought her military law "down to date." We have not the last French army-law at hand, but we believe we are right in saying that the system of lots and substitutes is a thing of the past, and that—with some needful exemptions—every man is now bound to personal service.

These remarks will show that there is room for improvement in some of the details of this Primer. But when all criticisms have been made, its general merit as a vigorous and clear sketch, giving in a small space a vivid idea of the history of France, remains undeniable.

* *History Primers.* Edited by J. R. Green. *History of France.* by Charlotte M. Yonge. London: Macmillan & Co. 1878.

MOORE'S COLUMBARIUM.*

IN its primary and classical sense a Columbarium is strictly a dovecot, and the chief difference between the modern and ancient dovecot would seem to have lain in the scale of accommodation, as many as five thousand birds being sometimes kept by the ancients in the same house. Even our own early history has left us, in a Western county, two fourteenth-century

* *Moore's Columbarium.* Reprinted *verbatim et literatim* from the Original Edition of 1735, with a brief notice of the Author by W. B. Tegetmeier, F.Z.S. London: "The Field" Office. 1879.

examples of almost unique stone "columbaria" of elaborate form, with arched doorways and accommodation for as many as six hundred doves; and it would seem that, as species multiplied and fanciers grew more keen in the refinements of breed, the necessity arose for more limited dovecots for distinct types of the domestic pigeon. It was not, however, the design of the author of the curious little publication which now lies before us as a facsimile reprint of a rare and shrewd treatise of a century and a half ago to discuss the structure and details of the internal economy of a dovecot, so much as to take the word "columbarium" in the sense of the general assemblage of the varieties of the domestic pigeon known to his day, and to make his readers acquainted with the results of his researches. John Moore was a London worm-doctor in Abchurch Lane, in the earlier part of the eighteenth century, chiefly famous, it would seem, for his freely advertised, though imperfectly appreciated, worm-powders; on which in 1716 Pope published a humorous epistle in which he addressed the quack as "Egregious Moore." Of this it will suffice to cite the one quatrain which in 1737 the *Gentleman's Magazine* published in an obituary notice:—

April 12:—Mr. John Moor, of Abchurch Lane, the noted Worm Doctor. He will now shortly verify Mr. Pope's witty observations:—

> O learned friend of Abchurch Lane,
> Who sett'st our entrails free,
> Vain is thy art, thy powder vain,
> Since worms shall eat e'en thee.

Little is known of "Egregious Moore," except from internal evidence, which shows that he had sparkles of a shrewd wit, with some small amount of collateral learning, and probably compensated the dismal nature of his special calling in life by giving his leisure to a study of one special branch of ornithology and natural history. Beyond four copies of his treatise to be found in the British Museum, Mr. Tegetmeier, the editor of this "verbatim and literatim" reprint, knows of no other except that which he has used for the present republication, and which is the property of Mr. Esquilant, the Secretary of the "Philoperisteron Society"; but we may safely say that for any intending dove-fancier the surest way to accurate knowledge, safe experiment, and successful breeding and rearing is to lay to heart the succinct data of Moore, using other and larger manuals, especially that of Mr. Tegetmeier, by way of correcting some mistakes of the old apothecary, which later observation has led the fanciers to discard. Armed with the *Columbarium* for his handbook, and the Pigeon-Book of Mr. Tegetmeier for his book of reference (invaluable, by the way, for its lifelike drawings of different varieties by Mr. Harrison Weir), the pigeon-fancier may overlook with complacency the distractions of rival treatises, and feel that he has ample materials for an exhaustive study of his subject.

Of varieties of pigeons there are, according to Professor Huxley, at least a hundred and fifty kinds; but four of these will sufficiently serve to represent the extremest divergencies of one variety from another—namely, the Carrier, the Pouter, the Fantail, and the Tumbler; and we shall touch chiefly upon these, following the lines of old Moore, with occasional glances at one or two kindred kinds. Moore begins with the carrier (Columba tabellaria), a long, firm-fleshed, close-feathered bird, of great length (*e.g.* 15 inches) from beak-point to tail-tip, with usually long neck, and an exceptional symmetry of shape. A carrier of good breed has, *inter alia*, a "naked, white, tuberous, furfuraceous flesh covering the upper chap of the bill, and hanging over both its sides"—the wattle to wit; and it is a valuable property when this flesh is not white, but blackish. When, too, the iris, or circle round the black pupil of the eye, is surrounded by a thick breadth of scurflike flesh, it is considered an indication of blood and breed. For beauty and sagacity the carrier is, in Moore's esteem, the king of pigeons, and in confirmation of this view he quotes a City contemporary, who always "kept a silver hatchet and block, on which he decently chopped off their heads, alleging that, being of the blood royal, they ought not to die after the same manner as the vulgar herd." The carrier's beak should be long, straight, and thick, especially the second, hooked beaks being reckoned unsightly. The wattle should be broad across the beak, short from the head to the bill-point, and tilting forward from the head; and here the Columbarian notes certain tricks of the trade in his day, which consisted in palming off on novices indifferent birds with the hinder part of their wattles artificially raised with cork and fine wire. The properties of the head are length, narrowness, and flatness; and of the eye, breadth, roundness, and equable thickness, so that a "rose-eye" is as great a charm as a "pinch-eye" is a blemish. Length and thinness of neck are also distinguishing marks of a good "carrier." Moore's surmises as to the origin of the carrier in "Bazora in Persia," and his inferences from the Dutch name of these pigeons, viz. "Bagadats," and the Turkish "Bagatins," cannot be said to go for much, inasmuch as no pigeon with the carrier's properties is met with abroad, except in the case of birds exported from England. The stories told by our old fancier about the carrier's feats and the use of the bird "by Turkish bashaws on emergent occasions," are amusing in their way; but it must not be forgotten that the English carrier, as such, is no longer in any sense a message-carrier, but a highly perfected artificial breed from which the homing bird or *pigeon-voyageur* is totally distinct.

Moore's next type is "the horseman," a miniature carrier, of smaller body, shorter neck, beak and eye surroundings less fleshy, and affording more room between eye and wattle. It is apt to be barrel-headed and pinch-eyed. He declines to pronounce whether this bird is an original pigeon, or a cross between a carrier and a tumbler, or a carrier and a pouter, and bred over again from a carrier, so as to make the horseman predominate. This pigeon in Moore's day would seem to have been of less account as a "homing bird" than the original carrier, yet capable, by training and regular flights, of being turned to good account. In Mr. Tegetmeier's estimate it is but an inferior horseman, or, when it is a cross of horseman and pouter, only a small variety of the pouter. The "dragoon" is an undoubted hybrid, bred from horseman and tumbler; and frequent matching with the latter will induce tolerable stoutness. Smaller and lighter than the horseman, this pigeon is fleeter for ten or twenty miles, but not up to its mark for a greater length. The Dutch croppers are so called from the crop of wind which they carry under their beak, and can raise or depress at pleasure. Thick-bodied and short, with thick, short feathery legs and feet, it would seem that they are not so much bred for their own qualities as to mix with others. For instance, our English pouter is originally a mixed breed between horseman and cropper; and Moore tells us "that, by marching their young ones over and over to the cropper, a wonderful beauty will be added to this bird, with the properties of length of legs and body, neatness of crop, slenderness of girth and beauty of feather." A pouter should be pied, preferably blue or black pied; and he should have the front part of his crop white, girt round, save behind the neck, with a shining green, and a half-moon shaped bib of the same colour with which he is pied; neck, head, back, and tail should be of uniform colour, and the thighs and nine flight feathers clear white. A great point in the pouter, however, is its carriage, which should show the crop filled with wind without risk of straining or slackness; the tail spread like a fan, without scraping the ground or being tucked under the legs; the legs standing close, without straddling; and the shoulders of the wing tight to the body. Thus, says Moore, the pouter trips, almost on his toes, *without jumping*—the characteristic of the "uploper," which is a Holland-bred bird, in every property smaller than the English pouter, with a crop so round that it buries its bill in it, and toes so short, close, and nice-treading, that, "when moving, you may put anything under the ball of its foot." In Moore's day these birds were very scarce and costly in England. The chief feature of the Parisian pouter seems to be peculiar variegation of every feather save the flight feather. Of the pouting horseman Moore has many good words to say for its merry antics, good breeding and nursing qualities, and capacity for homing ten or twenty miles.

The tumbler, which comes next, has ever been a favourite for its innate faculty of what our old apothecary recognizes as the human tumbler's technical back-spring. It is a very minute, thin-necked, spindle-beaked pigeon, with the iris of the eye of a bright pearl colour. In health all pigeons vent their animal spirits in muscular exertion; and doubtless, not only among the English but the Dutch tumblers also, the records of the fancy could produce abundant anecdotes of trackless flights beyond the eye's ken, and of the maintenance of this height for hours together, the merrymakers withal being so well behaved and complaisant as to reserve their tumblings for such times as either they are first beginning to rise or else coming down to pitch. As to colour, the tumblers are white, black, or blue, or a pleasant mixture of the three. The almond or ermine mixture of colours which has characterized the most favourite variety of the tumbler pigeon was in esteem even in the days when the *Columbarium* was put forth.

Of fancy pigeons we must make short work. The characteristic of the large and stately runts, whether Leghorn or Spanish or Friesland, is comparative bulk. In the *Columbarium*, their young are described on the spit as "middling spring fowls," and we find a writer as far back as 1664 averring that he ate them in sight of Caprea, near Pausilippo, as big as pullets. The Spanish runt is said to be the largest of all pigeons; the Friesland runt, the most admired for its ugliness. Modern runts are mostly blue or silver, with dark bars on the wings. Many fancy pigeons get their names, like certain sorts of apples, from supposed resemblances to ecclesiastics. The Jacobins, described by Willoughby in 1678, are called in Low Dutch "cappers," because certain feathers reflected upwards in the upper part of the neck encompass the head like a monk's hood thrown back. The Capuchin is hardly a distinct species, being allied to the Jacobin in shape, make, name, and all but the cravat, or lower chain of feathers. The Nun owes its name to a head covered with a veil. Its body, larger than a Jacobin's, as well as its hood, is white, its eyes pearly, its head, tail, and flight feathers black, red, or yellow. The fancier stocking a dovecot for eye-service and antics should invest in *finnikins*, which are of the size of runts; and the turbits and owls have their specialities of a short beak and queer shirt front, with a hooked upper chap of beak, in the owl's case. Moore's *broad-tailed shaker* may be identified with the *fantail*, a very graceful pigeon, with long thin neck of tremulous motion, full breast, short back, and tail of many feathers, which it spreads like a turkey cock, so that head and tail frequently meet. Willoughby and Moore know them as "broad-tailed shakers"; but the reader of Mr. Tegetmeier's entertaining Book of Reference will see them under the head of Fantails in p. 155 of that manual, though we will not promise that he will be convinced of the grace of the back view there given of the fantail. Mr. Tegetmeier deserves the thanks of Columbarians and naturalists for his careful and exact reprint.

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 1,223, Vol. 47. April 5, 1879. [Registered for Transmission abroad.] Price 6d.

EASTERN DIFFICULTIES.

THE popularity of the Government, as far as it depends on good fortune, is exposed to serious and increasing danger. Neither at home nor abroad can a cheerful prospect be discerned. The tone of the debate on South African affairs has not been unaffected by the continuance of diplomatic complications in South-Eastern Europe, and by the apprehension of prolonged war in Afghanistan. It is also not improbable that a quarrel with Burmah may be added to the number of political embarrassments. It would be unjust to attribute to the leaders of the Opposition any feeling of satisfaction at the accumulation of national difficulties; but the knowledge that the confidence of the country is shaken encourages their attacks on the Government. It is not yet certain whether the Porte has assented to the proposal of a joint occupation of East Roumelia; but, if the European Powers are agreed, the protests of Turkey will be disregarded. Unfortunately both Germany and France refuse to furnish contingents to the army of occupation. The intentions of the Italian Government are not yet announced, nor is it positively known whether Turkish troops will be allowed to form a part of the force. It would be impossible for the English Government, after proposing the measure, to decline a share in the burden; but it will be extremely inconvenient to spare three thousand men at a moment when two or three wars are proceeding in distant parts of the Empire. Although strict adherence to the provisions of the Treaty of Berlin may probably have been expedient, the suppression of disturbance in a remote Turkish province is not a task which will be regarded with enthusiasm. In the event of war, the English contingent would probably be forced to act as a mere detachment of the Austrian army; and in time of peace it may perhaps be exposed to the ill-will of the population. It is not absolutely certain that Parliament will sanction the employment of English troops for the maintenance of order in a foreign territory.

The scanty information which is received from the seat of war on the North-West frontier of India is uniform in its tenor. The premature anticipations of an early peace in consequence of the death of SHERE ALI seem to have been thus far disappointed. YAKOOB may possibly be a more formidable enemy than his father. It is believed that he has re-established his power at Cabul, and that he is now disinclined to negotiate with the Indian Government. If his position were secure, the English possession of one of his provincial capitals might induce him to make concessions in exchange for the restoration of Candahar; but it is not impossible that he may find it necessary for his own safety to exhibit an obstinate patriotism. The most formidable pretender to his throne, who is in the military service of Russia, is probably ready to bid against the reigning AMEER for popularity by professing uncompromising hostility to the English invader. It is not known whether any direct communications have passed between the VICEROY and the AMEER. If the terms of peace offered have been harsh and excessive, an inexcusable error will have been committed. Scarcely any concession which can have been demanded would have been as valuable as the opportunity of ending the struggle at a time when there had been little or no interruption of military success. The pretended reasons of the war imposed neither on friends nor enemies. It was well known that the advance of the English army was provoked by the presence of the Russian Envoy at Cabul; and when the Mission was withdrawn the columns of the invading force received credit for attainment of the real object of the war. A further campaign undertaken to compel the AMEER to admit a Resident at Cabul, or to surrender a portion of the territory which has been already occupied, would be an unnecessary and unwise enterprise. Late experience has shown that unforeseen military disasters are not impossible; and in war, as in other transactions, it is well to leave off a winner.

There is too much reason to believe that the English army is immediately to march on Cabul. The plan of operations is properly kept secret; but there can be little doubt that simultaneous movements will be made from Jellalabad and from Quetta or Candahar. If it were prudent to feel confident as to the result of military operations, former experience seems to show that no effective resistance can be offered to the English army. Forty years ago the English dominions were not conterminous with Afghanistan, inasmuch as both the Punjaub and Scinde were still independent. The great Sikh army lying on the flank of the advancing force constituted a formidable danger; and there were no railroads by which reinforcements could be forwarded from distant parts of India. Nevertheless a general of moderate capacity, with an army principally composed of native troops, marched by the Bholan Pass and by Ghuznee to Cabul without fighting a pitched battle. DOST MAHOMMED, who was both a brave soldier and a capable ruler, retired from his capital on the approach of the enemy; and for two years the English Resident, acting in the name of SHAH SOOJAH, governed Afghanistan with absolute authority. There is but one opinion of the imbecility and folly which led to the subsequent disaster. The garrison of Cabul alone, if it had been fitly commanded, would have been a match for any force which the Afghans could collect. After the destruction of the English army, SALE kept his position at Jellalabad for many weeks, although he was threatened in front by AKBAR KHAN, then in the first flush of his recent successes; and though his communications with India were cut off by hostile tribes, POLLOCK, having relieved SALE by forcing the Khyber Pass, which is now in possession of the English army, once more occupied Cabul in concert with NOTT, who advanced from Candahar. The army on the frontier is now commanded by skilful generals, it contains a large proportion of English troops, and all its columns are comparatively near their respective bases. Defects in the commissariat which are noticed by the critics in search of grounds for censure appear from their accounts to be susceptible of easy remedy. Large stores have been collected at Quetta and probably at Jellalabad; and the garrison of Candahar finds considerable supplies in the neighbourhood. If only there were sound political reasons for attempting to occupy Cabul, the result of the enterprise might be anticipated with reasonable confidence. It may be practicable to deprive YAKOOB of his capital, but not to force him to surrender, or to compel his acceptance of terms of peace. Both his father and his grandfather retired from Cabul in consequence of English invasion; and DOST MAHOMMED afterwards voluntarily constituted himself a prisoner, while SHERE ALI died in exile. The present AMEER may at his pleasure retire into distant parts of his territory where it will be impossible to follow him, and the English army must sooner or later evacuate Cabul. The fate of SHAH SOOJAH and of his patrons will

probably serve as a sufficient warning against any attempt to govern Afghanistan through a pretender. Any nominee of the invader would be justly hated by the people; and it would be necessary to maintain his power by a permanent occupation of the country. It is but a small additional objection to the proposed movement that it will contradict Lord BEACONSFIELD'S statement that the main object of the war was already accomplished by the rectification of the frontier.

Simultaneously with the tidings of the rupture of negotiations with the AMEER, reports have been circulated of Russian military operations in the neighbourhood of the Persian frontier. A large force had been despatched for the ostensible purpose of coercing the Turkoman tribes, and it was supposed that the real object of the expedition was the capture of Merv. It is now stated that General LAMAKIN has been recalled, and that the strength of his army had been greatly exaggerated; but an enterprise temporarily abandoned for political reasons may at any time be resumed. The Duke of ARGYLL may enjoy the satisfaction of repeating the solitary joke which enlivens his elaborate denunciation of the policy of the present Government. There is fresh reason for the feeling which he ridicules under the facetious name of "Mervousness." Alarm at the approach of Russian troops to Merv has been expressed by many politicians who in other respects share the opinions of the Duke of ARGYLL. Merv is situated in a fertile and well-watered district on the south of a desert, and in Russian hands it might become a considerable town. At present it is occupied by Turkoman tribes who seem to combine agricultural industry with occasional indulgence in the national pursuit of robbery. It is not certain that they would obstinately reject Russian dominion if it tended to increase their material prosperity in compensation for the loss of opportunities of plunder. The prevalence of "Mervousness" is explained by the position of Merv on the road to Herat. The intervening space, of about one hundred miles, offers no obstacle to the advance of an army, and there is little difference of opinion as to the great importance of Herat. No fortified city in Asia is stronger, and in the hands of a civilized Power the place would be almost impregnable. The Russians, once established at Merv, might perhaps acquire possession of Herat by negotiations with the Governor for the time being, with the result of being as advantageously placed in Afghan territory as if they occupied Cabul. The best security against the danger would be the maintenance of the agreement between England and Russia which was lately renewed by Lord SALISBURY and Count SCHOUVALOFF; but, as long as the Afghan war continues, the Russians may easily find pretexts for advances in the direction of India. Peace, if only its terms are not dishonourable, will be worth more than any special concessions which may be exacted from the Afghans.

THE BUDGET.

THE CHANCELLOR of the EXCHEQUER had on Thursday the pleasant task of disappointing the expectation of his adversaries and removing the fears of his friends. In spite of two wars actually going on, and one with difficulty avoided, there is to be no increase of taxation. This to many persons is the beginning and end of the Budget. But the result is arrived at by adopting a peculiar method of finance. The ordinary is separated from the extraordinary expenditure—that is, the money which the country would spend if there were no wars, or rumours of wars, is distinguished from that which the country is spending in consequence of wars or apprehensions of war; and then the funds necessary for the latter purpose are supplied by the creation of a short annuity, increasing difficulties being met by a prolongation of the term during which the annuity has to run. To take, for the sake of simplicity, round figures only, the CHANCELLOR of the EXCHEQUER creates by new taxation a special fund of two millions. He announces that there are difficulties which will need four millions to meet them. In two years the special fund will have cleared them off. New difficulties arise, and two millions more are wanted. The special fund is made to operate for three years instead of two; and, if ten millions are in all required, it will be provided by this annuity of two millions a year lasting over five years. It is in this way possible to have unexpected difficulties arising and yet not to have the immediate burden of taxation increased. The Zulu war is paid for, not by making the taxpayer pay more now, but by making him pay what he does pay now for a longer time than he would otherwise have to pay it. When once the principle has been accepted and the special fund has been created, making Budgets is easy work, and so is criticizing Budgets. All that has to be done is to substitute exact figures for round figures. In real life the sums with which the calculator has to deal are always varying. The ordinary revenue and the ordinary expenditure are not stationary. The special fund comes from new taxes, which may give less or more. The amounts required to meet difficulties still going on are necessarily a matter of estimate. The duty of the CHANCELLOR of the EXCHEQUER is therefore to make precise what was before vague, to tell us where the margin constituting the special fund begins, how much it is likely to bring in, and what he thinks his difficulties will cost him in the long run. If it is then assumed that what is true now will continue to be true in the next few years, with only unimportant variations, it is easy to calculate how long the annuity will have to run.

After the additional taxation necessary for the creation of the special fund had been imposed, the estimate for last year was 83,230,000*l*. The actual receipts were 83,115,972*l*., which, if the extreme depression of trade is taken into account, is exceedingly near the mark. There has been a slight falling off in the consumption of spirits in Ireland, and a somewhat larger falling off in the consumption of spirits in Scotland; but England has drunk exactly what was expected in the way of spirits and a little more than was expected in the way of beer. The vast drinking power of the nation has, therefore, not as yet been touched by its calamities. The consumption of tobacco has, however, fallen off to the extent of 3 per cent., and this is attributable not to a rise in price—for, in spite of the new duty, tobacco has not risen in price, as lower prices have been accepted by the growers—but to the enforced economy of a suffering people. In wine there has been a considerable falling off, which may perhaps be taken as an indication that it is on the wine-drinking classes that the burden of distress has most largely fallen. The receipts from stamps and legacy duties are also below the estimated amount; but in some items there is an increase, and so the total sum by which the receipts fell short of the Estimates was only 114,000*l*. For the coming year Sir STAFFORD NORTHCOTE, in order to err on the safe side if he errs at all, anticipates a further minute reduction of 60,000*l*., and puts the total estimated revenue at 83,055,000*l*. The ordinary expenditure has, however, increased, and whereas there was left last year for the special fund 2,210,000*l*., this year there is only left 1,900,000*l*. A very slight revival of trade might be expected to give at least 100,000*l*. more, so that it is scarcely departing from facts to take the special fund at the conveniently round sum of two millions. We now come to the sums required to meet difficulties. European complications were estimated to cost 6,000,000*l*. They have actually cost 6,125,000*l*., an instance of nicety of calculation for which Sir STAFFORD NORTHCOTE takes credit. The Transkei war cost 590,000*l*., and the Zulu war has already cost 1,510,000*l*. We have thus spent a little more than six millions for European purposes and a little more than two millions for South African purposes. For the future we have to add 1,900,000*l*. for the further expenses of the Zulu war, so that the total cost of this war is brought up to about three and a half millions, and the interest on our advance of two millions to India for the Afghan war, which is to be repaid without interest in seven annual instalments. But, we have already paid off 2,900,000*l*. of the total charge, as we had our surplus of 2,210,000*l*. to apply for the purpose, and a part of the sum destined to meet European complications had already been included in the expenditure of the year ending on the 31st of March of last year. If the figures are balanced on both sides, it will be found that we had on the 1st of this April a sum incurred, or to be incurred, of 7,325,000*l*. to discharge with an annual sum of 2,000,000*l*. Something must be added for the interest on the Afghan loan, and for that on Exchequer bonds. Again returning to round figures, we may say that we have eight millions to pay off, and two millions a year with which to pay it. If, therefore, no new complications arise, the term of the annuity may be taken at four years.

This mode of dealing with current complications must be taken in conjunction with the present mode of dealing

with our permanent debt. We are steadily reducing this debt. By a use of language which may easily be misinterpreted, it is said that we are paying off five millions of debt annually. What we are really doing is this. During the year that ended on the 31st of March we reduced the funded debt by 1,441,080*l.*, or, in round numbers, by a million and a half. Further, a portion of our debt consists in annuities, and, of course, the capitalized value of these annuities falls every year as they approach the time of their extinction. It is by adding this diminution in the capitalized value of the annuities to the sum by which the funded debt is reduced that the amount of five millions is reached. But the annuities, from their very nature, pay themselves off, and this item of the reduction of debt is not, strictly speaking, any part of current finance. The unfunded debt, again, has largely increased lately; but this is owing either to the granting of local loans, so that we are owed as much as we owe, or to the very expenditure which we are paying off with our short annuity of four years, so that it too may be put aside when we are speaking of our present financial position. The whole system on which these local loans are granted is unsatisfactory, and Sir STAFFORD NORTHCOTE has brought in a Bill intended to put things on a sounder footing, and every large increase of unfunded debt causes some perturbation in the money market. But these evils do not alter the general situation. The main result to the taxpayer is that he is now called on to pay his share towards the creation of two special funds, one of a million and a half for the reduction of the funded debt, and one of two millions, which in four years will wipe out an extraordinary outlay of eight millions. Sir STAFFORD NORTHCOTE does not seem to suppose that the annuity need last so long as four years, and with good times the produce of taxation would no doubt extinguish it at an earlier date. But, if we take its term at four years, we at any rate know the worst of it. We are then in a position to ask whether the plan is a good plan. The obvious objection to it is that it enables the electors to go to war without feeling the pinch of war, and encourages a Government to pursue, what is termed by its adversaries, a reckless policy. We are, it is said, mortgaging the future unfairly. If a Liberal Cabinet succeeded the present Cabinet, it could not make a financial *coup* because this wretched legacy of a short annuity would stand in its way. No doubt the taxpayer is very glad, especially in a time of distress like the present, to escape new taxation, and possibly thinks less of the Zulu war than if he had to pay for it all at once. But then the Government scheme of finance must in fairness be looked at as a whole. The taxpayer is allowed to spread his payments for complications over a term, but then he is all the time reducing the funded debt. He is allowed a little ease in one way, but he is made to exercise a painful political foresight in another way. If he realizes his position and does justice to the Government, he must own that he is being treated with extreme tenderness.

THE ZULU DEBATE.

THE second night of the debate on Sir CHARLES DILKE'S motion was damaging to the Government. Contrary to expectation, it appeared that the votes on either side would not exactly coincide with the regular divisions of party. Sir ROBERT PEEL indeed has, in his successive alliances with the Liberals and the Conservatives, always claimed a certain independence or eccentricity of action; but his powerful speech on Friday last was more formidable to the Government because it was delivered by one of their professed supporters. Sir HENRY HOLLAND is an active and trusted member of the party; and, if he had taken office in the Government, his appointment would have created no surprise. It is certain that only a strong conviction could have induced him to join in a censure, not only of Sir BARTLE FRERE, but of the Cabinet. Mr. ASHLEY, on the other side, declined, not less conscientiously, to vote for the motion, on the ground that the policy pursued in South Africa had been justifiable or necessary. Proofs that the House of Commons considers the question on its merits may perhaps add weight to its decision; but at the same time they relieve the opponents of the Government from the charge of having been actuated by factious motives. The peculiar circumstances of the case have involved the Ministers in an apparently logical dilemma. As Mr. LOWE said with his customary neatness of phrase, they seem to claim in dealing with Sir BARTLE FRERE a monopoly of abuse. The SECRETARY for the COLONIES has told the HIGH COMMISSIONER in strong terms that he was wrong, and yet for the purpose of the debate he was compelled to make the least of the error. The contradiction would be indefensible if it affected the policy of the Government rather than the exigencies of debate. It is not necessarily inconsistent to inflict a certain punishment, and at the same time to contend against a demand for greater severity; but a speaker who has at the same time to defend the author and the object of a censure is at a great disadvantage in meeting an assailant who directs his attack against both. That a reprimand for the past is compatible with confidence for the future will not be seriously denied; but it is difficult to satisfy a popular audience that disapproval is not connected with distrust.

It has been said that Sir BARTLE FRERE might have submitted to the official rebuke, but that the publicity given to the censure will render his retention of office incompatible with regard to his personal dignity. The Government are accused of a grave mistake in having informed Parliament and the country of their disapproval, instead of communicating their judgment to Sir BARTLE FRERE in a private despatch. Their critics forget that it would have been almost impossible for the Ministers to keep their secret, and at the same time to relieve themselves from the responsibility of acts which they could not have defended. The Opposition would have insisted on full answers to the question whether the Government approved of the ultimatum and the declaration of war. An evasive statement would have been equivalent to an admission that they had not sanctioned the policy of the HIGH COMMISSIONER, and it would have been correctly surmised that they had not shrunk from expressing their judgment to Sir BARTLE FRERE himself. The precedent already quoted of the censure inflicted on Lord CANNING is in this respect not distinguishable from the present case. Lord DERBY'S Government rebuked him in stronger language than that of Sir M. H. BEACH'S despatch for his threat of confiscating the estates of the Talookdars of Oude, and the censure was published in England long before it could have reached India. The Ministers, indeed, were not exempt from the suspicion of having arranged the whole transaction for the purpose of making a vacancy in the office of Viceroy for one of their colleagues. Nevertheless Lord CANNING, though he must have understood the motives of his official superiors, disappointed them by not resigning. The assurance of security of title which, under the orders of the Government, he gave to the Talookdars was not less inconsistent with his former policy than Sir M. H. BEACH'S instructions with the project of annexing the Zulu country. It is possible that Sir BARTLE FRERE may be more sensitive. Yet in such cases it is the duty of a public servant to consider whether he can serve his country better by indulging or by disregarding his personal feelings.

If Mr. COURTNEY is liable to the weakness of vanity, he is fully entitled to the pleasure of knowing that when he stood almost alone in opposition to the annexation of the Transvaal he was in the right. Lord CARNARVON and Sir THEOPHILUS SHEPSTONE were responsible for the measure which has been both a main cause of the Zulu war and a source of internal embarrassment. If the Republic had remained independent, the army of CETEWAYO would have been directed, not against the English, but against the Dutch. It is probable that his forces would have overrun the State; and any assistance which might have been afforded to the Boers would have been given at their own request. Perhaps they might have tendered the allegiance which the majority of them now disclaim. They now refuse to become auxiliaries in the war, although but for the annexation they would have been principals. Their disaffection is in part to be explained by the necessary interference of the English Government with their practical maintenance of slavery. The duty of suppressing this vicious institution was imposed on the new authorities as a consequence of annexation. It was not necessary to become responsible for the morals either of Dutch settlers or of barbarous chiefs. According to the latest accounts, there is no reason to apprehend immediate disturbance in the Transvaal, and it is possible that, with the re-establishment of the military reputation of the ruling Power, the agitation

for independence may subside. Good news from South Africa would have done the Government better service than any arguments which could have been used in the debate. The scanty reports which have been received are of a disheartening character. The collapse of certain negotiations with CETEWAYO'S brother will have excited little surprise. The failure of the first attempt to relieve Colonel PEARSON causes grave uneasiness.

In the division, notwithstanding the secession of Sir H. HOLLAND, Sir R. PEEL, and Mr. GORST, the Government was supported by its ordinary majority. There was no trace of the feeling which last year on questions of foreign policy expressed itself in majorities of a hundred or a hundred and twenty. It was impossible to feel enthusiasm for the theory that a colonial Governor had been so far in the wrong as to deserve a reprimand, and not so far in the wrong as to deserve dismissal. The official defence of the Government was undertaken by three of its own members. Sir M. H. BEACH was unavoidably and elaborately diffuse, and Lord SANDON and the CHANCELLOR of the EXCHEQUER merely dealt with special points which had arisen in the course of the debate. The Ministers evidently felt that they were on the losing side, although they had no fear for the result of the division. On the last night of the debate Mr. COURTNEY, Sir W. HARCOURT, and Lord HARTINGTON repeated, with the exultation of success, the blows which had already been dealt. The Opposition is at all times superior to the Ministerial party in debating power; and on this occasion it had the more tenable cause to support. Mr. GLADSTONE, Mr. BRIGHT, and Mr. GOSCHEN were silent, and Mr. LOWE was unluckily interrupted in the midst of a vigorous flow of argument and sarcasm. In the absence of some of the principal leaders, the speakers against the Government carried off the honours of the discussion. Sir C. DILKE, already one of the most rising members of the party, has by his opening speech greatly increased his Parliamentary reputation. The fidelity of the followers of the Government is admirable in its steadiness. For this, and perhaps another, Session the Government is at liberty to pursue its own policy at home and abroad. Miscarriages in diplomacy or in war alike fail to disturb the loyalty of Conservative members. It would be pleasant for the Ministers to float on smooth waters, but for the consciousness that they are advancing steadily towards the rapids. They have much reason to doubt whether they will emerge unhurt at the foot of the cataract. The South African debate will have a definite effect on the general election. Constituencies will not pause to apportion minutely the blame of an unnecessary war which has begun with a great disaster. Governments are held responsible not only for good intentions, but for good fortune. It cannot be denied that the Zulu war is an untoward occurrence; and the dissatisfaction which it produces will be directed against the Government. It is barely possible that a military success might turn the current of popular feeling; but thus far the scanty news from South Africa is not encouraging. It is not even known that an immediate attempt will be made to relieve Colonel PEARSON'S garrison; and the invasion has been wholly suspended.

ITALY.

THE arrival of the QUEEN at Baveno has been welcomed with as much eagerness to show respect and admiration as the retirement in which she wishes to pass her time would permit. The KING, the POPE, and GARIBALDI have each in their several fashions paid their tribute of grateful recognition to the chief of constitutional monarchs, the defender of toleration, and the head of a Government which at a very critical moment not only helped Italy to be free, but pushed her on in the path of freedom. The KING may probably have been a little vexed at the slight put on the Italian Court by the English Ministry when his father died. But his feelings, if they had been at all wounded, must have been soothed by the message of cordial sympathy sent him by the QUEEN when the recent attempt on his life was made at Naples. It happens by a curious coincidence that, exactly at the time of the QUEEN'S visit, the KING has had to decide the difficult question what should be done with the man who tried to assassinate him. He has decided that mercy is better than justice, and PASSAVANTE has escaped the scaffold and been sent as a life-prisoner to the Isle of Elba. Sovereigns, and especially constitutional sovereigns, naturally lean to mercy on such occasions. Even the late Emperor of the FRENCH could only be brought by the firmness of those around him to sign the death-warrant of ORSINI; and the Memoirs of the PRINCE CONSORT show how eager he, as well as the QUEEN, was to take as mild a view as possible of the attempts made on her life in the early years of her reign. Sovereigns like the QUEEN and the King of ITALY are reluctant to admit that they cannot trust their personal safety to the affections of their subjects, as they are conscious that they themselves are devoting their lives to doing their subjects as much good as they can. They have, too, a feeling of gratitude for the effusion of honest loyalty which such attacks provoke, and they are too much touched by what gives them well-deserved pleasure to bear to be severe. In Italy, again, there is a widely spread objection to capital punishment, and the KING may have shrunk from shocking the prejudices of any one in a matter in which he was immediately concerned. It would be presumptuous in foreigners to say that, if everything is taken into consideration, the KING has made a mistake. At the same time it may be observed that, if capital punishment is to be inflicted at all, it is difficult to see when it can be inflicted more wisely and justly than when a man tries to kill a King simply because he is a King. No outrage can be more wanton; and, if capital punishment has a strong deterrent effect, it might be reasonably expected that its restraining power would be greatest when the motive for committing the crime is very slight. The Nihilists allege that they destroy their victims only when gross acts of violence have been established against those who are doomed to perish; and long before ORSINI made his attempt the EMPEROR had waded through slaughter to his throne. Indignation at great wrongs may make men willing to court death in order to obtain a wild revenge. But the wish to kill a King because he is a King is one of the most trivial forces that can act on the human mind; and the certainty of death, if the wish ripened into action, might be expected to overpower this trivial force more easily than it overpowers the motives which ordinarily lead to murder.

The KING has no doubt strengthened his position very considerably during the year which has now elapsed since he began his reign. He has shown an eager desire to govern, not only according to the letter, but according to the spirit, of the Constitution; and such leaning as there was to Republicanism when he ascended the throne has, if it has not quite died away, yet become feebler and less conspicuous. The conviction, too, that Italy had for the present better keep herself to herself has gained ground lately, and the Government is allowed to persevere in its laudable policy of trying to stand well with every one. It is unavoidable, however, that some foreign questions should present difficulties of a special character to any Italian Government that may be in power. If Italy represents anything, it represents what is termed the principle of nationalities. So far as it has any influence in Europe and any settled purpose, it must strive to enforce the assumption that the rule of foreigners over subject nationalities ought to cease. The Albanians come to Italy begging that Italy will not permit them to be subjected to the dominion of Greece, which they detest, and the Danes have lately poured into the sympathizing breast of the Court of Rome the sad tale of the hard treatment they and their brethren in North Schleswig have received at the hands of Germany. In such cases it is, however, easy to be sympathetic and nothing more. The Italians may say with truth that, if they pity the Albanians and the Danes, they can do nothing for them. But the proposal to take part in a mixed occupation of Roumelia must be eminently disagreeable to Italian statesmen. To act in conjunction with other European Powers in carrying out arrangements made by collective Europe is no doubt attractive, as involving a new recognition of Italy as one of the Great Powers. But to aid in restoring a revolted nationality to a dominion it hates, and from which it has all but escaped, is contrary to the traditions and feelings of Italians; and they can scarcely forget the days when they were told on every side that it was by the wish of Europe, and in the interests of the balance of power, that Austria held Lombardy and Venice. If France and Germany have declined to take part in the occupation, Italy would have

precedents for a refusal of which she might be very glad to avail herself. But strong pressure might be exercised on very good grounds to induce Italy to take her part in a task to which she was very little inclined. If no other Powers except Russia, England, and Austria sent contingents, the enterprise would be sadly shorn of its European character, and Italy, as the last and weakest newcomer into the great Council of Europe, may be asked to do something, although very little to her taste, in order to justify the honour conferred on her.

By way of a novelty in the conduct of affairs, the KING has lately given a banquet to which all the leading statesmen of all political parties were impartially invited. This might seem a pleasant and ingenious mode of allaying the fury of party spirit. But M. DE LAVELEYE has just been bestowing on Italy one of those candid and amiable criticisms which he showers in turn on all European countries, and the main truth that he wishes to impress on his readers is that the great misfortune of Italy consists in the non-existence of parties. There are not, he thinks, enough differences of feeling and opinion among leading Italian statesmen to keep them alive. There are in the Chamber a nominal Right and a nominal Left, but in substance the Right and Left think the same thoughts, and do when in power the same acts. Both parties have the same ideas on finance and foreign affairs, on the necessity of keeping up the army, on the wisdom of unceasing vigilance against the Church. All that they can find to differ about is some small act of administration, or some question of personal confidence. The consequence is that the Chamber is split up into paltry cliques. There are not parties, but groups. There are not really so much Right and Left as a MINGHETTI group, a CAIROLI group, a NICOTERA group, and a DEPRETIS group. This, in the eyes of M. DE LAVELEYE, is not properly Parliamentary government at all, and he can see no hope for Italy until a more satisfactory state of things arises. His remedy for the mischief is that the Church should organize a strong clerical party, and then there will be a real division of opinion, and Italy will attain that nice balance of power founded on the profound antagonism of two radically divided parties which so highly distinguishes Belgium. This singular view of the best future for Italy shows an ardour in the pursuit of Parliamentary government which Englishmen, who are upheld as the original patentees of this form of government, must take as complimentary to them. But we do not know that there is anything in the past history of this country to warrant the theory that national happiness is dependent on the continued existence of a bitter party spirit. The test of excellence in Parliamentary government is not whether there is a very marked Left and a very marked Right, but whether the Sovereign is loyal to the Constitution, whether the people are satisfied, whether the laws are wisely made and well administered. In these respects Italy, as M. DE LAVELEYE recognizes, has, amid many shortcomings, made a progress that may fairly be described as surprising. In the common prosecution of a great undertaking Italian statesmen have had many serious differences and exhibited many personal jealousies. But it is a matter of congratulation rather than of regret that, after all, these differences and jealousies are not too strong to make it possible for the KING to ask them all to dinner.

PARIS AND THE SENATE.

THE French Senate has manifested an unexpected independence. The Bill for convoking the two Chambers in congress with a view to the substitution of Paris for Versailles as the place of meeting of the Legislature has been referred to a Committee which has reported against it. M. LABOULAYE, the Chairman of this Committee, has enumerated the objections to the change in a careful and forcible Report; and, though his known devotion to the Republic has not saved him from being hooted in Paris, it may give weight to his views in the country. M. LABOULAYE begins by putting aside the alleged inconveniences of the present arrangement as not worthy of serious discussion. During the eight years that the Legislature has sat at Versailles an abundance of new laws have been passed, and there is not the slightest need to suppose that the time which the Senators and Deputies spend on the railway is really needed for more important work. If no political reason could be alleged in opposition to the change, the advantages of Paris over Versailles would of course be sufficient to turn the scale; but, in the event of a political reason being forthcoming, there are no considerations of convenience strong enough to counterbalance it. M. LABOULAYE is at no loss to find such a reason. The fact that the sittings of the Legislature are held some miles away from Paris constitutes a moral and material security such as no other arrangement could supply. In the First Revolution Paris was the handmaid of the Terror. In 1848 the Chamber was twice in danger from the Paris mob. In 1871 the Commune was proclaimed in open defiance of the country, which had made its voice heard in the elections; and, if Paris has of late been more submissive, it is only that she has been subjected to fewer temptations. There can be nothing in the dissociation of the seat of government from the capital that is opposed to Republican ideas, for the same arrangement has been made and adhered to in the United States. It is a further reason, M. LABOULAYE thinks, against the change that it can only be effected by a revision of the Constitution. A fundamental law should not be altered except under a strong necessity. It is so important to invest a written Constitution with all available sanctity that nothing but a very unmistakable expression of public opinion can make it expedient to amend it.

These reasons deserve, beyond doubt, very careful attention. But, when this careful attention has been given to it, we do not think that M. LABOULAYE will be found to have proved his point. The example of the United States comes, it is needless to say, to nothing at all. A Federal Union almost suggested a capital which should belong to none of the component States, and the immense distances which separate one State from another made it convenient that the Federal capital should be more or less equidistant from the majority of them. The political reason is, therefore, the only one which M. LABOULAYE can produce in favour of his case. If that breaks down, his whole fabric of argument falls with it. M. LABOULAYE will hardly deny that the continued absence of the Government from Paris is in itself a sign of weakness. It implies that Paris cannot be trusted not to attempt to force the Government to do something which they do not want to do; and it implies further that the Government cannot trust themselves not to be thus driven. The first of these two inferences may be, and probably is, perfectly correct. The kind of history which Paris has had is very well suited to create such an impression. But, if this first inference may be safely conceded, and no harm come of it, it is essential that the second should be dismissed. A French Government ought to be and to appear strong enough to keep its capital in order, and if it is obliged to keep the Legislature away from the capital neither of these conditions will be satisfied. When it is argued that, if the Chambers hold their Sessions in Paris, they will find the mob breaking in upon their meetings and dictating from the galleries the measures which it chooses to have passed, the assumption necessarily is either that there is no adequate force at the disposal of the Executive, or that, having an adequate force, the Executive wants courage to use it. No doubt, if either of these assumptions were true, there would be ample reason against moving the Legislature to Paris. But, then, to say that either of them is true is to accuse the French Government of absolute paralysis in presence of popular discontent. An Executive is brought into such a plight by one of two things—the want of an adequate army, or the want of the resolution to employ it. It cannot be contended that the French army is not large enough to make Paris as orderly as any city in the world. Nor is there any ground to suppose that, if the soldiers were ordered to protect the Assembly against violence, they would not do as they were told. A great capital does not break into open violence without giving ample indication of the direction in which its thoughts are running. The Government is forewarned, and it is consequently its own fault if it is not also forearmed. No doubt, if, when the time for action comes, the Government were to give no certain sound, if it were to repeat the lamentable scenes of the First Revolution and tell the troops to fire and not to fire in one and the same breath, the army might speedily become demoralized, and all that M. LABOULAYE fears from the transfer of the Chambers to Paris might soon be realized. Well, then, it may be said, since this is admitted, why run the risk of such a calamity? So long as the Chambers

remain at Versailles they are safe, whether the Executive has or has not the courage to protect them. Why take them from a place in which no harm can come to them, whatever be the shortcomings of the Government, and move them to one in which any display of weakness on the part of the Government would be pregnant with disastrous consequences? We can only reply that the existence of a weak Government in France would be so great a misfortune that it ought not even to be contemplated. It is better for the country to say from the very first, We will not tolerate weakness in our rulers. The absence of the Legislature from Paris is likely to serve as a cloak for this unfortunate quality, and therefore the Legislature ought to return to Paris. Let it be clearly understood that no French Cabinet will be held fit for its place which is not as well prepared to protect the Chambers against violence if they sit at Paris as if they sit anywhere else; and then, when every Minister knows what will be required of him, there will be the less excuse for his falling short of it. It is important in dealing with this subject to bear in mind that open violence is not the only evil which has to be guarded against. A Government may fall into general contempt and discredit without having retreated before a mob, and when once it has come into this condition the mob will not long be wanting whether the Legislature is at Paris or at Versailles.

The controversy about the seat of Government has two collateral elements of interest in addition to the interest which attaches to the main question. There is first the disclosure of the distrust which Paris still awakens in the minds of those who are above all things the representatives of the rural communes, and, next, the evidence which the action of the Senate affords of the distinction which still subsists between the Upper and Lower Chamber. In our judgment the way in which the former feeling shows itself is not a wise one; but we are very far from denying that the distrust which Paris has excited in times past still retains some of its justification. The circumstances of a great capital do undoubtedly give a chance to disaffection which outside the capital it has no chance of commanding. Paris, above all cities, is the home of sudden surprises, and unless the Government are properly on their guard against them it may prove that the supply is not yet exhausted. It is not probable that much can be done in the way of specific guarantees; but, if the Government know their business, they will be able to convince the more timid section of the Senate that they have not the slightest intention of bearing the sword in vain. If they fail in bringing the Senate round to their views, it is to be hoped that the respect which Frenchmen have hitherto felt towards a Second Chamber will not be destroyed by that Chamber having a mind of its own in a single instance. If ever there was a case in which the suspensive veto could be applied without blame, the present is one. It is provided by the Constitution that Versailles, and not Paris, shall be the seat of government; and it is further provided by the same instrument that, as regards the alteration of the Constitution, either Chamber shall have a veto on the act of the other. Nothing can be plainer than the intention of those who framed the Constitution. The powers of the two Chambers with regard to it are strictly equal; and it would be a bad omen for the Conservative Republic if the will of the Second Chamber should be overruled on the very first occasion since its renovation on which it has ventured to differ from the Chamber of Deputies.

WELLINGTON COLLEGE.

THE debate on Mr. YORKE's motion has not supplied any additional materials for a conclusion upon the merits of the Wellington College controversy. All that is to be said on each side was already to be found in the correspondence between the ADJUTANT-GENERAL and the Governors of the College, to which we called attention last October. If the school had been confined to two out of the three classes of boys who are now educated in it, the present attack might never have been made. The original conception of Wellington College was that of a school for the gratuitous or nearly gratuitous education of the orphan children of officers, and this part of the promise held out to those who contributed to its foundation has not been departed from. The orphans of officers are still educated for a merely nominal sum. The only thing complained of is that the College is unable to educate a sufficient number of them upon these terms. But besides the children of dead officers, who pay next to nothing, there are a certain number of children of living officers who pay a good deal. It is true they do not pay so much as boys who have not the good fortune to be the children of either dead or living officers. What the one gets for 80*l.* the other gets for 110*l.* Unfortunately for the peace of the governing body, something was said, before the College was opened, of a very much smaller sum than 80*l.* being enough for the education and maintenance of boys out of whom it was not proposed to make a profit. The expectations of living officers were excited, and a certain number of them seem to have really believed that an education of the highest order would in future be open to their sons for the modest sum of 30*l.* No boy was ever actually taken at this figure, but the idea of a cheap education had been set going, and at every station where British officers are brought together, especially at those where English children cannot be retained without risk to health and even life, this new and advantageous mode of disposing of them was warmly welcomed. So far as the precise sum of 30*l.* is concerned, the idea was abandoned before the College was opened, and the present sum of 80*l.* was fixed on before the College had been opened a year. It is plain that the change from 30*l.* to 80*l.* was in all respects a radical one. There are comparatively few officers who can afford to pay the latter sum for the education of their sons, and it is from the majority who cannot afford to do this that the present complaint comes. It is in vain that the Governors insist that they make nothing by these boys, that the 80*l.* only about balances the cost of each boy for the school year, and that, if it is to be reduced, the character of the school must be changed. The aggrieved officers do not shrink from the answer. Let it be changed, they say. We had nothing to do with making Wellington College what it is, and we do not care how soon it becomes something different from what it is. It is plain that this view of the case is not at all disposed of by the speeches of either Mr. GLADSTONE or General SHUTE. When General SHUTE declares with pride that the Governors of Wellington College have raised a building "worthy to be a monument of the great DUKE," and have done their best to make the College fit to "rank "with the highest public school in England," he says what is perfectly true, but not perfectly to the point. The officers who quarrel with what has been done for them do so, not on the ground that the education given at Wellington College is dear at the money asked for it, but on the ground that, whether it be dear or cheap, the money asked for it is more than they can afford to give. Mr. GLADSTONE virtually conceded all that the complainants asked for when he admitted that those officers who contend that it is possible to give an education substantially as good as that now given for less money have a right to have their contention investigated. Is it necessary, that is, to the really important part of education, that the arrangements of the College should be so liberal, the buildings so magnificent, and the boys themselves placed so completely on a level with those of the first public schools in England? We may even go further than this, and say that the case of those who maintain that an education not quite so good as that which is given at Wellington College and at the great public schools would have answered their purpose very much better deserves consideration. Indeed we are inclined to think that this latter plea goes nearer to the root of the matter than the former. It is very doubtful, to say the least, whether the kind of education given at Eton and Harrow can be reproduced at Wellington College for less than the sum now charged for it. A public school education has now become a very costly compound. It needs the most successful young men at both Universities for masters, it needs the latest improvements in educational appliances of all kinds, it needs an apparatus appropriate for every kind of sport. Which of these accompaniments are essential and which accidental is a point upon which it is very difficult to have an opinion. No doubt there is much in the surroundings of a great public school which has no direct connexion with education. Yet there may be a real connexion between the choice of masters which it is open to the Governors to make, and the presence or absence of these accidents. Suppose, for example, that a school were started with a staff of masters of the highest excellence, and that, owing to various changes in the conduct of

the school, it were gradually deserted by boys whose parents intended to send them on to Oxford or Cambridge. Is it not clear that in that case the masters would leave the school for the simple reason that their occupation would be gone? Their salaries might remain the same, but the use for special qualifications they had to give would be at an end; and where a man—especially a young man—finds that his work no longer calls out his special qualifications, he either goes elsewhere in search of other work, or loses interest in the work he has. It is not probable, therefore, that, if the cost of the education at Wellington College were lowered, the education itself would retain its present character. Civilian parents would not pay 110*l.* a year for their sons if they got much less than they do now in exchange; and there is no reason to doubt the accuracy of the Governors' statement that the education for which they charge 110*l.* to civilians cannot be given to the children of officers at less than 80*l.* without the risk of loss to the College. And loss to the College, it must be remembered, means more than reduction of income to the masters. It means a positive reduction either in the number of orphans educated there or in the standard of education given to them. Where the children of living officers are concerned they have at least their parents to take thought for them. If Wellington College declines in reputation or in solidity they can be taken away and placed elsewhere. It is different where orphans are concerned. They are educated gratuitously at Wellington College, and whether the education there given is good or bad, it is all that they are likely to get. It is they, therefore, that have the first claim alike on the Governors of the College and on the public at large. The primary object of the College was to give them such an education as their fathers, if they had lived, would have wished to give them, and the fulfilment of this object ought not to be subordinated to the interests of children whose parents are still living.

Still when this has been admitted, the question whether the education now given at Wellington College is the best for the particular class of boys for which it was in the first instance intended remains to be answered. There are abundance of flourishing schools in existence, passing under the general name of middle-class or first-grade schools, which give an education thorough of its kind, but differing in many important respects from the education given at Harrow or Rugby. Would it be desirable that this should be the kind of education given to the orphans of officers? That is an inquiry which cannot be answered offhand, but it can hardly be denied, having regard to the antecedents, position, and prospects of the great majority of the boys in question, that it is not a matter to be dismissed as undeserving of consideration. Nor is it one that could be fairly dealt with by the Governors of Wellington College sitting alone. If Lord GEORGE HAMILTON really wishes to satisfy either the army or the public, he will take care that the promised inquiry shall be one in which the two opposite theories of what an institution such as Wellington College ought to be shall be fairly represented.

GRIEVANCES OF THE PEERAGE.

LORD ZOUCHE, a young and promising member of the House of Lords, has in an article in the *Nineteenth Century* given expression to a grievance which is felt by many others of equal age and of the same rank. He is willing to serve his country as a peer, and he can find nothing to do. It has generally been thought that a Scotch peer who is not elected as a representative is more completely excluded from political life than the members of any other class. Even a clergyman may vote for a member of the House of Commons; he is eligible to become a bishop; and, under recent legislation, he may at his pleasure denude himself of a character to which special disabilities are attached. The Scotch peer has no vote, except for a representative in the House of Lords, and he must remain a peer to the end of his life. Lord ZOUCHE finds that a peer of the United Kingdom, though he is not technically disqualified, has almost as little opportunity of gratifying a laudable ambition. He may go to the House of Lords, but on ordinary nights there is no business; and on the rare and brief occasions of a debate his assistance is not invited by the leaders of his party. He finds the present Government peculiarly disinclined to encourage youthful aspirations. If a peer hitherto unknown in political life insists on making a speech, he, according to Lord ZOUCHE, receives the plainest intimation that he is no better than an intruder. It is odd that Lord BEACONSFIELD and his colleagues should be charged with more than ordinary want of courtesy to the bulk of its supporters in the House of Lords. In his novels Mr. DISRAELI always announced that the world could only be regenerated by the young; but the survivors among his early followers have grown old, and they have perhaps not transmitted their genius and their wisdom to another generation. There is no doubt that a disposition to discover and promote young and able men is both useful and honourable to a statesman. Lord BEACONSFIELD has generally selected competent candidates for high employment; but perhaps he has not sufficient leisure or energy to invent a career for ordinary peers.

In spite of remonstrances addressed to every successive Government, the House of Lords finds that the business entrusted to it is constantly decreasing in amount and importance. Although the House of Commons is often hopelessly blocked, it will not transfer any part of its functions to the other branch of the Legislature. There is undoubtedly a great waste of ability in the House of Lords. Many of its members are men of business; almost all are fairly educated; and the majority would probably prefer Parliamentary activity to incessant hunting, shooting, and fishing. A certain number of peers with great advantage to themselves perform useful service by acting on public and private Committees; but their appointment in one case rests with the leaders of the two great parties; and the panel of judicial Committee-men is prepared by Lord REDESDALE. There is only room for a certain number in office or on the bench which is occupied by the official part of the Opposition. Compulsory idleness is a serious misfortune to an active mind; but unoccupied peers may partially console themselves with the reflection that they are not alone in their sorrow. Every profession swarms with unsuccessful aspirants whose price no man has asked. The briefless barrister is even more to be pitied than the silent peer, because he has not a home, an estate, and an agreeable society to fall back upon. Mr. GLADSTONE deserves credit for having discovered a method by which a few peers of the dominant party are made useful as well as ornamental. He was the first Prime Minister who allowed and required Lords in Waiting and other functionaries of the same kind to represent for certain purposes in the House of Lords the great departments of State. The Lord Steward himself, instead of confining himself to the arrangement of stately ceremonies, sometimes moves first readings of Bills, or answers questions like an ordinary official human being. Unfortunately it is impossible to find similar employment for four or five hundred peers. Impatient ambition must wait for opportunities, which to peers, as to commoners, sometimes never occur. The right to work which is claimed by French communists on behalf of labourers and artisans has not been practically asserted. Peers are so far better off than handicraftsmen that they receive their wages before they have earned them. Their hereditary wealth and their social position may partially console some of them for political inactivity.

There are many more undesirable lots in life than the position of an English peer of good fortune. If his manners and character are unobjectionable he can always command access to good society; and he has every facility for making the most of any taste or accomplishment which he may possess. A moderate faculty for science, art, or literature will in his case obtain at least the recognition which it deserves. It is remarkable that there are not half-a-dozen peers by inheritance who have ever written a book; and perhaps the same number may have painted tolerable pictures. In learned and scientific society some peers take a creditable share. An intelligent Londoner of competent means would on the whole be better off as a peer than as a commoner; but it is in the country that the great advantages of rank are most various and most conspicuous. Unless there is a still higher magnate in the immediate neighbourhood, a resident and not unpopular peer is the *ex officio* patron, chairman, or leader of every local organization. If he is sufficiently industrious and intelligent he is not unlikely, as a vacancy occurs, to become Chairman of Quarter Sessions; and he may even aspire in imagination to the august office of Lord Lieutenant. The deference which is willingly paid to rank

is one of the most wholesome elements of English social organization. Envy and jealousy find little provocation when precedence is regulated, not by disputable assertion of personal merit, but by a kind of superiority which is confessedly accidental. Even those who may think that equality conduces to the public interest will allow that the privileged person himself derives great advantage from his position. With a reasonable share of energy and versatility a peer may find employment for himself in the country, although he may be condemned to silence and obscurity in the House of Lords. A provincial reputation for capacity sometimes serves as an introduction to more important duties; but, even if an unhappy peer never emerges from his rural circle of employment, he has a more interesting career than most of his untitled neighbours.

Although the political system cannot be altered for the convenience of unemployed peers, the question remains whether the House of Lords might not be made more serviceable to the State. Its defect is not in ability, but in power. The House of Commons is not willing to entrust a rival assembly with important legislation. Measures relating to the law for the most part originate in the House of Lords; but there would be little saving of time if the usual procedure with respect to ordinary business were reversed. A Bill sent down from the Lords would necessarily pass through all the regular stages in the House of Commons, and its provisions would be not less fully debated because it had already been approved by the other House. The ability and high reputation of the leading members of the House of Lords exercise great influence on public opinion when there is a debate on any important question of public policy. Moreover, by an odd anomaly the Chairman of Committees of the House of Lords exercises much more influence over private legislation than the corresponding functionary in the House of Commons. On the whole, the House of Lords is respected in its collective character; and the personal power exercised in various capacities by its members is very great. The function of correcting or preventing erroneous legislation is gradually passing, like the analogous veto of the Crown, into practical disuse. Wisely, but against its wishes and convictions, the House of Lords has within a few years passed the Bill for disestablishing the Irish Church, the Irish Land Bill, the Ballot Bill, and the Reform Bill of 1867. The tact which it has shown in averting collisions has been rewarded by immunity from revolutionary menaces and attacks. Forty years ago the suppression or reform of the House of Lords was a common topic of agitation. For many years not a whisper has been heard of any similar design. It might perhaps be advisable, if it were possible, to enlarge the sphere of action of the House of Lords; but it would not be a forcible reason for such a change that an increase of business might perhaps furnish some of its younger members with suitable employment. Any peer who may hereafter hold the position of Lord BEACONSFIELD and Lord GRANVILLE may easily deserve and acquire popularity with the great body of peers by concealing his reluctance to be troubled by their speeches.

THE EDUCATION DEPARTMENT AND THE LONDON SCHOOL BOARD.

THE answer of the London School Board to the very serious accusation brought against them by the Education Department was read to the Board on Wednesday. The questions which it proposes to answer are two. Firstly, when the Board applied for supplemental loans to the extent of 91,000*l.* for the building of certain schools, had the department approved the plans and tenders in such a manner as to justify the Board in entering into contracts with builders and incurring the subsequent liabilities? Secondly, when the Board had sent in these applications, were they justified in anticipating that the department would recommend the loans in due course, and in stating, as they did, that there had been delay on the part of the department in forwarding the recommendations to the Public Works Loan Commissioners? The Education Department say that the plans had not been "finally approved"; that, on the contrary, they had been returned to the Board with a request that, after tenders had been obtained and before any contract was signed, they might be again submitted to the department with an estimate of the cost.

Mr. CROAD begins by recalling two facts, which he says "appear to have been overlooked for the moment" by the Education Department. One is that the Board "have "invariably in each case forwarded to the department at "one and the same time the plans for the school buildings "and the tender which they proposed to accept." The other is that the Education Department have made a special arrangement with the London School Board by which, as soon as "a rough estimate, verified by "the surveyor and architect of the School Board," has been submitted, the Education Department "will be "prepared to recommend the Public Works Loan Com"missioners to make a loan to the School Board to the "extent of three-fourths of the estimated cost, provided that "such recommendation does not exceed 10*l.* per child to "be accommodated in the school buildings." The explanation of the discrepancy between Mr. CROAD and Mr. CUMIN'S statements is to be found, according to Mr. CROAD, in the fact that the reply of the department is always made upon a printed form drawn up for the whole country, and consequently having reference to applications in connexion with which no preliminary estimate has been furnished, and no special arrangement has been entered into. Mr. CUMIN, according to this view of the case, is perfectly right in stating that the plans of the schools it was proposed to build with the 91,000*l.* had not been finally approved, but that, on the contrary, these plans had been returned to the Board with a request for tenders and estimates. What Mr. CUMIN has overlooked is, first, that under the arrangement of the 27th of January, 1875, the London School Board is allowed to borrow from the Commissioners to the extent of three-fourths of the estimated cost before the plans have been finally approved by the department, and, next, that, as a matter of fact, not only the preliminary estimate required by that arrangement, but the actual tenders, had in each case been sent in with the plans. It is true that there appears on the file a letter from the Education Department making the requests mentioned by Mr. CUMIN. But the existence of this letter is due entirely to the economy of the department in not having distinct printed forms for use under distinct circumstances. Its correspondence with every School Board except the London School Board is conducted on the assumption that tenders have not been submitted, and that no loan will be recommended until the contracts have been finally approved. The correspondence with the London School Board is conducted on the assumption that tenders have been submitted, and that the preliminary estimate, not exceeding a certain proportion of the total cost or a certain sum per child, which, by special arrangement, has been substituted for final approval, has been sent to the department. Unfortunately, it pleases their Lordships to make one and the same printed form do duty for both cases. They are consequently made to send printed letters asking for tenders which have been already sent, and contemplating a final approval of the contract as an indispensable condition to recommending a loan which they have already agreed to recommend on conditions which have been complied with. It is scarcely credible that the department should for years have used "Supply Form No. "4" in its communications with a School Board to which by its own arrangement "Supply Form No. 4" has no application. The expenditure of a few shillings in printing a "Supply Form No. 5" would not have materially increased the estimate, while it would have saved the department from an explanation which does not present it in a very creditable light. Supposing, however, that it was impossible to print a special form for use in a special, but frequently recurring, case, was there no clerk in the department who could have been employed to make the necessary alterations in the printed form with pen and ink? The practice of the Education Department seems to be analogous to that of a firm of solicitors who, in drawing up wills, should always make their clients give their property absolutely because they had no forms at hand by which to make the bequest conditional. And supposing that this, too, was impossible, and that the form, the whole form, and nothing but the form Supply No. 4 must be used in cases to which it was inapplicable, as well as in cases to which it was applicable, might not some record of the fact have been preserved for Mr. CUMIN'S use? It is impossible to suppose that, when he reminded the Board that their applications had been

returned in order that tenders might be furnished, he knew that the tenders had been sent with the applications, or that when he insisted on the absolute necessity of a final approval of the contracts, he knew that the department had arranged that, in the case of the London School Board, the submission of a preliminary estimate conforming to certain specified conditions should, for the immediate purpose of the Board, take the place of that final approval. It is an inconvenient and embarrassing method of transacting the business of a great public department, and their Lordships cannot be too strongly recommended in future to make their letters harmonize with the facts of the particular case to which they refer, or, if this is beyond their power, to inform their Secretary that their letters are to be taken with such and such modifications.

It appears, indeed, that in August last the Education Department did address a letter to the Board stating that in future they would not recommend a loan for school buildings exceeding a cost of 10*l*. per child, and that if any estimate exceeded that amount, the balance must be borrowed in the open market. Inasmuch, however, as, in the case of six out of the ten schools for which the loan of 91,000*l*. had been applied for, the plans and tenders had already been approved, and the approval of the remaining four was "forwarded without note or comment" within a fortnight of this letter being sent, Mr. Croad contends with, it must be admitted, a great deal of reason, that the Board were justified in considering that the caution of the department referred exclusively to schools the plans and tenders of which should hereafter be submitted for approval. They therefore regarded the previous applications as covered by the previous practice and the arrangement of the 27th of January, 1875, and expected that the recommendations would be sent in due course to the Public Works Loan Commissioners. As they were not sent for more than six months, they hold that they have a right to charge the department with delay in forwarding them.

It is possible, of course, that the Education Department may be provided with a rejoinder to this answer. It is difficult to imagine how this can be, because Mr. Croad's letter gives the text of the arrangement of January 1875, and if this arrangement had been subsequently cancelled, it seems natural to suppose that Mr. Cumin would not have omitted to mention so important a fact in his letter to the Board. Still, until the department has either made its reply or shown by its silence that it has no reply to make, it is proper to abstain from coming to any final conclusion in the matter. In the first instance it appeared that the London School Board had been greatly to blame. Now it appears that the Education Department is greatly to blame. It will be satisfactory, of course, if it should ultimately be shown that neither party has been guilty of anything worse than a misunderstanding of each other's meaning. As yet, however, there seems no probability that the controversy can be thus pleasantly disposed of.

CRITICS AND AUTHORS.

THERE is one question between critic and author which is incapable of settlement. It is the business and, as it were, the duty of the critic to give counsel which it is not the business of the author to attend to. What the critic demands seems to be reasonable, and, in some ways of putting it, incontrovertible; but there is something in the nature of things point-blank against it. What can be more reasonable on the face of things than the critic's remonstrance with the popular writer who floods the reading world with works inferior to the earlier efforts of his genius, whereby he both injures his own reputation, and induces people, by the prestige of a past success, to waste time and money on what is not worth the expenditure? It is quite true that popular authors will persist in this line of conduct, and the critic, while they persist, must enter his protest. Yet it must sometimes occur to him that, simple as his demand sounds, in the present state of things it is a sheer impossibility, as running counter to nature; that he is asking what he has no right to ask; that, in fact, the interest of readers and authors is not identical—that is, supposing it to be the interest of readers only to read masterpieces, the cream of each writer's intelligence. It is to be observed that this blameable redundance is a feature of the present century, attaching to authorship as a settled creditable profession. It is because authors are a steadier class than their predecessors of a long-past date, not given to excesses, no longer fitful, wild, dissipated, that they are over-prolific. Goldsmith wrote one novel, Fielding four, Smollett four, Sterne two. How many would they have written had they lived in our day and been under the inducements to a steadier life settling into habit, which literature as a recognized profession—subject we may say to the conditions of supply and demand—would offer them? Necessity drove them to the effort of invention, but the difficulties and humiliations of publishing presented the effort in a painfully depressing light. Habit was either never formed or was sadly submitted to as a bondage and perpetually broken in upon. We are speaking of course of writers of light literature, and especially of novelists. Richardson was in every point the one exception to the general position of the eighteenth-century novelist. He was his own publisher, and the "close application" with which he had always devoted himself to business made the "sedentary habits" of a literary life, when at past fifty he found his true vocation, natural to him. These "sedentary habits" belonged then to the learned, who were slaves to their desk in a sense in which no one is nowadays; but the imagination was generally treated as untameable, and not reducible to the bondage of regular hours. Who shall say that it is not now drilled to perform a day's work with the same punctuality as any divine, antiquary, or philologist of a past date showed in the execution of his heavier tasks? Habit is now master of the situation; and we need not look far to find the reason why. Success at all times must be a stimulus to further action; but success of praise and credit has nothing like the same control over natural indolence that pecuniary success has, especially when this can be calculated upon with any accuracy. Uncertain gains, as a rule, lead to idleness and extravagance; steady gains, affecting the rate of living and raising their owner in the social scale, as naturally lead to industry and the formation of habits necessary to the sustaining and securing of advantages once acquired. Thus impelled, the powers bow themselves to a yoke which otherwise might not be borne; but how soon does the pen become a tyrant over those who have framed their lives to its service! The old novelist wrote by fits and snatches, and thus knew nothing of this bondage, and he and his readers were agreed that the imagination is too volatile an essence for compulsion; but modern experience gives good reason for the suspicion that of all the powers invention, once put into the harness of habit, demands its exercise with most persistence. The work of life is then marked out; it would be as great an effort to leave off as it was to begin.

It is impossible, if we speculate on the fecundity of some of our novelists, not to conclude that practice has subdued the brain into absolute subservience to the needs of the hour. The mind forms a knack of devising plots; it sees everything with this view. The brain is ever at work on scenes, situations, dialogues, and it is a necessity as each day comes round to put them into shape. Of all literary work we may imagine it to be the most exacting, and this though pure invention has far less to do with the business than when novel-writing cost a good deal more trouble, and one story at a time kept fancy on the strain. Now half a dozen are apparently in hand at once, coming out piecemeal in as many periodicals. It seems all the same to brain, feeling, hand, which thread is taken up. The work achieved is really surprising considering all things—the wear and tear, the brief time for thought, the transition from group to group. Thought and feeling have only, like practised actors, to slip into the costume of the story, and, they say, Here we are to do the author's bidding. As an intellectual feat the thing is wonderful. We say it seriously. The variety of incident and character, the descriptions, the easy possession of the subject, the local colouring, the flowing style, are alike astonishing; the habit of good writing making the reader feel himself in the company of a practised hand, of a real artist. We will not say "under his spell"—that charm belongs to an earlier date in his career. The fastidious reader, while not unentertained, perceives this difference between the earlier and later periods. Practice makes the experienced novelist bring his horse to the water unresisting, with a plausible facility that was wanting in the earlier effort; but he cannot make him drink, to the same freshening of the reader's fancy. The true contact of mind with mind is not to be effected by practised ease; it is struck off in the heat of a new and vivid sensation. No trick of art can bring a reader into that intimate communion with the persons performing their parts before him which is the supreme delight of fiction. Who can know all this better than the author? If it comes to comparing sensations, what are the reader's feelings contrasted with the writer's own when he looks back on the glow of his first effort, and sets it by the side of his present business-like methods! As Walter Scott, in an extreme case—yet a case to the point—writes touchingly to James Ballantyne, who had been offering unwelcome hints:—"I value your criticisms as much as ever, but the worst is my faults are better known to myself than to you. Tell a young beauty that she wears an unbecoming dress, or speaks too loud, or any other fault she can correct, and she will do so if she has sense and a good opinion of your taste. But tell a failing beauty that her hair is getting grey, her wrinkles apparent, her gait heavy, and that she has no business in a ball-room but to be ranged against the wall as an evergreen, and you will afflict the poor old lady without rendering her any service. She knows all that better than you. I am sure the old lady in question takes pains enough with her toilet." Our more voluminous modern novelists who astonish us with their ceaseless stream of fiction would not make such an admission even to themselves; nor is there the same contrast between their earliest and latest works as when Scott's rich

vein was exhausted. But reflections similar in nature, though not in degree, must sometimes visit them; they must recognize a difference.

And here the question we started with meets us. The critic says "Rest upon your oars; do not let the past shame the present; you have done good work, retire on the credit of it." Circumstances once made this counsel easy enough to follow, but they are dead against it now. Industry is one of the duties of our lives. What other industry can the novelist follow? Must he alone sit idle? Now all industry is connected in some way with the idea of getting something by it, earning or saving for oneself or for others. The housewife's sedentary needle, or her busy cares, have all this for their end, however little it may come into immediate calculation. Work that is in no way profitable can scarcely be considered a duty. Looking at the question on this side, it would seem that the too voluminous writer, so long as he finds a publisher, may appeal to another kind of success besides the literary one as a justification. Though indolence is less injurious to fame than publishing for remuneration work of an inferior quality, there is a sort of virtue in this which the deliberate masterly inactivity misses. This sort of virtue, then, has its place in the world. Society cannot be fed on *chefs-d'œuvre*. So long as an author does his best with good intentions he is not such a superfluity as he seems, and we must leave the care of his fame in his own keeping. Critics are thus a sort of literary rural deans superintending airy fabrics of name and fame. It is their duty to speak in the cause of the ideal best, but they can enforce nothing; nor would things go any better if they could. The real interest of readers would not gain by fixing an early date of superannuation; because this would discredit the profession as an employment and point to a melancholy old age. What is really important is the moral question. A jaded imagination is tempted to take up subjects and questions which offered no temptation to its early freshness; but recourse to the vulgarly sensational and to still "fouler springs" is to be censured on its own account, and does not enter into the present argument.

What we have said belongs rather to the works of prose imagination than poetical. Yet it must be observed that the poets of our day protract the singing period beyond precedent, which seems to dictate a somewhat early retirement upon its laurels. Mr. Browning, indeed, may say that, as he started with a defiance of sing-song melody, he is independent of the period thus defined. But though poetry has commonly an early prime, and there is a charm in young verse which we often miss in the muse's later efforts, still we are disposed to approve of any use of the poet's time rather than spending the leisure of old age in tinkering the effusions of youthful genius; a habit in which Wordsworth indulged to such a degree that in the latest edition of his works we miss many a lovely cadence and memorable line, and find poems moved and shifted about out of their original setting till we don't know where we are. A young poet may prune and qualify, and transpose, because he does it with the same ear and with his original aim fresh in memory; he is still a friendly critic. The old man differs from his youth in the alterations he makes, and has another aim. He views his works as a whole; and bends each part to make it fit to needs undreamt of, whereas the happy numbers first ranged themselves as the ear and fancy bid them. Time will find it more difficult to settle points like this, to replant what has been uprooted, to decide the claims of original and tampered-with, than to ignore altogether the later productions of a genius that has worked out its vein. But it will make easy work of the abundant after-math of the modern novelist; the growth of an indefatigable intelligent industry, after the first harvest rich with the flowers and fruitful seeds of genius—the first gathering from the storehouse of thought and memory—has long been garnered.

POETS ON ISANDULA.

THE late reverse of the British arms at Isandula has given an opportunity to an inordinate number of poets. To the best of our recollection the *Spectator* has not yet published an ode, or even a sonnet, by any one of the many bards over whose productions men make merry with their friends. With this solitary and remarkable exception, almost every journal that admits poetry into its columns has had its dirge or its battle-cry. These lays are not all equally bad; but it is quite impossible to maintain that they are, as a whole, creditable to modern minstrels. Their failure illustrates the utter inadequacy of a popular theory of song—the theory that poets should write about the moving events of the present alone, and that the fresher the occasion the more manly and stimulating is the poem.

About the minor versifiers of the less known papers we need not say much, nor about the bundle of military ballads produced by Dr. W. C. Bennet. This author has turned out as many verses, and with as free a contempt of art, as the most unaffected critic can desire. It is a common opinion that really popular and stirring poetry should be ill-written, should rhyme inadequately, and should defy all principles of scansion. If this opinion were correct, Dr. Bennet's pennyworth of military songs, in which the soldiers are taught that we are a hunting race, and that Zulus and foxes are equally good game, would be one of the most remarkable productions of the age. If Dr. Bennet deserves no farther criticism than this—that he consistently adheres in practice to the theory that popular poetry should be bad poetry—it is well not to criticize Lord Stratford de Redcliffe's ode at all. Lord Stratford de Redcliffe has won his fame in a very different field, and his drama of *King Alfred*, and his verses on the African war, deserve the respect which was paid to the poems of Warren Hastings. It is enough to remark that, from the most uneducated rhymer to the aged diplomatist, and from the boarding-school girl to the violent philanthropist, the people of England have been moved to express their emotions in verse. The emotions of the philanthropist, to be sure, could not be called patriotic. His lines, which were printed in some Northern paper of which we have forgotten the name, began, "Thou bully, England," and gloried in the chastisement which was inflicted by "the Zulu's dusky hand." Unpatriotic as was the emotion of this writer, the fact remains that he was deeply moved. The feelings of bitter indignation, of sympathy, of grief, were indeed (except in this one case) universal in England. A defeat in which brave men are surrounded and outnumbered, still more a victory like that of Rorke's Drift, won under similar conditions, is among the most stirring events in national history. Now the theory of a large and blusterous school of critics is that stirring events are almost the only themes for poetry, and that the stormy passions of national sorrow, resentment, and mingled pride and shame, constitute just the proper frame of mind in which poetry should be written. The actual results of the general inspiration have been so commonplace, so mild, so trivial, and in the expression of historical truth so utterly erroneous, that the most high-souled of critics may well reconsider this theory.

Among the verses begotten by the defeat at Isandula, those of Mr. Robert Buchanan, published in the *Contemporary Review* for April, are perhaps the most important. Mr. Buchanan is not only a versatile, but an energetic bard. Among a great variety of efforts he has, with Æschylean boldness, attempted at least one drama, if not a trilogy, on *Napoleon Fallen*. Like the dramatist who was fined for reminding the Athenians of their contemporary misfortunes, Mr. Buchanan did not absolutely succeed with *Napoleon Fallen*. There were, in the midst of modern characters and events, too many "Voices" which wandered about with no visible owner, and perhaps there were too many soliloquies, and too much blank verse altogether. Unwarned by the fate of his tragedy, Mr. Buchanan has attempted once more to turn the occurrences of the moment into verse. Among his old properties, he has preserved the Voice—indeed there are at least two Voices in "The Battle of Isandula," one of them, perhaps, being that which wound up a drama by the irrelevant remark "Irene!" Here is a specimen of Mr. Buchanan's composition, which, it will be admitted, runs trippingly along and possesses some lyrical nimbleness:—

> In the wilds of Isandula, far away,
> The little band of British soldiers lay,
> When a warning voice cried "Fly!
> For the savage swarms are nigh!
> See! they loom in war array
> Against the sky!
> Ere they come in all the might
> Of their legions, black as night,
> Form in order, and take flight from Isandula!"

Does Mr. Buchanan expect us to take all this about the Voice for history? Has he read about it in any of the newspaper reports? If so, it is most desirable that the owner of the Voice (if an owner it had) should be identified, and that his proceedings should be subjected to the most searching inquiry. If Mr. Buchanan has any private information, let him not hesitate to make it public. A pretty idea, forsooth! to cry, "Fly! for the savage swarms are nigh!" What else did our men enter Zululand for (leaving, alas! their communications unguarded, and showing a fatal contempt for the enemy), except that they might come to blows with the savage swarms? English soldiers may be rash or ill led, but it would not go well with the owner of a Voice that bade them "fly" *because* the enemy was in view. "Form in order and take flight" is a piece of advice that was never given in these circumstances. In Mr. Buchanan's second stanza, Voice number two comes forward. This voice was not "a warning voice," but "a voice of thunder." Our men, according to Mr. Buchanan, were a good deal taken aback (and no wonder) when they heard Voice number one:—

> Then our soldiers looked in one another's eyes . . . . (*sic.*)
> Less in terror than in wondering surmise,
> And a cold breath of despair
> Seems to chill the golden air,
> When a voice of thunder cries:—
> "Men, prepare!
> Though no human help be by,
> We are here our strength to try,
> Yea, to keep the camp or die in Isandula."

Unfortunately there seems, as far as can be gathered from the confused reports, to have been no organized effort to defend the camp. Mr. Buchanan has doubtless a right to introduce into a modern poem the ὀμφή, the mysterious warning voice of old superstition. The experiment, however, is obviously most hazardous, and Mr. Buchanan's want of success (as we venture to think it) illustrates once more the exceeding difficulty of making poetry on the themes of the moment. Fresh and keen emotion—be it of private and personal grief, or of national and patriotic sympathy—is not the stuff out of which poetry is made, nor the motive which enables the poet to do himself and his topic justice. We do not mean to say that no works of art have ever sprung, direct and immediate, from the freshness of passion. When such poems are really poems, they are unequalled in their power. As a rule, however, every sentiment must mature slowly, and anger or pain must lose its rough

edges, before what sorrow teaches can be taught in song. Another extract from Mr. Buchanan's war-poem will demonstrate, we think, the danger of writing (as we are often told poets should write) on impulse:—

> Back to back, all sides surrounded, slowly led,
> Their fire upon the foe, they downward tread;
> While at last the sable stream,
> Sweeping on them, teeth agleam,
> Before their crimson lead
> Pause and scream!

Now in the *Chanson de Roland* there is something rather finely barbaric in the description of the advance of the Ethiopian hordes, "who have nothing white but the teeth." In Mr. Buchanan's poem things are rather too much mixed. We have a "sable stream," and the teeth of the stream are "agleam"; and then, before the "crimson lead" (that is, the bullets), the "sable stream" "pause and scream."

In spite of these obvious blemishes, and in spite of a description of what happened which later reports contradict, Mr. Buchanan's verses actually do possess spirit, colour, and movement. We can scarcely say as much for those which Mr. Alfred Austin has contributed to the *Standard*. The first stanza is peculiarly lame, and suggests an uncomfortable memory of the "Charge of the Light Brigade." Some one is supposed to be asking a survivor for his account of the disaster:—

> Who was it blundered? Eh!
> It is not mine to say,
> But I, if breath holds out, will tell you what I saw.
> Onward the black line came,
> In wreaths of smoke and flame,
> Curling about our front, one ever-widening jaw!

It is unnecessary to pick out in detail the faults of expression here and the languor of rhythm. Mr. Austin once before, breaking into song, told the world how "Mehemet Ali came and saw The riddled breast and the tender jaw," or words to that effect, of a girl who was killed in one of the Turko-Russian battles. It does not seem to be given to him, or indeed to any one else, to write good martial verse on contemporary battles. Indeed, if we consult any collection of English poetry, we shall find that the war-songs of permanent merit are the most scarce of all. Sir Francis Doyle's verses *In Memoriam* (dedicated to Major Steuart Smith, and published in the *Cornhill Magazine*) are full of noble feeling, but are in one respect unfortunate. Recent accounts of the fight at Isandula seem to show that, though Major Steuart Smith fought on, wounded as he was, and did all that man could do to rally the artillery, it was impossible for him to perform the particular service recorded by Sir Francis Doyle. Still we may repeat these admirable lines, lines which accident cannot deprive of their force and truth:—

> Let loose your sorrow without fear,
> Ye who now proudly mourn the dead,
> No wind of bitterness can sear
> The oak-leaves round that sacred head!

It will probably be admitted that the amount of real poetry produced under conditions which many theorists think peculiarly favourable to its growth is almost infinitesimal. Perhaps war-poetry is not the *forte* of an old and advanced civilization. What an uncivilised people—namely, the Maoris—can do in the way of epic narration may be gathered from the following passage. We quote it to show that the poetry of battle still exists in a favourable soil. The translation is by that admirable and most spirited writer, the author of *Old New Zealand*. His native friend is describing a Maori ambush:—"Heke lay on the ground with his own party; close at hand were the sleeping soldiers. Amongst those soldiers there was not one *tohunga* (soothsayer), not a man at all experienced in omens, or they must have had some warning that great danger and defeat was near; but there they lay sleeping between the open jaws of war and thought of no danger." How well that applies to the condition of our men at Isandula, how straightforward it is, how nobly simple! Does not Mr. Buchanan's "warning voice" seem a piece of stage effect compared to this savage epic? Again:—"And all the young men of the Hikutu came to help Walker; they came to practise war, and elevate their names; they thought not of the light of the sun, or of the number of the enemy. Their handsome and brave young chief, Haurahi, fell at Waikare, for such is the appearance of war!" The very turns are Homeric, because they are the expression of a man whose business is war, and who knows the joy of battle. But to modern English poets that is unknown, except in fantasy.

THE "LOUD-SPEAKING" TELEPHONE.

As a matter of public interest, we propose to give a brief description of the remarkable instrument recently sent to this country by Mr. Edison, the capabilities of which were illustrated a few days ago in the theatre of the Royal Institution. Through the kindness of Lord John Manners and of the Post Office authorities, a wire, passing through the air from Albemarle Street to Piccadilly Circus, was placed at the service of Professor Tyndall. The two ends of this wire being connected with the public water-pipes at the respective stations, a circuit was established through which an electric current could flow. In the circuit, at each end of the air-wire, was placed an ordinary carbon telephone, into which the words were spoken. But while the receiver at the Circus was a Bell's magnetic telephone held to the ear, the receiver at the Royal Institution was the loud-speaking telephone. The nephew of Mr. Edison was stationed at the Circus, while his assistant, Mr. Adams, operated with the new instrument in Albemarle Street. Passages from Shakspeare, Scott, Tennyson, Macaulay, and Burns, spoken by Professor Tyndall through the carbon telephone, were received by Mr. Edison, and returned with an accuracy and loudness which enabled them to be heard throughout the entire theatre. Not only were selected phrases thus heard, but a poem of Emerson's, which was new to Mr. Edison, was read out from beginning to end, and reproduced line by line with extraordinary fidelity and distinctness. Various expressions, moreover, following the quotations, such as "Excellent!" "Perfectly satisfactory!" "Exceedingly good!" were promptly returned and heard with amusing intensity by the audience. "John Brown" and "Yankeedoodle," sung at the Circus, were loudly reproduced in Albemarle Street. Perhaps the most striking illustration of the pliant power of the instrument was its capability to reproduce a whistled tune. Mr. Edison is not an adept at whistling, yet his melody at the Circus was heard in Albemarle Street almost as distinctly as if it had been produced upon the spot. After the lecture Professor Tyndall quitted the theatre for a time, during which some members of the audience conversed with Mr. Edison. On the Professor's return he resumed the carbon telephone, and spoke into it. Mr. Edison immediately detected the difference of tone, and, on being asked who it was that now spoke, answered correctly. By this new instrument, therefore, the varying qualities of the human voice are in a remarkable degree reproduced.

These extraordinary effects were obtained with an apparatus so simple, and apparently so rude, that without hearing the instrument its performance could never have been predicted. We shall endeavour in a familiar way to make clear both its construction and its action. Suppose an observer standing in front of a cylinder rotating round a horizontal axis, with one arm rigidly stretched at right angles to that axis. Let his flat hand be placed upon the moving surface, the pressure being so regulated as to produce considerable friction between cylinder and hand. Let the direction of the rotation be such that the friction shall draw the observer towards the cylinder, he, at the same time, poising his body so as to resist being thus drawn. If the surface of the cylinder were uniformly smooth, a uniform frictional resistance would be experienced, the inclination of the observer's body remaining constant. But supposing different parts of the surface to be of different degrees of smoothness, varying from the slipperiness of ice, through that of glass and polished metal, to the roughness of cartridge-paper and felt, it is plain that on passing from the rough and adherent surface to the slippery one there would be a sudden relaxation of the friction. The force previously exerted to prevent the body from being drawn forwards would now cause it to fall backwards, until the hand had been again caught by another adherent portion of the surface. It is obvious that such a cylinder, rotating uniformly, would, in virtue of its alternate slipping and biting, compel the observer's body to vibrate to and fro, the character of the vibration depending on the abruptness of the passage from rough to smooth and the reverse, and on the extent of the respective surfaces.

In the loud-speaking telephone there is a rotating cylinder about an inch and a half in diameter, and a little more in length, and a flat strip of metal (typified by our rigid arm) one end of which is pressed down upon the cylinder by a spring. The other end of this metal rubber is attached to the centre of a thin circular plate of mica about four inches in diameter. The cylinder is formed of powdered chalk, with which are mixed a little hydrate of potash and acetate of mercury, the powder being squeezed to hardness in a cylindrical mould. Through the centre of the cylinder passes a metallic axis. This is connected with one end of the secondary wire of a small induction coil, the other end of the wire being joined to the strip of metal above referred to. The radius of the chalk cylinder is therefore interposed between the two terminals of the secondary wire. A wet roller being brought from time to time into contact with the cylinder keeps it constantly moist. Thus moistened, the cylinder becomes to all intents and purposes an electrolyte, every passage of a current producing an amount of decomposition exactly proportionate to the current's strength and duration. The induction coil, the cylinder, the roller, and the small water cistern in which the roller usually lies, are all contained in an iron case seven inches and a quarter high, five and a half inches wide, and three and three-quarters deep.

A very small battery sufficed to work the apparatus. From the battery the current passed through the primary wire of the small induction coil, thence through the carbon telephone held by Professor Tyndall, onward to Piccadilly Circus, from which it returned under the earth to Albemarle Street. As long as this current flowed without any variation of strength, no effect whatever was produced upon the loud-speaking telephone. A hand turning the chalk cylinder experienced a uniform resistance, the mica plate being drawn inwards with a constant force. The essential feature of the carbon telephones employed is a thin cake of fine petroleum lampblack held between two thin plates of platinum, on one of which the voice impinged. The alternate compression and relaxation of the lampblack, by varying the resistance, produced variations in the current corresponding in period and intensity to the vibrations of the voice. Every varia-

tion thus introduced into the primary started an induced current in the small secondary coil, while every induced current produced its due amount of electro-chemical decomposition at the common surface of cylinder and rubber. The consequent mechanical action could hardly have been foreseen. The passages of the induced currents between the metal rubber and the chalk seemed accompanied by the periodic liberation of a lubricant underneath the rubber, which immediately yielded, by slipping, to the tension of the mica plate. Each slip was of momentary duration, being followed by a frictional "bite" which drew the mica diaphragm inwards as before. Thus the vibrations of the voice—of its tones and overtones—were in the first place impressed upon the primary current, every variation of the latter being followed by a proportionate discharge of the induction coil. By their electrolytic action these discharges produced and controlled the slipping of the metal rubber, causing it to vibrate longitudinally in accordance with the vocal vibrations. These were finally transferred, with their qualities to a surprising extent intact, to the plate of mica, and thence to the surrounding air, which they moulded into waves similar to those produced by the direct action of the voice. The mica plate might be regarded as a magnified tympanic membrane, the latter, like the plate, being drawn inwards by the bones of the ear. It may seem amazing that the mica should be able to take up and reproduce with such intensity and distinctness the manifold vibrations involved in whistling and speaking; but the wonder was anticipated by an artificer more ancient than Mr. Edison in the construction of the tympanum itself.

What is the lubricant which produces the slipping of the rubber? The instrument has been so short a time in action that this point is as yet unsettled. The slipping may be caused by a gas or vapour. Other agencies might be mentioned, but the choice of mercury- and potassium-salts to mix with the chalk powder is, in Professor Tyndall's opinion, not without significance. If a strip of bibulous paper, wetted by a solution of these salts, be connected permanently with the positive pole of a battery, on causing the negative pole to pass as a rubber over the moist surface, while the current is rendered intermittent by a contact breaker, the alternate slipping and biting are rendered obvious to the hand. May not the slipping over the chalk cylinder be caused by the greasy amalgam of potassium and mercury which is released in infinitesimal quantity underneath the rubber when the current passes from the cylinder to it? A very brief investigation will suffice to clear up all those points, but for the present they remain undecided.

The germinal observation, if we may use the term, from which the loud-speaking telephone has sprung, was, we believe, made by Mr. Edison in 1872, while experimenting on moist papers with a view to telegraphic applications. He then noticed the slipping by electrolysis which he has recently turned to such excellent account.

The statements sometimes made regarding the performance of the ordinary telephone may cause our readers to imagine that no considerable step has been here taken by Mr. Edison. But this would be an error; for the loudness and distinctness of this new receiver have never been hitherto approached. The Bell telephone is constructed for the individual ear; and even the remarkable development which this beautiful instrument has recently received at the hands of Mr. Gower leaves it still considerably behind the instrument of Edison. The Gower telephone is, however, a very handy piece of apparatus, and will doubtless have various applications. It creates its own currents, and thus dispenses with the battery. It will be interesting to pit it upon long lines against the new telephone. The performance of the Gower telephone at the Royal Institution was highly satisfactory, but the distance through which its currents travelled was limited to the extent of the Institution itself.

END OF THE SKATING-RINK.

THE beginning of a thing commonly attracts much more attention than the end. New customs and fashions force themselves on our notice as something positive. When, however, they cease to be they are apt to drop quietly out of sight, their removal exciting little observation. And this applies to the sudden as well as to the gradual termination of a fashion. Where our interests are not involved in a custom, where we do not miss it, we hardly observe its disappearance. The sudden collapse of the skating-rink is a good illustration of these observations. When this form of amusement came into vogue everybody was full of it; but its decline has only been a matter of remark among a specially interested few. Yet so rapid and complete a decadence of an absorbing pastime is surely a subject fitted to impress the mind that turns to it but for a moment. And it may not be altogether unprofitable to dwell awhile on the phenomenon.

A visit to the rink of to-day by any one who was familiar with the rink of a year or two ago will afford a curious example of the rapid scenic transformation which characterizes the swiftly moving drama of modern social life. Then all was life and excitement. A goodly gathering of well-dressed young people—young, at least, in the fashionable and elastic sense of the term—met, day after day, to roll in alternate and rhythmic movement to the inspiring sound of music. Passing acquaintances were made and flirtations indulged in in their nascent and most interesting stage. It might have been difficult for an onlooker to understand how these rhythmically swaying figures found much satisfaction in perpetually wheeling round the hall. But there was no doubt of the fact of the enjoyment, at least in the early stages of the fashion. Now the casual visitor to the skating-rink finds everything changed. The elegant company has vanished, or dwindled down to a meagre and pitiable residuum. The lofty roof no longer echoes with the rousing notes of the brass band or with the full volume of sound contributed by the skaters themselves. The well-built and smooth-floored hall looks desolate and dreary. Handbills announcing the performances of a comic singer suggest that the once fashionable rendezvous is being degraded to ignoble uses. The thoughtful spectator of this transformed scene will naturally reflect how great a difference the collapse of the rink must have made in many respectable lives. It can be no little thing, one imagines, to lose the prospect of the excitement of two hours' rinking in the dull winter afternoon. What, it may be asked, do the quondam skaters now do with the many hours which they were wont to pass at their favourite resort? Where does all the bodily energy flow to which used to vent itself in the gyrations of the rink? We do not hear of any rival pastime which has taken the place of roller-skating either as a physical exercise or as a social excitement. It looks as if the units of the well-bred crowd had gone back to their old habits of lounging, tea-drinking, and gossiping. But, if so, are they not to be commiserated on their loss of so absorbing a pastime? As he reflects on all this, the visitor to the deserted rink will be yet more profoundly impressed by the social results of that inexorable decree of fashion which seems to have condemned the rink to a place among the institutions of the past.

Another kind of reflection may arise in the spectator's mind as he turns his attention to the new and vulgar uses to which the rink is being put. The rapid rise and fall of the skating-rink has worked catastrophic changes in many people's fortunes. The rink mania, sweeping over the face of society like a tide, carried up a fortunate few to undreamt-of elevation. The first projectors of rinks must have realized a handsome profit from their undertakings. And as to the patentee of the roller-skates, the imagination fails to picture the influx of wealth which the pastime has probably secured to him. But, on the other hand, the sudden and swift ebb of the rink passion must have dragged down a large number of the more tardy rink-builders. The profitless sinking of capital in skating-halls has been very large. Much of this has been sunk in the most complete sense, since the buildings are now to a large extent useless. Not a few rink proprietors, we suspect, must have become involved in serious pecuniary losses. The deserted rink will wear a still more impressive aspect to the spectator who thus reflects on the number of fortunes it has helped to make and to mar.

If our imaginary visitor to the deserted rink is of a philosophical turn, and wishes *causas rerum cognoscere*, he may follow out a still wider line of reflection. Fully to understand the growth and collapse of the skating-rink one must have recourse to some very general truths of human nature and social life. It may no doubt be said that the root-idea of the rink, to use a German expression, was the attempt to make good by artificial means the loss of a natural mode of recreation. It was hardly an accident that roller-skating came into fashion at a time when there seemed reason to suppose that frost and ice had been struck out of nature's scheme of things. Everybody must know of some frequenters of the rink who may be said to have been driven there by the want of the natural conditions of skating. So far as this was the case the return of the old severity of winter this year must, one imagines, have given the final death-blow to the fashion of roller-skating. In a sense, nature may be said to have had her revenge on art. It looks as if she allowed her admirers to try for a while what art could do for them, just for the sake of afterwards showing her indubitable superiority. Nobody who has enjoyed days and weeks of genuine skating during the past winter on the overflowings of the Thames, or on the magnificent sheet of water at Hendon, will be in a hurry to go back to the skating-rink. But it is plainly an exaggeration to suppose that the fleeting passion for the rink rested wholly, or even mainly, on a pre-existing love of the more natural mode of skating. As a rule, we think, it may be said that the rink was not supported by people greatly addicted to skating in its earlier and incomparably superior form. We must then look for other and more general causes of the sudden rise and fall of the rink.

The way in which young people took up with the new fashion of roller-skating can hardly fail to suggest a number of reflections on the habits of modern life, and on human nature in general, which, though they may appear a little commonplace and tedious to some, need, we fear, to be yet dwelt on again and again. Friends of the higher education of women are wont to tell us of the vanity of young women's life in well-to-do families, and the skating-rink may be regarded perhaps as a striking illustration of the extent to which this class suffers from the chronic mental malady known as *ennui*. It was because the rink offered a novel form of social stimulation that young persons were at first so eager for it. As a rule, well-to-do people who are, by a curious bit of unconscious irony, felicitated by those below them on being able to "sit at home at ease," are only too thankful for any new suggestion as to a fairly pleasant way of killing time. They do not stop to inquire whether the occupation is fitted to their individual tastes and capabilities. They are so much in need of diversion that any new form of amusement is sure to draw them. And so it was that, when roller-skating was introduced, people eagerly rushed to the rink in the hope of being diverted. Thoughts like

these may well pass through the mind of our imaginary visitor to the rink who recalls to mind the early history of the institution.

Nor will he fail to moralize somewhat on the speedy collapse of the skating-rink. Does not the brief history of this engrossing pastime, he may perhaps ask himself, seem like an epitome of human life regarded as a search for pleasure? People acted as though they counted on the rink bringing them a lasting satisfaction, and had to discover that its charms were unsubstantial and fleeting. This is very like what certain moralists and philosophers are wont to tell us respecting the vanity of all pursuit of enjoyment. One is half tempted to suggest to those dismal pessimists who are given to painting life as one illusory dream of happiness that they should take the skating-rink as another illustration of their theory. It seems so well to prove not only the prevalence of that ennui which Schopenhauer calls the sense of the burden of life but the futility of all attempts to escape from this miserable condition of mind. Happily, however, we are not quite shut up to this moral lesson. The skating-rink may just as well be made an illustration of the ignorance and helplessness of people with respect to the real conditions of enjoyment. English people are said not to understand the art of being happy, and certainly a glance at the crowded rink was likely to suggest the thought that the fashionable gathering was taking its pleasure somewhat sadly. There was a stiff regularity, an appearance of restraint, a severe monotony in these organized drill-like movements that might easily make the spectacle a depressing one to a lively and imaginative person. This line of reflection, though not a cheerful one, is less dismal than that of our imaginary pessimist. It is to be regretted, no doubt, that people are so foolish in disposing of their time agreeably, but one need not perhaps yet despair of teaching them how to extract more enduring enjoyment from life.

As an economical phenomenon too, the history of the skating-rink is by no means insignificant or uninstructive. Where, one naturally asks, did all the capital come from which so quickly found its way into skating-rink undertakings? One can hardly see that any large amount was at the same time liberated from other employments, and one is led to suppose that in a country like ours there is always a lot of surplus capital, or what is equivalent to capital, credit, ready to be thrown into any new form of speculation. What is wanted to bring it into activity is some tempting prospect. A large class of industrial operations are clearly a species of gambling. They are only begun when there is a chance of winning a high prize in the shape of a rate of profit greatly in excess of the current rate, and when accordingly there is a distinct element of risk. The sudden development of the taste for roller-skating offered a fine opportunity for such adventurous embarkation of capital. If it only lasted, the returns would pretty certainly be large, and the chance of this sufficed. What will probably most surprise our imaginary onlooker is that people with money to lose did not reason better as to the probabilities of the case. It did not need any exceptional commercial sagacity to see that the skating-rink would not long remain the fashionable pastime it was at first. Its essentially fugitive character was written, so to speak, on its very face. One is led to conclude that those who speculated in the erection of skating-rinks, especially in the later stages of the mania, were so completely carried away by the idea of large profits as to leave out of account all the elements of risk. There seems, indeed, to be in the industrial world something very like the ennui of the home, which drives men to seize any new opportunity of indulging in the excitement of gambling for a large prize, however improbable its attainment.

In these different ways, then, a retrospective glance at the skating-rink may set a reflective person thinking. There are probably many serious people who would regard this amusement as much too frivolous a subject for their consideration. But to those who will take the trouble to look below the surface of things no event in the life of a community is really too trivial for observation. In the social organism phenomena are so closely connected that what seems a most superficial and limited change is often a symptom of the action of deep-lying vital forces. The skating-rink seems at first sight nothing but the momentary product of the capricious tastes of a few idlers in society; yet it may well lead us to ponder on various grave aspects of social life as a whole.

MR. HARRISON ON READING.

It is quite as easy to spin out endless platitudes on the glories of the printing-press as on the glories of the British Constitution. The "infinite blessings of literature and the miraculous achievements of the press" afford a theme of inexhaustible declamation, and we are apt to forget that there are two sides to the picture, and that the power of reading is equally available for the study of the *Police News* and of Plato. Nay, more, under the circumstances of an age like ours, which inclines to consider that "a great book is a great evil," there is sure to be a strong temptation to prefer the *Police News*. But the contention raised by Mr. Harrison in the lecture he has just reprinted in the *Fortnightly Review* does not specially concern the perusal of this or a still lower class of literature which might be mentioned. He puts out of the question "writing which is positively bad"—"the poisonous inhalation of mere literary garbage"—and sets himself to contrast the habitual poring over what is simply trivial or curious, but not actually vicious, with the study of what has a permanent interest and value, "the really great literature of the world." And we are ready to go a long way with him when he complains of the waste of time in "aimless promiscuous vapid reading," which at once gorges and enfeebles the mind, and crowds out the knowledge which would prove really beneficial. We do not know who is the distinguished author quoted as advising men to form a habit of reading, without caring what they read, but we agree with Mr. Harrison that the advice is not good. We can sympathize to a great extent with his characteristically vigorous denunciation of the bewildering multiplicity of modern literary products:—

> I listen with mixed satisfaction to the pæans that they chant over the works that issue from the press each day, how the books poured forth from Paternoster Row might in a few years be built into a pyramid that would fill the dome of St. Paul's. How in this mountain of literature am I to find the really useful book? How, when I have found it, and found its value, am I to get others to read it? How am I to keep my head clear in the torrent and din of works, all of which distract my attention, most of which promise me something, whilst so few fulfil that promise? The Nile is the source of the Egyptian's bread, and without it he perishes of hunger. But the Nile may be rather too liberal in its flood, and then the Egyptian runs imminent risk of drowning.

There is even a certain force in the ingenious argument of the youthful enthusiast who maintained in a debating club at Oxford the startling paradox that the invention of printing had been one of the greatest misfortunes to the world. The gift, as Mr. Harrison says, has not been wholly unmixed with evil, and, to be a boon, requires to be wisely used.

The lecturer refers, as we have seen, to the positively injurious effect of a mere surfeit of trivial reading—"a thing as fruitful as whistling"—and considers that it would be better to read nothing at all. But the point on which he mainly insists is the neglect involved in this voracity of desultory information of what would really strengthen and inform the mind. *Paradise Lost*, as he puts it, is lost again to us under an inundation of sugary stanzas of ladylike prettiness or ceaseless explanations of what Milton meant, or did not mean, while we omit to familiarize our minds with what he said. And this ignorance is illustrated by two or three typical examples of writers whose greatness no one theoretically disputes. Of Homer, "the Greek Bible of antiquity," Mr. Harrison speaks with an enthusiasm which Mr. Gladstone cannot fail to appreciate, and then asks the very pertinent question how many take him up again and again with ever fresh delight, or have even read the entire Iliad and Odyssey through, either in the original or in one of the translations where its life is fairly preserved. So again with a modern classic whom everybody professes to admire, and who is justly described as "a perfect library in himself," Walter Scott. How often do we read his romances, if we have indeed read all of them at all? Mr. Harrison says he can read the *Antiquary* or *Ivanhoe*, *Quentin Durward* or *Old Mortality* at least once a year afresh, and we do not differ from him there, or in his high estimate of the justice and comprehensive grasp of the author of *Waverley* in his various presentations of the individual, social, and religious character of successive ages. But it is due to him to add that he is not at all a specialist in his tastes, and is willing—partly perhaps for a reason that will appear presently—to admit works of the most diverse types into his collection, so long as they bear on them the unmistakable stamp of greatness. He delights alike in Scott, Fielding, Richardson, Sterne, and Defoe, in Cooper, Marryatt, Miss Edgeworth, and Miss Austen. What is true of Homer is declared to be true in a lesser degree of Æschylus, Aristophanes, Virgil, and Horace; what he says of Shakspeare he says of Calderon, Racine, Molière, Alfieri, and Goethe. He cares both for Wordsworth and Byron, for Burns and Shelley, for Bunyan as well as for Rabelais; in short, he "stands by the sentence of the world," and, as we shall see, of a high authority who has duly appraised and fixed that sentence.

Now it cannot, we think, be reasonably denied that there is a great deal of truth in this view, and of truth which is not only "wholesome," but "necessary for these times." It would be much better if young ladies—and young gentlemen too for that matter—would learn and inwardly digest Scott's novels, though they had to read them once again every year, than waste their time over Ouida and Miss Braddon. It would be much better to study Shakspeare than Swinburne, and to acquire a real mastery of "the Greek Bible" than to potter over the latest trash of the railway book-stall:—

> To organize our knowledge, to systematise our reading, to save, out of the relentless cataract of ink, the immortal thoughts of the greatest—this is a necessity, unless the productive ingenuity of man is to lead us at last to a measureless and pathless chaos. To know anything that turns up is, in the infinity of knowledge, to know nothing. To read the first book we come across in the wilderness of books, is to learn nothing. To turn over the pages of ten thousand volumes is to be practically indifferent to all that is good.

But there are some difficulties in the application of the rule. Mr. Harrison himself admits that "to know merely the hundred volumes or so of which I have spoken"—and he speaks later on of five hundred—"*would involve the study of years.*" How then are the ordinary run of people, who have but little leisure for reading of any kind, and none for "study" in any strict sense of the word, to acquire this undoubtedly desirable knowledge? Mr. Harrison will perhaps reply that, if they have so little time for reading at all, that is all the more reason why they should not waste any of it on worthless reading. But is he prepared to taboo the reading of contemporary literature altogether? for this is what it would practically come to. And a further question at once follows, whether he is prepared to condemn

the writing of it? For clearly there is no use in writing what is not intended to be read, and he complains that the accumulation of fresh books is a hindrance to our real knowledge of the old. And then, again, what of serial literature, of newspapers and magazines, which are not anywhere expressly noticed in his lecture? Would he go so far as directly to reverse Cobden's famous saying about Thucydides and the *Times*, and advise people to omit the perusal of newspapers altogether? For there is probably quite as much time spent on newspaper reading as on novels or other light literature of the day, and indeed there are many busy men who hardly read anything else. For ourselves we should be more than content to hand over at least nine-tenths of the novels of the day to Mr. Harrison's tender mercies, and should not think the world a loser if they shared the fate of the Alexandrian Library. But the practical question is how he proposes to carry out his programme with any tolerable prospect of success.

The fact is that a suppressed premiss underlies the entire argument, which it might not be easy to induce the general run of readers to accept. It used to be said by unfriendly critics of the late Mr. Maurice's theology that its result might be summed up in the paradoxical aphorism, "All nature is grace, and all grace is nature"; and a somewhat similar account might be given, with more plausibility, of the principles of the Positivist religion. Now Mr. Harrison is throughout actually, if not avowedly, arguing from the religious standpoint of Positivism. He begins with speaking of "the sacred value" of our use of books. He says further on that the books he recommends—the Bible being one of them—"have a daily and perpetual value, such as the devout Christian finds in his morning and evening psalm"; and again we are told that the great poets should be known "in the sense in which a thoughtful Christian knows the Psalms and the Epistles"—the "poets" to whom this is specially applied being Homer, Æschylus, Aristophanes, Virgil, Dante, Ariosto, Shakspeare, Calderon, Cervantes, Corneille, Molière, Milton, Fielding, Goethe, and Scott. It is clear from this and from other cognate passages that all reading is, or ought to be, in Mr. Harrison's eyes, a religious exercise in the sense in which reading the Bible or attendance on public worship is a religious exercise to Christians. In the Theistic service compiled by Mr. Voysey for use at St. George's Hall there is, or was, a "first lesson" from some ancient classic, and a "second lesson" from a modern standard work. Mr. Voysey is not a Positivist, but this arrangement illustrates fairly enough the Positivist estimate of literary study. And we fear that Mr. Harrison will not find it easy to persuade those who have a different system of devotional exercises of their own to take so solemn and "sacred" a view of their ordinary reading. He disclaims all intention of troubling his audience with the opinions of Comte, but at the same time he frankly admits that "to ask men to adopt the education of Auguste Comte is almost to ask them to adopt Positivism," and he mentions in a concluding note—what was already clear from internal evidence—that "the library of Auguste Comte forms the basis of the whole lecture." And it is explained that this library contains about five hundred volumes, including ancient works, and works in all the five principal languages of modern Europe, classified under the four heads of Poetry, Science, History, and Religion. It comprises no works written less than fifty years ago, and is purposely "limited to such a compass that hard-worked men might hope to master it." We are also assured that "it was not intended to put a bar upon other reading"; but it is obvious that, if the bulk of men, hard-worked or not, are to have any chance of "mastering" it, they must be content to read little or nothing else. Will they be so persuaded? The wise man complained some thousands of years ago that "much study is a weariness of the flesh," but he also remarked even then that "of making many books there is no end." And the perplexing "multiplicity of volumes" has increased, and is likely to increase, in a compound ratio in these latter days. That a serious percentage of them are not worth reading at all is indubitably true, but Mr. Harrison himself "emphatically" affirms that a great many give real information and possess an almost irresistible attraction. It would surely therefore, on his own showing, be more to the purpose to suggest some rules for the practical guidance of the undisciplined multitude in picking the needles out of the bundle of hay—or, to adopt his own metaphor, in selecting *raros nantes in gurgite vasto*—than virtually to bid men throw aside the entire mass of contemporary literature, which they certainly will not do, and confine themselves to the typical assortment of the wisdom of former ages enshrined in Comte's library, which it must be feared that the immense majority of them would fail to "master" by the continuous efforts of a life-time. The uses of lighter reading for recreation or relief of an over-burdened brain seem to find no recognition here. That a great service would be rendered to the moral and intellectual development of "that beast, the general reader," as some disrespectful critic has named him, if he could be led to become a little less general and a little more discriminating in the selection of his mental *pabulum*—to take less "garbage" and more solid food—is undeniable. But the Index Expurgatorius of the Positivist Church, even assuming its construction to be faultless, is too likely to share the fate of its elder namesake, and to stimulate the unchastened appetite it was designed to repress.

HARD UP.

It might be difficult to parse the expression "hard up," but most people find it easy to understand its meaning, and would wince perceptibly under its personal application. We are even afraid that many men who have never yet had any actual experience of the condition thus described would prefer losing a dear friend or being crossed in love to finding themselves hard up. To be hard up is strictly a relative term. The conditions under which one man would consider himself hard up would imply affluence to another. Even among people of equal social position the expression has many different meanings. It may either signify that a man has run into debt, or that a diminution of his income requires a proportionate reduction of his expenditure, or that fresh calls have been made upon his purse without a counterbalancing increase in its contents. Sometimes, too, it means that for the future welfare of a valuable estate a large part of its revenue must be temporarily expended upon its improvement. These and many other causes may explain the condition commonly known as being "hard up," which we take to denote an inconvenient shortness of ready money. This is an evil which varies widely in its nature and virulence. Sometimes it may only appear in isolated cases, the patients recovering rapidly after the exercise of a little prudence; at others it may assume the form of a general epidemic, numbers falling victims to its influences, perhaps never to recover. Again, in individual cases we find a variety of symptoms—some being transient, some intermittent, and others chronic. Like other maladies, too, it is often feigned by those who are free from it. It is by no means uncommon for people to sham illness, but to sham poverty is even commoner. As a rule, an ostentatious profession of indigence is anything but a trustworthy diagnostic of financial embarrassment. Then there are people who, when inconvenienced by a trifling loss, prefer to imagine themselves half-ruined. There is more romance to their minds in the idea of ruin than in genteel poverty. We need not say that they would wish the ruin to be entirely imaginary. It is more heroic to receive a severe gun-shot wound than to get a shaking through a fall down the back stairs, and the credit of martyrdom cannot be enjoyed by those who only incur slight financial losses. On the other hand, the lesser misfortunes of this sort seem conducive in many instances to swaggering of a very offensive kind. It is to our mind particularly disgusting to hear people say that they are so "awfully hard up" that they must do without a yacht this year, when we know that they have a deer-forest in Scotland, and a town and country house in England, with everything to make them happy. We feel little compassion for the man who complains of being obliged to hunt from home with six horses, instead of going to Melton with ten; nor does it seem a matter deserving of world-wide sympathy that times are too bad for an amateur to purchase a picture at Christie and Manson's for three thousand guineas. Yet all these miserable grumblers seem to consider their lot a hard one, while at the same time they indirectly boast their wealth. His sense of pity must be very delicate who can feel much commiseration for a woman who is ready to cry because she is so hard up that she is reduced to covering her walls with satin damask instead of rare old tapestry; and the man must be tender-hearted indeed who can sympathize with a friend who is brought to such destitution as to be reduced to taking a palace in Queen's Gate instead of Mayfair.

Some people may consider that we are speaking in a frivolous manner of a very serious subject; but in reality we are far from underrating its sorrows. The evil of a shortened income has a double sting, when it is the result of any fault on the part of the sufferer; and it makes all the difference whether he is presented before the eyes of the world as a fool or a martyr. After a loss of money the loser's private meditations are apt to run in a very disagreeable channel. If he had or had not acted in such a manner, he reflects, this trouble might have been avoided; still more unpleasant are his contemplations when he knows that all would have been well if he had not been a fool; and worst of all is his lot when the knowledge of this last fact is shared by the world in general. The depression consequent on self-reproach is almost a greater evil than the loss itself, and many sufferers condemn themselves to a sort of social outlawry without waiting for the verdict of the world. One very unpleasant consequence of a partial reverse of fortune is the necessary reduction of expenditure before domestics and dependents. There is a certain sulky satisfaction in making ostensible sacrifices in the eyes of friends and acquaintances; but the act of giving up horses, carriages, and other luxuries conveys no idea of heroism to the minds of servants. Perhaps the most painful accompaniment of an unfavourable balance-sheet consists in the duty of reducing the comforts, advantages, and pleasures of wives and children; but on so distressing a subject we will not linger. It must be understood that we are in no case referring to absolute ruin, but rather to inconvenient deficiencies in ways and means. There have been plenty of causes for such deficiencies during the last few years. A period of unnatural financial inflation has been suddenly followed by a severe fall in the prices of coal and iron, a ruinous depreciation in the value of foreign loans, and a general stagnation of trade. But, be the times good or bad, individual cases of serious loss are constantly occurring. Either the debts of an extravagant son have to be paid, or a law-suit runs away with a few hundreds or thousands, or some sudden damage is done by fire or water, or a freak of Quixotic liberality costs more than had been expected. There have often been disputes on the

question whether one or another branch of expenditure is usually the first to be curtailed in cases of loss of income, and whether this or that article of luxury is most readily sacrificed. It has been argued that the stables are usually the earliest scene of reduction, while other disputants have maintained that autumn tours, Scotch shootings, or yachts are the first luxuries to be given up. Pictures, china, books, and wine have each been named as the special hobby most willingly renounced. We venture to think that the authorities in such matters have failed to notice the expenditure which, in by far the majority of instances, is really the first to be reduced. Unless we are greatly mistaken, ninety-nine people out of a hundred who have lost money cut down their charities before they make any other sacrifice. Next in order come those expenses which are calculated to please and entertain other people rather than the spender; and thirdly, those personal luxuries which the impoverished person happens least to care about, be they china, horses, books, or anything else. It is sometimes curious to see how readily a man of artistic reputation and æsthetic taste will part with his collection of works of art, in which his whole soul has been generally supposed by his friends to have been completely absorbed. The most refined will usually let their old masters, their rare editions, and their Sèvres and Chelsea china be scattered to the four corners of the earth, rather than endure deteriorated dinners or drink inferior wine.

In its epidemic form, to be hard up is sometimes a sort of fashion. We have lived to see times when it has been considered what is termed "good form" to be a little impecunious. Whenever there is a sudden collapse of incomes in the fashionable world, the opportunity is seized by many people, who have in reality been hard up for years, to admit their neediness. They thus get off the more easily, as they are not singular in their adversity. If they have to reduce their display and lower their standard of entertainments, so have their neighbours. Again, some people who cannot be said to be really hard up are glad of an excuse for curtailing their expenditure. At such times we suspect that many men deceive their wives as well as the public. The happy man who has married a charming and beautiful woman, with enlarged ideas as to "how things ought to be done," has sometimes occasion to hail with satisfaction such a catastrophe, for instance, as a fall in the value of foreign Government securities. He has the merest trifle invested in stocks of this description, and their depreciation causes him no perceptible inconvenience, but he is able to say with truth that he has lost money in foreign bonds. He makes this an excuse for various economical proceedings, and thus a panic in foreign stocks becomes a source of actual wealth to him. It may happen, too, that an affectation of loss not only enables a person to save money, but also to obtain a certain *kudos*. In the present difficulties of tenant-farmers some landlords have returned a percentage of their rents; and the plea of temporary poverty on such a ground implies not only generosity, but the possession of a landed estate. This was even more the case some years ago, when the cattle-plague had devastated so many English farms. We well remember that at that time it was hardly considered respectable in some parts of the country for a man to appear affluent. Most landed proprietors had suffered a greater or less diminution of income, and to seem as prosperous as usual was understood to signify a deficiency of "real estate," or an undue wealth in those vulgar "stocks" which were supposed to be the special investments of self-made men. There is really no end to the uses of adversity, real or imaginary, if the thing is judiciously managed. A false reputation of having lost money makes a man to a certain extent richer. Less will be expected of him in the way of entertainment and display, and the parson will let him off more cheaply in the matter of parochial subscriptions. He will have a golden opportunity of selling a house or a horse that he does not like, of getting rid of an overbearing upper servant, or even of breaking up his establishment altogether and enjoying an agreeable tour abroad. Indeed one of the recognized forms of mendicancy in these latter days appears to be to spend the winter in the Mediterranean in a steam yacht.

So long as we ourselves are exempted from its influence, we can look with calm satisfaction on the prevailing scarcity of superfluous cash. When there were so many rich people in the world that fine houses could not be built quickly enough for them, moralists began to lament the extravagant luxury of the age, comparing our times to those immediately preceding the fall of the Roman Empire. We imagine that when these moralists see "To be let furnished" posted in the windows of so many London houses, or take a drive among the empty monuments to the subtlety of the Turk and the Egyptian to be seen in South Kensington, they must reflect with satisfaction that, if excessive prosperity is a sign of a falling empire, our day of destruction is staved off for a while. That the meditations of London tradesmen are not quite so agreeable we can well understand. For ourselves, we must admit that when we are told there is going to be a bad season, we are not heartbroken. In the worst of London seasons there is as much dissipation as any reasonable person can desire, and agreeable society is as pleasant in a bad as in a good season. In a first-rate season, as it is termed, entertaining and being entertained is a pain rather than a pleasure, and instead of enjoying themselves at any friend's house, people are always wanting to hurry off to somebody else's; but in a bad season society is a little less irrational than usual. We do not think it would be a matter for regret if moderation in expenditure were to extend beyond the London season. If people generally were a little "hard up," they might perhaps look round them and discover that there are other interests and amusements in the world besides trying to find out how much money can be lost over one race, how many brace of grouse or thousands of pheasants can be killed in a day, or how many hunters one man can knock up in a week.

WESTBURY MONASTERY.

ONE of the finest Early English parish churches in the county of Gloucester is seated in the valley of Westbury on the river Trym, near Clifton—or, as the place is described in a deed of Offa, King of the Mercians, *Westburg prope flumen qui dicitur Aven*. Forming a group with this church is a heavy, square, embattled tower overgrown with ivy, which, with some other features of the buildings of an ancient religious college, is incorporated with a spacious eighteenth-century mansion that some fifty years since was the residence of the Hobhouse family. We doubt whether the late Lord Broughton, whose learning and inclinations were of the kind exhibited in his elaborate annotations to the fourth canto of *Childe Harold*, knew, or possibly would have even cared to know, that one of the most momentous ecclesiastical movements of the Middle Ages began its systematized course on the site of the house in which he was born and spent many years of his life. It was in this corner of the diocese of Worcester that Oswald, the successor to Dunstan in that see, initiated his grave enterprise of colonizing the religious houses with Benedictine monks, who, by supplanting the secular clergy, were henceforth, with temporary interruption, to form the type of the monastic communities of the whole kingdom; and the architectural relics we have referred to, including the church, which was formerly collegiate, commemorate a monastery that existed on the same spot from the ninth century to the dissolution of religious houses. Westbury is named with interesting connexions in several Anglo-Saxon charters, but Mr. Kemble and the annotators of the new edition of Spelman and Wilkins's *Concilia*, now being published, seem uncertain of the identity of the place, or at least give no hint of its situation. Dr. Thomas, in his profound *History of Worcester Cathedral*, is equally indefinite, though he many times refers to the religious settlement at the spot; and Mr. Churton, in the ecclesiastical map of the Saxon kingdoms contained in his *Early English Church*, places Westbury between Evesham and Worcester, instead of at the extremity of Gloucestershire. As early as the ninth century, when the outlying hollow which afterwards became Bristol was for the most part an uninhabitable swamp, Westbury, or Westminster, was an important ecclesiastical district. The stately bishops of Worcester frequently presided there in person over its affairs; and as late as the fifteenth century, one of them, John Carpenter, who sleeps in the chancel of the church, conceived so great a regard for the place as to take the name for part of his designation, ordaining that himself and each successor should be styled "Bishop of Worcester and Westbury"—an injunction which has been disobeyed. It is remarkable that no one of the cloistered brethren or of the parish priests who century after century respectively lent their character to the locality should have thought it worth while to note the religious vicissitudes of his surroundings, an omission which is the more singular because the narration would have afforded scope for indulgence in the keenest theological sympathies or antipathies.

In nomine Summi Tonantis is the pious, if somewhat Homeric, exordium of King Offa's charter, dated at Cloveshoe, A.D. 794, which grants to Æthelmund, his faithful minister, four cassats of land at Westberg; and a little before his death, in A.D. 798, the same royal potentate presented land at Westburg and the adjoining territory of Heanbury, now Henbury, to the see of Worcester, to be held as long as the Christian faith endured in Britain. That the place became immediately the site of a monastery is evident from the fact that Ethelric, the son of Æthelmund, produced in 803 at a Synod also held at Cloveshoe a deed of heirship to land at Westminster, which is Westbury under a name that implied the existence there of a religious house. Monasteries at that period were half-secular family estates in which celibacy was not enjoined, the only requirement being, as Mr. Stubbs remarks, the assumption of clerical orders or the taking of vows. Such houses served as a retreat for worn-out ministers and warriors who, weary-hearted and conscience-stricken, sought a life free from the distractions of the world. They were regarded as family benefices that might devolve in heirship like other houses and lands. By Ethelric's bequest the monastery, with its attachments, came into the possession of the see of Worcester; but Hubert, who was then Bishop, was obliged to make it the subject of a further synodal deliberation through his right being disputed by the Saxon family of Berkeley, who asserted that the convent was situated within their territorial confines. The case was tried at Cloveshoe, A.D. 824, under the presidency of Beorwulf, King of the Mercians, and Wulfred, Archbishop of Canterbury, in the presence of "all our bishops and abbots and many men of wisdom"; and it is remarkable that the Witenagemot assembled to hear this dispute was the largest on record, the record being signed by 121 persons. Mr. Kemble, indeed, questions whether all the signataries were members of the Gemot, but he advances no evidence to show they were not. It was determined that the prelate should prove his title by the adjuration of many appointed priests, deacons, and monks. This oath, which decided the controversy, and for ever cut off Westbury from the inherit-

ance of the Berkeleys, whether of Saxon or Norman lineage, was ceremonially taken thirty nights afterwards at Westbury itself, or, as it is termed in the charter, Westminster, by fifty mass priests, ten deacons, and 160 ordained clerks, the names of the mass priests, including three abbots, being given in Haddon and Stubbs's *Concilia*, iii. 574.

From the fact that the monastery had formed the subject of three royal synods, it may be assumed that the foundation was of some importance; but it is not till the time of Oswald that we gain any definite acquaintance with its character. Oswald lacked none of the severity of his uncle, Archbishop Odo, towards the married clerks who for about two hundred years had held the chief estates of the Church. There are thirteen things corrupting the world, says an old Welsh ecclesiastical law, and a married priest is one of the most detestable of these things. As early as the 12th of October, 803, an act of Council under the mandate of the Pope, denouncing the election of laymen or seculars to the rule of monasteries, was signed by the crosses of many bishops, abbots, and mass-priests, with Archbishop Æthelred at their head. Even the threat of citation before the last judgment seat did not prevent the hated seculars continuing to usurp the cathedrals and convents; but what the Synod was unable to accomplish was effected by the decisive action of three energetic prelates—Dunstan, Archbishop of Canterbury, Ethelbald, Bishop of Winchester, and Oswald, Bishop of Worcester. Never, we are told, were there sadder days for monks, or more joyful days for seculars, than just before the advent of these resolute churchmen, and unless the Lord had shortened those days the English Church would have been lost. Her pleasant places, says the same old chronicler, Eadmer, were the habitations of dragons. To Dunstan has been popularly ascribed the glory of driving out these pernicious creatures from their pleasant haunts; but a study of the subject will lead one to agree with Professor Stubbs that to Dunstan's successor in the see of Worcester is to be chiefly referred that part. The attempts of Dunstan and Æthelwold to dispossess the seculars had been desultory and uncertain. Glastonbury, Mr. Stubbs decides, never under Dunstan became a pure Benedictine house; and, during the twenty years of his primacy, that churchman did not introduce a Benedictine into the diocese of Canterbury. "Clerks," says Mr. E. W. Robertson, in whose conclusions upon this phase of monasticism Mr. Stubbs agrees, "accompanied Æthelwold from Glastonbury when he revived the monastery of Abingdon; *clerks* welcomed the new Archbishop to Canterbury, and remained in unmolested possession of Christ Church until the time of Archbishop Ælfric" (A.D. 995). The reforms of Æthelwold were ineffective till 964, when Edgar, who had been as indecisive as Dunstan for the first four years of his reign, gave royal sanction by the operation of "Oswald's Law" to enforce the changes that revolutionized the religious communities. This decree (which, "having banished the foolish songs and filthy obscenities of the clergy, gave their possessions to monks, the religious servants of God") points by its name to the Bishop of Worcester as its author. Oswald, says his enthusiastic biographer, the monk Colman, was a man of incisive speech, sparkling wit, and judicious foresight, powerful in word and deed, and serious in momentous things. He was held to combine in himself the great qualities of his coadjutors, and to equal the one in authority, the other in energy, and both in holiness. His signature as bishop first occurs in the year 961; and without waiting for the legislative enactment with which he was afterwards empowered, he began his uncompromising movement against the seculars by planting in the sequestered valley of Westbury a colony of twelve monks from Fleury, in the cloistral shades of which latter place six years of his own life had been passed. Oswald's chief friend while at Fleury had been Germanus, a devout and learned man, "mature in wisdom though young in years." Him he chose to be the head of the new community to instruct in the Benedictine rule; and he appointed Ednoth, afterwards Bishop of Dorchester, to be prepositor of the household. They followed here, says Eadmer, the life of God's servants; and the holy Oswald was so delighted with their diligence that he frequently came personally among them to administer in things "belonging to their eternal welfare, to converse with and comfort them; and to join in the divine offices of hymns, psalms, fastings, vigils, and prayers," finding in this solemn valley opportunities for spiritual refreshment altogether wanting at the worldly seat of his bishopric where the seculars yet held their own. The tree planted by the bright little river of Westbury rapidly grew and strengthened till its branches spread over the land. The metaphor seems strong, but we are told by a Cottonian MS. (Nero. E. 1, fo. 76), cited by Mr. Dixon in his Life of Oswald, that Edgar the King was so well pleased with the example of the devout community there, that he directed forty-seven monasteries to be instituted after the same type. Probably these monasteries for the most part were structurally but wooden, and of no long duration.

Oswald proceeded to eject the seculars from seven principal monasteries in his diocese, Winchelcomb and Pershore being of the number. Germanus was translated from Westbury to become prior of Winchelcomb; and when the great convent of Ramsay was built by Ailwyn, Oswald could recommend no more eligible religious to people it than his cherished Fleury monks at Westbury, whom, together with Germanus from Winchelcomb at their head, he settled within its walls. After the death of Oswald the monastery at Westbury fell to decay, or, according to the language of a monkish chronicler, was devastated by "perverse and piratical sons of the Devil," insomuch that only one priest remained, and he performed religious offices but seldom. In the year 1093 Wulstan, second Bishop of Worcester of that name, whose memory is respected for his successful efforts in abolishing the lively traffic in Irish slaves for which at that period Bristol was the principal mart, turned his attention to the state of things in this part of his diocese. He restored the monastic buildings in a substantial manner, and raised a pointed roof, which he covered with lead. Then, reinstating the monks, he supplied them with vestments, missals, and all things necessary for their bodily and spiritual wants. To take charge of the monastery Wulstan appointed Colman, whose name is best known through his subsequently becoming the biographer of his patron. Wulstan was succeeded in the see of Worcester by Sampson, a Norman of noble birth, and brother to Thomas Archbishop of York. He was elected in 1096, and was consecrated at St. Paul's by Archbishop Anselm. Sampson's disposition was lively and sociable, and it is possible that these qualities induced him to dispossess the sombre monks of Westbury and fill their places by seculars. This procedure, however, brought him much obloquy, and his death (A.D. 1112) occurring at the scene of the transaction was inevitably reckoned an instance of divine retribution. Under Theulf, who succeeded Sampson, the seculars at Westbury remained undisturbed. Not so under the rule of Simon, the successor of Theulf in 1125, who again displaced the married clerks and restored the Benedictine regulars.

If more evidence were wanting to show the former significance of a place now so forgotten, we might find it in an attempt of Godfrey Giffard, who was elected to the bishopric of Worcester in 1268, to annex several of the best livings in his diocese to the convent of Westbury, in this way disposing of the important churches of Kemsey, Bredon, Cleeve, Weston, &c. This innovating procedure caused great indignation amongst the prior and monks of his cathedral city, as involving a usurpation of privileges and emoluments belonging to them and endangering their right of electing their bishop. A Bull thereupon arrived from the Pontiff, May 15, 1289, delegating the abbots of Reading and Wigmore and the precentor of Wells to hear and adjudge the matter of dispute. After many delays and a second Bull from the Vatican the cause was tried before the King, Edward I., and Council on Whitsun Tuesday, the 10th of June, 1290, when the prior's agents, having explained the perilous tendency of the invasion upon their rights and prerogatives, proceeded to read to the assembly the charter of Wulstan, wherein a curse was laid upon whosoever should remove the monks from Westbury and replace them by secular canons. The King in reply said, "I would willingly have assented that those churches should be made prebendal to Westbury had you so minded; but I desire not to wrong your church, do as you please." Gilbert de Clare, Earl of Gloucester, took the part of the monks, and declared that "the state of the church could be altered no more than the state of the barony." Notwithstanding this adverse decision, the Bishop (6th July, 1290) installed at Westbury Nigel of Wells, John de Sedberne, and John de Hereford. To obtain a ratification of the act he entered Worcester, attended like a prince, with one hundred and forty horsemen, but soon departed in anger, because the Chapter refused to set their seal to his arbitrary installation. He, however, by persistence, finally gained his point, and the monastery became a college with a dean and canons, and thus continued to the dissolution. Bishop Carpenter rebuilt and enlarged the fabric, and surrounded it with a turreted wall in the manner of a castle. He died in 1476 at Worcester, whence he was carried to Westbury, and there buried on the south side of the high altar. His monument remains, but his grave is empty, having been despoiled. Some years ago, on the removal of the whitewash about the place of his entombment in the crypt, a curious fresco was discovered; it represented the funeral procession of Bishop Carpenter from Worcester to Westbury; the name *Worcetta* being plainly inscribed on the gate of the town.

Among the canons of Westbury College were John Trevisa and John Wycliff (1375), both of whom, no doubt, from the pulpit of the church, helped to diffuse the doctrines which Henry, Bishop of Worcester, fulminating (1 August, 1387) from his palace at Henbury, a mile from Westbury, characterized as Lollardry, and denounced the preachers, John Purney and others, as "eternæ damnationis filii," &c. At the dissolution, the manor of Westbury with its demesne was granted to Sir Ralph Sadler. Fuller, in the dedication of the book on the Abbeys in his *Church History* to Sir Ralph's grandson, speaks of the latter as possessing "the fair convent of Westbury in Gloucestershire"; and though the Act passed in the twenty-seventh year of Henry VIII. requiring the holders of abbey lands to keep a "standing house" or else forfeit twenty nobles every month had been rescinded, yet his house there was known to be the centre of hospitality, where even the munificent abbots would have found themselves outdone.

On Sunday, July 23, 1643, Prince Rupert fixed his quarters at Westbury College previously to his storming of Bristol, and with pitiless unconcern for its venerable associations, fired the buildings on his departure to prevent their occupation by the enemy. The ivy-mantled tower already mentioned has lately had a narrow escape from demolition—a fate from which the sound Protestants of the district might have rescued it in memory of its connexion with the early Reformers we have named, and which lovers of architecture should have joined in preventing for the sake of William Canyng, the builder of St. Mary Redcliff, who died here as Dean of the college, and was interred within the walls of the church. Happily, however, it owes its preservation to an honest blacksmith, who, at least for a time, has saved the tower, the

vaulted chambers of which now ring with his anvil. Of the grand thirteenth-century church we have not space to speak particularly; but it is worthy of close study for its dignified proportions and details, even apart from its history of a thousand years from its original foundation.

ENGLISH AND FRENCH DINNERS.

ENGLISHMEN are usually supposed to have pronounced tastes, and to be by no means backwards in stating them; but certainly it is not altogether easy to say what kind of dinner they like best. Probably, if it were possible to question many people on this subject, the majority would answer that they prefer the plain English fare in which their forefathers gloried so much to any other, and that, though a dinner at a good Paris restaurant is a nice thing in its way, they care little on the whole for the elaborate devices of French cooks. Nevertheless, for dinner parties French cookery, or rather what is supposed to be French cookery, reigns supreme. There are few givers of feasts who would not be ashamed to offer an old-fashioned English dinner to their friends; and most guests would certainly be surprised if they found that nothing but soup, fish, meat, and game was provided for them, even though the soup were turtle and the meat venison. It is considered almost obligatory to describe the dishes in French, and not a little singular sometimes are the results of the attempt to do so. The adoption of the French system is not, as need hardly be said, of recent date, as the fashion began long before the days of the present generation; but in times when Englishmen were more stubborn about their national usages than they are now, it was not universally followed, being spurned by some and disliked by many. Moreover, its general acceptance now is far more significant than it would have been formerly. People dine out much more than they did, and the kind of dinner which is given is therefore a matter of greater importance than it was when dinner parties were not so frequent. That this should be a French dinner seems now to be thought indisputable; and, unless it is to be supposed that everybody is insincere about what is of considerable interest to all but those who have either no taste or no digestion, it must be assumed that—despite the strong liking for plain food which is so often alleged—Englishmen really think the French dinner to be, beyond all possible comparison, superior to the English one, and consider the latter to be so poor and homely as to be unfit for guests, though a necessary regard for economy prevents people from abandoning it altogether. There is no exaggeration in saying that at a dinner party of ten or more it would now seem nearly as great a solecism to offer simple English fare as it would be to proffer old ale as the principal drink or to crown the repast with a huge bowl of punch. It is much to be regretted that the excellent meal in which our forefathers delighted should be thus practically condemned, and should never be thought good enough for state occasions. The English dinner has of course one radical defect, its want of variety. Every one knows the saying about the country where there are twenty religions and only one sauce; but, though the censure thus happily passed is fully deserved, it may still be said that the old-fashioned system of serving a dinner was in some respects an excellent one, and that its merits should be recognized by those who pay any attention to gastronomy. To describe these merits minutely might be wearisome and unpleasantly suggestive of quotations from a cookery-book; but there are two recommendations of an English dinner which should certainly be mentioned in speaking of this subject. These are that, by taking moderate care, it is possible to make sure that the dinner shall be thoroughly good of its kind, and that it is not easy to make a mistake in arranging it. This may seem small praise; but a reference to the French dinner will show that it signifies a good deal. There is nothing in London like the admirable society of cooks which exists in Paris, and unfortunately it is, for people of moderate means, extremely difficult to make sure that a French dinner shall be good of its kind, and without some knowledge it is not at all easy to arrange it properly. As a matter of fact, it is often arranged very badly indeed, and a Véron or a Baron Brisse would look on many of the elaborate dinners which are served in London as far more barbarous than the simple repast which is now altogether despised. This might therefore very well be sometimes thought good enough for guests; but it is perhaps hopeless to expect that dinner-givers will ever return to it. To ask them to do so is like exhorting women to disregard the prevailing fashion in dress. Many women are willing to admit in the abstract that fashions are a great nuisance, but no woman is willing to be behind her neighbours; and hosts have a somewhat similar feeling. If, however, the French system is to be universally followed, surely people might give themselves the trouble to understand it. Considering the very long period during which it has been more or less adopted for dinners of any importance, it might be thought that the method followed by the French cooks in arranging a repast, which is clearly based on good sense, would now be appreciated here. This, however, is not the case. In what are supposed to be copies of French dinners, the order in which the dishes should be served is departed from in a manner which shows that the plan on which French *chefs* work is not understood. Some of the best preparations are excluded, and a rigid rule, unknown to the best French authorities, has been laid down by which the variety that can be given to dinners has been considerably and without any reason whatever curtailed.

To explain what the French system is, and to show how it is departed from here, its history must first be briefly glanced at. As need hardly be said, the French have always liked a considerable variety of flavours at their principal meal; but at no very remote period their tastes were much more simple than they are now, and the order in which the dishes were served has at times varied considerably. Brillat Savarin gives a description of what in the year 1740 was considered in the provinces a fairly good dinner for ten persons. This was composed as follows:—"1er service, le bouilli; une entrée de veau cuit dans son jus; un hors d'œuvre. 2me service, un dindon; un plat de légumes; une salade; une crême (quelquefois). Dessert; un fromage; du fruit; un pôt de confitures." The succession was, it may be observed, somewhat different from what it is now, and in the elaborate feasts of the same time it was still more different, the order followed being very singular. Sixty years or so later things had greatly changed. Here is Brillat Savarin's account of such a meal as people of moderate fortune ought to offer to their friends:—"Un filet de bœuf à cœur rose, piqué et cuit dans son jus; un quartier de chevreuil, sauce hachée aux cornichons; un turbot au naturel; un gigot de présalé à la Provençale; un dindon truffé; les petits pois en primeur." Now this is a very good dinner, certainly not wanting in solidity. As need hardly be pointed out, it differed nearly as much from the earlier repast as it does from those which are now served in Paris, and it cannot be said to be arranged on any very intelligible system. During the time of Brillat Savarin, however, the French dinner was changed, and the form was given to it which, with some slight alterations, it has kept up to the present day. The most amiable of gastronomes, writing as an old man, naturally described what he had admired and enjoyed in his best days. Long before his book appeared considerable alterations had been made, and the most enthusiastic and intelligent of French cooks had given the finishing touch to the work of others who had applied themselves to putting in order the *Cuisine Française*, and had thus set the model which has been followed ever since. Carême did not publish the *Maître-d'hôtel Français* until a short time before the appearance of the *Physiologie du Goût*; but his principal works in the kitchen had been long before that event. The plan on which he and his brethren proceeded was to make the order in which dinner was served correspond with the effect on the appetite produced by the various dishes eaten. After soup came the most substantial food, such as large fish and solid pieces of meat; then *entrées*, the more substantial first, and the lighter afterwards. With these ended the first of the two services in which dinner was necessarily divided. The second service was arranged on the same principle as the first, the most substantial food being given earliest; but was naturally much lighter in character, as people could not possibly have the same appetite as they had for the other. First came the *rôt*, usually consisting of birds, then dressed vegetables or salad, and then the sweets, sometimes called the third service. Now, if people are to eat a good many things—and a necessary condition of a French dinner is that it should consist of a good many things—it is difficult to see how they could be better arranged. Variety is given in the most ingenious manner, and so far as possible attention is paid to digestion. This fact has been recognized in France, and though there have been many great cooks since Carême, it has not been considered possible to improve on the system which he finally settled, and only trifling alterations have been made.

Many modern French cooks terminate the first course by a cold dish, some by a salad, and it has become the general practice to give at large dinners a *sorbet*—*i.e.* an ice with some spirit added to it between the two services. Whether this addition—which was not unknown in the days of the Marquis de Cussy—is a good one we will not attempt to say. The fact to which we desire to draw attention is that in Paris it has not been thought advisable to alter, except in some small particulars, the plan fixed a great many years ago by Carême, and it may fairly be assumed that it has been found impossible to improve on it. Very different has been the case in London. Englishmen were a great deal too clever to be content with what satisfied the great *chefs* and gastronomes of Paris, and they would not adopt Carême's system without altering it in their own ingenious fashion. They dismissed the substantial piece which came after the fish or soup, and thrust a roast joint accompanied by a quantity of vegetables into the middle of the dinner, thus entirely destroying the whole plan which had been so carefully arranged. As a further accompaniment to the joint they gave salad; and they ignored the dressed vegetables which should follow the roast and are amongst the pleasantest features of a French dinner. Further, they laid down as an absolute rule that fish must always follow the soup, and must on no account whatever appear at any other time during dinner. Having thus marred the whole scheme of the French repast, they seem to have been satisfied with their handiwork, and considerately made no further change. The dinner arranged in this barbaric fashion has, like the well-ordered French feast, remained immutable, and is universally accepted and believed by the majority of Englishmen to be in conformity with the strictest rules of the French kitchen. There are few givers of feasts who would not be astounded if they were told that their *menus*, displaying a pompous arrangement of *potages, poissons, entrées, relevés, rôts*, and *entremets*, would appear to an accomplished French cook or gastronome who had never heard of the insular ways to show either great ignorance or singular perversity.

Of the first blunder mentioned—the altering the place of the *relevé*, and giving people the most substantial dish at a time when the appetite is to a considerable extent satisfied—we have spoken twice before in these columns; but no apology is due for referring to it a third time, as a great deal of iteration is needed to convince Englishmen that in this matter they depart altogether from the system of the French kitchen. The writer of that excellent work on food and cookery called *Kettner's Book of the Table*, tried hard to persuade dinner-givers that they were wrong on this point, but without any avail. The other errors mentioned are certainly not inconsiderable. Why do dressed vegetables so seldom appear in English dinners? In the *menus* of the great French *chefs*, from Carême to Dubois, they have rarely been omitted. Then why does the cast-iron rule about fish exist? Generally speaking, no doubt, fish should be given after soup, but in some dinners it may appear later with advantage; and for what earthly reason are fish *entrées* proscribed in England, except at a Greenwich or Blackwall dinner? It would be impossible to give any reason for these eccentricities; and since it seems to be universally agreed that none but dinners served in the French fashion are good enough to be offered to guests, surely people might put themselves to the small pains which are required in order to ascertain how to give a true and not a false copy of the French original.

THE EASTERN TRADE AND EASTERN BANKS.

THE reports issued this week by the Boards of the Oriental and the Chartered Mercantile Banks have directed the attention of the general public to the state of our Eastern trade. The first of these establishments, the oldest and greatest of Eastern banks, lost in the second half of last year a quarter of a million sterling in round numbers; and moreover the depreciation of its investments during the six months decreased their value by 276,000*l.* Its total losses in the half year thus exceeded half a million. The Chartered Mercantile Bank had no bad debts of large amount to face, but it lost considerably upon silver, and it suffered likewise from the depreciation of its securities. In both cases alike the result of the year's transactions was that the whole of the earnings were swept away, and with them also the reserve fund—that is to say, the accumulation of former profits which had not been divided amongst the shareholders, but had been put by to meet contingencies, such as we now witness. Those who know the City are aware that a belief widely prevails that the whole Eastern trade is not in much better case than the affairs of the two banks in question. It is reported on every side that this and that branch have suffered heavily, that private liquidations are going on on an extensive scale, and that the consequences have to be borne by the banks. We are convinced that this talk is greatly exaggerated. That the Eastern trade is depressed certainly admits of no dispute. Several causes have contributed to produce such depression. A succession of famines in India has impoverished the population, and at the same time has raised the price of food so high as to trench seriously on the incomes of all classes. It is not merely the loss of crops and the increased cost of provisions that the people have to contend against. In the famine-stricken districts the cattle have died off, and the implements of husbandry have too often been sold or pledged, while debts at usurious interest have been contracted with the village money-lenders. The poverty of the population of course prevents them from buying English goods as formerly. At a recent meeting of the Bombay Chamber of Commerce, the President stated that the prices of European wares had fallen almost twelve per cent., which, added to the depreciation of silver, makes a total fall of thirty-two per cent., or about one-third. As a consequence, the import trade from Europe no longer yields its old profits, and yet the warehouses are glutted with commodities. The depreciation of silver affects injuriously the imports into India of English goods, because those goods are paid for in rupees; while, to be available in England, the rupees have to be exchanged for gold, which involves a loss of about one-fifth. On the other hand, the depreciation is favourable to the export of Indian goods to England, since they are paid for in gold here, and the gold exchanges for one-fifth more in rupees than it used to do a few years ago. But this advantage is said to be neutralized by two circumstances; the high price of food in India making it unprofitable to send grain to Europe, and the great fall of prices here equalling, or nearly so, the advantage accruing from the depreciation. In China also the same causes—famine and depreciation—are at work, and are aggravated by war expenditure. Lastly, the depression which we are experiencing in Europe reacts upon Asia. There can be no doubt at all, therefore, that the Eastern trade is in an unsatisfactory state; but that it is not so bad as City rumours would make it out to be seems capable of proof. The shrinkage in the volume of the trade has not been such as we should look for were it so ruinously unprofitable as is alleged. There is falling-off certainly, but not to an extraordinary extent. Nor is the fall of prices so severe as to inflict disastrous losses. In tea, for example, respecting which so much is said, the decline does not bear out the rumours that are afloat. Lastly, it is to be observed that the Directors of the Chartered Mercantile Bank tell us they have had no considerable bad debts during the past year. Their losses have been incurred on sales of silver and through depreciation of securities. The bad debts of the Oriental Bank are found in Glasgow and Australia. Thus it cannot be said that the reports of these two banks confirm the opinion that the present state of our trade with the East is ruinously bad.

In part the losses of these banks are due to causes entirely beyond their control, and the courage with which the Directors face them is highly to their credit. The East is their field of activity. There they employ their funds, and the securities in which they have invested have declined in value because of the depreciation of silver. They have no more been able to prevent that than to hinder a famine. And the only honest and safe course open to them was to write off from the investments the amount of the depreciation; which is what they have done. Their mistake was that they did not do it soon enough; that is, two or three years ago. The value of silver will in all probability rise by and by, and those investments will rise with it. In the meantime, however, if they had to be realized, they would be found to be not worth the sums at which they formerly stood in the bank books. But over and above these losses, for which the banks are not responsible, there are others of which this cannot be so confidently said. The Chartered Mercantile, for example, held a large quantity of silver last year, and lost heavily upon it. At the coming meeting, no doubt, full explanations will be given respecting this transaction. With our present information we can form no opinion concerning it. It may have been perfectly legitimate or rashly speculative; all we know is that it was very unprofitable. The Oriental Bank, again, holds a large amount of Chilian bonds, which have become greatly depreciated owing to difficulties in Chilian finances and to the policy pursued by the Chilian Government. It may be admitted that hitherto that Government has honourably kept faith with its creditors, and there is no reason to suppose that it will do otherwise in the future. Still we hardly think that these bonds were an eligible investment for the Oriental Bank. Another point, respecting which both banks appear to have made a mistake, is the too great extension of the area of their operations. The Chartered Mercantile Directors admit that their branches in China and Japan have for some years been unprofitable, and they propose to close the one at Yokohama. The Oriental report does not touch upon this point; but the bank has no fewer than fifty-six branches, which are found in India, China, Japan, the Straits Settlements, Ceylon, the Mauritius, South Africa, and Australia. Now it seems hardly possible that any Board of Directors can be acquainted with the peculiarities of the trade of countries so vast, so far apart, and so unlike each other in essential particulars. And yet, if they are to be able to control their agents abroad, they ought to know the nature of the trade of each place, its usages and its condition. That a Board sitting in London can have this knowledge is, to say the least, not probable; and if it has not, it is in the hands of its local managers. By the exercise of great care and judgment in the selection of managers, it may perhaps carry on its business successfully, and the high position occupied hitherto by the Oriental Bank is proof that its managers have been well chosen. Still it is a question which the shareholders should seriously ponder, whether the sphere of the bank's operations has not been too widely extended. The information at present before us is confessedly too scanty to permit an accurate and exhaustive investigation of the causes of these losses. At the meetings about to be held the chairmen will of course supply the details which are now wanting, and till then it will be well to suspend one's judgment. Even now, however, it seems to be established that the difficulties of these banks, though they must no doubt have been aggravated, have not been created, by the badness of the Eastern trade.

The converse, however, is by no means so clear—namely, that the action of the banks has not contributed to the badness of the trade. There is a prevalent opinion that the system of acceptances is a main element in the disastrous speculation which has characterized that trade. A principal part of the legitimate business of the banks is to facilitate remittances, to stand between parties in this country and in the East who have payments to make and receive, and to save them the trouble and expense of sending bullion. This the banks do by buying bills from exporters and selling them to importers. Nobody desires that this legitimate and useful business should be restricted, but the belief is general that it is carried to a mischievous extreme by means of the six months' usance; that traders are thereby enabled to carry on their operations without capital, and even after they have become insolvent. It is to be hoped that the shareholders will insist upon knowing whether any such abuse has been permitted in either of the cases before us. The kind of business in question certainly admits of being so abused; and, even if nothing of the sort has happened in these instances, the system has been practised by others, and is reacting on all the banks through the glut in trade which it has produced. There is another aspect of the question—namely, that this description of business enables banks to obtain funds with which to speculate in the exchanges. On every ground it is to be hoped that the subject will be fully discussed at the approaching meetings. We do not doubt that the acceptances of the two banks with which we are now concerned are perfectly secure. The Oriental does not accept for its own branches; and, though we are not sure about the Chartered Mercantile, we believe it follows the same rule. The banks which accept for them have doubtless taken care to obtain adequate cover. But, granting all this, the practice may indirectly have been productive of mischief, and it may well be reconsidered

in the light of the latest experience. That losses have been incurred on exchange operations is admitted. In what way has this happened? Has it been in giving customers the facilities which they had a right to expect, or has it been in speculative ventures?

MR. GILBERT'S *GRETCHEN*.

MR. GILBERT'S "bold experiment," as it has been justly called, of writing a new version of the familiar legend which Goethe has made immortal, might form the theme for a chapter in a new series of "Curiosities of Literature." It is an often noted fact that followers of the fine arts are apt to misjudge their own powers, and to think that the line in which they can always command success is in truth unworthy of their talents. There are many instances recorded of excellent low comedians who have thought that nature really intended them for what is called the higher walk of the drama; and if our memory serves us right Liston once played a tragic part for his benefit, and played it respectably. In like manner Mr. Gilbert, who is an absolute master of a certain kind of humour which he may fairly claim to have invented, seems to have felt that his well-deserved success as a humourist was but a vain thing compared to the success which he ought to obtain as a serious dramatist. He had proved long ago that he could write good blank verse; and, for reasons which no doubt seemed sufficient to him, he chose to apply this accomplishment, which is by no means too common, to a remodelling of the story of Doctor Faustus, whom he has deprived of the title of Doctor—by way, it may be supposed, of showing at once how untrammelled he is by any superstitious reverence, either for the ancient myth or for Goethe's treatment of it.

Mr. Gilbert's *Gretchen* is announced as "a new play in four acts, suggested by the leading incidents in Goethe's *Faust*"; and he is so "anxious that his motive in writing this play may not be misunderstood" that he has caused to be printed on the bill of the play a "Notice to the Public," which is perhaps as curious as anything contained in the body of the work. It is always pleasant to learn new facts, and we cannot but be grateful for the unexpected information which Mr. Gilbert is so kind as to give us, with an air of authority which there is no disputing, with regard to Goethe's *Faust*. This, he tells us, "is not a stage play, but a philosophical treatise on human nature, written in dramatic form." What Mr. Gilbert's new version of this "philosophical treatise" may precisely be we will not venture to say, but it may be confidently asserted that in Mr. Gilbert's sense of the term it certainly is not a stage play. The author appears to have founded his distrust of Goethe's play for stage purposes upon a passage which he quotes from Schlegel, who was not perhaps so infallible a critic as Mr. Gilbert seems to think him. He goes on to say that "a glance at Goethe's *Faust* will show that insuperable difficulties must present themselves to any stage manager who endeavoured to place upon the stage the elaborate philosophical essays with which the first two acts abound—the opening scene in heaven in which the Deity is introduced; the grim terror of the scene in which the Black Dog changes into the embodiment of the Tempter; the wild horrors of the Witch's Kitchen; the Walpurgis-Nacht scene; the interlude of the Golden Wedding of Oberon and Titania; and the short, but terrible, scene in which Faust and Mephistopheles are discovered at full gallop on black horses." Mr. Gilbert is perfectly right; this is precisely what "a glance" at Goethe's *Faust* would show. It is true that the scene in the witch's kitchen is remarkably effective in the stage version of *Faust* given in German theatres, but it is also true that the other scenes of which Mr. Gilbert speaks do present "insuperable difficulties." For this reason, and because for dramatic purposes they have no bearing upon the course of the story, they are invariably omitted; and *Faust*, played without them, is one of the most popular and, even regarded from a purely theatrical point of view, one of the most effective pieces in the German *répertoire*. Mr. Gilbert, who is probably better informed on this matter than we are, assures us that, "before the *Faust* of Goethe can be represented on the stage, it must be ruthlessly lopped of its greatest beauties; intervals comprehensible enough to the reader must be bridged over to make them intelligible to the spectator; much explanatory matter must be introduced; apparent lapses of time and action made good; unsightly and impracticable incidents expunged; and a catastrophe invented for which in the original poem there is no warrant whatever." These singular statements are calculated at first sight to take away the breath of any one who has seen *Faust* given on the German stage, and remembers its extraordinary effect as an acting play, without any of the "explanatory matter," the introduction of which in the master's work no German audience would tolerate. But the explanation is found in the continuation of the sentence:—"Indeed," says Mr. Gilbert, "it is scarcely going too far to say that in those versions of *Faust* which are current [the italics are ours] on the *English*, *French*, and *Italian* stages, the great master would hardly recognize his own handiwork." This is very much as if some Italian playwright who had seen *Hamlet* as rewritten by Ducis for the French stage, by Rusconi for the Italian stage, and by M. Thomas's librettist for the opera, were to set to work to write a new play on the theme of *Hamlet*, without inquiring if Shakspeare's *Hamlet* had ever been arranged as a good acting play in England. "Whether it is allowable," Mr. Gilbert continues, "so to trim, patch, lop, mutilate, and disfigure an immortal work in order to adapt it to an arena for which its creator never designed it, is a point upon which the reader will form his own opinion. I trust, however, that, in professing to remodel, for purely dramatic purposes, the entire story of Gretchen's downfall, I shall at least be absolved from a charge of intentional irreverence towards the grandest philosophical work of the century." Mr. Gilbert has evidently laid to heart the maxim about hammering in a nail; he begins by describing Goethe's work in an offhand manner as "a philosophical treatise," and he ends by calling it with a pompous reverence, for which its author would no doubt be grateful, "the grandest philosophical work of the century"; the inference of course being that Goethe was a great philosopher, but not a great dramatist, and that Mr. Gilbert, whether or not a great philosopher, is a great dramatist who proposes to show what Goethe might have made for stage purposes out of the *Faust* legend. We have said that Mr. Gilbert ends his notice by this reference to the philosophical excellence of Goethe's performance; but this is not a strictly accurate statement, as, before signing his name to his remarkable manifesto, Mr. Gilbert pays a becoming tribute to the German poet by saying, "I may add that I am indebted to Goethe's *Faust* for the scene between Mephistopheles and Martha in Act II. With this exception the dialogue of the piece is my own." It would not be strictly just to Mr. Gilbert to say that this scene is the only good one in his piece, for, as we have said, he can write good blank verse; and many passages of his play, taken by themselves, have considerable power, both of feeling and humour. But it is just to say that the scene for which he modestly acknowledges his indebtedness to his predecessor is the only completely effective one in the piece.

Mr. Gilbert, casting away the idea which is inherent in the *Faust* legend, and which has been adopted by every one before him who has taken it for a theme, makes Forstus or Fowstus (for, to quote the dying grammarian, *l'un et l'autre se dit*, according to the actors of Mr. Gilbert's piece) not an old man weary of the world and of human knowledge, but a young soldier, who, being jilted by a girl he loved, has turned monk and abjured all earthly things. His purpose, however, is so weak and wavering that when Gottfried, an old brother-in-arms, visits him in his monastery and descants upon the perfections of Gretchen, with whom Gottfried has since childhood lived in a kind of brotherly intercourse, Faust's mind reverts to the life which he has given up, and after Gottfried's departure he makes a soliloquy, which he ends by invoking various powers to his aid. The appeal is answered by Mephistopheles—or, as Mr. Gilbert chooses to call him Mephisto—who appears through a pillar with a thunderclap, the solitary proof of supernatural power, which he gives during the course of the play. He is indeed a singularly gentle fiend, and, for all that one can see, the repulsion which in a subsequent passage he asserts that he has to the crime of seduction is perfectly genuine. Goethe's "spirit that denies" becomes in Mr. Gilbert's play a somewhat cynical person, who chooses to dress, not in scarlet, but in black, and to wear a red feather in his hood, and who watches the course of crime with complacency, but with no special interest. One really fine speech is put into his mouth in the second act, and is delivered with singular force by Mr. Archer, who throughout the play does all that can be done for Mr. Gilbert's invention. But, with the exception of this speech, which is, we are inclined to think, by far the best passage of the play, Mr. Gilbert's Mephisto is a purposeless and colourless kind of creature. He has really no influence over the fortunes of Faust and Gretchen, which in Mr. Gilbert's hands are the theme of a commonplace and dismal story, related, as we have hinted, in verse of considerable merit. But Mephistopheles can hardly be called even an accessory before the fact to Faust's crime. All that he does is to spur an impulse given by Gottfried; and, as in the second act Gottfried, with an excess of confidence, gives Gretchen into the care of Faust, who has renounced the monastery to resume his former place in life, it will be seen that Faust is in Mr. Gilbert's version a creature even more degraded from the idea of the original story than Mephistopheles. As for Gretchen, she seems to be but tolerably burdened with a sense of sin until she is acquainted with the fact, which Mr. Gilbert chooses to make an utterly damning one, that Faust has been, and ought still to be, a monk. This fact it is which separates the pair; Faust's love is as ardent as ever, and so is Gretchen's; but the chance discovery on her part that her lover has thrown off his vows to the Church produces an effect which it is to be presumed nothing else would have produced, and impels her to say that she will never see him again. She does, of course, see him again when she is dying, and counsels him to redeem his sin, not by the death for which he longs, but by a life of holiness and self-sacrifice. The speeches put into her mouth in this scene have some beauty; but the end of the play leaves one pretty much where one was at the beginning. Faust has gone through a disastrous love affair, and retreats to his monastery, just as ready as he was before, according to the common interpretation of human nature, to leave it again whenever he hears a highly-coloured report of the fascinations of an exceptionally beautiful and virtuous girl. The play is, in fact, meaningless in a dramatic sense, and the finish of its writing cannot possibly redeem its glaring faults. The actors are heavily handicapped by the associations which must cling to the subject, in spite of Mr. Gilbert's "Notice to the Public"; but it is only fair to say that, if good acting and good

stage management could make such an attempt as Mr. Gilbert's "allowable," to use his own phrase, it would be allowable at the Olympic. Mr. Conway delivers the lines of a thankless part with much feeling, and Miss Marion Terry is graceful and tender as Gretchen. Mr. Billington cannot be congratulated on his performance of Gottfried, whom he presents in the likeness of the Knave of Hearts. Miss Brennan and Mrs. Bernard Beere play Martha and Lisa—a character introduced by Mr. Gilbert—with much success. But, as we have said, it is impossible to impart any real life to a play which is, in truth, a deplorable blunder.

REVIEWS.

THE LAND OF MIDIAN REVISITED.*

A PRECEDING volume, *The Gold Mines of Midian and the Ruined Midianite Cities*, narrated Captain Burton's first expedition, in April 1877, to the shores of North-West Arabia which belong to the Egyptian dominion. It was reviewed in this journal on May 25 last year, when the author had just finished a second and more protracted exploration of that country. This occupied four months; the previous tour not so many weeks. His practical object in both journeys, the cost of which was defrayed by the Khedive of Egypt, was to examine the mineralogical indications of the country and the tokens of ancient mining industries. Historical traditions prove beyond doubt the former existence of that kind of wealth along the eastern coast of the Red Sea and the Gulf of Akabah, as well as in the Sinaitic peninsula. Captain Burton has been assisted by the Rev. Dr. Percy Badger and by Dr. H. Brugsch Bey in adding here to his citations of such authorities, both from the records of Egyptian antiquity and from the mediæval testimony of Arab writers. These contributions form but a single chapter of his present work, and serve to complete that part of his introductory essay which was occupied with literary discussion of archæological topics. The Midian of Mosaic and later Hebrew history was, after several revolutions of empire and developments of race, superseded by the Nabathæan State, which probably covered a much larger territory. Notices of this by Greek and Roman geographers abundantly show that the natural wealth of the region was still held in repute. Its mines of precious metal, in Captain Burton's opinion, continued to be worked until the Mohammedan conquest. He even hints a suspicion that they have been surreptitiously used in later times. Whether they have been exhausted or may now be rendered a welcome source of revenue to the Khedive is really an interesting question. The financial and political advantages of such a discovery would be appreciated by the British public in the present crisis of affairs. It is well, however, to beware of indulging sanguine expectations. The readers of Captain Burton's narrative will find little cause to complain of having been misled by any imaginative exaggeration of existing facts. They are more likely to feel that his precise topographical descriptions of the sites and ruins of so many old mining settlements become rather tedious. There is an uninviting sameness in the repeated inventory of a rock-cut cistern and conduit, with a furnace and scattered bits of slag or ashes, and some fragments of pottery and glass; and again, upon the neighbouring hill, traces of a hut village for the slave labourers, with a small fort to guard them. But Captain Burton was in duty bound to report these details with the utmost minuteness, as well as to scrutinize the geological features of the supposed auriferous, or silver, copper, and sulphur-yielding districts. We must leave his array of positive and presumptive evidence, with his twenty-five tons of specimens containing a small proportion of metallic ore, to the judgment of scientific or practical experts. Our present concern with the book is to extract from it whatever fresh information it may afford relating to the obscure historical associations of that tract of country, and to get some comprehension of its remarkable physical conditions, which the author has set clearly before us.

With regard, however, to the first-mentioned object of interest we are somewhat disappointed; because the Cairo newspaper correspondence of last spring, when it announced Captain Burton's return from his second tour in Midian, seems now to have overrated the amount of its archæological results. He has, indeed, completed the exploration of the territory properly called Midian, extending northward of El Muwaylah, or Mowilah, up to the head of the Gulf of Akabah; and he has apparently found the ancient capital of Midian, not in the seaport of Makná, as was supposed, but at Maghair Shu'ayb, the Madiama of Ptolemy, which is some twenty miles inland east of Makná. He has, moreover, traversed the whole of the Egyptian territory lying south of El Muwaylah, as far as the Wady Hamz, which is the boundary of the Turkish Arabian province of El Hejaz, and within seven caravan stages of Medinah. This territory is more than equal in extent to that usually known as Midian, having nearly the same length—about one hundred miles—but a greater breadth inland to the mountain wall of El Nejd, the Arabian table-land. Captain Burton prefers to give it the arbitrary name of South Midian, contrary to the advice of his learned friend Aloys Sprenger, and with no warrant of former usage. But he has fairly earned the praise of making considerable additions to our knowledge of the topography of that somewhat equivocal region. He here shows us all there is to be seen of the once important cities of Shuwák and Shaghb, which appear to have been sister-towns, co-operating in their respective branches of mining and metallurgic industry, and perhaps forming together one community, the Soaka of Ptolemy (vi. 7). The gold mines of Umm-el-Karayat and Umm-el-Harab, which were systematically worked by the ancients, together with the remains of Badá, probably the chief town of Thamuditis, and a commercial station on the highway from the coast to Petra, are not less carefully described. These belong to the Nabathæan period; and the Badais or Badanutha of the Greeks and of Pliny, and the Mochura of Ptolemy (El Marwah or Mukayrah) are recognized by Captain Burton in the localities he has lately examined. But there is still a great deficiency of materials for portraying the character of that long past state of civilization. Its architecture, for instance, cannot be estimated from the mere basements and foundation walls of houses and traces of streets; nor in the way of sculpture, inscriptions, or coins, has this expedition been very productive. The coins picked up at Maghair Shu'ayb have been compared with other Nabathæan collections; many of them seem to be imitations of Greek coinage. The catacombs at the same place, with their elaborate ornamentation, and with the defined arrangement of their interior, are more impressive than the ruins of the city itself. Altogether, the perusal of these volumes gives more consistency to our previous impression, derived from a variety of meagre historical notices, that the whole region, with different successive inhabitants, was busy and rich, at wide intervals though not continuously, for upwards of a thousand years. It has been laid waste, and scraped to the bare rock-skeleton, by the ruthless rapacity of Persian, Saracenic, and Turkish conquerors, and by the savagery of the Bedawin. This is the common fate of many famous abodes of early civilization in Western Asia, and it is one of the sorriest spectacles in the world at the present day.

But, if we turn from the obscure antiquities of the ill-used country to the singular aspects of its physical geography, there are many wonders to delight the lover of nature in her capricious moods. The author's descriptive style grows eloquent without affectation in depicting the glorious effects of atmospheric tints at sunrise and sunset, in that luminous clime, on the brightly contrasted colouring of diverse masses of rock, the shapes and the grouping of which form a splendid exhibition of mountain grandeur. We long for the pictures which some great artist, who shall one day take the trouble to cross the Red Sea for that purpose, will paint and send to the Royal Academy. M. Lacaze, the artist employed by the Khedive to go with Captain Burton, has made a number of sketches in oil and water-colour, six of which are represented by chromolithographs in the two volumes; but the entire portfolio, with other drawings, maps, and photographs, is to fill a grand album prepared at Cairo. Hardly any portion of the earth's crust, we should imagine, can present a more striking display of the peculiar character of scenery produced by the mingled hues and varying outlines of different geological formations, all bared to view under a strong light, with comparatively no dress of trees or herbage. The beauty of the desert is anything but monotonous under these favouring conditions. We may refer to p. 60 of the second volume, describing the Jebel Sharr at successive times of day, or to the passages in which (chapter xi.) the weird and fascinating aspect of the southern Hismá wall is described, with its lofty sandstone coping broken into an endless variety of figures, and shining with the liveliest colours; or to that (vol. i. p. 84) which dwells upon the extraordinary sight of the white plains of gypsum, at sunset transformed to reddening gold, but stained with sundry clays and sands, pink, mauve, and greenish yellow, and broken through and girdled round by dark chocolate brown hills of plutonic formation, in the valley approaching Maghair Shu'ayb. Such vivid landscape accounts give the reader some compensation for the undeniable tediousness of the greater part of this narrative, which is excusable, in any case, as the report of a mineralogical inspector.

The entire territory called by the author North and South Midian is the strip of land from Akabah to the Wady Hamz, lying between the sea-coast and the Shafah range, which is the "lip" of the sandstone table-land, the Hismá, extending a hundred and seventy miles parallel with the maritime shore. Behind the Hismá is a volcanic region of lava and basalt, El Harrah, the extent and character of which are not precisely known. The lower country, which Arabs call El Tihámah, and of which this book is an account, measures two hundred and thirteen miles in length from north-north-west to south-east, and in width from twenty-four to sixty or seventy miles, broadening southwards. Its surface is everywhere diversified by groups of mountains, chiefly granite, of which the Sharr, rising to six thousand or six thousand five hundred feet, is the most conspicuous, with its neighbours the Dibbagh, Harb, and Urnub in Central Midian. It shows eruptive pieces of trap rock bursting through the sand, with huge lumps of "Marú," or quartz, formerly yielding gold; and the whole region is intersected by a series of frequent "wadys," or dry water-courses, passing between these elevated rock strata from the Hismá down to the sea. In the northern district—on the shore of the Gulf of Akabah opposite the peninsula of Sinai, in the neighbourhood of Makná and Maghair Shu'ayb, where Moses sojourned with Jethro the priest of Midian—the geological structure is different. It abounds with

* *The Land of Midian Revisited.* By Richard F. Burton. 2 vols. London: C. Kegan Paul & Co.

large deposits of sulphates and carbonates of lime, overlying chloritic sandstone, in the flat-floored hollows, and with blocks of conglomerate, felsitic porphyry, and syenite, heaped along the coast. Here, and in similar localities elsewhere, it is hoped that plenty of sulphur, manganese, and perhaps copper, lead, and silver, may still await the modern miner's search. The Tahisát mountain, close to Makná, presented a vein of quartz which at first seemed richly metalliferous; but subsequent assays were disappointing. We do not, however, purpose here to discuss the mineral prospects of the country. It is, beyond question, a highly interesting field of scientific examination and contemplation for the geologist. The shores of the Red Sea and its head inlets, both east and west, claim attentive study, with a view to the clear explanation of processes whereby that enormous cleft has been made in the plateau once connecting Arabia with Eastern Africa.

Captain Burton, upon this occasion, visited almost every part of the sea-coast; going up the Gulf of Akabah, not without considerable peril, in the Khedive's gunboat *Mukhbir*, which lacked ballast and had a leaky steam-boiler. He afterwards travelled, by land and water, as far south as El Haurá, the ancient Leuké Komé, which is the pilgrimage port of Medinah in the Hejaz. The ports above mentioned, and those intervening—Akabah and Makná in the gulf, Aynunah, Muwaylah, and Ziba in the middle part of the coast, Dumayghah and El Wijh further south—are delineated by him with a careful preciseness worthy of his professional knowledge as a sailor; and he is fully entitled to correct the gross errors of the Admiralty charts. Of Aynunah and the other northern ports we had already obtained some exact information; and we had been led to Akabah by the late Dr. Beke, in quest of Mount Sinai and of the place where Pharaoh and his army were drowned. Captain Burton's testimony in favour of the "admirable" harbour of Aynunah should be noted by our naval authorities and by those of the mercantile marine. They may also peruse his small chart of Dumayghah, which is situated thirty miles north of El Wijh, the late quarantine station for Hejaz pilgrims from Egypt, amongst whom Captain Burton was there a quarter of a century before. He observes that Dumayghah is much the better port, and should be utilized as a harbour of refuge; while he strongly advocates the re-establishment of El Wijh, and the abandonment of the Tor quarantine station in the Gulf of Suez. This he pronounces most unhealthy, and even likely to send infection to Egypt, and thence to Europe—a matter of urgent moment, if Captain Burton is right. There are several other practical suggestions in his book, which we have not space to discuss. It is to be hoped that the English and French directors of Egyptian administration will apply a fit share of their reforming enterprise to this Midianitish or Nabathæan province. Industrial colonization must probably depend on the evidences of profit from mineral resources; there is little apparent capacity of agricultural improvement. But it ought to be worth while at any rate to make the country safe for travellers without an escort, and to put the mongrel tribes of Bedawin under some degree of police supervision. These worthless gangs of rabble, whose names we do not care to transcribe, hang on the path of Captain Burton's exploring journeys throughout the narrative. They are not "horse Arabs," who may possibly be esteemed more noble, or "ass Arabs," who, for aught we know, are comparatively innocent, but "camel Arabs," and a very brutish lot. The laziness, untruthfulness, dishonesty, and ferocity of those Sons of the Desert in general have too long blasted the hopes of civilization in the Moslem world. As Captain Burton puts it, "the unsettled Arabs plunder and slay; the settled Arabs slander and cheat." Abd-el-Nabi, a chief of the Huwaytat, whom our author took for a native gentleman the year before, now turns out to be an impudent snob. Another chief is said to be officially recognized by the Egyptian Government "as the spokesman and diplomatist—*i.e.* the liar and intriguer—of his tribe." The poor Fellahin of Egypt have a proverb, "Shun the Arab and the 'itch." Shaykh Hasan-el-Ukbi was "a rat-faced little rascal," always trying to breed mischief. But Shaykh Furayj-bin-Rafia, of the Huwaytat, proved as trusty, discreet, brave, and diligent as one could wish a native companion to be. The merits of the Sayyid Abd-el-Rahim, official accountant at Muwaylah, and of Shaykh Mohammed Shahadah, at El Wijh, late Wakil or Government agent, have been attested by Captain Burton in a memorandum to the Khedive. He cannot say much in praise of the Egyptian officers and military escort, and the party of quarrymen, who were sent with him from Cairo. His European comrades, Mr. George Marie and Mr. J. C. Clarke, engineers, M. Emile Lacaze, artist, M. Philipin, smith, and Mr. David Duguid, in charge of the steamboat's engine, deserved honourable mention. The itinerary is precisely set forth, with complete lists of the men, inventories of the stores and beasts of burden, and accounts of money spent in each section of the tour; with daily meteorological records and notes of the plants and insects. The map is an imperfect one, and the engravings and lithographs are not very helpful, including the facsimiles of Brugsch Bey's copies, with translation, from the Harris papyrus in the British Museum. It would have sufficed to give the purport of Rameses III.'s memorial concerning the copper-mines of Athaka. But the drawings of such places as the Maghair Shu'ayb catacombs, and the interior of the mine at Umm-el-Haráb, are very serviceable; and those also of the Gasr, a lonely building of Græco-Roman architecture, with an interior colonnade or peristyle, as it seems, near the seaward outlet of the Wady Hamz. It is conjectured that this may be a votive shrine erected by Ælius Gallus before embarking on his return from the campaign in Arabia. There are, in all probability, not a few suggestions of historical interest to be gathered on that shore, of which fame has so long been silent.

HOURS IN A LIBRARY.*

MR. LESLIE STEPHEN'S third series of *Hours in a Library* is no less interesting and attractive than the two volumes which have preceded it, and which have been reviewed in these columns. The present volume contains nine chapters, and, as in the case of the former ones, it will be found convenient to select certain of them for special notice, not because those which are left to recommend themselves to readers are inferior in merit, but because it is impossible within our limits to do justice to all the subjects discussed by the author.

Mr. Leslie Stephen's first chapter deals with Massinger, and opens with some pertinent and acute remarks on what he calls the "old case of Puritans *versus* Playwrights," in which he observes that Kingsley in one of the best of his occasional essays held a brief for the plaintiffs. Kingsley of course "pays the usual tribute to Shakespeare, whilst denouncing the whole literature of which Shakespeare's dramas are the most conspicuous product." Mr. Stephen justly points out the inconsistency of this by the remark that "you can hardly demolish Beaumont and Fletcher without bringing down some of the outlying pinnacles, if not shaking the very foundations, of the temple sacred to Shakespeare," and goes on to discuss the general tendencies of "the so-called Elizabethan dramatists." He is unsparing in his denunciation of the ridiculous affectation which has led some critics to praise the worst as much as the best qualities of the Elizabethan school, and observes with perfect truth that "much that has been praised in the old drama is rubbish, and some of it disgusting rubbish"; and it is by way of throwing some light on the question, "Are we bound to cast aside the later dramas of the school as simply products of corruption?" that he devotes consideration to the works of Massinger, which belong in a literary sense to "the period when the imaginative impulse represented by the great dramatists was running low." What the author says in connexion with this matter is well worthy of note:—

> It is curious to reflect that, if Shakespeare had lived out his legitimate allowance of threescore years and ten, he might have witnessed the production, not only of the first but of nearly all the best works of his school; had his life been prolonged for ten years more, he would have witnessed its final extinction. Within these narrow limits of time the drama had undergone a change corresponding to the change in the national mood. The difference, for example, between Marlowe and Massinger at the opening and the close of the period—though their births were separated by only twenty years—corresponds to the difference between the temper of the generation which repelled the Armada and the temper of the generation which fretted under the rule of the first Stuarts. The misnomer of Elizabethan as applied to the whole school indicates an implicit perception that its greater achievements were due to the same impulse which took for its outward and visible symbol the name of the great Queen. But it has led also to writers being too summarily classed together who really represent very different phases in a remarkable evolution. After making all allowances for personal idiosyncrasies, we can still see how profoundly the work of Massinger is coloured by the predominant sentiment of the later epoch.

This sentiment was in strong contrast to what Mr. Dowden has called, in language the affectation of which is at variance with the truth of his perception, "the rich feeling for positive concrete fact" which was characteristic of the earlier period. Massinger, "instead of abandoning himself frankly to the stream of youthful sentiment," is filled with forebodings of its danger, and is moreover a moralizer by temperament. He is described later on as "a sentimentalist and a rhetorician"—a man who is not impelled by the force of genius to give life to his thoughts and feelings, but who has much feeling and much facility of utterance, and "finds in his stories convenient occasions for indulging in elaborate didactic utterances upon moral topics." This sentence does not of course fully express either the best or the worst that Mr. Stephen has to say of Massinger, but it certainly gives a general idea of Massinger's method and character as well as it could be given in a few words. The writer's opinion is supported by much sound criticism in detail, one passage of which may be dwelt upon. Mr. Stephen points out the weakness, the indecision, the unreality of Massinger's characters as compared with those of the time when "every man was run in a mould of iron" by the dramatists, and goes on to say that there is one striking exception to this in the case of Sir Giles Overreach. But even here "Massinger fails to project himself fairly into his villain," whose words express not what he would think or say of himself, but what other people would say or think of him. The truth of this conclusion may be seen at once by a reference to the well-known speech quoted by Mr. Stephen, which is delivered in answer to the question whether he is not moved by the imprecations of his victims, and which begins, "Yes, as rocks are when foaming billows split themselves against their flinty sides." "Put this into the third person," says Mr. Stephen, "read 'h.' for 'I' and 'his' for 'my,' and it is an admirable denunciation of a character probably intended as a copy from life. It is a description of a wicked man from outside, and wickedness seen from outside is generally unreasonable and preposterous."

Mr. Stephen's second essay deals with Fielding's novels, and

* *Hours in a Library.* (Third Series.) By Leslie Stephen. London: Smith, Elder, & Co. 1879.

begins with a discussion of the double parallel which has been commonly made between Fielding and Thackeray, Smollett and Dickens. The author finds the resemblance closer in the former than in the latter case, observing that "the resemblance between 'Pickwick' and 'Humphrey Clinker' or between 'David Copperfield' and 'Roderick Random' consists chiefly in the exuberance of animal spirits, the keen eye for external oddity, the consequent tendency to substitute caricature for portrait, and the vivid transformation of autobiography into ostensible fiction, which are characteristic of both authors." Possibly the comparison between *Roderick Random* and *David Copperfield* is hardly as just as it might have been; but the general truth of what the author says would be obvious enough even without the well-chosen instances of particular likeness between Fielding and Thackeray which he puts forward. Mr. Stephen goes on to speak with well-deserved bitterness of the "banalities of criticism" which dismiss Richardson as an idealist and Fielding as a realist, and so forth; and then proceeds to consider how much Fielding had of "that power by which the novelist or dramatist identifies himself with his characters, sees through their eyes, and feels with their senses . . . the power in which Shakspeare is supreme; which Richardson proved himself, in his most powerful passages, to possess in no small degree; and which in Balzac seems to have generated fits of absolute hallucination." Mr. Stephen naturally admits that Fielding's novels "are not without proof of this power"; but it seems to us that he allows them somewhat too small a share of it. According to Mr. Stephen, the knowledge for which Fielding is specially conspicuous "differs almost in kind" from that above spoken of, and "is drawn from observation rather than intuitive sympathy." We are inclined to think that in this respect the author has been led somewhat astray by paying too much attention to the habit which belonged to Fielding, as it did to Thackeray, of constantly appearing as a chorus to his fictitious personages. Both Fielding and Thackeray, no doubt, drew very largely upon their own accumulated experience; but we should hesitate to say of either what Mr. Stephen says of Fielding, that the result is "distinctly the concentrated essence of observation rather than the spontaneous play of a vivid imagination." The remark undoubtedly has an element of truth, but strikes us not the less as being a little one-sided. We are, however, well content to accept it with a passing record of disagreement for the sake of what follows:—

> And, therefore, it may be said in passing, it is refreshing to read Fielding at a time when this element of masculine observation is the one thing most clearly wanting in modern literature. Our novels give us the emotions of young ladies, which, in their way, are very good things; they reflect the sentimental view of life, and the sensational view, and the commonplace view, and the high philosophical view. One thing they do not tell us. What does the world look like to a shrewd police-magistrate, with a keen eye in his head and a sound heart in his bosom? It might be worth knowing. Perhaps (who can tell?) it would still look rather like Fielding's world.

In connexion with Fielding's method Mr. Stephen has some very interesting remarks on that of Scott; but these, and much more, we must be content to pass over, concluding our notice of the essay by these remarks of the author:—

> Fielding is really a novelist in the more natural sense. We are interested, that is, by the main characters, though they are not always the most attractive in themselves. We are really absorbed by the play of their passions and the conflict of their motives, and not merely taking advantage of the company to see the surrounding scenery or phases of social life. In this sense, Fielding's art is admirable, and surpassed that of all his English predecessors as of most of his successors.

Passing over several essays of great interest which many readers will remember to have seen in the pages of the *Cornhill Magazine*, from which they are reprinted, we come to one on Macaulay, in which Mr. Stephen, after paying a well-deserved compliment to Mr. Trevelyan's excellent biography, goes on, according to his method, to draw his own inferences from the facts presented to him. Dwelling upon Macaulay's extraordinary powers of memory, he observes that generally (he quotes Pascal as an exception) such a possession "is unfavourable to a high development of the reasoning powers. . . . It encourages the indolent propensity of deciding difficulties by precedent instead of principle." Macaulay himself knew and said that he had very little of the critical faculty; and, to illustrate the truth of this, the author quotes his curious remarks on Bunyan—curious because it was so very needless to make them. Macaulay's preference of precedent to principle accounts, according to Mr. Stephen, for his method in politics, which he describes as hopeless. "When stripped of its pretentious philosophy, Macaulay's teaching comes simply to this—the only rule in politics is the rule of thumb." In this connexion Mr. Stephen has much to say which will no doubt afford matter for argument, but we must refrain from dwelling on this, in order to come to the author's analysis of Macaulay's style: "the faults and merits of which," he says, "follow from his resolute determination to be understood of the people." Mr. Stephen quotes the story told by Mr. Trevelyan of Macaulay's delight at hearing that there was only one sentence in the History the meaning of which was not at first sight obvious to Messrs. Spottiswoode's reader, and says, "We are more surprised that there was one such sentence." Macaulay sacrificed much to obtain his marvellous clearness of style; "he proves that two and two make four, with a pertinacity which would make him dull, if it were not for his abundance of brilliant illustration. . . . It is no small proof of artistic skill that a writer who systematically adopts this method should yet be invariably lively." For the same reason, in his writing "there are no half tones, no subtle interblending of different currents of thought." In description of character he sacrifices possibility to the opportunity for obtaining startling contrasts, and in illustration of his method in such matters Mr. Stephen aptly quotes the story of the Duke of Wellington and the rats which got into his wine bottles. "They must have been very large bottles or very small rats," said some one present. "On the contrary," said the Duke, "very small bottles and very large rats." Mr. Stephen goes on to explain why, in spite of its defects, Macaulay's work is so living and so impressive as it is and will be, and we will not spoil his explanation by attempting to paraphrase it or by making extracts from it without the context.

THE ABORIGINES OF VICTORIA.*

(Second Notice.)

We have examined the marriage laws of the aborigines of Australia, and some of their religious practices, such as their initiatory mysteries and the rites paid to the dead. We now propose to consider their government, their arts, and their very peculiar weapons of war. Before approaching the politics and art of the Australians, it may be well to remind the reader that in early societies institutions of all sorts exist in a kind of nebulous mass. They have not yet been properly differentiated, and are potential rather than actual. It is never possible to say with perfect accuracy that this or that institution is religious, political, or artistic. It may contain the germs of art, of faith, of government, and of etiquette. Thus the "taboo," or prohibition to do this or that apparently harmless action—a prohibition strengthened by fear of a magical penalty—may be called a political, a social, or a religious institution. It may develop into a theory of unlucky or holy days, and may produce the Assyrian, the Jewish, or the Scotch Sabbath. It may merely reserve the best food for the old men. It may help to construct a system of forbidden degrees in marriage, it may cause a divinity to hedge kings yet unborn, or it may aid the growth of personal property. The most permanent and sacred elements in civilized society got their grip on the human conscience by aid of the mysterious awfulness of the taboo, and the taboo is only a specimen of the strange devices hit upon by early ingenuity.

The government of the Australian tribes is not democratic, according to Mr. Brough Smyth. Of the various elements of political authority, none are absolutely wanting; but one, and that not the least important, is in a very rudimentary condition. The Australians respect prowess in war, which makes the war-chief the *dux*, as Tacitus calls him, in his description of the German tribes. They dread and respect sorcerers and medicine-men, through whom it is not improbable that the idea of supernatural power became attached to early kings, to the "fosterlings of Zeus" in Greece, and to all the other possessors of right divine. The Australians also regard old age with some measure of reverence, though Europeans are apt to think that they hit aged persons on the head, in the manner attributed to the early Scandinavians. In the respect given to old age is the germ of a senate or council of the elders. What then is wanting to the idea of chiefship, which Mr. Brough Smyth says is unknown in Australia? (i. 146). Apparently the missing element is that of *ancestral wealth*, which entered so largely into the Greek conception of noble birth, as into that of the early Irish. Though the Australians appear to recognize private property in land (which is strange in a race so averse to agriculture), there appear to be no accumulations of wealth in certain houses, if we may speak of "houses" among the Murri. Probably the very general recognition of female kinship, combined with the vagrant and hand-to-mouth life of the bush tribes, makes the accumulation of wealth impossible. The natives, however, are eager traders, and they have even a peculiar custom of appointing consuls, so to speak, among strange tribes, for commercial purposes.

For want of wealth, then, and of more or less settled conditions of life, the institution of chieftainship has not been developed. This, by the way, is an unlucky thing for the women. If the Australians were rich, like some African peoples who trace kinship through women, if they possessed gold, ivory, and abundant food, while still holding to the system of female kinship, women would be much more important. Through them the right to succession to property would be traced, the accumulated possessions would go to the mother's children, not to people of the father's name, and thus women would naturally be held in far greater consideration. Where there is scarcely anything to succeed to, the mere fact that the mothers, and not the fathers, determine the family name of the offspring, is of very little moment.

To return to the politics of the tribe; though "the pale name of priest" seems to be unknown among the Murri, the "doctors," or sorcerers, in some circumstances, have supreme power. They partly represent the spiritual peers, and partly exercise the influence which in more advanced societies is exercised by the divinely-born king. The warriors, "the host," in time of trouble are absolute masters, and form the great gathering which is guided in its decisions by the soothsayers and by the council of the elders. In the council of the elders, as we have said, is the germ of the γερουσία, or *senatus*. Another power in modern

* *The Aborigines of Victoria.* By R. Brough Smyth. Melbourne: Government Press. London: Trübner & Co. 1879.

society, the press, finds its counterpart, perhaps its germinal form, in the old women, "who noisily intimate their designs and endeavour by clamours and threats to influence the leaders of their tribe." Mr. Brough Smyth says that "the government of a tribe might well serve as a model to peoples claiming to be more civilized than the Australians." It not only might serve, but apparently has served, as a model; and, when the leaders of the English tribe read some newspaper invectives, they may be reminded of the old women "who noisily intimate their designs."

It is perhaps under the head of elementary education that we should rank the native use of runes, or σήματα, tokens which may be read by the initiated, but which are not picture-writing, still less a syllabary like that of the Vei tribe in Africa. An Australian, like a Spartan, despatch is carried on a σκυτάλη or staff. "A messenger has to carry a token, by virtue of which he passes safely through the lands of the several tribes. The token is a piece of wood eight or ten inches in length, sometimes round and sometimes flat, and rarely more than one inch in thickness. On it are inscribed hieroglyphics, which can be read and interpreted, and which notify all persons of the nature of the mission" (i. 133). Mr. Brough Smyth gives pictures of "message sticks" (vol. i. pp. 354, 355). One was conveyed into the possession of a native who had been imprisoned, and whom his tribe meant to rescue. It is about three inches long, has two cross notches at the top, two cuts run through the greater part of the length, and within these lines are seventeen small cross notches. The rest of the space is occupied by a zigzag line, at the end of which are two more cross notches. This was interpreted to mean that "two black fellows come up in two days, seventeen days ago. One black fellow come up to where this black fellow sit down." The zigzag line referred to the path or track of the black fellows. The stick may have been a comfort to the prisoner, as a proof that his friends were interested in him, but it is a very rudimentary form of epistle. It is more important, if true, that a friend of Mr. Moore Davis carried a stick from a native to his father, and that the father "called together all the blacks that were living with him, and read off the stick a diary of the proceedings of the party" with which the son was exploring. By the way, it was surely the Peruvians, not the Mexicans, as Mr. Brough Smyth says, who used the *quipus*, or records tied in knots on pieces of string. Compare, as a survival, the habit which some casual people have of tying *quipus* knots in their pockethandkerchiefs. The wide prevalence of savage methods of conveying intelligence, and even of preserving poetry, by rude signs, is of importance in view of Wolf's theory of the late application of writing to the latter purpose.

The plastic art of the Australians (who are great singers, and have the original form of ballet, opera, and drama in the corroboree or dance) is decorative. They have reached, according to Mr. Brough Smyth, that early stage of ornament in which geometrical patterns are used. Patterns like those on their shields, of which we have here many engravings, are found on a vase from Lesmurdie in Banffshire, and on another from Memsie in Aberdeenshire. Behind this stage, in which straight lines are first scratched, and secondly lines forming the herring-bone and the chevron, we can hardly go in the study of ornament. What ornament, indeed, can possibly be more simple? Just as on the earliest vases found in Greek soil there is great difficulty in representing the curve, for example, of the neck of a bird. Thus, on a vase found in Cyprus (Cesnola's *Cyprus*, p. 404), "it is clear," says Mr. Murray, "that the hand which traced the figure of the swan could not escape from its habit of drawing geometric lines." The early vases from Athens, and other ancient sites, have also geometric patterns. The patterns on shields (vol. i. 330-331) may be compared with those of the vase in Cesnola's book (p. 408), but it must be remarked that the early European has broken up his patterns, and enjoys designing concentric circles, which the early natives had not mastered. Something approaching to the coiled rope pattern of the Mycenæan antiquities may be detected on an Australian shield, engraved vol. i. p. 334. The drawing of the human form on a throwing-stick (figure 88) is more successful than the crude efforts on many old vases found in the Levant. One native said that he borrowed decorative patterns from the markings on the skin of lizards, and from the scales of snakes. No conclusion can be drawn from designs made by blacks under European influence. The old race who left their pictures (coloured white, black, red, yellow, and blue) in the caves succeeded better in drawing geometrical patterns than animals, and better in drawing animals than the human form (compare the figures in vol. i. p. 293, where the man is beneath the contempt even of a Mycenæan artist, while the kangaroo is worthy of a primitive Landseer). It is worth noticing, perhaps, that the paintings in the caves of Depuch Island are absolutely free from any suggestion of grossness. Depuch Island, on the north-west coast, is, as it were, the national gallery of the blacks, a vast collection of primæval frescoes on the walls of caves; but it is suspected by some authorities that the pictures are the work of shipwrecked Malays.

None of Mr. Brough Smyth's chapters is more interesting or better illustrated than that which treats of native weapons. These are chiefly the various sorts of spear (headed with stone or hard wood), of club, of "throwing-stick" (answering to the Roman *amentum*), and of boomerang. The play-boomerang, with which wonderful feats are performed, is called *wonguim*; the war boomerang is *Barn-geet*; the latter being the less curved of the two, and, as far as our own experience goes, the more difficult to throw. No two weapons are exactly alike, and the European may amuse and perplex himself with one, while with another he absolutely fails. Mr. Brough Smyth has a controversy with Colonel Lane Fox about the so-called Egyptian boomerang, in which he appears to us to have somewhat the better of the argument. Mr. Brough Smyth has had many opportunities of seeing the *wonguim* thrown by native experts, and estimates its certainty of return to the thrower much higher than does Colonel Lane Fox. The latter distinguished authority may reply, however, that neither Mr. Brough Smyth nor any one else has seen the so-called Egyptian boomerang thrown by an Egyptian expert, say of the Eighteenth Dynasty. It remains true that "the flat leaf-like weapon of the Australian differs essentially from the Egyptian crooked stick," as represented in the monuments. In one design the Egyptian stick is like the Australian *Warra-warra*, in another like the *Quirriang-an-wun*. Isidore of Seville in the seventh century describes a *cateia* or *clava* ("Teutonico ritu soliti torquere *cateias*") as a weapon "which, if it be thrown by an expert, returns to him who cast it," and says that the Spaniards called these weapons *Teutones*. Whatever Isidore or any one else may say, we decline absolutely to see in the Australian *wonguim* any proof of the presence of "the Japhetic race" in Australia.

We have exhausted our space and left the philological and mythological parts of Mr. Brough Smyth's book untouched. But we must quote one anecdote in illustration of the execution of the rude tribal justice of these people:—

> A man had stolen a small quantity of sugar from one of his fellows. The tribe took it up, and condemned the thief to receive a blow on the head from the man he had wronged. The culprit stood as I have described, and the other walked quickly up to him, stopped for a few moments, and dealt him a blow which would have smashed a white man's skull. The man who received it, however, never stirred, but simply looked up, the blood streaming down his face. The man who struck him now burst into a violent fit of crying, and, lifting his waddy, struck the pointed handle again and again into his own head, until it was covered with blood; then turning round, he threw his waddy from him as far as he could, and still crying violently, threw his arms round the neck of the man he had struck.

The feelings of remorse, of pity, of self-contempt, in view of the selfish and ignoble satisfaction of revenge, are not so modern as we suppose. Morality in its emotional form is one of the most ancient things that the race possesses. Its existence makes all men akin, and may intensify our regret at the sight of races which are vanishing and decaying before they have mastered more than the earliest approaches to civilization, but which, for all that, are essentially human.

LATHEBY TOWERS.*

It is not often, unfortunately, that we have the opportunity of congratulating a novelist on a decided advance on a promising former work. But *Latheby Towers* is something more than a mere improvement on the pleasant and very interesting book that the author had written before. In thought and art, as well as in the care and finish of the execution, it more than confirms us in the favourable opinion we then formed of Miss Corkran's powers. She seems to be possessed of the finer literary instincts which are sure to be developed with practice and confidence. In *Latheby Towers* she has steered a happy middle course between sensational extravagance and tameness of incident; while she shows something of French ingenuity in evoking striking situations from circumstances that are perfectly simple and probable. And these situations, although frequently recurring, are by no means mere stimulants to excitement, as is too often the case. On the contrary, they fall naturally into the plan of the story, either illustrating its phases or advancing its progress. They serve to bring out in effective relief the characters which are quietly, yet forcibly, contrasted; while to the last we are left in agreeable uncertainty as to the fortunes and fate of the various personages in whom we have been brought to feel a genuine interest. It is evident that Miss Corkran has observed and studied character with a practical purpose. She has achieved the very difficult feat of introducing us to the intimacy of a little group of children, and making them preserve the characteristics of their various idiosyncrasies when they have grown up into men and women. The performance is the more creditable because no one of the group is commonplace, while each is made a distinct source of interest. They are dominated by conflicting influences in their natures, which are strong ultimately for good or for evil; and as some of them are exposed to more than ordinary temptations, we fear that the principle of evil may triumph. Yet anxiety is never unnaturally overstrained, and we read for the most part in a serene assurance that good will have the best of it in the end, and that efforts of self-sacrifice and devotion will have their reward even in this world. Perhaps the explanation of Miss Corkran's success lies partly in her not having attempted too much. The literary tact of which we have spoken has counselled her to concentrate her cares on a limited number of people; and she has paid the strictest attention to the unities of place. The actual *dramatis personæ* number hardly more than half a dozen; and all the incidents at which we personally assist take place near the country village of Fareham, which gives occasion for some picturesque sketches of rural scenery; although the author never obtrudes these unnecessarily for the mere sake of eloquent description.

There is no prettier scene in the book than one in the opening

---

* *Latheby Towers*. By Alice Corkran, Author of "Bessie Lang." London: Richard Bentley & Son. 1879.

chapter, where the children of two rival families make each other's acquaintance in a picturesque little adventure. Latheby Towers has been from generations the heritage of the long-descended family of that name. The walls of the ancient rooms are still hung with their portraits, as the interior of the venerable church is filled with their ancestral monuments. But a spendthrift baronet, supposed to be the last legitimate scion of the race, has taken advantage of the extinction of the entail to part with the property. The purchaser was Mr. Saville, a wealthy brewer, who has established himself at the Towers. But Sir Peter when he sold the place reserved to himself the Dower House; and the Mr. Latheby who would have inherited, had his father been born in wedlock, is come thither to establish himself with a son and daughter. Mr. Latheby has a strong conviction that his grandparents were duly married, and consequently believes himself to have been deeply wronged. Naturally, if unjustly, he resents the presence of the Savilles in his ancestral hal's, although they bought the property and paid for it honestly. And he is the more puffed up with family pride, and stands the more on the family dignity, for the shadow of the bar sinister that falls across his scutcheon; while Mr. Saville's widow, who has been left in possession of the Towers, has a good deal of the innate vulgarity of the newly rich. The feelings of their respective children have naturally taken colour from the atmosphere in which they have been brought up; and so we are prepared to understand the meeting of the little hereditary enemies. We cannot pass it over in silence, and yet we feel that the episode loses all its grace and half its humour by being condensed, instead of being quoted at length. Little Clara Saville, who, heiress as she is, is very much left to her own devices, has wandered out into the fields, sadly disconsolate over the death of a blind bullfinch. The history of her relations with the bullfinch, by the by, is in itself extremely touching, as well as happily suggestive of her affectionate, though high-spirited, nature. Near the Lathebys' cottage she hears voices, and, looking over the hedge, she sees a boy and a girl, very much of her own age. For the boy she feels immense sympathy and interest when it has dawned upon her that he is blind, like her departed bullfinch. She timidly introduces herself; they begin to prattle their childish confidences; and one and the other are most frankly outspoken. Clara sketches her portrait at the request of the blind boy. "You must be pretty," he says, "and I suppose you have a bright complexion?" "Very rosy. I *am* pretty," is the answer. But on further explanations she has a great shock. Cecil Latheby reveals his identity; and when he learns who the little beauty is, he declares that he and she can never possibly be friends. The Towers were given to his ancestors because they were valorous, and Clara's grandfather had bought them like a sack of hops. Not that it is her fault, he owns relentingly, when Clara is gasping and showing symptoms of crying. Clara is honestly struck by the force of his argument, and impetuously anxious to make restitution. "I'll give it to you as soon as it's mine," she said, "if you'll give me the Dower House, for you know I must have a house." Cecil does not quite see his way to the arrangement; and Clara on second thoughts whispers something into his ear, "in her softest little voice," when his sister has joined them and they are on the point of parting. "We might marry" is the solution that has occurred to her. But when she breaks her purpose to her family, her mother puts the thing in a different light. Mrs. Saville explains that Cecil and his father are come into their neighbourhood to take "the Towers" away from the people who have paid for them. So Clara sits down and pens a retractation to her possible *fiancé*. Thus it runs:—

"Dear Sir,—I had the pleasure of meeting you to-day in the field behind the mill and of talking to you. I have the honour of writing to you now. to tell you, that I shall never marry you—Never." (This last word was written in larger letters than the rest and forcibly scratched under three times. The writing, that had been punctiliously neat and prim, now became erratic.) "And when I meet you, I shall not speak to you. But I want you to know, that I think it *mean* and *horrid* to take back something that has already been paid for; and my mother paid a *heap of money* for the Towers. I think it is like being a Robber to try to get them back for nothing. This is all I have to say." (Here the writing resumed its ambitious evenness.) "And I beg to remain, dear sir, yours truly, Clara Saville."

The letter and the childish talk are not only as prettily funny as need be, but they give us the forecast of the characters of the children as they seem likely to grow up, with the clue to the future course of the story. We know of course, or at all events we presume, that the emphasized "never" of Clara will be falsified by events. When Clara and Cecil meet again they meet as young man and young woman, and their families are more estranged than ever. Mr. Latheby has tried an action at law for the vindication of his father's legitimacy, and has been more embittered than before by its failure. Clara fiercely resents the attempt, and lays herself out for revenge by doing her utmost to injure the prospects of Cecil, who has been brought down to giving lessons in music. How the beginnings of her compassion and involuntary respect for him gradually intensify and deepen into warmer feelings is told with equal power and delicacy. The series of accidents that force a renewal of their acquaintance on them is described with great delicacy and spirit; as when Clara, maliciously watching the blind man blundering along a woodland path, makes an involuntary rush to the rescue when he is on the point of stumbling into the river. It is by slow and very natural degrees that the vindictiveness of her quick and emotional nature yields to explanations and to her better feelings. But, when once won over, she is won effectually; and Cecil's blindness makes advances possible which would otherwise seem indelicate and unmaidenly. She takes to meeting him in the dark loft in the church, where he goes regularly to practise on the organ; and there is much quiet drollery as well as rough eloquence in the description of the behaviour of the pair by the old parish organist:—

There they sit, side by side, and look as cosy and bright as if they were sitting in the middle of a bit of sunshine I cannot see. She plays a little and he half smiles and half scolds her; and she looks up into his blind face with soft eyes all shining. Sometimes she speaks so coaxing to him . . . . and she listens, breathing a little hard, and her cheeks a little deeper in colour—and sometimes she quarrels with him—and that's the sweetest of all.

It is equally good when he again prevails on her to make the inventory of her more mature charms for his benefit; comparing it with all he so well remembers of what the girl had told him so many years before, when she made her offer to him in the meadow under the hedge. In spite of passing storm-clouds the future of the lovers might have seemed almost too assured to be interesting to novel-readers of experience. But Miss Corkran, with much art, has given Cecil a formidable rival, in the shape of a cousin who has been brought up with Miss Saville. Fred Raikes is in every way worthy of her; he has prevailed on her to give him a conditional acceptance; the happiness of his life appears to be in her hands, and we feel that, if he misses her, he will have hard measure. But it strikes us as barely possible that the author may relent in his favour. There is a powerful and ingeniously conceived scene, where Raikes, who is a doctor and an enthusiastic oculist, is consulted by Cecil's sister as to the chances of the restoration of her brother's sight. Raikes naturally hesitates; but he feels on reflection that it will be a noble answer to some malicious imputations on his conduct if he can restore light to the rival whom he has good cause to detest. An ordinary novel-writer would have made the operation triumphantly successful. In Miss Corkran's hands it ends in a dismal failure, and the faint spark of light that had given rise to glimmerings of hope is extinguished at once and for ever. It is easy to imagine the various states of mind which arise out of the deplorable catastrophe—Raikes's bitter self-reproach, Cecil's noble resignation, the disappointment and indignation of Clara, which make her cruelly unjust to her cousin. However, things calm down in the end. Raikes finds a rich consolation in the grateful appreciation of Cecil's sister, while Clara, though she can give him neither her hand nor her heart, has learned to value him next to her husband. And so one of the pleasantest stories we have read for some time past is brought to a finish as brightly as it began, after a due amount of trouble and uncertainty.

POLLOCK'S LECTURES ON FRENCH POETS.*

The French are beginning to admit that we are careful and loving students of their literature. The eminent critic who the other day entreated all Germans, Russians, Spaniards, Italians, and Patagonians to understand once for all that Paul de Kock is not considered a classical French writer politely refrained from including the English in his admonition. He tacitly admitted that we, at least, know better. Times have changed since Mrs. Trollope, finding herself in Paris, deemed it right to warn London readers against a dangerous writer named Victor Hugo, whose productions were "calculated to do great injury to human nature." But the first prominent advocacy of French writers in England commenced about fifteen years ago, and took the eccentric form of homage paid to one or two rather curious than valuable poets, such as Baudelaire. The last two seasons have shown a tendency among our best younger critics to view contemporary French literature from a wider and saner standpoint; and Mr. Pollock's volume of bright and appreciative studies will do much to increase this tendency.

Mr. Pollock may be said to deal with two themes—Béranger and Romanticism; for though his lectures are four in number, and include Alfred de Musset and Victor Hugo among their subjects, yet he mainly regards these two poets as the representatives of the romantic movement. The section on Alfred de Musset is particularly worthy of attention. We do not know that the singular temperament of this poet has ever before found so acute an observer, and we are inclined to claim for Mr. Pollock's criticism in this case greater originality than in any other. He begins his study by recounting Gautier's tale of *Le Chevalier Double*, in which the hero is for ever accompanied by a red knight precisely similar to himself, and whose heart is ceaselessly occupied by contrasted instincts and battling emotions. Mr. Pollock applies this parable to the case of Alfred de Musset, and points out with great acumen the ceaseless warfare that went on between the elements of his character:—

In him, as in Oluf, there were always two natures at work in opposition to each other. The one was tender, gentle, quick to feel every impression of outside circumstances, to respond to kindness with all the warmth of a poet's heart, and to grieve at harshness, ingratitude, or malice, with the sorrow of a child who cannot believe that the world is not all beautiful. The other was hard, suspicious, distrusting alike the people and the impressions he encountered, treating life as a thing to be made tolerable only by a reckless abandonment of all belief in, or striving after, high aims—a spectacle for the due enjoyment of which were needed a mind resolved against serious enterprise—a wit ready to jest at scars, and a heart prepared

---

* *Lectures on French Poets.* By Walter Herries Pollock. London: C. Kegan Paul & Co. 1879.

to deny the possibility of feeling a wound. Such, more or less, were the two natures always working against each other in Musset, of whom it might be said that he was constantly playing Mephistopheles to his own Faust.

This is very acutely felt and admirably put; and it is surely this precise weakness, this ardent helplessness of twofold imperfection, that has made Musset so charming to emotional natures and so repulsive to purely intellectual ones. It is particularly to be noticed that Mr. Swinburne, to whom merit in almost all its forms appeals, is quite unable to speak tolerantly of Alfred de Musset. The cynical softness of the poet of *Namouna* is absolutely repugnant to the transcendental imagination that created *Erechtheus*. We cannot dwell on this theme; but we must not fail to point out that Mr. Pollock has some very happy remarks on the comedies of Musset.

To characterize Victor Hugo in a chapter of fifty pages is not an easy task, and the study before us makes no pretension to being exhaustive. It almost confines itself, in fact, to an examination of Hugo's position as the dramatist of Romanticism. The young poet's interview with Talma, his famous preface to *Cromwell*, a preface which was like the Tables of the Law on Sinai to his breathless band of disciples, the refusal of *Marion de Lorme*, the rehearsal and representation of *Hernani*, all this leads up to an analysis of the beauties and the faults of *Le Roi s'amuse*. Mr. Pollock, who dedicates his book to Mr. Henry Irving, shows so very special an attraction to the study of dramatic art, and so delicate an appreciation of its requirements, that we could wish those portions of the volume much larger which deal with the French stage; and this subject is so fertile in whimsical anecdote and subtle insight into artistic character that we cannot but hope he will make it the theme of a more extended work. The translations here given—limited, it is true, to two long passages of blank verse—suggest that such a book might with advantage be supplied with numerous versions of tragical poetry from the hand that has given us this rendering of part of *La Rose de l'Infante*:—

> The Koran's Eblis and the Bible's Cain
> Are scarce as black as was that spectre King,
> Son of a spectre Emperor,—who sat
> On the Escurial wielding evil's sword;
> He hung above the nations like a dream—
> He lived, and none dared look at him, for fright
> Cast round the King a strange and baleful light.
> Men shuddered as they saw his ushers pass,
> So much was he confounded in their eyes
> With the tomb's depths and with the heaven's stars,
> So near he seemed to be to God himself.
> His fatal will, that never could be moved,
> Seemed to hold destiny with iron grasp.
> All nations—save dark Britain—bowed to him;
> His mouth was silence, mystery his soul;
> His throne built up of fraud and treachery,—
> He rode the darkness like a sculptured knight.

When we come to leave the greatest names of the Romanticists and to descend to the *petit cénacle*, we are not sure that Mr. Pollock is quite indulgent enough to his subject. M. Jérome Paturot is very delightful, but he is not perhaps more amusing than and scarcely so significant as many of the genuine youth of the pale face and Merovingian locks. There is no epoch of modern literature quite so amusing as the Paris of 1830. In reading of Bouchardy, with his Indian graces, like a young black panther; of Jules Vabre the architect, who renounced all drinks but double stout that he might understand *Macbeth*; or of Graziano, who tried to drink sea-water out of a skull in emulation of Han d'Islande, we are inclined to sigh, with the biographer of John Gilpin, "When they behave that way again, may we be there to see." To have met Gérard de Nerval patiently leading his lobster with a blue ribbon along the streets of Paris, or to have dined with Pétrus Borel *en costume d'orgie*, these are pleasures for which Mrs. Blimber might have relinquished that little visit to Cicero in his retreat at Tusculum. The painters flaunted on their palates seditious colours proscribed by the Institute, the architects lost themselves in the colossal audacities and florid luxury of their dreams, the sculptors mourned that marble must always be white, and lent itself but prudishly to the raptures of the new age. It was a time when to live was pleasure, but to be young was ecstasy; a time like a sudden warm spring, when the slow progress of the seasons is confounded in a simultaneous blossoming of early trees and late. Unfortunately the quick hot growth was soon nipped by the frost, and of all the promise of *le petit cénacle* there ripened little beyond the ardent and iridescent, but faulty, work of Théophile Gautier. It was not so with the *cénacle* itself. The career of Victor Hugo was attended by those of Lamartine and De Vigny, whose independent qualities have been obscured by the immense genius of their compeer. Lamartine, after having enjoyed a success of singular brilliancy, has subsided into a position very far inferior to his pretensions. De Vigny, the representation of whose *Chatterton* in 1835 was almost as momentous as that of *Hernani* in 1830, had none of Victor Hugo's personal attraction, and is now represented, not by any school of disciples, but by the solitary and austere figure of Victor de Laprade, a poet who will probably take a higher position in French literature than he now holds when posterity has rudely shaken some more brilliant reputations. But all these men, De Vigny and Lamartine no less than Victor Hugo, descend in the direct line from André Chénier, father of all that is vital in modern French poetry, and creator, in a sense by the side of which the influence of Keats on English poetry is weak, of the whole new direction of imaginative life in France. It was perfectly true that the preface of *Cromwell* contained, as the Merovingian youths declared, the pure doctrine of Romanticism; but it is just as true that, without Latouche's edition of Chénier, it could never have taken that form and energy.

At the close of the volume Mr. Pollock draws an ingenious parallel between the classical school against which the *cénacle* contended and the "classicist" period, as he calls it, in our own Restoration literature. He compares Shakspeare trimmed and dressed by Ducis with Shakspeare travestied by Davenant and imitated by Rowe. We confess that it seems to us that he somewhat exaggerates the sins of his countrymen. At the worst of times the English tragic poets possessed those distinctive qualities of style which preserve a literature from becoming entirely decomposed. But the corruption of tragic poetry in France after Voltaire was complete. A critic of quick ear and practised taste can recognize the peculiar manner and metre of Otway as distinct from that of Dryden, of Rowe as other than that of Southerne. But who is to distinguish Champfort from Blin de Sainmore? The tone, the measure, the monotonous swing of the rhetoric are absolutely identical. "Tous les poëmes," as Théodore de Banville confesses, "du dix-huitième siècle se ressemblent; tous font rimer *époux* et *coups*, *mourante* et *expiante*, et sont faits de vers muets, sourds et endormants." We could easily cap those instances of turgid and offensive verse which Mr. Pollock quotes from Otway and from Rowe; but we could with equal ease bring forward from those dramatists specimens of powerful tragic poetry, at once harmonious and moving, which we would defy him to approach with citations from Lafosse or La Harpe. Thus, in spite of all the bombast and dulness of the Restoration, its poets were capable of passing on to their successors unquenched the lamp of imagination, while the flat and uniform writers of the last classical period in France had lost the universal light altogether, and were mere spectres moving along in an unwholesome phantasmal glimmer of their own.

The style in which Mr. Pollock's volume is composed is very bright and clear, and has no unpleasant affectation of fine writing. The book is one which appeals to a wide circle of readers, and should be certain of a wide success.

IMPERIAL INDIA.*

POLITICIANS and casual tourists have in one shape or other told us a good deal about India. It is quite right that artists should tell us something more. But it is surely not desirable that they should disfigure their narratives by a style in which vulgarity contends for mastery with flippancy. Mr. Prinsep is fond of what some critics term the rollicking and free-and-easy manner. Rajas and Nawabs with him are always "swells." They occasionally chew "some beastly stuff" in a leaf. A summer palace inspires him with a delightful sense of "rumminess." On another occasion he wades through slush and snow across the Pir Punjal pass, "cursing" the Maharaja all the way. He condescends to repeat a contemptible bit of scandal about a native general who twanged a guitar under the windows of an English lady. During the hot weather in a railway journey, when the *tatties* or wetted screens of grass did not work, he was, apparently, "in hell fire." Sir Salar Jung, when he urged the cession of the Berars, is elegantly supposed to have "caught it hot." In fact we never come on what might have been a graphic description of a feast, a festival, or a native assembly, without being offended by some glaring violation of good taste. This is the more provoking, because Mr. Prinsep, as he tells us, belongs to a family honourably distinguished in Indian annals. In the last generation more than one member of it rose to eminence in one or other of the Indian services and at the Indian bar. Mr. Prinsep's father was a keen politician and an excellent Orientalist, and served the State, in India and in England, for the long period of sixty-five years. The dedication to the memory of this gentleman, the late Henry Thoby Prinsep, is simple and appropriate. The Indian connexion of the author has saved him some preliminary labour, and has kept him from very serious errors. But every now and then, especially in the latter half of his volume, he stumbles, and he has no more business to dabble in philology than the Sanskrit or Arabic Professor at either University has to paint pictures for the Exhibition. *Gaj* means elephant, but it is Sanskrit, and not Persian as the author will have it. To call the wife of Shiva *Sati* is rather a stretch. Sati, as most people know, is the excellent wife who used to burn with the corpse of her husband. The term is also applied to the goddess Uma, and this word again is sometimes used as a synonym for Durga or Parvati. But the latter are the names by which the consort of Shiva is usually known. Mr. Prinsep's remarks about the demeanour, habits, and language of the native potentates whose faces he was condescending enough to transfer to his canvas, are very questionable, not to say offensive and impertinent. We have lately read a long discussion in one of the Indian journals about the difficulty of the fusion of races, the hauteur of the Englishman, the rigid caste of the native, and the exclusiveness of both. But the difficulties of their meeting cordially in society, or in some common pursuit, will be greatly enhanced if travellers who are admitted into the palaces of Nawabs and Rajas think themselves at liberty to fill their chapters with accounts of the

* *Imperial India: an Artist's Journal.* Illustrated by numerous Sketches taken at the Courts of the Principal Chiefs in India. By Val. C. Prinsep. London: Chapman & Hall.

physical peculiarities of their hosts. We are told that one prince was bored, and yawned at one sitting and was "gorged with breakfast" at another; that a second had a largish nose, pig eyes, and an enormous stomach; that a third was covered with jewels, and yet, for all that, was a "miserable object"; that a fourth exhibited bare legs and a common-looking *pugree* (turban); that a Ranee was utterly uneducated, and that one "paternal" is a "solid lump of inert flesh." Indian Residents and Agents at native Courts, who endeavour to restrain spendthrifts, to educate minors properly, and to repel intriguing and licentious Ranees, have occasionally, in their duty to the Government, to say rough things and to recommend hard measures. But their reports are private and confidential, and are properly "Bowdlerized" before they see the light. Mr. Prinsep does not seem to perceive that he has committed a breach of the unwritten canons of good taste when he dilates humorously on the corpulence or the phraseology of his sitters. His remarks on Anglo-Indian engineers may be less questionable; but we hesitate to accept them as decisive in matters of art, revival, and decoration.

All this is the more to be lamented because Mr. Prinsep travelled to courts and provinces not always visited by the tourist, and sometimes unknown, except by description, to officials who have passed a quarter of a century in the country. He saw several of the Rajput princes, painted the most noted of the Mahrattas, visited Kashmir and Hyderabad, and went over much of the ground which has been so admirably described by M. Rousselet. But there is as much difference between *L'Inde des Rajas* and *Imperial India* as there is between a virgin and child by Luini and a village scene by a third-rate artist of the Dutch school. We are thankful that the author did not extend his journey further east than Benares. A picture of Calcutta society from the same "rollicking" pen would in all probability have seriously offended the Anglo-Indian community. It would be unfair to say that the book is all slang, or to deny that there are passages which evince general observation, intelligence, and a correct appreciation of the problems of English rule. Attention is drawn to the contrast between the head station of an English province and the residence of a Political Agent at some native court. It is quite true that an air of official primness pervades the first. No outdoor labour by prisoners; no picturesque buildings half in ruins; but roads metalled and watered, and rows of offices with walls of dazzling whiteness and Venetians of bright green. Very likely, too, in the native towns there are picturesque horsemen, with long spears and curious head-pieces; and the criminals whom the Maharaja's tribunals have sentenced to imprisonment instead of, as in old days, to fines or mutilation, may spend their time pleasantly in watering the vegetable garden of the Agent *Sahib*, instead of grinding at the oil mill or weaving at the loom within the walls of a regulation gaol. We have heard in old times of misdemeanants of the first class who were occasionally allowed to take an airing, or who cut grass for the judge's horses. But our object in India is not to perpetuate picturesque groups and quaint customs for the pencil of the artist, but to leave behind us some practical and abiding memorial of a Government which must rest on the belief in its order, strength, and equity, as it has no basis of similarity in colour and creed. Mr. Prinsep, in another passage (p. 106), contrasts the melancholy of the people in our own provinces with the "surly indifference" and "the amusement and fun" to be found in a purely Indian town. We take this to be sheer delusion. At a large *mela*, or native fair, in Bengal, Behar, or the Upper Provinces there may be seen quite as much excitement, "fun," and animation as is good for the people, and as can be ever witnessed in Jeypore or Gwalior; and the author can never have seen the Hindu Rath Jatra, the Mohurrum, or a gathering at the tomb of a native *Pir*, deceased a couple of hundred years back in the odour of Mahommedan sanctity, or he would not venture to write pragmatically about dulness and decorum. It is true, however, that the Anglo-Indian official, Magistrate, Judge, or Commissioner, may appear to the visitor to be melancholy and oppressed with work. The duties of the civilian are manifold and his recreations are few. At stations of moderate size there are no public amusements of any kind at all. It is not every one who is active or muscular enough to play racquets in April or May between the walls of a court which has been thoroughly heated by twelve hours of unbroken sunshine. Cricket is the pastime of the cold weather, and very often shooting, even for the least exacting sportsman, is not to be had near the station or anywhere but out in camp. We think it was Mr. Grant-Duff who remarked, after his tour through India, that civilians seemed too busy to think, or to collect their ideas into one focus and to draw conclusions from the multiplicity of their experiences. The real explanation of this we take to be the fact that in India, the servants of the State perform the double work which in England is portioned out between the paid official and the unpaid philanthropist. In India, one and the same man makes roads, catches offenders or tries them, and sits all day in the court-house, the treasury; or the secretariat. At odd times he visits hospitals, presides at municipal boards, takes the lead in charitable movements, and generally organizes and directs the social forces of the time. In England, much of this last kind of work is got through by men who are not paid for it, and who in many cases have no regular duty to perform. In the East men are the servants both of the State and of society, and it is no wonder if they occasionally feel the double duty to be rather more than mortal shoulders can bear. A Political Agent or Resident at a native Court has at times heavy responsibilities; and when there is an intrigue in the Zenana, or a contest on a question of privilege between a Rajput Prince and his feudal chieftains, it may require all his tact and much of his time to prevent an outbreak and to bring the dispute to a peaceful issue. But no one would think of comparing the ordinary work of a "Political" with the downright, continuous, unbroken labour exacted from a judicial or an executive officer serving under Sir George Couper or Sir Ashley Eden.

We have no objection to Mr. Prinsep on his own ground as an artist. He says truly that the "natives have beautiful things, and dress themselves with some feeling for colour." His picture of a Nautch girl, very much as he describes one at p. 95, has already attracted attention. Elsewhere he expresses a hope, which will find an echo in the heart of many an Anglo-Indian, that he is not getting too familiar with the "sights and scenes of the native bazaars." "A native man or woman with his or her drapery round them" is, as he remarks, a classical sight. The description of sunrise over the Himalayas is just and graphic, and shows that the author is capable of better things than schoolboy slang. The clear outline of the jagged peaks; the darker blue of the lower ranges beneath the snow level; the delicacy of tone and the gradual succession of colours—gold, delicate yellow, and roseate—the whole vanishing when the sun reaches a certain point; all this is well described. The crowd of bathers at the Ghauts at Benares in the early morning is one of the sights of the holy city. It has often been described by travellers, and Mr. Prinsep must have really felt, as he says, that it would require a month's careful study to do the scene justice. These remarks will carry more conviction than any vague expressions about the "untold wealth" and the abundance to be found in the jungly dominions of Indian Rajas. Nothing hitherto has made any sensible contribution to the resources of India in this particular line except coal, and even the best coal will only answer for sea-going steamers when mixed with the English or Australian kind. Neither do we find fault with Mr. Prinsep for giving his impressions of India in a concluding chapter. It would be absurd for officials to claim a monopoly of knowledge, or to say that a traveller is not justified in telling us how the political machine seems to work, and what are the difficulties or the aids to the good government of the country. If there is nothing very original in the remarks on the native character, its sensitiveness, suppleness, cunning, inconsistency, tyranny, and so forth, there is no grave misconception of good or bad qualities; and the author dwells very properly on the "inexhaustible field" which India presents to his brother artists. But India, though tempting enough to the painter, may be ruin to the thing painted. Heat and damp, white ants, and horrible creeping things, are most injurious to neglected works of art; and it requires constant vigilance on the part of curators and secretaries to prevent damage to the portraits of celebrities which adorn the walls of Government House, the Town Hall, the High Court of Justice, the Asiatic Society, the Metcalfe Hall, and other buildings. A few years ago a cyclone annihilated a painted window in the new Cathedral at Calcutta, but happily spared a finer work of art in the old Cathedral, regarding which the late Mr. J. C. Marshman used to relate an anecdote on the authority of a contemporary. There was an old firm of Tulloh and Co., which for many years was the Tattersalls of Bengal When Zoffany, in 1787, was painting an altar piece for this old Cathedral, he was somewhat perplexed to find sitters for all the heads in the "Last Supper." The requisite number of portraits was, however, filled up, with the exception of Judas Iscariot; and the senior partner of Tulloh and Co. was induced to sit for the betrayer, under the belief that he was representing St. John the Divine. But, in spite of this deception, we never heard that Zoffany wrote ill-natured remarks about the eyes and complexions of his models.

GRIFFITHS ON THE ENGLISH ARMY.*

MAJOR GRIFFITHS gives as a reason for publishing this book the want for some work which should describe in a popular fashion the condition of the British army of to-day. "Many and great changes," he observes, "have recently been made in its character and constitution; old institutions have gone by the board; a reforming spirit deeply impressed with the necessity of keeping pace with the times has led to the introduction of others, which are still on their trial." And he goes on to say that "he has been at liberty," as a retired officer, "to speak his mind more freely, to discuss more openly the changes recently introduced, to press further reform with greater insistence than if he were still on full pay." The use of such a book for the general reader, giving an account of the army in all its different branches, may be freely admitted, and the descriptive part is clearly and pleasantly written; but as for the boldness of criticism foreshadowed in the preface as permissible to the critic who has left the army, utterances far more outspoken are to be found issuing every day from men still in the service. Major Griffiths roars you as gently as a sucking dove, and, in fact, has done his spiriting as gently as if he were on the staff of the Horse Guards. He is severe enough indeed on the follies of the past, and lashes himself up into quite a state of indignation when denouncing the mismanagement of Crimean days; but that anything still remains to be done in the way

* *The English Army: its Past History, Present Condition, and Future Prospects.* By Major Arthur Griffiths, late 63rd Regiment. Cassell, Petter, & Galpin.

of reform, or that any one is to blame for stopping reform, is at most rather implied than stated; or, if any shortcomings are admitted, the responsibility for their continuance is not placed on the right shoulders. Thus, when a man who is going to lay bare unsparingly our faults of system begins by telling us that the duties of the Deputy Adjutant-General at the Horse Guards are "varied in the extreme"—going on to explain that the officer in question arranges guards of honour and State ceremonials, and decides upon and notifies to those entitled to know "the word" or countersign of the day—ill-natured persons might remark that this is not an inapt illustration of the sort of appropriateness of the establishment in question to the needs of the times, and that the officer whose valuable time is engaged in entrusting the grave secret of the countersign in Pall Mall to the privileged class entitled to share in the mystery will not improbably be leavened somewhat strongly with the ideas of the good old times of Sir David Dundas and the Duke of York. Of the latter distinguished officer, by the way, Major Griffiths says kindly that "he was actuated with the best intentions, but was good-natured to a fault; and he suffered social influence and personal feelings to prevail with him"; and here we cannot but suspect our author to be writing satire under the guise of parable.

Of the supply branches of the army Major Griffiths writes that

> frequent and drastic as have been the changes introduced in army supply, they have been mostly of an experimental kind. By this means, slowly and tentatively, the system best suited to meet the heavy strain of real war has been built up in the calm, undisturbed atmosphere of peace. . . . It is true that, in a great measure, only the skeleton exists; but the bones are those of a sound frame, which can be promptly fi l and expanded into muscle and flesh. . . . This, in effect, took place very recently, when the prospect of hostilities with Russia led to the partial mobilization of two army corps, to serve, if needs were, as an expeditionary force to the East.

This extract illustrates the danger of using metaphors, for undoubtedly the process of mobilizing our army only too faithfully represents what would follow the attempt to furnish a skeleton with flesh and muscle. To describe the wild organizations and disorganizations which have succeeded each other of recent years, in the attempts made to arrive at a supply system which will work in a fashion and not break down whenever a strain is put on it, as something built up in the calm atmosphere of peace, is sufficiently inappropriate. As to the late mobilization having been a satisfactory experiment, the most that it proved was that the establishment of men required for two army corps could be got together in the first instance; but from a system which should keep the establishment full by supplying trained soldiers to fill up casualties we are as far off as ever; while as to the arrangements for transport and supply, the step was indeed taken of appointing a provisional commander-in-chief and head of the staff, but all the arrangements were carried out by the central departments in Pall Mall, and the officers who would have been appointed to the expedition had nothing to say to the arrangements. The lesson which might have been learnt in the art of decentralization was thus to a great extent thrown away, while as much fuss was made over the job by the establishments in Pall Mall as would have sufficed to mobilize the whole German army.

Turning to the account of the artillery we find the same scorn for the effete procedure of the past, and the same optimism in dealing with the existing state of things. Speaking of the old brigade system which has just been done away with, Major Griffiths observes that, "when the brigade head-quarters was at Jamaica or Halifax, and single batteries acknowledging its sway were stationed at Hong Kong, the Cape, or New South Wales, the delays and difficulties in administrative intercommunication were obviously very great. The new arrangement substitutes a few large brigades for several small ones, each of which has now its head-quarters fixed permanently in England." This is an improvement, but the absurdity is still maintained that at the same station (say in India) where three batteries may be stationed together, one horse, one field, and one garrison—instead of these being regarded as parts of the same regiment, each battery makes its separate returns to a separate head-quarters, and the men are not interchangeable. As to the future of artillery, "all that seems required of leaders of field batteries is to realize fully the splendid *rôle* which will be theirs in modern war. In the last great war the artillery was wielded with a new lavishness and a reckless boldness hitherto unknown. Batteries were decimated perhaps, but not till they had done tremendous execution." We may observe, by the way, that an infantry regiment in a battle which was only decimated would not be considered to have suffered very severely; but our estimate from this statement of the tremendous effects of artillery fire must be modified by what Major Griffiths himself tells us a little further on, when he comes to speak of the infantry. "Last of all," he says, "musketry fire, compared with other destructive agents in warfare, is the only one that really kills. Deaths by infantry bullets in the Franco-German campaign were just ninety-five per cent. of the whole number slain." There is no doubt about this, we believe, but it must considerably affect our disposition to accept the author as a guide in speculating on the splendid part to be played by the artillery of the future. In fact, when he comes to deal with the different branches of the service, infantry, cavalry, artillery, and engineers, not to mention the general staff, he is equally ecstatic about each in turn. The cavalry of the future especially is also to have a great part, although ninety-five per cent. of the execution may be done by infantry fire. And it is in dealing with the cavalry that our author's tendency to praise the present administration at the expense of the past is especially notable. In the Crimean days "the uniform worn was beautiful to the eyes which could only approve creaseless coats, and trousers clinging like wax to the legs. . . . . But in none of the ranks, from the highest to the lowest . . . . was there prevalent any notion that soldiering for the cavalryman meant more than a good seat and hands upon a horse, the punctual discharge of stable duties, the polish of buttons, and superficial acquaintance with the rudiments of a mechanical drill." But "that a substantial movement ahead has been made since the Crimean days cannot be denied. Earnest students of contemporary military history have conned closely the lessons of recent great campaigns, and have persistently urged upon the authorities the necessity for changes in the cavalry to keep pace with the changed conditions of warfare." But it is one thing to urge reforms and another to carry them out; and, as a sort of commentary on his statement about the "substantial movement made ahead" just spoken of, Major Griffiths goes on to add that

> it would be unfair to blame the military authorities if as yet no marked success has attended the attempt to institute reform. They have not failed to acknowledge themselves the wisdom of the proposed alterations and to acquiesce in the principles involved. That these reforms are still delayed is the fault not of the Horse Guards, but of that larger authority which, outside and beyond the executive and administrative departments, hampers all progress by too close and parsimonious supervision of the public purse. The measures needed to put our cavalry on a sound basis involve the expenditure of money.

As instances of the needed reforms which the advanced spirits at the Horse Guards are anxious to carry out, but are stopped by the "larger authority beyond," and the "parsimonious supervision of the public purse," Major Griffiths proceeds to mention that, "although the squadron is admitted as the right and only tactical unit of cavalry, our administrative unit continues to be the troop. . . . The reorganization of cavalry regiments upon the squadron system has been repeatedly and urgently recommended, but it still hangs fire. Vested interests have long been the principal bugbear." Are we to understand from this that the Secretary for War is the "larger authority beyond" who is restraining the excessive zeal of the Horse Guards for introducing the squadron system? Again, "our cavalry uniform can be called neither sensible nor workmanlike, when the troopers cannot draw on or off their long boots without assistance, and run the risk of splitting their tunics every time they raise their hand in salute. . . . The steel scabbard has long been scouted by a general chorus of disapprobation; but it still holds its ground." Again, we ask, is the War Minister to be held responsible for these things, and for the present effete form of saddle and all the other obsolete matters still maintained in our service? And is it parsimony in dealing with the public purse that stops the way of reform? The truth is that, if Major Griffiths had constituted himself the special apologist for the Horse Guards, he could not have taken a stronger line, and we must protest against this most unfair practice, too common in the army, of trying to fasten responsibility on the War Administration for matters with which it should have and has nothing to do. Does any sane person really suppose that it is Lord Cardwell or Lord Cranbrook who has been standing in the way of all the numerous reforms in the dress, equipment, and tactical organization of our army which every one knows to be necessary, but which are not carried out? The point is not whether the army has made any advance since the Crimean days—it could not of course stand still—but whether it has made a sufficient advance with reference to the progress of Continental armies, and whether whatever of good has been effected has not been done unwillingly under pressure from without, rather than through the spontaneous action of those who should be the first to lead the way towards improvement; and upon this Major Griffiths's implied criticism seems altogether beside the mark.

Nevertheless, although we must abate somewhat of the expectations which we formed from the perusal of its preface, Major Griffiths has written a very interesting and readable book, which gives much information on points difficult for the general public to gain information about. And if the reader makes his own inferences from the facts supplied—as, for example, in the account to be found towards the end of the various attempts to create a real organization for home defence, and the causes of their failure—he may get instruction on a very important matter, about which it behoves every man, whether soldier or civilian, to make himself acquainted.

BLUE AND GREEN.*

HERE for once, in these days when it seems harder to find a good name for a story than for a steamship, is a novel with a first title which is both rather catching and undeniably apposite. *Blue and Green*—what, if suitable, could be better than this? The simple yet adequate collocation has no doubt carried a gentle satisfaction to the mind of the author who adopted it, as it has furnished an obvious suggestion to his bookbinder. By the by, that artist's choice of blue may, or may not, properly represent the rather doubtful colour intended; but his green should assuredly have been lighter and more leek-like. It is at the same time possible

* *Blue and Green; or, the Gift of God: a Romance of Old Constantinople.* By Sir Henry Pottinger. 3 vols. London: Chapman & Hall. 1879.

that this title may have mildly puzzled some of Mr. Mudie's subscribers, unfamiliar by chance with certain very picturesque—in parts all but too picturesque—passages in Gibbon. Readers of the *Decline and Fall*, on the other hand, will readily allow that the author of *Blue and Green* has not only happily named his book, but very well chosen its subject. And the choice of subject is, as it seems to us, a matter of more importance in the case of an historical novel than with most other species of literary composition affected by the present generation. In dramatic writing, for instance, it is on the arranging—the re-making, so to speak—of a given theme, rather than on the actual choice of the original theme itself, that success pre-eminently depends. *Sardanapalus* seems an excellent subject, and Surrey's sonnet suggested by it seems to contain the germ of an admirable drama; but Byron, whose instinct was quick in the choice of themes, in this as in other instances forgot, or knew not how, dramatically to re-cast the subject he had chosen; and the result is a drama in which, when presented on the stage, nothing is really effective but the scenery. But the laws which regulate the novelist's treatment of his theme are lighter and more elastic, whether he be the gay votary of the *novela picaresca* in any of its developments, or more heavily laden with the impediments of historical ornament. It is accordingly all the more necessary that his theme should be *à priori* such as to stimulate curiosity and sustain interest; and this especially when he draws it from history, and thus runs the risk of a double danger. For, should he allow the Charybdis of his imagination to whirl him too far out of the course of more or less established historical fact—or of what the consent of gods, men, and history-books has agreed to accept as such—he will spoil his credit with those who, possessing some previous knowledge of the passage of history treated by him, are likely to be disagreeably affected by deviations from their notions of it. But it will be even worse for him if he surrenders himself to that Scylla with many heads—an absorbing attention to historical detail; if he strives so hard to be conscientiously accurate as to become intolerably dull, and buries the human interest which no story should lack under a mass of adventitious adjuncts like those under which some modern theatrical managers bury Shakspeare when humorously professing to "revive" him.

Now Sir Henry Pottinger's choice of a subject appears to us doubly lucky, because the episodes which he has attempted to weave into the texture of a fiction are in themselves full of colour, variety, and suggestiveness, and because more than one of the most prominent among the personages concerned in the historical events in question are not only decidedly interesting, but more or less perplexing characters—"problematical natures," to use the expression of a popular German novelist. Thus there is an excellent background to begin with, while the figures which are specially to stand forth against it offer manifold opportunities for that unfettered kind of interpretation which it is the indisputable privilege of the historical novelist to apply. And, to crown all, it so happens (unless we mistake) that since Gibbon composed his account of Justinian's reign no English writer of mark in either history or fiction has chosen as a special subject for monograph or romance the curious chapter of Constantinopolitan life and history which culminated in the famous *Nika* revolt of the two great factions of the Hippodrome. Of that chapter, and of its climax, the heroine is the Empress Theodora, a woman whose intellectual gifts, it can hardly be doubted, equalled the charms of her person, but the details of whose early life were such that Gibbon, with the most pious willingness to tell the truth on the subject, was constrained to veil his account of them "in the obscurity of a learned language." Theodora, as the author of *Blue and Green* remarks in his preface, has been painted in the blackest of colours in a German romance entitled *A Struggle for Rome*, which was not long since published in an English version. Perhaps Sir Henry Pottinger would have done better service to such of his readers as are really interested in the subject of his tale by referring them to an admirable sketch of the causes and course of the *Nika* revolt, which forms part of Professor Adolf Schmidt's *Epochen und Katastrophen* (Berlin, 1874). We are acquainted with no equally clear and spirited account of this series of events, which from Gibbon, after all, received but a passing notice. Adolf Schmidt's essay begins with a rapid sketch of the scene of events—the "old Constantinople" of Sir Henry Pottinger's title-page, of which it is so difficult to imagine the aspect in the midst of the dust and decay of modern Stamboul, where, on or close by the site of the Hippodrome itself, there are holes in the ground large enough to swallow up chariot, charioteer, "four gallant thoroughbreds," and all. He goes on to sketch the chief personages of the Court and the chief elements of the Opposition—dynastic, "circensian," and ecclesiastical—and thus supplies even an ill-informed reader with the aids requisite for understanding the narrative of the insurrection which ensues.

It is not, however, Schmidt's compact essay, but a three-volume novel of regulation length, which we have at present before us. And as there are many readers who, for reasons best known to themselves, prefer a dilution of fact with fiction, like that offered by Sir Henry Pottinger, to historical narrative proper, it is due to him to allow that, while in accordance with the unwritten principles of his craft he has shunned brevity, he has on the other hand fallen into no extreme either of frivolous lightness or of tedious pedantry. He has taken a considerable amount of pains in acquainting himself with the authorities on his subject, and has not, to all appearance, contented himself with a smattering obtained at second-hand. He has acquired the necessary degree of familiarity with the disputes about the Trisagion as well as with the technicalities of the Hippodrome; and is not at fault in his descriptions either of the dancing of Theodora as Hesione or of the fighting of Belisarius against the Mirranes of Persia. His book is, in short, one of those historical novels in which enthusiastic scholars aim at reproducing the past without alienating the sympathies of the present. Such efforts are usually quite different from the theatrical historical novel by more experienced hands, where the lines of the scheme are conventional, the characters artificial, and the accidents of dress and scenery reflect the ready omniscience of the stage *costumier*. Mr. Leatham's *Charmione* was an effort of the kind to which we refer—a book of no great literary merit, but of real freshness and some promise; and Sir Henry Pottinger's *Blue and Green* is, we think, another. His researches have necessarily taken him into less pleasant haunts than are associated with Periclean Athens; but he has made a discreet use even of Procopius, and, so far as materials are concerned, has collected them with diligence and used them without ostentation. In one respect, however, of considerable importance in the execution of a work like that before us, he has, in order to avoid the semblance of affectation, fallen into the opposite extreme of what we cannot but regard as slovenliness of manner. But he has not done so unconsciously, and indeed he explicitly defends the course he has adopted. As this raises a point of some interest with regard to the style and diction of historical novels—and, indeed, of historical dramas as well—we will quote Sir Henry Pottinger's own words:—

> I am disposed to believe that modern turns of thought and expression are most acceptable to modern readers. I have not, therefore, much concerned myself to give this book any strong archaic flavour. Human nature remains the same in all ages; the manners and customs of the sixth century in the East bore sufficient resemblance to those of our own times to warrant some strength of comparison; there are probably few colloquialisms of the present day—even to its slang—but have their equivalent in the dead languages. Writing for modern ears, the interchange may be effected without much impropriety.

Now, undoubtedly the cheapest of all the devices which the historical novelist or dramatist can employ is that of seeking to revive a period of the past by a reproduction of fragments of its phraseology; and when this attempt reduces itself to a mere incidental peppering of the text with "By'r Lady," or "By the Dog" (as the case may be), few readers are confiding enough to be deceived thereby. Undoubtedly, too, the mere occasional archaizing of language in a work of fiction is apt to give to the whole an aspect which is at once wearisome and inconsistent in itself; "if part is ancient," as Landor says, when condemning an archaizing style in poetry, "let all be ancient." At the same time, no more rigorous canon than that of ordinary good taste is necessary to suggest to the historical novelist a diction sustained on the level of his subject and in accordance with its general colour, both of time and place. The dialogues of Landor himself offer an excellent example of the possibility of remaining in character without over-specializing the manner of the particular person or age. Dr. Arnold used to speak of the difficulty which an historian finds in pitching his style to the height demanded by his subject; and the historical novelist, though not in the same measure, will likewise strive to attain to a corresponding harmony between matter and form. Sir Walter Scott, though full of comic humour, never failed in this respect; and the late Lord Lytton was hardly anywhere so free from inflation and so full of dignity as in some of his best historical novels. Sir Henry Pottinger has not, however, thought proper to follow these examples. He rightly abstains from obscuring his dialogue by translated phrases, and gives to his narrative in general a colouring and tone sufficiently modern to enable the more lightsome reader to be interested in the race between the Nisæans and the Palmatians as if it were only another kind of Derby, and in the Lodge of the Rising Sun as if it were only an earlier variety of Mary Anne. But, as a matter of good taste, he might have avoided the glaring inequalities of style in which his novel abounds, and which range from little bursts of rhetoric verging upon rant to little bits of colloquial phraseology verging upon slang, by way of variety. Thus we have the following example of Byzantine political oratory. The speaker, who is addressing the secret Brotherhood of the Rising Sun, is John the Cappadocian, whose career our novel follows to its climax and catastrophe, and in the epilogue pursues even a little further:—

> In analysing the nature of the political crisis we have to calculate the relative value and operation of three great intramural forces—the army, the clergy, and the factions—forces familiar enough, as a rule distinct and well defined, and by no means difficult to estimate; but now, under peculiar circumstances, so transformed and modified, so crossed and intermingled, that any calculation based upon their normal condition must infallibly mislead us. In addition to these there is a fourth, an external force, the importance of which I entreat you not for one instant to underrate—the army of Vitalian the Goth.
>
> Let us consider the changes developed during the last ten days. We are accustomed to regard the Factions as two bodies eminently antagonistic, capable, from a political point of view, of being played against each other, and of being thereby to a certain extent severally neutralized. Through their recent condition we are now confronted by a novel factor of immense if of indefinite strength, &c. &c.

"The effect of this speech," which ends with a peroration about "the tranquil azure," was, we afterwards learn, "not for one instant doubtful." Its effect upon Sir Henry Pottinger's readers we venture to predict with similar certainty; it is not in order to

read the like of this that people take up novels, historical or other. But the present novel, in truth, in its third volume almost loses its character as such, and becomes an historical narrative with a thin vein of fiction running through it. The account, for instance, of Justinian's political progress in the chapter headed "Consule Justiniano" is little better than a dry epitome of facts; and in the passage relating Theodora's marriage and elevation to the Imperial dignity the author confesses himself unable to analyse the "unspeakable complexity" of her emotions. But this is precisely what the novelist should not shrink from attempting to do. The truth is that, as he advances with his subject, Sir Henry Pottinger loses his grasp of it as of the theme of a story—the more so because its real interest, as such, has passed with the accomplishment of Theodora's vengeance upon the Green Faction. Her wrongs and her revenge give to this tale what human interest it possesses; and we think that in drawing her character and sketching her career the author has been fairly successful. If he has not inclined us to reconsider the traditional picture of the woman whom something besides "gymnorchestry" must have raised to the throne, and whom something like genius seems to have fitted for the elevation, he has at least drawn a heroine who is interesting and not offensive. For a real psychological study the career of the famous *mima*-Empress is hardly a suitable subject, unless the inquiry is conducted with closed doors. Sir Henry Pottinger has executed something of a *tour de force* in relating without impropriety the career of a very improper heroine. That either his Theodora or his Justinian can be said to have any living reality of their own is more than we should be prepared to maintain. In his next historical novel we would suggest to him to spend upon the execution of his work something of the care which he has in the present instance given to the collection of his materials; but since it is pleasing to find a novelist take trouble about anything, we may term *Blue and Green* in some sense a promising effort, as it certainly is in some sense a meritorious one.

ENGLISH COMMENTARIES ON THE NEW TESTAMENT.*

MR. DUNWELL'S goodly and beautifully printed volume is of a widely different type from the *Speaker's Commentary*, or that edited by Bishop Ellicott, lately reviewed in these columns. Mr. Dunwell appears to be a young man, for he graduated at Oxford in 1869, and settled the next year in the small country parish of Hensall, where he must have made good use of his comparative leisure, borrowing books, as he tells us, from a wide circle of friends, and being permitted to make a most liberal use of the Chapter Library at York. Those who have laboured diligently under like circumstances can easily recall the advantages and drawbacks of such a lot; the unbroken studious morning, the quiet engendered by simple pastoral labours; on the other hand, the remoteness from intellectual society, and almost complete ignorance of the passing phases of contemporary thought. Much may thus be done, and well done, in the cultivation of some special branch of learned investigation; but these are hardly the circumstances in which a work of enduring general interest can often be written. We are not sure also that the present editor has not under-estimated the difficulties of his self-imposed task, just as we are told of Dean Alford by his widow that he at first supposed that two or three years' exertion would carry him through the whole New Testament. We cannot help noticing a certain thinness of texture in our author's introductions and notes, a habit of filling up the pages with long quotations drawn from commonplace and familiar sources, and a lack of fulness and completeness conspicuous throughout, which exaggerates the effects of faults of design and plan that are patent to every reader.

The principle on which this commentary is written is set forth on the title-page in a memorable extract from Bishop Bull's *Defence of the Nicene Creed*:—"I have, and always shall have, a religious scruple in interpreting the Holy Scriptures against the stream of all the Fathers and eminent doctors, except when the most evident proofs compel me to do so; this, however, I do not believe will ever happen. For certainly the consentient judgment of antiquity, especially of primitive antiquity, ought to outweigh the force of many probabilities and reasonings from likelihood." We have, therefore, to a far greater extent than in the Bishop of Lincoln's Commentaries, to deal with patristic interpretation of Scripture. Where the Fathers are at unison, as in the great and leading passages they are usually found to be, Mr. Dunwell will uphold their authority against a large preponderance of recent scholars and critics ranged on the other side. Notwithstanding this general preference for Christian antiquity (which is at least as reasonable as the neglect or ignorance of it affected by the host of modern expositors), he makes "constant reference to Erasmus, Jansenius (Bishop of Ghent), Maldonatus, Cornelius a Lapide, Grotius, and Bengel . . . . partly because they were all endued with a large share of the critical faculty, and were representatives of various [very various] schools of thought which are fast disappearing from among us; and partly because, in forming their opinion on any passage of Scripture, they were all disposed to give due weight to the interpretation of the Early Church, and never lightly set aside." The Rabbinical learning of the elder Lightfoot, and the varied erudition of his living namesake, of Canon Westcott, and Professor Blunt of Cambridge, are frequently resorted to; otherwise, there is but a scanty use of the great English divines of past times, and, to the grievous injury of his work, Mr. Dunwell hardly ever notices any German except Wieseler.

The critical portion of this volume is even more defective than the exegetical. In this department, indeed, our editor has attempted so little that he had almost better have left untouched a subject on which he has bestowed very slight trouble. A single page comprises all he has to say about manuscripts of the Gospels, and it is obvious that so limited an apparatus as the three named on his title-page (the Sinaitic, Vatican, and Alexandrine), with the Vulgate Latin version to boot, is more likely to mislead than to instruct.

The "Introduction to the Four Gospels," on the other hand, displays great care and pains. Its main purpose is to show that the whole four were received throughout Eastern and Western Christendom alike, "all and always," notwithstanding other disagreements which proceded and led up to the final separation of the Churches. He then "ascends the stream of time higher still," and, beginning formally with the date A.D. 400, mainly by the help of Lardner's exhaustive researches, he examines the testimony of Christian writers respecting the authenticity of the Gospels, by taking separate periods of fifty years each, up to the date A.D. 100. The only extant compositions that he assigns to the first century are the Epistles of Barnabas and Clement of Rome, although he is unwilling to vouch for the apostolic origin of the former. The second century, and especially the lifetime of Justin Martyr, is the battlefield chosen by those who refuse to accept the Gospels as the writings of our Lord's Apostles and their immediate followers. Into this discussion Mr. Dunwell throws himself with a good heart, but has little to add to the forcible arguments of Canon Lightfoot, Mr. Sadler, and Mr. Sanday on the orthodox side. On the whole, we cannot but think that the powerful reasoning which his case admits might have been more methodically digested, and the legitimate conclusions more pointedly brought out. The inferences he draws from the examination of the whole matter will best be stated in his own pertinent words:—

> First, though this inquiry has been in a great measure confined to the four Gospels, and has seldom taken into consideration the Epistles, we may fairly conclude that the formation of the Canon of the New Testament generally, or the reception of some books as authoritative and the rejection of others, was not the result of a divine revelation, so to speak, from God to man, as to the character of each particular book; but that it arose from the deliberate determination of a divinely directed body, the Church of Christ, and on the evidence which it had before it with respect to each book separately; the question in each case simply being, whether such a book was written by an Apostle, or under the direction of an Apostle. The inspiration of the Apostles being granted as proved in some other satisfactory manner, the question in the formation of the Canon of the New Testament was, whether a Gospel or an Epistle was written by an Apostle or under the direction of an Apostle.
>
> Secondly, that the Church of Christ, at the time when it settled the Canon of the New Testament, was not a body possessing only one centre of action, or many centres united under one visible head; but that it consisted of many Churches in every part of the world, in Europe, in Asia, and in Africa, each in a manner, so far as internal arrangements were concerned, independent of the other; and that the agreement of these several Churches, especially of those that were Apostolic seats, which had been founded by an Apostle, ... was necessary for the full reception of any book into the Canon.

Lastly—but his *lastly* may well be passed over. It is the old-world fling, a little out of season, at an Infallible Pope.

Mr. Dunwell has bestowed great pains on adjusting what is called a Harmony of the Gospels, arranging the parallel portions of the narratives of the several Evangelists in parallel columns at the heads of the several sections, chiefly in St. Matthew, so as to avoid the necessity of a separate body of annotations for passages which are substantially the same in the other two. The difficulty of settling the chronological order of the events of Our Lord's ministry has not hitherto been surmounted by commentators; nor can we say that Mr. Dunwell has contributed much towards the solution of an intricate problem. The second work on our list, that of Mr. Slatter, is wholly devoted to this subject; and here again we find little satisfaction in estimating the probability of his results. Indeed this *Student's Gospel Harmony*, on careful examination, perplexes us not a little. It is obviously an independent work, inasmuch as the writer has clearly thought out his scheme for himself, and that in complete, we must even say in perverse, ignorance of all that has been written by those who have preceded him. One book, and apparently only one, seems to have fallen in his way, if we may judge by the first sentences of his preface:—

> Any one coming fresh to the study of the Gospel Harmony would be amazed on opening Tischendorf's *Synopsis Evangelica* to see the long list of authors who have published works on the subject. The idea naturally suggests itself that such a variety in the mode of treatment must arise from the want of some governing principle, and that in the absence of such guidance each writer has trusted to that of his own judgment.

We do not profess to have examined, or even glanced at, many of the forty-seven works, ancient and modern, in Tischendorf's portentous catalogue (1851, second edition 1864), to which must now

* *The Four Gospels as Interpreted by the Early Church: a Commentary on the Authorized English Versions of the Gospel according to St. Matthew, St. Mark, St. Luke, and St. John, compared with the Sinaitic, the Vatican, and Alexandrine MSS., and also with the Vulgate.* By Francis Henry Dunwell, B.A., Vicar of Hensall. London: Printed by Clowes & Sons. 1878.

The Student's Gospel Harmony; being the Four Gospels in the Original Greek, arranged in Parallel Columns so as to show the Consentient Portions; together with a Preface and various Analytical Tables. By the Rev. John Slatter, M.A., of Lincoln College, Vicar of Streathley, Berks, and Honorary Canon of Christ Church, Oxford. London: W. Wells Gardner. 1878.

be added at least one other, and that among the most painstaking and meritorious of them all, the *Chronological and Analytical Harmony* covering 253 well-filled pages of Mr. McClennan's first volume of the New Testament (1875); but we will venture to assure Mr. Slatter that every one of them to which any intrinsic value can be assigned was grounded on principles as distinct and positive as his own. So far as they have failed, the cause of failure was the fact that in practice their theories would not work, or led to consequences that were palpably wrong. "The acceptance of St. Luke's order," he tells us, "as the basis of the arrangement is the fundamental principle strictly followed throughout the present compilation." But Mr. McClennan presents us with an array of names, including "Osiander and his school, Macknight, Greswell, Wieseler, Ellicott, Lewin," as well as Mr. Slatter's chosen guide, Tischendorf, who have worked out the same principle with results the reverse of satisfactory; so that whatever praise may be assigned to our author for originality rests purely on his strange lack of research. Then, again, it is well known that all attempts to construct a Harmony are complicated by considerations depending on various readings of the Greek original; for in no way has the sacred text been more changed from its original purity than by the practice, whether designed or unconscious it matters not, on the part of transcribers of the Gospel records, of paring down diversities of statement and expression, and thus assimilating the peculiarities, now of style, now of statement, of one of the three earlier Evangelists to the language of the other two. Hence it is that Tischendorf took especial care to revise the text as he went along, studiously giving his authorities for the changes he was compelled to make. Mr. Slatter, on the contrary, having decided, like Tischendorf, to present to his readers the whole text of the Gospels in parallel columns, has not so much as indicated the edition of the New Testament from which he has copied. It is, in substance, the *textus receptus*, with all its confessed faults and interpolations. In the absence of all explanation on his part we were driven to examine the point for ourselves. It turned out that his reprint is not from one of Beza's or the Elzevir editions; we should have referred it to Stephens's of 1550, but that he reads ἡ μία not μία in Luke xvii. 35, οὕτως not οὕτω in John viii. 59. Incredible as the supposition may seem, his deep silence on the matter had led us to suspect that the author had never heard of the existence of various readings in the text of the Bible, until at the end of his preface he disclaims any need on the part of the "Christian disciple" to seek to know the letter of Scripture as well as the spirit; "he should rest satisfied," we are told, "in the acquisition of that substantial truth which is to be found in the Gospels, and is independent of all the discrepancies whether apparent or real, whether caused by translation or *transcription*, or in any other way" [the italics are our own.] Thus it would seem that Mr. Slatter's profound lack of acquaintance with textual criticism is the more hopeless, inasmuch as he regards it, not with regret, but with something like actual complacency.

Yet if he had but thought it advisable that those who undertake to write books for the instruction of others should begin by studying for themselves, he would have found not a few statements made in his preface, from which he has drawn inferences more or less true, either modified or confirmed by the verbal criticism which he so unwisely disparages. He would not, for instance, (Pref., p. xxi.) have troubled his readers with a vindication of the employment of the same speech of our Lord on three different occasions (Matt. xviii. 11, and Luke ix. 55; xix. 10) if he had known that the verse found in the common text of Matt. xviii. 11, Luke ix. 55, is probably an interpolation of the transcribers, derived from the one place where alone it is genuine; at any rate it is absent in the other two from the best manuscripts and oldest versions. On the other hand, our author's strong plea for assigning the Lord's Prayer as given by St. Matthew to a much earlier period than that in St. Luke is powerfully corroborated by the fact (can we suppose it absolutely unknown to Mr. Slatter?) that the authentic form, as exhibited in St. Luke, is much the shorter of the two, consisting, as St. Augustine observed long since, of only five petitions, while St. Matthew supplies seven. After this it might seem useless to enlarge upon our author's "fundamental principle" of taking St. Luke's Gospel as the standard in arranging the order of events in our Saviour's life and ministry; but a theory which has been supported by so many critics of widely different calibre is sure to have something to say for itself. And to our mind the precision with which leading dates are fixed by St. Luke in ch. ii. 1, and especially in ch. iii. 1–2, is of much greater weight than the almost incidental use of the term καθεξῆς, "in order," in ch. i. 3. The word, indeed, like its simple ἑξῆς, is bound by its derivation to express connexion of some kind; but, except when the context compels, as it certainly does not here, it need not be chronological connexion, but rather logical (Acts xi. 4), or even geographical order (Acts xviii. 23). These arguments then being disposed of, all attempts to distribute the events of Christ's ministry according to St. Luke's arrangement introduce far more difficulties than they solve. The result would imply a repetition of miracles, parables, and discourses, which is simply incredible, and would crowd all the preceding transactions into so small a space that the last journey to Jerusalem would commence as early as Luke ix. 51. This last objection Mr. Slatter would meet by supposing that St. Luke there refers, not to our Lord's going up to his last Passover, but to the Feast of Tabernacles mentioned in John vii. 2. This hypothesis, however, we are forbidden to entertain, not only by the fact that Christ appears to have gone up to the latter feast absolutely alone, whereas the Apostles were undoubtedly present with Him when travelling upwards to the former (Luke ix. 54); but far more decidedly by the language of the passage itself—"And it came to pass, when the days were a fulfilling (συμπληροῦσθαι) that he should be received up, he stedfastly set his face to go to Jerusalem"—expressions which manifestly refer to the same journey as that described in Mark x. 32—"And they were in the way going up to Jerusalem; and Jesus was going before them; and they were amazed; and as they followed, they were afraid." In regard, again, to iterations, whether of speech or narrative, of which Mr. Slatter accumulates examples in his preface, we do not in the least deny their existence within a certain limited degree. In a three or four years' mission, wherein there must of necessity have been so much of sameness, repetitions must necessarily have abounded, modified only by circumstances not very marked or important. We do not doubt, for instance, that the Sermon on the Mount (Matt. v.–vii.) was spoken at a period considerably earlier than that on the Plain, as it has been called (Luke vi. 20–49). But a bare inspection of Mr. Slatter's parallel columns will prove that his scheme demands much more than this, and we cannot think inapplicable to his system what Mr. McClennan had already written of those of Greswell and Wieseler, that while "the Gospels exhibit undoubted cases of repetition and selection of similar instances, under different circumstances, yet we most confidently submit that it is a monstrous and impossible hypothesis which compels us to admit a whole host of repetitions under circumstances and relationships which have all the appearance of being identical."

From a volume on which the author has obviously spent some thought, with no better result than the voluntary exposure of his astonishing want of diligence and research, we gladly turn once more to Mr. Dunwell's attempt to supply us with a patristic commentary on the Holy Gospels. While we must think the task to be somewhat beyond his strength, it is impossible to look through his pages without finding much to interest and instruct a patient reader. The following extract from Dr. John Lightfoot, for example, may not be a very pertinent illustration of μακρὰ προσευχόμενοι, Matt. xxiii. 13 (of Stephens's text), but is worth citing on its own merits:

> Concerning the length of their prayers it may suffice to produce the words of the Babylon Gemara in Beracheth:—"The religious anciently used to tarry an hour," meditating before they began their prayers. . . . "He that prays ought to tarry an hour after prayers." It is necessary, therefore, that he should stay (meditating) an hour before prayers, and an hour after; and the religious anciently used to stay an hour before prayers, an hour they prayed, and an hour they stayed after prayers. Since, therefore, they spent nine hours every day about their prayers, how did they perform the rest of the Law?

We could have wished to speak of Mr. Dunwell's labours with more unreserved commendation than our judgment can approve. A worthy ambition has prompted him to aim high; and it is no great discredit to him that he has somewhat missed his mark. We shall no doubt have the benefit of his future studies; and in arranging the second volume of his commentary he will do well either to discard all notice of points involving textual criticism (which would not be easy), or to pay much greater attention to the subject. Partial information, such as he at present conveys, is simply misleading to the unlearned. Moreover, we are not sure that it is advisable to combine materials of such varied quality and character as his foot-notes exhibit; they produce an appearance of crude book-making which does injustice to the spirit in which he writes. *Nonum prematur in annum* is too late advice for him to follow now; but an opportunity may some day occur for him to undertake the thorough revision of a work which meanwhile entitles him to the respect and gratitude of all intelligent students of the New Testament.

FRENCH LITERATURE.

M. AD. FRANCK is one of the few survivors of a school which did much for the diffusion of metaphysical studies in France. We are not great admirers of what is called eclecticism, and have frequently shown the weak point of the system founded, or rather, perhaps, revived, by Victor Cousin. At the same time it is impossible to ignore the undoubted merit of the chief representatives of that system, and M. Franck deserves least of all to be forgotten. The volume he has just published (1) is an excellent sequel to some of his previous works. The philosophers whom M. Franck here takes for consideration are certain Frenchmen who are either comparatively unknown beyond the frontiers of their own country (MM. Bautain, Leroux, and Reynaud), or whose reputation abroad rests chiefly upon their merits as politicians and statesmen, such as M. Charles de Rémusat. These portraits, grouped harmoniously together, fill the latter half of the volume; the former part being devoted to sketches of philosophy in Italy, Germany, and Sicily, including an account of Bernardino Telesio, a thinker who flourished at the beginning of the sixteenth century, and who, whilst contributing powerfully to destroy the rule of Aristotle, attempted to revive the system of Parmenides by way of explaining the origin of the universe.

Psychology, as it was understood half a century ago, is dead; such is the axiom which M. Ribot puts forth in the preface to his

(1) *Philosophes modernes, français et étrangers.* Par Ad. Franck. Paris: Didier.

and interesting volume (2) on the psychological systems of modern Germany. It is a complete sketch of the subject he has undertaken to treat, and if the reader will bear in mind the Positivist sympathies which have suggested it, he cannot but derive much benefit from the perusal of M. Ribot's work. We may add that the plan adopted consists in giving monographs, not of the various philosophers, but of the systems discussed.

The fourth volume of the History of Florence by M. Perrens (3) is before us. It takes up the thread of events at the death of the Emperor Henry VII., and of Pope Clement V. When the former of these sovereigns disappeared, the Guelph party felt its hopes rise again; but the death of Bertrand de Got re-established a kind of equilibrium, and Italy was once more a prey to disputes and fruitless wars. The narrative of these collisions, together with an account of the pestilence which broke out in 1348, and of the various reforms attempted from time to time in the government of the republic, is given minutely and in the most interesting manner by M. Perrens, who ends this fourth division (Book VIII.) of his work with a sketch of the Florentine democracy about the middle of the fourteenth century. One of the arguments generally put forward against democratic institutions, to the effect that they are incompatible with great enterprises, fails signally here, for the reason that this form of government was at Florence not an empirical expedient or the result of a mere theory, but a thing inherent in the genius and character of the commonwealth; at the same time we must acknowledge that within the walls of the town disorder was rife, and acts of violence were of everyday occurrence. The questions connected with the *popolani grassi*, the *parte guelfa*, and the *ammonizione* form the subject of the last chapter, which is completed by documents borrowed from the most trustworthy sources.

If revolutions follow one another in quick succession in the book of M. Perrens, they also fill the pages of M. Maxime Ducamp (4). While the bad faith of the insurgents, equalled only by the stupidity of some and the ferocity of others, is clearly and conclusively demonstrated, the extraordinary want of energy manifested by the friends of order appears in equally strong colours. After the dismissal of General d'Aurelle de Paladines, decreed by Ernest Picard and Jules Favre with the view of conciliating the mob, it was evident that the Government would be driven from one act of weakness to another, till it had deprived itself of all means of re-establishing order. M. Ducamp has given abundant details about the wanton destruction of the Tuileries and other public buildings; and, as we read his painfully interesting volume, we find it more than ever difficult to understand the conduct of Thiers in refusing to send, at the beginning of the insurrection, the necessary forces to assist Admiral Saisset by taking possession of strategical points which might then have been easily occupied. The *pièces justificatives* printed at the end of the volume contain, amongst other interesting documents, a statistical account of the dead, whether hostages, soldiers, or *fédérés*, buried in Paris after the Communal rebellion was suppressed.

"Facit indignatio!" The Marchioness de Blocqueville, daughter of Marshal Davoust (5), has of course read all that has been published about her father, and is naturally indignant at what she deems the misrepresentations of professed historians. M. Fleury de Chaboulon, Bourrienne, M. Achille de Vaulabelle, and several others have pointed out in their works acts of Davoust's which they considered to be censurable; they have sometimes ascribed to other generals the credit of successes which were really his; in short, a number of historical misstatements and prejudices had to be exposed, and the result is a volume written without any literary pretensions, and consisting chiefly of documents illustrating Marshal Davoust's early years. When we find the *Revue militaire* giving May 1819 as the date of the Prince of Eckmuhl's death, whereas he died on the 1st of June, 1823; when we see him elsewhere described as entering the Brienne military school in the very year of Napoleon's leaving it, whereas he never was at Brienne at all, we cannot feel much surprised at Mme. de Blocqueville's irritation. It appears that she communicated some of her father's papers to M. Edgar Quinet when he was busy writing his account of the campaign of 1815, and that he, in return, urged her to publish a biography of the Marshal. As we have said, the present volume is rather a collection of materials than a memoir properly so called; but it is full of interest and may take a place side by side with Baron Ducasse's Life of General Vandamme and M. Saint-René Taillandier's monograph on Count de Ségur. It consists of five distinct parts:—1. A defence of Davoust against some of his critics; 2. the correspondence of the Marshal with his wife and mother; 3. letters addressed by Mme. Campan to the Prince and Princess of Eckmuhl; 4. letters of General Leclerc; 5. an account of Davoust's early years, with memoranda of various kinds, extracts from his notebooks, &c. A fine portrait faces the title-page.

Three formidable octavos closely printed give us the Parliamentary speeches of M. Thiers (6) from 1830 to 1836. The first time he addressed the Chamber of Deputies was on the occasion of the settling of the budget for the year 1828, when he had just been made Under-Secretary of State to Laffitte, Minister of Finances; the last speech printed in these volumes was delivered before the Chamber of Peers on the 3rd of July, 1836. Thiers was then President of the Cabinet and Minister of Foreign Affairs, and it was in that capacity that he defended against Baron Mounier the policy of the Government on the subject of Algeria. The present publication forms an excellent counterpart to the collection of Guizot's Parliamentary speeches. Each speech is prefaced by a short summary explaining the topic discussed and the line of argument taken by the orator; and the first volume opens with an introduction from the pen of M. Calmon, himself a distinguished financier and an intimate friend of Thiers. It is not too much to say that never did French political oratory shine with such splendour as during the period covered by these volumes; Guizot, De Broglie, Dupin, Odilon Barrot, Royer Collard, Berryer, were then in all their vigour, and amongst them Thiers soon rose to the foremost position. There is scarcely a branch of the public service which is not discussed in this collection, the most remarkable speeches being the one on the *loi des associations* (May 1834), and the address on the alliance with England (June 1836).

M. Ledru-Rollin, too, has left a certain reputation as an orator, and his widow enables us to appreciate it by publishing a collection of his speeches (7), together with a short biographical memoir and a few political writings of no great importance. The political discourses here collected are fair specimens of revolutionary eloquence—that is to say, of turgid style, rhetorical claptrap, and commonplace declamation. M. Ledru-Rollin outlived his reputation, and these volumes will scarcely excite more than a transient feeling of curiosity.

M. Rambaud's History of Russia is so justly popular, and has so decidedly established its position as the best work of its kind, that to compete with it seems a difficult task. Princess Sovonoff has, however, attempted to do this in her translation of Professor Solowieff, and the book has at any rate the advantage of being written by a Russian (8). If, on the one hand, the author may be supposed to judge too partially of his country and its laws and institutions, on the other he has the advantage of being at the fountain-head for documentary evidence, and we are told in the preface that leave was granted him to consult freely the State papers in the Imperial Record Office. The work begins with the origin of the Russian nation, and comes down to the reign of Alexander I. Literary notices and sketches of social life introduce here and there a little variety amidst the details of political transactions, wars, and *coups d'état*; the great fault of the work, however, is that it is written in a dry, uninteresting style, and that it does not give us a single reference to the authorities consulted by Professor Solowieff. We do not think that M. Rambaud need fear the result of the comparison with his own work.

The Grand Duchy of Luxemburg is certainly a small country, but it has been deemed important enough to have its independence guaranteed by European treaty, like Belgium and Switzerland; and it is of some consequence that this guarantee should be regarded as a serious matter, and not as a mere formality which can be set aside on account of the insignificance of the Grand Duchy itself. M. Servais (9) remarks that in the sphere of politics the weakest generally go to the wall, unless political opinion is duly enlisted on their side; he has accordingly taken advantage of the position he held at the London Conference, and in his lucid discussion of the whole subject has been able to consult a mass of State papers laid before the Luxemburg Legislative Assembly, which had never found their way into the columns of the periodical press. The volume before us, touching as it does upon international questions, is equally valuable as a contribution to the diplomatic history of England, France, Germany, and Holland; for the King of the last-named country took a considerable share in the debates, and the part he played reflects great credit upon his character.

Count de Serre was one of the best representatives of what has been called the *juste milieu*, equally remote from the reactionary tendencies of the *ancien régime* and the wild and subversive theories of Radicalism. His political discourses and correspondence published some time ago have suggested to M. Ch. de Mazade a series of articles which, originally contributed to the *Revue des Deux Mondes*, are now reprinted in an elegant little volume (10), and certainly deserve a permanent place in all historical libraries. It is still too much the fashion to decry the period of French history included between 1815 and 1830. After the brilliant despotism of the Empire, the attempt to naturalize Parliamentary government amongst our neighbours was undoubtedly a bold venture; and we are not of the number of those who consider it a mere illusion. M. de Mazade remarks very truly that common-sense views, what he calls *la politique modérée*, may have from time to time been defeated by a majority in the Chambers, but, after all, the best and only durable monuments which the French legislation of the last fifty years has produced are the results of the school of politicians to which Count de

Serre belonged. The biography of such a statesman deserves to be attentively studied.

M. Philarète Chasles devoted much of his time to English literature; he was better acquainted with it, perhaps, than any of his contemporaries except Villemain, and the sixteenth century in particular suggested to him several amusing and instructive sketches which we remember reading in the *Journal des Débats*, *L'Artiste*, and elsewhere. They are now collected (11) and placed, so to speak, under the protection of Shakspeare. One of these critiques is entitled "Shakspeare, a translator of Montaigne"; and M. Chasles endeavours to show that the study of the Essays of the Gascon *gentilhomme* led Shakspeare to revise and recast some of his best plays—*Hamlet*, for instance, *King Lear*, and *Othello*: a separate chapter is reserved for *Romeo and Juliet*, and in another we find an attempt to describe the performance of the play of *Henry VIII.*, as it must have taken place at the Globe Theatre in 1613. Although Shakspeare is the principal author examined by M. Philarète Chasles, he is by no means the only one. Ford, Webster, Ben Jonson, Massinger—in fact, the whole group of dramatists—come under consideration, and M. Chasles intersperses his remarks with illustrative quotations very neatly translated. The last essay in the volume is on Mary Stuart.

Some of the nations which Madame Judith Gautier calls *peuples étranges* (12) are not so very strange after all; we are beginning to know a little about the Celestial Empire, for instance. About the origin of the human race there is still some discussion; and, with all due deference to M. Hovelacque, amongst others, we do not think that our relationship with the chimpanzees is yet sufficiently established. Mme. Gautier, we are glad to see, is of the same opinion. Mme. Gautier has devoted one of her essays to an interesting, though somewhat sketchy, account of Persian poetry, beginning, of course, with the Zend-Avesta, and giving us brief notices of Firdusi, Sadi, and Hafiz. Under the title *Une ville retrouvée*, the concluding chapter describes Count de Clermont-Ganneau's attempt to identify the site of the city of Gezer mentioned in the Old Testament.

M. Emile Burnouf is one of many writers who for the last few years have been discussing from the critical point of view the position of the Roman Catholic Church (13). He says in his preface that his attitude is not that of an adversary who wishes *coûte que coûte* to pull down a structure which has for so long a period occupied the most prominent place in the history of the world. He holds that Roman Catholicism is in the last stage of decay; and he asks, What are the causes of this collapse? Are all the means exhausted of restoring health to the invalid? M. Burnouf is of opinion that, if a reformation is possible, it should proceed from the Catholics themselves, whose interest it is that remedial processes should be applied spontaneously and quietly. His volume is divided into three parts, corresponding respectively—(1) to the beginnings of the Church; (2) to its present state; (3) to its means of action. It is written in a serious style, and the chief fault we have to find with the author is that he confounds throughout Roman Catholicism with Christianity. His theory of religion is certainly not one that we can accept, but some of his remarks on the early Church are excellent, and he has at any rate the good sense to abstain from scurrility and misplaced frivolity.

The leading thought of M. Carrau's book (14) may be found in the preface, where he describes our modern scientific men exploring caverns, digging up the strata of the diluvial, tertiary, and quaternary epochs, with the avowed hope of confirming the *à priori* theories which represent man as descending directly from a microcephalous troglodyte, or from a kind of ape somewhat surpassing in intelligence and skill the majority of his fellow quadrumanous brutes. The exposition of Lamarck's system is one of the most interesting parts of the volume, because our author shows that, although he certainly must be regarded as the father of evolutionists, yet there is a wide difference between his views and those of the modern school.

When we open the pamphlet composed by Professor Haeckel (15) and translated into French by M. Jules Soury, we find ourselves in the presence of all the notions most stoutly opposed by M. Carrau. This is not the place for attempting the discussion of a large subject, but we may at least remark that the offhand way in which M. Soury asserts, as proved beyond a doubt, hypotheses which are still matter of controversy is only equalled by the bad taste with which he denounces the thinkers who still continue to believe in final causes and in the existence of God.

Our list of scientific works includes the new instalment of M. Figuier's *Année scientifique* (16) for 1878; M. de Parville's *Causeries scientifiques*, which has the advantage of being illustrated with diagrams and woodcuts (17); a pamphlet against vivisection (18); and, last but not least, M. Vivien de Saint-Martin's splendid geographical dictionary (19), together with its companion atlas (20). Of this atlas two instalments only have hitherto appeared; the maps are beautifully engraved, and it is provoking to think that, at the slow rate at which the work is proceeding, ten years must elapse before it is completed, supposing even that three parts are issued, according to promise, every twelve months. Each map is accompanied by a short description. The dictionary, which is published much more rapidly, comprises already ten *livraisons*, taking us as far as the word "Corea."

Three octavo volumes have been published at various times on the origin of the Suez Canal, the negotiations to which it led, and the obstacles thrown in the way of its construction. A fourth series of documents recently printed, and including the period from 1861 to 1864 (21), contains upwards of a hundred papers of various kinds—letters, memoranda, extracts from the journals kept by M. de Lesseps, and opinions of the periodical press. Lord Palmerston's opposition to the scheme is of course one of the prominent features in the volume, and it is curious to see the independence of Italy and of Poland dragged in *à propos* of the famous Canal.

Among the minor publications of the month we may mention the elegant edition of the Abbé Prévost's *Manon Lescaut* (22), published by M. de Lescure, with an historical preface and a bibliographical appendix.

EGYPT.

THE KHEDIVE has struck a sudden stroke for his freedom from foreign control. He has announced that he has tried the plan of having a Ministry directed by foreigners, and has found that it does not answer. It throws the country into confusion; it makes every one discontented; and, to his great sorrow, the KHEDIVE finds that it does the one thing which he felt sure it was incapable of doing, and robs the poor creditor of what might easily be paid him. This last is the main avowed cause of quarrel. The KHEDIVE has chosen to stand on the extraordinary ground that he is a most honourable and solvent prince who is being dragged by foreign advisers into a position totally unworthy of him. He has got plenty of money, but Mr. WILSON and M. DE BLIGNIÈRES will not let him pay it to those to whom it is due. He called together the Consuls-General, and informed them that this was really more than he could stand, and he therefore intended to replace his evil counsellors by high-minded and adroit natives, who would be sure to put their hands in a moment on the necessary funds, and apply them as they ought to be applied. He accordingly turned out his French and English Ministers, and the Pasha on whose co-operation they had recently insisted, and he formed a homogeneous Ministry, all Pashas, and all devoted to him. When he accepted his European Ministers, he did away with the Controllers of the Debt, promising, however, that, if he gave up having European Ministers, he would reinstate the Controllers. This he has done, and he therefore puts himself nominally into exactly the same position as that which he occupied before the NUBAR PASHA Ministry was contemplated. In reality, he does more than this, because he breaks away from the control of the allied Powers. He has expressly raised the point whether it is he who is to govern Egypt or whether they are to govern it. He says that he chooses to govern it. If he succeeds in maintaining the position he has temporarily asserted, he will reign in the way in which he loves to reign. He will get the last possible farthing out of his wretched subjects; he will have something handsome to spend on himself; and he will have the supreme delight of playing with his creditors—now assuring them that he is a millionaire, and that he will see every one paid all round, and now vowing that he is a beggar, and that there is not a penny in the Treasury for any one. Those familiar with his history and that of his unfortunate country will smile at this wild tale of the undiscovered wealth of Egypt, and at this sudden ardour of the KHEDIVE and his Pashas to protect creditors. If Mr. WILSON had done nothing more than simply recommend that less money should be paid to creditors, he might have been Minister as long as he pleased. His real offence was of a totally different kind. Being Finance Minister, he has acted as the head of his department. He has begun to see what money was collected, and how. He has visited some localities where he thought things wanted looking after. He has warned his subordinates against indulging in peculation. He has, in short, attempted to alter the character of Egyptian administration, to make it a little less oppressive, and a little more honest. This is to introduce a system of government totally alien to that of the KHEDIVE. The KHEDIVE and those who fatten on his system of government thought that all they held dear was in jeopardy unless this unpleasant process was stopped at once. The KHEDIVE has summoned up courage and has stopped it. He boldly says that an Oriental despotism is what he and his subjects like, and that he cannot have any tampering with it.

It has long been easy to foresee that the time would come when the KHEDIVE would, if he dared, rebel against the yoke of reform which England and France were imposing on him. He would probably not rebel so long as there were merely questions about courts and creditors; but he was sure to rebel as soon as the question was raised whether he and his Pashas were to treat his subjects as they have been accustomed to treat them. The doubt was whether he would dare to rebel, and, if he dared, what occasion he would choose for a rupture. He has, it must be owned, chosen his occasion with much dexterity. He falls back on the right of an independent sovereign to select his own Ministers. If he had waited, and had quarrelled with Mr. WILSON because Mr. WILSON had exposed some great abuse and insisted on a remedy being applied, there would have been a definite charge of misconduct which the KHEDIVE would have seemed afraid to face. He has anticipated any such exposure by simply announcing that he thinks he can find Ministers who will serve him better than those whom he has tried and found, as he says, impracticable. Why should he not change his Ministers if he pleases? The answer to this question is one which it is very difficult to give. The CHANCELLOR of the EXCHEQUER recently explained to the House the true position of Mr. WILSON, and stated that Mr. WILSON was altogether the Minister of the KHEDIVE, not bound to consult the English Government or to report to it, competent to resign at any moment if he wished, and also liable at any moment to dismissal. If this were all, it would be difficult to see what England has to do with the matter. An Englishman has been taken into the service of a foreign prince on the understanding that the prince might, if he wished, dispense at any time with the services of this Englishman. England cannot complain that a contract made with a private Englishman has been violated. But Mr. DICEY, the extent and accuracy of whose information about Egypt can scarcely be estimated too highly, states that, although these were the terms on which Mr. WILSON was originally appointed, yet when M. DE BLIGNIÈRES was appointed, the KHEDIVE definitely engaged with the French Government that he should not be dismissed without consulting France; and it was added that Mr. WILSON should be in the same position, and that he too should not be dismissed without England having been consulted. Either there must be some error in the statement, or the English Government must have considered that, as it had never asked for such a promise, it did not recognize its validity. But, if the KHEDIVE was merely bound to consult France before dismissing M. DE BLIGNIÈRES, then, although it would only be France that had to complain of a distinct breach of faith, still, as the two Governments have agreed to act together in everything touching Egypt, the wrong to one ally might be said to touch the other. There is, too, the far larger question opened whether the government of Egypt by the KHEDIVE and his Pashas, all practical reform being rejected, can be said to be one which must lead to anarchy. If it is, and if England claims, as the English Government has distinctly claimed, the right to interfere in Egypt to prevent anarchy, then the

dismissal of Mr. WILSON and M. DE BLIGNIÈRES, as a signal of impending anarchy, may be said to affect England as much as France.

It appears from those semi-official communications which are issued on such occasions to let the public know how things are going, that the two Governments are quite in harmony, that they have decided on joint action, and that the joint action is to be of a very moderate, cautious, and deliberate kind. The road to Cairo is said to lie through Constantinople. In other words, the SULTAN is to be asked to frighten, coerce, or possibly depose the KHEDIVE. We can only trust that the process may succeed. The KHEDIVE knew perfectly well that this was the form which the joint action of France and England must take, and he determined to run the risk, and speculated that it would not succeed. And it must be allowed that he has some reason for thinking that it is not a very terrible thunderbolt that is to be launched at his head. In the first place, there is something bordering on the grotesque in inviting the SULTAN of all people to express his solemn horror of such iniquities in a ruler as not paying his creditors, being in the hands of his Pashas, staving off reform, and letting his provinces drift towards anarchy. The SULTAN could only be induced to go through the comedy by his wish to oblige France and England, and why should he wish to oblige them? If they were willing to buy his consent, and would do something handsome in the way of providing Turkey with a little ready money, that would be a different thing. The Porte would perhaps sell the KHEDIVE, and not put a very high figure on him. But then the KHEDIVE will come into the market in his own interests, and if the allies hesitate about paying for his being denounced, he is sure to pay for not being denounced. The Porte will not, it may be supposed, refuse the request of the allies; but it can, if it pleases, ask for any amount of time to look into the matter, and say that, in justice to the KHEDIVE, it must hear his story before it condemns him. However, England and France are very great nations, and the SULTAN may sooner or later be brought to do what they wish. But what is it that they can ask? The easiest thing to ask for is that the firman altering the proper line of succession may be revoked, and that the KHEDIVE's brother, and not his son, may be recognized as his successor. This would be a blow to the KHEDIVE's pride, and might be an adequate punishment for his breach of faith, if there has been a distinct breach of faith, in dismissing M. DE BLIGNIÈRES. But it is not easy to see how it would prevent Egypt drifting into anarchy. The KHEDIVE would reign after his own fashion for his lifetime, and he would have a new motive for getting every possible farthing out of Egypt while he had the opportunity. To do any real good, and to reinstate the control of the allies, the SULTAN must be induced to go further; he must order the KHEDIVE to be deposed. It is, we believe, a mistake to suppose that this remedy, if carried out, would be ineffectual. It is the dread of being deposed that has made the KHEDIVE bow so far as he has bowed to the dictation of France and England, and his successor would be aware that he only held his office during good behaviour. But the decree has not only to be issued, but executed; and the allies, who certainly would not wish to undertake the task themselves, must ask the SULTAN to do the work himself. Here is the real difficulty, and the difficulty is so great that possibly the KHEDIVE may be right in calculating that it will be a very long time before it is surmounted.

THE SESSION TO EASTER.

DURING the six or seven weeks of the Session before Easter, the Government has constantly lost ground. The majority, indeed, is not seriously impaired; but it becomes less aggressive, less vigorous, and less hopeful. From the short winter Session the Ministers derived the not inconsiderable advantage of temporary exemption from debates on the Afghan war and on Eastern policy; but the troubled condition of affairs produces feelings of uneasiness and discontent which are always in some degree directed against the Ministers of the day. Lord BEACONSFIELD and Sir STAFFORD NORTHCOTE have without difficulty persuaded the two Houses to wait for the result of negotiations which excite no sanguine hope of peace. If the official anticipation of a favourable result is disappointed, the Opposition will compensate itself for previous forbearance by energetic attacks on the Gov[illegible] Another danger impends in the possible applica[illegible] the consent of Parliament to the joint occupation of East Roumelia. No more distasteful duty could be imposed on English troops, even if the country had abundance of military force to spare for the benefit of a foreign country. In the only great debate which has varied the general dulness of the Session it was impossible that the Ministers should obtain a triumph; but it could scarcely have been foreseen that an almost untenable position should be so weakly defended. The Zulu war excites no popular enthusiasm, though the apologists of Sir BARTLE FRERE's policy may contend that it was unavoidable. The official speeches of Sir M. H. BEACH, Lord SANDON, and Sir STAFFORD NORTHCOTE were conventional and unimpressive; but in the House of Lords Lord CARNARVON, in vindicating his own policy, necessarily defended the Government. Fortune and the confidence which is engendered by success seem to be deserting the party which must still remain in power as long as the present Parliament lasts. Six years ago, though the country was then prosperous and though no foreign or colonial complications had occurred, symptoms of decline portended the fall of Mr. GLADSTONE's Government. For the third time in succession the next general election will probably produce a change of Ministry.

Domestic legislation has made even less progress than in former Sessions. The County Boards Bill was received with a mixture of disapproval and indifference, and it will probably be abandoned without further discussion. It was not worth while to encounter a feeling of discontent which is perhaps imaginary by the production of so small a measure. The much more important measure of the Criminal Code has been introduced in an able speech by the ATTORNEY-GENERAL, only to encounter threats of obstruction which will probably postpone for an indefinite time a great practical reform. Sir HENRY JAMES and other lawyers in the House are not prepared to pass the measure as a whole, either in deference to the authority of the framer of the Code and of the Commission by which it has been considered, or on the more sufficient ground that its merits preponderate over all the defects which it can be supposed to possess. If the Code were once enacted, nothing would be easier than to supply deficiencies or to correct errors which would probably disclose themselves in practice. Adverse and unfriendly criticism involves the assumption that the inconveniences of the existing law are less mischievous than the oversights which may probably be discovered in a systematic project of legislation. The objections of Sir H. JAMES and his supporters are of course directed against the innovations of the code, and not against its re-enactments. To a mere digest which would give new sanction to obsolete absurdities the opponents of the scheme would not have objected. It would perhaps have been better to introduce the Bill in the House of Lords. If the LORD CHANCELLOR and his professional colleagues had formally approved the measure, their authority would have weighed with suspicious members of the Bar. A vigorous Minister would use his majority to carry such a Bill; but the present Government is not prone to heroic enterprise. The QUEEN's Speech was unusually barren of promises, and even the meagre intentions of the Government seem likely to remain unfulfilled. There is a Valuation Bill which may perhaps escape defeat by its insignificance; but it is difficult or impossible to remember any other Government measure. Mr. CROSS, who has in former years displayed more practical energy than his colleagues, has confined himself to administrative duties.

The annual motions of private members have from time to time furnished the House with languid occupation. Sir WILFRID LAWSON on this occasion slightly varied the form of his usual motion by affirming in general terms the expediency of subjecting the trade in liquors to local control. In other words, members who wished to court Temperance Societies and not directly to offend the publicans were invited to vote for the Permissive Bill in a slightly disguised form. Mr. FORSTER thought the opportunity favourable for forming an alliance between the Liberal party and the Temperance fanatics; but Lord HARTINGTON, with a clearer perception both of the meaning of the Resolution and of party interests, condemned Sir WILFRID LAWSON's illusory proposal. The Government found a pretext for neutrality in the supposed necessity of waiting for a Report of the Lords' Committee which, having since been published,

...light on the subject of public-houses. The ... inclines to the Gothenburg scheme, which ... enable a municipal Corporation to deprive a mi... of the population of the use of fermented liquors. ... experiment would, if it were made legal, prob... be tried by the dominant faction at Birmingham, ... might perhaps find pleasure in withholding beer ... spirits from the unfortunate Conservatives who are ... ady excluded from public employment. In course of ... e it will probably be found that philanthropic busy... dies have greatly exaggerated the evil which they ... propose to redress. The most considerable debate at the instance of a private member was raised by Mr. TREVELYAN on the county franchise. If Lord BEACONSFIELD at any time meditated a fresh extension of the suffrage, he has probably by this time ascertained that his party would not repeat, even at his bidding, the hazardous experiment of 1867. The division almost exactly followed the boundary lines of parties, although Mr. LOWE and two or three other Liberals retain their conscientious objection to the new article which Lord HARTINGTON has added to the Liberal creed. Whenever the present Opposition recovers office, household suffrage will be extended to counties, to be converted on an early occasion into universal suffrage. Mr. COURTNEY proposed a farther dilution of political responsibility in the admission of female householders to the franchise. The House was not inclined to reverse the system which has prevailed in all ages and countries with the exception of the interesting Territory of Wyoming. The oddest incident of the debate was a speech by the CHANCELLOR of the EXCHEQUER on behalf of the rights of women. A proposal for the establishment of household suffrage instead of a 4*l.* franchise in Irish boroughs might perhaps have been accepted with little perceptible deterioration of many of the constituencies; but it seems that the degradation of the suffrage would have excluded from all share in the borough representation the Protestants who, as Mr. BIGGAR lately declared, are not to be regarded as Irishmen. With the return of the Liberal party to power, the 4*l.* franchise, like many other institutions, is destined to disappear.

The most remarkable peculiarity of the Session consists in the unwonted silence of Mr. GLADSTONE. He has left to other speakers the exposition of opinions on the Zulu war which may be easily conjectured, and he has perhaps been unwilling to compromise the public interest by premature discussion of European and Asiatic complications. Sir STAFFORD NORTHCOTE still commands the respect and regard of all parties by his knowledge of business, his equable temper, and his unfailing honesty and sincerity; but since the retirement of Lord CRANBROOK from the House the debating power of the Ministerial bench is unprecedentedly small. Lord HARTINGTON, if not a great orator, constantly gains in political aptitude, in confidence in himself, and in decision. Throughout the Session he has never missed an opportunity of damaging the Government, though he seldom deviates from moderation. Mr. LOWE, Mr. GOSCHEN, and Mr. CHILDERS have not in general taken an active part in debate; Sir W. HARCOURT meets with no equal opponent among the Ministers and their supporters; Sir CHARLES DILKE is rapidly attaining a high Parliamentary position. It is possible that when the Conservatives are liberated from the restraints of office, the younger members of the party may in their turn become formidable critics and assailants. Mr. STANHOPE and Lord GEORGE HAMILTON will have had the advantage of official experience; and Lord SANDON has the additional claim to attention which belongs to the rank of a Cabinet Minister. It cannot be said that, as a Secretary of State, Sir M. H. BEACH has hitherto increased his Parliamentary reputation.

THE GREEK QUESTION.

THE settlement of the Greek frontier threatens to be almost equally troublesome with the more imperative clauses of the Treaty of Berlin. The Congress indeed did its best to render the claims of Greece innocuous by expressly defining its interference as a mere recommendation which was to have no coercive force. At the time the French Plenipotentiaries concurred in the limitation; but it happened that they had chosen the patronage of Greece as the occasion for re-entering the field of diplomatic activity. Since 1871 France had deliberately and even ostentatiously declined to incur any new international liabilities. During the Russian invasion of Turkey, and in the subsequent negotiations, the French Government professed to observe an impartially benevolent neutrality. Lord SALISBURY was the first to propose the qualified admission of Greek representatives to the Congress; but the delegates found that their demands were more heartily supported by France than by England. The Russian Plenipotentiaries, though they perhaps felt little good will to Greece, were ready to approve any sacrifice which could be imposed on Turkey. Germany was indifferent to the cause of Greece, Austria was unfriendly, and Lord BEACONSFIELD and Lord SALISBURY were compelled to attend to still more pressing matters. M. WADDINGTON, remembering the share which his country had taken in establishing Greek independence, proposed a considerable cession of territory by Turkey, and his colleagues were induced to accede to his suggestion on condition that the matter should be settled by negotiation between Greece and Turkey. It seems to have been taken for granted that the Turkish Government would offer no obstinate opposition, for Lord BEACONSFIELD stated some weeks afterwards that Greece would receive a larger accession of territory than Roumania, Servia, or Montenegro. His Government has since reverted to the original stipulation that the transfer should not be effected by force. Lord SALISBURY not long since announced a probable delay in the cession of territory. The Porte has made a counter proposal; but the Greeks, relying on the support of France, have refused to negotiate except on the basis of M. WADDINGTON'S proposal. French politicians now contend that, in disclaiming the employment of force, the Congress merely consulted the susceptibilities of the Turkish Government, without intending to deprive the Powers of the right to compel obedience.

It is extremely undesirable that there should be any interruption of the good feeling which has for some time past existed between England and France. The Republican leaders, though they gave no active aid to English diplomacy, habitually approved of the single-handed resistance which was offered to the encroachments of Russia. On the retirement of the Duke DECAZES from office, the relations between the Governments became closer; and the annexation of Cyprus, though it caused suspicion and jealousy in France, produced no actual rupture. It cannot be said that any predilection for England has blinded M. WADDINGTON to the supposed expediency of maintaining an equal rivalry. When the KHEDIVE engaged an English Minister to restore order in his finances, M. WADDINGTON insisted on the simultaneous appointment of a French Minister of Commerce; and he has since claimed and exercised an equal share of control over the acts of the Egyptian Government. It is perhaps in opposition to his wishes that the French AMBASSADOR at Constantinople has become an active partisan of Russia, and that he made an effort to settle the financial difficulties of Turkey by an already abortive scheme which was not communicated beforehand to his English colleague. The late speeches of Lord SALISBURY and Lord BEACONSFIELD on the question of the Greek frontier have provoked a kind of agitation for the accomplishment of the vague promises of the Congress. At the same time the English Government is reproached with its alleged neglect to place irresistible pressure on the Turks. The more urgent question of East Roumelia has probably superseded for the time the controversy on the Greek frontier. If the French Government is in a hurry to compel the cession, it will scarcely attain its object without the employment of force. The English Government has thus far merely advised the Porte to comply with the recommendations of the Congress. It is probably more difficult at Constantinople than elsewhere to do two things at a time. The Ministers, even if they are disposed to compliance with English counsels, are hampered by the uncertainty of their position, for a Vizier who urges unpalatable measures on the SULTAN is not unlikely to incur dismissal. M. DE FOURNIER has not in general been disposed to concert a policy with his English colleague.

The interests of Turkey and Greece are not perhaps irreconcilably opposed. It is better that a Greek population should be subject to the Government of Athens, while it is highly inexpedient for the Greek Government to encumber itself with the task of controlling turbulent Albanian tribes. There is no difference of opinion as

to the mistake which was committed half a century ago in confining the Greek kingdom within the narrowest possible limits. Its territories have since been augmented by the acquisition of the Ionian Islands; and the addition of a considerable part of Epirus and Thessaly will constitute a State of respectable dimensions. Although it is impossible accurately to foretell future political combinations, there is reason to hope that Greece will not be disposed to facilitate the extension of Russian influence and dominion. National and ecclesiastical differences tend to create unfriendly feeling between the Greeks and the Bulgarians. It is even possible that far-sighted Greeks might see their advantage in alliance with what remains of Turkey. They would all prefer that, until their own claims are ripe for assertion, Constantinople should belong rather to the Turks than to the clients of Russia; but it is not easy to persuade Turkish statesmen of the advantage which their Government might derive from further loss of territory. The loss of Bulgaria north of the Balkans and of other districts was the result of conquest. The claim of the Greeks is founded partly on ethnological considerations which are not recognized by the Turks, and more immediately on the neutrality which Greece had no excuse for violating. Perhaps the best reason of all is that the French are bent on obtaining a boon for their clients, and that they will probably sooner or later attain their object. If at any time the dispute with Russia and its dependencies is finally settled, a remaining diplomatic conflict with France would not be desirable. The Porte must be aware that in such a struggle it could expect no aid from England.

If collision with French policy is to be deprecated, there are also reasons for affording active support to Greece. No other minor State has at different times exhibited so strong an inclination to an English alliance. In 1827 a Greek historian states, in a passage quoted by Mr. GLADSTONE, that "all Greece anglicized" as a consequence of the treaty concluded for the emancipation of the country by England, France, and Russia. Not long afterwards Prince LEOPOLD of SAXE-COBURG was invited to be the first King of Greece, because he had become, by marriage and adoption, a member of the Royal family of England. Again, in 1862, the voluntary cession of the Ionian Islands produced a burst of gratitude which found expression in an almost unanimous desire for the succession of an English Prince to the throne which had been vacated by OTHO. The friendly feeling of the Greeks to England was the more remarkable because there had been more than one act on the part of the English Government which bordered on hostile interference. Lord PALMERSTON's strange blockade in vindication of the claims of Don PACIFICO had been followed by a peremptory refusal during the Crimean war to allow the Government of Athens to take advantage of the opportunity for attacking Turkey. After the declarations of Berlin, it is nearly certain that the Turks will be forced to surrender the territory which M. WADDINGTON induced the Congress to assign to Greece; and it seems scarcely judicious to leave to another Power, however friendly, the whole credit of the transaction. Friendly offices rendered to the Greek Government might probably conciliate the good will of the Greek population in Bulgaria and in the provinces which still remain to Turkey. Although sympathy with the losses and sufferings of Turkey is natural and laudable, it is not worth while to haggle for a few villages which the Porte may desire to retain beyond the boundary line which was devised by the French Plenipotentiary. The inhabitants of the disputed district would certainly prefer a Government of their own race and religion, even if they cannot expect immediate administrative improvement. There is in this instance no serious question of military positions or strategic advantages. There is little reason to apprehend war between Greece and Turkey, if a frontier satisfactory to the more aggressive State is once defined. Mussulmans who may be unwillingly compelled to transfer their allegiance to the Greek Government have no cause to apprehend the atrocious persecution which their countrymen have suffered from the Russians and Bulgarians. With the exception of some trifling skirmishes, there has been no war in the neighbourhood, and the Greeks are comparatively civilized. The English Ministers have never disavowed their former professions of sympathy with Greece, and they may properly advise the Turkish Government to yield to the pressure of France.

THE FRENCH GOVERNMENT AND T[HE] EDUCATION BILL.

THE irony of circumstances has brought M. WADD[INGTON], who was chosen to succeed M. DUFAURE as th[e] example of a really Conservative Republican, int[o the] most formidable conflict with Conservative ideas th[at the] Republic has yet been committed to. The Clerical p[apers] are full of episcopal petitions against the Governm[ent] Education Bill. One after another all the Archbishops [of] France have come forward, in their own names and [in] those of their suffragans, to denounce this unfort[u]nate measure. That it may become law in spite of a[ll] this opposition is quite possible; but, if it does, all hope of any *modus vivendi* being established between the Republic and the Church will be at an end. For the future the two powers will know no relation but that of open warfare. The Republic may win an apparent victory in the first instance, but from the moment it is won the process of undermining it will begin. The Church shares with Englishmen the gift of not knowing when she is beaten. In this instance the Church will have the best conceivable ground on which to renew the fight. She will have on her side every consistent Liberal—if indeed there be such a thing in France—and all the fathers of families who will be obliged to take their sons from the schools to which they have chosen to send them in order to place them at schools to which they do not want to send them. The controversy about liberty of education, after contributing its share of confusion to the Monarchy of July, and being laid to rest under the Republic of 1848, is now to be revived for the benefit of the Republic of 1870. If the question had been still unsettled, a Republican Government might conceivably have been forced to settle it. Even in that case it would have argued great unwisdom that they should have proposed to settle it in this way. Some allowance, however, might then have been made for the need of conciliating their supporters, and for the difficulty of doing this on any other lines than those of declared hostility to the Church. But M. WADDINGTON and his colleagues can claim no such excuse. The question had been settled as regards secondary education by the law of 1850; as regards University education by the law of 1875. It was as a matter of pure free will that the Government reopened the controversy. If Lord BEACONSFIELD had marked his accession to office in 1874 by bringing in a Bill to repeal the Elementary Education Act, he would have been thought to deserve whatever might have befallen his Ministry in consequence. M. WADDINGTON will not be able to escape a similar responsibility.

By the law of 1850 every Frenchman who can satisfy certain prescribed conditions of age, morality, and capacity is allowed to open a school. This law the Church has taken advantage of to a very great extent. The Jesuits especially have opened secondary schools in all parts of France, and as their traditional skill in education appears not to have deserted them, the schools in which they teach have become very popular and are largely attended. By the law of 1875 this freedom has been extended to the higher education. Certain conditions are prescribed under which Universities, or Faculties intending to become Universities eventually, may be opened, and in five cases these conditions have been complied with and Universities have been founded. In these also the Jesuits, and one or two other teaching orders, contribute a large proportion of the professors. None of these orders are recognized by the French law. They have no corporate character, and no rights except such as belong to their members individually. Thus the clause in M. FERRY's Bill which prohibits members of non-recognized Orders from teaching is ingeniously contrived to deprive both the secondary schools and the free Universities of the teachers without whose assistance neither schools nor Universities would be in existence. The sam[e] effect might be produced by a law closing these scho[ols] altogether; but this would preclude the Left fro[m] boasting its zeal in behalf of freedom of education. [M.] FERRY's Bill brings with it no inconvenient consequences of this sort. The private secondary schools are left quite untouched, so far as buildings and scholars are concerned. The one thing that the Bill touches is the teaching staff, and in touching this it only makes a single stipulation. But this single stipulation is all sufficient for the purpose. The teachers are practically all members of

ecognized Orders. The first school term after as become law may find the scholars in the as usual, but there will be no one there to give instruction. Their old teachers will still be close at but they will be forced to remain silent. They will all their other rights as French citizens—the law quarrel with them upon any point but one—but will no longer have the right to teach the children have been committed to them by their parents. chers are not made in a day; and, though the Church y hereafter checkmate the Republic by creating a dy of lay teachers, it would be a work of time, even she set about getting them together at once; and e is certain not to set about this until she is satisfied at there is no hope of getting the prohibition taken off. To forbid the Roman Catholic Church to employ the services of religious orders is to deprive her of her most potent instruments. If she could be convinced that the deprivation was final, she would fashion other instruments to take their place. But in the absence of this conviction the whole energy of the French Catholics will be devoted to getting the law altered, and, as a means to this end, to bringing the Government which enacted it into discredit.

The more closely the facts are looked into the more extraordinary will the action of the Government appear. What has the Conservative Republic to expect from such a policy? The answer probably is, greater union among the various sections of the Left. When the Government found themselves at the head of a motley majority, only a fractional part of which shared the opinions of the Cabinet upon any important question, they may be supposed to have asked themselves whether there was any measure upon which it would be possible to unite their supporters in the Chamber of Deputies. Unfortunately the Extreme Left is always ready to begin an anti-Catholic crusade, while the Moderate Left and the Left Centre are only deterred from taking part in one by considerations of policy. Undoubtedly, if the Cabinet had been well advised, they would have seen that considerations of policy make against M. FERRY's Bill. But the immediate advantage of uniting Liberals seems to have blinded them to the remote disadvantage of alienating Conservatives. Probably the day that the Bill becomes law will be the last on which they will be able to persuade themselves that they have consulted even their own interest as a Cabinet. The advanced Left will then have got from them all, and, more than all, that they ever hoped to get, and their next move will be to get rid of a Ministry which has already served the purpose for which it has been left in office. The authors of the Education Bill will have no well-wishers outside the Left; and when the Left chooses to put the Government into a minority, there will be no support to be had from the Right. When M. WADDINGTON and his more moderate colleagues find themselves no longer Ministers, the opportunity of forming a Conservative Republican Opposition will be lost. A gulf will have been fixed between the Republic and the Church which will, for the present at least, be fatal to any such combination. If the Legitimists or the Bonapartists had been asked to shape M. WADDINGTON's policy in whatever way would be most serviceable to their several causes, they might have drafted M. FERRY's Bill, and been thoroughly content with their work. It will be useless for a long time to come to contend that there is no necessary antagonism between the Church and the Republic. M. FERRY's Bill will be held to have proved to demonstration that there is such an antagonism. If the Bill had been introduced by a Ministry avowedly belonging to the advanced Left, comparatively little harm would have been done. Every one knows that the extreme Republicans are hostile to the Church; but hitherto there has been room for believing that this hostility does not extend beyond the extreme Republicans. It is impossible to assert this now that an eminently Conservative Cabinet—a Cabinet to which the Conservative element in the Republican party has contributed far more than its fair proportion of Ministers—has of its own free will introduced a Bill which aims at depriving the Church of all share in secondary education. No professions of good will, no assurances of protection, no disclaimer of hostile designs, can avail to rebut the overwhelming testimony of actual facts. Even if the Bill should be thrown out by the Senate, the main part of the mischief will have been done past recall. The secession of a contingent of Conservative Republicans strong enough to give the opponents of the Bill a majority would not relieve the leaders of the Conservative Republicans from the responsibility they have voluntarily assumed. It is the first great blunder of which the Republican party has been guilty, but it is a blunder of which it is not likely soon to exhaust the ill effects.

CHILI.

THE news that Chili had gone to war with Bolivia and Peru caused much disquietude to persons who hold the securities of the one Spanish Republic which has hitherto maintained a high character for honesty. Chili has for some time been struggling with financial difficulties, caused by the unfavourable conjunction of successive bad harvests, a heavy fall in the price of copper, and the depreciation of the currency. She has hitherto managed to fulfil her engagements punctually, and it seemed very disappointing that, at a moment when her solvency was imperilled, she should add the expenses of a war to her other embarrassments. But she has gone to war simply because her neighbours calculated that she would put up with any affront and any injustice rather than fight. It was only after a long struggle to avert a rupture that her patience finally gave way. Her bankrupt neighbours were determined to impose the most monstrous exactions on a State which they thought they might safely insult and oppress, because she might be trusted to bear anything rather than so involve her finances as to be compelled to break faith with her foreign creditors. As events have shown, they have carried their speculations a little too far, and at last the worm has turned. Generally, whatever may be the real motives of the parties to a war, there is some pretence of right on each side. It has been reserved for Bolivia and Peru to provoke a war with no other justification than that of a naked and frank desire to rob. It might have been thought that there was nothing which Spanish Republics could do that would astonish those who are familiar with their singular history. But there is something in the effrontery of Bolivia and Peru which transcends all that could have been supposed possible even in them.

The history of the events which have led to the war may be briefly summarized as follows. There was a strip of desert on the confines of Chili and Bolivia which was looked on as utterly worthless, and, while each claimed it, neither cared in the least about it. Guano was, however, found in 1866 on the seaboard of this no man's land, and it then became worth while to settle in which Power the ownership should be held to lie. A treaty was concluded by which it was agreed that Bolivia should own and administer the territory, but that one-half of whatever revenue might be collected from it should be paid over to Chili. Explorations showed that this strip of desert contained very valuable minerals. Deposits of nitrate, more especially, were discovered at a distance of something under a hundred miles from the coast, and a Chilian Company was formed to work them. Still further inland was discovered the great silver mine of Caracoles, and again Chilians devoted their money and energy to a business which proved very profitable. As Bolivia was recognized as the Government holding the territory, the Chilians engaged in these undertakings addressed themselves to the Bolivian authorities, and with regard to the nitrate deposits it was ultimately arranged in 1873 that the Chilian Company should be limited in the field of its occupation, so that a monopoly might not be created; but, on the other hand, the Bolivian Government solemnly undertook that for fifteen years no duties should be imposed on the export of nitrate. This was only an arrangement between private persons and the Bolivian Government; but in 1874 a treaty was made between Chili and Bolivia, by which Chili renounced its half share of the revenues, while Bolivia undertook that no duties beyond those existing at the date of the treaty should be imposed on Chilians working minerals in the territory; the time during which the treaty was to be in force being fixed at twenty-five years. Thus Bolivia became bound to Chili, in consideration of having first the ownership of the territory settled in her favour, and then of getting the whole instead of only one-half of the revenues, to carry out the arrangement by which no export duties were to be imposed for a term of years on the nitrate exported by the Chilian Company. This undertaking was observed faithfully until the beginning of last year, when the Bolivian

Government carried out a design it had long been meditating, and issued, without in any way communicating with Chili, a decree by which an alarming export duty was imposed on the nitrate which it had pledged itself should be free from any duty of the kind. The Chilian Government could not believe that so flagrant a breach of faith was seriously meant, and contented itself with remonstrating against the injustice. But its remonstrances met with no attention, for the Bolivians, knowing that they could rely on the assistance of Peru, in concert with which Power the decree had been issued, felt sure that Chili would yield anything rather than go to war. Stimulated by what seemed assured impunity, they thought that, if they were going in for robbery, they might as well do it wholesale, and actually published another decree confiscating the property of the Chilian Company for the benefit of their own precious State. This filled up the cup of outrage to overflowing, and Chili, having offered to refer the question to arbitration, and the offer being rejected, landed a force and occupied the seaboard of the territory which had been not so much the origin of disputes as the occasion of wanton injustice.

The course taken by the Bolivians is simple enough. They wanted money, and they thought they might safely screw it out of unresisting Chilians. But why should Peru interfere? The cause of Bolivia is really the cause of Peru, for the Government of Peru has been robbing on its own account, but found that it could not derive all the profits from its robbery that it expected. It has acquired by extortion the monopoly of nitrate production in its own territory; but it has not been able to drive the price of nitrate in the market to the point that it thinks desirable, because it has been checked by the competition of the Chilian Company. If it could but crush this Company, it might hope to make something out of nitrate which would surpass the wildest dreams of avarice. The way to do this was to get Bolivia to do precisely what it had done itself. The nitrate deposits in Peru belonged until recently to private owners. The Government thought it would like them for itself, and therefore put a prohibitive duty on the export of nitrate, informing the owners that, if they did not like to pay the duty, they might sell their property to the Government. Many of the owners were willing to sell, but others held out until a duty of a prohibitive kind was threatened, and then all succumbed. The Peruvian Government made a good thing out of this, but not a delightfully good thing. They had got an excellent business on favourable terms, but they had not got much more. Above all, they had not got that for which their souls most yearned—a handsome sum of ready money. This, it appeared, might be accomplished if only the yield of their nitrate fields might be made to appear great enough to cover a loan which should not only represent the cost of the purchase, but should include an odd million or two additional. For this purpose it was expedient that the price of nitrate should be controlled by the Peruvian Government. The more complete their monopoly the higher the price, and therefore the better the prospects of a satisfactory loan. But they did not own all the nitrate vineyards of South America. The Chilian Company was their NABOTH. They felt that NABOTH must be dispossessed. And they calculated with reason that the Bolivians were the kind of people who would be most happy to dispossess him.

Thus the war is merely a violent effort of two confederates, one of whom wishes to get money anyhow, while the other wishes to ruin an innocent neighbour in order that he may get a loan out by commanding the price of a particular article. Chili would not be a nation at all if it did not do its best to resist so iniquitous a scheme. It is better for the creditors of Chili themselves that Chili should resent this extremity of injustice. The national pride—a most just and legitimate pride—is the real basis on which the creditors have to rely, and a nation which could bear to be robbed because the robbers traded on its desire to be honest would soon sink low enough to believe no longer in the virtue of honesty. No doubt Chili runs a risk, and a great risk. War is proverbially uncertain, and the goddess of war thinks more of the largeness of battalions than of the justice of a cause. It must not be supposed that because Chili is wholly and indisputably in the right she is certain to win. If she loses, it may be after a struggle so protracted and costly that it will be quite out of her power to meet her engagements, altho[ugh if time] enough is given her, she may, even after a disastr[ous war,] pay back all she owes. On the other hand, it ca[n be] said that she has embarked on a reckless adventure. [She] is in possession of the disputed territory, where sh[e has] now at least two thousand good troops, and as all, or a[lmost] all, the inhabitants are Chilians, she can comm[and a] courageous and determined local militia, whom s[he is] arming, and who are fighting not only for their country, [but] for their most cherished possessions. Six hundred m[iles] of almost waterless desert divide the territory where s[he] is encamped from Bolivia. Peru can do nothing excep[t] by sea, and although the nominal force of the Peruvia[n] navy is much greater than that of Chili, the Chilians hav[e] a decided superiority in effective ironclads. A nava[l] engagement in which the Peruvians were worsted, and the failure of the Bolivians to transport an adequate force through the desert, might terminate the war. Peace might not be made at once, but Chili would remain in possession. All that can be said is that, if speculative possibilities are regarded, this may not improbably happen, and that, if justice is to control the wishes of mankind, this is what it must be ardently desired should happen.

PLACEMEN IN PARLIAMENT.

WHEN Parliament meets again the decision of the Committee on the Clare election will be questioned on plausible grounds. The interest of the inquiry is rather curiously antiquarian than either constitutional or practical. It matters extremely little who is member for Clare; and the Crown is unlikely to corrupt members by giving them colonial offices which are, in fact, not at its disposal. Mr. BERRY, Prime Minister of Victoria, who was the first witness examined, has come to England mainly for the purpose of asserting the entire independence of the colony. If he has a sense of humour, he may perhaps have been amused by a grave inquiry whether a nominee of his own came within the purview of a statute passed for the discouragement of corruption exercised by the Ministers in England. Sir BRYAN O'LOGHLEN, having been in his absence elected member for the county of Clare, afterwards accepted from the GOVERNOR, or rather from Mr. BERRY, the office of Attorney-General for Victoria. One condition of his tenure of office was his residence in the colony, which might have been thought incompatible with the discharge of his duties in the Imperial House of Commons. The electors of Clare are probably indifferent to representation as long as they can confer on a favourite candidate the titular rank of member for the county. It is not known whether Sir BRYAN O'LOGHLEN is anxious to retain a seat which he cannot effectually vacate if he has already ceased to hold it by acceptance of office. Under the Constitution an appointment to the Stewardship of the Chiltern Hundreds is more certainly incompatible with the retention of a seat in Parliament than permanent absence from the United Kingdom on official service in a distant colony. Sir BRYAN O'LOGHLEN is not more incapable of discharging Parliamentary duties than a Governor of Madras who fifty years ago retained his seat on the ground that his commission was held under the East India Company, and not under the Crown. It is true that he was really appointed by the Cabinet, while Sir BRYAN O'LOGHLEN derives his title from a majority in the colonial Assembly. It has not been considered necessary in the course of nearly two centuries materially to alter the provisions of the Act which regulates the right of placemen to sit in the House of Commons, although during the interval the power of the Crown has been greatly diminished, while Great Britain and Ireland have been consolidated into a United Kingdom which has itself become the centre of an Empire spread over almost all parts of the world.

By the Act of Settlement, modified by one or two subsequent Acts, the holders of certain specified offices vacate their seats on appointment, but they are eligible for re-election. The incumbents of other offices, and of all offices which might be created after the date of the Act, were absolutely disqualified from sitting in the House of Commons. Only a few years ago the law was so far changed that no re-election has since been necessary on the transfer of Ministers from one Cabinet office to another. Secretaries of the Treasury and of the Admiralty and Under-Secretaries of State were not made subject to

...n the technical ground that their offices were ...d from the Crown, but under the respective ...f their departments. The Irish Act of Union pro... with perhaps superfluous caution, that officers ap...d by the Lord-Lieutenant should be considered ...ing office under the Crown. In the late inquiry ... contended that the functions of a colonial Go...or were analogous to those of a Lord-Lieutenant, and ... consequently, in default of special legislation, colonial ...isters were not within the meaning of the original ...t. The Committee seem to have held that the section ... the Act of Union was merely declaratory, and that ...ish officers would in any case have been supposed to hold ...eir appointments from the Crown. The Attorney-...eneral for Victoria receives a salary; he is theoretically selected by the Governor, who may also dismiss him; and it is admitted that the Governor would be compelled to obey an order from the Secretary of State directing him to appoint or to dismiss an Attorney-General or any other member of the Cabinet. For legal purposes it is not necessary to consider that the Governor must follow the advice of his responsible Ministers, who would resent as a gross violation of their privileges any interference of the Imperial Government. The Committee have thought it prudent to report their opinion without stating the reasons on which it is founded. They have declared that the office of Attorney-General of the colony of Victoria is an office or place of profit under the Crown within the meaning of the statutes in that behalf; and it follows that Sir BRYAN O'LOGHLEN, having accepted the said office, has thereby vacated his seat.

Sir ERSKINE MAY, who gave evidence at considerable length, evidently dissented from the conclusion at which the Committee afterwards arrived. He was fully justified in holding that the acceptance of office in a colony possessing a responsible Government had no kind of connexion with the evil which the English Act was intended to prevent. Before the Revolution the Crown frequently created offices for the express purpose of bribing members of the House of Commons. WILLIAM III., who sometimes found it expedient to follow precedents established by the STUARTS, put his veto on one of the Bills which were intended to check the practice of corruption. The Act which was ultimately passed excluded from the House of Commons the incumbents of new offices, while it was not thought necessary to exercise equal vigilance as to places already existing. One of the witnesses mentioned the case of one G. A. SELWYN, who vacated his seat on appointment to the office or offices of Chief Registrar, Examiner or Chancery Clerk of the Crown and the Peace in the island of Barbadoes. Mr. FORSTER, with laudable simplicity, observed to Sir ERSKINE MAY that "your "remark as regards such an office not being contemplated "by the Act would seem to me to apply quite as much to a "man taking office and residing in Barbadoes as it would "to the Attorney-General of Victoria." The Attorney-General of Victoria must reside in that colony, though, but for the decision of the Committee, the member for the county of Clare might be a perpetual absentee; but no such disability applied to the Chief Registrar of Barbadoes, who was no other than the famous GEORGE SELWYN, the friend of HORACE WALPOLE and of the notorious Duke of QUEENSBERRY. GEORGE SELWYN returned two members of Parliament besides himself, and he certainly never thought of setting foot in Barbadoes. He probably received a good salary in consideration of his three votes, and he furnished a typical illustration of the abuse which the Act was framed to prevent or discourage. Since his time two great changes have affected the relation between the Crown and its officers. The powers of the Sovereign are exercised by a Minister who represents a Parliamentary majority, and members are elected by independent constituencies whom they cannot afford to offend. GEORGE SELWYN was as certain of his seat for Gloucester and of his power to return two members for Ludgershall when he was Registrar of Barbadoes as before his acceptance of the sinecure. If Sir BRYAN O'LOGHLEN had been eligible for the county of Clare, his constituents would have had the opportunity at the next election of sanctioning or disapproving his tenure of office in Victoria. In the meantime he was under no temptation to pay undue deference to the Crown. Neither the SECRETARY of STATE for the COLONIES nor the Cabinet in general had earned his gratitude by conferring upon him any benefit or favour. Sir ERSKINE MAY in several of his answers called the attention of the Committee to the spirit of the Act; but, if they rightly interpreted the letter of the law, they were perhaps right in confining their attention to the text. It happened that there was a conclusive objection to Sir BRYAN O'LOGHLEN's retention of the seat if the functions of the Committee had been legislative and not judicial. A technical excuse relieved them from a technical incapacity to disqualify an absentee.

It seems that the Constitution of Victoria has borrowed the provision of the English law that a Minister on his appointment shall vacate his seat as a representative. Sir BRYAN O'LOGHLEN had to seek re-election to the Assembly on the same occasion which has disqualified him for a seat in the Imperial House of Commons. The framers of the English Act could not possibly have foreseen the double disability. It would have been difficult at the beginning of the eighteenth century to imagine the form of colonial government which has been tried during the present generation. The North American Colonies, indeed, profited by a wholesome neglect to govern themselves; but in theory they were subject to the control of the Crown and Parliament. During the contest between the Council and the Assembly of Victoria, the ATTORNEY-GENERAL, though nominally a member of the Parliament of the United Kingdom, distinguished himself by the vigour of his threats of secession if the Home Government should venture to afford any support to the weaker branch of the Legislature. The confirmation or avoidance of his place as member for Clare may be regarded with perfect indifference; but the decision of the Committee, if it is adopted by the House, will remove a paradox or anomaly. There is no reason to apprehend a frequent recurrence of the difficulty. Even an Irish constituency will not often choose a member who has transferred his domicile to a distant country; and it is not certain that the electors of Clare when they chose Sir BRYAN O'LOGHLEN knew that he had determined to expatriate himself. His appointment to office in his new country was an accident, though it has given rise to the present inquiry. If his party in Victoria should be driven from power, or if he should himself resign or be dismissed, he would once more become eligible to the House of Commons. Investigations such as that conducted by the Committee are historically interesting or amusing, being founded on the convenient fiction that where the letter of the law has not been altered the Constitution has been exempt from change. When Mr. BERRY invited Sir BRYAN O'LOGHLEN to enter his Cabinet, the QUEEN was, by construction of law, supposed to exercise over the new official an influence which rendered him unfit to hold a seat in the House of Commons.

SIR ANTHONY PANIZZI.

THE death, at an advanced age, of Sir ANTHONY PANIZZI has recalled to the English public how great were the services rendered to it by a man who in his day did perhaps harder work, and certainly received more abuse, than falls to the lot of most of its servants. That he very much improved the Library of the British Museum, that he invented and executed a new and admirable catalogue, that he planned a handsome reading-room bearing his name, and that he was knighted and retired on a full pension, are the salient points in his career which it is easy to remember. But his death has called into print some of those excellent biographical sketches which are kept in stock to await the moment when men of eminence expire; and there was much in the character and in the history of PANIZZI to awaken special interest when the full story of his life was told. He had the misfortune to be born a subject of the Duke of MODENA, and when he was quite a young man the Duke of MODENA thought it would be advisable to put him to death. The gallows was set up; the executioner was ready; but the prisoner escaped, and after a stay in Switzerland got safely to England. Fortunately he carried with him an introduction to Mr. ROSCOE of Liverpool, the historian of Italy, and the generous friend of Italians. With the help of Mr. ROSCOE's protection PANIZZI managed to support himself, until BROUGHAM, who was then getting up the University of London, thought he would do very well for his Italian professor. This was rather a tribute to his merits than a refuge from starvation, and BROUGHAM, finding that his promis-

ing professor could not keep body and soul together on his professorship, got him appointed to a minor post in the Museum Library. He had turned to account the abundant leisure which his unremunerative professorship had forced on him, and had made himself known by editions of Italian authors and dissertations on their writings. He became favourably known to the great Whig group of notabilities, literary and political, which was then flourishing in all its glory, and his merits or his friends so impressed Lord MELBOURNE, that in 1836 he was made Keeper of Printed Books. This irregular advancement of a foreigner who had been thrust into the library department in order that bread might be found for him caused much natural jealousy; and all that could be said by those who advanced him was that, if his advancement was not in the regular groove, his capacities for doing good service were equally unusual. They appealed from PANIZZI as he then seemed to be to PANIZZI as he would be known to be when time had given him a fair opportunity of showing his excellence. The event amply justified their anticipations. He lived to show that the one man who had it in him to transform the Museum Library had been selected for the task. As a rule, Lord MELBOURNE was not very fortunate in his appointments, and his Whig friends were more often occupied in tormenting him into jobs than in stimulating him into recognition of budding promise; but, at any rate, it may be said of him that he made THIRLWALL a bishop and PANIZZI a librarian.

The success which PANIZZI achieved was won partly by his knowing what to do, and partly by his love of fighting and his strength as a combatant. It appears simple to say that a national library to be good must fulfil three conditions. It must be complete, it must be methodically arranged, and it must be accessible. But until the rule of PANIZZI was established the national library of England was very incomplete, it was destitute of anything that could be called a catalogue, and those who visited it received a very poor welcome. PANIZZI doubled the library, made a catalogue which good judges hold to be a marvel of skill, and seated his visitors in a spacious and commodious room. When he had once got the Trustees to sanction the expenditure, and had hit on a good plan for his reading-room, the last of these tasks was not one of any great difficulty. But to make a good catalogue is a work of art. It demands a perception of all the intricate problems raised by the proper arrangement of books. Like the human mind from which they flow, books present some obvious divisions; but these divisions run into endless cross-divisions. Which of these cross-divisions to recognize and which to ignore is the standing puzzle of a librarian, and the greatest success he can achieve is to realize the reasonable anticipations of a student who has endeavoured to look on all literature as a great whole. It is impossible that a catalogue should be perfect if the library is extensive, since if it aimed at too nice a perfection, it would be so voluminous as to be practically useless. The maker of the catalogue has triumphed if he has got as far on the road to scientific perfection as the limits of practical utility will allow; and, if it is too much to say that PANIZZI got to the last stretch of what is possible in this direction, he at any rate got further than any one had done before him. Here, again, as he was competent to the task, and had not much difficulty in being allowed to show that he was competent, the obstacles to success were such as, being given the opportunity, he was sure to surmount. The fight of his life was over the question whether the library should be complete. Here, again, he knew, as none of his predecessors knew, what a complete library means. Books do not rain on a librarian through the ceiling. They have to be bought, or they have to be demanded where there is a right to demand them. PANIZZI found that foreign books must be bought, and that English books might, when published, be demanded by the British Museum. But the right had been allowed to fall to a great extent into desuetude, and PANIZZI had to fight publisher after publisher before he could get it generally recognized. There was a wild outcry against the attacks made on honest English tradesmen by this pushing and tyrannical foreigner. PANIZZI merely went on fighting until his victory was complete, and the outcry died away. With regard to foreign books, PANIZZI had the advantage, with his comprehensive knowledge of European literature, of being able to suggest what books ought to be bought. But the trustees had to find the money; and, although the trustees are as a rule men with views sufficiently elevated to wish for a complete library, only spend what Parliament allows them to spend, buy more foreign books meant asking Parliament for money, and this is not a very pleasant process. PANIZZI did may be described by saying that he g the Trustees into getting from Parliament the which he wished them to spend.

Although he spent all his life from early manhood old age in England, PANIZZI never ceased to be an Itali and was as devoted to the cause of liberated Italy as if had remained in his country, and had watched his ow Duke crossing his frontier for the last time. He was th friend alike of CAVOUR and GARIBALDI, and had the offer o high office if he would return to Italy. He very sensibly thought that, if he might be valuable as a politician, he was invaluable as a librarian, and that he had better stick to the sphere in which he was supreme. But he never became an Italian transmuted into an Englishman; he remained always a foreigner in the service of the English Government. It is not much in the habits of the English Government to accept the service of foreigners. France has really welcomed foreigners, and Russia has liberally employed them so long as it was obliged from its barbarism to seek assistance in administration from outside. PANIZZI was employed not from any wish to do honour to an illustrious exile, but simply because he was much the best man that could be got. He was selected to buy and arrange books because there was no one else who knew equally well how to do it, just as VANDYKE was selected to paint portraits in the reign of CHARLES I. because no one else could paint them so that the picture should be worth having. There was no advantage to PANIZZI in being an Italian. He knew perhaps more about Continental literature than most Englishmen, and he probably owed this knowledge in part to his being an Italian. But every learned man starts with some special knowledge, and it could not have been difficult to find Englishmen who knew as much of literature generally as PANIZZI knew. It may perhaps be also true that as a foreigner PANIZZI was less in awe of English great people than an Englishman would have been, and that his audacity was partly due to his happy ignorance of our conventionalities. But, on the other hand, he was exposed to much jealousy and detraction merely because he was a foreigner, and many of the trials of his life would have been more easily surmounted by a native. Possibly one reason of such toleration or notice as he received was that during the greater part of his life Italy was more pitied than respected. The moral of his story is not that a nation gains especially by employing foreigners, or that it is a special gain to foreigners to be employed, but that all the world gains when a man endowed with signal faculties in any one line gets the opportunity of making his power known and felt.

INDIA AND LANCASHIRE.

ON the last Friday before the Easter recess both Houses were occupied with the subject of the cotton manufacture in India. In the Lords the need for some legislative protection of the women and children who work in the Indian mills was appropriately insisted on by Lord SHAFTESBURY. That the need exists is not a matter that admits of any doubt. The arguments of those who maintain the contrary have the serious fault of proving too much. If some of the evidence quoted by Lord CRANBROOK is to be accepted as trustworthy, Indian manufacturers must be altogether exempt from the weaknesses to which manufacturers of other countries have been uniformly found liable. No reason is assigned for this extraordinary moral pre-eminence. It is not denied that in English mills women and children would be worked a great deal longer than is good for them if it were not that the law has interfered to prevent it. But we are asked to believe that when the owner of the mill is a Parsee, and the mill itself is in Bombay or Bengal, nothing of the kind is ever practised. Even the courage which has not shrunk from propagating these fictions has been unequal to denying that in India the mills run seven days to the English six. The Indian manufacturer is happier than the English in not being troubled with Sundays. The very thought of this superiority is almost enough to make a Lancashire millowner embrace a religion which is free from the superstition

...rest. Considering that the condition of India is very much more dependent than in ...try, it seems reasonable to assume that they ...least as great a need as English women of pro-...n against their parents or husbands. The objection ... is brought against factory legislation at home, that ...ts grown-up women as if they were still children, is ...s applicable in India than in England. When women ... all respects put on a level with men in this country, ...ill be time enough to consider whether Indian legisla-...n ought not to proceed on the same principle. Till ...at time comes, a principle which is held to be good enough ...r England will be good enough for her dependencies. It ...s true, no doubt, that the application of the principle to India will be attended with many special difficulties. If Lord SHAFTESBURY had introduced a Bill to carry out the object he has at heart, this would have been a formidable objection. Inasmuch, however, as he only proposed that the VICEROY should be instructed to take the necessity of passing a Factory Act into immediate consideration, it has no weight whatever. The details of such a Bill must undoubtedly be determined in India, but Lord SHAFTESBURY was in no way stepping outside his own province in proposing that the Government of India should be instructed to take the work in hand at once. Lord CRANBROOK was able to give a more conclusive reason for the motion not being pressed, in the fact that the Government of India have drawn up a Bill on the subject, which it may be presumed will be submitted to the Legislative Council as soon as the authorities have time to think of anything except the Afghan war.

In the Commons the Lancashire manufacturers succeeded in making a night of it. The great doctrine that the Empire was made for Manchester and not Manchester for the Empire was never more boldly preached than by Mr. BRIGGS. A good deal has been said lately about the unsatisfactory state of Indian finance, and the difficulty of devising new taxes to meet new deficits. In Mr. BRIGGS's opinion the question is simplicity itself. The repeal of the import duty on cotton goods is the one thing needful. It is not, Mr. BRIGGS declares, the Lancashire millowners who would benefit by this repeal. If they take any part in the agitation, they do so merely as attorneys for a mysterious personage called the Lancashire producer. He apparently is in a very bad way indeed. Left to himself, he would ask nothing better than to supply the millions of toiling Hindoos with cotton goods at the lowest remunerative prices. But this hideous duty comes in to cripple his power of doing them service. The addition of five per cent. to the cost of imported cotton goods gives the Indian manufacturer just the advantage he wants, and starts him happily on a career of successful competition. This would be bad enough by itself; but his Indian rival must needs add insult to injury, and declare that it is not the duty that enables him to undersell the Lancashire producer, but the incurable disposition of this same producer to send out a preparation resembling whitey-brown paper in substance and composed chiefly of china clay. Mr. J. K. CROSS became quite epigrammatic under the stimulus of this cruel accusation. Unfortunately epigram does not supply the place of argument, however much it may adorn it; and Mr. J. K. CROSS cannot need to be told that the statement that, from the commencement of the cotton manufacture until now, no single piece of cotton goods has been made without a proper mixture of size, does not in the least disprove the statement that, in the later periods of the cotton manufacture, a large number of pieces have been made with very much more than the proper mixture of size. Another Mr. CROSS has given, in a letter which appeared in the *Economist* some weeks back, the exact statistics of this process. Originally, he says, a piece of calico would contain ten per cent. of size; but upon that proportion manufacturers have steadily improved, until now it is not uncommon to find seventy-two per cent. of size in goods of professedly the same quality. The Indian consumer is quite competent to distinguish, after a few experiments, between cotton and plaster of Paris regarded as alternative materials for shirts; and until Lancashire returns to honester ways there is no reason to expect that the repeal of the Indian cotton duties will make any appreciable difference in the Indian demand for Lancashire goods.

Still the import duty on cotton goods is in many ways an objectionable duty, and no one contends that, if the finances of India were in a sufficiently prosperous condition, it would not be right to repeal it. We may go further than this, and say that it has not yet been conclusively made out that, even in the present condition of Indian finance, a less objectionable duty might not be discovered. But no concessions of this kind will meet the demands of the Lancashire agitators. If it could be proved to demonstration that the result of repealing the cotton duty would be to necessitate the sale of one Hindoo in every hundred as a slave, their advocates in the House of Commons would no doubt be ready with a plea that it was better for one man to lose his liberty than for ninety-nine to buy their shirts of the wrong makers. It argues some boldness in Lancashire members that one after another of them should have risen to maintain that these duties ought to be repealed in presence of an admitted Indian deficit and of a large impending addition to Indian expenditure. They might perhaps have gone through the decent form of suggesting an alternative way of raising the money. But they were quite above any such pretence. Deficit, debt, crushing and unequal taxation—any one of these contingencies would apparently be preferable in their judgment to the maintenance, even for a single year longer, of a duty of five per cent. on imported cotton goods. The exhibition was all the more striking because the Government has actually taken off a part of these duties in preference to abolishing the duty on rice—a tax which, in the judgment of most political economists, is far more objectionable, considered as a mode of raising revenue, than a moderate duty on imports. Lancashire has got her half-loaf before she ought to have had it, and now her disinterested representatives are clamouring to have the whole loaf at once. Mr. NEWDEGATE oddly enough voted in favour of the Lancashire demand, by way of a hint to the colonies that they are not entitled to levy protective duties against the mother-country. The colonies will be more apt to see in this superb indifference to the interests of India where Lancashire profits are concerned substantial cause for self-congratulation that the mother-country has resigned the right to say what duties they may not levy.

THE POSITION IN AFGHANISTAN.

WHETHER or not a further advance is to be made from our present position in Afghanistan towards Cabul, it seems certain that the existing line occupied by our troops represents pretty nearly the position which moderate men would recommend as that to be permanently taken up, for securing and establishing what some have been pleased to call a scientific frontier. When we say moderate men, we mean moderate men among those who belong to the school which advocates an advance of some sort beyond the line heretofore held. Those who are for keeping to our present frontier as soon as the war is ended would indeed probably say that they alone really deserve to be styled moderate. They do not deny the necessity of the war, or the need, if war was necessary, of making it offensive war, and pressing the enemy until he sues for peace. But they consider that this temporary advance need not necessitate a permanent occupation of any part of Afghanistan, and that we should be stronger in every way, both financially and in a military point of view, by concentrating our military force along the present frontier, than by spreading it over an extended line of difficult country in advance. They say that it would be cheaper and more effective to go into Cabul with an army whenever necessary—say, once in ten years—than to stay there. It is certainly not a little perplexing to find the merits of the two schemes so hotly contested, and to read the gloomy predictions uttered of our political condition in the future by each side, if the policy advocated by it be not adopted. Nothing is more striking in the controversy than that so many men who have precisely the same data on which to form their judgments, who have had large experience of Indian affairs, and whose reputations stand equally high for intelligence and discretion, should come to diametrically opposite conclusions upon the Afghan question.

The objections to the forward policy are as obvious as they are formidable. In the first place, the different advanced positions we now occupy are not only independent of and detached from each other; they are separated by long distances, amounting in the case of the Koorum and Candahar forces to some hundreds of miles. Thus they afford no mutual support, but each must be self-contained and able to hold its ground by itself. They no more form parts of one tactical system of operation than would two armies operating in Italy and Switzerland. Further, enough has already happened to show that the position at Jellalabad, at any rate, is a very troublesome one, by reason of the tribes occupying the mountains between it and Peshawur. The force massed along that line is far larger than the army with which Lord Lake conquered Hindustan; yet we cannot even ensure that the telegraph shall be respected; no one is safe for a moment outside

a British post, and hardly within it; right and left of our line is a region in which we dare not set foot unless moving with large columns. We have neither bought nor conquered the submission of the mountaineers who now perpetually menace our flanks. It is palpable that to establish the Peshawur-Jellalabad line as a safe one will be a great undertaking, of which we have hardly as yet made a beginning. In the Koorum valley, the General holds merely the ground occupied by his camps; the real conquest of the country has still to be made. In the direction of Candahar there has been less opposition; but here nature herself opposes the difficulty of a long line of barren and difficult country, part of it intolerably hot in summer, and part excessively cold in winter, along which communication can be kept up only at a great cost and sacrifice of life, at any rate of the beasts of burden which alone can now be used for transport. Even if a road for wheeled carriage were constructed from the valley of the Indus to the neighbourhood of Candahar, it is very doubtful whether food could be provided by the way for the bullocks to be used as draught cattle. Indeed there seems to be only one practicable method of maintaining satisfactory communication with Quetta and Candahar, and that is by a railway. This might probably be constructed very cheaply for the greater part of the way in that almost rainless country; and, a railway once made, the peculiar difficulties due to the absence of water and cultivation along a great part of the route will practically disappear. If Candahar or its neighbourhood is to be permanently occupied, a railway from the Indus to the new frontier must be made sooner or later; it had much better be made sooner. It will, however, be a dead weight on the finances of India, for such a line can never pay a fair dividend; but it will be much less of a burden than would be involved in trying to keep our troops in Afghanistan supplied by any other means.

Another cause of expense will be the inevitable increase of the Indian army. The *Times*, indeed, suggested the other day that, the scientific frontier being now attained, the Indian army should be at once largely reduced. But then the *Times* has been outdoing even itself of late in the puerile weakness of what it publishes about India. Within the last few days it objected to an advance on Cabul under any circumstances. Having got the new frontier that we want, why, asks the *Times*, go beyond it? According to this view, the Germans, having overrun Alsace and Lorraine in the late war, and meaning to keep those provinces, ought not to have made any further advance, but should have been content with occupying their conquests, and holding them for ever against the French. The *Times*, in short, cannot perceive that there is any difference between holding a line of frontier by force, as the Romans kept off the Picts and Scots from England by their wall, and holding it peacefully with the consent of the beaten Power; and is unable to understand that it may be necessary, in order to obtain the distinct acquiescence of the ruler of Cabul in our new position, which is a condition requisite for holding it in quietness undisturbed by aggressions, to make a temporary advance beyond that point, in order to compel that ruler to accept regular conditions of peace. All those who know anything about the matter are well aware that a permanent increase of the Indian army must be accepted as a necessary consequence of occupying any part of Afghanistan. Some reductions may possibly be made of our former frontier garrisons, but these will at most be quite inconsiderable compared with the requirements of the new territory for additional troops. In fact, it is not easy to see the way to any reduction at present in the force now in occupation of the country, and that includes practically almost the whole fighting strength of the native army. It must be added that service in Afghanistan will be very unpopular with the native army in time of peace, although probably the European soldier will prefer it to an Indian station. Nor is it easy to see how regular reliefs are to be provided, so large will be the proportion of the Bengal army which must be permanently maintained beyond our present frontier. Further, besides the permanent expense involved in the occupation of Afghanistan from this cause, there must in any case be a large outlay in building barracks for the troops. Even if the army does not need to be increased, still its distribution will need to be greatly altered. Now the expense of barracks for European troops on the Indian pattern is enormous.

In the present state of the Indian finances those who are responsible for them may well feel aghast at the prospect of fresh burdens on an impoverished treasury which an occupation of Afghanistan opens out. But then it will probably be said in reply that, after all, it is a choice of evils It so happened that the present time was favourable for taking a decided course and putting our frontier policy once for all on a satisfactory footing. Had the present complication arisen at a time when Russia was less hampered by engagements elsewhere, or when a weaker policy was in favour at home, we might have found Russia practically in possession of the country before we were in a position to do anything, and, once there, it would have been impossible, or at best extremely difficult, to dislodge her. It is all very well, we may be told, to talk about going into the country whenever we choose; but a moderate amount of assistance from skilled agents would make an advance on another occasion a very different affair from what it has been on this; in fact, if properly defended, Afghanistan would be impregnable. Even now it is evident that Russia was prepared to play a bold game if we had given her a chance, and that we should have encountered a very different degree of opposition had our advance been deferred till the spring. And, after all, when we consider the circumstances which attended former annexations, is this one, it may so very alarming? When the annexation of tl under consideration, it must have seemed at the hazardous an undertaking as this is; yet we kno. annexation of the Punjab has immensely strengthened tary and political position in India. Now the subjug a portion of Afghanistan should not, it is contended more difficult task. The people are not united; apa the strength afforded by their mountain fastnesses, tl never shown themselves capable of making a formid fence; and, if a mountainous country is difficult to sub ought not, when once subdued, to be difficult to hold. Ti habitants cannot live on the rocks and stones in which their nesses are placed; occupy the cultivated parts, and they are at mercy. Admitting that it would be much better not to be un the necessity of taking this step, still—so the advocates of annex tion would argue—it is a choice of evils, and the only thing is look the matter in the face, and make the best of an unfortunat necessity. Such is the argument; and, though it completely ove looks the grave financial difficulties of the case, its plausibility may be admitted even by those whom it fails to convince or to satisfy. Let us at least hope that, if the permanent occupation of our present positions has been determined on, we shall not go about the business in a half-hearted way. It is no light undertaking to which we are invited to commit ourselves. The point to be aimed at, apart from the strategical arrangements, is the absolute pacification of the country. We should rest satisfied with nothing less than the same security to life and property here which obtains throughout the rest of India. To attain to this two things seem indispensable—the complete disarmament of the people, and the opening up of the country in all directions by good roads. But when all this is done, we still believe that it would be very much better if it were possible to leave it undone by avoiding annexation altogether. The advantages of annexation are at best extremely uncertain; the disadvantages—in the form of an increased army and great permanent increase of expense—are certain and most serious. A temporary advance to Cabul, undertaken from the exigencies of the campaign, though a sufficiently grave undertaking, would be of trifling importance compared with the financial and other consequences involved in the permanent occupation of Jellalabad.

COMPENSATORY ECONOMIES.

WE suspect that many men, we are sure that most women, take a positive pleasure in an occasional piece of meanness. They rejoice in the odd inconsistencies which Elwes, the notorious miser, exaggerated, when, as his biographer tells us, after gambling for thousands, he would walk out in the early morning to meet the droves of cattle from his Essex estates, and stand in a chilly drizzle of rain to higgle with a butcher over a shilling or two. If they do not launch out in reckless expenditure, shutting their eyes to the ruin that must inevitably overtake them—if they do not indulge in a manner of living that they know to be distinctly beyond their means—yet they are guilty from time to time of some unmistakable bit of extravagance. Then their conscience bothers them, more or less, and they seek to silence it and reassure their prudence by practising the consolatory doctrine of compensations. The worst of it is that the isolated or spasmodic act of retrenchment probably bears no sort of proportion to the excesses that have been its immediate motive, for either selfishness will be prompting them to some lavish self-indulgence, or else they are painfully persuaded that society is looking on, and likely to be sarcastic over their self-denying virtue. Thus, to pass from the abstract to the concrete, there is the question of railway travelling. Is a man to go first or second class? As to the matter of comfort, there can be no arguing at all; for we set aside as too contemptible for notice the paltry and transparent pretexts of those who declare that second-class compartments are cooler in the summer, and that the undeniable hardness of the leather seats is counterbalanced by their superior healthfulness and cleanliness. We have even the advantage of knowing one gentleman who has the hardihood to aver that you meet incomparably more cultivated society in what Artemus Ward was wont to call "the string of second-hand coffins," since curates have all taken to travelling by them. This shallow sophistry is of course absurd. If a man is poor, and thinks it more prudent to take even a third-class ticket, there is an end of it as far as he is concerned. We can only respect his motives, and hope he has the means of providing himself with a portable india-rubber cushion. For ourselves, if our banker's balance chanced to be tolerably satisfactory, we should risk that contamination of the company of purse-proud millionaires which our ingenious friend so strongly protests against, knowing that at all events we should be safe from the half-drunken roughs who make travelling horrible from their most objectionable habits. But we have personally experienced what it is to discuss the point between modest economy on the one side and comfort and the conventionalities on the other. In England, in our opinion, the debate is hardly an open one, if your finances are fairly flourishing and you are going a long journey. Our English railway directors have exerted themselves with creditable success to prevent one's compounding for their lower fares; moreover, independently of the inherent discomfort of the cheaper classes, the frequency of collisions makes it eminently advisable that you should embed yourself in padding as much as possible.

tinent, however, it is different. There in former days, beyond the frontiers of France and Belgium, the ordi-...lier was in the habit of regarding the sumptuous first-class ...s above his humble sphere. To live in conformity with the ...al use of them, one should have secured a suite of apartments ... first floors at the fashionable hotels, and sat down to little ...s served *en particulier*, with flasks of Veuve Clicquot ...loss Johannisberg at one's elbow. It was supposed to be a ...ing maxim of the German railway authorities that only ...es, ambassadors, and English fools took first-class tickets, ... their subordinates were instructed to make arrangements ...cordingly. Now all that is changed. The Teutons have so ...r fallen into the practices of their English visitors that you have ...xcellent reasons for shirking the second class. The second-class ...arriages are more cramped and more crowded than they used to be, and there are disagreeable restrictions upon smoking, without a sufficiency of special compartments for the many who indulge in tobacco. The traveller drives up to the station with the most severely economical intentions. He has gone in for the far-sighted extravagance of fortifying himself with an excellent dinner and an exceptionally good bottle of wine against the hardships of a night passed in the second class. He has sipped his coffee in the sublimity of his exalted resolution, and fillipod himself with a *chasse* of old cognac or curaçoa. In fact, in bracing himself up for self-mortification, he has unseasonably stimulated the sensual habit of body and the luxurious frame of mind. He hesitates on his way to the booking-window, and, hesitating, of course he is lost. He blurts out *Erste classe*, instead of *zweite*, and almost immediately repents his timid resolution. But, having taken the first fatal step, he gives a loose rein to his reckless impulses. Rushing out on the platform, he contemplates the carriages, feeling fastidious about comfortable and uncomfortable corners, and severely scrutinizing the aspect of his miscellaneous fellow-voyagers. He may as well be hanged for a sheep as for a lamb. The extra tariff for a *coupé* is a bagatelle, and so he pays it; and in one of the *coupés* he snugly bestows himself. But there are retributory thorns in the voluptuous cushions. He has been betrayed into the follies against which he had deliberately set his face, and has taken a more hopeless header than he had ever dreamed of. So he sinks for the time in his own estimation, till he is irresistibly prompted to do something for self-conciliation. If he is very much in earnest, he is not satisfied with barren regrets, but decides upon a deed of self-victimization. Declining to spend some coppers on the evening journal, he wraps himself up in his rugs in a glow of reviving complacency, or it is much more probable that he executes himself vicariously. He docks the guard of a half of the honorarium for which that obsequious attendant has been working so indefatigably; or he reduces the gratuities of the porters at his destination, or squabbles with the fiacre driver over the fare. He is at once ashamed of himself, and inclined to brighten up; and if he is happier it is because he is heartily ashamed of himself. But he flatters himself that the infinitesimal saving he has effected may set his mind at ease for the morrow over the sad indiscretions into which he had previously been betrayed.

We have taken a common instance by way of illustration, and in this case the economy has so far been harmless that it merely compromises the offender with people to whom he is scarcely bound either legally or morally. But we are perpetually meeting with exhibitions of a similar weakness in circumstances which are far less excusable and infinitely more foolishly short-sighted. When a man invites his friends to his house he should at least try to make them as comfortable as they are in their own homes. Yet, how often do we come across some trivial piece of parsimony that irritates one far more than it should do, simply because we feel it to be purely gratuitous. You are in a big country house, with troops of servants, and you know that your host has an ample income and lives easily within it. The dinner is abundant to excess, and the service and the cookery leave little to desire. You do not ask your entertainer to give you champagne, and you could very willingly dispense with it. But you are fretted internally towards the point of indigestion when you find that you are being put off with inferior gooseberry, or that you are left stranded high and dry among the *entrées*, after having been served with the frothing of a single glass. You would be content, in default of better, with a cheap and sound claret, but you do object to the acidity of a "Gladstone," especially when it masquerades in a delicate decanter that ought appropriately to be scented with Château Lafitte. Fiery sherry is an abomination, and a quick poison to boot, yet you may be doomed to choose between a dilution of vitriol and falling back on the contents of the water carafe. If you were dining with a poor parson, or a family man who was candid as to the narrowness of his means, you would grin and drink it, or fall back on total abstinence. But when a Dives is eccentrically frugal you feel that he has lured you to his halls on false pretences, and you resent his misplaced parsimony accordingly. So it is with the article of cream, which falls, by the way, more in the department of the ladies; and with the ladies, as we said at the beginning, there are more offences of the kind to be forgiven. We are aware that, in the opinion of connoisseurs, any admixture of cream is deleterious to the fragrance of coffee, and that the flavour of the most delicate teas is best brought out by a faint infusion of lemon. But there can be no question that cream is popularly considered an improvement to the average coffee and tea that are served in ordinary establishments. At all events, every guest should at least have the option of declining it. Yet, as a matter of fact, stinting you of cream is a common form of paltry avarice; and there are houses we have long learned to avoid, and houses too that boast of the excellence of their dinners, where, in place of ignoring milky fluids altogether, they unblushingly condemn you to boiled milk. More cold-blooded still is the vile fashion of fixing a hard and fast date for the first fires of the year. This might be all very well in the tropics, where the transitions of the seasons are absolutely to be depended on, and you know exactly what you may expect when the rains have once set in; but in a subtle and treacherous climate like our own it is a sheer refinement of cruelty. A man of chilly habit comes down of an autumn morning, shuddering under the influences of an easterly wind and a fast-falling thermometer. He congratulates himself as he makes a rush through the cold corridors on the prospect of basking before a genial blaze. To his intense disgust, the chimney-place is coalless, and he has to shiver through a miserable breakfast as best he may, with no prospect of circulating the blood save by violent exercise out of doors. This, of course, is a deliberate outrage that one can neither forget nor forgive, and a well-meaning hostess, with her inconsiderate parsimony, may have alienated a devoted family friend. We use the word "devoted" deliberately; for we maintain that the fault of interrupted relations lies altogether on her side, and not on ours. We are betrayed into a state of suffering which we would have done much to escape, and if the lady had desired to keep herself guiltless, the note of invitation ought to have contained, by way of postscript, a "N.B.—No fires."

We are persuaded that many really generous people are painfully conscious of a weakness which they find it impossible always to overcome. We remember a case in point in the life of the late George Hughes, written by his brother—a charming and unpretending little memoir of a loveable and most liberal man. We are told that Hughes was occasionally sensible of impulses of very inconsistent narrowness, and his habitual treatment for them was to fine himself promptly, by launching out into a piece of apparent extravagance. Smarting under his sensations of regretful remorse, he would buy his wife a diamond brooch or some other costly trinket. That was all very well with a man of easy means; but we should say that with most people the remedy is to be sought rather in watchfulness and prevention than in tardy atonement; and we are sure that we should have reason for personal rejoicing were some of our kindly-meaning friends to lay our observations to heart.

OUR LATEST SOUTH AFRICAN MISADVENTURE.

THE last reverse reported from South Africa will be universally regarded as an inauspicious opening of the new campaign, even when we bear in mind that the misadventure happened at the extreme end of the line from that by which the relief of Ekowe is to be attempted. A convoy of provisions was proceeding from Derby, in the Transvaal, due north of Zululand, to Luneberg, about forty miles to the south, and on the borders of that country, a post under Rowland's command. At the point where the road crosses the Itombe river it is even nearer to the frontier than Luneberg itself. A detachment of the 80th, apparently about one hundred strong, was sent out from Luneberg to bring in the convoy, but was detained for three days on the river owing to the difficulty of getting the waggons across. Sixty men were encamped, with the captain commanding, on the left, or Zulu, bank of the stream, when they were suddenly attacked by an overwhelming force of the enemy, and cut to pieces. Though the alarm had previously been given, they were apparently destroyed without even being able to make any resistance; and any loss sustained by the enemy must have been caused by the fire of the section of forty men who had remained on the opposite bank, and who thereon made their escape to Luneberg, an entrenched post held by a part of the 80th.

The loss of sixty men, although to be deplored when their lives are thrown away to no purpose, does not materially affect the relative strength of the opposed sides; but, coming after the first crushing defeat, it may easily have a very bad effect on the troops. These savages certainly understand the art of fighting in their own country. They do not look to drawn battles, or even to merely winning them; but are satisfied with nothing less than sweeping their opponents completely away, although the intermittent and fitful character of savage warfare is shown in their failure to follow up a success, even when it is complete. Had the hordes triumphant from their victory at Isandula turned on Lord Chelmsford's approaching force, and prepared a similar surprise for him, there is every reason to believe it would have been equally successful. Nor is their omission to do this, and their leaving the English general to resume his retreat to British territory unmolested, to be ascribed to the losses they had suffered; for, except before the entrenched post at Rorke's Drift, there is no evidence to show that these had been heavy; the slaughter at Isandula appears to have been mainly on one side. But this aptitude for turning the advantages offered by the country to the best account, by making these sudden raids on our detachments, renders the issue of the campaign for a time at least very doubtful, even now that the reinforcements have arrived. The whole of our system of warfare, with our slow-moving columns, our ignorance of the enemy's movements, and the need for carrying large supplies to meet our many artificial wants, involves the constant sending of convoys

under small detachments, for large ones cannot be spared; and if these are liable to be attacked unexpectedly, it is not easy to see how they are to defend themselves. An entrenched camp may be very useful when the body to defend it is of considerable strength, but a company or so of infantry could not make any defence of this sort which would be effective against so determined and numerous a foe; and, besides, the object of the convoy will not be accomplished if it halts to entrench itself indefinitely, instead of moving on. Thus far indeed the Zulus have not attempted anything like a flank march or operations in rear of our positions. The camp at Isandula was an advanced post, and the detachment now destroyed was nearer to the frontier than the place on which it was marching. But the Zulus have shown such an unexpected appreciation of the conditions of war that it would be foolish to presume on their not displaying some fresh instance of originality. Henceforward, we fear, until the present relative condition of the two sides has undergone material alteration, the attempt to move our troops about the country in small bodies will have to be abandoned. They must be advanced in large masses—large, that is, by comparison with the bodies which we have had available so far—and the military authority of the general will not extend beyond the limits of his camp. Moving in that difficult country, encumbered with supplies and baggage, in entire ignorance of the enemy's movements, obliged to advance and halt in line of battle, with the fear of another surprise constantly present to the general's mind—with such a slow and cautious manner of going to work the campaign may be spun out indefinitely. There is no visible reason why the Zulus should not be able to elude us as long as they choose. Truly, the contrast between the way in which we started at the outset and our present position would be sufficiently ludicrous if it were not so serious. Of our invading columns, one has not got ten miles into the enemy's country before it is almost cut to pieces, and the other, having penetrated five-and-twenty miles, is straightway blockaded, and that almost within sight of our own frontier.

The force which is going to relieve Colonel Pearson, or rather which should have done so more than a fortnight ago, is apparently composed of the column, some two thousand strong, collected for the purpose in the first instance, containing the 99th and part of the 88th, with the addition of the 57th from Ceylon, and the *Shah's* crew, and now still further supplemented by the 91st and the 3rd battalion of the 60th, a part of the reinforcements from England. The force, which is commanded by General Crealock, may comprise perhaps four thousand Europeans. That the advance was to be made before the whole of the reinforcements arrived is due of course to the extreme urgency of the need of relieving Pearson, who had only ten days' provisions left, and must be relieved at any cost. And probably five thousand men are as many as supplies and transport could be found for in one place; while a part of the reinforcements from England must be needed to strengthen the centre column at Helpmakaar, or rather to constitute a new column there, and a party will also no doubt be sent in the direction of Wood's post at Utrecht in the Transvaal. But five thousand men are none too many for the work that has to be done at Ekowe, albeit it consists in marching about two-score miles on a place plainly visible from the point of departure. The Zulus are now no doubt ready with their plan to intercept the relieving force, and the operation to be successful will require a due mixture of caution and boldness. Happily there is no instance in history of the British army arriving at that state which all the best Continental armies have passed through at one time or another, of being unable to fight at all. But it would not be surprising if recent events were found to have their effect, especially on troops newly landed, and which have only heard of, but not seen, the Zulus, whose prowess has probably lost nothing in the narration. Our troops in New Zealand had at one time distinctly lost spirit, and until we have gained some decided success we must not look for any extraordinary manifestation of dash. One thing would put matters straight at once—a general of genius. In war the effect of genius is hardly to be overrated. We are so little accustomed to see our generals show themselves more than respectable, commonplace men, that we are apt to forget what marvels real genius may work with an army. And a man who should divine the conditions of successful warfare in the novel circumstances now presented, and carry them out, would soon make an end of the business. In the absence of such an apparition among our senior officers, which we have no reason to look for, we must console ourselves by reflecting that we shall now have the aid of cavalry, which ought to give a great advantage against a foe that has none. But too much must not be expected from this accession. The horses will start in bad condition, and their riders will be quite unaccustomed to and inexperienced in the sort of work required of them. It is quite possible, indeed, that the resistance of the enemy may collapse as unexpectedly as it has arisen. It is not unreasonable to expect that a savage race, however capable of sudden efforts, will be wanting in persistence, and that, if a great and successful blow be once delivered, their defence may at once break down. But this way out of our present difficulties is not a thing to speculate upon, and it seems more reasonable to expect that our troops will have a task before them which will require all their energies, while the strongest support of all that could be given them, a general in whom they could have perfect confidence, is denied them. But, if the Government refuse to supply a leader, they would at least do well to be ready with more reinforcements, in reverses.

While deploring our own misadventures, a word about the enemy, who as a nation had done us no sought no quarrel, and who have struck these blows while their country against invasion. If they have the adva numbers, we must remember that they have no firearms wort ing of, and no guns. It has been said that troops cannot stand adays in the open against breechloaders, even when armed ther with the same weapons. But these gallant fellows are ready t our arms of precision with no better weapon than a lance. S determined bravery has seldom been shown; and, when we member that these men are fighting in self-defence, and in quarrel with which they have no concern, it is impossible withhold a feeling of admiration for them, savages and enemie though they be, while feeling, too, what splendid soldiers the would make, if enlisted on our side, for employment against any antagonist.

THE *DAILY TELEGRAPH* ON EASTER.

THE approach of Easter seems always to touch a sympathetic chord in the devout heart of the *Daily Telegraph*. Our contemporary is much addicted to frequenting functions—both Roman and "Ritualistic"—during Holy Week, and especially on Good Friday; and indeed it is partly, we believe, to this pious habit that we owe those striking works on the "Orthodox," "Heterodox," and other "doxical" aspects of the religious life of the metropolis which have been published by Dr. Maurice Davies. In the present instance we are left in some doubt as to how far the *Telegraph*, in its sudden access of devotion, has succeeded in clearly distinguishing between the Easter festival and the penitential season which precedes it. An elaborate leader on "holiday-making at Eastertide" appeared—somewhat prematurely one would have supposed—last Wednesday; and on the same day "our Special Correspondent" devoted more than two columns to "Paris at Eastertide," the alternative title of his article being "Palm Sunday on the Boulevards." We have heard of Protestants of an inquiring turn of mind going to High Mass on Easter Day, and being grievously disappointed at not seeing a donkey driven or ridden round the church during some part of the ceremony, there being a very prevalent impression that this belongs to the Roman Catholic manner of observing Palm Sunday. Perhaps the *Telegraph* and its Special Correspondent were not altogether free from a similar confusion of thought, though the latter is careful to give us the proper name of the day he is describing both in English and French—"Palm Sunday—*le Dimanche des Rameaux*"—and adds for our further information that it is "the first day of Holy Week." But this had not apparently occurred to him till he "had emerged from the North Terminus into the interminable Rue de Lafayette, the Upper Wigmore Street of Lutetia." The fact was then forced on his attention by the streets being "all agreen with branches of box-tree," which are, it is added, in French "*faisceaux* of the *buis bénit*"; and it struck him as unfortunate that we do not have these *faisceaux* in England—we almost thought the *Telegraph* had witnessed something of the kind in English churches before now—or rather that we do not keep our Christmas holly and mistletoe till Easter instead of consigning it to the dustbin. That would, however, be hardly the same thing. But it is time to return to the leading article, which comes before the Paris letter, and deals with our native observance of Eastertide, or rather with what used to be the sports, amusements and customs of our forefathers, of which we are told that "faint relics" only remain, at least to Londoners. In the country "an inherited conservatism" was maintained "if not intact, at any rate in a clear and consistent form." We should certainly be rather surprised to find that some of the customs specified are kept up, even in the country, "in a clear and consistent form," whatever exactly that may mean—for instance, "the custom of rolling young couples down Greenwich hill." Still more wonderful is the next ancient custom described, though it is not obvious how it can be kept up out of London. "It would greatly astonish the Dean of Arches and the Ecclesiastical Courts"—why it should astonish Lord Penzance more than other people is not explained—"if the Archbishop of Canterbury and other learned prelates were discovered playing at hand-ball on Easter Day in the gardens of Lambeth Palace, their opponents being the inferior clergy and the Ritualists for the time being." Whether the solemnity of spirit induced by the observance of Lent is supposed to have prepared the minds of the Archbishop and the Ritualists for this amicable interchange of amenities we do not know, but what is peculiarly perplexing is the statement immediately following that "such distinctly used to be the custom, if we are to believe the historians of old times." How it should have been the custom, distinctly or indistinctly, for mediæval Archbishops to play at bowls with the Ritualists in Lambeth Palace gardens is one of those things "no fellow can understand," until it is "distinctly" explained how the Ritualists, who are commonly reputed to have come into existence less than twenty years ago, can have attended, say, Stephen Langton's garden parties at Lambeth.

It is a great descent from the sports of mediæval primates and unborn Ritualists to hot cross buns. But the *Telegraph* is afflicted to

these degenerate days "the baker and confectioner ...oyal to Easter traditions"—that is, we presume, in ...For we have already seen that there are rural retreats ...newly-married couples are still rolled down the hill at ..., and the writer at once goes on to console us with the ...tion that "there is still a notion"—unfortunately in this case ...not "distinct" like the early Ritualistic hand-balls, but "half ...re and indefinite"—that it is unlucky not to wear new ... Easter Day. The indefinite notion appears, however, to equal to the occasion, and produces a very distinct and highly ...torial result, as avouched by the independent testimony of the ...orsetshire labourer: "Laste Easter I put on my blue Frock ...uoat, the vust time, vier new, Wi yaller buttons, aal o' brass, That glittered in the zun like glass, Bekiaze 'twer Easter Zunday." There is therefore a modest survival of lay ritualism, anyhow in Dorsetshire, connected with this sacred season. But there was till lately a survival "in the suburb of Twickenham" of a more directly ecclesiastical kind, which we can hardly hear without a pang of regret "has been abolished as degrading and superstitious by Act of Parliament." It seems that two great cakes were divided on Easter Day among the young people in the church. Why this practice should be superstitious we hardly see, nor is it likely that the young people—in other words, we presume the school children—felt any more degraded by their slice of the big Easter cake than by the Christmas buns which it is permissible to hope that no Act of Parliament has yet deprived them of. Another old custom may be fairly allowed to be more honoured in the breach than the observance, if, that is, we are to gather from the rather peculiar wording of the following sentence that such a custom formerly existed. "It is scarcely probable that the metropolitan police would permit a grand scramble for coppers thrown from the top of Paddington Church steeple; so it happens that antiquity dies at the command of order and increased population." There is something truly tragical in the idea of antiquity dying at the command of increased population; it should inspire archæologists with a respectful sentiment for the memory of Malthus. But we must find room for an interesting relic of antiquity which is said to have lasted into the present century, and indeed, in the more prosaic and secular form of tossing in a blanket, may be not wholly strange to the scholastic experience of some of our readers:—

At the beginning of the present century a learned antiquary relates how he happened to be sitting alone in his room on Easter Tuesday, at the Talbot Inn, Shrewsbury, when he was surprised by the opening of the door, and the sudden and unannounced entry of all the female servants of the establishment. They brought with them an armchair, lined with white, and decorated with many-coloured ribbons and favours. The excellent old gentleman, taken aback by these extraordinary proceedings, mildly asked what the women wanted to do. They answered very promptly that they only wanted to "heave him," and as it was the custom of the place they doubted not that permission would be granted. On which the excellent chronicler remarks, with much simplicity and considerable common sense, "It was impossible not to comply with a request very modestly made, and to a set of nymphs in their best apparel, and several of them under twenty." So they promptly seated the old gentleman in the armchair, "heaved" him without more ado, and concluded with kissing him all round. When the object of all this interest had paid a customary fee, the ceremony was complete, and the decorated maidens departed to discover another victim. But in Warwickshire, Manchester, Warrington, Bolton, and other places devoted to "lifting" or "heaving," the fun of the diversion was not confined alone to the female sex. Easter Monday and Easter Tuesday were known by the name of "heaving days," because on the former it was customary for the men to heave and kiss the women, and on the latter for the women to retaliate on the men, though it is slyly observed by a waggish commentator that "the women's heaving day was the most amusing."

A still older authority relates that it was a custom on Easter Tuesday for wives to beat their husbands, and on the next day for the husbands to beat their wives. The Wednesday part of the ceremony has unfortunately survived in full force to our own times, and it would probably be a relief to many wives—to say nothing of police magistrates—if it were confined to any one day in the year. We cannot follow the *Telegraph* through its learned and minute disquisition on the component elements of "tansy cakes," "pudding-pies," and Easter eggs; but it was new to us that "the religious significance" of the latter delicacy is connected with the deliverance from the Deluge, nor did we even know that it was at Easter the Ark rested on Mount Ararat. Perhaps this may be one of "the ingenious and graceful fancies in connexion with the sun shining at Eastertide which," like the two great cakes at Twickenham Church, "were exploded as superstitious," though not, so far as our informant tells us, by Act of Parliament. But it is some consolation to be assured that "schoolboys"—the schoolboy of the *Telegraph* is hardly less serviceable than Lord Macaulay's, and this is by no means his first appearance in the article—unconsciously preserve one of these exploded superstitions "when they place a glass of pure water in the open air and see the reflected sun on the tremulous motion of the liquid." We were unaware that schoolboys at home for the Easter holidays were given to this certainly very innocuous form of diversion, but if they are, it may perhaps be hoped that "the scientific men of to-day" will be content to let them enjoy it in peace without ruthlessly "exploding" either the superstition or the wine-glass.

We have already intimated that the Paris Correspondent of the *Telegraph* did not seem very clearly to distinguish between Palm Sunday and Easter Sunday, and on closer inspection of his letter we are half afraid that his indistinctness of view may be explained by the fact of his not having on this occasion gone to church as usual. He suspects that in England "the last week in Lent"—which from the date of his letter ought to mean the week before Palm Sunday—"left nothing to be desired in the way of devout observance"; but he complains with painful emphasis of Palm Sunday having been "socially intensely dull and dreary" in Paris. Of its religious observance there he speaks with a vagueness which hardly recalls the glowing and graphic delineations to which we have been accustomed in former years. To be sure he keeps clear of the detailed eccentricities of ritual to which writers who do profess to have been present have sometimes committed themselves—as for instance of "an acolyte suspended during mass from the roof of the chancel," or "a thurifer carried in by two surpliced choir-boys and reverently placed upon the altar." But still it is rather disappointing, when we want to hear something about the famous Lenten preachers, to be told merely that "there were matin and vesper sermons by friars of great oratorical eminence at Notre Dame"; especially as "matins" is not a service very commonly performed in foreign cathedrals, and the Lenten Conferences at Notre Dame are always preached at a separate hour quite independently of any of the ordinary services. Nor is one's confidence in the personal testimony of the writer enhanced by the further statement that "the fires of Lacordaire and Hyacinthe yet live, *it is asserted*, in the ashes of the French pulpit." The juxtaposition of two preachers of such very unequal merit as Lacordaire and Hyacinthe is a little odd, and certainly if "the fires" of the former "yet live," or, in plain English, if any orator of at all the same mark is to be heard in the French pulpit, it would be only kind to tell us at least his name. Instead of this the Correspondent goes on to explain himself thus—*obscurum per obscurius:* "in the religious journals *you read* of nascent Massillons and coming Bourdaloues, of Fléchiers hitherto unknown to fame, and of a new Bossuet hourly expected." Very likely you do; but will not our enterprising Special Correspondent be good enough to go to Notre Dame and hear them, and give us the benefit of his experience, which, we cannot doubt, would be more valuable than what "you read in the religious journals." Meanwhile it is due to him to say that he has done something else for the public benefit. He has carefully scrutinized the bill of fare—*maigre* fare, that is—at "Bignon's" and "Durand's," and is in a position to advise his readers how to order their dinner there on Maundy Thursday or Good Friday. "It will not be at all *mauvais ton*"—by which we understand that it will be a graceful concession to local usage in what he calls "reclusive circles"—to eat no meat on these days, and it is evident that the Correspondent has nobly sacrificed himself for his countrymen by making the experiment in his own person. He is able accordingly to assure them that they "will be able to get on tolerably well, gastronomically speaking, without partaking of either butcher's meat or poultry," and he even proceeds to specify in detail, or to use his own happy phrase, "to formulate" "a Good Friday *menu*, highly recommended in the most reclusive circles of the Faubourg St. Germain," which contains neither milk, butter, nor eggs, but which "a celebrated gastronome" nevertheless pronounces to be very good. He also went to the Louvre, where he tells us that the crowd was quiet and well behaved; but he did not go to St. Germain l'Auxerrois or St. Étienne du Mont, for he only "thinks" that there were no crowds there at all. And having drawn this contrast between the crowded picture gallery which he visited, and the presumably empty churches which he did not visit, he ends with the very unedifying reflection that "there are features in the Continental Sunday"—*i.e.* apparently the preference of sight-seeing to church-going—"which might on consideration be condoned." We have a right to expect better and more Sabbatical things from the Correspondent of the *Daily Telegraph* at this solemn season of the year. But there is yet balm in Gilead. He does not close his letter without expressing an intention of "endeavouring to take note of some of the frequent and superb offices at the Madeleine before Easter Eve." Let us hope that this pious though somewhat faltering resolution has been carried into effect, and that to his excellent advice about the Holy Week *menu* at Bignon's he will henceforth be able to add suggestions equally felicitous and discriminative about the "superb" functions of the Madeleine.

JONES AND THE DUCHESS

A LAWSUIT between a servant-maid and a duchess must surely tend to strengthen the hold of the aristocracy upon the affections of the people. Assertions to the effect that "rank is but the guinea stamp," and that "a man's a man for a' that," are commonly made with an excess of emphasis that implies some lingering doubt as to their correctness; but that the wife of a powerful nobleman should be subject to the commonest form of domestic annoyance is a proof of kinship with ordinary humanity which will carry conviction to every heart. Nor is there any danger lest this one touch of nature should at all diminish the respect that is felt for the great. To the toiling British housewife the discovery that even duchesses are not exempt from what has been called "the greatest plague of life" will undoubtedly serve as a source of happiness and consolation; but such evidence of community in suffering is not likely to be interpreted as a sign of failing power in the aristocratic class; rather will it be welcomed as a mark of gracious condescension destined to beget a

quickened sense of loyalty and respect. The Duchess of Westminster, therefore, deserves the gratitude of her peers as well as the thanks of the public for consenting to appear in the character of the outraged British matron. There were no doubt other ways in which the dispute between herself and her maid Jones might have been adjusted. The injury to Jones's honour which was the subject of the action tried before Baron Pollock could not, we may assume, have been beyond the reach of material satisfaction, and we can readily believe that it would have been personally more agreeable to the defendant to settle the case out of court by the simple device of paying the damages which Jones and her friends thought fit to claim. But the Duchess of Westminster, with commendable courage, has preferred to sacrifice her personal convenience for the sake of supporting the legitimate rights of mistresses against their servants, and her decision is all the more praiseworthy seeing that the case is not devoid of certain humorous elements, which would seem to show that the Duchess somewhat tardily arrived at a true appreciation of her responsibilities in the matter. Indeed the whole course of her relations with the remarkable Jones is delightfully typical of the somewhat haphazard system by which English servants are transferred from one household to another, and the document containing the alleged libel against the maid is in itself almost a perfect specimen of that peculiar epistolary style which ladies employ when they are answering inquiries as to the character and qualifications of applicants for domestic service.

According to the story made out by the defendant's counsel, the maid Jones discharged her duties for some time without reproach, and it was only when she received notice to leave her situation that she developed any morbid characteristics. The Duchess, it would seem, desired to have a maid who could discourse with her in foreign tongues, and it was Jones's misfortune rather than her fault that she could not satisfy these new requirements. No sooner, however, was she made acquainted with her employer's intentions than, as we are told, she began to betray by unmistakable signs that her mind was unhinged. She took to reading tracts, and she would not go to bed. The housekeeper at Cliveden, who was with her at this time, reports that "she saw her reading a tract about twelve o'clock at night, and advised her to put it down and go to bed. She was trying to find something in it, but could not." Jones is probably not the first person who has endeavoured without success to find something in a tract, and her failure in such a quest would not of itself offer convincing proof of insanity. But her conduct altogether was so alarming that finally the doctor was called in, and upon his advice Jones's brother was sent for, and under his care she was removed to her own home. Subsequently she received from the Duchess considerable presents in the shape of money and clothes, and for these marks of kindness she showed her gratitude by taking rooms in the neighbourhood of Cliveden in order, as she took occasion to explain, that she might have an opportunity of annoying her late mistress. In fact, her conduct was such that the servants, both at Cliveden and in London, were at length instructed not to admit her into the house. At this point, according to common notions of justice, it might fairly be assumed that the relations of Jones and her mistress would finally cease. Having abandoned the study of tracts for the composition of abusive letters, the servant had obviously no further claim upon the indulgence of her employer; and yet it must be acknowledged as profoundly characteristic of the conditions of modern domestic service, that Jones should have seized this very moment to apply for a character to establish her in a new situation. And what Jones had the audacity to demand, the Duchess of Westminster, with the common frailty of mistresses, had the weakness to grant. Lady Huntly happened at the time to be in want of a maid, and who could be so fitting as Jones to fill the vacant place? It is true that Lady Huntly, if she had been questioned on the point, would probably have expressed a preference for a maid whose mind could be warranted sound, and who would not occupy her leisure by unpleasant attacks upon her mistress. But such little caprices of taste must not be indulged, and accordingly, when the Duchess met Lady Huntly at a ball, "she did not say a single word to prevent the plaintiff getting the situation." The reasons which the Duchess offered for this strange reserve will, we feel sure, win the sympathy of nearly every matron throughout the kingdom. They do not appeal with any force to the logical faculty, and may possibly for that reason make but an imperfect impression on the male mind; but they are eminently feminine, and we may add eminently human, and their sufficiency is constantly admitted in practice, if not in theory. Referring to her own experience of Jones, she naïvely observes, "I did not wish to put my relations to the same inconvenience that I myself had been put to with regard to her. Of course I thought more of their convenience than that of other people. I would not recommend her to them, but I would to others." This general principle receives a somewhat startling illustration when it is applied to a case like the present, and Jones's mental weakness having again displayed itself in a form no longer mitigated by religious enthusiasm, even the Duchess of Westminster, in spite of her desire to give this interesting creature a chance, felt that it was time to consider her responsibilities in regard to the question of servants' characters. Unfortunately, however, a newly acquired virtue found an unlucky occasion for its display. Having long sought without success to help Jones at the expense of her employers, she now endeavoured with no less signal failure to benefit an intending employer at the expense of Jones. The lady who now came forward for the character of a maid appears to have been utterly the reception of a sincere reply. If the Duch chosen to repeat the stereotyped document which accustomed to despatch with their departing servants, we may suppose, would have been given. The youthful may be remembered, after musing over the glowing trib affection inscribed upon the tombstones in a churchyard, wondering where the bad people were buried; and a like perusal of the characters commonly given to servants woul bably have suggested to the humourist an inquiry as to the des in this world of unfaithful or incompetent servants. But Chapman, the lady who now applied for Jones's character, can be ranked as a humourist. She was apparently shocked at t bare suggestion that any servant could be other than admirabl and she accordingly at once confided to Jones the contents of th letter she had received. The defendant's counsel commented with some warmth upon this proceeding, and it has no doubt been disastrous in its consequences. It is, however, only charitable to suggest that Mrs. Chapman may have acted from a strict sense of social etiquette. She may possibly be under an impression, which custom has done much to confirm, that there is only one pattern for a servant's character, and that it is unbecoming on the part of a mistress to attempt any departure from what is usually received. To a mind so constituted it would possibly have been easier to endure those little eccentricities of conduct which Jones might have developed in her service than to tolerate such a breach of the proprieties as is involved in the giving of a faithful and accurate portrait.

On the whole, the result of this case, although it has disappointed the hopes of Jones and her friends, can scarcely be regarded as encouraging to mistresses. The number of ladies who would have the courage to do what the Duchess of Westminster has done is comparatively small. The tendency to an undue reserve in regard to servants' characters is already strong, and it is certainly not likely to be lessened by the reflection that the first essay in sincerity will be followed by an action for libel. Even to the defendant in the present case, although she has gained a verdict, the thought will possibly occur that, if she had done unto Mrs. Chapman as she did unto Lady Huntly, she might have saved herself a great deal of trouble and annoyance. But, on the other hand, mistresses may take courage from the fact that persons like Mrs. Chapman are happily rare. To most people a bad character would be more acceptable than a bad servant, and even if the letter containing such a character gave evidence of prejudice or bias, there are fortunately few women who would be so imprudent as to communicate its contents to the servant herself. In the interests of the community it is of the utmost importance that this kind of imprudence should spread no further. The well-being and right conduct of every household are largely in the hands of servants, and it is next to impossible to devise any system which could free us from this kind of dependence upon those we employ. It is therefore an urgent necessity that masters and mistresses should deal frankly with one another; and fortunately for society the law clearly recognizes the confidential character of the communications that pass between them. In the present case it would seem that an attempt is to be made to appeal against Baron Pollock's ruling in this sense, but we can scarcely believe that any such appeal will be seriously entertained. Even with the present liberty to speak the truth, the confidences are by no means too full, and if any kind of restriction were set by the law, the whole custom of giving and receiving servants' characters would degenerate into an empty farce.

THE UNIVERSITY BOAT-RACE.

THE Oxford and Cambridge Boat-race excites rather more interest than a small war, and perhaps rather less than a great crime. It appeared not unlikely a week or two ago that a British army might be on the point of marching on Cabul, but public feeling, as shown by the press, seemed far less stirred about the possibility of an event which would have excited the attention of all Europe than it was about the relative rowing powers of an Oxford and a Cambridge eight. If, however, during the latter part of March some horrible criminal had been awaiting his trial or lying under sentence of death for a deed of exceptional atrocity, it is not altogether improbable that accounts of it, of his behaviour in prison, and of his remarks to those who had the privilege of approaching him, would have been deemed even more worthy of prominence in the newspapers than the daily reports of the practice of the crews. No less absorbing subject, however, would have much chance of occupying people during the fortnight which precedes the eventful day on which the two crews pull from Putney to Mortlake. The coming struggle is talked about by everybody, and some anxiety respecting it is supposed to be felt by all Englishmen who do not suffer from that grave moral deficiency, a want of sympathy with a noble sport. For some time before the contest a large number of painstaking persons belonging to all ranks of society journey down to Putney, and in cutting March winds wait patiently by the riverside until such time as they may be blessed with the sight of the crews. All that these latter do is as carefully watched and recorded as if they were preparing to do battle like the champions of "The New Ordeal." The colours of the two Universities become universal, and the shops, from those of Piccadilly and St. James's Street downwards, are made splendid with dark and light

and more concentrated does attention become as the ...hes; and, when it comes, the profound devotion of ...en to the cause of rowing is shown by the huge crowds ...k the banks of the Thames to witness a contest which is to prove extremely dull to most of them, and to terminate in ...ner that has been foreseen for some time.

...at the reason for this enthusiasm is it would be extremely ...it to say. An Englishman's fondness for manly sports would ...ally be held to account for it; but this can hardly be admitted ...he true cause, for how does it happen that Henley Regatta passes ...th comparatively little notice, and—even when the greater dis...nce from London is fully allowed for—attracts but few people com...ared with the race from Putney to Mortlake? The struggles at Henley are, to ordinary spectators, much more interesting than this contest usually is; and there is a great variety of them; but society does not become profoundly moved about their probable result as the regatta week draws nigh. The pride which Englishmen feel in their two ancient Universities, and the pleasure which is therefore taken in seeing their most vigorous sons contend together, is sometimes referred to as the cause of the popularity of the boat-race; but any one who knows what the crowd on the towing-path is, and thinks that those who for the most part compose it have any deep attachment to Oxford or Cambridge, must possess very singular ideas respecting the feelings of the London rabble. Probably the only reason which can be discovered for the presence in such large numbers of this section of the population, and of no small proportion of their betters, is that they are following a practice which has sprung up no one exactly knows how. Amongst roughs it has certainly become the fashion to attend the University boat-race. In society it has become much more decidedly the fashion to attend it than it used to be. Both the roughs and many of the ladies and gentlemen who go would find it very difficult to give any other reason for going than that they are following the general example.

That what most people usually see on these occasions is of small interest can hardly be denied. Now and then there is an exceptional struggle like that of 1877, but very frequently the contest is virtually over at a comparatively early period. Those who see the winning boat gradually head the other no doubt see what is well worth taking some pains to witness; but the tens of thousands of spectators who view the latter part of the race have merely the sight of one eight rowing some distance astern of another without the slightest chance of overtaking it. It shows strangely how little people really care about the rowing that the part of the river which is most sought is that where the likelihood of anything like a struggle is extremely small. For some little distance above Barnes Bridge the throng is usually enormous; but very often when this portion of the course is reached by the boats, the race is as clearly decided as though they had passed the winning-post. It can hardly be the traditional love of Englishmen for trials of speed which attracts them to a place where they behold, not a trial of speed, but vanquished combatants humbly following in their conquerors' wake.

That the combatants themselves have never done anything to encourage the exaggerated popularity which the race has acquired, and have shown no liking whatever for the notoriety which has been thrust on them, need hardly be said. University oarsmen cannot prevent their contest from having extraordinary attractions for the rabble, or prevent newspapers from drawing attention to their preliminary work; but they have never, in any way whatever, aided those who persisted in writing about them, and they have shown, once in a very marked manner, that the publicity given to all they do is extremely distasteful to them. This was naturally to be expected from English gentlemen who had no desire to see themselves advertised and to be stared at by gaping multitudes every time they went out for practice or exercise. As was also perhaps naturally to be expected, their wishes have not been in the smallest degree attended to; and if, as seems not impossible, University crews find that the consequences of the popularity of the boat-race are almost intolerable, they will have to do more than snub intrusive admirers, who endure their rebuffs with perfect complacency. The expediency of abandoning the Thames course, to which attention has several times been drawn, may perhaps again be considered, and those who have to decide the matter will certainly not be blind to the advantages which will be gained by choosing waters at some distance from London as the scene of the contest. One fact connected with the recent race certainly constitutes a reason for such a change. It appears that, owing to the heavy odds which were laid on Cambridge, and to the amount of betting of which the race was the subject, the Presidents of the two boat-clubs were not without suspicions that there might be foul play, and agreed in consequence that, in the event of one of the boats being impeded, the race should be rowed over again on the Monday. Now the fact that such an agreement had become necessary shows how much betting there now is about the race; and the advisableness of putting a stop to this, and of curtailing so far as possible the activity of the betting fraternity, must be manifest to all. If the contest took place at a considerable distance from London it would not, in all probability, excite so much attention as it does now, and as a necessary consequence there would not be so much betting about it.

No change, however, is hastily made in England; and though there are very good reasons for giving up the present course, it is but little likely that this will be deserted for a considerable time to come. There would, indeed, be some cause for regret if the contest of Saturday last closed the long series of races which have been rowed over the bight of the Thames which lies between Putney and Mortlake. It was but a very poor match, and would be a tame ending to so many conflicts. Both eights were below the average, but unfortunately they were not below the average in anything like the same degree, there being a marked difference between them; and the result of the struggle was foretold with even greater certainty than usual. One writer predicted with almost absolute accuracy the distance which would separate the two eights at the end of the contest. Little interest could be attached to a so-called race the whole course of which could be so clearly foreseen. The only thing which could have equalized the chances would have been the opportune indisposition of one of the Cambridge crew; but unfortunately the Cambridge crew obstinately persisted in remaining perfectly well, and took their seats in the boat with as much certainty of winning as can be looked for in any of the affairs of life. When, after the period of waiting which, according to some unwritten rule, one crew always thinks it necessary to inflict on the other, their rivals appeared, and a start was made, the first few strokes showed that the prophets had been right, and that no doubt as to the result could be hoped for. Many and many a time has it happened in these contests that the weaker crew has by a desperate effort gone ahead at the beginning and kept ahead for a time; but on the present occasion nothing of the kind occurred to give room for even temporary uncertainty. The Cambridge boat drew away from the other in the first few strokes, and, by the time that two furlongs had been covered, was nearly clear. Up to Hammersmith bridge the Cambridge eight continued, in spite of a vigorous effort on the part of the Oxford crew, to improve their position, and passed the bridge, which is a mile and three quarters from the starting place, about three lengths ahead of their antagonists. Further on some trifling difficulties were encountered by the leading boat. The wind, which was S.W. by W., had raised off the "Doves" that ripple which it is the fashion to call "a sea," and this was for a little time more felt by the Cambridge than by the Oxford crew, the latter having a larger boat. The disadvantage to the former was, however, but very small; and no marked difference in the relative positions of the two boats occurred after Hammersmith Bridge was passed. Oxford twice made a slight gain, which in both cases was shortly lost. The Cambridge eight did not, as winning eights have so often done, row away from the other, and beat them by many lengths, but were either not anxious or not able to improve their lead, and passed Barnes Bridge and the winning-post only a little more ahead than they had been before the first half of the course had been covered. The race, though not won by a great interval, was as one-sided as any race could be, and tame and uninteresting in proportion. It may, however, be memorable on one account, as it has been the means of bringing to light a fact of singular interest, to which attention should certainly be given. There is apparently no limit of time for University oars; that is to say, there is no rule which says that, after a certain number of terms, a man shall not pull in the University eight. Heads of Houses and resident Fellows would therefore be competent to take part in this contest if only they could qualify themselves for it; and let it be hoped that they have learnt this fact with pleasure as well as with surprise. With regard to the first-named of them, it is to be feared that they are not very likely to attempt to avail themselves of the right which it seems they possess. Some feelings of prejudice, age, and perhaps too heavy a burden of flesh, will probably prevent Doctors of Divinity from attempting to gain admission into the eight; but the possibility of getting into it might be worthy of the consideration of some Fellows. Not a little might a college add to its popularity by possessing a boating Fellow and Tutor who would annually take his place amongst the crew, and who would certainly attract as pupils and followers many of the serious and thoughtful young men who are laudably ambitious to attain the highest honours which can be hoped for in an English University.

THE BESANT CASE.

WHERE the custody of infants is concerned the Court of Chancery is as nearly omnipotent as it is given to anything human to be. When Mrs. Besant separated from her husband, and the husband covenanted by deed, for valuable consideration, that for eleven months in the year she should have the sole custody and control of her infant daughter, free from interference or interruption on the part of the father, she probably thought that the law had spoken its last word. In Mrs. Besant's own opinion the effect of this arrangement was to place her, with respect to the infant, in the same position as the father would have been in if he had not executed the deed of separation. The Court of Appeal, which gave judgment in the case on Wednesday, held that this contention was, as a matter of course, untenable. No such substitution or delegation of a father's rights and powers is possible by English law. This, however, was merely said by the way. It was not necessary for the Court of Appeal to upset Mrs. Besant's contention. All that the Judges thought it necessary to do could equally be done if that contention were admitted. Even assuming, said Lord Justice James, that the deed of separation created a personal disability in

the husband to remove or procure the removal of the child from the custody and control of the wife, the child is only placed in the position of a fatherless child. Let it be granted that Mrs. Besant has got Mr. Besant entirely out of the way, she cannot claim to have done so more entirely than death would have done. She is at best in the position of a widow left in charge of an infant child. Probably when the deed of separation was executed, Mrs. Besant would have been quite content with this description of her relationship alike to Mr. Besant and to the child. She had not then made acquaintance with the Court of Chancery, and the real effect of the deed was for certain purposes to substitute the Court of Chancery for Mr. Besant. As soon as this is understood, the process of which Lord Justice James was on Wednesday the exponent becomes perfectly clear. The Court of Chancery acts in regard to fatherless children coming within its jurisdiction on certain well-settled principles. One of these principles is that it is the duty of the Court to take care that a fatherless ward must be brought up in the religion of the father. "Where the infant is of sufficient age and intelligence to have received and formed, and has received and formed, other religious impressions and convictions, the Court shrinks from the consequences of any attempt on its part to disturb them." But this is the only exception to the rule, and even this is an exception which the Court is very unwilling to recognize. The application of this principle to Mrs. Besant's case is exceedingly simple. She claims the custody of her child in virtue of a deed executed by Mr. Besant. But this custody must be held subject to the same restrictions as it would have been subject to if it had devolved upon her in consequence of Mr. Besant's death. Foremost among these restrictions is the obligation to bring the child up in Mr. Besant's religion, and this obligation is one which Mrs. Besant, by her own admission, is conscientiously unable to discharge. Mrs. Besant holds opinions which are distinctly anti-Christian, which indeed are opposed to every kind of religion. More than this, she considers herself bound to teach and promulgate these opinions in every way that is open to her. It is impossible, therefore, that the Court when appealed to should leave the child in her custody. Mrs. Besant is bound by her conscience not to bring up the child in Mr. Besant's religion; the Court is bound to take care that the child is brought up in Mr. Besant's religion. It happens that Mr. Besant's religion is the Christian; but the principle would equally apply if he were a Jew or a Mahommedan. The father being out of the way, whether by death or by his own act does not matter, the Court becomes the real guardian of the infant, and must perform its duty accordingly. Whether this state of things is a desirable one is of course another question. It is quite arguable that, if the father is willing to allow the child to be brought up in the mother's religion, he should be allowed to make a binding covenant to that effect. But this is a matter for the consideration of Parliament, not of the courts of law. It is a well-understood point that, as the law now stands, the utmost effect that can be claimed for such a covenant is that it puts the child in the position which it would be in if the father had died, and this is a position in which the Court of Chancery will take care that it is brought up in the father's religion.

The judgment did not turn wholly upon the religious aspect of the case. The child of whom Mrs. Besant claims the custody being a ward of Court, the Court had to consider the force of certain moral reasons which were alleged to show that Mrs. Besant was not a proper person to have the custody of a daughter. These reasons were, of course, the fact that she has been found guilty by the verdict of a jury of writing or publishing a book "calculated to deprave public morals," and that, on being asked by the Judge who tried the case whether she would undertake to discontinue such publication, she refused to do so. The Judges of the Court of Queen's Bench held that the jury were right in their condemnation of the book, and the Judges of the Court of Appeal are of the same opinion. "It is impossible," said Lord Justice James, "for us not to feel that the conduct of the appellant in writing and publishing such works is so repugnant, so abhorrent, to the feelings of the great majority of decent Englishmen and Englishwomen, and would be regarded by them with such disgust, not as matters of opinion, but as violations of morality, decency, and womanly propriety, that the future of a girl brought up in association with such a propaganda would be incalculably prejudiced." Mrs. Besant holds that these feelings are mere unwarranted antipathies which will disappear with the progress of enlightenment. It may be so; and if it is so, she may be sure that the Court of Chancery of that day will be prompt to give effect to the change. But it is not the function of the Court to lead public opinion in these matters. It has simply to take public opinion as it finds it, and to consider whether, public opinion being what it is, the future of a child brought up in ostentatious opposition to it will or will not be gravely and irretrievably injured. When this test is applied to Mrs. Besant's case there can be no doubt as to the answer. "If the ward were allowed to remain with the mother it is possible, and perhaps not improbable, that she would grow up to be the writer and publisher of such works." In the opinion alike of the Master of the Rolls and of the Court of Appeal that is a future from which a child ought to be protected, and the only way of protecting her is to remove her from her mother's custody. Even Mrs. Besant would probably admit that an infant daughter might properly be taken away from her mother, supposing that this mother advocated prostitution or infantic[illegible] and praiseworthy practices. In the opinion of the [illegible] rity of Englishmen and Englishwomen there is no [illegible] able difference between this and the kind of advocacy to [illegible] Mrs. Besant has devoted herself. It is only natural, then, that a Court which has to consider the interests of a child will have to live in a country in which the majority of the [illegible] lation hold this view should decree that it must be taken [illegible] from its mother. If Mrs. Besant can convince her country[illegible] that they have formed a wrong estimate of the moral tendency [illegible] her teaching, she may renew her application with a differe[illegible] result. It must be owned, indeed, that this is but a worthless con[illegible] cession, inasmuch as, long before Mrs. Besant can hope to succeed in her great enterprise, her daughter will have ceased to be an infant. In the interval she must console herself as she best can with the reflections common to martyrs and prophets in all ages. We can only wish, for her own sake, that she were a martyr in a better cause.

AN AMERICAN WALKING-MATCH.

NOT long ago we had occasion to comment upon the senseless feat attempted in England by Weston, the American pedestrian. Since that time the walking mania has reached its climax in America. It is at least to be hoped that no lower depth of folly can be reached than that which is shown in the contest which has taken place at Gilmore's Garden, New York, for a champion belt provided by Sir John Astley—a contest which, according to the *New York Herald*, has kept two continents in a constant state of excitement, and which has been the occasion for various disgraceful outbreaks of ruffianism among the free and enlightened audience assembled to witness it. The competitors in "the great walk," which lasted a week, were four in number, and the prize was won by one Rowell, an Englishman. When it began, "the thousands who obtained seats on Sunday night, not content to sit quietly and watch the four men begin their long journey, stood on tables and chairs, and even on one another's shoulders. The result was broken tables, demolished chairs, and personal collisions"; and the *Herald* goes on to record with honest pride that the representative of Sir John Astley held up his hands in wonderment, and exclaimed, "A great sight! a wonderful people!" With true devotion to his trade, the *Herald* reporter obtained detailed information about the internal condition of the four candidates, which we may be pardoned for not reproducing, and noted with evident satisfaction that the spectators even on the first day of the race "seemed beside themselves, and ran and shouted and yelled." This was nothing at all to what came later on, but it was not bad by way of a beginning. On the table inside one of the candidates' cottages "stood an immense basket of flowers, the gift of Mr. Jacob G. Bebus, and beside the basket was a neat banquet which came from Miss Bartel." In this way began "the most remarkable contest known in the history of athletic sports either in this country or in Europe." Whether so stupid, dangerous, and brutal a performance as this trial of human endurance ought to be ranked among athletic sports is perhaps an open question. No doubt it afforded a good deal of sport to the people who saw it, and so did throwing stones at frogs to the boys in the fable.

Very early in the race one of the competitors was completely knocked up, and towards its end another of them whose strength was all but worn out presented a shocking appearance, which the *Herald* is of course careful to describe in detail for the benefit of those inhabitants of two continents who were not fortunate enough to see it for themselves. During the contest various pleasing and exciting incidents took place. An overcrowded gallery broke down and injured many persons, and a police officer distinguished himself by walking about amongst the crowd "clubbing" inoffensive people. In contrast to the sombreness of these incidents were the profuse gifts of bouquets showered upon the walkers, the constant popping of corks at the drinking-bars, and the clouds of tobacco-smoke which, in defiance of regulations, wreathed themselves about the building, and produced a most injurious effect upon one of the candidates. All these, and many other exciting and picturesque occurrences, were recorded day by day with praiseworthy accuracy by the "knight of the quill," as he calls himself, who reported this great contest for the *Herald*. But we may be excused for leaving aside the daily record of the match in order to come to the noble and soul-stirring scene which took place at the end. Early in the last day of the race "the seats were almost deserted, and there were no more than four hundred persons on the promenade. These were, however, about as evil a collection of men as is often seen in New York." Rumours had been going about for some days before that foul play would be employed to prevent the Englishman from winning, and it was reported that certain "deeply-dyed scamps," who had bet heavily against him, had "introduced into the Garden a gang of desperate roughs in order to cause him to give up the contest whenever it should become certain that he was the destined winner." Up to the last day, however, these persons had been held in check by the presence of the police, and of an enormous concourse of people who had not yet acquired a taste for witnessing brutal assaults, though they liked to see their fellow-creatures tramping painfully round a track hour after hour at the risk of ruining their constitu-

was in one case the result. However, the roughs did t their opportunity. Their ringleader "was for several spicuous for his insulting behaviour towards Rowell. He led him foul names and threatened him right under the f Captain Williams's police officers, who had lifted no o interfere." At six o'clock, having with touching frank- nnounced that he had bet heavily against Rowell and "was d to get square," he began to dog the Englishman's footsteps, ng him most horrible names and shaking his fist over the rails is face. Finally, encouraged by the supineness of the seventy eighty policemen who were present, he jumped over the ils and pursued Rowell. "The scene in the Garden," the *Herald* justly observes, "was disgraceful to the American name." Fortunately some respectable people among the crowd interfered and insisted upon the man being removed. He returned to the charge, however, came upon the track again, and proposed to his followers that they should kill "this ——— of a Briton." At this point the ever-ready *Herald* reporter made his way to a policeman and said, "Why do you not arrest that man?" The policeman, conscious no doubt of the omnipotence of the *Herald*, replied, "See here; I'll make this arrest if you say so. . . . . But I don't want to go down to court to-day; so I would thank you if you would say no more about it." "In the meantime the riot had proceeded, and, at the urgent demand of Harriman's backer, the scoundrel had been expelled to the street. Even yet he has not been arrested." After this "the brutal crowd grew less demonstrative, and the reputable people constantly applauded Rowell and assured him of their respect and admiration." A little later on a large basket of roses was presented to Harriman, one of the competitors, "by a very handsome lady who sat in a box near the judge's stand. It was quite heavy, and Harriman, after going a few steps, was assisted by Rowell in carrying it, amid the applause of the whole multitude. Some of the ladies shed tears." Soon after this touching incident a lady, "apparently of British birth," gave Rowell "a floral trophy," decorated with two British ensigns and one American flag. "Rowell made his acknowledgments, but requested the lady to receive the British ensigns again, and permit him to carry her gift to his cottage with only the American colours." This noble conduct completely won the hearts of the crowd, who from that time forth were loud in praise of Rowell. Later on the wife of the British Minister presented him with a massive gold medal, and "as the sturdy little Briton received the gift, he bowed his acknowledgments."

In the afternoon a strong body of police, mindful no doubt of the excellent adage about shutting the stable-door after the horse is stolen, made their appearance in the building in anticipation of a riot. However, Harriman, amid shouts of applause, presently came out from his cottage, and "was seen passing Rowell's cottage, not walking but limping and giving great signs of physical weakness." What followed upon this it is but fitting that the *Herald* reporter should be allowed to tell completely in his own eloquent words:—

> Rowell overtook him at the scorer's table, and, shaking hands with him, walked by his side encouraging him to continue his walk. Putting his arm within Harriman's they trod the track side by side. Men rose from their seats, ladies stood on chairs waving their handkerchiefs, and every man in the neighbourhood of the two pedestrians was cheering himself hoarse. By the time they had completed their first lap in this way the multitude that filled every nook in the building had given itself up to all possible forms of demonstration of applause. There was no cessation of the joyous tumult; when it ceased in one corner it was taken up in another, and thus it continued until about a quarter-past six o'clock. There was a little lull in this excitement, when it was renewed with still greater ardour by the appearance of Ennis on the track, who, joining Rowell and Harriman, locked his arm into Harriman's disengaged one, and thus England and Ireland supported America. No word picture is adequate to portray the enthusiasm that took possession of the spectators. Men, women, and children seemed to have no other thought in their minds than the present joy that possessed them, and relieved their overcharged feelings by cheering, clapping their hands, and shaking hands with their neighbours. The idea of nationality was fused into this one supreme moment, and human nature, without any of the limitations of geography, got a fair show. Strong men, with tears in their eyes, said one to the other, "I would not have missed this for a thousand dollars." "Talk about a riot; this is a love-feast." Even the stolid policemen gave way to sentiment, and as the trio went by one blue-coat said to another blue-coat, "This is damned funny, we ain't no use here."

This must indeed have been a great and glorious sight; and we were reflecting upon its impressiveness, and attempting not to envy those who were so happy as to see it, when, on taking up a later number of the *Herald*, we saw it reported that the touching attentions paid to each other by the rivals were an ingenious device of the manager's for engaging popular sympathy. Once roused, the enthusiasm of the multitude required no factitious encouragement. At the finish of the race Harriman was presented with "floral trophies," silk sashes, and so on. "This was simply too much for the overwrought house. Men shouted, screamed, danced, grasped each other's hands, and did all manner of extraordinary things in its (*sic*) joy and delight, and the band, also bubbling over with delight and patriotism, burst forth into Yankee Doodle."

The monstrous and degrading folly which reigned during the progress of the exhibition continued for some time after it. Every saying and doing of "the four pedestrians" was religiously chronicled by the *Herald*. New York preachers denounced them from the pulpit; and, to judge from the *Herald's* accounts, they were for days the most important people in America. It may be hoped, however, that all Americans are not so foolish as the *Herald* would have us believe. Unfortunately we are threatened with another contest for the much-prized belt in London during this summer. If this takes place, we can only trust that it will not be made an occasion for so despicable an exhibition of silliness and ruffianism as that which occurred in New York.

AUSTRALASIAN DEBTS.

THE frequency with which the Australasian colonies are applying to the London loan market for accommodation has directed attention to the large debts they have already incurred, and excites in the minds of thoughtful observers a doubt whether they are not too rapidly mortgaging their future. Young communities have a very strong temptation to borrow, which is quite unknown to the people of an old country like our own. We in England have inherited from the labours of countless generations conveniences of all kinds which they have to create for themselves. Our lands have been brought under cultivation, fenced and improved; our towns have been built; our roads have been made; our churches and our law courts, our schools and prisons have been constructed. But the colonists of Australia, New Zealand, and Tasmania have had to do for themselves, within living memory, the work that here at home was spread over centuries. Going out from a highly civilized country, they found themselves without the elementary appliances of civilization, and naturally were impatient to procure them. Indeed, without them the wealth that lay in abundance around them in their new homes could not be made available. The vast flocks that fed upon their pasturages were of little value unless the fleeces could be exported to Europe. Their gold-mines and their corn-fields would be comparatively worthless if the surplus produce could not be disposed of. Hence the need of roads and railways, of harbours, wharfs, warehouses, and landing stages. On the other hand, the illimitable resources of the colonies required labour to develop them, and labour could be obtained only by immigration. Therefore it was clearly desirable to attract settlers by every legitimate means. Thus the first condition of colonial progress is large expenditure—expenditure on a scale that can be supported only by borrowing. We would not be understood, then, to imply that the Australasian colonies ought not to have raised loans. To say this would be, in effect, to say that they ought not to have developed their resources, or turned to the best account their great opportunities. But, while we fully admit that they were right in incurring debt, we venture to think that they have not shown due moderation in doing so, and we must add that, unless the rate at which they are piling up obligations is materially slackened, future embarrassment is to be apprehended.

The Australasian colonies—that is, Australia, New Zealand, and Tasmania—have an area somewhat over three millions of square miles. In other words, they are collectively more than twice the size of India. But, while India has 240 millions of inhabitants, their whole population is about 2½ millions. That is to say, where there are 192 persons in India there is but one in the Australasian colonies. From these figures we may form to ourselves some vague conception of the sparseness of population at the antipodes. We have already pointed out how such a state of things necessitates a large expenditure. But, on the other hand, the scantiness of the population, its insufficiency for the tasks laid upon it, the undeveloped condition of the country, and the boundless calls upon the energies of every family make a heavy rate of taxation in the highest degree injurious. The problem which the colonies have to solve is how, by associated effort, to provide themselves with the necessary instruments of civilization without drawing too heavily on their accumulated wealth or unduly mortgaging their future. Have they solved this problem? It would certainly be going too far to reply that they have failed to do so, but at the same time there is need to address to them a word of warning. The aggregate revenues of these colonies amount to about 16½ millions per annum, which is at the rate of 6*l.* 12*s.* per head. This revenue, however, is not all raised by taxation. Part of it is rent paid by the occupiers of the public domain, and a still larger part is the proceeds of the sales of land. The former is strictly revenue, and therefore is rightly included in the current income. But the latter is as clearly capital. We all know what we should think of a private landowner who should sell his estate bit by bit, and apply the price to defray his current expenses. It may, however, be urged in defence of the colonial mode of proceeding that a very large part of the outlay is on capital account; and this is true. A private landowner would be fully justified in selling part of his property in order to reclaim and fence the rest and provide it with farm buildings, or to sink and work a mine, or, in a word, to procure for himself capital to turn the estate he retains to the best account; and so far as the colonies apply the proceeds of land sales to railway construction or the like, they do what is equivalent to this. But when they use the money to defray current expenses they are clearly drawing upon their capital. We do not say that even this may not within limits be a legitimate proceeding in the case of a very young community whose resources are as yet undeveloped; but plainly the diminution of capital is to be taken into account when we are considering the question of the debt. Communities which are simultaneously expending their capital and adding debt to debt are *primâ facie* pursuing a very perilous course. It may be a wise course, all the circum-

stances considered, but clearly it is one that may be carried too far if the greatest caution is not observed.

The debts of the seven colonies added together amount to very nearly 73 millions—that is, to almost four and a half times the revenue, including in it the land sales. Per head of the population it amounts to 29*l*. If the debt of the United Kingdom bore the same proportion to the population, it would very nearly reach one thousand millions; in other words, it would exceed its present amount about 40 per cent. The accumulated wealth of the United Kingdom is out of all comparison greater than that of the colonies, and yet we should think a debt of a thousand millions enormous. In fairness, however, it ought to be observed that the Australasian debts have been incurred for reproductive purposes, whereas our own debt is the consequence of wars. This circumstance makes a vast difference between the two cases. The burdensomeness of a debt is measured by the yearly charge which it imposes. If a State laid out the money it borrowed so advantageously that it all yielded a return equal to the interest on the loans, the debt would of course be no burden whatever to the taxpayers, and consequently its magnitude would be a matter of indifference. We need hardly say that the Australasian colonies have not displayed the consummate prudence here supposed. Still their loans have been for purposes of undoubted public utility, and some at least of the works constructed yield revenue, while it is to be presumed that, as time goes on and population grows, their profitableness will increase. The railways, for example, will earn more and more as cultivation is extended and wealth developed. There are indirect advantages also arising from useful public works which ought not to be overlooked. The making of a railway, for instance, opens up a new tract of country previously inaccessible, and enables population to push forward, and therefore to multiply more quickly; at the same time it supplies the farmers of the districts through which it passes with the means of sending their produce to market, and thus adds to the export trade. In like manner the construction of a harbour or breakwater, or of commodious warehouses, facilitates trade, though it may directly yield no return. Again, money spent in attracting or conveying immigrants may appear an unprofitable outlay, yet indirectly it may be the very best investment that could be made.

Nevertheless, while we make full allowance for these considerations, we must not forget that in some of the colonies the ordinary revenue is not sufficient to cover the ordinary expenditure, the balance being made up by the sale of Crown lands; that the value of these lands is dependent upon the continuance of immigration; and that, if from any cause immigration were to cease, there would either be deficits, or taxation must be seriously increased. The ability, therefore, of the colonial community to pay interest on the debt without unduly pressing on the taxpayer depends upon the continued flow of immigration. This consideration makes the amount of the debt a serious matter. And its gravity is not lessened when we examine the debts of the colonies separately. Thus New South Wales, with a population of 630,000, has a debt of 12 millions; Victoria, with 860,000, has a debt of 20 millions; and New Zealand, with 400,000, has a debt of 24 millions. Not less serious is the rapidity with which these debts have been run up. In 1872 the debts of the seven colonies only amounted in the aggregate to 41 millions; now they are nearly 73 millions. In seven years, therefore, they have increased nearly 80 per cent. This is a rate of growth far more rapid than that of either population or wealth, and, if continued, it must end in embarrassment. It is not enough that the purposes to which the money is applied are good in themselves, nor even—what is much more problematical—that they are suited to the requirements of the country. The very best kind of investment may be overdone. There is no doubt at all that the United States are imperfectly supplied with railways, that the existing system will have to be largely increased, and that at some time in the future it will pay. Yet the over-construction of railways in the years before 1873 led to panic and to the depression of trade that has since prevailed. A good thing, it is thus seen, may be overdone; and, if the Australasian colonies are not more moderate in the future than they have been in the past, we fear that a similar experience may be in store for them. In their own interest it is to be desired that they should find it somewhat less easy to borrow than they have hitherto done.

REVIEWS.

FARRER'S ZULULAND AND THE ZULUS.*

WHEN we annex a new territory of which the public has scarcely heard the name, or go to war with a people about whom we only know that they are black, the bookstalls are generally covered with little books which profess to describe the nature of our new possession or, the manners of our new enemy. Among these little books, but scarcely of them, is Mr. Farrer's *Zululand and the Zulus*. The author has not "crammed" his subject, but treats it out of the fulness of his knowledge of savage and barbarous races and of their institutions. This method gives him, of course, a considerable advantage over his ri[...] book may be read with the confidence due to an accom[...] student, though allowance must perhaps be made for the fa[...] Mr. Farrer does not admire the Boers of the Transvaal, and he is not violently prepossessed in favour of missionaries. [...] whole sketch of our relations with the Amazulu he seems t[...] that the English have acted fairly and honestly, that the na[...] have not transgressed their own theories of honour and loya[...] while the Boers have been greedy and cruel and hypocritical, a[...] the missionaries have displayed the foibles of missionaries.

If he had been anxious to satisfy an antiquarian taste, M[...] Farrer might have dilated on the pre-historic past of the Zulus. He might have harked back to Unkulunkulu, the Zulu Hiawatha, and he might have tried to show that the Zulus came from the north, or the south, or the west. He very sensibly leaves these important questions to the ethnologist, and treats Zulu history from its beginning in 1823. To Zulu annals 1823 is as the date of the First Olympiad in the annals of Greece. It was in that year that Lieutenant Farewell, engaged in an exploration of the east coast of Africa, reached Natal, and made acquaintance with the power of Chaka. It was Chaka that converted the Amazulu from a loose collection of tribes into a nation, and the nation into an army. He invented the tactics which English papers were laughing at only two days before we heard of the defeat at Isandula. He made his subjects exchange the long for the short stabbing assegai, and proved that "the people which shortens its weapons lengthens its boundaries." The moment we touch the authentic history of the Europeans in Natal we find the germs of all the wars between them and the natives. The causes of these wars are territorial and politico-religious. A Zulu chief makes a grant of land, or is cajoled into putting his mark to a treaty, written perhaps in High Dutch, which he does not understand. He supposes himself not to be alienating the soil (which, by the customary constitution of his tribe, he has not the right to do), but merely conferring certain privileges, such as the right of pasturing cattle. The settlers, in his opinion, become his subordinate chiefs. The territorial difficulty has already begun, for the Europeans of course make out that they are full owners of the soil. The politico-religious difficulty is on the point of beginning. The settlers assume the privileges without performing the duties of subordinate chiefs. As early as 1834 they received as retainers Zulus who had left the territory of their King, and sought new rulers among the Europeans. This change in Zululand, just as in the Russia of Ivan the Terrible, was of course a breach of loyalty. "To change your master," says M. Rambaud, speaking of the boyards who left Russia and went to Poland or Lithuania, "was to pass over to the enemy, to become a traitor. To 'change' and to 'betray' were soon synonymous terms." What added to the treachery of these *émigrés* was their probable adoption of Christianity. Thus, as soon as white men and the black King were face to face, the latter was in danger of losing land and subjects, while the former could not reasonably give up refugees who claimed their protection, and perhaps embraced their religion.

On August 27, 1824, the British colours were hoisted in Natal, on the soil granted by Chaka. Neither then nor in 1835 did the Home Government sanction the foundation of a colony. In the latter year Dingan (who slew his brother Chaka in 1829) made an extraditionary treaty with the whites. In compliance with this treaty, Captain Gardiner once restored three refugees to Dingan, who starved them to death. By a singular coincidence, Captain Gardiner himself afterwards died of starvation among the Patagonians. The treaty was repudiated in 1837 by the Dutch who, disgusted by the emancipation of their slaves by the English, had emigrated from the Cape.

The Anglo-Batavian management of Natal dragged on till 1842, and was most unfortunate. In 1837 Peter Retief, the Dutch leader, visited Dingan, who promised to cede to him Natal if he would recover certain cattle which had been stolen from the Zulus. Retief brought back the cattle to Dingan, but, as he came accompanied by two hundred armed men, the suspicions of the savage were aroused. He had no idea of playing Inca to Retief's Pizarro, and, after warning Mr. Owen the missionary, he butchered all the Dutchmen. This massacre was followed by that of the squatters on the Upper Tugela. Meanwhile the English of Natal, who sided with the Dutch, invaded Zululand, and carried off cattle, women, and children. We must let Mr. Farrer tell in his own words the remainder of the story:—

> War of course ensued, in which the English settlers took part with the Boers in the hope of more plunder.
>
> Cane and Ogle were the leaders of the English, and the jealousy and animosity which existed between them resulted in one of the most dreadful disasters of the many that have occurred in South Africa. When they crossed the Tugela 10,000 Zulus were sent to repel them. The Zulus suffered severely, and lost thousands; "they were cut down until they formed banks, over which those who were advancing had to climb." They advanced nevertheless; Cane was killed, and a frightful slaughter of the fugitive settlers and natives took place at the Tugela river. The Zulus advanced to Natal; the English sought safety on an island in the middle of the bay; and in about a fortnight's time, everything that the settlers had at Natal was destroyed, and their cattle driven away. "The Zulus left not a vestige of anything remaining, except perhaps the walls of some of the houses."

The next event of importance was the alliance between Panda, brother of Dingan, and the Dutch, by whose aid Panda defeated and slew Dingan, and became King.

The conduct of the irresponsible English settlers in Natal now claimed the attention of the Home Government. In 1842 Natal

* *Zululand and the Zulus: their History, Beliefs, Customs, Military System, Home Life, Legends, &c., &c., and Missions to Them.* By J. A. Farrer. London: Kerby & Endean. 1879.

a British colony under the government of the Queen. We ..xed it just as we annexed the Transvaal; and, though we ..rited many troubles from the Dutch, and though the mis..aries, as usual, created new difficulties, our relations with the ..us were friendly. The problem of how to deal with refugees .. solved by the Lieutenant-Governor's proclamation of Novem.. 14, 1854:—

'And whereas I am desirous of duly cautioning all concerned, and specially such as are, or have been, in the *habit of enticing or encouraging refugees from Panda's country into this district*, in order that they may be fully aware of the danger in which they place themselves:

"Now, therefore, I do most solemnly caution all traders and others, the subjects of this Government, resorting to the Zulu country for the purposes of trading or hunting, and give them to understand that, in so doing, *they become for the time being subject to the laws of that country, and that this Government cannot in any way interfere* should they, by the commission of any such unlawful acts as those above alluded to, or by any other means, place their lives in jeopardy:

"And I give this public warning in the earnest hope that all concerned will conduct themselves, while in the Zulu country, with the prudence and moderation so necessary for the safety of their persons and property; and with the respect due to the authority of the government of *an independent and friendly chief*."

From an unquoted part of this proclamation we infer that it was less philanthropy than desire to make labour cheap, that caused "traders and others" to "entice or encourage refugees from Panda's country."

Mr. Farrer repeatedly insists that we know scarcely anything of the internal politics of Zululand. We know that there was civil war in 1856; we know that Umbulazi, Panda's son and heir presumptive, was defeated and put to death, and we know that Cetewayo became Prince Regent. We do *not* know that Umbulazi was flayed alive and peppered with ants, for the people who spread that report also averred that Panda was dead. Now Panda survived till 1872. Mr. Farrer is sceptical about the cruelties of Cetewayo. He produces evidence, both native and English, to prove that Cetewayo has abolished capital punishment, except in cases of witchcraft. "The sin of witchcraft is as the sin of rebellion." "Thou shalt not suffer a witch to live." "Behold, thou knowest what Saul hath done, how he hath cut off those that have familiar spirits, and the wizards out of the land." The missionaries must find it a little hard to reconcile their approval of Saul with their aversion to Cetewayo. As to the whole question of Cetewayo's cruelty, Mr. Farrer observes:—"We shall perhaps be justified in thinking, not that all the stories told about Cetewayo are lies, but that, if we rank them with our beliefs about the cruelties of Busiris and Phalaris, we shall be most likely to entertain a true judgment regarding them."

As to Cetewayo's famous coronation oath, which he, like George IV., is said to have violated, Mr. Farrer quotes a letter from a Norwegian missionary, Bishop Schreuder, dated August 20, 1873. The bishop presented the book of the new laws and explained its "generation" in this Oriental apologue:—

"It was born an infant, it went across the water, the child of a king, to seek for kingship, and it found it; it was made king far away, and here it is, returned with its rank to its own country, Zululand. . . . This book has to-day rank; it took that rank beyond the water, *it has come back a king, and is supreme in this country*."

After some discussion the Bishop declared that the King was at the book's feet, and His Majesty merely murmured, "Oh dear, oh dear, what a man this is!" We quote the inference drawn by Mr. Farrer from the letter. He appears to think that charges of "atrocities" are a game which two can play at, and that the wily Muscovite is not alone in his preference for this weapon:—

The inferences from this most interesting, but already buried interview, may be wrong, but they are irresistible, and they are these: that the new laws accepted by Cetewayo at his coronation were not accepted willingly; that they were forced upon him, not from any philanthropic interest or love for the Zulus, but in order to have a handle against the Zulu government whenever an opportunity occurred to make violation of these said laws a pretext for annexing the long coveted country north of the Tugela; that reports of atrocities in Zululand have, so far from being recent, been for at least four years purposely circulated in Natal, and made use of by missionaries in order the sooner to justify the destruction of the independence of Zululand.

Mr. Farrer's chapter on Missions proves, we think, that the Zulu kings, where they have "persecuted," have done so from political motives, while with the missionaries they have never actively interfered. "The insecurity of missions in the country has always been as great as it is now represented to be under Cetewayo, and the latter, in his present policy, is simply following the policy we never felt called upon to resent, in the cases of Dingan and Panda." It must not be forgotten that there are charges and counter-charges, myths and counter-myths. Cetewayo may have assegaied a few witches, and a few missionaries may have acted as spies on Cetewayo, while others sold powder, ball, rum, and rifles to their dusky flocks. When the missionaries finally left the country, from an unconquerable aversion to becoming martyrs, Cetewayo asked some to stay, and told others they might stay if they chose. They did not choose, and they may reflect with pleasure that they have had their share in bringing about a religious war, a war in which some eight thousand men, black and white, have already been blown to pieces. This is the charming result of the policy of resenting reported "atrocities."

Mr. Farrer's account of the Zulu constitution is remarkably instructive. He demonstrates that Cetewayo is not the irresponsible despot of declaimers, but a king, like the kings of the heroic age in Greece, who rules under certain traditional restraints, and in harmony with the advice of the council. His power over life, death, marriage, and property is, however, rather extensive; and, if he cannot give away land or make wars without the assent of his council, he can have any man put to death (a power which Cetewayo is said not to exercise) or can seize his cattle. There are three grades of judicial tribunals, and the King's consent is necessary for the infliction of capital punishment. As in early Ireland, diviners have judicial, or judges have divinatory functions.

The constitution of the Zulu army is by this time so well understood that Mr. Farrer's chapter on the subject adds little to our knowledge. His account, on the other hand, of the forgeries and frauds of the Boers (to whose quarrels we so unfortunately succeed) is very clearly written and instructive. As the religion of the Zulus is rather a mass of the puerile germs of faith than a creed, we need not follow his exposition of it, but conclude this notice of a most useful little book with a Zulu love-story:—

It was once decided by the king to make a raid against the Amaswazi, to rob them of their cattle; but strict orders were given to the soldiers that all cattle and captured girls were to belong to the king alone. The raid began, the women and children of the enemy were killed; but one Zulu, when on the point of killing a girl, stayed his assegai, feeling suddenly as if all his anger had gone out of his fingers and toes. He protected this girl from the attacks of his companions; he could not kill her himself, for their eyes met, and something seemed to soften and melt within him. He thought of his own father and mother at home, and how very likely the girl's parents had been killed that very day. He did not like that she should be taken from her people and become a slave to the king, so on the march homewards he managed to let her escape from the captive throng. Then came the review before the king; the lover was threatened with death for his neglect. But he spoke out boldly, telling the dread monarch that the girl had used medicine against him. The king laughed, and the culprit escaped, but he never forgot the girl he had saved. By night he dreamed of her; by day he thought of her; he would stop eating to think of her, forget what he was doing when out hunting, stop without knowing it in a dance. At last, one day, his sisters rushed into his hut: a girl was lying half dead with cold in the garden. There she was whose glancing look on the day of battle he so well remembered, hungry, cold, exhausted. Her people had all been killed, and where could she seek protection better than with the man who had spared her in war? In this romantic way that Zulu soldier gained a wife.

FENNELL'S PINDAR.*

CONSIDERED simply as a contribution to the study and criticism of Pindar, Mr. Fennell's edition is a work of great merit. But it has a wider interest, as exemplifying the change which has come over the methods and aims of Cambridge scholarship within the last ten or twelve years. In looking over Mr. Fennell's notes one feels that one is somehow in a new atmosphere. Verbal scholarship used to be a master at Cambridge, and sometimes a tyrannous one; here it is mastered, and made to serve its proper ends. We do not say that it was ever officially taught by public or private instructors of candidates for the Classical Tripos that the Greek language existed in order to illustrate the rules of Attic syntax; but such was the tendency of much of the teaching and learning that went on. The canons of Porson and his successors were treated as inviolable, and it was little short of blasphemy to suggest that the Athenian writers themselves might possibly have known the usages of their own language better than the modern Atticists. An especially rigid orthodoxy prevailed as to the particles. The omission of ἂν where it ought to have been was a thing to be allowed only in extreme necessity and under one's breath, and there were searchings of heart over the few stubborn examples in Attic prose of καίπερ with a finite verb. As to one of these we remember a half-serious suggestion that it did not count, occurring, as it did, in a speech of Alcibiades in the *Symposium*, when he had drunk much more than was good for him. The non-Attic writers were supposed to be in a manner irresponsible, as knowing no better, and their frailties were suffered to pass with gentle regret. Even in their case there would be suggestions of tinkering; for example, to correct Pindar's οὐ ξείναν ἱκοίμαν γαιαν ἄλλων (Pyth. 4. 118) by inserting κ' before ἱκοίμαν. Mr. Fennell's way is different. In his note on this line he faces the fact and shows that it corresponds to a real distinction of meaning, and moreover says openly that "critics have no doubt frequently inserted the particle wrongly." To some extent this gain in freedom from absolute dogmas, which is really a gain of carefulness and exactness in treating the particular passages, may be due to the reaction of scientific philology on pure scholarship, which is noticeable in other parts of Mr. Fennell's work. Once or twice he boldly goes to the analogies of Sanskrit for the meaning of a rare word. The constant use of the symbol √ for *root* in the philological sense has at first an odd appearance; but it is evidently convenient, and we presume it is by this time well established. Very slender traces are to be found here, if any, of the good old notion that the whole duty of an editor is to pick holes in former editors' conjectural readings and propound new ones of his own. Mr. Fennell has hazarded new emendations here and there; but he keeps conjecture in its proper place. One reading which he admits to the text, though the only novelty is in punctuation, is ingenious enough to be called brilliant, and shows that scholars need never despair of

* *Pindar: the Olympian and Pythian Odes.* With Notes Explanatory and Critical, Introductions, and Introductory Essays. By C. A. M. Fennell, M.A., late Fellow of Jesus College, Cambridge. Cambridge: University Press. 1879.

finding something left to do. In Ol. 6. 73 the common punctuation gives

τεκμαίρει
χρῆμ' ἕκαστον· μῶμος ἐκ δ' ἄλλων κ.τ.λ.

which is rendered "The matter proveth the man" (Dissen, E. Myers), or "It is money which distinguishes a man" (Donaldson), "but from the envious calumny ever threateneth," &c. The sense thus obtained is poor and disjointed. Mr. Fennell has seized on a slight indication to restore what seems to be the true meaning. His note runs thus:—

MSS. have *μῶμος δ' ἐξ* against scansion. I hold the error to be due to the separation of *μῶμος* from the previous sentence, to which I restore it, rendering "Cavil affords ground for true inference as to every transaction."

Or why not say, more shortly, "Cavil is the touchstone of a man's work," or something to that effect? Thus we have a gnomic sentence much more pointed and Pindaric than the common arrangement. "That hostile criticism bears even stronger testimony to real merit than eulogy is now a truism; but it was scarcely so in Pindar's time."

We find in the note on Pyth. 4. 250 a conjecture which just hovers on the doubtful verge. The vulgate *κλέψεν τε Μήδειαν σὺν αὐτᾷ*, or the variant *σὺν αὐτῷ*, is a little stiff and ungainly, but not positively unsatisfactory. Mr. Fennell's suggestion of *σύνευνον* might be an improvement, and he shows that Pindar has elsewhere used it in exactly the same construction. But is it not rather dangerous to improve a poet's style even out of his mouth? for the correction is one of style and nothing more; and Mr. Fennell's hypothetical account of the existing reading (which is a fact to be accounted for even when it is nonsense, much more when it makes tolerable sense) does not carry conviction to us. But something must be risked if anything is to be won; and indeed we know not what right the reader has to quarrel with any amount of conjectural suggestions in the notes, so long as the editor does not go the length of thrusting on him a text rewritten out of all knowledge. The short introductions and arguments to the Odes, which for so discursive an author as Pindar are all but a necessity, are both careful and acute. As an example we may take Pyth. 7, where Mr. Fennell rebuts the inference that Pindar cared nothing for the deliverance of Greece at Marathon because he celebrated the Pythian victory of a distinguished Athenian without mentioning it. Mr. Fennell points out that Megacles, the victor in question, was an Alcmæonid, and the Alcmæonids were shrewdly suspected of Medizing; so that perhaps the less said of Marathon in that particular ode the better. In a poem written to the order of Megacles it might have provoked some such comment as was addressed at a later time in Aristophanes's dialogue to the caricatured personage of Euripides:—

τοῦτο μὲν ἔασον, ὦ τᾶν·
οὐ σοὶ γάρ ἐστι περίπατος κάλλιστα περί γε
τούτου.

Those, however, who have not occasion or leisure to study the text of Pindar as critically as they once did may turn with more interest to Mr. Fennell's general introduction. It is not the mere explanation of an editor, but the plea of an amateur of poetry for a favourite author. Attention is justly drawn to the intimate relation of Pindar's Odes to the contemporary expression of similar ideas in plastic forms, and to the light often thrown upon his descriptions and epithets by extant works of Greek art. We only regret Mr. Fennell's decision that "it does not come within the scope of a practical edition to develop such a topic." It appears to us precisely the kind of topic that ought to be developed for students at our Universities, if Greek literature and the life of which it was part are to be perceived by them as living realities and something more than examination subjects. But good work is already being taken in hand in this direction, and there is reason to hope that a state of things will not long continue in which a high reputation for scholarship is compatible with absolute ignorance of Greek art in any of its forms.

Of Pindar's poetical style Mr. Fennell speaks with something like enthusiasm, and in a way that shows considerable power of literary as well as philological criticism. Probably he is conscious that he will not carry a very large number of readers with him; we catch the glow of his admiration as we read, and should be glad to retain it if we could. But the difficulties of entering into Pindar's mood are very great for a modern Englishman; and, if we are to be honest, we must confess that what Mr. Fennell succeeds in finding in Pindar constantly we can find in him only when he breaks loose from the trammels of his immediate subjects and the conventional treatment of them, and launches himself on digressions which may be regarded as independent poems. We are aware that the elaborate mythical treatment of the victors' genealogies was not conventional to Pindar's original audiences, that the apparent digressions are not really digressions, and that we have no business to read Pindar from a modern point of view. Practically, however, it is hardly possible to escape the modern point of view and its disturbing influences unless one devotes oneself to Pindar as no man well can who is not going to edit him. And the effect actually produced on us moderns by this all but inevitable illusion is that of a great poet exercising his powers and ingenuity on a series of monotonous and commonplace themes, which only now and then give him the opportunity of showing what he is really capable of. Taking Pindar as a whole, Mr. Fennell seems to express rather what one ought to feel about him than what one does feel. Yet this adds, in one sense, to the value of his criticism; for it is the judgment of a man who has specially [fitted] himself to enter into the spirit of Pindar, and whose position [in] this respect can be shared only by a few. We shall give at large, therefore, his chief paragraph on this subject:—

To turn the light afforded by contemporary history on to the scan[ty] materials for Pindar's biography is easier than to point out the characteristics of his genius as exhibited in the extant *Epinikia*, if one may judge from the application thereto of the incompatible epithets "genial" and "frigid." I cannot accept Mr. J. A. Symonds' account of Pindar's personality as frigid, austere, not genial, not passionate, hard as adamant. In criticism of this kind the personal equation must largely enter, so I shall only state my own views briefly and with extreme diffidence. Omitting the obvious and essential features common to all genius, I find lofty serenity and dignity combined with considerable geniality, and as Mr. Myers says, "pre-eminent rapidity" of thought, "as of an eagle's flight or of very lightning." His compositions everywhere evince impassioned animation, and marvellous reserve of power. They show traces of humour and of tenderness, of the latter to a surprising extent, considering the nature of his themes. To suggest that he lacked sympathy and tenderness is like finding fault with a march for not being as brisk as a polka or as solemn as a requiem. Several passages suggest forcibly that the poet was fond of festivity and good cheer, as, for instance, Frag. 101 [94], *Δείπνου δὲ λήγοντος γλυκὺ τρωγάλιον καίπερ πεδ' ἄφθονον βοράν*, Nem. ix. 48–53; Ol. vii. 1–12; Pyth. iv. 294–297. His vividness of conception and appreciation of delicate touches of character are, I venture to say, unrivalled in the whole range of Greek and Latin authors. Witness the interviews between Pelias and Jason, Pyth. iv. 94–119, 135–167, and between Apollo and Cheiron, Pyth. ix. 30–65. He seems to have cherished a deeper love of nature, especially of trees and flowers, than is generally to be discerned in Greek literature. He is a most effective word-painter, producing his pictures by a few bold strokes. The simplicity of his constructions, the grace and freedom of his forms of expression, the impetuous, elastic movement of his verse, combine to form almost the ideal of lyric style. Critics who speak of "tumidity," "overblown exaggeration of phrase," "pomposity," and "floridity," must be thinking of English versions rather than of the original. The richness of the poet's diction, his pregnant phraseology, and his full-sounding compound words, are very apt to make such opprobrious epithets applicable to any literal modern rendering. The attribution of sententiousness to his style is less unjustifiable. He frequently formulates in fresh, terse terms, a principle, social or moral, appropriate to the topic in hand. So far he is sententious, even as George Eliot.

And it is true that even a superficial acquaintance with Pindar discloses magnificent felicities for which Mr. Fennell's praise is no whit too strong. In addition to Mr. Fennell's references, one may mention the wonderfully beautiful description of the islands of the blest in the second Olympian Ode, where the poet, in not unequal rivalry with Homer himself, tells how in that place where the sun measures equal days and nights the just who have kept their plighted word rest in the company of the gods, not vexing the earth and the sea with toil. Now and again, moreover, Pindar flashes out into single phrases of intense splendour, as where he says in the third Isthmian, "Over the fruitful earth and across the sea travels, ever unquenchable, the radiance of noble deeds."

The possible influences of Pindar on Socrates and Plato are likewise touched upon; and finally there is a short discussion of the question whether Pindar wrote his Odes, which is, in fact, whether a written literature existed in Greece in Pindar's lifetime. On this point Mr. Fennell adheres to Professor Paley's theory, which —whatever may be thought of Professor Paley's own application of it to Homeric criticism—is not nearly so paradoxical as it looks at first sight. As to Pindar's metres, the nature of Greek music, and the interminable controversies which may be raised concerning them, Mr. Fennell frankly confesses that these topics do not interest him, and dismisses them with the least possible notice; and, as our taste happens to coincide with his, we cannot charge it upon him as a shortcoming. Altogether, this edition is a welcome and wholesome sign of the vitality and development of Cambridge scholarship, and we are glad to see that it is to be continued. We hope that Mr. Fennell will not omit to give at least a selection of the fragments. Works preserved only in a fragmentary form are apt to receive very scant justice from editors; and yet in the case of many poets, and certainly in that of Pindar, the fragments contain passages in no way inferior to anything in the pieces which have come down complete.

LEFROY'S MEMORIALS OF THE BERMUDAS.*

As we said in our notice (November 3, 1877) of General Lefroy's first volume, this is a work which very few persons will ever read through. Yet it is one which, once taken up, it is singularly difficult to put down. Much of the very considerable bulk is occupied with the habitual verbosity of State papers. But in the most unexpected places some luminous fact is perpetually being turned up which illustrates the social and mental condition, not of the Bermudas only, but of a whole period of English history.

The present, like the former, volume leaves an uncomfortable impression of colonial society in the seventeenth century. Unless we knew that official documents necessarily chronicle chiefly the darker aspects of life, we should infer from them that Bermuda existence alternated between riotous license and harsh repression. The Committee of the Bermuda Company in the paper with which this volume opens is found lamenting to the Governor of the islands, Captain Josias Forster, that "sins of drunkenness, lying, swearing, profaneness, whoring, extortion, and other vices do abound now more than ever.

* *Memorials of the Discovery and Early Settlement of the Bermudas or Somers Islands.* By Lieutenant-General Sir J. H. Lefroy, C.B., K.C.M.G., F.R.S. Vol. II. 1650–1687. London: Longmans & Co. 1879.
